Vegetal (*vej'-e-tal*) [*vegetus*, lively; *vegere*, to move, quicken]. In biology, of or pertaining to plants, characteristic of plants, plant-like in habit. **V. Functions**, the vital phenomena common to plants and animals, viz., irritability, digestion, assimilation, growth, secretion, excretion, circulation, respiration, generation.

Vegetality (*vej-e-tal'-it-e*) [*vegere*, to move, excite, quicken]. In biology, the possession of *Vegetal Functions, q. v.*; the opposite of *animality.*

Vegetarian (*vej-e-ta'-re-an*) [*vegetare*, to quicken]. One who lives on vegetable food alone.

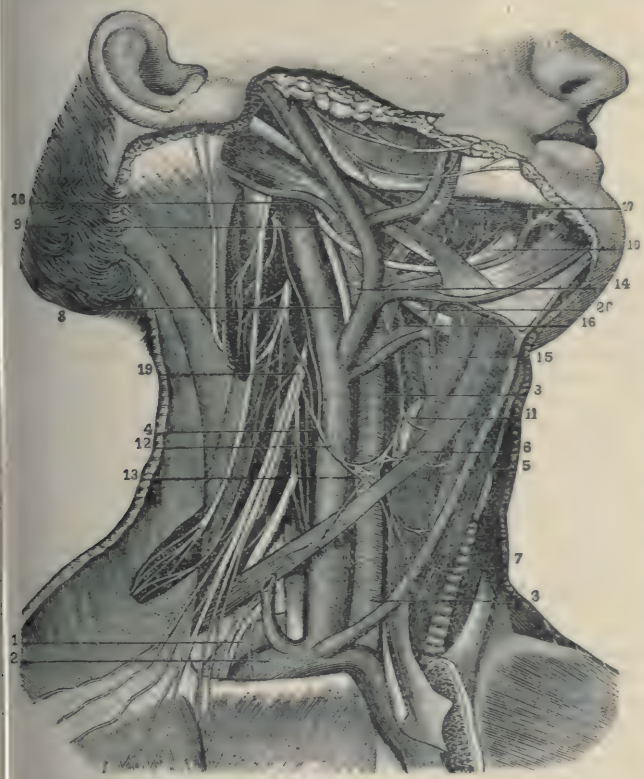
Vegetarianism (*vej-e-ta'-re-an-ism*) [*vegetare*, to quicken]. The doctrine that vegetable food is the only kind proper for man, and the practice of this doctrine.

Vegetatio (*vej-e-ta'-she-o*). Same as *Vegetation.*

Vegetation (*vej-e-ta'-shun*) [*vegetatio; vegere*, to grow]. Morbid or fungous growth, such as abnormal granulations, excresences, warts, etc. **V., Adenoid**, morbid growths in the naso-pharyngeal cavity. **Vs., Digital**, prominent, villous vegetations. **Vs., Fibrinous**, small, wart-like bodies growing on a serous surface. **Vs., Urethral**, papillomata of the urethra.

Vegetative (*vej'-e-ta-tiv*) [*vegere*, to grow]. Having the power of growth, like a vegetable; applied to certain tumors.

Vegeto- (*vej'-et-o*) [*vegere*, to grow]. A prefix employed to denote connection with or relation to the vegetable kingdom.



Vehicle (*ve'-hik-l*) [*vehiculum; vehere*, to carry]. Anything which carries or conveys. In pharmacy any excipient or substance serving as a medium of administration.

Veiel's Paste. A paste used in the treatment of furuncles. It consists of equal parts of oxid of zinc and vaselin, with 4 per cent. of boric acid. It is to be well rubbed into the skin around the boil three times a day.

Veil (*vāl*) [*velum*, veil]. See *Velum, Velamen* and *Calyptra.* **V., Acquired**, an obscuration or imperfection of voice from exposure to cold, catarrhal conditions, or overuse, or from bad training. **V., Uterine**, a cap fitted over the cervix uteri, to prevent the entrance of the semen.

Vein (*vān*) [*vena*, vein]. The veins are tube-like vessels that receive the blood from the lungs and peripheral organs of the body and convey it to the auricles of the heart. They are divided into three systems or groups, the Pulmonary, Systemic, and Portal, the latter being an appendage of the systemic, its capillaries ramifying in the liver. In biology, one of the fibro-vascular bundles of a leaf. **V., Acromial Thoracic**, a small vein accompanying the artery of the same name. **V., Angular**, a continuation of the frontal vein downward to become the facial at the lower margin of the orbit. **V., Auricular** (*anterior* and *posterior*). 1. The vein of the ear. 2. A vein from the cardiac auricles. **V., Axillary**, a large vein formed by the junction of the inner brachial venæ. It lies to the inner side of the axillary artery and becomes the subclavian at the border of the first rib. **Vs., Azygos** (three in number), situated ventrad of the bodies of the thoracic vertebræ; they are a means of communication between the superior and inferior venæ cavæ. **V., Basilar**, a [illegible] vein passing back over the crus cerebri to unite with the veins of Galen. **V., Basilic**, a vein on the in-

side of the arm. It unites with the inner brachial to form the axillary. **Vs., Brachial,** the veins accompanying the brachial artery. **V., Brachio-cephalic.** See *V., Innominate.* **Vs. of Breschet,** the veins of the diploë. **Vs., Bronchial,** veins that correspond to the bronchial arteries. **V.-brooch,** an instrument for compressing varicose veins. **V., Buccal,** a vein coming from the buccinator muscle; it empties into the pterygoid plexus. **V., Capsular,** the suprarenal vein. **Vs., Cardiac,** the veins from the heart. **V., Cephalic,** a large vein of the arm, formed by the union of the median cephalic and superficial radial. It opens into the axillary. **Vs.,**

Vessels and Nerves of the Neck.

1. Subclavian artery. 2. Subclavian vein. 3, 3. Common carotid artery. 4. Internal jugular vein. 5. Anterior jugular vein. 6. Omo-hyoid muscle. 7. Sterno-hyoid muscle. 8. Trunk of pneumogastric nerve. 9. Hypoglossal nerve. 10. Its terminal portion. 11. Its descending branch. 12. Internal descending branch of cervical plexus. 13. Plexus formed by last two branches. 14. External carotid artery. 15. Superior thyreoid artery and vein. 16. Lingual and facial arteries. 17. Facial artery and vein. 18. Occipital artery. 19. Anterior branches of the first four cervical nerves. 20. Superior laryngeal nerve.

Cerebellar, veins coming from the cerebellum; they empty into the various sinuses. **Vs., Cerebral,** veins coming from the cerebrum. They are cortical and central: the former are from 8 to 12 in number on each side and empty into the superior longitudinal sinus. The central veins unite to form the venæ Galeni. **V., Cervical, Deep,** the second or deeper division of the posterior portion of the vein of the scalp. **V., Cervical, Transverse,** a vein accompanying the artery of the same name. **V., Choroid,** a vein of the choroid plexus. It unites with the vein of the corpus striatum to form the veins of Galen. **Vs., Ciliary,** small veins from the eyeball. **Vs., Circumflex Iliac** (*deep* and *superficial*), veins accompanying the arteries of the same name. **V., Conarial,** a vein originating in the fine venous plexus over the conarium. It is one of the prebasal veins that unite to form the subcerebral. **Vs., Coronary:** 1. Same as *V., Cardiac.* 2. Veins surrounding the margins of the lips. 3. See *V., Gastric.* **V., Cystic,** a vein returning the blood from the gall-bladder; it empties into the portal vein. **Vs., Dental,** veins conveying the blood from the alveoli of the jaws. **V., Diaphragmatic.** See *V., Phrenic.* **Vs., Emissary,** small veins passing through the cranial foramina and connecting the cerebral sinuses with external veins. **Vs., Emulgent,** a synonym of the renal veins. **V., Epigastric, Deep,** a vein emptying into the external iliac above Poupart's ligament. **Vs., Ethmoid,** veins corresponding to the arteries of the same name. **Vs., Extra-spinal,** veins ramifying over the external surfaces of the vertebræ. **V., Facial,** a continuation of the angular vein; it joins the internal jugular at the level of the hyoid bone. **V., Femoral, Common,** a short, thick trunk corresponding to the femoral artery; it becomes the external iliac at Poupart's ligament. **V., Femoral, Deep,** a vein accompanying the femoral artery; it empties into the superficial femoral. **V., Femoral, Superficial,** a name given to the femoral vein before it is joined by the deep femoral vein to form the common femoral vein. **V., Frontal,** a name given to the anterior vein of the scalp as it crosses the frontal bone. **V. of Galen,** a synonym for the anterior cardiac vein. **Vs. of Galen,** two large veins of the brain, continuations of the internal cerebral veins; they open into the straight sinus. Sometimes there is but a single vein of Galen instead of two. **V., Gastric,** a vein accompanying the artery of the same name. **V., Gluteal,** a vein passing through the great sacro-sciatic foramen with the gluteal artery. **Vs., Hemiazygos,** small, accessory veins of the azygos veins. **Vs., Hemorrhoidal,** a plexus of veins surrounding the rectum. **Vs., Hepatic,** the largest tributaries to the inferior vena cava; they return the blood from the liver. **Vs., Iliac, Common,** two veins formed opposite the sacro-iliac synchondrosis by the confluence of the external and internal iliac veins. They unite opposite the fifth lumbar vertebra to form the inferior vena cava. **V., Iliac, External,** a continuation upward of the common femoral; it extends from the lower border of Poupart's ligament to the lower border of the sacro-iliac synchondrosis. **V., Iliac, Internal,** a short trunk extending from the great sacro-sciatic foramen to the sacro-iliac synchondrosis. **Vs., Innominate,** two large valveless veins returning the blood from the head, neck, and upper extremity. They are formed by the union of the internal jugular and subclavian veins, and unite to form the superior vena cava. **Vs., Intra-spinal,** the veins within the spinal column. **V., Jugular, Anterior,** a vein beginning at the level of the chin and ending at the clavicle in the external jugular vein. **V., Jugular, External,** a vein formed at the angle of the lower jaw by the union of the posterior auricular and temporo-maxillary veins; it empties into the subclavian. **V., Jugular, Internal,** a continuation of the lateral

sinus, beginning at the jugular fossa; it accompanies the internal and common carotid arteries, and joins the subclavian vein to form the innominate. **V., Jugular, Posterior, External,** a small vein in the dorsal portion of the neck. **V. of Labbé.** See *V., Posterior Anastomosing.* **V., Lingual,** the vein returning the blood from the tongue. It empties into the internal jugular. **Vs., Lumbar** (four on either side), veins corresponding to the lumbar arteries. **Vs., Mammary, Internal,** veins formed by the union of the venæ comites of the superior epigastric and internal mammary arteries; they empty into the innominate vein. **V. of Marshall.** See *V., Oblique.* **V., Maxillary, Anterior,** a small vein of the anterior portion of the face. **V., Maxillary, Internal,** a vein accompanying the first part of the internal maxillary artery. **V., Median Basilic,** the largest of the two divisions of the median; it unites with the superficial ulnar to form the basilic. It is chosen for venesection. **V., Median Cephalic,** the smaller branch of the median; it unites with the superficial radial to form the cephalic. **V., Median, Deep,** a vein formed by the union of the outer vena comes of the ulnar artery and the muscular and radial recurrent veins. **V., Median, Superficial,** a vein that starts at the anterior plexus of the wrist and unites with the deep median to form the median. **V., Mesenteric, Inferior,** one formed by the superior and middle hemorrhoidal veins at the rectum; it accompanies the inferior mesenteric artery, and joins the splenic vein behind the pancreas. **V., Mesenteric, Superior,** one that accompanies the superior mesenteric artery, and joins the splenic vein to form the portal. **V., Oblique** (*of Marshall*), a vein crossing the dorsal portion of the left auricle of the heart. It is the remnant of the left duct of Cuvier. **V., Obturator,** a vein accompanying the artery of the same name. **V., Ophthalmic,** a short trunk carrying the blood from the eye; it empties into the cavernous sinus. **Vs., Ovarian,** two veins beginning as the pampiniform plexus in the broad ligament; the right one empties into the inferior vena cava, the left one into the left renal. **V., Pancreatic,** a vein returning the blood from the pancreas. **V., Peroneal,** a vein accompanying the peroneal artery. **Vs., Phrenic,** veins accompanying the phrenic arteries. **V., Popliteal,** one formed by the union of the venæ comites of the anterior and posterior tibial arteries; it accompanies the popliteal artery, and becomes the femoral at the junction of the lower with the middle third of the thigh. **V., Portal,** a short trunk formed by the junction of the superior mesenteric and splenic veins; it enters the liver. **V., Posterior Anastomosing** (**of Labbé**), one of the cortical cerebral veins. **V., Pudic,** a vein accompanying the pudic artery; it empties into the internal iliac. **Vs., Pulmonary,** two veins on each side returning the aërated blood from the lungs to the heart. **V., Radial, Superficial,** a vein accompanying the musculo-cutaneous nerve up the radial side of the forearm. **V., Renal,** a vein returning the blood from the kidneys. **V., Salvatella,** a vein of the little finger, situated in the fourth metacarpal space and entering into the formation of the posterior ulnar vein. **V., Saphenous, Long or Internal,** a long vein running up the inner aspect of the leg, terminating in the femoral vein below Poupart's ligament. **V., Saphenous, Short or External,** a vein running up the outer aspect of the foot, leg, and back of the calf; it empties into the popliteal vein. **Vs., Sciatic,** veins accompanying the sciatic artery. **V., Spermatic,** a vein returning the blood from the testicle; on the right side it terminates in the inferior vena cava and on the left in the left renal vein. **V., Splenic,** a vein returning the blood from the spleen; it forms the vena porta by uniting with the superior mesenteric vein. **V.-stone.** See *Phlebolith.* **V., Subcerebral,** a large vein at the base of the brain. **V., Subclavian,** a continuation of the axillary; it unites with the internal jugular vein to form the innominate vein at the sterno-clavicular articulation. **Vs., Submaxillary,** veins returning the blood from the submaxillary gland. **Vs., Temporal,** veins returning the blood from the temporo-maxillary region of the head; they join the internal maxillary vein to form the temporo-maxillary vein. **V., Temporo-maxillary,** one formed by the union of the temporal and internal maxillary veins in the parotid gland; it terminates in the external jugular. **Vs., Thyreoid,** veins returning the blood from the thyreoid gland. **V. of Trolard,** a vein of the cerebrum passing along the posterior branch of the fissure of Sylvius and emptying into the superior petrosal sinus. **V., Tympanic,** a vein accompanying the tympanic artery. **V., Ulnar, Superficial,** a vein running from the wrist up the anterior and inner surface of the forearm. **V., Umbilical,** in the fetus, a vein extending from the navel along the falciform ligament to the liver. **Vs., Uterine,** a plexus of veins returning the blood from the uterus. **V., von Burow's.** See *Burow's Veins.* **V. of Vesalius,** a vein forming the channel of communication between the pterygoid plexus of veins and the cavernous sinus. **V., Vidian,** one of the branches of the pharyngeal vein.

Veinage (*va'-nāj*) [*vena*, vein]. Veining.

Veined (*vānd*) [*vena*, vein]. Provided with veins.

Veining (*vān'-ing*). Same as *Venation.*

Veinless (*vān'-les*) [*vena*, vein]. Without veins.

Veinlet (*vān'-let*). See *Venule.*

Veinous (*va'-nus*) [*vena*, vein]. Same as *Venous.*

Veinule (*vān'-ul*). See *Venule.*

Veinulet (*vān'-u-let*) [*vena*, vein]. A branch of a veinlet.

Veiny (*va'-ne*). Same as *Venose.*

Velamen (*ve-la'-men*) [L.: *pl.*, *Velamina*]. A veil, or envelop. **V. nativum,** the skin. **V. vulvæ.** See *Apron.*

Velamentous (*vel-am-en'-tus*) [*velamen*, a veil]. Veil-like.

Velamentum (*vel-am-en'-tum*) [L.: *pl.*, *Velamenta*]. A veil, or covering membrane. **Velamenta cerebri,** meninges. **V. infantis,** the fetal membranes.

Velar (*ve'-lar*) [*velum*, veil]. Pertaining to a velum, especially to the velum palati.

Velarium (*ve-la'-re-um*) [*velum*, veil: *pl.*, *Velaria*]. In biology, the peculiar velum of the *Cubomedusæ* and *Rhizostomæ*, differing from the true velum of the *Craspedota* by its supply of gastro-canals.

Velate (*ve'-lāt*) [*velare*, cover, veil]. Furnished with a veil.

Velation (*ve-la'-shun*) [*velare*, to veil]. The formation of a velum.

Veliferous (*ve-lif'-er-us*) [*velifer*, sail-bearing]. Having a velum; velamentous.

Veliform (*vel'-if-orm*) [*velum*, veil; *forma*, form]. Forming a velum.

Veliger (*vel'-ij-er*) [*velum*, a veil; *gerere*, to bear]. In biology, a larval stage of development in *Mollusca*, characterized by the presence of a velum, or ciliated swimming-membrane.

Veligerous (*ve-lij'-er-us*) [*velum*, a sail, veil; *gerere*, to bear]. In biology, bearing a veil, or velum.

Vella's Fistula. See *Fistula.*

Vellarin (*vel'-ar-in*). The active principle of *Hydrocotyle asiatica;* alterative, astringent, tonic. Unof.

Velleity (*vel-e'-it-e*) [*velleitas; velle*, to wish]. A weak form of volition; feeble desire or inclination.

Vellicate (*vel'-ik-āt*) [*vellicare*, to pluck]. To twitch; to move spasmodically.

Vellication (*vel-ik-a'-shun*) [*vellicatio; vellicare*, to twitch]. The spasmodic twitching of muscular fibers as observed in tic.

Velpeau's Apparatus. An immovable dressing for fractures, consisting of a compress and card-board splints, hardened by a solution of dextrin. **V.'s Bandage.** See *Bandage*. **V.'s Hernia,** femoral hernia in front of the vessels. See *Hernia*, and *Diseases, Table of*.

Velum (*ve'-lum*) [*velum*, veil, sail: *pl.*, *Vela*]. In biology, a veil or veil-like structure, variously applied to membranous growths in both plants and animals, as the swimming-membrane of molluscan larvæ; the turned-in margin of the umbrella of certain medusæ, or the envelop covering the sphorophore of a hymenomycetous fungus. **V. interpositum,** the membranous roof of the third ventricle. **V. palati.** Same as *V. pendulum palati*. **V. partiale,** a membrane or veil which in some of the *Hymenomycetes* stretches from the margin of the pileus to the stipe. **V. pendulum palati,** the soft palate, and especially the uvula. **V., Posterior Medullary,** the commissure of the flocculus of the cerebellum. **V. tarini.** Same as *V., Posterior Medullary*. **V. universale,** a membrane which in some of the *Hymenomycetes* covers the entire sporocarp.

Velumen (*ve-lu'-men*) [*velumen*, a fleece]. In biology, the velvety integument of certain parts of plants or animals.

Velutinous (*ve-lu'-tin-us*) [*velutem*, velvet]. Velvety to the touch.

Vena (*ve'-nah*) [L.]. A vein. See *Vein*. **V. cava.** See *Cava*. **Vena cava inferior,** is formed by the junction of the two common iliac veins and empties into the right auricle of the heart. It receives lumbar, right spermatic, renal, suprarenal, phrenic, and hepatic branches. **Vena cava superior,** formed by the union of the innominate veins, conveys the blood from the upper half of the body to the right auricle.

Venæ (*ve'-ne*). Plural of *Vena*. Veins. See *Vein*. **Venæ comites,** veins that accompany arteries in their course. **V. Galeni,** the two trunks formed by the union of the vein of the corpus striatum and that of the choroid plexus; they empty into the straight sinus. **V. thebesii,** the small veins by which blood passes from the walls of the heart to the right auricle. **Venæ vorticosæ,** the venous network and trunks of the choroid coat of the eye.

Venal (*ve'-nal*). Same as *Venous*.

Venalization (*ven-al-iz-a'-shun*) [*vena*, vein]. The acquirement of venous qualities by the blood.

Venatio (*ven-a'-she-o*) [*venari*, to hunt]. 1. Same as *Venation*. 2. A hunting.

Venation (*ven-a'-shun*) [*vena*, a vein]. In biology, the distribution of veins in a leaf, or in the wing of an insect. See *Nervation*. **V., Forked,** venation in which the veins branch in repeated equal divisions. **V., Reticulate,** venation in which the veins have the form of a network. **V., Unbranched,** venation in which the veins run parallel and unconnected from the base to the tip of a leaf.

Venenate (*ven'-en-āt*) [*venenum*, poison]. Poisonous.

Venenation (*ven-en-a'-shun*) [*venenum*, a poison]. The condition of one affected by the venom of a poisonous insect or reptile.

Venenatus (*ven-en-a'-tus*) [*venenum*, a poison]. Poisonous.

Venenific (*ven-en-if'-ik*) [*venenum*, poison]. Poison-forming.

Venenifluous (*ven-en-if'-lu-us*) [*venenum*, poison *fluere*, to flow]. In biology, exuding a poisonous fluid or juice.

Venenose, Venenous (*ven'-en-ōz, ven'-en-us*) [*venenosus*]. Toxic; poisonous; acting by a toxic property.

Venenum (*ven'-en-um*). Same as *Poison*.

Venereal (*ven-e'-re-al*) [*Venus*, the goddess of love]. Pertaining to the sexual passion. **V. Bubo,** a swelling of the glands of the groin secondary to some venereal disease. **V. Diseases,** gonorrhea, syphilis, and chancroid. **V. Sore.** See *Chancre*. **V. Wart.** See *Verruca acuminata*.

Venereology (*ven-e-re-ol'-o-je*) [*Venus*, the goddess of love; λόγος, science]. The science of venereal disease.

Venery (*ven'-er-e*) [*Venus*, the goddess of love]. Sexual intercourse.

Venesection (*ven-e-sek'-shun*). See *Blood-letting*.

Venesuture (*ven-e-su'-tūr*) [*vena*, vein; *sutura*, suture]. The suturing of a vein.

Venetian Red. See *Pigments, Conspectus of*.

Venice (*ven'-is*) [Ital.]. A city of Italy. **V. Treacle, V. Turpentine.** See *Theriaca, Turpentine*. **V. White.** Same as *Hamburg White*.

Veniplex (*ven'-ip-leks*) [*vena*, vein; *plexus*, plexus]. A venous plexus; a plexus of veins.

Venom (*ven'-om*) [*venenum*, poison]. The poison secreted by certain reptiles and insects, as the rattlesnake, the scorpion, etc. **V.-albumin,** the albumin of the venom of a snake. **V.-globulin,** a globulin found in snake-poisons; there are various kinds described. **V.-peptone,** a peptone found in the venom of certain serpents. **V., Quickening, V., Vital,** semen.

Venomous (*ven'-om-us*) [*venenum*, a poison]. Poisonous; belonging or pertaining to venom; secreting venom.

Venosal (*ven-o'-zal*) [*vena*, vein]. Venous.

Venose (*ven'-ōz*) [*vena*, vein]. In biology, veiny; furnished with conspicuous veins. **V.-costate,** in biology, between ribbed and veined.

Venosity (*ven-os'-it-e*) [*vena*, vein]. Venous quality; a condition in which the arterial blood shows venous qualities; general congestion of the veins.

Venous (*ve'-nus*) [*venosus*]. Pertaining to a vein. **V. Hum,** the murmur or rushing sound observed in auscultation of a vein. **V. Nevus.** See *Nævus vascularis*.

Vent (*vent*) [ME., *vente*, vent]. An outlet, especially the anal opening.

Venter (*ven'-ter*) [*venter*, belly]. The belly or abdomen. Applied to structures having a concave or a belly-like appearance. **V. of Ilium,** the iliac fossa. **V. of Kidney,** the pelvis of the kidney. **V. of Scapula,** the anterior surface of the scapula.

Ventilation. The dilution and removal of all impurities that collect in the air of inhabited rooms, the most common of which is CO_2, which may be tested by *Lange's Method, q. v.* In hospitals the fundamental principle of ventilation observed is that each adult person confined in a space of 1000 cubic feet requires 3000 cubic feet of fresh air per hour in order to prevent the proportion of carbon dioxid in the room from rising above 0.06 per cent. This estimate is based on the fact that each adult expires, on the average, 0.6 of a cubic foot of carbon dioxid per hour. Ventilation may be *natural*, due to the forces constantly acting in nature, or *artificial*, the result of measures introduced by man. The former is brought about by the agency of the wind and by *diffusion*, or the power which gases of different densities possess of mixing with each other. *Artificial* ventilation is brought

about either by extracting the foul air from the room, or by forcing pure air into the room, and is effected by means of fans, heat, gas, or steam. *Natural* ventilation is aided by means of tubes or shafts employed as inlets and outlets. The outlets are guarded by *Cowls*, which prevent the entrance of rain, increase the extracting effect of the wind, and check the tendency to down-draught. A most valuable agent in this ventilation is the chimney. Windows also may be utilized for the same purpose. The estimation of CO_2 in the air may be made by the following methods: 1. *Minimetric Method*, when the proportion of CO_2 is not less than one part per 1000. The analysis is made by the use of a solution of sodium carbonate with phenolphthalein as an indicator. 2. *Pettenkofer's Method* has for its basis the fact that if air containing CO_2 is brought into contact with barium hydroxid in solution a combination takes place between the barium and CO_2 immediately, and insoluble barium carbonate is precipitated. 5. *Szydlowski's Method* consists in comparing a given volume of the air to be tested with a sample of air from which CO_2 has been removed, and the difference of pressure recorded by means of a mercurial column. 4. *Reiset's Method*, calculates the amount of CO_2 in the air from the difference found between the titration of a given volume of barium-water before and after the passage of the air through it. **V., Methods of;** there are various methods of securing ventilation, some of which are as follows: *Auburn or Pentonville System* of ventilating prisons. The cells are arranged in blocks of several tiers in height, and each block is surrounded by an outer building, between the walls of which and the doors of the tiers of cells on each side is an open corridor, not divided by floors corresponding to the floors of the several tiers. The air is drawn from this corridor into the cells. *Boyle's Ventilator*, an arrangement of mica valves allowing air to pass out, but allowing no back-draught. *Cooper's Ventilator*, a series of apertures in the glass of a window-pane arranged in a circle so as to be more or less completely closed by a circular disc having corresponding apertures and moving upon a central pivot. *Ellison's Ventilating Bricks*, are bricks perforated with conical holes, and fixed in the walls, with the apices of the cone on the outside. They are not likely to produce a draught. *Hinckes-Bird's Method* consists in placing a movable block of wood under the entire length of the lower window-sash. *Louvred Panes*, a form of window-ventilation by which an upward direction is imparted to the incoming air. These panes take the place of one or more of the squares of glass, and may be either opened or closed. *McKinnell's Ventilator*, a combined outlet and inlet ventilator, which is applicable in the case of upper rooms or rooms in single-story houses. It consists of two tubes, the one encircling the other, the inner acting as the outlet, and being fitted with a cowl. *Sheringham Valve*, a common form of inlet in windows or walls for the purposes of ventilation. The entrance to the opening in the wall is guarded by a strainer to keep out dust, while on the inside is a valved iron plate with closed sides and hinged at the bottom. This opening is usually placed near the ceiling. *Smead-Dowd System of Ventilation*, an artificial system of ventilation in which the outlets are at the bottom of the sheeting along the floor-line and open into spaces beneath the floor. These spaces are connected with flues down which the air is drawn by the powerful action of the furnace-chimney. *Tobin's Tube*, a means of ventilation, the air from without entering through a hole in the wall and being conducted by an upright tube into the upper portion of the room. **V., Pulmonary,** the supply of pure air to the lungs and the removal of the vitiated air. **V., Respiratory,** the supply of a fluid containing oxygen to a respiratory membrane and its removal after the oxygen has been given up.

Ventilator (*ven'-til-a-tor*) [*ventilare*, to fan]. An apparatus for effecting ventilation.

Ventrad (*ven'-trad*) [*venter*, stomach; *ad*, toward]. Toward the ventral aspect or surface; not dorsad nor neurad, and not laterad.

Ventral (*ven'-tral*) [*ventralis; venter*, belly, or abdominal cavity]. Pertaining to the belly. At or in the direction of the venter or belly-side of the body or the ventral aspect of an organ. *Hemal* is sometimes used instead of ventral. See the opposite, *Dorsal;* also, *Position and Direction, Table of Intrinsic Terms.*

Ventrally (*ven'-tral-e*). Synonym of *Ventrad.*

Ventricle (*ven'-trik-l*) [*ventriculus:* dim. of *venter*, a belly]. Applied to certain structures or parts having a bellied appearance. **V., Aortic,** the left ventricle of the heart. **V. of Arantius,** a cul-de-sac in the oblongata. **Vs. of Brain,** the third, fourth, fifth, and two lateral. *V., Third,* between the optic thalami and extending to the base of the brain; *V., Fourth,* the space between the oblongata and pons in front, and the cerebellum behind; *V., Fifth,* the cavity between the laminæ of the septum lucidum; *V., Lateral,* the considerable cavity of either half of the cerebrum, communicating with the third through the foramen of Monro. Each ventricle consists of a triangular central cavity or body, and three smaller cavities, called cornua. The corpus callosum forms the roof of the body, the septum lucidum the mesal boundary, and the floor is formed by the corpus striatum, tænia semicircularis, optic thalamus, choroid plexus, corpus fimbriatum, and fornix. The anterior cornu curves forward and outward into the anterior lobe of the brain, the middle cornu descends into the middle lobe, and the posterior cornu or digital cavity curves backward into the occipital lobe. **V. of Cerebellum,** the extension of the fourth ventricle into the substance of the cerebellum. **V. of Cord.** See *Canal, Central.* **V. of Corpus callosum,** the space between the labium cerebri and the callosum; the callosal fissure. **V. of Larynx,** a depression between the true and false vocal bands. **V., Left, of Heart,** that upon the dorsal and left side of the heart, and which, through the aorta, forces the blood over the general system. **V. of Morgagni,** a small cavity bounding each vocal band externally. **V., Optic,** the cavity of either optic or geminal lobe. **V., Right, of Heart,** that forcing the blood through the pulmonary artery toward the lungs. **V., Sixth.** See *Verga's V.*, and *Canal, Central.* **V., Sylvian.** Same as *V., Fifth.* **V., Verga's,** a space occasionally found between the callosum and the fornix.

Ventricornu (*ven-trik-or'-nu*) [*venter*, venter; *cornu*, cornu]. The ventral extension, or anterior horn, of the gray matter of the myelon.

Ventricornual (*ven-trik-or'-nu-al*) [*venter*, venter; *cornu*, cornu]. Pertaining to the ventricornu.

Ventricose (*ven'-trik-ōz*) [*venter*, abdomen]. Inflated or swelled out on one side, resembling an abdomen.

Ventricous (*ven'-trik-us*) [*venter*, belly]. In biology, distended, resembling an abdomen.

Ventricular (*ven-trik'-u-lar*) [*ventriculus*, a ventricle]. Belonging or pertaining to a ventricle. **V. Aqueduct.** See *Aqueductus Sylvii.* **V. Bands,** the longitudinal folds of mucous membrane above and parallel to the vocal bands. The false vocal bands.

Ventriculose (*ven-trik'-u-loz*) [*ventriculus*, belly]. Minutely ventricose.

Ventriculous (*ven-trik'-u-lus*). Same as *Ventricular.*

Ventriculus (*ven-trik'-u-lus*). See *Ventricle.*

Ventricumbent (*ven-trik-um'-bent*) [*venter*, belly; *cubere*, to lie]. Prone; lying with the ventral surface down.

Ventriduct (*ven'-trid-ukt*) [*venter*, belly; *ducere*, to lead]. To carry toward the belly.

Ventriloquism (*ven-tril'-o-kwizm*) [*venter*, belly; *loqui*, to speak]. Peculiar vocal utterance without the usual modifications of the resonance-organs, so that the voice seems to come from a closed space or from a distance.

Ventrimesal (*ven-trim-e'-zal*) [*venter*, belly; μέσον, middle]. Pertaining to or situated on the ventrimeson. At or toward the ventral edge of the meson, or ventral mesal or median line. See the opposite—*Dorsimesal;* also, *Position and Direction, Table of Intrinsic Terms.*

Ventrimeson (*ven-trim-e'-zon*) [*venter*, belly; μέσον, middle]. The mesial line on the ventral aspect of the body. The ventral edge of the meson or median plane of the body. The ventral median or mesal line. Cf. *Dorsimeson;* also, *Position and Direction, Table of Intrinsic Terms.*

Ventripyramid (*ven-trip-ir'-am-id*) [*venter*, belly; *pyramis*, pyramid]. An anterior pyramid of the oblongata.

Ventrocystorrhaphy (*ven-tro-sis-tor'-a-fe*) [*venter*, venter; κύστις, cyst; ῥαφή, suture]. The surgical operation of attaching to the wall of the abdomen the opened cyst-wall, so as to provide a free discharge of its contents.

Ventrodorsally (*ven-tro-dor'-sal-e*) [*venter*, belly; *dorsum*, back]. In a direction between the dorsal and ventral aspects.

Ventrofixation (*ven-tro-fiks-a'-shun*) [*ventrofixatio*]. The fixation of a displaced viscus to the abdominal wall.

Ventroinguinal (*ven-tro-in'-gwin-al*) [*venter*, belly; *inguinal*]. Pertaining to the abdomen and the groin.

Ventro-laterad (*ven-tro-lat'-er-ad*) [*venter*, belly; *latus*, side]. Toward the ventral and lateral aspects.

Ventromesal (*ven-tro-me'-zal*). Same as *Ventrimesal.*

Ventrose (*ven'-trōs*) [*ventrosus*]. Having a belly, or a swelling like a belly.

Ventrosity (*ven-tros'-it-e*) [*ventrositas*]. Corpulence; pendulousness of the abdomen.

Ventrotomy (*ven-trot'-o-me*) [*venter*, belly; τομή, a cut]. The operation of surgical incision of the abdominal cavity.

Venula (*ven'-u-lah*) [*venula*, dim. of *vena*, a vein: *pl.*, *Venulæ*]. In biology, a small vein or veinlet.

Venule (*ven'-ūl*). See *Venula.*

Venulose (*ven'-u-lōs*) [*venula*, dim. of *vena*, a vein]. In biology, furnished with veinlets.

Venulous (*ven'-u-lus*) [*venula*, a small vein]. Full of veinlets.

Venus Flycatcher, or **Flytrap.** See *Dionæa.*

Veratralbin (*ver-at-ral'-bin*) [*veratrum*, veratrum; *albus*, white]. An alkaloid obtained from *White Hellebore.*

Veratria (*ver-a'-tre-ah*). See *Veratrina.*

Veratric Acid (*ver-a'-trik*). See *Acid.*

Veratrin (*ver-a'-trin*) [*veratrum*, veratrum], $C_{32}H_{49}NO_9$. 1. See *Veratrina.* 2. *Cevadin.* This occurs, together with veratric acid and other alkaloids, in white hellebore and in Sabadilla seeds. It crystallizes from alcohol in prisms and melts at 205° C. 3. A precipitate from a tincture of the root of *Veratrum viride;* it is cathartic, nervine, arterial sedative, resolvent, anodyne, etc. Dose ⅛ to ½ grain. Unof. **V., Oleat.,** veratrin 2, oleic acid 98 parts. **V., Ung.,** veratrin 4, alcohol 6, benzoinated lard 90 parts.

Veratrina, Veratrine (*ver-at-ri'-nah, ver-at'-rin*) [L.]. A mixture of alkaloids obtained from the seeds of *Asagræa officinalis.* It is an exceedingly poisonous local irritant, and is used mainly as an external application for neuralgia, gout, and rheumatism. Dose gr. $\frac{1}{50}$–$\frac{1}{10}$.

Veratrization (*ver-at-riz-a'-shun*) [*veratrum*, veratrum]. Subjection to the influence of veratrin; veratrin-poisoning.

Veratrum (*ver-a'-trum*) [L., hellebore]. A genus of liliaceous plants. **V. album,** white hellebore, a European plant closely related to *V. viride.* It is a violent emetic and cathartic, and is actively poisonous; it is now little used, except as an insect-powder. For this use it is highly valued, as it destroys many insects which the ordinary buhach does not affect. Unof. **V. sabadilla.** Cevadilla, cebadilla, a bulbous plant of the order *Melanthaceæ;* it contains a number of alkaloids, and is the source of *Veratrina.* The seeds are official in the B. P. under the name *Sabadilla.* **V. viride** [*gen.*, *Veratri viridis*], American hellebore; the rhizome and rootlets of the plant contain jervin, veratrin, and other alkaloids. It is a powerful depressant of the heart and a paralyzant of the spinal cord. Its action is similar to that of aconite, but is regarded as inferior. It is highly esteemed in puerperal fevers, pneumonia, and aneurysm. **V., Ext., Fld.** Dose ♏ij–iv. **V., Tinct.,** 50 per cent. Dose ♏ij–x.

Verbascum (*ver-bas'-kum*) [L., mullein]. A genus of scrophulariaceous plants, including mullein, the leaves of **V. thapsus** L., or common mullein. The latter is emollient, demulcent, and slightly anodyne, and is a popular domestic remedy in pulmonary tuberculosis and other pulmonary affections, being palliative to the cough. It is useful in diarrhea and in inflammations of the urinary tract. Dose of fluid extract gtt. x–xx.

Verbena (*ver-be'-nah*) [L.]. A genus of flowering plants of some 80 species, once highly esteemed in medicine, but now little used. **V. hastata,** *blue vervain,* is expectorant and emetic; **V. officinalis** and **V. triphylla,** antispasmodic; **V. urticifolia,** diuretic. Unof.

Verbigerate (*ver-bij'-er-āt*) [*verbigere*, to talk]. To make use of verbigeration.

Verbigeration (*ver-bij-er-a'-shun*) [*verbigere*, to talk]. The frequent and uncontrollable repetition of one and the same word, sentence, or sound, without reference to its meaning; abnormal repetition of words.

Verdet (*vār-da'*) [Fr.]. A fungous disease of maize due to the presence of parasites—*Ustilago segetum, Uredo carbo,* or *Sporisorium maidis*—on the grains. It was erroneously believed to cause pellagra.

Verdigris (*ver'-dig-ris*) [ME., *verdegrese*, verdigris]. A deposit upon copper vessels from the formation of cupric salts. See *Copper,* and *Pigments, Conspectus of.* **V., Blue,** a deposit consisting in the main of bibasic acetate of copper. **V., Common,** basic cupric acetate. **V., Green,** a bright, very bluish-green verdigris composed of a mixture of several acetates, but mainly of sesquibasic cupric acetate.

Verditer (*ver'-dit-er*) [Fr., *verde de terre*, earth green]. A name applied to two pigments. **V., Blue,** is either a carbonate of copper or a mixture of copper oxid with hydrated lime. **V., Green,** is an impure carbonate of copper with chalk. Both are used as pigments.

Verdure (*ver'-dūr*) [*viridis*, green]. Green vegetation.

Verdurous (*ver'-dūr-us*) [*viridis*, green]. Covered with verdure; verdant.

Veretrum (*ver-et'-rum*). Synonym of *Penis.*

Verga's Ventricle. A cleft-like space occasionally found between the fornix and the callosum.

Verge (*vurj*) [*virga*, a rod]. In biology, the male organ of crabs, arising from the sternum or from the coxal joint of the posterior feet.

Vergens (*vur'-jenz*) [L.]. Inclining. **V. deorsum,** tending or inclining downward, as of the axis of vision of one eye in strabismus. **V. sursum,** upward inclination or tending.

Verheyen, Stars of. Venous plexuses of stellate form situated on the surface of the kidney, beneath its capsule. They unite to form the interlobular veins.

Verin (*ver'-in*) [*veratrum*, hellebore], $C_{28}H_{45}NO_8$. An amorphous alkaloid obtained from veratrin.

Verjuice (*ver'-jūs*) [Fr., *verjus*]. The expressed juice of unripe fruits.

Vermian (*ver'-me-an*) [*vermis*, a worm]. In biology, of or pertaining to worms; worm-like.

Vermicelli (*ver-mis-el'-e*) [It., little worms]. An Italian paste consisting mainly of flour, cheese, and egg, rolled into small, worm-like cylinders. It is a favorite ingredient of soups.

Vermicidal (*ver-mis-i'-dal*) [*vermis*, worm; *cædere*, to kill]. Destroying worms.

Vermicide (*ver'-mis-īd*) [*vermis*, a worm; *cædere*, to kill]. A medicine or agent that kills intestinal worms.

Vermicular (*ver-mik'-u-lar*) [*vermicularis; vermis*, worm]. Worm-shaped or with worm-like motion.

Vermiculate (*ver-mik'-u-lāt*) [*vermiculatus*]. Resembling or shaped like a worm. In biology, (*a*) marked with tortuous, wavy lines or depressions; (*b*) infested with worms.

Vermiculation (*ver-mik-u-la'-shun*) [*vermiculatio*]. The peculiar motion of certain tubular organs, such as the esophagus and the intestines, consisting in the progressive contraction of successive parts of the tube.

Vermicule (*ver'-mik-ūl*) [*vermiculus*, a small worm]. A little worm or grub.

Vermiculose (*ver-mik'-u-lōz*) [*vermiculus*, a little worm]. Full of worms; worm-like.

Vermiculus (*ver-mik'-u-lus*) [L.]. A little worm or grub.

Vermiform (*ver'-mif-orm*) [*vermiformis; vermis*, worm; *forma*, a form]. Having a shape like a worm. **V. Appendage,** or **Appendix,** a worm-shaped tube at the lower and back part of the cecum. **V. Process, Inferior and Superior,** the vermis of the cerebellum.

Vermifugal (*ver-mif'-u-gal*) [*vermis*. worm; *fugare*, to flee]. Having the qualities of a vermifuge; expelling worms.

Vermifuge (*ver'-mif-ūj*) [*vermis*, worm; *fugare*, to expel]. A medicine or agent that expels intestinal worms.

Vermigrade (*ver'-mig-rād*) [*vermis*, worm; *gradi*, to walk]. Moving like a worm.

Vermilion (*ver-mil'-yun*). See *Pigments, Conspectus of.*

Vermin (*ver'-min*) [*vermis*, worm]. A general (and mainly collective) name for parasitic animals and for semi-parasites, such as fleas and bed-bugs.

Vermination (*ver-min-a'-shun*) [*vermis*, worm]. Infestation with worms; the condition of one affected with worms.

Verminous (*ver'-min-us*) [*vermis*, worm]. Affected with or having the characters of worms.

Vermiparous (*ver-mip'-ar-us*) [*vermis*, worm; *parere*, to bear]. Producing or breeding worms.

Vermis (*ver'-mis*) [L.: *pl.*, *Vermes*]. 1. A worm. See *Worm.* 2. The mesal lobe of the cerebellum.

Vermivorous (*ver-miv'-or-us*) [*vermis*, worm; *vorare*, to devour]. Worm-eating.

Vermix (*ver'-miks*). A contraction, used by Minot and some German writers, of the term *Vermiform Appendix.*

Vermouth (*ver'-muth*) [Ger., *wermuth*, wormwood]. A cordial prepared from white wine and flavored with wormwood; esteemed as an appetizer.

Vernacular (*ver-nak'-u-lar*) [*vernaculus*, native]. The language or dialect of one's own country.

Vernal (*ver'-nal*) [*vernalis*, of the spring]. Pertaining to the spring. **V. Conjunctivitis,** a conjunctival inflammation or congestion, occurring chiefly in the young, recurring each spring or summer, and disappearing with frost.

Vernation (*ver-na'-shun*) [*vernare*, to flourish, bloom]. In biology, the arrangement of leaves within the bud; prefoliation.

Verneuil's Neuroma. A plexiform neuroma or neuroma cirsoideum.

Vernicose (*ver'-nik-ōz*) [*vernix*, varnish]. Glistening, having a varnished appearance.

Vernier (*ver'-ne-a*) [after Paul *Vernier*, the inventor]. In physics, a contrivance attached to various instruments of precision for the estimation of minute fractions of any unit of distance.

Vernin (*ver'-nin*). A leukomain base found in young vetch, clover, ergot, etc.; it yields guanin on heating with hydrochloric acid. See *Leukomains, Table of.*

Vernix (*ver'-niks*) [L.]. Same as *Varnish.* **V. caseosa,** "Cheesy Varnish." A sebaceous deposit covering the surface of the fetus.

Verona Brown. See *Pigments, Conspectus of.*

Veronese Green. See *Pigments, Conspectus of.*

Vernonia (*ver-no'-ne-ah*) [after William *Vernon*, an English botanist]. A genus of composite-flowered plants of some 500 recognized species. **V. cinerea** is esteemed in India as a febrifuge; **V. anthelmintica** affords a kind of wormseed; **V. nigritiana,** of Africa, is febrifugal and acts on the heart. Unof.

Vernonin (*ver-no'-nin*) [after William *Vernon*, an English botanist]. A glucosid, the active principle of the root of *Vernonia nigritiana*, an African plant. Its properties are similar to those of digitalis, though its poisonous properties are much less.

Veronica (*ve-ron'-ik-ah*) [*vera*, true; *εἰκών*, image]. A genus of scrophulariaceous herbs and shrubs of some 200 species. **V. beccabunga,** antiscorbutic. Unof. **V. officinalis** is diuretic and diaphoretic. **V. virginica.** See *Culver's Physic.*

Verriculate (*ver-ik'-u-lāt*) [*verriculum*, a drag-net]. Covered with verricules.

Verricule (*ver'-ik-ūl*) [*verriculum*, a drag-net]. In biology, a thick-set tuft of upright parallel hairs.

Verruca (*ver-ru'-kah*) [L.: *pl.*, *Verrucæ*]. *Wart;* single or multiple, hard or soft, rounded, flattened, or acuminate, circumscribed, papillary excrescences on the skin, variable in color and smooth at the summit, or studded with moniliform elevations or with clusters of minute, pointed, horny filaments. **V. acuminata,** *Condyloma; moist wart; fig wart; cauliflower excrescence; venereal wart;* a warty growth occurring in parts especially subjected to maceration with sweat, venereal secretions, and mucous discharges, such as the genital and anal regions of both sexes. They are flat, acuminate, whitish, reddish, pinkish, or flesh-tinted, sessile or pedunculated masses of vegetations, commonly smeared with a thin, excessively offensive secretion. They may be single and small, or as large as the fist; often they are very numerous. They are highly vascular. **V. ani,** condylomata about the anus. **V. congenita,** a wart appearing at or shortly after birth. **V. digitata,** flat warts characterized by digitations springing from the center or border. **V. febrilis.** Same as *Variola verrucosa.* **V. filiformis,** a thread-like wart, single or multiple, congenital or acquired, seen often on the face, neck, eyelids, and ears,

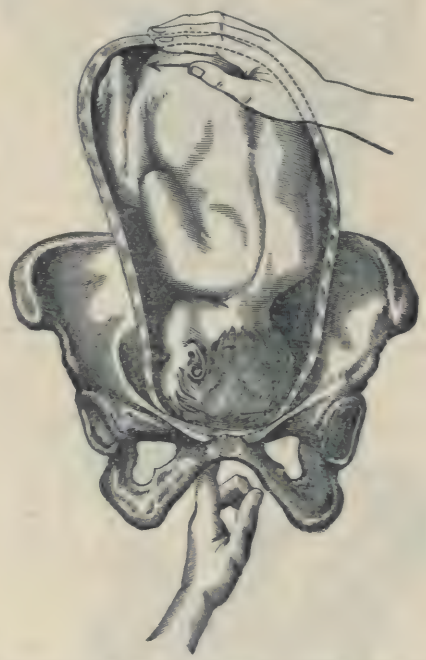
as well as the trunk. **V. follicularis**, wart-like accumulations around the mouths of the sebaceous follicles. They are composed of dried epithelium and sebaceous matter. **V. glabra**, a smooth wart. **V. necrogenica**, *Anatomic tubercle; post-mortem wart; warty tubercle; tuberculosis verrucosa cutis;* a warty excresence found usually on the fingers of those who frequently handle the tissues of tuberculous subjects. It begins as a vesicular or pustular lesion rising from an engorged base, and may be a purely local disorder, or give rise to general infection. **V. perstans**, a wart that does not tend to spontaneously disappear. **V. plana**, a flattish wart with a slight elevation and broad and relatively smooth surface; seen in older patients. **V. sebacea**, the type met with in persons of seborrheic tendency and uncleanly habits. **V. senilis**, *Keratosis pigmentosa;* a flattened and markedly pigmented wart of old people. It occurs on the face, trunk, hands, and genital regions usually. It often undergoes an epitheliomatous metamorphosis. **V. sessilis.** Same as *V. plana.* **V. subunguinalis**, a soft wart growing under the nails. **V. syphilitica**, syphilitic condylomata. **Verrucæ venereæ**, tubercular syphiloderm arranged in clusters. **V. vulgaris**, the single or multiple horny warts, in size from a pinhead to a pea, seen often on the hands of young persons of both sexes.

Verruciform (*ver-u'-sif-orm*) [*verruca*, wart; *forma*, form]. Wart-like.

Verrucose, Verrucous (*ver'-u-kōz, ver'-u-kus*) [*verrucosus*]. Warty; covered with or having warts.

Verrucula (*ver-u'-ku-lah*) [L.: *pl.*, *Verruculæ*]. A little wart; a minute, wart-like eminence.

Verruculose (*ver-u'-ku-loz*) [*verrucula*, a little wart]. Marked by small, warty growths.

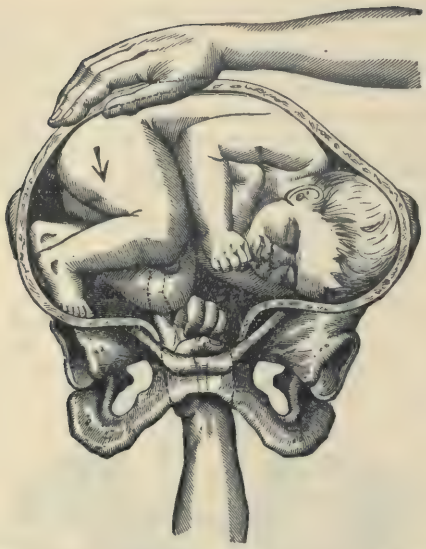


Verrugas (*ver-u'-gahs*) [Sp.]. See *Verruca.* **V. peruana**, *Carrion's Disease* (after Daniel A. Carrion, a Peruvian medical student). *Peruvian Wart;* a narrowly endemic, specific disease of the skin occurring in the Western Andes, in Peru. It consists in the development of raised spots, in size from a lentil to a pea, which become cylindric, conic, or hemispheric tumors, in size from a raspberry to an orange. Severe febrile symptoms precede the eruption of the lesions. The consistence is soft or elastic; the epidermis thins over the tumor; cracks and bleeding, often copious, follow. There may be hundreds of the tumors, which ulcerate and fungate. Death usually results from profound anemia. The disease is believed to be due to a special bacillus known as *Yzquierdo's bacillus*, having been first described by Professor Yzquierdo of Santiago de Chile.

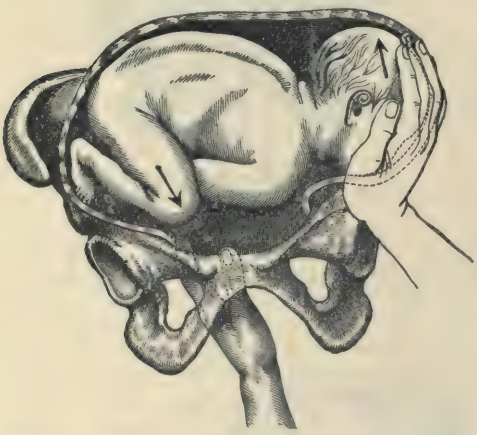
Versatile (*ver'-sat-il*) [*versare*, to turn]. In biology, swinging or moving freely; reversible.

Versicolor (*ver-sik-ul'-or*) [*versare*, to change; *color*, color]. Of variegated or changing color.

Versio (*ver'-zhe-o*). Same as *Version.*

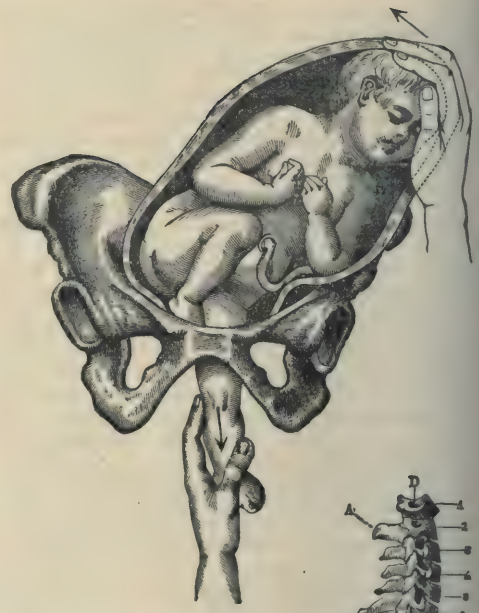


Version (*ver'-zhun*) [*versio; vertere*, to turn]. Turning: an obstetric operation whereby one end of the fetal ovoid is made to replace the other. **V., Abdominal.** Same as *V., External.* **V., Ano-pelvic**, a variety of pelvic version, the child being seized by the pubic arch through the mother's pelvis. **V., Bipolar**, version by acting upon both poles of the fetus. **V., Cephalic**, turning the fetus so as to bring the head to present. **V., Combined**, bipolar version, consisting of a combination of external and internal version. **V., External**, version effected by external manipulation. **V., French Method of**, podalic version, in which the hand is first directed to the breech and then follows down the thighs to the feet. **V., German Method of**, podalic version, in which the hand is carried directly over the abdominal aspect of the fetus to the feet. **V., Internal**, by entering the hand within the uterus. **V., Mixed.** Same as *V., Combined.* **V., Pelvic**, turning the fetus so as to bring about a breech-presentation. **V., Podalic**, bringing down one or both feet. **V., Spontaneous**, the process whereby a transverse position is, without external influence, changed into a longitudinal one. **V., Two-finger**, version by the introduction of two fingers into the uterus.



First Stage of Bipolar Version. (*After R. Barnes.*)

Second Part of the First Stage of Bipolar Version, when Head becomes Extended. (*After R. Barnes.*)

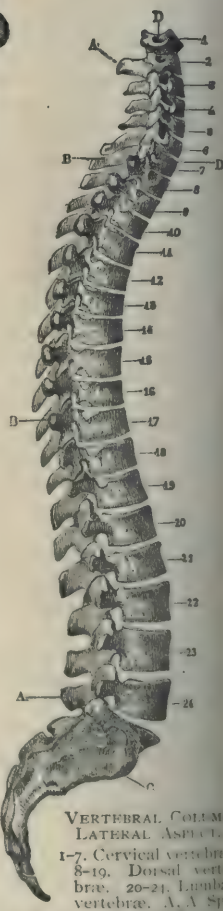


SECOND STAGE OF BIPOLAR VERSION. (*After R. Barnes.*)

COMMENCEMENT OF THIRD STAGE OF BIPOLAR VERSION. (*After R. Barnes.*)

Vertebra (*ver'-te-brah*) [*vertere*, to turn: *pl.*, *Vertebræ*]. The vertebræ in man are the 33 bones forming the spine or vertebral column, divided into 7 cervical, 12 thoracic or dorsal, 5 lumbar, 5 sacral, 4 coccygeal. In a wider sense any axial metamere of the skull or of the neuroskeleton is called a vertebra. **V., Basilar**, the last lumbar vertebra. **Væ., Caudal**, the vertebræ of the tail. **Væ., Cephalic**, the bones of the skull considered as vertebral in type. **Væ., Cranial**, vertebræ formed of the cranial bones and the osseous and cartilaginous appendages of the skull. **V. dentata**, the axis, or second cervical. **Væ., Dorsal**, same as *Væ., Thoracic.* **Væ., False**, or **Fixed**, the united portions of the coccyx and the sacrum. **Væ., Pelvic.** Same as *Væ., Sacral.* **V. prominens**, the seventh cervical. **Væ., Sacral**, the five bones entering into the formation of the sacrum. **Væ., Thoracic**, the costiferous vertebræ, numbering twelve in man. **V., Tricuspid**, in lower animals the sixth cervical vertebra. **Væ., True**, the cervical, thoracic, and lumbar vertebræ. Those which are not fused in adult life. **Væ., United.** Same as *Væ., False.*

SECOND PART OF THIRD STAGE OF BIPOLAR VERSION. (*After R. Barnes.*)



Vertebral (*ver'-te-bral*) [*vertebralis*]. Pertaining to or characteristic of a vertebra; made up of or possessing vertebræ. **V. Canal.** See *Canal.* **V. Column**, the spine, or back-bone, composed of the vertebræ.

Vertebrarterial (*ver-te-brar-te'-re-al*) [*vertebra*, vertebra; *ἀρτηρεία*, artery]. Belonging or pertaining to the vertebral arteries or veins.

Vertebrata (*ver-te-bra'-tah*) [*vertebra*, a vertebra]. In biology, a great division of the animal kingdom, including all animals having a spinal column, or its equivalent body axis.

Vertebrate (*ver'-te-brāt*) [*vertebra*, vertebra]. Having or pertaining to vertebræ.

Vertebration (*ver-te-bra'-shun*) [*vertebra*, vertebra].

VERTEBRAL COLUMN, LATERAL ASPECT. 1–7. Cervical vertebræ. 8–19. Dorsal vertebræ. 20–24. Lumbar vertebræ. A, A. Spinous processes. B, B. Articular facets of transverse processes of first ten dorsal vertebræ. C. Auricular surface of sacrum. D. Foramina in transverse processes of cervical vertebræ.

Separation into vertebræ, or into metameres resembling the vertebræ.

Vertebro-basilar (*ver-te-bro-bas'-il-ar*) [*vertebra*, vertebra; *βάσις*, base]. Belonging to the vertebræ and the base of the skull.

Vertebro-chondral (*ver-te-bro-kon'-dral*) [*vertebra* vertebra; *χονδρός*, cartilage]. Connecting the costal cartilages with the vertebræ.

Vertebro-costal (*ver-te-bro-kos'-tal*) [*vertebra*, vertebra; *costa*, rib]. Pertaining to the vertebræ and the ribs.

Vertebrodidymia (*ver-te-bro-did-im'-e-ah*) [*vertebra*, vertebra; *δίδυμος*, twin]. A monstrosity formed by two individuals united by the vertebræ.

Vertebro-femoral (*ver-te-bro-fem'-or-al*) [*vertebra*, vertebra; *femur*, femur]. Pertaining to the vertebral column and the femur.

Vertebro-iliac (*ver-te-bro-il'-e-ak*) [*vertebra*, vertebra; *ilium*, ilium]. Pertaining to the vertebræ and the ilium.

Vertebrosacral (*ver-te-bro-sa'-kral*) [*vertebra*, vertebra; *sacrum*, sacrum]. Pertaining to the sacral and antecedent vertebræ.

Vertebrosternal (*ver-te-bro-stur'-nal*) [*vertebra*, vertebra; *στέρνον*, sternum]. Extending, as a rib, from the spinal column to the sternum. **V. Ribs**, the true ribs.

Vertebrum (*ver'-te-brum*) [L.]. The head of the femur.

Vertex (*ver'-teks*) [L.]. The crown or top of the head. The apex of an organ. See *Craniometric Points*.

Vertical (*ver'-tik-al*) [*vertex*, a polar axis]. Pertaining to the vertex. In a direction at an angle of 90° with the horizontal. **V. Diameter of Cranium**, an imaginary line from the basion to the bregma.

Verticil (*ver'-tis-il*) [*verticillus*, the whirl of a spindle]. In biology, a whorl; a circle of leaves, tentacles, hairs, organs, or processes radiating from an axis on the same horizontal plane.

Verticillaster (*ver-tis-il-as'-ter*) [*verticillus*, the whirl of a spindle]. In biology, a term applied to the pairs of opposite cymes that occur in the axils of the leaves of mints, and at first sight resemble whorls.

Verticillastrate (*ver-tis-il-as'-trāt*) [*verticillus*, the whirl of a spindle]. Arranged in verticillasters.

Verticillate (*ver-tis-il'-at*) [*verticillus*, a whirl]. Whorled. **V.-pilose**, pilose or hairy in whorls.

Verticillation (*ver-tis-il-a'-shun*) [*verticillus*, a whirl]. The formation of a verticil.

Verticillus (*ver-tis-il'-us*) [L.]. A verticil.

Vertico-mental (*ver-tik-o-men'-tal*) [*vertex*, vertex; *mentum*, chin]. Pertaining to the vertex and the chin. **V. Triangle.** See *Triangle*.

Vertiginous (*ver-tij'-in-us*) [*vertere*, to turn]. Resembling or affected with vertigo. **V. Status**, a term applied to the condition in which paroxysms of vertigo occur in rapid succession.

Vertigo (*ver'-tig-o*) [L., *vertere*, to turn]. Giddiness, dizziness. The sensation of a lack of equilibrium. This condition may be due to pathologic conditions of the ears (*Auditory V.*), the eyes (*Ocular V.*), the brain (*Cerebral V.*), the stomach (*Gastric V.*), the blood, etc. It may be *subjective* or *objective*. **V., Auditory.** See *Ménière's Disease*. **V., Aural**, labyrinthine vertigo, or Ménière's Disease. **V., Bilious**, vertigo due to derangement of hepatic function. **V., Cerebral**, vertigo caused by cerebral disorder. **V., Epileptic**, vertigo due to or associated with epilepsy. **V., Essential**, when no abnormalism of the body can be found to account for it. **V., Gastric.** Same as *V., Stomachal*. **V., Horizontal**, vertigo which appears when the patient assumes a horizontal position. **V., Intestinal**, vertigo caused by intestinal disorder. **V., Labyrinthine.** See *Ménière's Disease*. **V., Laryngeal**, a name applied to a group of symptoms of rare occurrence that may appear in connection with recognized nervous diseases, as posterior spinal sclerosis or epilepsy, or without obvious explanation. It is accompanied by pain or spasm of the larynx, and perhaps syncope. **V., Lateral**, vertigo which is due to the rapid passing of similar objects, as fence-palings. **V., Mechanical**, vertigo caused by mechanical movements. **V., Ménière's.** See *Ménière's Disease*. **V., Neurasthenic**, subjective vertigo found in neurasthenia. **V., Objective**, when objects seem to the patient to move. **V., Paralyzing.** See *Gerlier's Disease*. **V., Riders'**, dizziness occurring in some persons from riding in the cars. **V., Rotatory**, vertigo produced by rotation of the body, or by seeing rotating objects. **V., Smokers'**, a form of vertigo occurring chiefly in men past fifty years of age, especially those accustomed to smoke before meals. It may be arterio-sclerotic in character. **V. Stomachal**, vertigo arising from dyspepsia. **V., Subjective**, when the patient himself seems to move. **V., Vertical**, vertigo caused by looking downward from or upward to a height.

Verugas (*ver-u'-gas*). Same as *Verrugas*.

Verumontanum (*ver-u-mon'-ta-num*) [*veru*, a spit; *mons*, a mountain]. The caput gallinaginis, a longitudinal ridge on the floor of the canal of the male urethra.

Vesalius, Foramen of. See *Foramina, Table of*. **V., Glands of.** See *Gland*. **V., Ligament of**, Poupart's ligament. **V., Vein of.** See *Vein*.

Vesania (*ves-a'-ne-ah*) [L.]. Unsoundness of mind.

Vesica (*ves'-ik-ah*) [L.: *gen.* and *pl.*, *Vesicæ*]. The bladder.

Vesical (*ves'-ik-al*) [*vesicalis; vesica*, a bladder]. Pertaining to or having the nature of a bladder. **V. Triangle.** See *Triangles, Table of*.

Vesicant (*ves'-ik-ant*) [*vesicare*, to blister]. 1. Blistering. 2. A blistering agent or application.

Vesication (*ves-ik-a'-shun*) [*vesicatio; vesicare*, to blister]. The formation of a blister; a blister.

Vesicatory (*ves'-ik-at-or-e*) [*vesicatorium*]. A medicine or agent that, applied to the skin, produces a blister.

Vesicle (*ves'-ik-l*) [*vesica*, bladder, blister]. In biology, a small, membranous, bladder-like formation. See also *Papule*. **V., Allantoic**, the internal portion of the allantois. **V., Auditory**, the sac in the fetus from which the internal ear is formed. **V. of Baer**, the ovum of the Graafian vesicle. **V. of Balbiani.** Same as *Yolk-nucleus*. **V., Blastodermic.** See *Blastoderm*. **V., Blood.** A *Blood-corpuscle*. **Vs., Cerebral.** Same as *Vs., Encephalic*. **Vs., Encephalic**, the divisions of the cephalic extremity of the primitive neural tube; they are formed early in fetal life and constitute the protons of the segments of the brain. **V., Germinal.** See *Macula* and *Zona pellucida*. **V., Gland.** Same as *Acinus*. **Vs., Graafian**, the ovisacs of the ovary containing the ova. **V., Kupffer's.** See *Kupffer*. **V., Malignant.** Synonym of *Contagious Anthrax*. **Vs. of Naboth.** Same as *Ovule of Naboth*, *q. v.* **V., Ocular**, a protrusion in the fetus that is the first indication of the eye. **V., Olfactory**, the primitive vesicle which develops into the olfactory lobe. **V., Otic**, a pear-shaped, closed sac of the embryonic inner ear formed by the fusion of the lips of the auditory pit, and giving rise by a diverticulum to the recessus vestibuli. See *V., Auditory*. **V., Pituitary**, the primitive vesicle which develops into the hypophysis. **V. of Purkinje.** See

Macula. **V., Seminal,** the lobulated pouches of a membrane between the base of the bladder and the rectum that serve as reservoirs for the semen. **V., Umbilical.** See *Yolk-sac.*

Vesico- (*ves'-ik-o-*) [*vesica*, bladder]. A prefix to denote relation to or connection with the bladder.

Vesico-abdominal (*ves'-ik-o-ab-dom'-in-al*) [*vesica*, bladder; *abdomen*, abdomen]. Belonging to the abdomen and the urinary bladder.

Vesicocele (*ves'-ik-o-sēl*) [*vesica*, bladder; κήλη, hernia]. Hernia of the bladder.

Vesico-cervical (*ves'-ik-o-ser'-vik-al*) [*vesica*, bladder; *cervix*, cervix]. Belonging to the cervix uteri and the urinary bladder.

Vesicoclysis (*ves-ik-ok'-lis-is*) [*vesica*, bladder; κλύσις, a drenching]. The injection of fluid into the bladder.

Vesico-prostatic (*ves'-ik-o-pros-tat'-ik*) [*vesica*, bladder; προστάτης, prostate]. Belonging to the prostate gland and the urinary bladder.

Vesico-pubic (*ves'-ik-o-pu'-bik*) [*vesica*, bladder; *pubis*, pubis]. Pertaining to the urinary bladder and to the pubes.

Vesico-rectal (*ves'-ik-o-rek'-tal*) [*vesica*, bladder; *rectum*, rectum]. Pertaining conjointly to the bladder and the rectum.

Vesico-spinal (*ves'-ik-o-spi'-nal*) [*vesica*, bladder; *spina*, spine]. Belonging to the urinary bladder and the spinal cord.

Vesicotomy (*ves-ik-ot'-o-me*) [*vesica*, bladder; τέμνειν, to cut]. Incision of the bladder, usually of the urinary bladder.

Vesico-umbilical (*ves-ik-o-um-bil'-ik-al*) [*vesica*, bladder; *umbilicus*, umbilicus]. Belonging to the umbilicus and the urinary bladder.

Vesico-uterine (*ves-ik-o-u'-ter-in*) [*vesica*, bladder; *uterus*, uterus]. Belonging to the uterus and the urinary bladder. **V.-u. folds,** two semilunar folds which pass between the neck of the uterus and the posterior surface of the bladder.

Vesico-vaginal (*ves'-ik-o-vaj'-in-al*) [*vesica*, bladder; *vagina*, vagina]. Pertaining conjointly to the bladder and the vagina.

Vesicula (*ves-ik'-u-lah*) [dim. of *vesica*, a bladder: *pl.*, *Vesiculæ*]. A vesicle or papule containing lymph. Applied, also, to a number of pouches or bladder-like bodies. **V. cordylares,** cordylar auditory vesicles of the *Marmonemidæ* and *Geryonidæ* among *Medusæ.* **V. graafianæ,** the vesicles in the outer layer and stroma of the ovary, each of which contains an ovum. **V. nabothi,** the small glandular bodies within the mouth of the uterus. **V. prostatica,** the depression or cul-de-sac, called, also, the *sinus pocularis*, which traverses the prostate gland beneath its middle lobe. It is the male homologue of the uterus, developed from the Müllerian ducts. **V. seminales,** the two lobulated, membranous pouches between the base of the bladder and the rectum. They constitute reservoirs for the semen. **V. serosa,** the false amnion. See *Amnion.*

Vesicular (*ves-ik'-u-lar*) [*vesicula*, a little bladder]. Pertaining to or having vesicles. **V. Breathing or Murmur,** the fine, normal, inspiratory, auscultatory sound heard over the chest. **V. Column,** the ganglionic column of the spinal cord. **V. Column, Posterior.** See *Clarke's Column.* **V. Cylinder,** Clarke's column. **V. Eczema,** eczema attended with the formation of vesicles. **V. Emphysema.** See *Emphysema.* **V. Erysipelas,** erysipelas attended with the formation of vesicles. **V. Fever.** Synonym of *Pemphigus.* **V. Germ.** See *Blastosphere.* **V. Glands,** in biology, glands containing a volatile oil placed just beneath the epidermis of a leaf or of the bark. **V. Quality,** the quality of sound characterizing the vesicular respiratory murmur. **V. Râle.** See *Râle.* **V. Resonance.** See *Resonance.* **V. Stomatitis.** Same as *Stomatitis, Aphthous.*

Vesiculate (*ves-ik'-u-lāt*) [*vesicula*, a little bladder]. 1. Having a vesicle. 2. To become vesicular.

Vesiculated (*ves-ik'-u-la-ted*) [*vesicula*, a little bladder]. Hydatidiform; appearing like a bunch of grapes.

Vesiculation (*ves-ik-u-la'-shun*) [*vesicula*, a little bladder]. The formation of vesicles; the condition of having vesicles.

Vesicule (*ves'-ik-ūl*). Same as *Vesicle.*

Vesiculiferous (*ves-ik-u-lif'-er-us*) [*vesicula*, bladder; *ferre*, to bear]. Bearing or having vesicles.

Vesiculiform (*ves-ik'-u-lif-orm*) [*vesicula*, a little bladder; *forma*, form]. Having the form of a vesicle.

Vesiculitis (*ves-ik-u-li'-tis*) [*vesicula*, vesicle; ιτις, inflammation]. Inflammation of the seminal vesicles.

Vesiculo-bronchial (*ves-ik'-u-lo-brong'-ke-al*) [*vesicula*, vesicle; βρόγχος, bronchus]. Both vesicular and bronchial, as a vesiculo-bronchial respiratory murmur.

Vesiculo-cavernous (*ves-ik'-u-lo-kav'-er-nus*) [*vesicula*, vesicle; *cavernous*]. Partaking of both vesicular and cavernous qualities.

Vesiculose (*ves-ik'-u-lōz*) [*vesicula*, a vesicle]. Vesiculiform.

Vesiculo-tubular (*ves-ik'-u-lo-tu'-bu-lar*) [*vesicula*, vesicle; *tubulus*, a tubule]. Both vesicular and tubular (a qualification for certain respiratory sounds).

Vesiculo-tympanitic (*ves-ik'-u-lo-tim-pan-it'-ik*) [*vesicula*, vesicle; τύμπανον, drum]. Partaking of both vesicular and tympanitic qualities.

Vesiculous (*ves-ik'-u-lus*). Same as *Vesicular.*

Vesiculus (*ves-ik'-u-lus*) [L.]. Same as *Vesicle.*

Vespajus (*ves-pa'-jus*) [*vespa*, a wasp]. A follicular and suppurative inflammation of the hairy part of the scalp.

Vespertine (*ves'-per-tin*) [*vesper*, evening]. In biology, of or pertaining to the evening; crepuscular, as many beetles, moths, bats, and birds, which are active at twilight.

Vespiary (*ves'-pe-a-re*) [*vespa*, a wasp]. In biology, a wasp's nest. Cf. *Apiary.*

Vespiform (*ves'-pif-orm*) [*vespa*, wasp; *forma*, form]. Wasp-like.

Vesque's Method. A method of producing crystals resembling in most respects those which are found in plant-cells. Three test-tubes are placed side by side; in the first is a moderately strong solution of calcic chlorid, in the middle one a 5 per cent. solution of sugar, and in the third a solution of potassic oxalate. From the liquid in the first a short strip of filtering paper runs to that in the second, and a similar strip passes from the second to the third test-tube; and thus the liquids in the three tubes are brought into direct contact. Crystals will be formed in the middle tube, their character depending upon the nature of the liquid there. In a solution of sugar, raphides are produced; in pure water, prisms of small size, but with sharply defined faces and angles. (Goodale.)

Vessel (*ves'-el*) [ME., *vessel*, vessel]. Any tube or canal through which the fluids, especially the blood, of the body circulate. See *Vas, Artery, Vein, Capillary, Lymphatic.* **Vs., Absorbent,** the lymphatics and lacteals. **V., Chyliferous,** absorbent vessels extending from the intestinal walls to the thoracic duct. **Vs., Hemorrhoidal,** varicose veins of the rectum. **Vs., Lacteal.** Same as *Vs., Chyliferous.* **Vs., Umbilical,** the umbilical arteries and veins.

Vestibular (*ves-tib'-u-lar*) [*vestibulum*, porch]. Pertaining to any vestibulum or vestibule.

Vestibulate (*ves-tib'-u-lāt*) [*vestibulum*, vestibule]. Having a vestibule; vestibular.

Vestibule (*ves'-tib-ūl*) [*vestibulum*, a porch]. A porch or threshold. **V., Aortic,** the space formed by the left ventricle adjoining the root of the aorta. **V. of the Ear,** the oval cavity of the internal ear, which forms the entrance to the cochlea. **V. of the Mouth,** that portion of the mouth outside of the teeth. **V. of the Nose,** the external nostrils. **V. of the Ventricles,** the entrance to the ventricles of the brain. **V. of the Vulva.** See *Bulbi vestibuli.*

Vestibulum (*ves-tib'-u-lum*) [L.: *gen.*, *Vestibuli*; *pl.*, *Vestibula*]. See *Vestibule.* Especially applied to the vestibule or cavity of the internal ear. It is situated behind the cochlea and in front of the semicircular canals.

Vestige (*ves'-tij*) [*vestigium*, foot-print]. In biology, a trace, sign, or remnant of something formerly present or more fully developed. See *Rudiment*, *Vestigial.*

Vestigia (*ves-tij'-e-ah*) [L., plural of *Vestigium*]. Parts of the body that may have no evident use in man, and yet may subserve important functions in lower animals, *e. g.*, the muscles of the external ear. **V. rerum** [L., "foot-prints of things"], the hypothetic changes which sensations impress upon the brain-substance, and which serve as a physical basis for memory.

Vestigial (*ves-tij'-e-al*) [*vestigium*, a vestige]. Of the nature of the vestigia. Existing only as a trace or vestige of what formerly existed; rudimentary. **V. Reflex.** See *Reflex.*

Vestigiary (*ves-tij'-e-a-re*) [*vestigium*, foot-print]. Vestigial.

Vestigium (*ves-tij'-e-um*) [L., a foot-print: *pl.*, *Vestigia*]. An anatomic relic of fetal or embryonic life. Thus, the thymus gland becomes in adults a *vestigium.*

Vestiture (*ves'-tit-ūr*) [*vestire*, to dress, clothe]. In biology, the epidermal investment, as hair, feathers, scales.

Vesuvin (*ve-sū'-vin*) [*Vesuvius*, a volcano near Naples]. Bismarck brown; triamidobenzol; phenylene-brown; used as a histologic stain. See *Pigments*, *Conspectus of.*

Veta (*vē'-tah*). See *Mareo.*

Veterinarian (*vet-er-in-a'-re-an*) [*veterinarius*, of or belonging to beasts of burden]. One who practises veterinary medicine.

Veterinary (*vet'-er-in-a-re*) [*veterinarius*]. Pertaining to animals. **V. Medicine,** the art and science of medicine as applied to the domestic animals.

Veternomania (*vet-er-no-ma'-ne-ah*) [*veternus*, lethargic; *μανία*, mania]. Typhomania.

Veternositas (*vet-er-nos'-it-as*) [*veternus*, old, lethargic]. Same as *Coma-vigil.*

Vetiveria (*vet-iv-ē'-re-ah*) [E. Ind., vettivayr]. A grass, *Andropogon muricatus*, of S. Asia. It affords a highly fragrant, volatile oil, and its infusion is refrigerant. Unof.

Vexillar (*veks'-il-ar*) [*vexillum*, standard]. Same as *Vexillary.*

Vexillary (*veks'-il-a-re*) [*vexillarius*, a standard-bearer]. In biology, applied to that form of imbricate estivation observed in the corolla of the pea, in which the other petals are enwrapped by the vexillum.

Vexillate (*veks'-il-āt*) [*vexillum*, a standard]. In biology, having vexilla or pogonia.

Vexillum (*veks-il'-um*) [*vehere*, to carry: *pl.*, *Vexilla*]. In biology, the upper and largest of the five petals of a papilionaceous flower.

Via (*vī'-ah*) [L.: *pl.*, *Viæ*]. A way. *Viæ naturales*, the natural passages. See also *Primæ viæ.*

Viability (*vi-ab-il'-it-e*) [*viabilis*, viable]. Ability to live; applied to the condition of a child at the time of birth.

Viable (*vi'-ab-l*) [*viabilis*, viable]. Capable of living, or likely to live; applied to a child born in a condition of development which will permit of its living.

Vial (*vi'-al*) [*φιάλη*]. A small, glass bottle.

Viand (*vi'-and*) [Fr., *viande*]. Food; sustenance.

Vibex (*vi'-bĕks*) [L.: *pl. Vibices*]. Any ecchymosis occurring in lines of varying width, from about an eighth of an inch to one inch. See *Purpura.*

Vibracularium (*vi-brak-u-la'-re-um*). Same as *Vibraculum.*

Vibraculum (*vi-brak'-u-lum*) [*vibrare*, to shake: *pl.*, *Vibracula*]. In biology, one of the peculiar appendages found on the stocks of many chilostome *Bryozoa.* They consist of prominences on the wall of the ordinary individuals (*zoœcia*) each of which carries a long seta, by the free movement of which the water surrounding the colony is kept in motion and particles of food brought within reach. Cf. *Avicularia* and *Flabellarium.*

Vibratile (*vi'-bra-til*) [*vibrare*, to shake]. Capable of vibrating.

Vibrating (*vi'-bra-ting*) [*vibrare*, to shake]. Shaking; oscillation. **V. Arm-chair.** See *Shaking-cure.*

Vibration (*vi-bra'-shun*) [*vibratio*; *vibrare*, to shake]. A swinging, oscillation, or thrill, like that of the string of a musical instrument; fremitus. In massage, a modification of the kneading-movement. It consists in making the alternate successive pressures and relaxations with very great rapidity. This may be done by the hand, but is better performed by means of some form of machine.

Vibrative (*vi'-bra-tiv*). See *Consonants.*

Vibrio (*vib'-re-o*) [*vibrare*, to vibrate]. A genus of *Schizomycetes.* See *Bacteria*, *Synonymatic Table of.*

Vibrion (*vib'-re-on*) [*vibrare*, to vibrate: *pl.*, *Vibriones*]. A member of the genus *Vibrio.*

Vibrissa (*vi-bris'-ah*) [*vibrissæ*, the hairs in the nostrils: *pl.*, *Vibrissæ*]. In biology, one of the tactile bristles growing about the mouths of various animals, as cats, the whippoorwill, and other birds, insects, etc.

Vibrophone (*vi'-bro-fōn*) [*vibrare*, to vibrate; *φωνή*, sound]. An instrument for conveying vocal vibrations to the ear.

Viburnin (*vi-bur'-nin*) [*viburnum*, the wayfaring tree]. A precipitate from a tincture of *Viburnum opulus*; anti-spasmodic, anti-periodic, expectorant, tonic. Dose 1 to 3 grains. Unof.

Viburnum (*vi-bur'-num*) [L.; *gen.*, *Viburni*]. 1. A genus of caprifoliaceous trees and shrubs, of some 80 species. **V. dentatum,** is diuretic. **V. lantana** is vesicant. **V. obovatum** has antiperiodic properties. **V. opulus,** "Cranberry tree," "Cranebark," is an efficient remedy in uterine and abdominal pains. **V. prunifolium,** *black haw*; the bark is used. It contains a resin, viburnic acid, identical with valerianic acid and other extractives. It is astringent and antispasmodic, with decided nervine properties. It is useful in the nervous diseases of pregnancy. Dose of the fld. ext. ʒss–ij; of extract. gr. iij–x. **V. tinus** is purgative. **Liquor sedans,** a utero-ovarian sedative and anodyne. Each fluid-ounce contains of black haw and golden seal each gr. lx, Jamaica dogwood gr. xxx, aromatics *q. s.* Dose ʒj–ij. The so-called *Hayden's Viburnum Compound* is said to be composed of the active principles of *V. opulus*, *Dioscorea villosa*, *Scutellaria lateriflora*, and aromatics. See, also, *Dockmackamus.*

Vicarious (*vi-ka'-re-us*) [*vicarius*; *vice*, in the place of]. Substitutive; taking the place of another;

applied to the assumption of the functions of one organ by another. **V. Menstruation.** See *Menstruation*.

Vice (*vīs*) [ME., *vice*, vice]. Defect, fault, or deformity. **V. of Conformation,** defect of structure, organs or parts being either absent or imperfect. See *Malformation*.

Vichy Salt (*ve'-she*) [Fr.]. A compound salt (*sal vichyanum*) supposed to represent the saline constituents of the Grande Grille spring at Vichy, in France. The N. F. has a formula for its preparation. It is recommended as diuretic, alterative, and antiarthritic. Unof. **V. Water,** a well-known, mildly laxative and antacid mineral water. Its main constituent is sodium bicarbonate.

Vicq d'Azyr, Bundle of. See *Bundle*. **V., Foramen of.** See *Foramina, Table of*. **V., Operation of,** rapid tracheotomy. Incision of the crico-thyreoid membrane. **V.'s White Line,** a thin stratum of white matter between the strata of the cinerea in the occipital region of the brain. See *Lines, Table of*.

Victoria (*vik-to'-re-ah*) [L., victory]. A genus of water-lilies. **V. Blue.** Same as *Night Blue*. **V. Green.** Same as *Chrome Green* and *Malachite Green*. **V. Orange.** Same as *V. Yellow*. **V. Yellow.** See *Pigments, Conspectus of*.

Vicuna (*vi-ku'-nah*). See *Alpaca*.

Vidard (*ve-dahr'*) [Fr.]. The French term for a horse affected with chronic intestinal catarrh due to the presence of *Ascaris megalocephala*.

Vidian (*vid'-e-an*) [after Guido Guidi, Latinized *Vidius*, an Italian anatomist]. Relating to Vidius the anatomist. **V. Artery.** See *Arteries, Table of*. **V. Canal.** See *Canal*. **V. Foramen.** See *Foramina, Table of*. **V. Nerve,** the union of the great petrosal and carotid nerves entering Meckel's ganglion. See *Nerves, Table of*.

Vienna (*ve-en'-ah*). The capital of Austria. **V. Caustic.** Same as *V. Paste*. **V. Draught,** compound infusion of senna. **V. Green.** Same as *Schweinfurth Green*. **V. Lime.** Same as *V. White*. **V. Method,** a method of examining the spinal cord from the front in performing an autopsy. The thoracic and abdominal viscera having been removed, the body of the fifth lumbar vertebra is cut away, and then the pedicles of the vertebræ are successively divided from below upward. The bodies being lifted off, the spinal canal is exposed. **V. Mixture.** See *Anesthetic*. **V. Paste.** See *Potassium*. **V. Powder.** See *Powder*. **V. System.** See *Merz System*. **V. White.** See *Pigments, Conspectus of*.

Vieussens, Annulus of. See *Annulus*. **V., Valve of.** See *Valve*.

Vigilantia (*vij-il-an'-she-ah*) [L.]. Wakefulness; insomnia.

Vignal, Bacillus of. See *Bacteria, Synonymatic Table*.

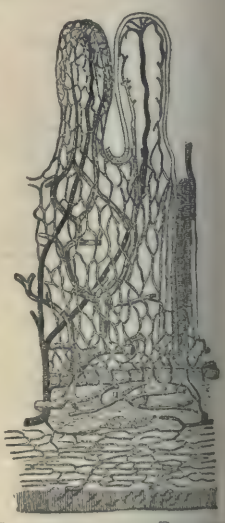
Vigo's Powder. See *Powder*.

Villatte's Liquor. A preparation used for injecting into carious bones. It consists of sulphate of zinc and sulphate of copper, each fifteen grains, solution of the subacetate of lead, half a dram, and dilute acetic acid, three and a half drams.

Villi (*vil'-i*). Plural of *Villus*, a tuft. Tufts of hair, or hair-like processes or projections of a mucous membrane giving it a velvety appearance. **V. of the Chorion,** fringes growing from the external surface of the vitelline membrane, finally covering the entire chorion. **V., Intestinal,** minute, highly vascular tongue-like processes projecting from the free surface of the mucous membrane of the small intestine throughout its whole extent. They are larger and more numerous in the duodenum and jejunum and are fewer and smaller in the ileum. They constitute the chief organs of absorption of fatty emulsions. **V. pericardiaci,** villi upon the ental surface of the pericardium. **V. peritoneales,** villi upon the free surface of the peritoneum. **V. plurales,** villi on the parietal pleura. **V., Synovial,** small, tongue-like processes projecting from the fringes of synovial membranes.

Villiform (*vil'-if-orm*) [*villus*, villus; *forma*, form]. Villose in form.

Villiplacental (*vil-ip-las-en'-tal*) [*villus*, villus; *placenta*]. Having a tufted or villous placenta.



Villitis (*vil-i'-tis*) [*villus*, villus; *ιτις*, inflammation]. Inflammation of the cushion or soft part of the wall of a horse's hoof. See *Coronitis*.

Villoid (*vil'-oid*) [*villus*, villus; *εἶδος*, like]. Villiform.

Villose, Villous (*vil'-ōz, vil'-us*) [*villus*, hair]. Pertaining to or having the nature of villi. Having a pile like that of velvet. See *Villi*. Covered with long, soft, shaggy hairs.

Villosity (*vil-os'-it-e*) [*villous*, shaggy]. The state of being villous.

Villus (*vil'-us*) [L., a shaggy hair: *pl.*, *Villi*, *q.v.*]. In anatomy: 1. One of numerous minute vascular projections from the mucous membrane of the intestine, of a conic, cylindric, clubbed, or filiform shape. It consists essentially of a lacteal vessel as a central axis, with an arteriole and a veinlet enclosed in a layer of epithelium. 2. One of the vascular tufts of the chorion. In biology, one of the long, straight, and soft hairs occasionally covering the fruit, flowers, and other parts of plants.

SCHEME OF THE DISTRIBUTION OF BLOOD-VESSELS IN THE VILLI OF THE SMALL INTESTINE OF A DOG. (*From Stirling.*)

Vimen (*vi'-men*) [L.]. A long and flexible shoot of a plant.

Vimenal (*vim'-en-al*) [*vimen*, a twig]. Pertaining to twigs or shoots.

Vimeneous (*vi-men'-e-us*) [*vimen*, a pliant twig]. In biology, producing slender twigs, such as those used for wicker-work.

Vina (*vi'-nah*) [L., Plural of *Vinum*, wine]. Wines. **V. medicata,** medicated wines.

Vinaceous (*vi-na'-shus*) [*vinaceus*, pertaining to wine].

Vinasse (*ve-nas'*) [Fr.]. Potash obtained from the *marc* or residue of the wine-press. Also, the residuum in a still after distillation.

Vinca (*ving'-kah*) [L., periwinkle]. A genus of apocynaceous plants, the periwinkles. **V. major** and **V. minor** are astringent, vulnerary, and antigalactic. Unof.

Vincula (*vin'-ku-lah*) [L.]. Plural of *Vinculum*. **V. accessoria tendinum.** The slender, tendinous filaments which connect the phalanges with their tendons.

Vine (*vin*) [*vinea*, a vine]. A climbing plant with a woody stem. **V.-disease,** a disease of the grape vine due to the phylloxera.

Vinegar (*vin'-e-gar*) [*vin*, wine; *aigre*, sour]. Dilute and impure acetic acid, obtained by acetous fermen-

tation. See *Acetum*, and *Acid, Acetic*. *Wine-vinegar* varies in color from light-yellowish to red, according as it has been derived from white or red wines, that from the former being the most highly esteemed. The vinegar from red wines, however, can be decolorized by filtration through purified bone-black. Wine-vinegar has a specific gravity of 1.014 to 1.022, and contains from six to nine per cent. (rarely 12) of absolute acetic acid. *Malt-vinegar and Beer-vinegar* have a specific gravity of from 1.021 to 1.025, and contain dissolved dextrin, maltose, soluble albuminoids, and similar constituents of the malt-extract. It contains only from three to six per cent. of acetic acid. *Spirit-vinegar* is colorless as produced, but is frequently colored with caramel to imitate the appearance of wine or cider vinegar. It contains from three to eight per cent. of acetic acid, although the so-called "vinegar essence" (double vinegar) may contain as much as 14 per cent. *Cider-vinegar* is yellowish-brown, has an odor of apples, a density of from 1.013 to 1.015, and contains from three and a half to six per cent. of acetic acid. It is distinguished from the other varieties by yielding on evaporation a mucilaginous extract smelling and tasting like baked apples and containing malic acid, which replaces the tartaric acid of the wine-vinegar. *Glucose-vinegar, or Sugar-vinegar*, prepared from different saccharine and amylaceous materials by conversion with dilute acid, followed by fermentation and acetification, contains dextrose, dextrin, and often calcium sulphate. It is said to be employed in France and England for adulterating wine-vinegar, or malt-vinegar. *Factitious vinegars* are often made from pyroligneous acid flavored with acetic ether and colored with caramel. Such a product differs from malt-vinegar in containing no phosphates, and from wine-vinegar or cider-vinegar in the absence of tartaric and malic acids respectively. **V. Essence.** See *Vinegar*.

iniferous (*vi-nif'-er-us*) [*vinum*, wine; *ferre*, to bear]. Wine-bearing.

inometer (*vi'-nom-et-er*) [*vinum*, wine; *μέτρον*, measure]. An instrument for measuring the percentage of alcohol in a liquor.

inose (*vi'-nōz*). Same as *Vinous*.

inous (*vi'-nus*) [*vinosus; vinum*, wine]. Having the nature or flavor of wine, alcoholic.

inum (*vi'-num*) [L.: *gen., Vini; pl., Vina*]. Wine. The fermented juice of fruits, especially that of grapes. *White wines* are made from the pulp; *red wines* from the pulp and *skins*, the latter yielding the coloring-matter. Each should contain 10–12 per cent. of alcohol. There are nine official vina. **V. absinthiatum,** wormwood-wine; made by macerating *Artemisia absinthium* in white wine. **V. album,** white wine, an alcoholic liquid made by fermenting the juice of the fresh grape; it contains from 10 to 14 per cent. by weight of absolute alcohol. **V. album fortius** is made from *V. album* by fortifying the latter until it contains 20–25 per cent. of alcohol. *Sweet wines*, such as Burgundy, Tokay, Muscatel, Angelica, etc., seldom exceed 6–7 per cent. of alcohol unless fortified. *Light red wines*, such as claret, contain normally about 5 per cent. *Sparkling wines*, such as champagne, derive their quality from the presence of carbon dioxid, being bottled before fermentation. They contain 10–12 per cent. of alcohol. **V. antimonii,** wine of antimony. Dose ♏x–xxx. **V. aromaticum** consists of strong white wine 94 per cent., with one per cent. each of lavender, origanum, peppermint, rosemary, sage, and wormwood. **V. colchici radicis,** wine of colchicum-root. Dose ♏v–xx. **V. colchici seminis,** wine of colchicum-seed. Dose ♏x–xxx. **V. ergotæ,** wine of ergot. Dose ʃʒj–j. **V. ferri amarum,** bitter wine of iron. Dose ʃʒj–iij. **V. ferri citratis,** wine of ferric citrate. Dose ʃʒj–ij. **V. ipecacuanhæ,** wine of ipecac. Dose ♏v–x. **V. opii,** 1.3 to 1.5 gm. morphin in 100 c.c. Dose ♏v–xv. **V. portense,** Port wine, is fortified with 25–30 per cent., and **V. xericum,** Sherry wine, until it contains about 25 per cent. of alcohol There are 14 official *vini*, of which 11 are medicated. **V. rubrum,** red wine. An alcoholic liquid made by fermenting the juice of the fresh, colored grapes, the fruit of *Vitis vinifera*, in the presence of their skins. It contains from 10–14 per cent. by weight of absolute alcohol. **Vini, Spiritus, Gallici,** brandy.

Vinyl (*vin'-il*), C_2H_3, a hypothetical trivalent radicle existing in acetic aldehyde.

Viola (*vi'-o-lah*) [L., violet]. A genus of plants, including the true violets and pansies. **V. canina** has an emetic and cathartic root. **V. odorata** has fragrant flowers, which are made into a lenitive syrup. **V. pedata** of the U. S. is demulcent and expectorant. **V. tricolor,** pansy; a wild flower sometimes known as heart's-ease pansy. It contains an alkaloid, violin, with emeto-cathartic properties. It is mucilaginous and expectorant. Dose gr. x–ʒj.

Violanilin (*vi-o-lan'-il-in*). See *Pigments, Conspectus of*.

Violation (*vi-o-la'-shun*) [*violatio; violare*, to ravish]. Rape. Sometimes used to express the fact of coitus without force, but by deception, with the weak-minded, etc.

Violet (*vi'-o-let*) [*viola*, violet]. 1. A popular name for viola. 2. One of the colors of the rainbow which very closely resembles the purple of violets. 3. A dye-stuff. **V.-blindness,** retinal insensibility to violet tints. **V., Gentian,** a violet anilin dye used for staining in histologic and bacteriologic work. **V., Methyl,** an anilin dye used in the same way as *V., Gentian*.

Violette's Solution. See *Sugar*.

Violin (*vi'-o-lin*) [*viola*, violet]. An emetic principle found in *Viola odorata, V. tricolor*, and other violets; said to be probably identical with emetin. Unof.

Violinists' Cramp. See *Cramp*.

Viraginity (*vir-aj-in'-it-e*) [*virago*, a woman]. A form of sexual perversion in which the male individual is essentially effeminate in his feelings and tastes.

Viragint (*vir'-aj-int*) [*virgo*, a virgin]. A male given to viraginity.

Virchow's Method (*of opening the heart*). The heart is opened in situ. The first incision is made in the right ventricle (many open the right auricle first) along the ventricular ridge, from near the auriculo-ventricular groove to near the apex. The second incision opens the right auricle midway between the entrances of the venæ cavæ. In the left auricle the incision is carried from the left superior pulmonary vein to near the auriculo-ventricular ring. The incision through the left ventricle begins just behind the base and ends just short of the apex. It must be carried deeply through the wall of the heart. The heart is now removed. To do this the organ is grasped with the index finger of the left hand in the left ventricle and the thumb in the right; the heart is then raised by the apex and the venæ cavæ, the pulmonary veins, and the pulmonary artery, and the aorta divided, taking care that the incisions are not too close to the heart. The next step is to open the ventricles. For this purpose the heart is placed exactly in the position it occupied in the body. One blade of the scissors is then introduced near the lower end of the incision in the right ventricle and carried outward in the direction of the pulmonary artery. The incision for the left ventricle commences at the apex of the heart and divides the anterior wall of the ventricle close to the septum, and is continued out through

the aorta. These are the principal incisions; it is customary, however, to make at least two others, viz., one connecting the incision in the right auricle with that in the right ventricle, and one connecting that in the left auricle with the incision in the left ventricle. **V.'s Theory of Cellular Physiology**; this is summarized in the formula, *omnis cellula e cellula*, *i. e.*, every cell is derived from a cell. It is the theory of the hereditary succession of the cells and tissues. **V.'s Theory of Inflammation.** See *Theory*.

Virchow and Holder, Angle of. See *Angle*.

Virchow-Robin Lymph-spaces. The spaces between the ental coats of the cerebral blood-vessels and the adventitia.

Virescence (*vir-es'-ens*) [*virescere*, to grow green]. In biology, greenness, especially a green petal or leaf, normally some other color.

Virescent (*vir-es'-ent*) [*virere*, to be green]. Becoming green.

Virgate (*vir'-gāt*) [*virga*, a rod, twig]. Straight and slender, like a wand.

Virgin (*vir'-jin*) [*virgo*; *virginis*, a virgin]. A woman who has never had sexual connection with a man. **V.-tooth**, the milk-tooth of a horse not worn by use.

Virginal (*vir'-jin-al*) [*virgo*, a virgin]. Pertaining to virginity.

Virginale Claustrum (*vir-jin-a'-le klaw'-strum*) [L.]. The hymen.

Virginia (*vir-jin'-e-ah*) [*Virginia*, a female name]. A State of the United States. **V. Creeper.** See *Ampelopsis*. **V. Snake-root.** See *Serpentaria*.

Virginity (*vir-jin'-it-e*) [*virgo*, a virgin]. The condition of being a virgin.

Viridescence (*vir-id-es'-ens*) [*viridis*, green]. The state of being greenish.

Viridescent (*vir-id-es'-ent*) [*viridis*, green]. Slightly green.

Viridian (*vir-id'-e-an*). Same as *Veronese Green*.

Viridigenous (*vir-id-ij'-en-us*) [*viridis*, green; *genus*, producing]. In biology, producing greenness, as the diatoms eaten by certain molluscs. Cf. *Marennin*.

Viridin (*vir'-id-in*) [*viridis*, green]. An alkaloid obtained from *Veratrum viride*, and supposed to be identical with jervin.

Viridity (*vir-id'-it-e*) [*viridis*, green]. In biology, greenness.

Virile (*vir'-il*) [*virilis*; *vir*, a man]. Pertaining to mature manhood. **V. Member**, the penis.

Virilescence (*vir-il-es'-ens*) [*virilis*, virile]. The assumption of male characters by an aged woman; the growth of a beard, the development of a manly voice on the part of a woman after the menopause.

Virilia (*vir-il'-e-ah*). Plural of *Virilis*, manly. The male generative organs.

Virility (*vir-il'-it-e*) [*virilitas*]. The condition of mature manhood; procreative power.

Virose (*vi'-rōz*) [*virosus*, poisonous]. Poisonous; having a poisonous taste or smell.

Virous (*vi'-rus*) [*virosus*, poisonous]. Possessing poisonous properties.

Virulence (*vir'-u-lens*) [*virulentia*; *virus*, a poison]. Malignity, noxiousness, infectiousness.

Virulent (*vir'-u-lent*) [*virulentus*]. Having the nature of a poison. See *Virus*.

Viruliferous (*vir-u-lif'-er-us*) [*virus*, virus; *ferre*, to carry]. Containing or conveying a virus.

Virus (*vi'-rus*) [L.]. A poison that causes a morbid process or disease; any pathogenic microbe. The word was formerly applied to the specific contagium of an infectious disease, especially to that of cowpox. **V., Attenuated**, virus deprived of some of its pathogenic quality by culture and modification by animal inoculation-experiments, so that inoculated in another person or animal it preserves the same against attack or the usual violence of the disease. **V., Humanized**, vaccine-lymph that is not taken directly from the cow or calf, but from the vaccine-pustule of a human being, usually a child, who may have been inoculated with matter obtained from another child or from the cow. **V., Specific**, the characteristic poison of a disease.

Vis [L.]. Force or energy. **V. conservatrix**, the healing power of nature. **V. formativa**, the energy of nature as manifest in the formation of new tissue to replace that which has been destroyed. **V. a fronte**, energy exerted in front; resistance. **V. inertiæ**, that force by virtue of which a body at rest remains at rest; or, if in motion, continues in motion. **V. medicatrix.** Same as *V. conservatrix*. **V. plastrix**, in biology, growth-force. See *Bathmism*, *Physiobathmism*, *Statobathmism*. **V. a tergo**, force applied from behind. **V. vitæ**, vital force.

Visage (*viz'-ij*) [*visus*, a look]. The face.

Viscera (*vis'-er-ah*). See *Viscus*.

Viscerad (*vis'-er-ad*) [*viscus*, a viscus]. Toward the visceral cavity.

Visceral (*vis'-er-al*) [*viscera*]. Pertaining to the viscera. **V. Arches** and **Clefts**, four slit-like depressions with intermediate thickenings of the lateral wall of the cervical region of the embryo. They are persistent slits in fishes.

Visceralgia (*vis-er-al'-je-ah*) [*viscus*, viscus; ἄλγος, pain]. Pain or neuralgia in a viscus.

Viscerate (*vis'-er-āt*) [*viscera*]. To eviscerate or disembowel.

Viscericardiac (*vis-er-ik-ar'-de-ak*) [*viscera*; καρδία, heart]. Pertaining to the viscericardium.

Viscericardium (*vis-er-ik-ar'-de-um*) [*viscera*, viscera; καρδία, heart]. The visceripericardial sac.

Viscerimotor (*vis-er-im-o'-tor*) [*viscus*, viscus; *motor*, motor]. Conveying motor impulses to a viscus.

Visceripericardial (*vis-er-ip-er-ik-ar'-de-al*) [*viscera*, περί, around; καρδία, heart]. Common to the pericardium and the viscera.

Visceropleural (*vis-er-o-plu'-ral*) [*viscera*; πλευρά, side]. Same as *Pleurovisceral*.

Visceroskeletal (*vis-er-o-skel'-et-al*) [*viscera*; σκέλετον, skeleton]. Pertaining to the visceral skeleton.

Viscid (*vis'-id*) [*viscidus*]. Clammy; slimy; adhesive; glutinous. See *Viscous*.

Viscidity (*vis-id'-it-e*). Same as *Viscosity*.

Viscin (*vis'-in*) [*viscum*, bird-lime]. Bird-lime. A mucilaginous extraction of the mistletoe, *Viscum flavescens*, *Gentiana lutea*, and other plants.

Viscose (*vis'-kōz*) [*viscum*, bird-lime]. A gummy secretion or product of the *Micrococcus viscosus*.

Viscosity (*vis-kos'-it-e*) [*viscositas*]. The property of glutinousness, ropiness, or tenacity.

Viscous (*vis'-kus*) [*viscosus*]. Glutinous, ropy, sticky. Also, pertaining to a viscus or internal organ.

Viscum (*vis'-kum*) [L.: *gen.*, *Visci*]. Mistletoe. The leaves and stems of *V. album*, the European, and *V. flavescens*, the American, species. It contains a mucilage, viscin, bird-lime, and various other extractives. In large doses it induces vomiting and purging. The American plant has alleged properties similar to those of digitalis. Dose gr. x–℥j, in decoction; of a 10 per cent. tincture ♏v–xxx. Unof.

Viscus (*vis'-kus*) [L.: *pl.*, *Viscera*]. Any organ enclosed within either of the four great cavities, the cranium, thorax, abdominal cavity, or pelvis; as the brain, intestine, spleen, bladder, uterus, lungs, liver etc.

Vishucki (*vis-huk'-e*) [Ind.]. Synonym of *Asiatic Cholera* among Hindoo physicians.

Visibility (*viz-ib-il'-it-e*) [*visibilitas; videre*, to see]. Capability of being seen.

Vision (*vizh'-un*) [*visio; videre*, to see]. 1. Sight; acuity of visual power. See also, *Acuteness*. 2. A visual hallucination, or illusion. **V., Binocular.** See *Binocular*. **V., Central,** direct vision, or vision when the image falls on the fovea centralis. **V. for Color,** pertains to the chromatic sense. **V., Direct,** that when the image is formed at the macula. **V., Double.** See *Diplopia*. **V., Field of.** See *Field*. **V. for Form,** the acuteness of vision with white light. **V., Indirect,** that when the image is formed upon the peripheral portions of the retina. **V., Peripheral,** that when the image is not formed at the macula. **V., Qualitative,** vision in which there is ability to distinguish objects. **V., Quantitative,** mere perception of light. **V., Solid,** or **V., Stereoscopic,** the visual perception of the third dimension of space, or the perception of relief or depth of objects obtained by binocular vision. See *Hering's Experiment*. **V., Triple.** See *Triplopia*.

Visit (*viz'-it*) [*videre*, to see]. A call upon a patient.

Visual (*vizh'-u-al*) [*visualis; visus*, sight]. Pertaining to vision. **V. Acuteness,** or **Acuity.** See *Acuteness*. **V. Amnesia.** See *Mind-blindness*. **V. Angle.** See *Angle*. **V. Axis.** See *Axis*. **V. Field.** See *Field*. **V. Logagnosia.** Synonym of *Word-blindness*. **V. Purple,** a substance in the retina reacting to light in a peculiar manner, and thought to be intimately connected with vision. See *Rhodopsin*.

Visus (*vi'-zus*) [*videre*, to see]. Vision. **V. dimidiatus.** Synonym of *Hemiopia*. **V. diurnus.** Synonym of *Hemeralopia*. **V. senilis.** Synonym of *Presbyopia*.

Vita (*vi'-tah*) [L.]. Life.

Vital (*vi'-tal*) [*vitalis; vita*, life]. Pertaining to life. **V. Capacity,** the volume of air that can be expelled after a full inspiration. **V. Knot,** a term applied by Flourens to the respiratory center in the oblongata. **V. Principle,** the energizing principle on which individual life depends. **V. Statistics,** the statistics of vital facts, the science of numbers as applied to the life-history of communities and nations.

Vitalism (*vi'-tal-izm*) [*vita*, life]. In biology, the doctrine that ascribes the phenomena exhibited by living organisms to the action of a supersensuous vital force.

Vitalist (*vi'-tal-ist*) [*vita*, life]. A believer in the existence of vital force.

Vitality (*vi-tal'-it-e*) [*vitalitas*, vitality]. The vital force or principle of life; also, the condition of having life; vigor; activity.

Vitalize (*vi'-tal-iz*) [*vita*, life]. To endow with life.

Vitals (*vi'-talz*) [*vita*, life]. A vulgar term for the intestines and the organs essential to life.

Vitellarium (*vit-el-a'-re-um*) [*vitellus*, yolk: *pl.*, *Vitellaria*]. In biology, one form of the female germ-glands in platode worms, in which the work of supplying the egg-germs with nutritive yolk is carried on. "Comparative research has shown that the vitellaria are not newly formed accessory glands of the female sexual apparatus, but that they are metamorphosed ovaries or portions of ovaries adapted to a special function." (Lang.) Cf. *Germarium*.

Vitellary (*vit'-el-a-re*) [*vitellus*, yolk]. Pertaining to the vitellus.

Vitellicle (*vit-el'-ik-l*) [*vitellus*, yolk]. The yolk-sac; umbilical vesicle.

Vitelligenous (*vit-el-ij'-en-us*) [*vitellus*, yolk; *genus*, producing]. In biology, producing yolk. Cf. *Vitellarium* and *Vitellogene*.

Vitellin (*vit-el'-in*) [*vitellus*, yolk]. In biology, the chief proteid of egg-yolk. According to Weyl, it also occurs in chyle and the amniotic fluid.

Vitelline (*vit-el'-in*) [*vitellus*, yolk]. Pertaining to the *vitellus*, the yolk of an egg. **V. Circulation,** the circulation through the yolk. **V. Membrane.** See *Zona pellucida*. **V. Spheres.** See *Sphere*.

Vitello-ducts (*vit'-el-o-dukts*) [*vitellus*, yolk; *ductus*, a duct]. The yolk-ducts; applied to the ducts of the *vitellaria* of platode worms.

Vitellogene (*vit-el'-o-jēn*) [*vitellus*, yolk; γενής, producing]. In biology, yolk-producing. Cf. *Vitellarium* and *Vitelligenous*.

Vitellogenous (*vit-el-oj'-en-us*). Same as *Vitelligenous*.

Vitellolutein (*vit-el-o-lu'-te-in*) [*vitellus*, yolk; *luteus*, golden-yellow]. The yellow pigment obtained from the eggs of the spider-crab (*Maia squinado*).

Vitellorubin (*vit-el-o-ru'-bin*) [*vitellus*, yolk; *ruber*, red]. The reddish-brown pigment obtained from the eggs of the spider-crab (*Maia squinado*).

Vitellus (*vit-el'-us*) [*vitellus*, a yolk]. In biology, the yolk of an egg, including both the formative and the nutritive yolk. Specifically the yolk of the egg of the common barnyard fowl (*Gallus domesticus*). A viscid, orange-colored liquid containing oil, cholesterin, vitellin, and albumin. It is bland and nutritive. It is used mainly to emulsionize oils and camphors. In pharmacy, the yolk of egg, ovi vitellus.

Vitex (*vi'-teks*) [L.]. See *Agnus castus*.

Vitiation (*vish-e-a'-shun*) [*vitiatio; vitiare*, to corrupt]. The contamination of any substance, especially of the air.

Viticolous (*vit-ik'-o lus*) [*vitis*, the vine; *colere*, to inhabit]. Inhabiting or produced upon the vine.

Viticula (*vit-ik'-u-lah*) [dim. of *vitis*, vine: *pl.*, *Viticulæ*]. In biology, a small, trailing vine, like that of a melon or cucumber.

Viticulose (*vit-ik'-u-lōz*) [*vitis*, vine]. In biology, producing long, trailing, vine-like twigs or stems.

Viticulture (*vit'-ik-ul-tūr*) [*vitis*, vine; *cultura*, culture]. The culture of the vine.

Vitiligo (*vit-il-i'-go*) [L., tetter]. *Piebald skin; white leprosy;* an acquired disease of the skin characterized by the appearance of one or many well-defined, circular, oval, irregularly-shaped, or reticulated patches, having a milky-white color, without other manifest change in the integument; the hairs growing upon these patches are usually destitute of color. At the periphery of the patches there is usually a hyperpigmented border, varying in color from a light-fawn to a deep-chocolate. The disease is most common in warm weather. See *Leukoderma*. **V. capitis.** Synonym of *Alopecia areata*.

Vitiligoidea (*vit-il-ig-oi'-de-ah*) [*vitiligo*, tetter; εἶδος, likeness]. Xanthoma of the eyelids.

Vitrella (*vit-rel'-ah*) [*vitreus*, glassy: *pl.*, *Vitrellæ*]. In biology, same as *Retinophora*.

Vitreodentinal (*vit-re-o-den'-tin-al*) [*vitreus*, of glass; *dens*, tooth]. Pertaining to vitreodentine.

Vitreodentine (*vit-re-o-den'-tin*) [*vitreus*, of glass; *dens*, a tooth]. A variety of dentine of particularly hard texture.

Vitreous (*vit'-re-us*) [*vitreus; vitrum*, glass]. Glass-like, hyaline. **V., Artificial.** See *Evisceration*. **V. Chamber,** the portion of the globe of the eye posterior to the crystalline lens. **V. Degeneration,** disease of the intima of arteries. **V. Humor,** or **Body,** the transparent, jelly-like substance filling the vitreous chamber of the eye. **V. Tables,** the dense, osseous laminæ on the inner and outer surfaces of the cranial bones.

Vitreum (*vit'-re-um*). Same as *Vitreous Humor*.

Vitriol (*vit'-re-ol*) [*vitriolum; vitrum*, glass]. In chemistry, a term formerly used to designate any substance having a glassy fracture or appearance. **V., Blue,** copper sulphate, or "blue stone," $CuSO_4$. **V., Green,** ferrous sulphate, or "copperas," $FeSO_4$. **V., Oil of,** sulphuric acid, H_2SO_4. **V., White,** zinc sulphate, $ZnSO_4$.

Vitta (*vit'-ah*) [*vitta*, a band, a fillet: *pl.*, *Vittæ*]. In biology, (*a*) a band, or stripe, either of color or tissue; (*b*) one of the longitudinal, tubular oil-receptacles in the fruits of the *Umbelliferæ*. An oil-tube.

Vittate (*vit'-āt*) [*vitta*, a band, a fillet]. Possessing vittæ.

Vitular (*vit'-u-lar*) [*vitulus*, calf]. Relating to a calf or to calving. **V. Apoplexy,** apoplexy of cows occurring at parturition. **V. Fever,** vitular apoplexy, or, more correctly, a fever following parturition in the cow. See *Collapse, Parturient.*

Vitus' Dance, St. See *Chorea.*

Viviparous (*viv-ip'-ar-us*) [*vivus*, alive; *parere*, bring forth, produce]. In biology, applied to such animals as bring forth the young at an advanced stage of development, as distinguished from *oviparous* and *ovoviviparous.*

Vivipation (*viv-ip-a'-shun*) [*vivus*, alive; *parere*, to bring forth]. In embryology, that form of generation in which the ovum, expelled from the ovary, clings to the maternal organ and derives its nourishment directly from the mother until birth.

Viviperception (*viv-ip-er-sep'-shun*) [*vivus*, alive; *percipere*, to perceive]. The study or observation of physiologic processes without dissection or vivisection.

Vivisection (*viv-is-ek'-shun*) [*vivus*, alive; *sectio*, cutting]. The dissection of an animal, or experimentation upon it, while still alive, for scientific purposes. See *Callisection*, and *Sentisection.*

Vivisectionist (*viv-is-ek'-shun-ist*) [*vivus*, alive; *sectio*, a cutting]. A practiser or defender of vivisection.

Vivisector (*viv-is-ek'-tor*) [*vivus*, alive; *sector*, a cutter]. One who practises vivisection.

Vivisectorium (*viv-is-ek-to'-re-um*) [L.]. A place or laboratory where vivisection is performed.

Vleminckx's Solution. An application used in Austria and Germany for treating acne. It consists of lime 1 part, sulphur 2 parts, and water 20 parts. Slake the lime, add the sulphur, and boil to 12 parts.

Vocal (*vō'-kal*) [*vox*, the voice]. Pertaining to the voice or its organs. **V. Bands,** a name given to certain membranes of the larynx by which the sounds of the voice are produced. They consist of *superior*, ventricular or false bands, and *inferior* or true bands. The latter are covered by the mucous membrane of the larynx and are thin bands of elastic tissue, reaching from the wings of the thyreoid to the arytenoid cartilages. **V. Fremitus,** the thrill conveyed to the hand when applied to the chest during phonation. It is increased in consolidation of the lungs, and decreased or absent when there is a pleural effusion. **V. Resonance,** the resonance produced by the voice as heard on auscultating the lung. This is increased with slight degrees of consolidation of the lung and decreased with extreme consolidation and with large pleural effusions.

Vogt, Angle of. See *Angle.*

Vohsen's Method. A method of illuminating the frontal sinus. It is done by placing the source of illumination over the orbital surface of the sinus.

Voice (*vois*) [ME., *voice*, voice]. The sound produced by the vibration of the vocal bands and modified by the resonance-organs. The utterance of articular sounds. **V., Change of.** In the transition-period of youth the voice loses its treble quality and (sometimes irregularly) assumes the qualities of the adult voice. This is called the change of voice.

Void [ME., *voiden*, to void]. To evacuate, *e.g.*, from the intestine or bladder.

Voisin's Method. See *Hypnotism.*

Vola (*vo'-lah*) [L.: *gen.* and *pl.*, *Volæ*]. The palm, or rather the hollow of the hand; the hollow of the foot.

Volar (*vo'-lar*) [*volaris; vola*, palm]. Pertaining to the palm of the hand. See *Palmar.*

Volatic (*vo-lat'-ik*) [*volaticus; volare*, to fly]. Flying. momentary.

Volatile (*vol'-at-il*) [*volatilis*]. Capable of assuming, or prone to assume a state of vapor; evaporating. **V. Oils.** See *Essential Oils.*

Volatility (*vol-at-il'-it-e*) [*volatilitas*]. The quality of being volatile.

Volatilization (*vol-at-il-iz-a'-shun*) [*volatilizatio*]. The change of a solid or liquid to a gas or vapor by heat.

Volhard, Volumetric Method of. A method for estimating halogens by means of ammonium sulphocyanid.

Volition (*vo-lish'-un*) [*volitio*, will]. The will or determination to act.

Volitional (*vo-lish'-un-al*) [*volitio*, will]. Pertaining to volition. **V. Insanity,** insanity characterized by perversions of the will, or by abulia or hyperbulia.

Volitive (*vol'-it-iv*) [*volitio*, will]. Pertaining to the will; volitional.

Volkmann's Deformity. Congenital tibio-tarsal luxation. See *Diseases, Table of.* **V.'s Solution.** See *Thymol.*

Volsella (*vol-sel'-ah*) [*vellere*, to pluck]. A forceps having one or more hooks at the end of each blade. Also called *Vulsella.*

Volt (*volt*) [*volvere*, to turn around]. The unit of electro-motive force, or the force sufficient to cause a current of one ampère to flow against a resistance of one ohm. The following is the voltage of several popular cells: Smee 0.65, Bunsen 1.90, Daniell 1.05, Callaud 0.60, Leclanche 1.50. **V.-ampère,** the amount of pressure developed by a current of one ampère having an electro-motive force of one volt. Its mechanic equivalent is about 44.2 foot-pounds per minute. It is sometimes called a Watt. See *Electric Unit.* **V.-coulomb.** See *Electric Units.*

Volta's Law. A law for the differences of electric potential produced by the contact of dissimilar metals or other substances. See *Law.*

Voltaic (*vol-ta'-ik*) [*Volta*, an Italian scientist]. Pertaining to the constant electric current or to galvanic electricity. **V. Alternatives,** a term used in medical electricity to indicate sudden reversals in the polarity of the electrodes of a voltaic battery.

Voltaism (*vol'-ta-izm*). See *Galvanism.*

Voltameter (*vol-tam'-et-er*) [*volt*, a unit of electro-motive force; *μέτρον*, a measure]. An instrument for ascertaining the electro-motive force of a current in volts.

Voltmeter (*volt'-me-ter*) [*volt*, a unit of electric force; *μέτρον*, measure]. A synonym of *Voltameter.*

Voltolini's Disease. A purulent, labyrinthine otitis accompanied with violent pains in the ear, complete unconsciousness, high fever, and delirium. See *Diseases, Table of.* **V.'s Method,** the examination of the anterior nasal region by means of transmitted light. This method is also called examination by "through illumination," and *transillumination*, *q.v.*

Voluble (*vol'-u-bl*) [*volubilis*, whirling]. See *Twining.*

Volume (*vol'-ūm*) [*volumen*] In physics, the space which a substance fills. Cubic dimension. **V. Specific,** the molecular weight divided by the specific gravity; referred to hydrogen as a unit.

Volumetric (*vol-u-met'-rik*) [*volumen*, a roll; *μέτρον*, measure]. Pertaining to measurement by volume. **V. Analysis.** See *Analysis.*

Voluntary (*vol'-un-ta-re*) [*voluntarius*]. Pertaining to or under the control of the will. **V. Muscle,** striped muscle.

Voluntas (*vol-un'-tas*) [L.]. Desire or will.

Voluntomotory (*vol-un-to-mo'-tor-e*) [*voluntus*, will; *motor*, motor]. Pertaining to voluntary motion.

Voluptuary (*vo-lup'-tu-a-re*) [*voluptuarius*, pertaining to pleasure]. 1. Promoting sensual indulgence; voluptuous. 2. A sensualist.

Voluptuous (*vo-lup'-tu-us*) [*voluptuosus*, full of gratification]. Contributing to sensual pleasure.

Voluptuousness (*vo-lup'-tu-us-nes*) [*voluptuosus*, full of gratification]. The state of being voluptuous.

Volupty (*vo-lup'-te*) [*voluptas*]. Voluptuousness; orgasm.

Volute (*vo-lūt'*) [*voluta*, a spiral scroll]. In biology, rolled up like a scroll.

Volva (*vol'-vah*) [*volva*, a wrapper, covering: *pl.*, *Volvæ*]. In biology, a covering possessed by the fruiting organs of some fungi. The same as *Velum universale.*

Volvulus (*vol'-vu-lus*) [*volvere*, to roll]. An old name was *Ileac Passion.* A twisting of the bowel upon itself or upon its mesenteric axis, so as to occlude the lumen. It occurs most frequently in the sigmoid flexure.

Vomer (*vo'-mer*) [L., a plowshare]. The thin plate of bone situated vertically between the nasal fossæ, and forming the posterior portion of the septum of the nose. **V., Cartilaginous,** a cartilaginous plate that forms the anterior portion of the septum of the nose.

Vomerine (*vo'-mer-in*) [*vomer*, vomer]. Pertaining to the vomer.

Vomic (*vom'-ik*) [*vomicus*]. Ulcerous; purulent.

Vomica (*vom'-ik-ah*) [*vomere*, to vomit: *pl.*, *Vomicæ*]. A pulmonary cavity; a collection of pus in the lungs or adjacent organs that may discharge through the bronchi and mouth. **V. laryngis.** A synonym for *Perichondritis of the Larynx.*

Vomit (*vom'-it*) [*vomere*, to vomit]. 1. To expel from the stomach by vomiting. 2. Vomited matter; an emetic. **V., Bilious,** vomit stained with bile. **V., Black,** the characteristic vomit of yellow fever. The dark fluid ejected is a mixture of decomposed blood and the contents of the stomach. **V., Bloody.** See *Hematemesis.* **V., Coffee-ground,** vomit composed of broken-down blood-clots and tissue, together with the contents of the stomach. It is seen frequently in carcinoma of the stomach. **V.-nut.** See *Nux vomica.*

Vomiting (*vom'-it-ing*) [*vomere*, to vomit]. The forcible, convulsive ejection of the contents of the stomach, duodenum, or intestines through the mouth. **V. of Blood.** See *Hematemesis.* **V., Dry,** persistent nausea with attempts at vomiting, but with the ejection of nothing but gas. **V., Pernicious,** the variety of vomiting occasionally seen in pregnancy that becomes so excessive as to threaten the patient's life. **V., Stercoraceous,** the ejection of fecal matter in emesis, usually due to intestinal obstruction.

Vomitive (*vom'-it-iv*) [*vomere*, to vomit]. Emetic.

Vomito (*vom'-it-o*) [Sp.]. Vomit.

Vomitonigro. Black vomit. A name for yellow fever. **V., Priests'.** A name for *Yellow Fever, q. v.*

Vomitory (*vom'-it-or-e*) [*vomitorius*]. 1. Emetic, or vomitive. 2. Any agent or substance that induces emesis. Also, a vessel to receive the ejecta.

Vomiturition (*vom-it-u-rish'-un*) [*vomituritio*]. Ineffectual attempt at vomiting, with a strong feeling of desire to vomit. 2. Vomiting with but slight effort.

Vomitus (*vom'-it-us*) [*vomere*, to vomit]. Vomited matters; the act of vomiting. **V. cruentus,** bloody vomit.

Von Baer's Law. The law that the embryos of higher animals pass through a succession of metamorphoses resembling the adult forms of lower types of animals. See *Law.*

Von Gieth's Oil-jacket. A dressing especially of value in the pleurisy of infants or young children. Pure olive-oil is poured in sufficient quantity into a previously warmed bowl, and a strip of old, soft, cotton-cloth, large enough to encircle the chest, is placed in the bowl and completely saturated with the oil. This is then applied to the patient's chest, and outside of it a second strip of dry cloth is placed, and, if necessary, a third, which completes the dressing.

Von Mering's Mixture. See *Anesthetic.*

Von Troeltsch, Corpuscles of. Peculiar, spindle-shaped corpuscles; the connective-tissue corpuscles of Virchow.

Voodoo (*vu'-du*) [Creole Fr., *vaudoux*, a negro sorcerer]. A system of charms and enchantments of African origin, practised in part as a healing art in the U. S. and W. Indies.

Voracious (*vor-a'-shus*) [*vorax; vorare*, to devour]. Having an insatiable appetite or desire for food. See, also, *Bulimia.*

Voracity (*vor-as'-it-e*) [*voracitas*, voracity]. Greediness or rapaciousness for food.

Voronej, Elixir of. A famous mixture used in Russia. It occurs in a stronger and a weaker form, as follows: 1. The *stronger:* sal. ammon. ℥ x, ol. naphthæ ℥ vj, ol. caryophyl. ℥ x, acid. nitric. ℥ vj, potas. nitrat. and Turkey pepper each ℥ jss, menth. virid ℥ viij, acetum Oj, spts. vin. gall. Oiv. 2. The *weaker:* camphor, ol. naphthæ, ess. terebinth., acid. nitric., each ℥ ij, Turkey pepper 2 pods, acetum ℥ vjss, spts. vin. gall. ℈ iv.

Vortex (*vor'-teks*) [L., a whirl]. A structure having the appearance of being produced by a rotary motion about an axis. **V. of the Heart,** a name applied to the spiral arrangement of the muscular fibers of the walls of the heart.

Vorticose (*vor'-tik-ōz*) [*vortex*, vortex]. Whirling. In anatomy, specifying the veins of the external layer of the choroid coat of the eyeball, the *venæ vorticosæ.* **V. Veins.** See *Venæ vorticosæ.*

Vowel (*vow'-el*) [Fr., *voyelle*, vowel]. Any one of the chief sounds of the voice, formed by the vibrations of the vocal organs unmodified by the resonance-organs.

Vox (*voks*). *Voice.*

Voyeur (*voi-yr'*) [Fr.]. A sexual pervert who indulges in witnessing coitus.

Vries, Plasmolytic Method of. A method of determining osmotic pressure by the use of living plant-cells.

Vulcanite (*vul'-kan-īt*) [*Vulcan*, the god of fire]. Ebonite, or hard, vulcanized caoutchouc (india-rubber). **V. Base,** in dentistry, a vulcanized, India-rubber plate adapted to such portion of the alveolar arch as is deprived of natural teeth and is to be supplied with an artificial substitute. **V., Dental,** India-rubber combined with sulphur or sulphur compounds, and colored with vermilion. A combination of rubber 48 parts, sulphur 24 parts, and vermilion 36 parts. Compare *Rubber.*

Vulcanizer (*vul'-kan-i-zer*) [*Vulcan*, the god of fire]. In dentistry the apparatus in which the prepared rubber is hardened by the action of steam. It consists of a copper boiler, with a screw-top, having connected with it a thermometer for regulating the steam necessary to harden the rubber, and a safety-valve to prevent explosion.

Vulcanol (*vul'-kan-ol*) [*Vulcan*, the god of fire]. A thick, lubricating oil formed in great quantities in petroleum-refineries and in paraffin and solar-oil works.

Vulgar (*vul'-gar*) [*vulgaris*, common]. Common. Coarse. Unrefined. Popular.

Vulnera (*vul'-ner-ah*) [L.]. Plural of *Vulnus*. A wound.

Vulnerary (*vul'-ner-a-re*) [*vulnus*, a wound]. In therapeutics, any remedy or agent useful in healing wounds.

Vulnus (*vul'-nus*) [L.: *gen.*, *Vulneris*; *pl.*, *Vulnera*]. A wound. **V. sclopetarium**, a gun-shot wound. **V. simplex**, an incised wound.

Vulpian's Law. See *Law*.

Vulpic Acid (*vul'-pik*). See *Acid*.

Vulsella (*vul-sel'-ah*). See *Vulsellum*.

Vulsellum (*vul-sel'-um*) [L.: *pl.*, *Vulsella*]. A kind of forceps; volsella. See *Volsella*.

Vultus (*vul'-tus*) [L.]. The face, countenance, or looks.

Vulva (*vul'-vah*) [*volvere*, to roll up]. The female pudendum, though not, strictly speaking, including the mons veneris. **V. connivens**, a form of vulva in which the labia majora are in close apposition. **V., Garrulity of**, vaginal flatus. **V. hians**, the form of vulva in which the labia majora are gaping.

Vulval, Vulvar (*vul'-val*, *vul'-var*) [*vulva*, vulva]. Pertaining to the vulva.

Vulvate, Vulviform (*vul'-vāt*, *vul'-vi-form*) [*vulva*, vulva; *forma*, form]. Shaped like or resembling the vulva.

Vulvismus (*vul-viz'-mus*). See *Vaginismus*.

Vulvitis (*vul-vi'-tis*) [*vulva*, vulva; ιτις, inflammation]. Inflammation of the vulva. **V., Diphtheric**, vulvitis with diphtheric deposit. **V., Follicular**, inflammation of the mucous follicles of the vulva.

Vulvo- (*vul'-vo-*) [*vulva*, vulva]. A prefix denoting relation to the vulva.

Vulvo-vaginal (*vul-vo-vaj'-in-al*) [*vulva*, vulva; *vagina*, vagina]. Pertaining conjointly to the vulva and the vagina. **V. Glands**, the small glands situated one on each side of the vulva near the vagina. See *Glands*.

Vulvo-vaginitis (*vul-vo-vaj-in-i'-tis*) [*vulva*, vulva; *vagina*, vagina; ιτις, inflammation]. Inflammation of the vulva and the vagina.

W

W. The symbol of *Tungsten* (Wolfram).

W. L. or λ. Wave-length.

Wachendorf's Membrane. The fetal membrane of the pupil of the eye. It atrophies about the seventh month. See *Membrane*, *Pupillary*.

Wachsmuth's Mixture. See *Anesthetic*.

Waddle (*wod-l'*) [dim. of *wade*]. To sway or rock from side to side in walking.

Wade's Balsam. *Friars' Balsam*; *Jesuits' Drops*; a favorite vulnerary, essentially the same as the compound tincture of benzoin.

Wafer (*wa'-fer*) [ME., *wafre*, *wafer*]. A pharmaceutic preparation made by pouring a thick, smooth mixture of flour and water between greased, hot, polished plates or cylinders, so adjusted that a thin sheet or wafer is produced. When dry this is hard and brittle, but when moistened it becomes soft, tough, and slippery, and is well adapted for taking medicines in the form of powder. **W.-ash.** See *Ptelea trifoliata*.

Wagner's Spot. The germinal spot or nucleolus of the ovum.

Wagner, Tactile Corpuscles of. Oval-shaped bodies at the termination of nerve-fibers, regarded by Wagner as directly concerned in the sense of touch. **W. and Meissner's Corpuscles**, tactile end-organs lying in the papillæ of the skin.

Wagnerian Corpuscles (*wag-ner'-e-an*). See *Tactile Corpuscle*.

Wahoo (*wah-hoo'*). See *Euonymus*.

Waist (*wāst*) [ME., *wast*, waist]. The narrowest portion of the trunk above the hips.

Waistcoat, Straight (*wāst'-kōt*, *strāt*). See *Jacket*.

Walcher's Posture. The woman in the dorsal position, the hips at the edge of the table, the lower extremities hanging.

Walcheren Fever (*wal'-cher-en*) [from *Walcheren*, Netherland]. A severe type of malarial fever.

Waldenburg's Apparatus. An apparatus constructed on the principle of a gasometer, and used for compressing or rarefying air, which is inhaled, or into which the patient exhales.

Waldeyer's Glands. Acino-tubular glands at the attached border of the tarsus. **W.'s Plasma-cells.** See *Plasma*. **W., Sulcus of**, a spiral sulcus of the limbus of the ear.

Wale (*wāl*). See *Wheal*.

Walk (*wawk*) [ME., *walken*, to walk.] 1. Manner of walking. See *Gait*. 2. In Swedish physical training certain forms of progression are specified as walks. See *Stretch-walk*, *Yard-walk*.

Wallerian Degeneration. Degeneration of nerves after separation from their trophic centers. **W. Law.** See *Law*.

Wall-eye (*wawl'-i*). A vulgarism used to express the appearance of leukoma of the cornea, or of eyes with a light-colored iris; also, a divergent strabismus. **W.-pepper.** See *Sedum acne*.

Walnut (*wol'-nut*). See *Juglans*.

Walter's Ganglion. See *Ganglia*, *Table of*.

Walther's Angle. See *Angle*. **W.'s Ducts**, ducts in the sublingual gland. **W., Oblique Ligament of**, a band of capsular ligament of the ankle-joint, extending from the external malleolus to the eminence on the astragalus for the flexor longus pollicis.

Wamble (*wom'-bl*) [ME., *wamlen*, mawkish]. A feeling of nausea; a heaving of the stomach. [Vulgar.] **W.-cropped.** Nauseated; sick at the stomach. [Vulgar.]

Wan (*won*) [ME., *wan*, wan]. Pale; pallid; of sickly hue or expression.

Wandered (*won'-derd*) [ME., *wanderen*, to wander] Out of the usual or normal place; out of the proper habitat; as a *wandered* scolex.

Wandering (*won'-der-ing*) [ME., *wanderen*, to wander]. 1. Delirium; incoherence of speech or thought. 2. Having no fixed place. **W. Abscess**, one that points at a considerable distance from its real seat. **W. Cell**, an ameboid connective-tissue cell; a leukocyte, so

called from its power of leaving the blood-current and entering the tissues. See *Leukocyte*. **W. Erysipelas**, *Erysipelas migrans*, erysipelas with frequent change of localization. **W. Kidney**. See *Floating Kidney*. **W. Liver**. See *Liver*. **W. Pneumonia**, a migrant, or locally progressive pneumonia; one that changes its seat. See *Pneumonia*. **W. Rash**, *Geographic Tongue*, *Lichenoid*, *Circinate Eruption*, a peculiar and rare disease of the tongue occurring, as a rule, in children under two years of age. It consists in the appearance on the dorsum of the tongue of round, raised, whitish patches surrounded by a raised ring of epithelial tissue yellowish in color. These rings may intersect and cover the tongue with sinuous lines. It is a chronic disease of a harmless nature, very resistant to treatment. See *Geographic Tongue*. **W. Spleen**, a rare condition in which the attachments of the spleen become relaxed to such a degree that it descends by the force of gravity into the left iliac fossa, or may be found upon the opposite side of the body when the patient lies upon the right side. **W. Tumor**, usually a displaced or floating viscus.

Wane (*wān*) [ME., *waney*, to wane]. To decrease; to decline; to fade.

Wang [ME., *wange*, cheek]. 1. The jaw, jaw-bone, or cheek-bone. 2. A cheek-tooth or grinder. **W.-tooth**. A cheek-tooth; a grinder or molar.

Wanklyn's Ammonia Process. A process for the estimation of nitrogenous organic matter in water. This process operates on the water itself, and not on the residue obtained on evaporation, and it gives as characteristic data the "free ammonia" and "albuminoid ammonia" yielded by waters. The principle of the method is the measurement of the nitrogenous organic matter in waters by the quantity of ammonia yielded by the destruction of the organic matter. For the measurement of the quantities of ammonia, the very delicate test of Nessler is utilized.

War Fever. Synonym of *Typhus Fever*.

Warble (*war'-bl*) [also *wormil*, *wormul*, *warnle*, *wornil*, *wornal*. Origin obscure, perhaps connected with ME., *war*, pus, humor, or with *worm*]. (*a*) A small, boil-like tumor on the back of horses, cattle, deer, etc., produced by the galling of a saddle or by the presence of the larva of the warble-fly. The inflammation produces a condition of the surface of the carcass beneath the warble known as "licked beef," or "butchers' jelly." **W.-fly**. See *Hypoderma bovis*, under *Parasites* (*Animal*), *Table of*.

Warburg's Tincture, *Tinctura pyrexialis*. It consists of aloes soc. ℔ j, rad. rhei, sem. angelica, confec. Damocratis āā ℥ iv; rad. helenii, croci sativi, sem. fœniculi, cretæ præp. āā ℥ ij; rad. gentianæ, rad. zeodariæ, pip. cubebæ, myrrh. elect., camphoræ, bolet. laricis, āā ℥ j. Digest with proof spt. ℥ 500, and add quinin disulph. ℥ x. Filter. Dose ℥ j in two doses three hours apart.

Ward [ME., *ward*, ward]. A division or room of a hospital. **W.-carriage**, an apparatus for hospital service mounted upon wheels, and containing a reservoir of water, and other materials, instruments, etc., used in surgical operations and dressings.

Ward's Paste, confection of black pepper. See *Paste*.

Wardrop's Disease. Malignant onychitis. See *Diseases*, *Table of*. **W.'s Operation**, ligature of the artery beyond an aneurysm.

Warega-fly (*war-a'-gah-fli*) [S. A. Ind., *warega*, fly]. See *Musca sp.* (*?*) under *Parasites* (*Animal*), *Table of*.

Warehousemen's Itch. See *Grocers' Itch*.

Waring's System. A system of sewage-disposal by means of sub-surface irrigation. It should be called "*Moule's System*" because invented by the late Rev. Henry Moule, Vicar of Fordington.

Warm [ME., *warm*, warm]. Having a moderate degree of heat. **W. Bath**. See *Bath*. **W.-blooded**, a term applied to animals that maintain a uniform temperature, whatever the changes of temperature in the surrounding medium.

Warming [ME., *warmen*, to warm]. Making warm. **W. Plaster**. See *Cantharis*.

Warner's Laudanum. See *Laudanum*.

Warras (*war'-as*) [Ind.]. A variety of kamala, said to be obtained from *Flemingia grahamiana*, a leguminous tree of India; it is a teniafuge and useful in skin-diseases. Dose of powder ℥ iss–v; of tincture f ℥ j. Unof.

Warren's Styptic. See *Lotio adstringens*.

Wart [ME., *wert*, wart]. See *Verruca* and *Condyloma*. A small, circumscribed elevation on the skin, with an uneven papillary surface and a broad base. In farriery, a spongy excrescence in the pastern of the horse. In biology, a small glandular or gland-like excrescence on the surface of a plant. **W., Peruvian.** See *Verruca peruana*.

Warty [ME., *wert*, wart]. Resembling a wart; covered with warts. **W. Smallpox**, *Hornpox*, a name given to those cases of smallpox in which the eruption does not develop beyond the papular stage. **W. Tubercle.** See *Verruca necrogenica*. **W. Ulcer.** See *Marjolin's Ulcer*.

Wash [ME., *washen*, to wash]. To cleanse with a liquid. See *Lotion*. **W., Black.** See *Lotio hydrargyri nigra*. **W.-leather Skin**, that condition of the skin in which certain metals, especially silver, mark it with a black line. It occurs, as a rule, in patients suffering from diseases which directly or indirectly affect either the trophic or the sensory nerves. It sometimes precedes the occurrence of bed-sores. **W.-rag.** See *Luffa*. **W., Yellow.** See *Lotio hydrargyri flava*.

Washerwoman's Hand. See *Cholera-hand*. **W.'s Itch** or **Scall**, psoriasis of the hand, occurring in washerwomen.

Washing (*wash'-ing*) [ME., *washen*, to wash]. Ablution. The mechanical operation of separating soluble from insoluble matter.

Waste (*wāst*) [ME., *wast*, waste]. Any ultimate product of katabolism; loss by reason of disease, inanition, or over-use. **W. and Garbage.** See *Sewage*. **W. Silk**, that which proceeds from perforated and double cocoons, and such as are soiled in steaming or in any other way. This waste silk is washed, boiled with soap, and dried. When carded and spun like cotton it yields the so-called *flurt-silk*.

Wasting (*wāst'-ing*) [ME., *wasten*, to waste]. Destroying; running; laying waste. See *Atrophy*. **W. Disease**, a popular term for *Pulmonary Tuberculosis* and for tuberculous disease of cattle. **W. Palsy.** See *Atrophy*, *Progressive Muscular*.

Watchmakers' Cramp. See *Cramp*.

Water (*waw'-ter*) [ME., *water*, water], H_2O. A transparent, inodorous, tasteless fluid, boiling at 212° F. (100° C.), and freezing at 32° F. (0° C.). The specific gravity of water at 39.2° F. (4° C.) is 1. See *Aqua*. **W.-analysis**, the analysis of water. **W.-bag**, the reticulum of the stomach of the camel and other *Camelidæ*. A rubber bag in which water of varying degrees of temperature can be introduced for topical application. **W.-bed.** See *Bed*. **W.-blue.** See *Pigments*, *Conspectus of*. **W.-brain**, gid or staggers of sheep, caused by the brain-worm. **W. Brain-fever.** See *Meningitis*, *Tuberculous*. **W. on Brain.** See *Hydrocephalus*. **W.-brash.** See *Pyrosis*. **W.-braxy**, a disease of sheep in which there is hemorrhage into the peritoneal cavity. **W.-breather**, any branchiate which breathes water by means of gills. **W.-cancer.** Synonym of *Cancrum oris*. **W.-**

canker. Synonym of *Cancrum oris.* **W.-cell,** one of several diverticula of the paunch of the camel, serving to store up water. **W.-closet,** an apparatus for the reception of excrement, which is connected with a sewer by a pipe, and in which water must be used to carry away the excrement deposited in it. **W.-closets, Varieties of:** 1. Those in which there is no movable apparatus for retaining water in the basin—the hopper and wash-out closets. 2. Those in which there is a movable apparatus—the pan, valve, and plug closets. **W.-colors.** See *Pigments, Colors, and Dyestuffs.* **W. of Crystallization,** the water employed in giving molecular structure to the crystals of chemic salts, to which their physical qualities are due. **W.-cure.** See *Hydropathy* and *Hydrotherapeutics.* **W., Distilled.** See *Aqua.* **W.-dressing,** the treatment of ulcers and wounds by the application of water. **W.-farcy,** lymphangitis of the leg of a horse. **W., Florida,** a perfume consisting of oleum bergamii ℥iv, comp. tinct. benzoini ℥ij, alcohol Oj. **W.-gas,** a gas, non-luminous in its pure form, derived in part from the decomposition of steam passed over ignited coals. It is used as an illuminating gas when enriched by the addition of a hydrocarbon, as petroleum or naphtha. It is also used in metallurgic operations, in chemic works, and in the laboratory. **W.-gurgle Test,** a gurgling sound heard when water is swallowed on auscultation over the seat of narrowing in cases of organic stricture of the esophagus. **W.-hammer Pulse.** See *Corrigan's Pulse.* **W., Hard,** natural waters containing soluble calcium salts, distinguished by their curdling action on soap. **W.-hemlock.** See *Cowbane.* **W., Ice,** water obtained by the melting of ice. **W.-immersion.** See *Objective.* **W., Javelle,** a solution of potassium hypochlorite, KClO. **W.-jugs.** Synonym of *Varicella.* **W.-melon,** the fruit of *Cucumis citrullus.* Its sweet and watery fruit, and especially the seeds, are diuretic. Unof. **W., Mineral.** See *Mineral Water.* **W.-pang,** pyrosis. **W.-passage,** the urethra. **W.-pepper.** See *Polygonum hydropiperoides.* **W.-plantain.** See *Alisma.* **W.-pock.** Synonym of *Varicella.* **W.-pore,** in biology, an aperture in the epidermis of the leaves of certain plants (*e. g., Caladium esculentum*) directly over the extremity of a vein. It is a modified stroma and serves to facilitate the transpiration of water. **W.-pox,** chicken-pox. **W.-proof Drawing-ink,** powdered, bleached shellac 4 parts, borax 1 part, water 24 parts; dissolve by the aid of heat. To this solution the coloring-principle, as India ink, lampblack, different tints and shades of anilin colors, is added, after being dissolved in or triturated with a small quantity of water. **W.-qualm,** pyrosis. **W., Rice.** See *Oryza.* **W., Soda.** See *Soda-water.* **W., Softening of,** the process of removing from water certain mineral constituents that render it "hard" or unsuited for technical or domestic purposes. This may be accomplished either by heat or the use of chemicals. The *Clarke Process* of softening consists in bringing steam directly into contact with the water. **W.-vascular,** in biology, applied to the system of circulation of water through the tissues of many invertebrates; a respiratory process. **W.-wheel Sound.** See *Bruit de Moulin* and *Hydropneumopericardium.*

Watered-silk Reflex. See *Reflex.*

Waters (*waw'-terz*) [ME., *water*, water]. Plural of *Water, q. v.* **W., Bag of.** The amnion. See *Amnii, Liquor.* **W., False,** a discharge of fluid before labor, due to a catarrhal endometritis.

Watt (*wot*) [after James *Watt*, the Scottish engineer]. In electro-mechanics, one voltampère. See *Volt* and *Electric Units.*

Wattle (*wot'-l*) [ME., *watel*, a hurdle]. 1. See *Mimosa-bark.* 2. In biology, a lobe or flap of the skin, usually paired and pendent, on the head and near the mouth of certain birds, fishes, and mammals. A dew-lap, a barbel.

Wave (*wāv*) [ME., *wave*, wave]. A cycle of rhythmic alternating movements. **W.-lengths and Frequencies of Light,** the ethereal wave-lengths, together with their frequencies, of the visible portion of the spectrum are given in the appended table. The average vibrational frequency of white light has been estimated at 554 millions of millions per second. **W., Pulse.** See *Pulse.*

TABLE OF THE WAVE-LENGTHS AND FREQUENCIES OF LIGHT.

(*From Daniell.*)

	Frequencies—Per Sec.	Lengths in Cm.
Line A,	395,000,000,000,000	.00007604

Wavy (*wa'-ve*) [ME., *wave*, wave]. Of the nature of a wave. **W. Breathing.** See *Breath-sounds.*

Wax (*waks*) [ME., *wax*, wax]. 1. To grow; to increase in size. 2. See *Cera* and *Cerumen.* **W., Bees',** a wax deposited by the honey-bee in the honeycomb. **W., Carnauba,** obtained from the leaves of the carnauba tree; it melts at 83° C.; contains free ceryl-alcohol and various acid esters. **W., Chinese,** ceryl cerotic ester. **W., Mineral.** See *Ozocerite.* **W.-myrtle.** See *Myrica.* **W.-work.** See *Celastrus.*

Waxing (*waks'-ing*) [ME., *waxen*, to increase]. Growing; increasing in size. **W.-kernels,** enlarged inguinal and submaxillary lymph-glands in children; popularly associated with the growth of the child. **W.-pains.** See *Growing Pains.* **W. and Waning Pulse.** See *Pulsus inciduus.*

Waxy (*waks'-e*) [ME., *wax*, wax]. Of the nature of or like wax. **W. Degeneration.** See *Degeneration.* **W. Kidney.** See *Bright's Disease.*

Weak (*wēk*) [ME., *weik*, weak]. Not strong. **W. Ankle,** a condition in which there is an abnormal relaxation of the ligaments of the ankle-joint, with such weakness of the leg-muscles as may allow the foot to bend involuntarily, either inward or outward, in the act of standing or walking. It is common in feeble children. **W.-minded,** having a feeble intellect.

Weaken (*we'-ken*) [ME., *weik*, weak]. To reduce the strength.

Weakness (*wēk'-nes*) [ME., *weik*, weak]. See *Asthenia.* **W., Inward,** a popular term for leukorrhea.

Weal (*wēl*). 1. Well-being. 2. See *Wheal.*

Wean (*wēn*) [ME., *wenen*, to wean]. To cease to give suck to offspring at a period when the latter is capable of taking substantial food from external sources.

Weaning (*wēn'-ing*). See *Ablactation*.

Weasel-faced (*wē'-zl-fāst*) [ME., *wesel*, weasel; *face*]. Having a thin, sharp face.

Weather-plant (*weth'-er plant*). Jequirity, *q. v.*

Web [ME., *web*, web]. A woven fabric; a membrane-like structure. The thin, soft tissue between any two adjacent fingers or toes, lying distad of the knuckles. **W. of the Brain**, the bindweb, or neuroglia. **W., Choroid**, the velum interpositum. **W.-eye.** See *Pterygium*. **W.-eyed**, affected with pterygium. **W.-fingered**, having the fingers united by web-like tissue. **W.-foot**, a foot whose toes are webbed. **W.-footed**, having web-feet. **W.-footedness**, webfoot. **W.-toed**, web-footed.

Webbed (*webd*) [ME., *web*, web]. Having, or of the nature of a web. **W. Fingers** (or **Toes**), union of two adjacent digits by a thin band of connecting tissue.

Weber (*web'-er*). 1. Same as *Coulomb*. 2. Same as *Ampère*. See *Electric Units*.

Weber's Chronometer. A kind of metronome consisting of a weight and a graduated and adjustable cord. **W.'s Corpuscle.** See *Corpuscle*. **W.'s Experiment**, for testing hearing. A vibrating tuning-fork set on the median line of the skull will be heard best by the ear the external meatus of which is occluded by the finger. In unilateral ear-disease the tuning-fork is best heard by the ear in which pathologic changes have occurred in the external meatus or the middle ear. **W.'s Glands.** See *Gland*. **W.'s Law**, *a law of sense-perceptions*. When the excitation is increased in geometric proportion, the sensation is increased in arithmetic proportion, or, in other words, the reaction varies as the logarithm of the excitation. See *Law*. **W.'s Paradox**, the fact that a muscle, when so stretched that it cannot contract, may elongate. **W.'s Symptom**, paralysis of the oculo-motor of one side and hemiplegia of the opposite side. **W.'s Test.** See *W.'s Experiment*.

Weber and Hasner, Theory of. See *Aspiration-theory*.

Webster's Condenser. In microscopy, an apparatus consisting of two lenses, used for intensifying the light thrown on the object. **W.'s** (*Lady*) **Pill**, a pill of aloes and kina.

Wedge (*wej*) [ME., *wegge*, wedge]. A prismoidal mass used by dentists to separate the teeth. **W.-bone**, an ossicle sometimes found at a vertebral joint.

Wedl's Solution. A solution of a coloring-matter obtained from the lichen *Roccella tinctoria*. The free ammonia is driven off by gentle heat from the French extract of orseillin, and this powder is added to the following mixture until a deep-red fluid is obtained: absolute alcohol 20 c.c., hydric acetate 5 c.c., distilled water 40 c.c.

Weed (*wēd*) [origin obscure]. 1. Milk-fever. See *Garget* and *Ephemera*. 2. Lymphangitis in the legs of a horse.

Weep (*wēp*) [ME., *wepen*, to weep]. To shed tears.

Weeping (*wēp'-ing*) [ME., *wepen*, to weep]. 1. Lachrymation. 2. Exudation, or leakage of a fluid. Exuding; applied to raw or excoriated surfaces bathed with a moist discharge.

W. Leg. See *Leg*. **W. Sinews**, a colloquial term applied to torn or broken tendons, because of the appearance of the structures after certain injuries.

Weibel, Spirilli of. See *Bacteria, Synonymatic Table of*.

Weid (*wēd*). Same as *Weed*.

Weight (*wāt*) [ME., *weight*, weight]. The measure of the force of gravitation. A table or system for the measurement of weight. **W., Atomic.** See *Atomic Weight*. **W., Molecular.** See *Molecular Weight*. **Ws. and Measures:** The U. S. **Standard Unit of Weight** is the **Troy Pound**; it was copied in 1827, from the imperial troy pound of England, for the use of the U. S. Mint, and there deposited. It is standard in air, at 62° Fah., the barometer at 30 inches.

TROY WEIGHT.

Grains.						
24	=	1 dwt.				
480	=	20 dwts.	=	1 oz.		
5760	=	240 dwts.	=	12 oz.	=	1 lb. = 22.816 cu. in of distilled water at 62° Fahr.

AVOIRDUPOIS WEIGHT.

Drams.		Ounces.						
16	=	1	=	437.5 grains Troy.				
256	=	16	=	1 lb.	=	1.2153 lb. Troy.		
6,400	=	400	=	25 lbs.	=	1 quarter.		
25,600	=	1,600	=	100 "	=	4 quarters	=	1 cwt.
512,000	=	32,000	=	2000 "	=	80 "	=	20 " = 1 ton.

APOTHECARIES' WEIGHT.

Grains.						
20	=	1 scruple.				
60	=	3 scruples	=	1 dram.		
480	=	24 "	=	8 drams	=	1 oz.
5760	=	288 "	=	96 "	=	12 ounces = 1 lb.

APOTHECARIES' MEASURE.

60 minims	=	1 fluidram.
8 fluidrams	=	1 fluidounce.
16 fluidounces	=	1 pint.
2 pints	=	1 quart.
4 quarts	=	1 gallon.

45 drops of water, or a common teaspoonful, make about 1 fluidram; 2 tablespoonfuls about 1 fluidounce; a wineglassful is about 1½ fluidounces; and a teacupful about 4 fluidounces.

LIQUID, OR WINE MEASURE.

Gills.														
1	=	7.2187 cu. in.												
4	=	1 pint	=	28.875 cu. in										
8	=	2 pints	=	1 quart	=	55.75 cu. in.								
32	=	8 "	=	4 quarts	=	1 gallon.								
2016	=	504 "	=	252 "	=	63 gallons	=	1 hogshead.						
4032	=	1008 "	=	504 "	=	126 "	=	2 hogsheads	=	1 pipe.				
8064	=	2016 "	=	1008 "	=	252 "	=	4 "	=	2 pipes	=	1 tun.		

The **Standard Unit of Liquid Measure** adopted by the U. S. Government is the **Winchester Wine Gallon**, which contains 231 cubic inches, and holds 8.339 lbs avoir. of distilled water, at its maximum density, weighed in air, the barometer being at 30 inches. The **Imperial Gallon** adopted by Great Britain contains 277,274 cubic inches, and equals 1.20032 U. S. gallons. The **Standard Unit** of the U. S. and British **Linear Measure** is the yard. It was intended to be exactly the same for both countries, but in reality the U. S. yard exceeds the British standard by .00087 inch. The *actual standard of length* of the U. S. is a brass scale 82 inches long prepared for the Coast Survey and deposited in the Office of Weights and Measures at the U. S. Treasury Dept., Washington. The yard is between the 27th and the 63d inch of this scale. The temperature at which this scale is designed to be standard, and at which it is used in the U. S. Coast Survey, is 62° Fahrenheit.

LONG MEASURE.

Inches.														
12	=	1	foot.											
36	=	3	feet	=	1	yard.								
72	=	6	"	=	2	yards	=	1	fathom.					
198	=	16.5	"	=	5.5	"	=	2.75	fathoms	=	1	perch.		
7,920	=	660	"	=	220	"	=	110	"	=	40	perches	=	1 furlong.
63,360	=	5280	"	=	1760	"	=	880	"	=	320	"	=	8 furlongs = 1 mile.

SQUARE MEASURE.

Sq. Inches.	Sq. Feet.			
144 =	1			
1296 =	9	= 1	sq. yard.	
39,204 =	272.25	= 30.25	sq. yards =	1 perch.
1,568,160 =	10,890	= 1210	" " =	40 perches = 1 rood.
6,272,640 =	43,560	= 4840	" " = 160 "	= 4 roods = 1 acre.

An acre is 69.5701 square yards; or, 208.710321 square feet.

A township is 6 miles square = 36 sections.
A section " 1 mile " = 640 acres.
¼ " " ½ " " = 160 "
⅛ " " ¼ " " = 40 "

SOLID MEASURE.

Cu. in.		
1,728 =	1	cubic foot.
46,656 =	27	cubic feet = 1 cubic yard.

DRY MEASURE.

Pints.					
1 =	33.6 cubic inches.				
2 =	1 quart	= 67.2 cubic inches.			
8 =	4 quarts =	1 gallon	= 268.8 cubic inches.		
16 =	8 "	= 2 gallons =	1 peck	= 537.6 cubic in	
64 =	32 "	= 8 "	= 4 pecks =	1 bushel.	

The **Standard U. S. Bushel** is the **Winchester Bushel**, which is, in the cylinder form, 18½ in. in diameter and 8 in. deep, and contains 2150.42 cub. inches.

The English Imperial bushel = { 2218.192 cubic inches. / 1.03152 U. S. bushel.

The English quarter = { 8 Imperial bushels. / 8¼ (nearly) U. S. bushels. / 10.2694 cubic feet.

Weil's Disease. An infectious febrile disease, somewhat resembling typhoid fever, accompanied by muscular pain and grave disturbance of the digestive organs. See *Diseases, Table of.*

Weisner's Tests. Tests for lignin. The specimen is first acted on by hydrochloric acid, and then moistened with a solution of phloroglucin in water and alcohol. If the cell-walls are lignified, they will at once assume a red color. Höhnel suggests the employment of a strong decoction of cherry-wood instead of phloroglucin. Used in the same way, it imparts a violet color to lignified cells (Goodale).

Weiss' Reflex. A peculiar curved reflex seen with the ophthalmoscope parallel with and to the nasal side of the papilla or disc of the fundus of the eye. It is thought to be a sign of myopia.

Weissmann's Ahnenplasma. See *Heredity, Weissmann's Theory of.* **W.'s Theory.** See *Blastogenesis, Germ-plasm,* and *Heredity.*

Weissmannism. See *Heredity, Weissmann's Theory of.*

Weitbrecht, Cartilage of. See *Cartilage.* **W., Cord of.** See *Cord.* **W.'s Ligament.** See *Ligament.* **W., Retinacula of.** See *Retinacula.*

Welcker's Angles. See *Angle.*

Welk. See *Whelk.*

Well [ME., *wel*, well]. In good health, not diseased. An artificially made spring of water. A cavity or pit.

Wells' Facies. The facies of ovarian disease.

Welt. See *Wheal.*

Wen. See *Sebaceous Cyst.*

Wenz's Method. A method of removing all the proteids from a liquid. Saturate the solutions with ammonium sulphate, and all the proteids but peptone will be precipitated, and may be filtered off.

Werlhoff's Disease. Purpura hæmorrhagica. See *Diseases, Table of.*

Wernekinck, Commissure of. The decussation of the prepeduncles of the cerebellum.

Wernicke's Fissure. See *Fissure.* **W.'s Sign** *Hemiopic pupillary inaction.* If a bright light is thrown into the eye and the pupil reacts, the integrity of the reflex arc is demonstrated. It is possible in cases of lateral hemianopsia to throw the light into the eye so that it falls upon the blind half of the retina. If when this is done the pupil contracts, the indica

tion is that the reflex arc referred to is perfect, by which is meant that the optic nerve-fibers from the retinal expansion to the center, the center itself, and the third nerve are uninvolved. In such a case the conclusion would be justified that the cause of the hemianopsia was central; that is, situated behind the geniculate bodies, either in the fibers of the optic radiation or in the visual cortical centers. If, on the other hand, when the light is carefully thrown on the hemiopic half of the retina, the pupil remains inactive, the conclusion is justifiable that there is interruption in the path between the retina and the geniculate bodies, and that the hemianopsia is not central, but dependent upon a lesion situated in the tract.

Wertheim's Ointment. An ointment used in treating chloasmata. It consists of the ammoniated chlorid of mercury and bismuth, each two drams, and glycerin ointment one ounce. This is to be smeared over the blotches.

Werwolf, Werewolf (*wēr'-wulf*) [ME., *werwolf*]. A lycanthrope. See *Lycanthropy* and *Zoānthropy*.

West Indian Colic. See *Colic.*

Westphal's Nucleus. See *Nucleus.* **W., Paradoxic Contraction of,** this consists in the contraction of a muscle, caused by the passive approximation of its extremities. It is best known in the tibialis anticus, in which it can be produced in proper cases by rapid dorsal flexion of the foot; the foot remains firmly fixed in this position for some time. It has been observed in cases of combined sclerosis of the posterior and lateral columns and in paralysis agitans (Westphal). It is found only in disease. **W.'s Phenomenon,** or **Symptom,** loss of the knee-jerk, as in tabes dorsalis. See *Signs and Symptoms, Table of.* **W.-Erb's Symptom.** Same as *Westphal's Phenomenon.*

Wet [ME., *wet*, wet]. Moist; not dry. **W. Brain,** an excessively serous condition of the brain, seen *post-mortem* in cases of alcoholism, etc. **W.-cupping,** cupping combined with scarification, whereby some blood is drawn. **W.-nurse.** See *Nurse.* **W. Pack,** wrapping a patient with a wet sheet covered with dry blankets. **W.-scald,** eczema in sheep, occurring in wet and cold weather. **W. Tetter.** See *Eczema.*

Weyl's Test (*for kreatinin*). See *Tests, Table of.*

Whale-oil [AS., *hwæl*, whale]. *Train-oil.* An oil extracted from the blubber of the common or Greenland whale. It is yellowish or brownish in color and of disagreeable odor. Its specific gravity is .920 to .931. It is used for illumination and for soap-making.

Wharl (*hwarl*) [a variety of whirl]. **The uvular or** rattling utterance of the *R* sound.

Wharton's Canal. See *Duct.* **W., Duct of.** See *Duct.* **W.'s Jelly,** the gelatin-like connective tissue of the umbilical cord.

Wheal (*hwēl*) [ME., *wheel*, a pimple]. A raised stripe or ridge on the skin, usually of short duration and accompanied with violent itching. It may be produced by a stroke or from the bite or sting of an insect, or it occurs as a symptom in urticaria. See *Pomphus.* **W.-worm,** the *Acarus scabiei*, or itch-insect.

Wheat (*hwēt*). See *Triticum.*

Wheatena (*hwēt-ē'-nah*) [ME., *whete*, wheat]. An artificial food said to contain all the elements of the wheat-berry except the husk. The starch-granules have already been ruptured by heat, and only a few moments' cooking is necessary.

Wheel (*hwēl*) [ME., *wheel*, wheel]. A circular frame or solid disc turning on an axis. In biology, the trochal disc of *Rotifera.* **W.-crutch,** a contrivance used in orthopedic surgery whereby children unable to walk from hip-disease, paralysis, etc., may move themselves from place to place. **W., Knight's,** a small wheel rotating in the horizontal plane, with a number of seeds attached to its circumference, devised by Andrew Knight to ascertain the effect of geotropism. **W. of Life.** See *Zoetrope.*

Wheelhouse's Operation. Incision into the urethra through the perineum for the treatment of stricture. See under *Urethrotomy.*

Wheeze (*hwēz*) [ME., *hwezen*, to wheeze]. To breathe hard; to puff and blow; to breathe with difficulty and audibly.

Wheezing (*hwēz'-ing*) [ME., *hwesen*, to wheeze]. The half-stertorous, sibilant sound occasionally observed in the breathing of persons affected with croup, asthma, or coryza.

Whelk (*hwelk*) [ME., *welk*]. A protuberance upon the face, due to alcoholism; acne rosacea; a pimple.

Whetstone Crystals (*hwet'-stōn*). Peculiar crystals of xanthin found in urine.

Whey (*hwa*) [ME., *whey*, whey]. The liquid part of milk separating from the curd in coagulation. **W., Alum,** whey separated by stirring milk with a lump of alum; a popular remedy for sore eyes. **W.-cure,** a cure for chronic catarrh of the respiratory organs. This consists in drinking warm whey, either alone or mixed with a mineral water, in definite quantities at set times. About 20 ounces are taken daily. This is regarded by many as in all respects similar to the use of skimmed milk. Sometimes the method is combined with baths of whey. See *Serotherapy* and *Aponipsis.* **W., Wine,** a whey prepared by adding Rhine wine, 1 part, to hot milk, 4 parts, and straining.

Whiff (*hwif*) [origin obscure]. A puff of air. **W., Oral,** a peculiar sound heard during expiration from the open mouth, principally in cases of thoracic aneurysm.

Whipping (*hwip'-ing*). See *Flagellation* and *Percussion.*

Whip-worm (*hwip'-wurm*). See *Thread-worm.*

Whirl (*hwurl*) [ME., *whirlen*, to whirl]. To revolve rapidly. **W.-bone:** 1. The head of the femur. 2. The patella.

Whirling (*hwurl'-ing*) [ME., *whirlen*, to whirl]. Revolving rapidly. **W.-chair.** See *Chair.*

Whiskers (*hwis'-kerz*) [origin obscure]. 1. The beard, especially that of the cheeks. 2. The vibrissæ of the cat.

Whiskey, Whisky (*hwis'-ke*) [Sc., *whuskey*]. See *Spiritus frumenti.* **W.-nose.** See *Acne rosacea.*

Whisper (*hwis'-per*) [ME., *whisperen*, to whisper]. An utterance of words by the breath, without vocalization; in auscultation, the sound of a whispering voice, as a cavernous *whisper.*

Whispered (*hwis'-perd*) [ME., *whisperen*, to whisper]. Uttered beneath the breath. **W. Bronchophony.** See *Bronchophony.*

Whispering Pectoriloquy. See *Pectoriloquy.*

Whistle (*hwis'-l*) [ME., *whistle*, a whistle]. A sound produced by forcing the breath through the contracted lips. **W., Galton's.** See *Galton's Whistle.*

Whistling (*hwis'-ling*) [ME., *whistle*, whistle]. Broken wind in the horse.

White (*hwīt*) [ME., *whit*, white]. The opposite of black. In chromatics, the color-effect produced by a mixture of the primary colors. **W. Blisters,** a gangrenous eruption, following varicella and other pustular eruptions in children; varicella gangrænosus, rupia escharotica, pemphigus gangrænosus, dermatitis gangrænosa infantum. **W.-browed,** having a white superciliary streak. **W.-celled Blood.** Synonym of *Leukemia.* **W. Clay.** See *Kaolin.* **W. Clot,** a clot occurring in the heart or vessels, devoid of red coloring-matter. It is usually formed before death. **W. Cohosh.**

See *Actea*. **W. Commissure,** the ventral commissure of the spinal cord. **W.-crowned,** having the crown or top of the head white. **W. Diarrhea,** diarrhea in which there is a large amount of thin mucus in the stools. **W., Dutch,** a mixture of white lead and barium sulphate, 1 : 3. **W. Dysentery,** dysentery without admixture of blood in the stools. **W. Flake,** lead subcarbonate. **W. Flux** (*of India*), "Hill diarrhea;" tropical diarrhea associated with the presence of the *ankylostoma*. See *Diarrhea*. **W. Galls,** the nutgalls procured after the escape of the insect; they are inferior to the blue or black galls. **W. Gangrene.** See *Gangrene*. **W. Gum,** Milia strophulus albidus of Willan. **W., Hamburg,** a mixture of white lead and barium sulphate, 1 : 2. **W. Infarct.** See *Infarct*. **W. Lead,** lead carbonate. See *Pigments, Conspectus of*. **W. Lead Substitute.** See *Pigments, Conspectus of*. **W. Leg.** See *Phlegmasia alba dolens* and *Leg*. **W. Leprosy.** See *Vitiligo*. **W. Lettuce.** See *Nabalus*. **W. Line** (*of the pelvic fascia*), a thickened, whitish band in the pelvic fascia, extending from the lower part of the symphysis pubis to the spine of the ischium. This line marks the point of division of the fascia into two layers, the obturator and the recto-vesical. **W.-lipped,** having white lips. **W. Matter.** See *Brain*. **W. Mole.** See *Mole*. **W. Mustard,** sinapis alba. **W. Nail,** a condition of the nail in which spots and bands of white are seen on its surface. Occasionally the whole nail may be white. The mechanical cause is the presence of air between the affected lamellæ, but the origin is unknown. The condition is sometimes associated with gout, syphilis, or leprosy, or is a part of trophic changes. The white spots commonly seen on the nails of young persons are due to trauma. **W. Oak Bark.** See *Quercus alba*. **W., Paris,** whiting. **W., Pearl,** bismuth subnitrate. **W., Permanent,** pulverized barium sulphate mixed with white lead. **W. Pneumonia.** See *Pneumonia*. **W. Precipitate.** See *Precipitate* and *Hydrargyrum*. **W. Rosin,** ordinary rosin which has been melted and mixed with water. **W. Sage.** See *Erotia lanata*. **W. Sandalwood.** See *Santalum*. **W. Softening,** a form of cerebral softening in which the affected area presents a dirty-white color, due to embolism of one of the larger arteries or to gradual narrowing of the arteries by chronic endarteritis. **W. Substance of Schwann.** See *Schwann*. **W. Swelling.** See *Hydrarthrosis*. **W. Tâche,** a form of tâche observed in typhoid fever, in which the vessels of the area irritated by the nail undergo contraction and remain empty. **W. Tanned Leather.** See *Leather*. **W., Venetian,** a mixture of equal parts of white lead and barium sulphate. **W. Vervain,** the root of *Verbena urticifolia;* of reputed value in malarial fevers. **W. Vitriol,** zinc sulphate. See *Pigments, Conspectus of*. **W. Wax,** yellow wax bleached by exposure to air, light, and moisture. **W. Wine.** See *Wine*. **W.-winged,** having white wings.

White's Disease. Same as *Darier's Disease*.

Whites (*hwīts*). See *Leukorrhea*.

Whiting (*hwīt'-ing*) [ME., *whit*, white]. Purified calcium carbonate.

Whitleather (*hwīt'-leth-er*) [ME., *whittlether*]. The ligamentum nuchæ, or packwax, of the ox.

Whitlow (*hwīt'-lo*). See *Panaris*. **W., Painless.** See *Morvan's Disease*.

Whole (*hōl*) [ME., *hol*, whole]. Hale; healthy; sound.

Whoop (*hoop*) [ME., *houpen*, to whoop]. The inspiratory crow which precedes or occurs during a paroxysm in whooping-cough.

Whooping Cough (*hoo'-ping-kawf*). See *Pertussis* and *Bacillus tussis convulsivæ*, Afanassiew, under *Bacteria, Synonymatic Table of*.

Whorl (*hworl*) [ME., *whorle*, whorl]. See *Vortex*. In biology, organs disposed in a circle about a central axis are said to be arranged in a whorl. **W. of Heart.** See *Vortex of Heart*.

Whytt's Disease. Acute hydrocephalus. **W.'s Tincture,** a preparation consisting of cinchona 6, orange peel 2, gentian 2, cinnamon 1, dilute alcohol 50.

Wickersheimer's Fluid. A fluid employed chiefly for the preservation of museum specimens. There are two formulæ, the first for injecting, and the second for immersing. They are as follows:—

	First Solution.	*Second Solution.*
Arsenious acid,	16 gms.	12 gms.
Sodium chlorid,	80	60
Potassium sulphate,	200	150
" carbonate,	20	15
" nitrate,	25	18
Glycerin,	4,000 c.c.	4,000 c.c.
Wood-naphtha,	750	750
Water,	10,000	10,000

Widal Reaction (Gruber-Widal Reaction, Agglutination-test). The clumping and sedimentation with loss of mobility, of certain bacteria on addition of blood-serum from persons who have passed or are passing through the disease to which the respective bacterium gives rise.

Wig [abbr. of periwig]. A covering of false hair for the head.

Wigger's Ergotin. An alcoholic extract prepared from ergot deprived of fixed oil by means of ether. **W.' Method, a Method of Generating Chlorin.** Mix 18 parts of finely ground common salt with 15 parts of finely pulverized good manganese dioxid. Put the mixture in a flask and pour a *completely cooled* mixture of 45 parts of concentrated sulphuric acid and 2 parts of water upon it, and shake.

Wild (*wīld*) [ME., *wilde*, wild]. Not domesticated. **W. Bean.** See *Apios*. **W. Bergamot,** the herb *Monarda fistulosa*, in large doses a powerful diaphoretic. A reputed antiperiodic. Dose of the fld. ex. ♏xv–℥j. **W. Cherry.** See *Prunus virginiana*. **W.-fire.** Synonym of *Erysipelas*. **W. Ginger.** See *Asarum*. **W. Indigo.** See *Baptisia*. **W. Liquorice.** See *Abrus*. **W.-mare,** the night-mare. **W. Marjoram.** See *Origanum*. **W. Potato.** See *Convolvulus panduratus*. **W. Sage.** See *Serra salvia*. **W. Silk.** See *Silk*. **W. Sunflower.** See *Gaillardia*. **W. Yam.** See *Dioscorea*.

Wilde, Cords of. Transverse striæ of the corpus callosum. **W.'s Incision,** in operations in the mastoid region, the incision of the soft parts. See *Operations, Table of*.

Wilder's Fissures. See *Fissure*. **W., Foramen of.** See *Foramina, Table of*.

Wildermuth's Ear. See *Ear, Deformities, and Diseases, Table of*.

Wilkinson's Formula. An animal parasiticide used in dermatology. It consists of sulphur, tar, and lard of each two ounces, precipitated chalk one ounce, ammonium sulphid one-half dram. It is used in tinea tonsurans and scabies. **W.'s Ointment, Salve,** for psoriasis; it consists of sublimed sulphur and oil of cade, of each four drams, green soap and lard each one ounce, prepared chalk two and one-half drams.

Wilks's Kidney. The large white kidney of chronic parenchymatous nephritis. See *Diseases, Table of*.

Will (*wil*) [ME., *willen*, to will]. Volition; desire with more or less engagement of the motor centers and of the muscular system.

ll and Varrentrap's Method. See *Nitrogen.*
lliamson's Diabetic Blood Test. Place in a test-ıbe of small caliber 40 c. mm. of water and 20 . mm. of blood taken from the finger-tip or lobule of ıe ear; add to this 1 c.c. of methyl blue solution : 6000) and 40 c. mm. of liquid potassæ. Place the st-tube in boiling water for three or four minutes with-ıt shaking. If the blood is that of a diabetic patient, ıe blue color will disappear and the fluid will become llow. In nondiabetic blood the blue color will remain.
lliams' Tracheal Tone. The peculiar resonance, metimes found in the second intercostal space in ses of very large pleural effusions. It is a dull tym-nitic resonance, becoming higher on opening the outh, and arises from the vibrations of air in a large onchus surrounded by compressed lung.
lis, Chords of. Fibrous bands, which extend nsversely across the inferior angle of the superior ngitudinal sinus. **W., Circle of.** See *Circle.* **.'s Disease,** diabetes. See *Diseases, Table of.* **., Nerve of.** See *Nerves, Table of.*
low (*wil'-o*) [ME., *wilowe*, willow]. See *Salix.* **.-bark,** the bark of several species of willow, nota-*Salix arenaria* and *S. capræa*, used in Russia and nmark for the tanning of lighter skins, for the nufacture of glove-leather and the so-called Russia ther. The percentage of tannin it contains is ually given as from three to five per cent., although ner found over 12 per cent. in several species. .-herb. See *Epilobium* and *Lythrum.*
son's Disease. General exfoliative dermatitis. *Diseases, Table of.* **W.'s Formula,** an animal parasiticide used in dermatology. It contains sulphur unce, potassium carbonate 2 drams, benzoated lard unces, oil of chamomile ½ dram. **W.'s Muscle.** *Muscles, Table of.*
Vinch (*winch*) [ME., *winche*, the crank of a wheel]. handle for turning a wheel or other revolving ap-atus; the apparatus thus revolved. **W., Verona,** apparatus having a cog-wheel and used for tighten-a ligature around a hemorrhoid.
Wind [ME., *wind*, wind]. 1. A current of air. 2. ulus. **W. of a Ball,** the compression of air said e produced by the passage of a ball close to the y, and to give rise to an injury called a "wind-clusion." **W., Broken.** See *Heaves.* **W.-colic.** *Bloat.* **W.-contusion.** See *W. of a Ball.* **-dropsy,** a synonym for flatulence. **W., Elec-**, that form of electric current which, coming in act with the person, gives the sensation of a gentle ving upon the parts. **W.-fertilized,** anemophil-ous. **W.-flower,** anemone. **W.-galls,** in farriery, ed bursæ found at the posterior part of the fetlock-, and due to a dropsical condition of the bursæ endon. **W.-getting,** in the process of training, adual increase in the capability of the heart, cially of the right chambers. **W.-pipe.** See *hea.* **W.-pox,** chicken-pox, or varicella. **W.-** the collection of air or gas beneath the skin of a following the operation of caponizing. Simple ture affords relief. **W.-stroke,** acute spinal ysis in the horse. **W.-sucking:** 1. The habit horse that carries his nose in the air. 2. More tly, the habit of a horse, called crib-biting.
Wind'lass (*wind'-las*) [ME.]. An apparatus for wind-cord on an axle, the cord being tightened by s of a weight. **W., Spanish.** See *Tourniquet arrot.*
Window (*win'-do*) [ME., *windowe*, window]. An aper-n a wall for the admission of light and air. **W.,** See *Fenestra ovalis.* **W., Round.** See *Fenestra rotunda.*

Wine (*win*) [ME., *win*, wine]. The fermented juice of various species of *Vitis*. A *sweet* wine is one in which a notable portion of the original grape-sugar of the must has escaped fermentation, or to which an addition of sugar has been made subsequent to the main fermentation. A *dry* wine is one in which the sugar, whether originally present or subsequently added, has almost all undergone change in the processes of fermentation. A *sparkling* wine is one in which a supplementary fermentation is purposely developed subsequent to the bottling, whereby quantities of carbon dioxid are developed and held dissolved under pressure. See *Vinum.* **W., Barley,** beer. **W.-blue,** the coloring-matter of red wines, a blue substance similar to litmus, possessing the property of turning red in the presence of acids. **W., Burgundy,** a heavy red or white wine from Burgundy, France. **W., Champagne.** See *Champagne.* **W.-glassful,** two fluidounces. **Ws., Heavy,** wines containing more than 12 per cent. by weight of alcohol. **W., High,** commercial ethyl-alcohol. **Ws., Light,** wines containing less than 12 per cent. by weight of alcohol, as claret, Sauterne, or Moselle. **W., Low,** the products of the first distillation. **W., Madeira,** a heavy wine from the island of Madeira, having a nutty flavor. **W.-madness,** a form of insanity associated with and caused by alcoholism. See *Oinomania.* **W., Malaga,** a sweet wine from Malaga in Spain; it contains between 13 and 14 per cent. of alcohol. **W., Milk,** fermented milk. See *Kefyr.* **W., Moselle,** a light wine from the valley of the Moselle in Germany. **W., Mulled,** a preparation made by adding eggs and spices to wine and then heating it. **W.-nose,** a popular term for acne rosacea. **W., Oil of.** See *W., Oil of, Heavy.* **W., Oil of, Concrete.** See *Etherin.* **W., Oil of, Heavy,** ethereal oil. **W., Oil of, Light,** etherol, a yellowish liquid of a peculiar odor obtained from ethereal oil. **W., Port,** a heavy wine from Oporto, Portugal. **W., Raisin,** wine consisting mainly of a fermented infusion of raisins; it contains also the fermented juice of fresh grapes, sugar, and tartaric acid. **W., Red.** See *Vinum rubrum.* **W., Sherry,** a heavy wine from the region of Xeres, in Spain; it is white or brown in color. The sherry wine often obtained seldom contains any wine at all, but consists of alcohol, water, and flavoring ingredients. **W., Spirit of,** ethyl-alcohol. **W.-vinegar.** See *Vinegar.* **W.-whey,** a nutritious and slightly stimulating preparation used in adynamic states. It is made of white wine and milk, from two to eight ounces of the former being added to a pint of the latter at the boiling temperature; the whey is then strained off and sweetened. **W., White.** See *Vinum album.*

Wing [ME., *winge*, wing]. In biology, an organ adapted for flight. See *Ala.* **W. of Ingrassias,** the alæ of the sphenoid. **W.-seed.** See *Ptelea trifoliata.*

Winged (*wingd*) [ME., *winge*, wing]. Possessing alæ, or wings. **W. Scapulæ,** the peculiar deflection of the scapulæ in tuberculous patients, or in those so inclined. See *Angel-wing.*

Wink (*wingk*) [ME., *winken*, to wink]. To close and open the eyelids quickly.

Winker (*wing'-ker*) [ME., *winken*, to wink]. An eyelash. See *Haw.*

Winking (*wing'-king*). See *Nictitation.*

Winogradsky, Nitrifying Bacillus of. See *Bacteria, Synonymatic Table of.*

Winslow, Foramen of. See *Foramina, Table of.* **W., Ligament of.** See *Ligament.*

Winter (*win'-ter*) [ME., *winter*, winter]. The cold season of the year. **W.-berry,** black alder; fever-

bush. **W. Clover,** partridgeberry; checkerberry. **W. Cough.** See *Cough* and *Bronchitis.* **W. Egg,** in biology, a reproductive body in an encysted or resting condition, and capable of retaining its vitality throughout the winter season. Cf. *Statoblast, Spherula.* **W. Epidemic.** Synonym of *Cerebro-spinal Meningitis.* **W.-fat.** See *Erotia lanata.* **W.-green.** See *Gaultheria.* **W. Itch.** Same as *Army Itch.*

Wintera, Winter's Bark (*win'-ter-ah*) [L.]. The aromatic and tonic bark of *Drimys winteri.* See *Drimys.* Unof.

Wintrich's Sign. The change in the pitch of the percussion-note over a cavity in the lungs when the mouth is open or closed. See *Signs and Symptoms, Table of.*

Wire (*wīr*) [ME., *wir*, a wire]. A filament of metal, as steel, iron, silver, or the like. Wire is used in surgical operations for suturing, etc. Woven-wire splints are also employed. Wire is an essential part of the electric circuit.

Wiring (*wir'-ing*) [ME., *wir*, wire]. Securing or staying by means of wire. **W. Pin,** a method of fixing the fragments of a broken bone by means of pins, as in fracture of the olecranon or patella.

Wirsung, Canal of. See *Canal.* **W., Duct of.** See *Duct.*

Wiry (*wī'-re*) [ME., *wir*, wire]. Resembling wire; tough and flexible. **W. Pulse.** See *Pulse.*

Wisdom-teeth. See *Teeth.*

Wish-bone (*wish'-bōn*). See *Furcula.*

Wisp [ME., *wisp*, a little sheaf or bundle]. An inflammation of the interdigital substance of the hind foot of the ox or cow.

Wistar's Lozenges. See *Lozenge.* **W.'s Pyramids.** The cornua of the sphenoid.

Wistaria (*wis-ta'-re-ah*) [after Caspar *Wistar*, an American anatomist]. A genus of shrubs belonging to the *Leguminosæ*, indigenous to Japan, China, and the United States. The flowers of the Chinese species are said to be distilled for their perfume.

Wistarin (*wis'-tar-in*) [after Caspar *Wistar*, an American anatomist]. A poisonous glucosid extracted from the bark of *Wistaria chinensis.*

Witch (*wich*) [ME., *witche*, a witch]. A person (of either sex) given to necromancy; a sorcerer. **W.-grass.** Triticum repens. See *Triticum.* **W.-hazel.** See *Hamamelis.* **W.-meal.** See *Lycopodium.* **W.'s Milk,** the popular name for the small quantity of milk secreted for a few days after birth by the mammary glands of new-born animals of both sexes. **W.-wood.** Mountain ash.

Withania (*with-a'-ne-ah*) [L.]. A genus of solanaceous plants. **W. coagulans** curdles milk, is alterative, diuretic, and emetic. **W. somnifera** is emetic and hypnotic. See *Somniferin.* Unof.

Wither (*with'-er*) [ME., *widder*, to wither]. To become sapless and shrunken; to become dry and wrinkled; to decay generally.

Withering (*with'-er-ing*) [ME., *widder*, to wither]. The shriveling or atrophy of an organ. **W. Carcinoma,** carcinoma showing a tendency to atrophy and shrinkage.

Withers (*with'-erz*) [origin obscure]. The ridge above the shoulders of the horse, formed by the spinous processes of the first eight or ten thoracic vertebræ.

Wither-wrung (*with'-er-rung*). Hurt or galled in the withers.

Withy (*with'-e*) [ME., *withy*, a willow]. The name of several species of *Salix.*

Witt's Theory of Colors. See *Pigments.*

Wittich and Kistiakowsky's Method. A method of extracting soluble animal ferments. This consists in hardening the organ in alcohol for three days and then cutting it up into very small pieces, extract with glycerol, and filtering. On the addition of a hol to the filtrate the ferment is precipitated.

Wladimiroff's Operation. See *Operations, T of.*

Woad (*wōd*) [ME., *wod*, woad]. The *Isatis tin ria.* See *Pigments, Conspectus of.* **W., Waxen,** *Genista tinctoria.* **W., Wild,** the *Reseda luteola.*

Woillez' Disease. A name given to active cong tion of the lungs, on the supposition that it is an dependent primary affection. See *Diseases, Table*

Wolf [ME., *wolf*, wolf]. A digitigrade carni rous canine quadruped, *Canis lupus.* **W.'s-ba** See *Aconite.* **W.'s Bast,** *Daphne mezereum.* **W Claw, W.'s Foot.** See *Lycopodium.* **W.-ma ness.** See *Lycanthropy.* **W.-teeth** (*of the hor* premolars of a peculiar shape, not occurring in ev animal, and resembling the incisive teeth of carnivora.

Wolff, Canal of. See *Canal.*

Wolffian (*wool'-fe-an*) [after K. F. *Wolff*, a Ger anatomist]. Pertaining to the anatomist Wolff. **Body,** "The chief occupant of the embryo Wolffian ridge; in anamnia it is the chief renal or throughout life; in amniota it disappears during bryonic life, being replaced by the true kidney, exc that a small part of the cephalic end is retained enters into special relations with the sexual orga In its primitive form the Wolffian body appears to h consisted of a series of transverse tubules (Wolffia segmental tubules) emptying into the Wolffian pronephric duct. The Wolffian bodies were disc ered by Casper Fr. Wolff, 'Theoria generat.,' in 17 They received their present name from H. Rathk 1820, but Rathke termed the same organs in m mals *Oken'sche Körper.* In 1824 Jacobson in duced the name *Primordial Niere*, and discov that in birds the bodies secreted uric acid. bodies were recognized in man by J. Fr. Meckel Johannes Müller. The older writers held them t either the beginnings of the kidneys, or sperma or horns of the uterus, etc. Rathke, by discove the origin of the true kidney, led the way to true ceptions." (Minot.) Also, called *Corps de W Urniere, Mesonephros, Primitive Kidney, q. v.* **Cysts.** See *Cyst.* **W. Duct.** See *Duct.* **Ridge,** "The protuberance produced by the incr in size and number of the Wolffian tubules, an inclusion of the genital ridge is a secondary resu its enlargement in the higher vertebrata. Out of Wolffian ridge there arise three primary organs pronephros (head kidney), the Wolffian body (a niate or primitive kidney, and the true kidne the amniota (metanephros)." (Minot.) Also, *Nephridial ridge, q. v.*

Wollaston's Camera Lucida. See *Camera.* **Method,** a method for the determination of th fractive indices of liquids, based on the total refra caused by a layer of liquids.

Woman [AS., *wifman*, a wife man]. The adu male of the human species.

Womb (*woom*) [ME., *wombe*, womb]. See *C* **W.-grain.** See *Ergot.* **W.-passage.** See *Va* **W.-stone.** See *Hysterolith* and *Calculus.*

Wonder (*wun'-der*) [ME., *wonder*, wonder]. *N* ishment and admiration. **W.-apple.** See *Ja apple.* **W.-net.** See *Rete mirabile.*

Wongshy (*wong'-she*). See *Pigments, Conspectu*

Wooba (*woo'-bah*) [E. Ind.]. A form of diarrh

Wood [ME., *wode*, wood]. The main p a tree. The part within the bark. **W.-alco** See *Pyroxylic Spirit.* **W.-naph**

See *Methyl-alcohol*. **W.-Cells,** libriform cells and other elongated, taper-pointed cells, not distinctly marked with pits, spiral or annular markings, found in the wood of plants. **W.-fiber.** See *Cellulose*. **W.-flour,** finely powdered wood, which, variously medicated, serves as a dressing for surgeons' use. **W., Heart,** the older, harder, usually darker, central part of an endogenous stem. **W.-oil.** See *Gurjun Balsam*. **W.-parenchyma,** elongated parenchyma-cells associated with wood-cells. **W.-spirit.** See *Alcohol, Methyl,* and *Pyroxylic Spirit*. **W.-tar Creasote.** See *Creasote*. **W.-vinegar.** See *Pyroligneous Acid,* and *Acid, Acetic, Dilute*. **W.-wool,** prepared fiber of wood used mainly as a surgical dressing.

Wood's Therapeutic Test. In all cases of doubtful diagnosis of cerebral syphilis, iodid of potassium in daily doses of 60 grains should be given, and if this fails to produce iodism, for all practical purposes the person may be considered to be a syphilitic. This is now considered a fallacy, as personal idiosyncrasy to the iodids is perhaps as great in non-syphilitics as in syphilitics.

Woolen Tongue (*wood'-entung*). See *Actinomycosis*.

Wool [ME., *wull*, wool]. A variety of hair, found in greater or less quantity on almost all mammals, in a few of which, as the domestic sheep, it forms the principal covering of the body. The woolen fiber is finely crimped or curled, so that it becomes rougher when drawn out, and shortens again when the strain is removed. This spring gives woolen fabrics elastic elasticity. Wool is very hygroscopic. The best variety is colorless, but inferior grades are often yellowish, and sometimes even brown or black in color. True wool-fiber, when cleansed of impurities, has approximately the following composition: carbon, 49.25 per cent.; hydrogen, 7.57 per cent.; oxygen, 23.66 per cent.; nitrogen, 15.86 per cent.; sulphur, 3.66 per cent. The presence of sulphur is very distinctive of wool, and serves to distinguish it from silk, the other nitrogenous fiber. Wool is decomposed by heat; at 130° C. ammoniacal vapors are given off, and at 140° to 150° C. sulphur compounds are also present in the vapors. When incinerated it emits the odor of burnt feathers. **W., Antiseptic,** wool that has been sterilized and subjected to the action of some antiseptic. **W.-fat,** *œsypus;* an impurity of wool, consisting of a mixture of cholesterin, together with isocholesterin and the compounds of these bodies with several of the fatty acids. See *Fat, Agnin, Lanolin*. **Ws., Holmgren's,** a collection of colored wools used in the detection and examination of subnormal color-perception. **W.-perspiration,** an impurity of wool consisting essentially of the potassium salts of oleic and stearic acids, probably other fixed fatty acids, also potassium salts of volatile acids, like acetic and valerianic acids, and small quantities of chlorids, phosphates, and sulphates. **W.-sorters' Disease,** anthrax; wool-sorters are liable to wool-poisoning from various causes, especially to the disease anthrax.

Woolen Black. See *Pigments, Conspectus of*.

Wolf, System of. A system of purifying water by the admixture of electrolyzed sea-water.

Woorara (*woo-rar'-ah*). See *Curare*.

Word (*wurd*) [ME., *word*, word]. A term; a sound used in any language as the sign of a conception. **W.-blindness,** visual logagnosia. See *Aphasia*. **W.-deafness,** auditory logagnosia. See *Aphasia*. **W.-mania,** a symptom of mental disease consisting in the repeated pronunciation of certain words (Wortgesenheit of the Germans). See *Verbigeration*. **W.-photism.** See *Phonism* and *Photism*.

Work (*wurk*) [ME., *worken*, to work]. 1. To labor; to put forth effort. 2. Effort; labor. **W., Internal,** the force exerted in respiration, circulation, and other organic function. It is estimated as being daily equal to 260 foot-tons.

Working (*wurk'-ing*) [ME., *worken*, to work]. Active; busy; operation. **W. Distance.** See *Distance*. **W. Ocular.** See *Ocular*.

Worm (*wurm*) [ME., *worm*, worm]. (*a*) Any member of the third and fourth races or phyla of the animal kingdom, *i. e.*, the *Platodes* and the *Vermes*. (*b*) The *lytta* or glossohyal cartilage or fibrous tissue of the tongue of a carnivora, sometimes mistaken by dog-fanciers for a parasitic worm and extracted. (*c*) The vermis or mesal lobe of the cerebellum. **W., Bladder,** the *Tænia echinococcus*. **W.-seed, American.** See *Chenopodium*. **W.-seed, Levant.** See *Santonica*. **W.-sickness,** a serious affection of sheep in Holland caused by the fly *Lucilia sericata*. See *Parasites* (*Animal*), *Table of*. **W.-tea.** See *Spigelia*. **W.-wood.** See *Absinthum*.

Wormian (*wurm'-me-an*) [after Olaus *Worm*, a Danish physician, 1588–1654]. Pertaining to the physician, Olaus Worm. **W. Bones,** a name given to the supernumerary bones of the skull, which are frequently formed owing to the absorption or imperfect ossification of the tabular bones.

Worremberg's Apparatus. An apparatus for polarization by reflection.

Worry (*wur'-e*) [ME., *worryen*, to worry]. Harassment; perplexity due to annoying cares and troubles; a frequent factor in nervous and cerebral troubles.

Worsted Test. See *Holmgren's Test*.

Wort (*wurt*) [ME., *wort*, wort]. An infusion of malt; it is antiscorbutic, and is used sometimes in the dressing of ulcers. Unof.

Woulfe's Apparatus, W.'s Bottles. An apparatus consisting of a series of three-necked bottles connected by suitable tubes, and used for washing gases or saturating liquids therewith.

Wound (*woond*, or *wownd*) [ME., *wound*, wound]. A break or division of continuity of the soft parts caused by mechanical violence; trauma. **W., Complicated,** a wound in which a foreign body is present, or in which there is great hemorrhage or pain. **W., Contused,** one produced by a blunt body. **W.-fever.** See *Traumatic Fever*. **W., Flesh,** a wound involving only skin and muscular tissue. **W., Gunshot,** one caused by a projectile. **W., Incised,** one caused by a cutting instrument. **W., Lacerated,** one in which the tissues are torn. **W., Open,** a wound having a free external opening. **W., Poisoned,** one in which toxic materials are introduced, as in a dissection-wound, etc. **W., Punctured,** one made by a pointed instrument. **W., Simple,** one attended with a simple division of the soft parts without complication. **W., Subcutaneous,** a wound with a very small external opening in the skin. **W., Uterine,** the portion of the uterus from which the placenta has been removed.

Wourali (*woo'-ra-le*). See *Curare*.

Wreath (*rēth*) [AS., *wræth*, a twisted band]. In biology, applied to a stage in karyokinesis, as the *mother-wreath, daughter-wreath*. See *Aster*.

Wredin's Test. A test of live-birth. It consists in the absence of gelatinous matter from the middle ear; this is regarded as a proof that the fetus was born alive and has breathed.

Wrightia (*ri'-te-ah*) [after William *Wright*, a physician and botanist in Jamaica]. A genus of apocynaceous shrubs and trees. The bark of *W. antidysenterica* (or *Holarrhena antidysenterica*) of India is highly valued as a remedy for dysentery. Unof.

Wrinkle (*ring'-kl*). See *Ruga.*

Wrisberg, Abdominal Brain of. The solar plexus. **W., Ansa of.** See *Ansa.* **W., Cartilages of.** See *Cartilage.* **W., Ganglion of.** See *Ganglia, Table of.* **W., Lingula of.** See *Lingula.* **W., Nerves of:** 1. The nerves supplying the skin of the arm. 2. Portio inter duram et mollem; portio intermedia. A small nerve-fasciculus arising from the oblongata and coursing between the facial and auditory nerves. See *Nerves, Table of.*

Wrist (*rist*) [ME., *wrist*, wrist]. That part of the fore-limb or fore-arm which joins the fore-arm and the hand. See *Carpus.* **W.-clonus.** See *Reflexes, Table of.* **W.-drop,** a paralysis of the extensor muscles of the hand accompanying lead-poisoni See *Dropped Wrist.* **W.-ganglion,** a hernial po of a tendon-sheath upon the back of the wrist. **joint,** the carpus, the articulations between the f arm and the hand.

Writers' Cramp, W.s' Palsy. See *Cramp, Occu tion-neuroses, Paralysis.*

Writing Hand (*rit'-ting-hand*). A peculiar posit assumed by the hand in paralysis agitans. See *P alysis agitans.*

Wry-neck (*ri'-nek*). See *Torticollis.* **W., Rotato** a variety of spasmodic rotatory movements of head.

Wurali (*wu-ra'-le*). Same as *Curare.*

X

Xanthate (*zan'-thāt*) [ξανθός, yellow]. A salt of xanthic acid.

Xanthein (*zan'-the-in*) [ξανθός, yellow]. The yellow coloring-matter of plants (*e.g.*, dahlia, sunflower), soluble in water, but not in alcohol, in which respect it differs from xanthin.

Xanthelasma (*zan-thel-az'-mah*) [ξανθός, yellow; ἔλασμα, a lamina]. Spots of yellowish discoloration of the skin of the face, especially about the eyes. **X. multiplex.** Same as *Xanthoma multiplex.* **X. palpebrarum,** xanthelasma of the skin of the eyelids. **X. vitiligoides.** Same as *Xanthoma vitiligoides.*

Xanthelasmoidea (*zan-thel-az-moi-de'-ah*). Synonym of *Urticaria pigmentosa.*

Xanthene (*zan'-thēn*) [ξανθός, yellow]. A yellow mixture obtained from persulphocyanic acid.

Xanthic (*zan'-thik*) [ξανθός, yellow]. Pertaining to xanthin; yellowish. **X. Acid.** See *Acid.* **X. Calculus,** urinary calculus composed mainly of xanthin.

Xanthidia (*zan-thid'-e-ah*) [ξανθός, yellow]. In biology, small bodies found in the flints of the chalk-beds of England and held by Carter to be the petrified orbicular statoblasts of the *Polyzoa.*

Xanthin (*zan'-thin*) [ξανθός, yellow], $C_5H_4N_4O_2$. 1. A leukomain found in nearly all the tissues and liquids of the animal economy, and also in many plants; also in minute quantities as a normal constituent of urine. It is formed at the same time with adenin, guanin, and hypoxanthin in the decomposition of nuclein by dilute acids. Guanin is convertible into xanthin, which is thought to be one step lower as an intermediate product of nuclein-decomposition, and nearer the uric-acid limit of oxidation. It probably is oxidized in the body as fast as it is formed. It is a colorless powder, almost insoluble in cold water, but readily soluble in dilute acids and alkalies. It is non-poisonous and a muscle-stimulant, especially of the heart. See *Leukomains, Table of.* 2. The name given by Fremy and Cloez to the yellow coloring-matter of plants, which is insoluble in water, but soluble in alcohol, in which respect it is distinguished from *Xanthein.* See *Pigments, Conspectus of.*

Xanthinuria (*zan-thin-u'-re-ah*) [ξανθός, yellow; οὖρον, urine]. The presence of xanthin in excess in the urine.

Xanthium (*zan'-the-um*). See *Clotbur.*

Xanthiuria (*zan-the-u'-re-ah*). See *Xanthinuria.*

Xantho- (*zan'-tho-*) [ξανθός, yellow]. A prefix to note yellow or yellowness.

Xanthocarpous (*zan-tho-kar'-pus*) [ξανθός, yello καρπός, fruit]. In biology, characterized by yell fruit.

Xanthochroi (*zan-tho-kro'-e*) [ξανθός, yellow; χρ the complexion]. In biology, Huxley's term for yellow-haired, pale-complexioned people spread c Asia, forming as it were, an ocean in which the muck and Tartar tribes from Mongolian islands w engulfed. They form the prevalent races of north Europe, the fair whites, and are largely represer in northern Africa (Berbers). Cf., *Leukon, Melo chroi.*

Xanthochroia (*zan-tho-kro'-e-ah*) [ξανθός, yello χροιά, skin]. Yellow discoloration of the skin.

Xanthochromia (*zan-tho-kro'-me-ah*) [ξανθός, yell χρῶμα, a color]. A persistent condition of ye skin, resembling but not identical with jaundice.

Xanthochroöus (*zan-tho-kro'-us*) [ξανθός, yell χρόα, skin]. Yellow-skinned.

Xanthocyanopia, Xanthocyanopsia (*zan-tho-si-a pe-ah, zan-tho-si-an-op'-se-ah*) [ξανθός, yellow; κ blue; ὄψις, sight]. A defect of color-vision in wh yellows and blues are perceived, while reds are im ceptible.

Xanthocystin (*zan-tho-sis'-tin*) [ξανθός, yel κύστις, bladder]. A nitrogenous substance foun the whitish tubercles in the mucosæ and organs corpse.

Xanthoderma (*zan-tho-der'-mah*) [ξανθός, yell δέρμα, skin]. Yellowness of the skin.

Xanthodont (*zan'-tho-dont*) [ξανθός, yellow; ὀ tooth]. In biology, having yellow teeth, as th cisors of rodents.

Xanthodontous (*zan-tho-don'-tus*) [ξανθός, ye ὀδούς, tooth]. Having a yellow discoloration o teeth.

Xanthogen (*zan'-tho-jen*). Same as *Xanthin.*

Xanthoglobulin (*zan-tho-glob'-u-lin*) [ξανθός, y *globulus*, a ball]. Same as *Hypoxanthin.* A ye substance found in the liver and the pancreas.

Xantho-kreatinin (*zan-tho-kre-at'-in-in*) [ξανθό low; κρεας, flesh]. The most abundant of th leukomains, named from the sulphur-yellow colo crystals and its resemblance to kreatinin. It ap

in the physiologically active muscle at the same time with kreatinin, constituting sometimes one-tenth of the kreatinin present. It has been found by Monari in aqueous extracts of the muscles of a tired dog, and in the urine of soldiers fatigued by marching. In large doses it is decidedly poisonous, producing depression, somnolence, extreme fatigue, frequent defecation, and vomiting. See *Leukomains, Table of.*

Xanthokyanopy (*zan-tho-ki-an'-o-pe*) [ξανθός, yellow; κυανος, blue; ὤψ, eye]. Red-green blindness, with undiminished spectrum. See *Xanthocyanopsia.*

Xantholin (*zan'-tho-lin*). Same as *Santonica.*

Xanthoma (*zan-tho'mah*) [ξανθός, yellow; ὄμα, tumor]. *Xanthelasma;* a form of new-growth of the skin, occurring as plaques imbedded in the skin, or as nodules from a pin's head to a bean in size, rarely larger. The color is yellow, usually the tint of chamois-leather. The plaques are slightly raised above the surface, but are scarcely perceptible to the touch when pinched. They are frequently seen in the form of plates imbedded in the eyelids, especially in people past middle age who have been subject to migraine. **X. diabeticorum,** *Lichen diabeticorum:* a rare disease of the skin always associated with diabetes mellitus. It develops rapidly and sometimes intermittently; the lesions are denser and firmer than those of true xanthoma, and are dull-red, discrete, and solid, though at the apex they present a yellowish point, like pus. They are abundant on the scalp and face, but never exist on the eyelids, nor are they ever associated with jaundice. Itching and tingling are always present. **X. lineare vel striatum,** a form of *X. planum* in which the lesions occur in lines or striæ. **X. maculatum et papulatum,** a form of *X. planum* in which the lesions occur in papules and macules as well as in plaques. **X. multiplex,** a form occurring usually in women about middle life. It is frequently hereditary and is usually associated with jaundice, which, as a rule, precedes it by a year or more. The lesions are generally distributed. **X. palpebrarum.** See *X. planum.* **X. planum,** *X. palpebrarum;* the commoner form of *Xanthoma,* usually situated on the eyelids. **X. tuberculatum, X. tuberosum,** a rarer form of *Xanthoma* characterized by tubercular lesions upon the extensor surfaces of the extremities, and on parts exposed to pressure, as the elbows and knees, shoulders, buttocks, backs of fingers and toes, palms and soles. The lesions vary in size from a hemp-seed to a pea, are hard to the touch, deeply set in the skin, and project prominently from it. They may coalesce to form veritable tumors. The disease is a chronic one.

Xanthomatosis (*zan-tho-mat-o'-sis*) [ξανθός, yellow; ὄμα, tumor]. Xanthoma of so marked a type as to indicate a special diathesis.

Xanthomatous (*zan-tho'-mat-us*) [ξανθός, yellow; ὄμα, tumor]. Of the nature of or affected with xanthoma.

Xanthomelanous (*zan-tho-mel'-an-us*) [ξανθός, yellow; μέλας, black]. The lighter of the *Melanochroi,* or races with black hair and yellow or olive skin, as distinguished from the *Melanous,* those with black hair and black skin.

Xanthopathy (*zan-thop'-ath-e*) [ξανθός, yellow; πάθος, suffering]. Yellowness of the skin from morbid conditions.

Xanthophane (*zan'-tho-fān*). See *Chromophane.*

Xanthophyl, Xanthophyll (*zan'-tho-fil*) [ξανθός, yellow; φύλλον, leaf]. In biology, leaf-yellow, a special pigment isolated by Berzelius from autumn leaves. See *Pigments, Conspectus of.*

Xanthophyllin (*zan-tho-fil'-in*). Same as *Xanthophyl.*

Xanthopicrin (*zan-tho-pik'-rin*) [ξανθός, yellow; πικρός, bitter]. A yellow coloring-matter derived from the bark of *Xanthoxylum caribæum.* Same as *Berberin.*

Xanthopous (*zan'-tho-pus*) [ξανθός, yellow; πούς, foot]. In biology, having a yellow stalk or support.

Xanthoproteic (*zan-tho-pro'-te-ik*) [ξανθός, yellow; *protein*]. Derived from or related to xanthoprotein. **X. Reaction,** the deep-orange color obtained by the addition of ammonia to the yellow reaction of proteids heated with strong nitric acid.

Xanthoprotein (*zan-tho-pro'-te-in*) [ξανθός, yellow; *protein*]. A yellow substance formed from proteids by the action of nitric acid.

Xanthopsia (*zan-thop'-se-ah*) [ξανθός, yellow; ὄψις, vision]. The yellow vision sometimes accompanying jaundice.

Xanthopsin (*zan-thop'-sin*). Same as *Xanthophane.*

Xanthopsy (*zan'-thop-se*). See *Xanthopsia.*

Xanthopsydracia (*zan-thop-se-dra'-se-ah*) [ξανθός, yellow; ψύδραξ, pustule]. The presence on the skin of small, yellow pustules.

Xanthopuccin (*zan-tho-puk'-sin*) [ξανθός, yellow; *puccoon*]. An alkaloid found in *Hydrastis.*

Xanthopurpurin (*zan-tho-pur'-pu-rin*) [ξανθός, yellow; *purpurin*]. A yellow coloring-matter derived from the *Rubia tinctorum.*

Xanthorhamnin (*zan-tho-ram'-nin*) [ξανθός, yellow; ῥάμνος, buckthorn]. A yellow coloring-matter contained in the ripe Persian or Turkish berries and in Avignon grains. See *Pigments, Conspectus of.*

Xanthorrhea (*zan-thor-e'-ah*) [ξανθός, yellow; ῥέειν, to flow]. 1. An acrid, purulent discharge from the vagina. 2. A genus of tree-like liliaceous Australian plants, called black-boy and grass-tree. They afford an abundant resin. See *Acaroid.*

Xanthorrhiza (*zan-thor-i'-zah*) [ξανθός, yellow; ῥίζα, a root]. A genus of ranunculaceous plants. **X. apiifolia,** of the United States (yellow-root), is a good, bitter tonic. Unof.

Xanthosis (*zan-tho'-sis*) [ξανθός, yellow]. The yellow pigmentation sometimes observed in carcinoma. **X. of the Nasal Septum,** a dirty-yellow appearance in the nasal mucous membrane due to hemorrhage and the subsequent disintegration of the blood.

Xanthospermous (*zan-tho-sper'-mus*) [ξανθος, yellow; σπέρμα, seed]. In biology, having yellow seeds.

Xanthous (*zan'-thus*) [ξανθός, yellow]. Having a yellow skin, or complexion.

Xanthoxylene (*zan-thoks'-il-ēn*) [ξανθός, yellow; ξύλον, wood], $C_{10}H_{16}$. A colorless, volatile oil obtained from the fruit of *Xanthoxylum alatum.*

Xanthoxylin (*zan-thoks'-il-in*) [ξανθός, yellow; ξύλον, wood]. 1. A precipitate from a tincture of *Xanthoxylum fraxineum;* stimulant, styptic, tonic, sialagogue. Dose 1–2 grains. Unof. 2. A stearopten from the volatile oil of *Xanthoxylum piperitum.*

Xanthoxylum (*zan-thoks'-il-um*) [ξανθός, yellow; ξύλον, wood: *gen.,* *Xanthoxyli*]. A genus of rutaceous trees and shrubs of many species, including the prickly ash (*X. fraxineum*). In many, if not all the species, the root-bark is stimulant and tonic. **X. alatum,** of India, is anthelmintic and sudorific. **X. cribrosum,** of the U. S. and W. Indies, is strongly diuretic and stimulant. Its bark is locally used in a wide range of diseases. Dose of fl. ext., gtt. x–xx. Unof. **X., Decoctum,** unof., ℥j–Oij. Dose ℥j–ij. **X., Ext., Fld.** Dose ℥ss–j. **X. fraxineum,** *prickly ash,* tooth-ache tree, angelica tree—a North American species of the *Xanthoxylaceæ* which belong to the *Rutaceæ.* The bark, the Xanthoxylum of the U. S. Ph., is chewed in odontalgia. It is a stimulant, aromatic, bitter, sialagogue and emmenagogue, and is

of repute in chronic rheumatism and "biliousness." Dose gr. x–xxx. **X. naranjillo**, of the Argentine Republic, is recommended as a substitute for jaborandi. **X. nitidum**, of China, is febrifugal. **X. senegalense**, of Africa, has similar properties, but appears to be poisonous.

Xanthuria (*zan-thu'-re-ah*). See *Xanthinuria*.

Xarheb (*zar'-heb*). See *Paraschistes*.

Xenarthral (*zen-ar'-thral*) [ξένος, strange; ἄρθρον, joint]. Strangely jointed.

Xenembole (*zen-em'-bo-le*) [ξένος, foreign; ἐμβολή, a hurling]. Same as *Xenenthesis*.

Xenenthesis (*zen-en'-the-sis*) [ξένος, strange; ἐν, in; θέσις, a placing]. The introduction of a foreign body into the economy.

Xenodochium (*zen-o-do'-ke-um*) [ξένος, a stranger; δέχεσθαι, to receive]. A hospital; a public house.

Xenogamy (*zen-og'-am-e*) [ξένος, a stranger; γαμεῖν, to marry]. A form of cross-fertilization in which fertilization is effected by pollen from another plant of the same species.

Xenogenesis (*zen-o-jen'-es-is*) [ξένος, stranger; γένεσις, birth]. In biology, Mr. Milne Edwards' term for the generation of something foreign, *i. e.*, of offspring varying in their characters and life-cycle from the parents. Cf. *Heterogenesis*.

Xenogenetic, Xenogenic (*zen-o-jen-et'-ik, zen-o-jen'-ik*) [ξένος, strange; γεννᾶν, to produce]. Pertaining to xenogenesis.

Xenogeny (*zen-oj'-en-e*) [ξένος, strange; γενής, born]. Same as *Xenogenesis*.

Xenomenia (*zen-o-me'-ne-ah*). See *Menstruation, Vicarious*.

Xenonomia (*zen-o-no'-me-ah*). Same as *Heteronomy*.

Xenophthalmia (*zen-off-thal'-me-ah*) [ξένος, foreign; ὀφθαλμός, eye]. Conjunctivitis due to injury.

Xenopneumonypostasis (*zen-op-nu-mon-ip-os'-tas-is*) [ξένος, foreign; πνεύμον, lung; ὑπόστασις, subsidence]. The settling of foreign bodies into the lower portions of the lungs.

Xenosite (*zen'-o-sīt*) [ξένος, strange; σῖτος, food]. A parasite in an intermediate condition, organ, or host.

Xeransis (*zer-an'-sis*) [ξήρανσις]. The drying up or desiccation of a part or of a drug.

Xerantic (*zer-an'-tik*) [ξηραντικός]. Having desiccative properties; drying.

Xeraphion (*zer-a'-fe-on*) [ξηρός, dry]. 1. A medicine to be taken dry. 2. A medicine to check discharges.

Xerasia (*zer-a'-ze-ah*) [ξηρός, dry]. A disease of the hair marked by cessation of growth and excessive dryness.

Xerocollyrium (*zer-o-kol-ir'-e-um*) [ξηρός, dry; κολλούριον, collyrium]. Any dry collyrium; an eye-salve.

Xeroderma (*zer-o-der'-mah*) [ξηρός, dry; δέρμα, skin]. *Xerosis;* a congenital dryness, harshness, and roughness of the skin, commonly appearing within the first two years of life, unaccompanied by subjective sensations, and exhibiting to the eye a fine, scaly desquamation and a characteristic, dull, grayish, yellowish, dirt-colored discoloration, chiefly involving the temples and the extremities. See *Ichthyosis*. **X. ichthyiodes**. See *Ichthyosis*. **X. of Kaposi**, a diffuse atrophy of the skin, idiopathic in origin. **X. pigmentosum**, *Atrophoderma pigmentosum; Angioma pigmentosum atrophicum; Melanosis lenticularis progressiva; Kaposi's Disease;* a very rare skin-disease, beginning generally in summer and occurring during the second or third year of life. It is characterized by minute, measly, erythematous blotches upon parts exposed to the sun, which soon disappear, leaving pigment-spots like ordinary freckles, which persist even during winter. A spontaneous atrophy of the skin then occurs, resulting in the formation of non-pigmented, glistening scar-tissue, and finally in this tissue malignant, epitheliomatous growths form. Death generally results about puberty.

Xerodermia (*zer-o-der'-me-ah*) [ξηρός, dry; δέρμα, skin]. A dryness of the skin. See, also, *Xeroderma* and *Ichthyosis*.

Xerodes (*zer-o'-dēz*) [ξερώδης, dryish]. A tumor that is dry and hard.

Xeroma (*zer-o'-mah*). See *Xerophthalmia*.

Xeromycteria (*zer-o-mik-te'-re-ah*) [ξηρός, dry; μυκτήρ, the nose]. Lack of moisture in the nasal passages.

Xeromyrum (*zer-om'-ir-um*) [ξηρός, dry; μύρον, ointment: *gen.*, *Xeromyri*]. A hard, stiff ointment.

Xeronosos (*zer-on'-o-sus*) [ξηρός, dry; νόσος, disease]. A condition of dryness of the skin.

Xerophagy (*zer-off'-aj-e*) [ξηρός, dry; φαγεῖν, to eat]. The use of dry or desiccated aliment.

Xerophilous (*zer-off'-il-us*) [ξηρός, dry; φιλεῖν, to love]. In biology, a term applied to plants which, like the cactuses, are adapted to dry regions.

Xerophthalmia (*zer-off-thal'-me-ah*) [ξηρός, dry; ὀφθαλμός, eye]. A dry and thickened condition of the conjunctiva, sometimes following chronic conjunctivitis or disease of the lacrymal apparatus.

Xerophthalmos (*zer-off-thal'-mos*). See *Xerophthalmia*.

Xeroplasta (*zer-o-plas'-tah*) [ξηρός, dry; πλάσσειν, to mold]. A group of diseased states, attended with defective secretion; it includes sterility, anuria, atrophy, marasmus, etc.

Xerosis (*zer-o'-sis*) [ξήρωσις, a dry state]. A dry condition. See *Xeroderma*. **X. of the Conjunctiva**. See *Xerophthalmia*. See *Bacillus of Xerosis epithelialis conjunctivæ*, in *Bacteria, Synonymatic Table of*.

Xerostoma (*zer-os'-to-mah*) [ξηρός, dry; στόμα, mouth]. Aptyalism, or dry mouth.

Xerostomia (*zer-o-sto'-me-ah*) [ξηρός, dry; στόμα, mouth]. *Dry Mouth.* A rare condition of the mouth, in which the tongue is red, cracked, and dry; the buccal surfaces of the cheeks and the hard and the soft palate are also dry, and the mucous membrane becomes pale, smooth, and glistening. Speech is difficult, as is also swallowing. There appears to be no pathologic condition of the salivary glands. The disease occurs in women only, and usually after middle life.

Xerotes (*zer-o'-tēz*) [ξηρότης]. Dryness; dry habit of body.

Xerotic (*zer-ot'-ik*) [ξηρός, dry]. Characterized by xerosis; dry.

Xerotribia, Xerotripsis (*zer-o-trib'-e-ah, zer-o-trip'-sis*) [ξηρός, dry; τρίβειν, to rub]. Dry friction; a dry rubbing.

Xiphicostal (*zif-ik-os'-tal*) [ξίφος, sword; *costa*, rib]. Pertaining to the xiphoid cartilage and to the ribs. **X. Ligament**, a ligament extending from the xiphoid cartilage to the cartilage of the eighth rib.

Xiphihumeralis (*zif-e-hu-mer-a'-lis*) [ξίφος, sword; *humerus*, humerus]. A muscle which in some animals passes from the xiphoid cartilage to the proximal end of the humerus.

Xiphiplastral (*zif-ip-las'-tral*) [ξίφος, sword; *plastron*]. Pertaining to the xiphiplastron.

Xiphiplastron (*zif-ip-las'-tron*) [ξίφος, a sword; *plastron*, a breast-plate: *pl.*, *Xiphiplastra*]. One of the paired posterior bony scutes of the plastron or breast-plate of a tortoise or turtle. Also called *Xiphisternum*.

Xiphisternal (*zif-is-tur'-nal*) [ξίφος, sword; στέρνον, breast-bone]. Pertaining to the xiphisternum.

Xiphisternum (*zif-is-tur'-num*) [ξίφος, sword; στέρνον, breast-bone: *pl.*, *Xiphisterna*]. In biology: (*a*) the most posterior of the sternal elements; the metasternum or ensiform cartilage. See *Xiphoid* and *Ensisternum*. (*b*) See *Xiphiplastron*.

Xiphodes (*zif-o'-dēz*) [ξίφος, sword; εἶδος, like]. Having the shape of a sword.

Xiphodymus (*zif-od'-im-us*) [ξίφος, sword; δίδυμος, double]. A sysomic monstrosity with united pelvic and thoracic cavities, two legs, and with an occasional rudimentary third leg.

Xiphoid (*zif'-oid*) [ξίφος, sword; εἶδος, like]. Ensiform; sword-shaped. **X. Appendix**, or **Process**, the third piece, or ensiform process, of the sternum; xiphisternum. It is cartilaginous in youth and osseous in mature age.

Xiphoidian (*zif-oid'-e-an*) [ξίφος, sword; εἶδος, like]. Belonging or pertaining to the ensiform cartilage.

Xiphopagus (*zif-op'-ag-us*) [ξίφος, sword; πάγος, fixed]. A monomphalic monstrosity united by the xiphoid cartilages or the epigastrium. The Siamese twins furnished an example.

Xiphophyllous (*zif-off'-il-us*) [ξίφος, sword; φύλλον, leaf]. In biology, having sword-shaped leaves.

-Rays, or Röntgen Rays (*rent'-jen*). The peculiar rays or ether-waves discovered by Professor Röntgen, of Würzburg. A vacuum-tube (called a Geissler, Hittorf, or Crooke tube) is used with two wires sealed through the glass, these being connected with the two poles of a battery. The rays from the cathode have a penetrating power through matter opaque to other ether-rays, and by their use photographs (skiagraphs, shadowgrams, etc.) may be taken of bones, metallic substances, etc., situated in the tissues, thus proving of great service in the diagnosis of fractures of bones, the location of foreign bodies, etc.

ylem (*zi'-lem*) [ξύλον, wood]. In biology, that portion of the fibro-vascular bundle which contains ducts or tracheids.

ylic (*zi'-lik*) [ξύλον, wood]. Pertaining to or derived from wood. **X. Acid.** See *Acid*.

ylidic Acid (*zi-lid'-ik*). See *Acid*.

ylidin (*zil'-id-in*) [ξύλον, wood], $C_8H_9.NH_2$. A methylated homologue of anilin, obtained from dimethylanilin. It serves for the preparation of red azo-dyestuffs. See *Pigments, Conspectus of*.

ylo- (*zi'-lo-*) [ξύλον, wood]. A prefix to denote connection with or relation to wood.

ylobalsamum (*zi-lo-bal'-sam-um*) [ξύλον, wood; βάλσαμον, balsam]. The dried twigs of *Commiphora opobalsamum*, the balm of Gilead of Asia; also, a balsam extracted from the same. Unof.

Xylocarp (*zi'-lo-karp*) [ξύλον, wood; καρπός, fruit]. In biology, a hard, woody fruit.

Xylocarpous (*zi-lo-kar'-pus*) [ξύλον, wood; καρπός, fruit]. Having woody or hard fruit.

Xylogene (*zi'-lo-jēn*) [ξύλον, wood; γεννάν, to produce]. A woody substance found in vegetable cell-walls.

Xyloid (*zi'-loid*) [ξύλον, wood; εἶδος, resemblance]. Resembling or having the nature of wood; ligneous.

Xyloidin (*zi-loi'-din*) [ξύλον, wood; εἶδος, form], $C_6H_9NO_7$. A white, inflammable, pulverulent substance described by Braconnet (1833) and obtained by the action of concentrated nitric acid upon starch or various forms of woody fiber. Also called *Xylidin*.

Xylol (*zi'-lol*) [ξύλον, wood; *oleum*, oil], C_8H_{10}. Dimethyl benzene. A volatile hydrocarbon somewhat resembling benzol. It has proved serviceable in smallpox. Dose ɱiij–x. **X.-balsam**, Canada balsam dissolved in xylol. For its uses in microscopy, see *Mounting-media*.

Xyloma (*zi-lo'-mah*) [ξύλον, wood: *pl.*, *Xylomata*]. In biology, a sclerotoid, spore-producing body of certain fungi (*Polystigma* and *Ascomycetes*).

Xylon (*zi'-lon*) [ξύλον, wood]. 1. Wood. 2. The cotton plant. 3. A substance identical with wood-cellulose.

Xylonite (*zi'-lon-īt*). Same as *Zylonite*. See *Celluloid*.

Xylophagous (*zi-loff'-ag-us*) [ξύλον, wood; φαγεῖν, to eat]. Wood-eating.

Xyloquinone (*zi-lo-kwin'-ōn*) [ξύλον, wood; *quinone*], $C_6H_2(CH_3)_2O_2$. A yellow, crystalline substance occurring in three isomeric forms.

Xylose (*zi'-lōs*) [ξύλον, wood], $C_5H_{10}O_5$. One of the glucoses, alloisomeric with arabinose. It is obtained by boiling wood-gum (beechwood, jute, etc.) with dilute acids. See *Carbohydrates*, *Table of*.

Xylostein (*zi-los'-te-in*) [ξύλον, wood; ὀστέον, bone]. An indifferent, bitter substance obtained from the berries of *Lonicera xylosteum* by Hübschmann.

Xylotherapy (*zi-lo-ther'-ap-e*) [ξύλον, wood; θεραπεία, therapy]. Medical treatment by the application of certain woods.

Xylotomous (*zi-lot'-o-mus*) [ξύλον, wood; τέμνειν, to cut]. Wood-cutting, as an insect.

Xysma (*zis'-mah*) [ξύσμα, scrapings: *pl.*, *Xysmata*]. The fragmentary and flocculent pseudomembrane seen in the stools in some cases of diarrhea.

Xyster (*zis'-ter*) [ξυστήρ, a rasp]. A surgeon's rasp, or scraping instrument.

Y

the chemic symbol of *Yttrium*. Y-Ligament, the lio-femoral ligament. See *Ligament*.

bin (*yab'-in*). An amorphous, bitter alkaloid obained from the bark of *Andira excelsa*.

m. The esculent root of several species of *Dioscorea*; lso, incorrectly, a coarse variety of the sweet potato. **Wild Yam.** See *Dioscorea*.

ng-tasi (*yang-ta'-se*) [Chinese]. A gelatinous subtance employed in China and Japan in cookery. It is btained from the alga *Laurencia papillosa* (*Tanshi-wai*).

ourt (*yowrt*) [Turk.]. An oriental, fermented drink repared from milk. See *Koumiss*, *Kephyr*, *Leban*, *Matzoon*, *Galactozyme*.

pon (*yaw'-pon*). See *Yaupon*.

rd [ME., *yerd*, yard]. Membrum virile; penis. **-sitting,** in *massage*, sitting with the arms stretched out laterally and horizontally. **Y.-walk,** in physical culture, a mode of progression with the arms extended laterally.

Yarrow (*yar'-o*). See *Achillea*.

Yaupon (*yaw'-pon*) [*Am. Ind.*]. The *Ilex vomitoria*, a shrub or tree of the Southern U. S. Its leaves are purgative and emetic; called also *cassena*. Unof. **Y.-tree.** See *Cassena*.

Yava-skin (*yav'-ah-skin*). Same as *Elephantiasis*.

Yaw. [African, *yaw*, a raspberry.] A frambesia sore. **Y.-weed.** A West Indian shrub, *Morinda royoc*; used as a remedy for yaws.

Yawey (*yaw'-e*) [African, *yaw*, a raspberry]. Pertaining to or affected with yaws.

Yawn [ME., *zanon*, to yawn]. To gape, to open the mouth wide.

Yawning (*yaw'-ning*). See *Oscitation*, *Pandiculation*.

Yaws (*yawz*). See *Frambesia*. **Y., Ringworm,** a variety of yaws in which the nodules form rings around the eyes, nose, mouth, or anus.

Yeast (*yēst*) [ME., *zeest*, yeast]. The name applied to any of the various species of fungi of the genus *Saccharomyces*. It is best known as a ferment thriving in saccharine solutions, breaking up the sugar molecule into carbon dioxid and alcohol. In domestic economy, it is used in leavening bread, the porosity of the latter being due to the escaping carbon dioxid. It is also the essential principle in alcoholic fermentation. In medicine, it has proved of value as an application to foul ulcers and as an internal remedy in putrid fevers. "Of great theoretical interest are some recent researches of Hensen's which open out great possibilities in the future. In these investigations he has found that it is possible to produce artificial varieties of yeast, the acquired properties being transmitted from one generation to another, apparently indefinitely; it is obvious that we have here the beginning, on a microscopic scale, of practices which have long been carried out on the higher plants in floriculture." (Frankland.) **Y., Beer,** the ferment used in brewing beer. It is a more or less pure culture of the saccharomyces cerevisiæ. **Y., Bottom,** yeast found at the bottom of a chilled fermentation. **Y.-cakes,** cakes made of yeast which has been washed, dried, and pressed. **Y., German,** a mixture of beer-yeast and dry starch, used for baking purposes. **Y.-plant,** the saccharomyces. **Y.-poultice,** a fermenting poultice containing yeast. **Y., Top,** the yeast found on the surface of fermenting liquids.

Yelk (*yelk*) [a variety of *yolk*]. See *Yolk*.

Yellow (*yel'-o*) [ME., *yelow*, yellow]. A compound color of the spectrum. **Y. Atrophy of the Liver,** malignant jaundice; acute yellow atrophy of the liver. See under *Icterus*. **Y. Body,** the *Corpus luteum*, *q. v.* **Y. Carmin.** See *Pigments, Conspectus of*. **Y. Cartilage.** See *Cartilage, Reticular*. **Y. Cells,** peculiar cells in the *Actineæ*, which give the spectrum of *Chlorofucin*. Cf. *Chlorophore, Chloroplast*. **Y.-crowned,** having the top of the head yellow. **Y. Disease,** hemorrhagic malarial fever. **Y. Dock.** See *Rumex*. **Y. Fever.** See *Fever*. **Y. Jack,** a popular name for *Yellow Fever*, *q. v.* **Y. Jasmine.** See *Gelsemium*. **Y.-root.** See *Xanthorrhiza*. **Y.-shafted,** having the shafts of certain feathers yellow. **Y.-shouldered,** having the bend of the wing yellow. **Y. Spot.** See *Macula lutea*. **Y. Spot of Sœmmering.** See *Sœmmering*. **Y.-vented,** having the vent-feathers yellow. **Y. Wash,** a lotion consisting of hydrarg. oxychlorid gr. ij, liquor calcis ℥j.

Yellows (*yel'-ōz*). See *Jaundice*.

Yerba (*yer'-bah*) [Sp.]. An herb. **Y. buena.** See *Micromeria*. **Y. mansa,** the root of *Amenopsis californica*, stimulant, astringent, and tonic. It is employed in California and Arizona for malarial disorders. Dose of the fld. ext. ♏xv–℥j. Unof. **Y. reuma,** the herb, *Frankenia grandifolia*, common in California. It is astringent and is recommended in catarrhal affections of the urinary tract. Dose of the fld. ext. ♏x–xx. Unof. See *Frankenia*. **Y. sagrada.** See *Lantana brasiliensis*. **Y. santa.** See *Eriodictyon*.

Yerbin (*yer'-bin*) [Sp., *yerba*, herb]. Caffein obtained from *Ilex paraguaiensis*.

Yew (*u*). See *Taxus*.

Ylang-Ylang (*e'-lang-e'-lang*) [E. Ind.]. A tree of the E. Indian islands, *Cananga odorata*. Its flowers afford a fragrant oil.

Yok [Eng. colloq.]. The grease obtained from wool.

Yoke-bone. The malar bone.

Yolk [also *yelk*; AS., *geolca*, yolk, the yellow part]. Popularly applied to the yellow portion of the hen's egg as distinguished from the white. In biology, the term yolk has no exact meaning, being sometimes used to designate the *Deutoplasm*, *q.v.*, alone, while at other times the entire ovum proper is indicated. See under *Ovum*. See also *Yelk* and *Vitellum*. **Y., Accessory, Food, Nutritive, Subordinate,** or **Supplemental.** See *Nutritive Vitellus*. **Y.-cleavage,** segmentation of the vitellus. **Y.-duct,** the vitelline duct. See under *Duct*. **Y.-food.** See *Deutoplasm*. Cf. *Ovum*. **Y., Formative,** the active, living portion of the protoplasm of an ovum, with the nucleus it encloses; a whitish disc situated at the animal pole of an ovum, and which undergoes segmentation and enters directly into the formation of the embryo. Cf. *Germinal Disc, Cicatricula, Discus proligerus*. Also called the *Tread*, *Narbe*, *Hahnentritt*. **Y.-grains,** granules of nutritive substance (*deutoplasm*) directly produced by the egg-cell itself. **Y.-sac,** the larger of the two globes formed by the blastodermic membrane in the early development of the embryo. **Y.-segmentation.** Same as *Y.-cleavage*. **Y.-skin,** the vitelline membrane. **Y., Yellow,** the yellow mass centrally located. **Y., White,** the albuminous white of the egg. **Y. of Wool.** See *Suint*.

Young (*yung*) [ME., *yong*, young]. Being in the first or early stage of life. Not long born.

Young's Rule. A rule of dosage. Add 12 to the age and divide the result by the age, to get the denominator of the fraction, the numerator of which is 1.

Young-Helmholtz Theory. See *Color-sensation*.

Youngling (*yung'-ling*) [ME., *yongling*]. A young person.

Youpon (*yu'-pon*). See *Yaupon*.

Youth (*ūth*) [ME., *youthe*, youth]. The period between childhood and manhood.

Ypsiliform (*ip-sil'-if-orm*) [*ὑψιλόν*, upsilon; *forma*, form]. Shaped like the Greek letter Υ, *upsilon*. Hypsiliform. **Y. Figure,** a peculiar figure seen in the development of certain eggs, as that of *Ascaris megalocephala*.

Ytterbium (*it-tur'-be-um*) [*Ytterby*, in Sweden]. A metal, not yet isolated, having the symbol Yb and an atomic weight of 173.01. See *Elements, Table of*.

Yttrium (*it'-re-um*) [*Ytterby*, in Sweden]. Symbol Y, at. wt. 89. A rare metallic element of the cerium group. See *Elements, Table of*.

Yucca (*yuk'-ah*) [A. Ind.]. A genus of liliaceous plants. **Y. filamentosa,** Adam's needle, of the Southern U. S., is diuretic. Its tincture is employed in urethritis. Unof.

Yupon (*yu'-pon*). See *Yaupon*.

Yzquierdo's Bacillus. See *Verruga peruana*.

Z

Zalambdodont (*za-lam'-do-dont*) [ζα, intensive; λάμβδα, the letter λ; ὀδούς, tooth]. In biology, having short molar teeth with one **V**-shaped ridge.

Zalefski's Method. For ascertaining the presence of iron compounds in the liver or other tissues. The tissues are treated in bulk instead of in separate sections. The methods are as follows: (*a*) *Ammonium-sulphid Method.* (1) The pieces of tissue are left in 95 per cent. alcohol for twenty-four hours. (2) They are then hardened for twenty-four hours in 96 per cent. alcohol, to which a few drops of strong, yellow ammonium sulphid have been added. They must be shaken up from time to time. (3) They are next hardened in absolute alcohol, to which several drops of ammonium sulphid are added. (4) They may then be cut. The alcohol should completely fill the bottle; corks must not be used, because they give an iron reaction with ammonium sulphid. (*b*) *Potassium-ferrocyanid Method.* (1) The pieces are left in 65 per cent. alcohol for twenty-four hours. (2) They are then placed for two or three days in a 1 per cent. solution of potassium ferrocyanid in 96 per cent. alcohol. (3) They are then kept in a 1 per cent. solution of potassium ferrocyanid in 65 per cent. alcohol. (4) They are now placed in 1 or 2 per cent. acid alcohol (alcohol, 96 per cent.) for two or three days. (5) The sections may then be cut and may afterward be stained in carmin. Treatment with 65 per cent. alcohol (as in 3) is employed to aid the penetration of the acid used subsequently. For *ferrous* compounds potassium ferrocyanid may be similarly used.

Zamia (*za'-me-ah*) [L.]. A genus of cycadaceous plants. **Z. integrifolia,** of Florida, and some West Indian species, afford a kind of sago, known incorrectly as arrowroot.

Zanaloin (*za-nal'-o-in*) [*Zanzibar; ἅλοη*, aloes]. The aloin derived from Zanzibar aloes.

Zante Currants (*zan'-te-kur'-ants*). See *Uvæ passæ minores.*

Zaraath (*za'-ra-ath*) [Heb.]. The Hebrew term for *Leprosy.*

Zarathan (*zar-ath'-an*). Scirrhous hardening of the breast.

Zea (*ze'-ah*) [ξέα, a sort of grain]. A genus of grasses. **Z. mays,** Maize, Indian Corn. The stigmata of maize or "corn silk" (*Stigmata maydis*) have an active principle thought to be an organic (maizenic) acid. It is a mild diuretic, used with success in incontinence of urine and rheumatism. Dose of the fld. ext. ʒj–ij. All unof.

Zedoary (*zed'-o-a-re*). An East Indian drug or spice, the rhizome of *Curcuma zedoaria* and *C. aromatica.* It resembles ginger, but is less agreeable, and is not much used in medicine. Unof.

Zein (*ze'-in*) [ζέα, maize]. A yellowish, soft, insipid proteid obtained from maize.

Zeismus (*ze-iz'-mus*) [ζέα, a sort of grain]. Pellagra caused by a diet of maize.

Zeiss's Glands. See *Gland.*

Zeissian Sty. See *Hordeolum.*

Zelotypia (*zel-o-tip'-e-a*) [ζῆλος, zeal; τύπτειν, to strike]. Morbid or monomaniacal zeal in any pursuit.

Zelotypic (*zel-o-tip'-ik*) [ζῆλος, zeal; τύπτειν, to strike]. Characterized by or pertaining to zelotypia.

Zenker's Degeneration. A peculiar form of degeneration of the muscular fibers of the body, by which they are rendered extremely brittle, so that they readily give way if the muscle be forcibly contracted. This degeneration is liable to occur in cases of continued or high fever, and is not uncommon in typhoid fever. See *Degeneration,* and *Signs and Symptoms, Table of.*

Zenkerism (*zen'-ker-izm*) [after *Zenker,* an anatomist]. The condition of Zenker's degeneration.

Zeorine (*ze'-o-rin*) [*zeora,* a genus of lichens]. In biology, denoting, in lichens, an apothecium in which a proper exciple is inclosed in the thalline exciple.

Zeoscope (*ze'-o-skōp*) [ξέειν, to boil; σκοπεῖν, to view]. An apparatus for determining the alcoholic strength of a liquid by means of its boiling-point.

Zero (*ze'-ro*) [origin obscure]. Any character denoting absence of quantity. In physics, the point from which thermometers are graduated. **Z., Natural,** the temperature to which the earth would fall were the heat of the sun withdrawn entirely.

Zerumbet (*ze-rum'-bet*) [E. Ind.]. An E. Indian drug or spice, by some asserted to be the same as cassimuniar; probably the rhizome of *Zingiber zerumbet.* It resembles ginger; little used. Unof.

Zest [OF., *zeste,* one of the partitions which divide the kernel of a walnut]. The expressed oil of the peel of the orange or lemon.

Zestocausis (*zes-to-kaw'-sis*) [ζεστός, boiling; καίειν, to burn]. Cauterization with instruments heated by steam.

Zestolusia (*zes-to-lu'-ze-ah*) [ζεστός, boiling hot; λοίειν, to wash]. Washing with boiling or nearly boiling water.

Zeugite (*zu'-gīt*). See *Zygite.*

Zibet (*zib'-et*) [*zibethum; gen., Zibethi*]. A variety of civet produced by *Viverra zibetha,* an animal of S. E. Asia. It was formerly used as a substitute for musk.

Zimb (*zim*) [Ar., *zimb,* a fly]. See *Glossina morsitans* and *Pangonia,* under *Parasites* (*Animal*), *Table of.*

Zimmermann, Elementary Particles, or Corpuscles of. Minute, colorless, highly refractive particles encountered floating in the liquor sanguinis; blood-plates. Cf. *Granules of Max Schultze.*

Zimocca Sponge (*zi-mok'-ah*). A sponge of fine grade, *Euspongia zimocca.*

Zinalin (*zin'-al-in*), $C_{20}H_{19}N_2O_6$. A yellow coloring-matter obtained from anilin by the action of nitrous acid.

Zinc, Zincum (*zingk, zingk'-um*) [L.: *gen., Zinci*]. Zn = 64.9; quantivalence II. A metallic element with a lead-like luster. It is represented in medicine by several of its salts, all of which are more or less poisonous. In small doses it is tonic and astringent; in larger quantities, a strong emetic. It is used mainly in the form of lotions in conjunctivitis, in various catarrhs, and certain skin-diseases. See *Elements, Table of.* **Z., acetas,** Zn $(C_2H_3O_2)_2.3H_2O$. Dose, internally, gr. ½–ij; as lotion, gr. ij to ʒj of water. **Z., Aërated.** See *Zinc Carbonate.* **Z. bromidum,** $ZnBr_2$, zinc bromid. Dose gr. ½ to ij. **Z., Butter of.** See *Z. Chlorid.* **Z. carbonas præcipitat.,** $(ZnCO_3)_2.3Zn(HO)_2$, dusted over wounds as a protection. **Z. Carbonate.** See *Pigments, Conspectus of.* **Z. chloridum,** $ZnCl_2$, tonic and escharotic. Dose, internally, gtt. iv–viij of ℥ss to ʒiij solution in spt. ætheris; as a collyrium, gr. j–ij to ʒj of water. **Z. Chloridum, Liq.,** ½ to 1 per cent. in strength. **Z.-colic.** See *Colic.* **Z., Flowers of.** See *Z. Oxid.* **Z.-green.** See *Pigments, Conspectus of.* **Z. iodidum,** ZnI_2. Dose gr. ss–ij. **Z. lactas,** $Zn_2C_3H_4O_3$. Used in epilepsy. Dose gr. ij–x. **Z. oleat., Ung.** (B.P.), oleate of zinc and soft paraffin. **Z. oxidum,** ZnO. Dose gr. j–x. **Z. oxidum, Ung.,** 20 per cent. in benzoinated lard. **Z. oxychloridum,** a dental filling-

material composed of powdered oxid of zinc, and fluid chlorid of zinc. **Z. Oxyphosphate,** a dental filling-material which is a basic compound of zinc with phosphoric acid, and is made by adding a syrupy solution of glacial phosphoric acid to calcined oxid of zinc. **Z. Phosphate,** this dental filling-material consists of a powder—the calcined and pulverized oxid of zinc, and a fluid or crystals—glacial phosphoric acid. **Z. Phosphid,** Zn_3Ph_2. A nerve-stimulant in spinal irritation. Dose gr. $\frac{1}{16}$–$\frac{1}{4}$. **Z., Sea-salt of.** See *Z. Chlorid.* **Z.-spar.** See *Calamin.* **Z. Sulphas,** $ZnSO_4.7H_2O$. Dose, as tonic and astringent, gr. $\frac{1}{10}$–ij; as emetic, gr. x–xxx. **Z. Sulphid, Hydrated,** a white preparation of zinc useful in chronic eczema, psoriasis, and other diseases when the skin needs stimulation. It is used externally in ointments; internally, in pills, each containing six grains of the sulphid. **Z. sulphocarbolas,** $Zn(C_6H_5SO_4)_2H_2O_2$, an intestinal antiseptic. Dose gr. x–xv. **Z. valerianas,** $Zn(C_5H_9O_2)_2.2H_2O$, useful in neurasthenic conditions. Dose, gr. $\frac{1}{10}$–ij. See, also, *Allen's Test.* **Z.-white,** commercial oxid of zinc. **Z.-yellow,** basic zinc chromate. See *Pigments, Conspectus of.*

Zinciber (*zin'-sib-er*). Same as *Zingiber.*

Zincic (*zing'-ik*) [*zincum*, zinc]. Containing or pertaining to zinc.

Zincolith (*zingk'-o-lith*). See *Pigments, Conspectus of.*

Zingiber (*zin'-jib-er*) [ζιγγίβερις, ginger]. Ginger. The rhizome of *Z. officinale.* Its properties are due to an oleo-resin. It is a stimulant and carminative, and is excellent to relieve flatulence, to correct the griping of purgatives, and as a flavoring adjuvant. **Z., Fld. Ext.** Dose ♏x–ʒss. **Z., Oleoresina,** extracted by ether. Dose ♏½–ij. **Z., Syr.,** 2 per cent. of the fld. ext. in syrup. Dose ʒss–ij. **Z., Tinct.,** 20 per cent. Dose ♏x–ʒij. **Z., Tinct., Fortior** (B.P.) Dose ♏v–xx. **Z., Troch.,** each contains gr. ij of the tinct., with tragacanth, sugar, etc.

Zinn, Ligament of. See *Ligament.* **Z.'s Corona,** an arterial plexus about the optic nerve, in the sclerotic. **Z.'s Membrane.** See *Zonule of Zinn.* **Z., Zone or Zonule of.** See *Zonule.*

Zirconium (*zir-ko'-ne-um*) [Pers., *zargūn*, gold-colored]. A chemic element (symbol Zr.; at. wt., 89.6), resembling titanium and silicon, and soluble in aqua regia and in hydrofluoric acid. It is obtained from a mineral called zircon. See *Elements, Table of.*

Zittman's Decoction. A drink for old, obstinate cases of syphilis. It is constituted as follows: ℞. Sarsaparilla, cut, 12½ ounces; water 325 Troy ounces. Digest for 24 hours, and add alum and sugar each 6 drams, enclosed in a linen rag. Heat in a steam bath in a covered vessel for 3 hours, adding, toward the close, anise and fennel each 4 drams, senna 3 ounces, liquorice-root 1½ ounces. Express, strain, and after several hours decant. It should weigh 312 Troy ounces. Put aside as a strong decoction. A weaker decoction is made from the dregs.

Zizyphus (*ziz'-if-us*) [ζίζυφος, the jujube-tree]. A genus of rhamnaceous plants. See *Jujube.*

Zoadula (*zo-ad'-u-lah*) [ζωή, life; *pl.*, *Zoadulæ*]. In biology, one of the locomotive spores of certain *Algæ* (*Confervæ*). See *Zoöspore.*

Zoamylin (*zo-am'-il-in*). See *Glycogen.*

Zoanthodeme (*zo-an'-tho-dēm*) [ζῷον, animal; ἄνθος, a flower; δέμα, a bundle]. In biology, the compound organism produced by the budding of an actinozoan polyp.

Zoanthodemic (*zo-an-tho-dem'-ik*) [ζῷον, animal; ἄνθος, a flower; δέμα, a bundle]. Pertaining to a zoanthodeme.

Zoanthropic (*zo-an-throp'-ik*) [ζῷον, animal; ἄνθρωπος, man]. Of the nature of, or relating to zoanthropy.

Zoanthropy (*zo-an'-thro-pe*) [ξῷον, animal; ἄνθρωπος, a man]. A form of monomania in which the person affected imagines himself transformed into an animal, or inhabited by, or subject to the obsession of some animal.

Zoarial (*zo-a'-re-al*) [ζῷάριον, dim. of ζῷον, animal]. Pertaining to a zoarium.

Zoarium (*zo-a'-re-um*) [ζῷάριον, dim. of ζῷον, an animal: *pl. Zoaria*]. In biology, the composite structure formed by repeated gemmation in the *Polyzoa.*

Zodiophilous (*zo-de-off'-il-us*) [ξῷδιον, dim. of ζῷον, animal; φιλεῖν, love]. In biology, applied to plants which are frequented by animals and pollinated by their agency. Cf. *Anemophilous, Hydrophilous, Anthophilous.*

Zoea, Zoœa (*zo-e'-ah*) [ζῷον, animal: *pl.*, *Zoeæ, zoœæ*]. In biology, the developmental stage in which the larvæ of most of the *Decapoda* leave the egg. It is characterized by the presence of a large cephalothoracic shield, caudal segments well developed but without appendages, tail forked, six posterior thoracic segments rudimentary or non-existent, and seven anterior pairs of appendages. Cf. *Nauplius, Megalops.*

Zoeal (*zo-e'-al*) [ζῷον, animal]. Pertaining to a zoea.

Zoecial (*zo-e'-she-al*) [ζῷον, animal; οἰκία, house]. Pertaining to a zoecium.

Zoecium, Zoœcium (*zo-e'-se-um*) [ζῷον, animal; οἰκία, house: *pl.*, *Zoecia*]. In biology, the chamber in which the polyp is lodged in *Polyzoa;* the *Cystid* of Nitsche and the *Brutkapsel* of Reichert.

Zoeform (*zo'-e-form*) [ζῷον, animal; *forma*, form]. Having the form of a zoea.

Zoether (*zo-e'-ther*) [ζωή, life; αἰθήρ, upper air]. Same as *Protyl.*

Zoetic (*zo-et'-ik*) [ζωή, life]. Vital.

Zoetrope (*zo'-e-trōp*) [ζωή, life; τρέπειν, to turn]. An instrument that by the revolution of a series of pictures before the eye gives the appearance of a person or animal in motion, the pictures successively representing single phases of a compound act. Called, also, a *phanakistoscope.*

Zoiatria (*zō-e-a'-tre-ah*) [ζῷον, animal; ἰατρεία, medical treatment]. The art and science of veterinary surgery.

Zoiatrics (*zo-i-at'-riks*). See *Zoiatria.*

Zoic (*zo'-ik*) [ζωικός, of animals]. In biology, of or pertaining to living organisms; relating especially to animal life.

Zoidin (*zo'-id-in*). See *Glairin.*

Zoism (*zo'-izm*) [ζωή, life]. The doctrine or theory that life is the manifestation of the operations of a peculiar vital principle; the doctrine of vital force.

Zoistic (*zo-is'-tik*) [ζωή, life]. Pertaining to animal life; vitalistic.

Zöllner's Lines. A device to illustrate false estimates of direction or parallelism by intersecting lines crossing parallel lines at a certain angle.

ZÖLLNER'S LINES.

Zona (*zo'-nah*) [*gen.* and *pl.*, *Zonæ*]. 1. A zone; a belt or girdle. A name given to certain spaces traversing the cortical envelop of the kidney, as *Z. glomerosa, Z. fasciculata, Z. reticularis,* etc. 2. Herpes zoster. **Z. alba,** the white zone of the eyeball. **Z. arcuata,** the inner zone of the basilar

membrane extending from the lower edge of the spiral groove of the cochlea to the external edge of the base of the outer rods of Corti. **Z. cartilaginea**, the limbus of the spiral lamina. **Z. choriacea.** Same as *Z. cartilaginea*. **Z. ciliaris**, the ciliary zone, or ciliary processes collectively; the zone of Zinn, or the suspensory ligament of the crystalline lens; a radially plicated modified anterior continuation of the hyaloid membrane of the vitreous body (*Piersol*). **Z. denticulata**, the inner zone of the basilar membrane, together with the limbus of the spiral lamina. **Z. fasciculata**, the central portion of the cortex of the suprarenal capsule, composed of tube-like transverse bands. **Z. ganglionaris**, a collection of gray matter on the filaments of the cochlear branch of the auditory nerve. **Z. glomerulosa**, a zone of the cortical portion of the suprarenal capsule, which has a net-like appearance on section, situated near the surface of the organ. **Z. ignea.** Synonym of *Herpes zoster*. **Z. incerta.** See *Regio subthalamica*. **Z. lævis.** Same as *Z. arcuata*. **Z. mediana.** Same as *Z. cartilaginea*. **Z. nervea.** Same as *Z. arcuata*. **Z. orbicularis**, a thickening of the capsular ligament around the acetabulum. **Z. pectinata**, the outer zone of the basilar membrane, extending from the rods of Corti to the spiral ligament. **Z. pellucida**, the thick, solid, elastic envelop of the ovum, corresponding to the cell-wall of a cell. It is also called the vitelline membrane. It contains the *vitellus* or yolk, corresponding to the cell-contents of the cell; the *Germinal Vesicle* (corresponding to the nucleus of the cell), which last contains the *Germinal Spot*, corresponding to the cell-nucleolus. **Z. perforata**, the lower edge of the spiral groove of the cochlea. **Z. perforata of the Cochlea**, the inner and perforated division of the lamina spiralis membranacea. **Z. radiata**, the zona pellucida when the radiating pore-canals are very distinct. **Z. repens.** Same as *Herpes zoster*. **Z., reticularis:** 1. The portion of the cortex of the suprarenal capsule next to the medullary portion. Here the spaces formed by the transverse bands are of small extent. 2. The inner layer of the cortical portion of the suprarenal body. **Z. serpiginosa.** Synonym of *Herpes zoster*. **Z. spongiosa**, the extreme dorsal tip of the posterior horn of the gray matter of the spinal cord. **Z. tecta**, the inner part of the lamina spiralis membranacea covered by the organ of Corti. **Z. tendinosa**, a fibrous ring situated at each auriculo-ventricular opening in the heart. **Z. valsalvæ**, the membranous spiral lamina of the cochlea. **Z. vasculosa**, the medullary substance of the Graafian vesicles. **Z. volatica.** Same as *Herpes zoster*.

Zonæsthesia (*zōn-es-thē′-ze-ah*). See *Zonesthesia*.

Zonal (*zō′-nal*) [*zona*, zone]. Pertaining to a zone, or to the disease called zona. In biology, of or pertaining to the subdivisions of an articulate or annulose animal.

Zonary (*zō′-nar-e*) [*zona*, zone]. Characterized by or pertaining to a zone. **Z. Fauna**, Hæckel's name for the intermediate pelagic fauna discovered by Murray to inhabit the zones of different depths of the ocean between the surface and the deep-sea bottom. **Z. Placenta.** See *Placenta*.

Zonate (*zō′-nāt*) [*zona*, a zone]. In biology, girdled or ringed; marked with concentric bands.

Zone (*zōn*) [*zona*, a band]. See *Zona*. **Z., Anelectrotonic.** See *Z., Polar*. **Z., Cervical**, the lowest fourth of the internal surface of the uterus. **Z., Ciliary.** See *Zonula ciliaris*. **Z., Epileptic**, a tract of the integument irritation of which may give rise to an epileptic attack. **Z. of Haller.** Same as *Z. of Zinn*. **Z., Hepatic.** See *Hepatic*. **Z., Hyperesthetic**, a zone of the integument characterized by exalted sensibility. **Z., Hysteroepileptogenous, Z., Hysterogenic**, hyperesthetic areas in hysteric persons, where pressure on the one hand calls forth well-marked phenomena of hysteria, such as convulsions, or catalepsy, or on the other hand checks an attack that is in progress. The ovarian region and areas near the mamma are hysterogenic zones. **Z., Internal, of the Lenticular Nucleus**, a zone connected by transverse white fibers with the internal capsule. **Z., Katelectrotonic.** See *Z., Peripolar*. **Z., Lissauer's.** Same as *Lissauer's Tract*. **Z., Ophthalmic.** See *Herpes*. **Z., Peripolar**, a term proposed for the zone or region surrounding the polar zone on the body of a patient undergoing electrotherapeutic treatment. **Z., Placental**, that portion of the uterus to which the placenta is attached. **Z., Polar**, a term proposed for the zone or region surrounding the therapeutic electrode applied to the human body for electric treatment.

Zonesthesia (*zo-nes-thē′-ze-ah*) [ζώνη, a belt; ἀισθησις, sensation]. Perverted feeling in which there is a sense as of a cincture, or halter, or constriction about a part; also called *Strangalesthesia* and *girdle-sensation*.

Zonociliate (*zo-no-sil′-e-āt*) [*zona*, zone; *cilium*, eyelid]. In biology, characterized by a circlet or zone of cilia.

Zonolimnetic (*zo-no-lim-net′-ik*) [ζώνη, a belt; λιμνήτης, living in marshes]. In biology, applied to such freshwater or limnetic organisms as are limited to certain depths, as distinguished from *autolimnetic* (living only at the surface), and *bathylimnetic* (dwellers in deep waters).

Zonoplacental (*zo-no-plas-en′-tal*) [ζώνη, girdle; *placenta*]. Having a zonary deciduate placenta.

Zonula (*zo′-nu-lah*) [*zonula*, dim. of *zona*, zone]. A little zone or belt. **Z. ciliaris.** See *Zona ciliaris*.

Zonular (*zo′-nu-lar*) [*zonula*, a little zone]. Pertaining to or of the character of a zonula, or a zone. **Z. Cataract.** See *Cataract*.

Zonule (*zōn′-ul*) [*zonula*, a little zone]. A small zone. **Z. of Zinn**, the suspensory ligament of the crystalline lens of the eye. See *Ligament*.

Zonulet (*zo′-nu-let*) [*zonula*, zonule]. A little zone.

Zoo- (*zo′-o-*) [ζῷον, an animal]. A prefix to denote connection with or relation to animal life.

Zoo-amylin (*zo-o-am′-il-in*) [ζῷον, an animal; *amylum*, starch]. Glycogen; amyloid.

Zoo-amylum (*zo-o-am′-il-um*). See *Paramylum*.

Zoobic, Zoobiology (*zo-o′-bik zo-o-bi-ol′-o-gy*) [ζῷον, animal; βίος, life; λόγος, science]. In biology, terms employed indifferently by Ducrotay de Blainville to express the internal phenomena of the organism in their relation to external conditions.

Zoobiotism (*zo-o-bi′-ot-ism*) [ζῷον, animal; βίος, life]. Same as *Biotics*.

Zooblast (*zo′-o-blast*) [ζῷον, animal; βλαστός, germ]. In biology, an animal cell.

Zoocarp (*zo′-o karp*) [ζῷον, animal; καρπός, fruit]. See *Zoöspore*.

Zoocaulon (*zo-o-kaw′-lon*) [ζῷον, animal; καυλός, stem, stalk]. In biology, the branching stalk of certain colonial infusorians.

Zoochemia (*zo-o-ke′-me-ah*) [ζῷον, an animal; χημεία, *chemistry*]. The chemistry of animal life and tissues. Biochemistry.

Zoochlorella, (*zo-o-klo-rel′-ah*) [ζῷον, animal; χλωρός, pale-green: *pl.*, *Zoochlorellæ*]. In biology, one of the green granules found in certain invertebrates, *e. g.*, *Hydra viridis*, *Euglena*, *Stentor*. Cf. *Zooxanthella*.

Zoo-currents, or Zoorema (*zo-o-kur′-ents, zo-o-re′-mah*) [ζῷον, animal; ῥεῦμα, current]. In biology, local

planktonic streams or very crowded animal roads in the sea. They occur in the open ocean, as well as on the coast, and are especially pronounced at Messina and at Lanzarote.

Zoocyst (*zo′-o-sist*) [ζῷον, animal; κύστις, bladder]. In biology, an encysted organism which gives rise to zoospores.

Zoocystic (*zo-o-sis′-tik*) [ζῷον, animal; κύστις, cyst]. Pertaining to a zoocyst.

Zoocytial (*zo-o-sit′-e-al*) [ζῷον, animal; κύτος, cavity]. Pertaining to a zoocytium.

Zoocytium (*zo-o-sit′-e-um*) [ζῷον, animal; κύτος, cavity: *pl.*, *Zoocytia*]. In biology, the gelatinous matrix secreted by certain colonial infusorians.

Zoodendrial (*zo-o-den′-dre-al*) [ζῷον, animal; δένδρον, tree]. Pertaining to a zoodendrium.

Zoodendrium (*zo-o-den′-dre-um*) [ζῷον, animal; δένδρον, tree]. In biology, a branched *zoocytium*.

Zoodynamic (*zo-o-di-nam′-ik*) [ζῷον, animal; δύναμις, power]. Pertaining to zoodynamics.

Zoodynamics (*zo-o-di-nam′-iks*) [ζῷον, animal; δυναμικός, dynamic]. In biology, animal physiology.

Zooerythrin (*zo-o-er′-ith-rin*) [ζῷον, animal; ἐρυθρός, red]. In biology, a red lipochrome-pigment abundant in sponges; also spelled *zoonerythrin*. Cf. *Turacin*.

Zoofulvin (*zo-o-ful′-vin*) [ζῷον, animal; *fulvus*, tawny]. A yellow coloring-matter obtained from certain birds, the turakoos.

Zoogamete (*zo-o-gam′-ēt*) [ζῷον, animal; γαμετή, a wife]. In biology, a gamete or sexual spore endowed with the power of locomotion.

Zoogamous (*zo-og′-am-us*) [ζῷον, animal; γάμος, marriage]. Pertaining to zoogamy.

Zoogamy (*zo-og′-am-e*) [ζῷον, animal; γάμος, marriage]. In biology, the sexual generation of animals; copulation, conjugation, mating.

Zoogene (*zo′-o-jēn*). See *Glairin*.

Zoogenesis (*zo-o-jen′-es-is*) [ζῷον, animal; γεννᾶν, to beget]. The generation of animal forms. Animal-breeding.

Zoogenic (*zo-o-jen′-ik*) [ζῷον, animal; γεννᾶν, to produce]. Pertaining to zoogeny.

Zoogeographic (*zo-o-je-o-graf′-ik*) [ζῷον, animal; γεος, earth; γράφειν, to write]. Pertaining to zoogeography.

Zoogeography (*zo-o-je-og′-ra-fe*) [ζῷον, animal; γή, the earth; γράφειν, to write]. In biology, that branch of zoology which treats of the geographic distribution of animals. Cf. *Phytogeography*.

Zooglea (*zo-o-gle′-ah*) [ζῷον, animal; γλοιός, a sticky substance]. In biology, a stage in the life-history of certain *Schizomycetes*, or bacteria, in which they lie embedded in a gelatinous matrix secreted by the microbes themselves.

Zoogleic (*zo-o-gle′-ik*) [ζῷον, animal; γλοιός, a sticky substance]. In biology, pertaining to a zooglea.

Zoogleoid (*zo-o-gle′-oid*) [ζῷον, animal; γλοιός, sticky substance]. In biology, zooglea-like.

Zoogonia (*zo-o-go′-ne-ah*) [ζῷον, animal; γονή, generation]. Viviparous generation.

Zoogonidium (*zo-o-go-nid′-e-um*) [ζῷον, animal; γονή, generation: *pl.*, *Zoogonidia*]. In biology, a motile gonidium; one furnished with cilia.

Zoogonology (*zo-o-go-nol′-o-je*) [ζῷον, animal; γονή, generation; λόγος, a treatise]. A scientific view of the origin and development of animal life.

Zoogonous (*zo-og′-o-nus*) [ζῷον, animal; γονός, producing]. Same as *Viviparous*.

Zoograft (*zo′-o-graft*) [ζῷον, animal; *graft*]. A slip or graft of tissue derived from any one of the lower animals, and surgically implanted upon the human body.

Zoografting (*zo′-o-graf-ting*) [ζῷον, animal; *graft*]. Transplanting in which the grafts are taken from the skin of the lower animals.

Zoographer (*zo-og′-ra-fer*). See *Zoographist*

Zoographic (*zo-o-graf′-ik*) [ζῷον, animal; γράφειν, to write]. Pertaining to zoography.

Zoographist (*zo-og′-raf-ist*) [ζῷον, animal; γράφειν, to write]. One who describes animals.

Zoography (*zo-og′-ra-fe*) [ζῷον, animal; γράφειν, to write]. A descriptive treatise on the distribution of animals.

Zooid (*zo′-oid*) [ζῷον, animal; εἶδος, form]. Animal-like. In biology, "a more or less individualized animal organism, which may or may not be capable of independent existence, and which constitutes one of a series whose members are related to each other by some form of non-sexual reproduction and morphologically repeat one another, either actually or homologically." (Allman.) "The introduction of the term *zooid* into the language of zoology is of very recent date. This term is intended to indicate each of the distinct organisms which, with various degrees of independence, express, when taken together, the total result of the development of a single *ovum*. It is a valuable addition to our terminology, enabling us to avoid the ambiguous sense which attaches itself to the word *individual* when this word is used in its biological signification as the logical element of a species." (Huxley.)

Zoologic (*zo-o-loj′-ik*) [ζῷον, animal; λόγος, word]. Relating to zoology.

Zoologist (*zo-ol′-o-jist*) [ζῷον, animal; λόγος, science]. One who is versed in zoology.

Zoology (*zo-ol′-o-je*) [ζῷον, animal; λόγος, a treatise]. That branch of biology treating of the form, habits, structure, development, and classification of animals. **Z., Medical,** the study of drugs of animal origin.

Zoomelanin (*zo-o-mel′-an-in*) [ζῷον, animal; μέλας, black]. In biology, the black pigment of the feathers of certain birds.

Zoomephitism (*zo-o-mef′-it-izm*) [ζῷον, animal; *mephitism*]. Mephitic exhalations of animal origin.

Zoometric (*zo-o-met′-rik*) [ζῷον, animal; μέτρον, measure]. Pertaining to zoometry.

Zoometry (*zo-om′-et-re*) [ζῷον, animal; μέτρον, measure]. The measurement of the proportionate lengths or sizes of the parts of animals.

Zoomorphic (*zo-o-mor′-fik*) [ζῷον, animal; μορφή, form]. Pertaining to zoomorphism.

Zoomorphism (*zo-o-mor′-fizm*) [ζῷον, animal; μορφή, form]. Representation of animal forms as distinguished from the human form.

Zoomorphy (*zo′-o-mor-fe*). Same as *Zoomorphism*.

Zoon (*zo′-on*) [ζῷον, an animal: *pl.*, *Zoa*]. In biology, a morphologic individual, the total result of the development of a single ovum. Cf. *Zooid*.

Zoonal (*zo′-o nal*) [ζῷον, animal]. In biology, of or pertaining to a zoon.

Zoonerythrin (*zo-on-er′-ith-rin*). The red coloring-matter extracted by chloroform from the red excrescence over the eyes of certain birds, from the feathers of *Calurus auriceps*, and from other sources. It is soluble in ether, chloroform, and alcohol. It is bleached by light. See *Zooerythrin*, and *Pigments, Conspectus of*.

Zoonic (*zo-on′-ik*) [ζῷον, animal]. Relating to animals.

Zoonite (*zo′-o-nīt*) [ζῷον, animal]. In biology, one of the segments or somites, metameres, or arthromeres of which an articulate animal is composed.

Zoonitic (*zo-o-nit′-ik*) [ζῷον, animal]. Of or pertaining to a zoonite.

Zoonomia (*zo-o-no'-me-ah*) [*ζῷον*, animal; *νόμος*, law]. The principles or laws of animal life.

Zoonomic (*zo-o-nom'-ik*) [*ζῷον*, animal; *νόμος*, law]. Pertaining to zoonomy.

Zoonomist (*zo-on'-o-mist*) [*ζῷον*, animal; *νόμος*, law]. One versed in zoonomy.

Zoonomy (*zo-on'-o-me*). Same as *Zoonomia*.

Zoonosis (*zo-on'-o-sis*) [*ζῷον*, animal; *νόσος*, disease: *pl.*, *Zoonoses*]. Any disease communicated or communicable from one of the lower animals to man.

Zoonosology (*zo-o-nŏz-ol'-o-je*) [*ζῷον*, animal; *νόσος*, disease; *λόγος*, science]. The systematic consideration of the diseases of lower animals; zoopathology, zoopathy.

Zooparasite (*zo-o-par' as-it*) [*ζῷον*, animal; *παράσιτος*, parasite]. In biology, a parasitic animal.

Zooparasitic (*zo-o-par-as-it'-ik*) [*ζῷον*, animal; *παράσιτος*, parasite]. A disease caused by an animal parasite.

Zoopathology (*zo-o-path-ol'-o-je*) [*ζῷον*, animal; *πάθος*, suffering; *λόγος*, science]. The science of the diseases of animals.

Zoopathy (*zo-op'-ath-e*) [*ζῷον*, animal; *πάθος*, suffering]. The science of the treatment of diseases of animals.

Zooperal (*zo-op'-er-al*) [*ζῷον*, an animal; *πείραειν*, to experiment]. Pertaining to experimentation upon animals.

Zooperist (*zo-op'-er-ist*) [*ζῷον*, an animal; *πείραειν*, to experiment]. One who performs experiments on animals.

Zoopery (*zo-op'-er-e*) [*ζῷον*, an animal; *πείραειν*, to experiment]. A term proposed by Wilder to express experimentation upon animals. Cf. *Callisection* and *Sentisection*.

Zoophagous (*zo-off'-ag-us*) [*ζῷον*, animal; *φαγεῖν*, to eat]. Subsisting on animal food.

Zoopharmacy (*zo-o-far'-mas-e*) [*ζῷον*, animal; *pharmacy*]. The science or art of veterinary pharmacy.

Zoophobia (*zo-o-fo'-be-ah*) [*ζῷον*, animal; *φόβος*, fear]. Morbid dread of certain animals.

Zoophysics (*zo-o-fiz'-iks*) [*ζῷον*, animal; *φυσικά*, physics]. In biology, comparative anatomy.

Zoophysiology (*zo-o-fiz-e-ol'-o-je*) [*ζῷον*, animal; *physiology*]. Animal physiology.

Zoophyte (*zo'-o-fit*) [*ζῷον*, animal; *φυτόν*, plant]. In biology, a member of the lower invertebrata, the whole animal structure, whether a single animal (*zooid*), or consisting of a large number of animals, as in most corals, sea anemones, acalephs, and sponges. "The word has been applied to the lower animals by most writers in natural history since Pliny. It was first used by Sextus Empiricus and no doubt suggested by a passage of Aristotle in which the gradation from the higher animals to the plants is alluded to. But far from constituting a progress in science, that designation introduced only confusion, or at least served to propagate a false impression that there were living beings truly partaking at the same time of the nature of animals and plants. Nothing can be farther from the truth than to ascribe such a view to Aristotle, as his commentators, Goza and Budæus, have done; for, though Aristotle alludes to a gradation among animals and to a sort of transition from them to plants, he nowhere regards those animals as ambiguous in their character, but everywhere speaks of them as living animals and alludes to the sponges as plants. These erroneous notions had been entertained for nearly two thousand years until Peysonnel demonstrated the animal nature of the expanded individuals of the so-called zoophytes, in which some of his predecessors had fancied they saw real flowers." (L. Agassiz.)

Zoophytoid (*zo-off'-it-oid*) [*ζῷον*, animal; *φύτον*, plant]. Resembling a zoophyte.

Zoophytology (*zo-o-fi-tol'-o-je*) [*ζῷον*, animal; *φυτόν*, plant; *λόγος*, a treatise]. The study of zoophytes.

Zooplastic (*zo-o-plas'-tik*) [*ζῷον*, animal; *πλάσσειν*, to form]. Pertaining to or of the nature of zooplasty.

Zooplasty (*zo'-o-plas-te*) [*ζῷον*, animal; *πλάσσειν*, to form]. The surgical transfer of zoografts; the transplantation of tissue from any of the lower animals to man.

Zoopsia (*zo-op'-se-ah*) [*ζῷον*, animal; *ὄψις*, vision]. The seeing of animals, as an illusion or as an hallucination or in dream.

Zoopsychology (*zo-o-si-kol'-o-je*) [*ζῷον*, animal; *ψυχή*, soul, mind; *λόγος*, science). In biology, the science of the mental activities of lower animals.

Zoorema. See *Zoo-currents*.

Zooscopic (*zo-o-skop'-ik*) [*ζῷον*, animal; *σκοπεῖν*, to view]. Pertaining to or of the nature of zooscopy.

Zooscopy (*zo-os'-ko-pe*) [*ζῷον*, animal; *σκοπεῖν*, to see]. The hallucinatory appearance of animal forms.

Zoosperm (*zo'-o-spurm*) [*ζῷον*, animal; *σπέρμα*, seed]. Same as *Zoospermium*. In biology, (*a*) same as *Zoospore*; (*b*) a spermatozoid, a *Zoospermium*.

Zoospermatic (*zo-o-sper-mat'-ik*) [*ζῷον*, animal; *σπέρμα*, seed]. Pertaining to a zoosperm.

Zoospermium (*zo-o-spur'-me-um*). See *Zoosperm*.

Zoosporange (*zo'-o-spōr-anj*). Same as *Zoosporangium*.

Zoosporangial (*zo-o-spo-ran'-je-al*) [*ζῷον*, animal; *σπορά*, seed; *ἀγγεῖον*, vessel]. Pertaining to a zoosporangium.

Zoosporangium (*zo-o-spo-ran'-je-um*) [*ζῷον*, an animal; *σπορά*, seed; *ἀγγεῖον*, vessel: *pl.*, *Zoosporangia*]. A sporangium which produces motile spores.

Zoospore (*zo'-o-spōr*) [*ζῷον*, animal; *σπορά*, seed]. In biology, a motile spore, a swarm-cell or swarm-spore.

Zoosporic (*zo'o-spor'-ik*) [*ζῷον*, animal; *σπορά*, seed]. Of the nature of a zoospore.

Zoosporiferous (*zo-o-spor-if'-er-us*) [*ζῷον*, animal; *σπορά*, seed; *ferre*, to bear]. Producing zoospores.

Zootaxy (*zo'-o-taks-e*) [*ζῷον*, animal; *τάξις*, arrangement]. In biology, systematic zoology; the taxonomy of animals.

Zootechnics, or **Zootechny** (*zo-o-tek'-niks, zo'-o-tek-ne*) [*ζῷον*, animal; *τέχνη*, art]. In biology, the science of breeding and domesticating animals.

Zootheca (*zo-o-the'-kah*) [*ζῷον*, animal; *θήκη*, case: *pl.*, *Zoothecæ*]. In biology, the case or cell containing a zoospore or a spermatozoid.

Zoothecal (*zo-o-the'-kal*) [*ζῷον*, animal; *θήκη*, case]. Pertaining to a zootheca.

Zoothecial (*zo-o-the'-se-al*) [*ζῷον*, animal; *θηκίον*, a casket]. Pertaining to a zoothecium.

Zoothecium (*zo-o-the'-se-um*) [*ζῷον*, animal; *θηκίον*, dim. of *θήκη*, case: *pl.*, *Zoothecia*]. In biology, an aggregation of simple loricæ incasing certain colonial infusorians.

Zootherapy (*zo-o-ther'-ap-e*) [*ζῷον*, animal; *θεραπεία*, therapy]. Veterinary therapeutics.

Zootocology (*zo-o-to-kol'-o-je*) [*ζωοτόκος*, viviparous; *λόγος*, science]. A term proposed by Dr. Field, of Norwich, England, to supplant the word biology.

Zootomic (*zo-o-tom'-ik*) [*ζῷον*, animal; *τομή*, a cutting]. Pertaining to zootomy.

Zootomist (*zo-ot'-o-mist*) [*ζῷον*, animal; *τομή*, a cutting]. A comparative anatomist.

Zootomy (*zo-ot'-o-me*) [*ζῷον*, animal; *τομή*, a cutting]. In biology, comparative anatomy; the dissection of animals.

Zootrophic (*zo-o-trof'-ik*) [*ζῷον*, animal; *τρέφειν*, to nourish]. Pertaining to animal alimentation.

Zooxanthella (*zo-o-zan-thel'-ah*) [ζῷον, animal; ξανθός, yellow: *pl.*, *Zooxanthellæ*]. In biology, one of the yellow pigment-granules forming the phæodium of certain radiolarians.

Zopissa (*zo-pis'-ah*) [ζώπισσα]. In the older pharmacy, the pitch and tar scraped from a ship's sides. It was regarded as a strong xerantic and discutient remedy.

Zoster (*zos'-ter*) [ζωστήρ, a girdle]. See *Herpes zoster*. **Z. atypicus gangrænosus et hystericus.** Kaposi's term for a vesicular affection characterized by an eruption of vesicles and papules, chiefly in groups, followed by central scabbing, and which was often surrounded by a corona of pus or minute pustules. In some parts, from coalescence, large areas of gangrene are produced, followed by sloughing, and keloid development in the scar. The eruption is symmetric, shows a marked tendency to recur, and occurs in hysteric individuals. **Z. auricularis**, a form of zoster affecting the ear. **Z. brachialis**, zoster affecting the arm or forearm. **Z. capillitii et frontalis**, zoster of the forehead and scalp over the distribution of the first branch of the fifth nerve. **Z. cerebralis**, zoster which sometimes affects the whole of one side of the body and is of cerebral origin. **Z. cervico-subclavicularis**, zoster affecting the neck and anterior portion of the chest. **Z. facialis**, zoster in the distribution of the trigeminus nerve. **Z., Herpes**, shingles. An acute herpetic vesicular eruption in the distribution of a cutaneous nerve, often an intercostal nerve. **Z. hystericus**, zoster due to hysteria. **Z. lumbo-femoralis**, zoster appearing on the nates, thigh, and calf of the leg. **Z. lumbo-inguinalis**, zoster of the back and groin. **Z. ophthalmicus**, an eruption in the course of the ophthalmic division of the fifth nerve. It is confined to the orbital region, the side of the nose, the forehead, and the anterior part of the scalp. **Z. pectoralis**, zoster affecting the pectoral region. **Z. perinæalis**, zoster affecting the vulva, or the penis and scrotum, and the perineum.

Zuckerkandl's Convolution. See *Convolutions, Table of*.

Zygadenus (*zi-gad'-en-us*) [ζυγόν, yoke; ἀδήν, gland]. A genus of liliaceous plants, mostly N. American, the zygadenes. **Z. venenosus**, of the Pacific States (*death camass*, or *hogs' potato*), is a violent poison, narcotic, convulsant, and acrid stimulant. Unof.

Zygal (*zi'-gal*) [ζυγόν, yoke]. Yoked; applied by Wilder to cerebral fissures which, like the paroccipital, consist of two pair of branches connected by a stem or zygon.

Zygantrum (*zi-gan'-trum*) [ζυγόν, yoke; ἄντρον, cave]. In biology, a depression on the posterior face of the neural arch of each vertebra of certain reptiles, receiving the *zygosphene* of the succeeding vertebra and thus interlocking the vertebræ.

Zygapophysial (*zi-gap-o-fiz'-e-al*) [ζυγόν, yoke; ἀπόφυσις, apophysis]. Pertaining to a zygapophysis.

Zygapophysis (*zi-gap-off'-is-is*) [ζυγόν, yoke; *apophysis*]. Any articular or (so-called) oblique process of a vertebra.

Zygobranchiate (*zi-go-brang'-ke-āt*) [ζυγόν, yoke; βράγχια, gills]. In biology, having paired and, as it were, yoked gills or ctenidia.

Zygocardiac (*zi-go-kar'-de-ak*) [ζυγόν, yoke; καρδία, heart]. In biology, denoting a certain hard protuberance of the stomach of a crustacean, formed by a thickening of the chitinous lining of the cardiac division.

Zygodactylism (*zi-go-dak'-til-izm*) [ζυγόν, yoke; δάκτυλος, finger]. The yoking of the toes of a bird's foot in anterior and posterior pairs.

Zygoite (*zi'-go-īt*) [ζυγόν, yoke]. In biology, the organism resulting from the process of zygosis, or conjugation of two gametes.

Zygolabialis (*zi-go-la-be-a'-lis*) [ζυγόν, yoke; *labium*, lip]. The zygomaticus minor muscle. See *Muscles, Table of*.

Zygoma (*zi-go'-mah*) [ζύγωμα, the cheek-bone]. The arch in the bones of the face formed by the interarticulation of the temporal with the malar bone.

Zygomatic (*zi-go-mat'-ik*) [ζύγωμα, zygoma]. Pertaining to the zygoma, or cheek-bone.

Zygomatico-auricular (*zi-go-mat'-ik-o-aw-rik'-u-lar*) [ζύγωμα, zygoma; *auricularis*, of the ear]. Pertaining to the zygoma and the auricle.

Zygomatico-auricularis (*zi-go-mat'-ik-o-aw-rik-u-la'-ris*) [ζύγωμα, *zygoma*; *auricularis*, of the ear]. A muscle of the external ear; the attrahens aurem. See *Muscles, Table of*.

Zygomaticofacial (*zi-go-mat-ik-o-fa'-shal*) [ζύγωμα, zygoma; *facies*, face]. Pertaining to the zygoma and the face.

Zygomaticotemporal (*zi-go-mat-ik-o-tem'-po-ral*) [ζύγωμα, zygoma; *temporal*]. Pertaining to the zygoma and the temporal bone or fossa.

Zygomaticus (*zi-go-mat'-ik-us*) [ζύγωμα, zygoma]. One of several small subcutaneous muscles arising from or in relation with the zygoma. See *Muscles, Table of*.

Zygomorphic (*zi-go-mor'-fik*). Same as *Zygomorphous*.

Zygomorphism (*zi-go-mor'-fizm*) [ζυγόν, yoke; μορφή, form]. The character of being zygomorphous.

Zygomorphous (*zi-go-mor'-fus*) [ζυγόν, yoke; μορφή, form]. In biology, applied to such flowers as may be divided into similar halves in one plane, or into similar halves in two planes at right angles to one another, but in which the halves produced by the two bisections are of different shapes.

Zygomorphy (*zi'-go-mor-fe*). Same as *Zygomorphism*.

Zygon (*zi'-gon*) [ζυγόν, yolk]. In the cerebrum, the bar that connects the two pairs of branches of a zygal fissure.

Zygophyte (*zi'-go-fīt*) [ζυγόν, yoke; φυτόν, plant]. In biology, a zygospore-producing plant.

Zygopleural (*zi-go-plu'-ral*) [ζυγόν, yoke; πλευρά, side]. In biology, bilaterally symmetric. Cf. *Dipleural* and *Tetrapleural*.

Zygose (*zi'-gōz*) [ζυγόν, yoke]. In biology, pertaining to or characteristic of zygosis.

Zygosis (*zi-go'-sis*) [ζυγοῦν, to join, yoke]. In biology, the process of asexual reproduction by conjugation or fusion of two protoplasmic bodies or gametes.

Zygosperm (*zi'-go-spurm*) [ζυγόν, yoke; σπέρμα, seed]. Same as *Zygospore*.

Zygosphene (*zi'-go-sfēn*) [ζυγόν, yoke; σφήν, wedge]. In biology, a process on the anterior face of the neural arch of each vertebra of certain reptiles, interlocking the vertebræ by fitting into a fossa (*the zygantrum*) on the posterior face of the preceding vertebra.

Zygosporangium (*zi-go-spo-ran'-je-um*) [ζυγόν, yoke; σπορά, seed; ἀγγειον, vessel: *pl.*, *Zygosporangia*]. In biology, a sporangium resulting from zygosis and giving rise to zygospores.

Zygospore (*zi'-go-spōr*) [ζυγόν, yoke; σπορά, seed]. In biology, the spore resulting from the zygosis or conjugation of two protoplasmic bodies or gametes.

Zygosporophore (*zi-go-spor'-o-for*) [ζυγόν, yoke; σπορά, seed; φέρειν, to bear]. In biology, "a club-shaped or conic section of a hypha adjoining a gamete-cell after its delimitation."

Zygote (*zi'-gōt*) [ζύγοῦν, to yoke]. Same as *Zygospore*.

Zygozoospore (*zi-go-zo'-o-spor*) [ζυγόν, yoke; ζῷον, animal; σπορά, seed]. In biology, a motile zygote or zygospore.

Zylonite (*zī'-lo-nīt*) [*ξύλον*, wood]. This material is a modified form of celluloid, and, like the latter, is composed of pyroxylin and camphor, though in different proportions. It is claimed that zylonite is a chemic combination, while celluloid is a mechanical mixture. Zylonite has uses in dentistry and surgery. See *Celluloid.*

Zymase (*zī'-māz*). See *Microzyme.*

Zyme (*zīm*) [*ζύμη*, leaven]. In biology, an organized ferment. Cf. *Enzyme.*

Zymic (*zīm'-ik*) [*ζύμη*, leaven]. Of or pertaining to organized ferments.

Zymin (*zī'-min*) [*ζύμη*, a ferment]. A product prepared from the pancreas for the treatment of diabetes mellitus. See *Zyme.*

Zymogen (*zī'-mo-jen*) [*ζύμη*, leaven; *γενής*, producing]. In biology, the condition of an unorganized chemic ferment as it exists in the resting seed; during the process of germination it gives rise to an enzyme, diastase, etc.

Zymogenic (*zī-mo-jen'-ik*) [*ζύμη*, leaven; *γενής*, producing]. In biology, causing fermentation, as certain anaërobic microorganisms.

Zymogenous (*zī-moj'-en-us*). Same as *Zymogenic.*

Zymogic (*zī-moj'-ik*). Same as *Zymogenic.*

Zymoid (*zī'-moid*) [*ζύμη*, leaven; *εἶδος*, form]. In biology, resembling an organized ferment.

Zymologic (*zī-mo-loj'-ik*) [*ζύμη*, leaven; *λόγος*, science]. Pertaining to zymology.

Zymology (*zī-mol'-o-je*) [*ζύμη*, leaven; *λόγος*, science]. That department of science which deals with fermentation.

Zymolysis (*zī-mol'-is-is*) [*ζύμη*, leaven; *λύσις*, dissolving]. In biology, fermentation produced by an organized ferment. Sheridan Lea and others have incorrectly employed this term to designate unorganized fermentation, implying a vital origin of the agent. Same as *Zymosis*, which is preferable. Cf. *Enzyme* and *Enzymosis.*

Zymolytic (*zī-mō-lit'-ik*) [*ζύμη*, leaven; *λύσις*, loosening]. Due to, attended with, or relating to zymolysis; zymotic.

Zymoma (*zī-mo'-mah*) [*ζύμωμα*; *ζυμόειν*, to ferment]. Any ferment, fermented mixture, or culture.

Zymome (*zī'-mōm*) [*ζύμωμα*, a fermented mixture]. An old name for the gluten of wheat that is insoluble in alcohol.

Zymophyte (*zī'-mo-fīt*) [*ζύμη*, leaven; *φυτόν*, plant]. In biology, an anaërobic microorganism capable of producing fermentation; a zyme.

Zymoplastic (*zī-mo-plas'-tik*) [*ζύμη*, leaven; *πλάσσειν*, to form]. Applied to certain substances of the blood-plasma derived from cells.

Zymoscope (*zī'-mo-skōp*) [*ζύμη*, leaven; *σκοπεῖν*, to view]. In biology, Zenneck's apparatus for ascertaining the zymotic power of yeast by gauging the amount of carbonic anhydrid given off.

Zymose (*zī'-mōz*) [*ζύμη*, leaven]. Same as *Enzyme*, *q. v.*

Zymosimeter (*zī-mo-sim'-et-er*) [*ζύμωσις*, fermentation; *μέτρον*, measure]. A device for measuring fermentative processes.

Zymosis (*zī-mo'-sis*) [*ζυμοῦν*, to ferment]. 1. In biology, fermentation as the result of the vital activity of certain microorganisms, organized ferments, or zymes. It is a synonym of fermentation, but is preferable to *zymolysis*, as the effect is not one of simplification. 2. The condition of one affected with a zymotic disease.

Zymotechnic (*zī-mo-tek'-nik*) [*ζύμη*, leaven; *τέχνη*, art]. The art of inducing and conducting zymotic processes in connection with vinification, acetification, etc.

Zymotic (*zī-mot'-ik*) [*ζύμωσις*, fermentation]. In biology, pertaining to zymosis, or fermentative changes produced by an organized ferment, or zyme. **Z. Diseases**, those generally classed as epidemic, endemic, infectious, or contagious, now believed to be due to specific viruses, as small-pox, measles, scarlet-fever, diphtheria, whooping-cough, and "fever" (typhus, simple continued, enteric, and others).

Zymurgy (*zī'-mur-je*) [*ζύμη*, leaven; *ἔργον*, work]. That department of technologic chemistry that treats of the scientific principles of wine-making, brewing, and distilling, and the preparation of yeast and vinegar, in which processes fermentation plays the principal part.

PREFACE

Nothing so well illustrates the astonishing vitality and progress of present-day medical science as its unparalleled multiplication of new words. It is only ten years since I made what seemed then a thorough gathering of such new coinages and incorporated them in the "Illustrated Dictionary of Medicine, Biology, and Allied Sciences." It seemed at that time as if, for the most part, the possible phasings and discoveries of pathologic and physiologic conditions must have been made and designated with names. Since then I have kept an eye—and through friends and helpers, many eyes—upon the busy minting still proceeding unabated. That in a decade over 30,000 new terms should have been devised is almost incredible. It is doubtful if any other science or object of study has ever shown such a phenomenon.

Nomina si nescis perit cognitio rerum, said Coke with the acumen of the legal mind, and it is generally true that the knowledge of things depends upon the knowledge of their names. Discoveries of new facts, or new standpoints for viewing old facts, demand new tags or "nicking" symbols whereby their status may be fixed and their recognition insured and made more clear for distant or future students. Few philosophic and scientific minds may exhibit an aloofness and a freedom from the tyranny of words to enable them to study things without the aid of words and namings. But nothing, it is admitted, is more blundering in a personal sense, and more harmful to the progress of science, than the exhaustion of interest so soon as a classification and nomenclature have been made. The ridiculous is only needed to end in the absurd, and this is generally supplied by their wrong pigeon-holing and false ticketing. A diagnosis once made, a mere word, long, mysterious, and meaningless, pinned upon the bunched symptoms, and further study of etiology, prophylaxis, or therapeutics is with too many at an end. Over 200 years ago Dr. South tried to check this "fatal imposture and force of words" by showing how "the generality of mankind is governed by words and names," not by things as they are, but as they are called—in a word, by "verbal magic."

And yet in a groping science like medicine, one that inductively, slowly, and tenatively is feeling its way towards the truth, this need of naming every step forward is peculiarly necessary. It is the condition of securing the step in itself, and of guiding the aftercomers. It is the blazing of trails into the wilderness of the unknown. Closure may consequently be called upon the critic who may say that half the new words, or more, are the marks of trails which lead nowhither, and that have been abandoned before they can be sketched. Of course no one can tell what lines of research may finally prove the best and true, and none, therefore, what blazes will be useful or useless. New trails, shorter, easier, and better, may indeed be discovered, and when the wilderness country is settled, all trails will either be abandoned or become well-known roads. But even then good sign-posts and pointing index-fingers will be helpful for strangers, and some of the old names will never be discarded. None can foretell what words may die and what ones become a part of the language. Hence neither by guess nor by judgment may the lexicographer too recklessly exclude. He is moreover a contemporary historian, and must

gather even the spurious, debased, or counterfeit coins. Not even may the "ghost-words," no the unnamed and unnamable terata of scholarship or ignorance be thrown out, for they serve a least as warnings and danger signals to the unwary. Posterity will choose, whether wisely o unwisely, at least wilfully, and will restamp with its approval what it pleases. For the rest, a of old, the "bad words" need not be looked for, nor put to service. Thus, in a way, th dictionary of modern medicine is a sort of crude topographic map, drawn to large scal from the hurried and often inaccurate messages of the scouts and spies of science, for the in struction of the army which follows.

The history of lexicography finds its first data about 700 or 800 A. D., in glosses, or th more common explanatory words annexed or superposed over "hard" terms, and made eithe in Latin or in the glossator's own vernacular. A list of such glosses was called a *glossarium*, o as we say, a glossary. It soon became the custom for children and students to learn by heart th classified lists of the names of things, such as those of the parts of the body, of animals, trades tools, virtues and vices, diseases, etc. Such a list constituted a *vocabularium*, or vocabulary These glosses and vocabularies were in time thrown together in bundles, at first without an order, and as lists, without losing their individuality. Then came the "first letter order," i which all words and terms beginning with the letter a, were bundled together, still withou discrimination, so that the entire list of words beginning with a, or b, had to be scanned i order to find a special word. The classification proceeded to an arrangement of the item also according to the second letter, then the third, etc., until after hundreds of years complet alphabetization came into use. At first the aim had been to explain difficult Latin words b easier Latin ones; then by English ones, and in the tenth and eleventh centuries the Englis equivalents were the rule, and the glossaries were Latin-English. The first book of this kind t be called a *dictionarium*, that is a repertory of *dictiones* or sayings, was that of Sir Thomas Ely in 1538, and from that time the word *dictionary* has supplanted all others; so much so that it now the title of any alphabetic gathering not only of words but of any kind of knowledg whatsoever.

Our modern language of medicine is unique in that it is made up of the unchanged an undigested materials and relics used or contributed during its entire history. The persistin substratum is Latin, upon which has been placed a mass of pseudogreek words, not physiologic created nor grown by natural philologic methods, but springing Minervalike from the brains o thousands of modern Jupiters. These largely bear the marks of their parentage in characteristic that do not, or should not, beget a spontaneous pride of lineage. From a highly variegate medievalism that has, indeed, never ended, we have taken over another unassimilab conglomerate, and superadded are thousands of dissimilar terms derived from modern chemistry biology, bacteriology, and many other sciences. Each single group of contemporaneou nationalities contributes to the others its share of names, and is itself hard at work endeavoring t fuse the whole heritage into homogeneity and unity with the amalgam of the spirit of the gener language dominant among its people. The result is a strange hodge-podge of the medic language of two or more thousand years and of many special national tongues, in mechanic, no chemic mixture, with modern sounds and symbols, the whole amazingly heterogeneous an cacophonous. The thirtieth century medical student will probably be compelled to memori *iter a tertio ad quartum ventriculum*, etc., and to write his orders for drugs in a sad mixture o sorry Latin so far as his knowledge will carry, and then to end it in despair in the vulg manner of speech of his contemporaries. In general biology the law holds that the ontoge epitomizes and repeats the phylogeny; but only at the different successive stages of i individual development. In medical language the phylum is always present, and there are n successive stages; there has been no rebirth or inheritance; the ontogeny goes on preserv

all the old origins and accretions, and simply adding the new to them. For this sort of evolution there is no name (unless Weissmann's immortality theory is applicable), and its study may be commended to the Darwins and Spencers of the future as a noteworthy exception to hitherto formulated laws. The result is before us: a huge and unassimilated philologic mass, many times greater than it should be, the despair of medical students and of the makers of dictionaries. These word-books, of course, reproduce the phylogenetic history in the same way, and there is no escape from the republication of all the methods and most all the words gathered and found useful in the course of ages. Here with some modifications of detail must be repeated the glosses and vocabularies of a thousand years ago, the foiled attempts together with the partial successes at alphabetic arrangement, and lastly the addition of the modern encyclopedia.

The functions of the dictionary-maker have thus become multiplied and varied. As the gloss-lists and vocable-lists grew into dictionariums, and as alphabetization became thoroughgoing, as one after another subject was added to the word-gatherer's work, so our technical dictionary has at last become in part encyclopedic and expository, its plan and outworking still somewhat subject to the personality, scholarship, and judgment of the author. It will always remain an open question how far the author should or may go in giving individual color to his dictionary. Johnson's famous definitions of *excise*, *lexicographer*, *oats*, *pension*, *pensioner*, *ory*, *whig*, etc.; Webster's "Americanism" in spelling; the Century's seconding in various ways the obvious trending of philologic progress,—these, and many such illustrate the lexicographer's belief in his own, at least, "limited" free-will.

"Johnson's great work," says Dr. Murray, "raised English lexicography altogether to a higher level. In his hands it became a department of literature." The technical dictionary of to-day may indeed claim a higher office than that, because no monograph or text-book comes near the far-reaching and lasting influence of modern encyclopedic dictionaries. They help more than teacher or text-book to bring order into the student's forming mind, and to systematize and make definite his knowledge. In postgraduate life and practice there is no book that is so frequently consulted, and the teachings of which are so clearly kept in memory. This is because of the validity of the maxim of Coke.

Solely upon condition, however, that the author has put heart, intellect, and labor into his work! If he has been content to repeat, copy, and adopt, it will not be so. And even then only if other repeaters, copiers, and adopters "do not break through and steal." As has often happened since, dictionary-theft is an ancient story. As long as 250 years ago Phillips plagiarized the *glossographia* of Blount. The robbed author indignantly exposed the shamelessness of the cribber, even of misprints and errors. But he was not ashamed! *More suo* the thief, having no defense, made none, and instead proceeded to correct all the errors pointed out by Blount, and, in many subsequent editions, the quack-lexicographer reaped the reward given by a too careless public.

The ancient injustice would be much manifolded in modern times, with an intensely progressing science which demands that, if to be of the best service, new editions of its word-books shall be made every few years. The system must become systematic and the professing truly professional. No spasmodic, incidental, or amateur methods will nowadays avail. Revisions are required, and continuous labor, not only of one but of many, so that helpers, a large corps of them, must be organized, and paid. Over 300 years ago a great worker in this field, one who "contrived and wrought not onelie for our owne private use, but for the common profet of others," even with the patronage of great men "who encouraged in this wearie worke" was grieved that "the charges were so great and the losse of time" so much that he came near having "never bene able alone to have wrestled against so manie troubles."

Finding that "his spiritual substance had vanished," old Simon Browne "took to an employment which did not require a soul, and so became a dictionary-maker," piously adding that we should "thank God for everything and therefore for dictionary makers."

This supplement has grown so rapidly and so voluminously that it is at least four times as great as intended. *Non mea culpa!* It may serve as an addendum to most other works as well as to my own, and also as a new book of the terminology of medical science which has been devised during the last ten years. I have made use of the opportunity and have included some things omitted in the work of 1894, and have added a number of obsolete or obsolescent words which the student might find in his historic reading. Those who may detect any sins of omission or of commission are requested to notify me in order that future editions may be made more accurate.

To many friends and assistants I cannot adequately express my gratitude for unfailing kindness and help in the preparation of this supplementary volume. To O. Rodham, G. C. C. Howard, C. S. Dolley, D. Riesman, Burt G. Wilder, S. H. Gage, M. E. Raigueil, and others, especial thanks are due, as also to C. F. Taylor, of London, England. Both scholarship and time have been so continuously and unselfishly given by many that proper recognition may hardly be expressed in words. I should also mention the obligation of those who may find the book of service in their professional work for the good offices, going far beyond any calculating commercialism, rendered by the best of publishers and of printers.

A word may be added of some interest to those who have editions, subsequent to the first, of the Illustrated Dictionary. The changes, insertions, corrections, etc., made in these various editions have, for the most part, been incorporated in this supplement.

I have a feeling of gladness in learning from my publishers that as many as 166,000 copies of my medical dictionaries have been scattered among the profession in many parts of the world. That evidences something of usefulness in the great cause of medical science and progress.

GEORGE M. GOULD.

ABBREVIATIONS.

ABBREVIATIONS USED IN GENERAL MEDICINE.

ā	ana	Of each.
A. c.	Ante cibum	Before meals.
Abdom.	Abdomen	The belly.
Abs. feb.	Absente febre	When fever is absent.
Abstr.	Abstractum	Abstract.
Ad.	Adde	Add.
Ad lib.	Ad libitum	At pleasure, as desired.
Admov.	Admoveatur	Let it be applied.
Ad pond. om.	Ad pondus omnium	To the weight of the whole.
Adv.	Adversum	Against.
Aggred. feb.	Aggrediente febre	While fever is coming on.
Al.	Aluminum	Aluminum.
Alt. dieb.	Alternis diebus	Every other day.
Alt. hor.	Alternis horis	Every other hour.
Alv. adstrict.	Alvo adstricta	The bowels being confined.
Alv. deject.	Alvi dejectiones	The intestinal evacuations.
Anat.		Anatomy.
Aq.	Aqua	Water.
Aq. astr.	Aqua astricta	Ice.
Aq. bull.	Aqua bulliens	Boiling water.
Aq. com.	Aqua communis	Common water.
Aq. dest.	Aqua destillata	Distilled water.
Aq. ferv.	Aqua fervens	Hot water
Aq. font.	Aqua fontana	Spring water.
Aq. mar.	Aqua marina	Ocean water.
Aq. pur.	Aqua pura	Pure water.
As.		Arsenic.
At. wt.		Atomic weight.
Av.		Avoirdupois.
B.		Boron, Bowels.
Ba.		Barium.
B. A., or B S.	Balneum arenæ	Sand bath.
Bals.	Balsamum	Balsam.
Be.		Beryllium.
Bi.		Bismuth.
Bib.	Bibe	Drink.
Biol.		Biology.
B. i. d.	Bis in die	Twice daily.
B. M.	Balneum maris	Sea-water bath.
Bol.	Bolus	A large pill.
B. p.		Boiling-point.
Br.		Bromin.
Bull.	Bulliat	Let it boil.
B. v.	Balneum vaporis	Vapor bath.
C.	Congius, Centigrade	Carbon; Cubic; A gallon; Centigrade.
Ca.		Calcium.
Cap.	Capiat	Let him take.
c. c.		Cubic centimeter.
Cd.		Cadmium.
Ce.		Cerium.
Cel.		Celsius.
Cent.		Centigrade.
Cg.		Centigram.
C. m.	Cras mane	To-morrow morning.
Cm.		Centimeter
C. m. s.	Cras mane sumendus	To be taken to-morrow morning.
C. n.	Cras nocte	To-morrow night.
Co.		Cobalt
Cochl.	Cochleare	Spoonful.
Cochl. ampl.	" amplum	A tablespoonful.
" infant.	" infantis	A teaspoonful.
" mag.	" magnum	A tablespoonful.
" med.	" medium	A dessertspoonful.
" parv.	" parvum	A teaspoonful.
Col.	Cola	Strain.
Colat.	Colatus	Strained.
Colet.	Coletur	Let it be strained.
Color.	Coloretur	Let it be colored.
Comp.	Compositus	Compound.
Cong.	Congius	A gallon.
Cons.	Conserva	Keep.
Contin.	Continuatur	Let it be continued
Cont. rem.	Continuetur remedium	Let the medicine be continued.
Coq.	Coque	Boil.
Cort.	Cortex	Bark.
Crast.	Crastinus	For to-morrow.
Crys.		Crystal.
Cs.		Cesium.
Cu.	Cuprum	Copper.
Cuj.	Cujus	Of which.
C. v.	Cras vespere	To-morrow evening.
Cyath.	Cyathus	A glassful.
D.	Dosis; Da	A dose; Give.
Decub.	Decubitus	Lying down.
De d. in d.	De die in diem	From day to day.
Deg.		Degree; degeneration.
De R.		Reaction of degeneration.
Destil.	Destilla	Distil.
Det.	Detur	Let it be given.
Dieb. alt.	Diebus alternis	On alternate days.
" tert.	" tertiis	Every third day.
Dil.	Dilue	Let it be dissolved.
Dilut.	Dilutus	Dilute.
Dim.	Dimidius	One-half.
Dist.	Distilla	Distil.
Div.	Divide	Divide.
D. in p. æq.	Divide in partes æquales	Divide into equal parts.
Donec alv. sol. fuerit,	Donec alvus soluta fuerit	Until the bowels are opened.
D. P.	Directione propria	With a proper direction.
E.		Erbium.
Eb.		Erbium.
E.-j.		Elbow-jerk.
Ejusd.	Ejusdem	Of the same.
Elec.	Electuarium	An electuary; Electricity
Emb.		Embryology.
Enem.		Enema.
Er.		Erbium.
Exhib.	Exhibeatur	Let it be given.
Ext.	Extractum	Extract.
F.		Fahrenheit; Fluorin.
Far.		Faradic.
Fe.	Ferrum	Iron.
Feb. dur.	Febre durante	The fever continuing.
F., Ft.	Fac, Fiat	Make.
Filt.	Filtra	Filter.
Fld.	Fluidus	Fluid.
Flor.	Flores	Flowers.
F. m.	Fiat mistura	Make a mixture.
Fol.	Folia	Leaves.
F. p.	Fiat potio	Make a potion.
F. pil.	Fiat pilula	Make a pill.
F. s. a.	Fiat secundum artem	Prepare skilfully.
Galv.		Galvanic.
Gl.		Glucinum.
Gm.		Gram.
Gr.	Granum	Grain.
Gtt.	Guttæ	Drops.
Guttat.	Guttatim	By drops.
H.		Hydrogen.
Hg.	Hydrargyrum	Mercury.
Hl.		Hectoliter.
Hm.		Hectometer.
Hor. decub.	Hora decubitus	At bed-time.
H. s.	Hora somni	At bed-time.
I.	Iodum	Iodin.
In.		Indium.
In d.	In die	Daily.
Inf.	Infunde	Pour in.
Inj.	Injectio	An injection.
Ir.		Iridium.
K.	Kalium	Potassium.
K.-j.		Knee-jerk.
Kl.		Kiloliter.
Km.		Kilometer.
L.		Liter.
Li.		Lithium.
Liq.		Liquor.
M.	Meridies; Misce	Noon; Mix.
Mac.	Macera	Macerate.
Mass. pil.	Massa pilularum	Pill-mass.

M. ft.	Mistura fiat	Let a mixture be made.
Mg.	Magnesium; Milligram.	
Ml.	Milliliter.	
Mm.	Millimeter.	
Mod. prescript	Modo præscripto	In the manner directed.
Mol. wt.	Molecular weight.	
Mor. sol.	More solito	In the usual way.
Muc.	Mucilago	Mucilage.
Myg.	Myriagram.	
Myl.	Myrialiter.	
Mym.	Myriameter.	
N.	Nitrogen.	
Na.	Natrium	Sodium.
Ni.	Nickel.	
No.	Numero	Number.
Noct.	Nocte	By night.
O.	Octarius	A pint.
Ol.	Oleum	Oil.
Ol. oliv.	Oleum olivæ	Olive-oil.
Ol.-res.	Oleoresina	Oleoresin.
O. m.	Omni mane	Every morning.
Omn. bih.	Omni bihora	Every two hours
Omn. hor.	Omni hora	Every hour.
Omn. noct.	Omni nocte	Every night.
Os.	Osmium.	
Ov.	Ovum	An egg.
Oz.	Uncia	Ounce.
P.	Phosphorus, Pulse.	
Part. æq.	Partes æquales	Equal parts.
Pb.	Plumbum	Lead.
P. c.	Post cibum	After meals.
P. C.	Pondus civile	Avoirdupois weight.
Pd.	Palladium.	
Phar.	Pharmacopeia.	
Pil.	Pilula	Pill.
Pocul.	Poculum	A cup.
Pond.	Pondere	By weight.
Pot.	Potio	Potion; potassa.
Ppt.	Preparata	Precipitate; Prepared.
P. rat. ætat	Pro rata ætatis	In proportion to age.
P. r. n.	Pro re nata	When required.
Pt.	Pint.	
Pulv.	Pulvis	Powder.
Q. d.	Quater in die	Four times a day.
Q. l.	Quantum libet	According as required.
Q. p.	Quantum placeat	At will.
Q. s.	" sufficit	A sufficient quantity.
Qt.	Quart.	
Q. v.	Quantum vis	As much as you wish.
R.	Reaumur's thermometer, Respiration.	
℞.	Recipe	Take.
Rad.	Radix	Root.
Rb.	Rubidium.	
R. D.	Reaction of degeneration.	
Rect.	Rectificatus	Rectified.
Rep.	Repetatur	Let it be repeated.
S.	Semis	Half; Sulphur.
S.	Signa	Label.
S. a.	Secundum artem	According to art.
Sb.	Stibium	Antimony.
Scr.	Scrupulum	Scruple.
Sig.	Signetur	Let it be labeled.
Sig. n. pr.	Signa nomine proprio	Label with common name.
Sing.	Singulorum	Of each.
Si non val.	Si non valeat	If it does not answer.
Si op. sit	Si opus sit	If requisite.
Solv.	Solve	Dissolve.
Sp., or Spir.	Spiritus	Spirit
Sp. gr.	Specific gravity.	
Ss.	Semi, semissis	One-half.
St.	Stet	Let it stand.
Su.	Sumat	Let him take.
S. v.	Spiritus vini	Alcoholic spirit.
S. v. r.	Spiritus vini rectificatus	Rectified spirit of wine.
S. v. t.	Spiritus vini tenuis	Dilute alcohol, proof-spirit.
Syr.	Syrupus	Syrup.
T.	Temperature.	
T. d.	Ter in die	Three times a day.
Tr., Tinct.	Tinctura	Tincture.
Ung.	Unguentum	Ointment.
Ur.	Urine.	
Vesic.	Vesicatorium	A blister.
Wt.	Weight.	
V. s. b.	Venesectio brachii	Bleeding from the arm.
♏.	Minimum	Minim.
ʒ.	Drachma	Dram.
℈.	Scrupulum	Scruple.
℥.	Uncia	Ounce.

ABBREVIATIONS THAT SHOULD ONLY BE USED UNDER HEADINGS, OR WITH A CONTEXT, RENDERING THE MEANING OBVIOUS.—*Ewart.*

Names of Diseases.

Bctasis	Bronchiectasis.
Brhea	Bronchorrhea.
Btis	Bronchitis.
G. K.	Granular Kidney.
G. P.	General Paralysis.
Phth., or $\phi\theta$, or ϕ.	Phthisis.
Pn^a	Pneumonia.
Pn^x	Pneumothorax.
Rhc F.	Rheumatic Fever.
Rhsm	Rheumatism.
Sct F.	Scarlet Fever.
Syph., or $\sigma\nu\phi$.	Syphilis.

Names of Regions or Organs.

Clavr	Clavicular.
I. C. F.	Infraclavicular Fossa.
Infrascr	Infrascapular.
Interscr	Interscapular.
Mamy	Mammary.
S. C. F.	Supraclavicular Fossa.
Sp. C.	Spinal Cord.
S. S. F.	Supraspinous fossa.
V. C. or V. B.	Vocal Bands.

Names of Signs and Symptoms.

C/	Cough.
Cephgia	Cephalalgia.
Hge	Hemorrhage.
Ngia	Neuralgia.
N. S.	Night-sweats.
Sp^m	Sputum.
T.	Tongue.
Vg	Vomiting
Vt	Vomit.

In Physical Examination, Etc.

H. C.	Humid Crepitations.
R. S.	Respiratory Sound.
V. F.	Vocal Fremitus.
V. S.	Voice-sounds.

ABBREVIATIONS USED IN OPHTHALMOLOGY.

Acc.	Accommodation.
Ah.	Hyperopic Astigmatism.
Am.	Myopic Astigmatism.
As.	Astigmatism.
Ax.	Axis.
B. D.	Base (of prism) down.
B. I.	" " " in.
B. O.	" " " out.
B. U.	" " " up.
cm.	Centimeter.
Cyl.	Cylinder, Cylindric Lens.
D.	Diopter.
E.	Emmetropia, Emmetropic.
F.	Formula.
H.	Hyperopia, Hyperopic, Horizontal.
L. E.	Left Eye.
M.	Myopia, Myopic.
mm.	Millimeter.
O. D.	Oculus dexter—Right Eye.
O. S.	Oculus sinister—Left Eye.
P. p.	Punctum proximum, Near Point.
P. r.	Punctum remotum, Far Point.
R. E.	Right Eye.
Sph.	Spheric, Spheric Lens.
Sym.	Symmetric.
V.	Vision, Visual Acuity, Vertical.
+, —, =	Plus, Minus, Equal to.
∞	Infinity, 20 ft. distance.
( )	Combined with.
°	Degree.

ABBREVIATIONS USED IN OTOLOGY.

⏚	Applied to or in contact with Auricle.
A. C.	Air-conduction.
A. D.	Auris dextra—Right Ear.
A. S.	Auris sinistra—Left Ear.
B. C.	Bone-conduction.
C	Contact.
D.	Dentes—applied to Teeth.
F.	Tuning-fork.
Gl.	Glabella—applied to Forehead.
H.	Hearing Power.
L.	Left Ear
M.	Applied to Mastoid.
Meat. Aud. Ext.; M. E.	External Auditory Meatus.
Meat. Aud. Int.; M. I.	Internal Auditory Meatus.
Men. dis.	Ménière's disease.
M. flac.	Membrana flaccida; Shrapnell's membrane.
M. T.; Mt.	Membrana tympani.
Myring.	Myringitis.
O.	Complete Lack of Perception of Sound.
ot. ext. ac.	Otitis externa acuta.
ot. ext. chron.	Otitis externa chronica.
ot. ext. diff.	Otitis externa diffusa.
ot. med. sup. ac.	Otitis media suppurativa acuta.
ot. med. sup. chron.	Otitis media suppurativa chronica.
Pol.	Politzer's.
Pol. Ac.	Politzer's Acoumeter.
R.	Right Ear.
S.	Susurrus—a Whisper.
t.	Applied to Temple.
Tymp.	Tympanum.
ub.	Ubique—when applied at all points.
v.	Voice.
V.	Applied to Vertex.
vib.	Vibration.
z.	Applied to Zygoma
′	Foot.
″	Inches.
ϖ	Heard, but not Understood.
+R.	Rinné's Test Positive.
−R.	Rinné's Test Negative.

ABBREVIATIONS USED IN ELECTROTHERAPEUTICS.

A., or An.	Anode.
Amp.	Ampère.
A. C.	Anodal Closing.
A. C. C.	Anodal Closure Contraction.
A. C. O.	Anodal Closing Odor.
A. C. P.	Anodal Closing Picture.
A. C. S.	Anodal Closing Sound.
A. D.	Anodal Duration.
A. D. C.	Anodal Duration Contraction.
A. M.	Ampère-meter.
A. O.	Anodal Opening.
A. O. C.	Anodal Opening Contraction.
A. O. O.	Anodal Opening Odor.
A. O. P.	Anodal Opening Picture.
A. O. S.	Anodal Opening Sound.
B.	Magnetic Induction.
B. A. U.	British Association Unit.
C.	Centigrade; Current; Cathode.
C. C.	Cathodal Closure.
C. C. C.	Cathodal Closure Contraction.
C. C′ C″	Various Degrees of Contraction.
C. T.	Cathodal Closing Tetanus.
C. G. S. Units.	Centimeter-gram-second Units.
C. O.	Cathodal Opening.
C. O. C.	Cathodal Opening Contraction.
C. S.	Current-strength.
D.	Duration; Density.
De. R.	Reaction of Degeneration.
E.	Earth; Electromotive Force.
E. M. D. P.	Electromotive Difference of Potential.
E. M. F.	Electromotive Force.
F. M.	Field Magnet.
H.	Horizontal Intensity of the Earth's Magnetism; One Unit of Self-induction.
H.	Intensity of Magnetic Force.
I.	Intensity of Magnetism.
J.	Joule.
K.	Electrostatic Capacity.
K.	Kathode.
Kl.	Klang (sound).
K. C.	Kathodal Closing.
K. C. C.	Kathodal Closing Contraction.
K. C. T.	Kathodal Closing Tetanus.
K. D.	Kathodal Duration (or Period of Closure of Circuit).
K. D. C.	Kathodal Duration Contraction.
K. D. T.	Kathodal Duration Tetanus.
K. W.	Kilo-watt.

O.	Opening of Circuit.
P. D.	Potential Difference.
Q.	Electric Quantity.
R.	Ohmic Resistance.
S.	South Pole.
T.	Time.
Te.	Tetanic Contraction.
U.	Unit.
V.	Volume; Velocity.
v.	Volt.
V. A.	Voltaic Alternative.
V. M.	Volt-meter.
W.	Work; Weight; Watt.
Z.	Contraction (Zuckung).
Z. Z.′ Z.″	Increasing Strengths of Contraction.
κ	Magnetic Susceptibility.
μ	Magnetic Permeability.
ω	Ohm.
ρ	Specific Resistance.
Ω	Megohm (one-millionth part of an ohm).
⊣⊢	Battery.
+	Anode or Positive Pole.
−	Kathode or Negative Pole.
>	Greater than, as K > A.
<	Less than.

PREFIXES AND SUFFIXES USED IN CHEMISTRY.

am- indicates the group NH_2.

azo-, diazo-, and hydrazo- indicate compounds in which nitrogen atoms are linked in various ways.

bi- is applied as a prefix to signify *two*.

cin- indicates the group NH.

diket- indicates the molecule CO in certain structural relations.

hendon- is employed as a prefix to signify *one*.

nitro- indicates the group NO_2.

pent- is applied as a prefix to signify *five*.

per- denotes in a rather vague sense an indefinitely large amount of the body to which it is prefixed, or to which it is referred.

sesqui- indicates the proportion of *two* to *three*.

sub- is employed in a rather vague sense to indicate deficiency of the body to which it is prefixed.

tetr- is applied as a prefix to signify *four*.

thio- indicates sulphur, especially replacing oxygen.

tri- (sometimes "*ter-*") is applied as a prefix to signify *three*.

ul indicates aldehydic structure.

an is applied to a class of bodies related to the starch and sugar group.

ane indicates a saturated hydrocarbon.

ase indicates an enzyme, or non-organized ferment, *e.g.*, diastase. This termination is at present restricted generally to enzymes of vegetable origin, but it should also be used with animal enzymes—which, however, usually end in "in." It would thus be better to say *pepsase* and *trypsase*, rather than *pepsin* and *trypsin*.

-ate. A suffix to nouns in chemistry signifying any salt formed by an acid acting on a base; *e.g.*, *sulphate*, *phosphate*.

-ic denotes the higher of two valencies assumed by an element, and incidentally in many cases a larger amount of oxygen.

-in is of no precise significance, and is mostly applied to bodies the structure of which is not yet known.

-yl, -ene, -enyl, and -ine indicate hydrocarbons. According to the American system of orthography, the only case in which "*ine*" is used is as a termination for a series of hydrocarbons, beginning with Ethine, C_2H_2. English writers and some American chemists use it to signify basic properties, regarding *-in* as the proper term for non-basic bodies. They thus distinguish between salicin, which forms no salts with acids, and morphin (which under such system is spelled "morphine"), which does. It must be noted that such methods are not in accordance with the tendency of modern chemic nomenclature, which seeks to express structure, not properties. The organic bases

or alkaloids are not all of the same type, and when their structure is elucidated systematic names will be found for them. Until then there is no particular gain in indicating them as a group.

-id is similar to "in."

-ol indicates alcoholic structure, *i. e.*, presence of the group HO (hydroxyl), *e. g.*, alcohol, glycerol, phenol.

-one is applied to bodies related to the starches and sugars. It is, however, not used with this significance in "peptone," which word is not formed according to any established system.

-ose indicates a carbohydrate, *e. g.*, glucose, although it is also occasionally applied to the results of digestion of proteids, *e. g.*, albumose.

-ous denotes the lower of two degrees of valency assumed by an element and incidentally indicates, in many cases, a small amount of oxygen.

The word *sulphonic* indicates the group HSO_3.

ABBREVIATIONS USED IN HYGIENE AND SANITARY LAW.

SIGNS ABBREVIATIONS, ETC., USED IN DESCRIPTIVE ZOÖLOGY AND BOTANY.

o . . . . . Feet.
′ . . . . . Inches.
″ . . . . . Lines; each one-twelfth of an inch, or about two millimeters.
! . . . . . A mark of affirmation or authentication.
? . . . . . A mark of doubt.
- . . . . . Figures or words separated by a short dash indicate the extremes of variation, as 5-10″ long, few-many flowered; *i. e.*, varying from 5 to 10 lines in length, and with few to many flowers.
c.c. . . . . . Cubic centimeter.
cm. . . . . . Centimeter.
mm. . . . . . Millimeter.
μ . . . . . The Micron, Micromillimeter, or unit of Microscopic Measurement. For convenience of reference, the following table of comparative measurements is given:—

μ	*Inches.*	μ	*Inches.*	*Inches.*	μ
1.	.000039	6.	.000236	$\frac{1}{10000}$	2.5399
2.	.000079	7.	.000276	$\frac{1}{1000}$	25.3997
3.	.000118	8.	.000315	$\frac{1}{100}$	253.9972
4.	.000157	9.	.000354	**One Meter**	39.370432 in.
5.	.000197	10.	.000394		

x . . . . . Used to express magnification, thus × 10 indicates a magnification of 10 diameters. The improper fraction $\frac{10}{1}$ indicates the same thing, but is rarely used.
① . . . . . An annual Herb.
② . . . . . A biennial Herb.
♃ . . . . . A perennial Herb.
♄ . . . . . An Undershrub, deciduous.
♄ . . . . . An Undershrub, evergreen.
♄ . . . . . A Shrub, deciduous.
♄ . . . . . A Shrub, evergreen.
♄ . . . . . A Tree, deciduous.
♄ . . . . . A Tree, evergreen.
♄ . . . . . An herbaceous Vine, annual or biennial
♄ . . . . . A woody Vine, deciduous.
♄ . . . . . A woody Vine, evergreen.
♄ . . . . . A trailing Herb, annual or biennial.
♄ . . . . . A trailing Herb, perennial.
♒ . . . . . An aquatic plant.
☿ . . . . . Flowers perfect.

♂ . . . . . A male animal, or a plant or flower bearing only stamens or antheridia.

♀ . . . . . A female animal or a plant or flower bearing only pistils or archegonia.

♂yg . . . . . A young animal of undetermined sex, thus ♂o, young male, or ♀yg for young female, but ○*juv* (*juvenis*, young).

☉ . . . . . A monocarpic plant.

⊢ . . . . . Cotyledons accumbent.

⊦ . . . . . Cotyledons incumbent.

⊕ . . . . . A plant introduced and naturalized.

⊙ . . . . . A plant cultivated for ornament.

♃ . . . . . A plant cultivated for use.

♯ . . . . . Monecious.

♯ . . . . . Diecious.

♯ . . . . . Polygamus.

0 . . . . . Wanting or none.

∞ . . . . . Numerous or indefinite; more than twenty when applied to stamens.

" . . . . . The microsecond represents .000 001 second or the unit of time in experiments or psychophysic reactions.

Authors' names are abbreviated in the following Manner:—

Ait., Aiton. **Bech.**, Bechstein. **Cham.**, Chamisso. **Dum.**, Duméril, etc.

Aupt, signifies in ornithology, breeding plumage.

Avocet, means a bird of the year.

-aceæ, a suffix used in botany to designate a family, the name chosen being one of the principal genera. Ex., *Rosa*, *Rosaceæ*, *Ranunculus*, *Ranunculaceæ*. Cf., *iceæ*, *ideæ*, *ineæ*, *eæ*.

-ana, preferably used as a suffix to the name of a species around which others naturally cluster, in the naming of subsections or groups of species; *e. g.*, the group of species of *Helix* related to *H. pomatia* may be indicated by the term *Pomatiana*.

-ensis, a termination given to the names of species only when derived from the name of their habitat; *e. g.*, *Tænia madagascariensis*, *Daphne chinensis*, *Dracæna brasiliensis*.

Eu-, employed as a prefix in forming the names of genera, subgenera, or sections of genera before a Greek derivative.

Excl. gen., exclusit genus.

Excl. sps., exclusit species.

Excl. var., exclusit varietas, when following an onym, indicates that the group has undergone revision, and the name does not cover the original ground to the extent indicated.

-ia, -ius, -ica, -icus, -ina, -inus, -ita, -itus, terminations used in making specific names which are derived from the name of a river or other body of water, a province, a country, or a kingdom; *e. g.*, *arabicus*.

-iceæ, -ideæ, -ineæ, suffixes used in botany to designate a family when the name taken ends in Latin *-ix* or *-is* (genitive *icis*, *idis*, *iscis*); *e. g.*, *Salicineæ* from *Salix*, *Berberideæ* from *Berberis*, *Tamariscineæ* from *Tamarix*.

-eæ, as a rule, these suffixes, together with *eæ*, are employed to designate botanic sub-families, tribes, and sub-tribes; *e. g.*, *Roseæ* from *Rosa*.

-idæ, -inæ, the suffixes added to the name of the earliest known or most characteristic genus, to designate zoölogic families or sub-families; *e. g.*, *Strix*, *Strigis*, *Strigidæ*, *Bucerotis*, *Bucerotidæ*.

-ites, -itis, frequently employed to designate fossil organisms analogous to the living form whose generic name is the radical to which *ites* is appended. They are rarely used with specific names.

Mutatis char., *mutatis characteris*, when following a specific name signifies a change in the diagnostic characters of a species.

-astrum, -oidea or **-oides, -oidalis, -oideum, -opsis**, terminations employed in forming generic, sub-generic, or specific names after a Greek derivative. Bourguinat suggests that *astrum* be reserved to be appended to the name of a genus to indicate its typical sub-division. *Opsis* and *oides* should be reserved for sub-divisions of a genus which resemble another genus, by adding them to the name of that other genus when it is of Greek origin.

-oides is preferably reserved for specific names of Greek or barbarous (never Latin) origin

(a) When the radical of the specific name is the name of a genus which it resembles, *e. g.*, *Salix myrtilloides*, *Bupleurum ranunculoides*, *Malva abutiloides*, *Thuja cupressoides*.

(b) When the radical is the name of another species which the new one resembles. *Helix carascaloides*, a species like *H. carascalensis*.

(c) When the radical of the specific name is a Greek word signifying an animal, organ, part, object, as *Potentilla arachnoidea*, *Prenanthes delloidea*. *Jungermannia zoöpsis*, *icthyoides*, *rhomboidale*, *pterigoideus*, *paraboloides*, *dendroideus*.

Only one apparent exception to the compounding of Greek and Latin has been consecrated by usage; viz.: *ovoides* from *ovum* and εἶδος; this has arisen from the absence of euphony in the correct form, ooides (ᾠόν, and εἶδος).

pro-parte, for a part, when following a specific name indicates that since its first application the group has been revised.

Pseudo-, a prefix employed in forming specific names before a Greek derivative.

-pteris, a termination frequently employed in the generic names of ferns, for the purpose of recalling the affinities of the genus.

sp. (1) In zoölogy, abbreviation of species, written when the specific name is not known or is wanting, or if placed after the name of the authority, as *Crania craniolaris*, Linné sp., indicates that Linné is only to be credited with the specific name.

(2) In botany, species or specimen.

Sub-, a prefix employed in forming specific names before a Latin derivative. It may also be used in designating a new species before the name of another with which the first was in intimate relation. It is also used in the sense of *nearly*, *less*, *somewhat*, *slightly*. It has, moreover, a few legitimate Latin compounds which may be used for specific names; *e. g.*, *subterraneus*, *subalpinus-a-um*, *subcurrens*, *subcutaneus*, *subdimidiatus*, *subjectus*, *submersus*, *subrotundus*, *substratus*.

Sub-sp., subspecies.

gen., genus.

var., variety, placed before the name of a plant or animal indicates that it is a hybrid of doubtful origin.

PREFIXES AND SUFFIXES USED IN MEDICAL TERMS.

PREFIXES.

A-, an-, called *alpha privative* (Gr. α, αν, or αμ), the equivalent of our prefix, *un-*, or *in-*, denotes an absence or want of the thing or quality expressed by the principal; *e. g.*, *adynamia, anaërobic, aphasia, apraxia, apyrexia, astigmatism, atony*, etc. *a* is used before consonants, *an* before vowels, and, rarely, *am* before *bl* or *br*. (To be distinguished from *ana*.)

Ad- (ad), to, at, toward, as, *adduction, adhesion.* The *d* is often changed in the compound to correspond to the next letter, as *accretion, appendix*.

Al- (Arab.) article *the*; *e. g.*, *alchemy*, the secret art; *alcohol*, the very subtle.

Amphi- (or **amph-**) (ἀμφί), upon both sides, in two ways, as in *amphiarthrosis, amphibia*, etc.

Ana- (ἀνά). Up, through, again; *e. g.*, *anabolism, anasarca, anatomy*, etc.

Anti- (or **ant-**) (ἀντί). Against, opposed to, opposite of; as *antaphrodisiac, antibrachium, antipyretic, antiseptic*, etc.

Apo- (ἀπό). Off, away, upon; *e. g.*, *aponeurosis, apoplexy*, etc.

Auto- (αὐτός). Self; as *autopepsia, autopsy*.

Bary- (βαρύς). Heavy, difficult; as *barymezia, baryphonia*, etc.

Bi-, bin- (bis). Twice, twofold; *e. g.*, *bicuspid, bivalent, binocular, binaural*.

Bio- (βίος). Life, *e. g.*, *bioplasm, biology, biolysis*.

Brach- (βραχίων). Arm, pertaining to the arm; as *brachialgia, brachioncus*.

Broncho- (βρόγχος). Pertaining to the trachea; as *bronchorrhagia, bronchotomy*.

Cardi-, cardio- (καρδία). Pertaining to the heart, as *cardiogram, cardialgia*.

Celio-, cœlio- (κοιλία). Pertaining to the belly, as *celiotomy, cœliac*.

Chiro- (χείρ). The hand. *Chiragra, chiropodist*.

Co-, con-. Together, along with; *e. g.*, *coitus, congenital*.

Dacryo- (δάκρυον). A tear, pertaining to a tear; as *dacryoid, dacryo-cystitis*.

Dactyl- (δάκτυλος). A finger; pertaining to the fingers; as *dactylitis, dactylion, dactylate*.

Dermo-, dermato- (δέρμα). The skin; pertaining to the skin; *e. g.*, *dermotomy, dermatolysis*.

Di- (δίς). Twice, double; as *dimorphism, digastric*.

Dia- (διά). Through. Examples: *diabetes, diagnosis, diaphragm, diarrhea*, etc.

Dyn- (δύναμις). Force, power; *dynamogeny, dynamograph*.

Dys- (δυς). Difficult, defective, painful; *e. g.*, *dysentery, dyspnea, dysuria*.

Ec-, ex-, ecto- (ἐκ, ἐξ, ἐκτός). Out, outside, away from; as in *ecchymoses, ecdemic, eclampsia, exostosis, exanthema, ectropion, ectoderm*.

En-, em- (ἐν, ἐμ). In, within; as in *embryo, embolism, endemic*, etc.

Endo-, ento- (ἐντός). Within, internal; *e. g.*, *endarteritis, endoscope, entoblast, entoptic*.

Entero- (ἔντερον). The intestine; as in *enterocele, enterostomy*, etc.

Epi- (ἐμί). Upon, over, above; *e. g.*, *epiblast, epicranium, epistaxis, epidemic*, etc.

Extra- (*Lat.*). Outside; *e. g.*, *extravasation, extroversion*.

Galact- (γάλα). Milk; as *galactocele, galactozemia, galacturia*.

Gastro- (γαστήρ). The stomach; relation to the stomach; *e. g.*, *gastrocele, gastrocnemius, gastroenterostomy*, etc.

Genio- (γενείον). Pertaining to the chin; *e. g.*, *geniohyoglossus, geniohyoid*.

Glosso- (γλῶσσα). Pertaining to the tongue. See *glossology, glossoplegia, glossophytia*.

Hæma-, hæmato- or **hemo-** (αἷμα). The blood; pertaining to the blood. See *hematemesis, hematoma, hemorrhage*, etc

Hemi- (ἡμι-ἥμισυς). Half; as in *hemiachromatopsia, hemicrania, hemiplegia*.

Hepat- (ἧπαρ). The liver; pertaining to the liver. See *hepatemphraxis, hepatization, hepatopostema*.

Hetera- (ἕτερος). Different; opposite; *e. g.*, *heteroinfection, heterologous, heteropathy*.

Hydro-, hydr- (ὕδωρ). Water; resembling or relating to water, dropsy, etc.; as in *hydremia, hydragogue, hydrate, hydrocephalus*, etc.

Hyper- (ὑπέρ). Excess; exaggerated abnormality in amount, size, quality, etc. See *hyperesthesia, hypermetropia, hyperpyrexia, hypertrophy*, and others.

Hypno- (ὕπνος). Sleep. See *hypnopathy, hypnotism*.

Hypo- (ὑπό). Diminution as to degree, amount, size, quality, etc., or that located under or beneath; *e. g.*, *hyposthenia, hypoblast, hypochondriac, hypodermatic, hypoglossal*.

Hystera-, hystero- (ὑστέρα). The uterus or womb; relation to the uterus; *e. g.*, *hysterectomy, hystero-epilepsy, hysteropexia*, etc

Ileo- (*Ileum*). Pertaining to the ileum; *e. g.*, *ileo-colitis, ileotyphus*.

Ilio- (*Ilium*). Pertaining to the ilium; *e. g.*, *ilio femoral, iliolumbar*.

Im-, in- (*In*). Privative, negative; as *imperforate, incarceration, insane, incontinence*.

In- (ἐν). In, within, upon, by; as *incubation, infarction, inflammation, inoculation*, etc.

Infra- (*Infra*). Beneath, below; *e. g.*, *inframaxillary, infrascapular*.

Inter- (*Inter*). Between. See *intercellular, intercostal, intertrigo*, and others.

Intra- (*Intra*). Within, inside of, as *intra-articular, intrauterine*.

Iso- (ἴσος). Equal, like; *e. g.*, *isometric, isothermal, isopathy*.

Kata-, kath- (κατά). Down, through; as *katabolism, katatonia, kathode*.

Leuko- (λευκός). Whiteness; *e. g.*, *leukemia, leukocyte, leukomain, leukorrhea*.

Lith-, litho- (λιθος). Pertaining to stone, calculus, or lithic acid. See *lithemia, lithiasis, lithotripsy*, etc.

Macro- (μακρός). Largeness, hypertrophy; as in *macroglossia, macromelia*.

Mal- (*Malus*). Bad; as *malformation, malpractice, malaria*

Melano- (μέλας). Blackness, pigmentation; *e. g.*, *melancholia, melano-sarcoma*.

Meso- (μέσος). The middle; *e. g.*, *mesoblast, mesocolon*, etc.

Meta- (μετά). With, after; *e. g.*, *metabolism, metatarsus*.

Micro- (μικρός). Smallness; *e. g.*, *micrococcus, microglossia, microscope*.

Mon-, mono- (μόνος). Singleness. For example, *monamin, monomania, monorchis*.

Morpho- (μορφή). Shape, form; *e. g.*, *morphography, morphology, morphometry*.

Multi- (*multus*). Number, many; *e. g.*, *multilocular, multiparous*.

Myelo- (μυελός). Referring to the brain or spinal cord; as *myeloid, myelitis*.

Myo- (μῦς). Pertaining to a muscle or to muscularity. See *myocarditis, myoma, myopathy*.

Neo- (νέος). New, recent, young; as *neogala, neo-membrane, neoplasm*.

Nephr- (νεφρος). Pertaining to the kidney; *e. g.*, *nephrapostasis, nephria, nephritis*.

Neuro- (νεῦρον). Relating to a nerve or to neurology. In the original Greek the word meant a cord or tendon,—*neurosis*, the stringing of the bow. It is now applied only to nerve-structure; as, *e. g.*, *neuralgia, neurasthenia, neurilemma, neuroglia*.

Ob- (*Ob*). In front of, against, denoting hindrance or obstruction; *e. g.*, *obstruent, obturator, occlusion, opponens*.

Odonto- (ὀδούς). Of the teeth; as *odontology, odontalgia*.

Oligo- (ὀλίγος). Fewness or lack of, as *oligocythemia*.

Ophthalmo- (ὀφθαλμός). Pertaining to the eye, as *ophthalmia, ophthalmoplegia*.

Ortho- (ορθός). Straight, upright, correct. See *orthoscopy, orthopedia, orthopraxis*.

Osteo- (ὀστεον). Referring to bone. See *osteoblast, osteomyelitis, osteoplastic*.

Oto- (οὖς). Pertaining to the ear, as *otorrhea, otophone*.

Oxy- (ὀξυς). Denoting the presence of oxygen, or acidity; as *oxygen, oxyhemoglobin*.

Pan-, Pant- (πᾶς, πᾶν). All, every, universal; as *pancreas, pangenesis, pantomorphic*.

Para- (παρά). Through, near, by, by the side of, abnormality. Examples: *paracentesis, paresthesia, parenchyma, parotid*.

Peri- (περί). About, around. See, *e. g.*, *pericardium, perimeter, perilymph, periosteum*.

Pod- (πούς). Pertaining to the foot, as *podalgia, podedema*

Poly-, pol- (πολύς). Many, much; *e. g.*, *polycoria, polygalactia, polyuria*.

Præ-, pre- (*Præ*). Before; *e. g.*, *præcordia, prepuce*.

Pro- (πρό). Before, down; as in *process, procidentia, prolapsus, proptosis*.

Proc-, procto- (πρωκτός) The anus, pertaining to the anus; *e. g.*, *proctitis, proctoplegia*.

Pseudo- (ψευδής). False, spurious; as in *pseudarthrosis, pseudocyesis*.

Pyo- (πῦον). Pertaining to pus or purulency; *e. g.*, *pyogenic, pyosalpinx*.

Pyr-, pyro- (πῦρ). Concerning fire or heat, or inflammation; *e. g.*, *pyrogenous, pyrexia*.

Retro- (*Retro*). Backward, behind; *e. g.*, *retroflexion, retroversion*.

Rhin-, Rhino- (ῥίς). Pertaining to the nose, as *rhinoplasty, rhinitis*.

Semi- (*Semis*). Half, partly, almost, as *semicapium, semilunar*.

phyg- (σφυγμός). Pertaining to the pulse, as *sphygmometer, sphygmotechny.*
sb- (*Sub*). Beneath, under; and also partialty or deficiency of, as *subclavian, subluxation.*
per- (*Super*). Above, upon; excess of; *e. g.*, *supercilium, superfecundation.*
Supra- (*Supra*). Above, upon, superior to, as *supraorbital, supraspinatus.*
Sym-, syn- (σύν). With, together, same. See, *e. g.*, *symblepharon, symphysis, synalgia, synchondrosis.*
Zoö- (ζῷον). Animal. See *zoölogy, zoöchemia.*

SUFFIXES.

-go (agere). Gives the idea of activity, presentation, etc.; as *lumbago.*
-gogue (ἀγειν, to bear off, carry away). Signifies an agent stimulating the function of excretion or secretion of the product. Thus, *emmenagogue, hydragogue, sialagogue.*
-gra (ἀγρα, an attack, seizure). Denotes an acute attack of pain in the part, as *arthragra, podagra.*
-gia (ἄλγος, pain). Pain in a part, expressed by the chief word; *e. g.*, *cephalalgia, gastralgia.*
-resia (ατρησια). Imperforate, as in *proctatresia.*
-le (κήλη). A tumor, hernia, or protrusion. See *cystocele, hydrocele, meningocele.*
-le, cœle (κοιλία). A cavity, ventricle; *e. g.*, *mesocele.*
-tomy (ἐκτέμνειν). Excision, exsection; as in oöphorectomy, *nephrectomy, splenectomy.*
-æmia, -æmia, blood). Denotes a condition of the blood, or an ingredient in the same, expressed by preceding word; *e.g., hydremia, lithemia, pyemia, uremia.*
-in (ρητινη) Used in the names of certain resins, as *abietin.*
-ge (fugare, to expel). Driving out, an expeller, as *vermifuge, febrifuge,* etc.
-graph, -graphy (γραφειν, to write). An instrument; a treatise or description; *e. g.*, *sphygmograph, demography.*
-y often contracted to *-y*, denotes the quality of the root-word as an abstract noun, as *akromegalia, akromegaly.*
-æ (-ιδης). The suffix to the name of a genus forming the name of a family; *bovidæ, equidæ.*
-s. A variation of *-ago; e. g., prurigo, vertigo.*
-sis. Present the abstract idea of activity of the root-word.
-n (-ισμος). Implies the doctrine, practice, or theory of the principal word; *Darwinism, tribadism.*
- (-ιτης). Of the nature of. In anatomy, denoting a constituent part of an organ; as *sergile, sternile.* In chemistry, any salt of an -ous acid; as *sulphite, phosphile.*
-s (-ιτις). Originally the feminine ending of Greek substantives and denotes an especial activity of the root-word. By habit and general use it is now limited to inflammatory activity; as *gastritis, otitis,* etc.
-gy (λόγος, discourse). A treatise upon; as *bacteriology, dermatology, pathology.*
-sis (λύσις, a loosening). A separation into constituent parts, or the setting free of some part; as *hydrolysis, analysis.*
-malacia (μάλακος, soft). Abnormal softness; as in *osteomalacia.*
-mania (μανία, madness). The chief word denotes the principal symptom of the mental affection; *e. g.*, *erotomania, kleptomania,* etc.
-meter (μέτρον, a measure). An instrument for measuring; *e. g.*, *aërometer, urinometer.*
-odynia (ὀδύνη, excessive pain). The principal word denotes the seat of great pain, as *coccygodynia.*
-oid (εἶδος, form). Similar in shape, etc.; as in *choroid, cuboid, sphenoid, xiphoid.*
-oma (ωμα). A tumor, *e. g., glioma, sarcoma.*
-opia (ὤψ). Pertaining to the eye or vision; as in *amblyopia, myopia,* etc.
-orium, -torium, -sorium (τήριον). Designate places, tools, etc.; as *tentorium, auditorium,* etc.
-osis, -osus, derived from Greek words in *-όω*, and usually denote fulness, redundancy, excess.
-pathy (πάθος). A condition of disease, and also a method of cure; as *adenopathy, psychopathy, homeopathy, hydropathy.*
-phobia (φοβος, fear). Morbid or exaggerated fear or dread, as *agoraphobia, photophobia.*
-plasty (πλάσσειν, to form). Surgical plastic operation upon a part; *e. g., blepharoplasty, rhinoplasty.*
-rhagia (ῥήγνυμι, to burst forth). A hemorrhage or excessive discharge; *e. g., blennorrhagia, metrorrhagia.*
-rhaphy (ῥαφή, a suture). A stitching or suturing of a part; as *enterorrhaphy, perineorrhaphy.*
-rhea (ῥεειν, to flow). An excessive discharge or excretion; as *blennorrhea, diarrhea, leukorrhea.*
-scope (σκοπεῖν, to look). An instrument for making an examination; as *laryngoscope, microscope.*
-scopy (σκοπέειν). An examination; as *ophthalmoscopy.*
-stomy (στόμα, mouth). A suffix seen in the names of those surgical operations in which an artificial opening or passage is formed, as *enterostomy.*
-tas, -ty. Derived originally from the Greek *-της*, denote abstract quality or idea, as *immunity, acidity.*
-tio, -atio, -tion. A suffix of verbal roots denoting an action or function as taking place—an occurrence. The *n* was added to the original *-tio* by Roman and French influence.
-tomy (τέμνειν, to cut). Incision; *e. g., laparotomy, tenotomy.*
-ulus, -ula, -ulum, -ola, -ion, -ellus, -illus, -leus. Diminutives.
-uria (ουρεειν, to urinate). Abnormalities of the urine or of urination; as *albuminuria, polyuria.*

DEGREES, DIPLOMAS, AND QUALIFICATIONS.

A. S. . . . . . Fellow of the American Academy.
A. B. or **B. A.** . . Bachelor of Arts.
A. M. . . . . . Master of Arts.
C. M. . . . . . Master in Surgery.
D. S. . . . . . Doctor of Dental Surgery.
D. P. H. . . . . . Diploma in Public Health.
D. S. M. . . . . . Diploma in State Medicine.
D. S. S. . . . . . Diploma in Sanitary Science.
F. B. S. . . . . . Fellow of the Botanical Society.
F. B. S. Ed. . . . Fellow Botanical Society of Edinburgh.
F. C. S. . . . . . Fellow of the Chemical Society.
F. E. S. . . . . . Fellow of the Entomological Society.
F. F. P. S. G. . . Fellow of the Faculty of Physicians and Surgeons of Glasgow.
F. K. Q. C. P. I. . Fellow of the King and Queen's College of Physicians of Ireland.
F. L. S. . . . . . Fellow of the Linnæan Society.
F. R. C. P. L. . . Fellow of the Royal College of Physicians of London.
F. R. C. P. Ed. . . Fellow of the Royal College of Physicians of Edinburgh.
F. R. C. P. I. . . . Fellow of the Royal College of Physicians of Ireland.
F. R. C. S. E. . . Fellow of the Royal College of Surgeons of England.
F. R. C. S. Ed. . . Fellow of the Royal College of Surgeons of Edinburgh.
F. R. C. S. I. . . . Fellow of the Royal College of Surgeons in Ireland.
F. R. S. . . . . . Fellow of the Royal Society.
F. R. S. E. . . . . Fellow of the Royal Society of Edinburgh.
F. R. S. L. . . . . Fellow of the Royal Society of London.
L. H. . . . . . Licentiate of the Apothecaries' Hall, Dublin.
L. S. . . . . . Licentiate in Dental Surgery.
L. F. P. S. G. . . Licentiate of the Faculty of Physicians and Surgeons of Glasgow.
L. K. Q. C. P. I. . Licentiate of the King and Queen's College of Physicians of Ireland.
LL. B. . . . . . Bachelor of Laws.
LL. D. . . . . . Doctor of Laws.
L. R. C. P. L. . . Licentiate of the Royal College of Physicians of London.
L. R. C. P. Ed. . . Licentiate of the Royal College of Physicians of Edinburgh.
L. R. C. S. Ed. . . Licentiate of the Royal College of Surgeons of Edinburgh.
L. R. C. S. I. . . . Licentiate of the Royal College of Surgeons in Ireland.
L. S. A. . . . . . Licentiate of the Apothecaries' Society of London.
L. S. S. . . . . . Licentiate in Sanitary Science.
M. A. . . . . . Master of Arts.
M. B. . . . . . Bachelor of Medicine.
M. D. . . . . . Doctor of Medicine.
M. K. Q. C. P. I. . Member of the King and Queen's College of Physicians of Ireland.
M. P. S. . . . . . Member of the Pharmaceutical Society.
M. R. C. C. . . . Member Royal College of Chemistry.
M. R. C. P. L. . . Member of the Royal College of Physicians of London.
M. R. C. P. Ed. . Member of the Royal College of Physicians of Edinburgh.
M. R. C. P. I. . . Member of the Royal College of Physicians of Ireland.
M. R. C. S. E. . . Member of the Royal College of Surgeons of England.
M. R. C. S. Ed. . Member of the Royal College of Surgeons of Edinburgh.
M. R. C. S. I. . . Member of the Royal College of Surgeons in Ireland.
M. R. C. V. S. . . Member of the Royal College of Veterinary Surgeons.
M. S. . . . . . Master in Surgery.
Ph. B. . . . . . Bachelor of Philosophy.
Ph. D. . . . . . Doctor of Philosophy.
V. S. . . . . . Veterinary Surgeon.

INDEX OF TABLES

AND IMPORTANT DEFINITIONS, WHEREIN LARGE NUMBERS OF FACTS ARE BROUGHT TOGETHER AND CLASSIFIED

	PAGE		PAGE

DICTIONARY

OF

NEW MEDICAL TERMS.

A

basia. (See Illus. Dict.) **A. atactica,** a form marked by awkwardness and uncertainty of movement. **A., Choreic,** that due to choreic cramps in the legs. **A., Paralytic,** that form in which the legs give way under the weight of the body and walking is impossible. **A., Paroxysmal Trepidant,** a form of astasia-abasia in which trepidation similar to that of spastic paraplegia stiffens the legs and prevents walking. **A., Trembling,** incapacity to walk on account of trembling of the legs.

batage (*ah-bah-tazh*) [Fr.]. 1. The slaughter of an animal to prevent the infection of others. 2. The art of "casting" an animal preparatory to an operation; abattage.

bâtardissement (*ah-bah-tar-dees-mon*[*g*]) [Fr.]. The gradual degeneration or deterioration of a breed or race.

Abbé's Test-plate. An instrument designed by Abbé for testing microscopic objectives for spherical and chromatic aberration. It is composed of a microscopic slide with six cover-glasses ranging from 0.09 to 0.024 millimeter in thickness, and silvered on one side. Delicate, parallel, ruled lines are cut through the silver film, thus making a kind of micrometer with transparent rulings.

bdomen. (See Illus. Dict.). **A., Accordion,** Kaplan's term for a swelling of the abdomen attended with flattening of the arch of the diaphragm and increased respiration. It is not due to the presence of gas nor to tumor, and disappears under anesthesia; nervous pseudotympany. **A., Boat-shaped, A., Carinate.** See *A., Scaphoid.* **A. obstipum,** congenital shortening of the rectus abdominis muscle. **A., Scaphoid.** See under *Scaphoid* (Illus. Dict.). **A., Uncinate,** one in which the terminal segments and those next to them are turned under the others.

bdominocystic (*ab-dom-in-o-sis'-tik*) [*abdomen; κύστις,* bladder]. Relating to the abdomen and bladder.

bdominous (*ab-dom'-in-us*). Same as *Abdominal* (Illus. Dict.).

bducens-facialis (*ab-du-senz-fa-se-a'-lis*). Pertaining to the abducens and facial nerves. See *Nerves, Table of* (Illus. Dict.).

benteric (*ab-en'-ter-ik*) [*ab,* from; *ἔντερον,* intestine]. Outside the intestine; involving or pertaining to organs or parts other than intestinal. **A. Typhoid.** See under *Typhoid.*

berratio (*ab-er-a'-she-o*). See *Aberration.* **A. humorum,** an abnormal tendency or direction of blood or other fluid to a part; as in vicarious menstruation. **A. lactis,** milk metastasis. See *Galactoplania* (Illus. Dict.). **A. mensium, A. menstruorum.** See *Menstruation, Vicarious* (Illus. Dict.).

Aberration. (See Illus. Dict.) **A., Dioptric.** See *A., Spherical* (Illus. Dict.). **A., Distantial,** indistinct vision due to distance. **A., Lateral,** a deviation of a ray in any direction from the axis measured in the focal plane perpendicularly to the axis. **A., Longitudinal,** a deviation of a ray from the focus, measured along the axis above or below the focal plane. **A., Newtonian.** Same as *A., Chromatic* (Illus. Dict.).

Abiaba [Peruvian name]. See *Lucuma caimito.*

Abietate (*ab-i'-e-tāt*). A salt of abietic acid.

Abiogenetic, Abiogenous (*ab-i-o-jen-et'-ik, ab-i-oj'-en-us*). Pertaining to abiogenesis; characterized by spontaneous generation.

Abiogeny (*ab-i-oj'-en-e*). See *Abiogenesis* (Illus. Dict.).

Abionarce (*ab-i-o-nar'-se*) [*a,* priv.; *βίος,* life; *νάρκη,* numbness]. Torpor due to infirmity.

Abiosis (*ab-i-o'-sis*) [*a,* priv.; *βίωσις,* life]. The absence of life.

Abiotic (*ab-i-ot'-ik*). Opposed to or incapable of life.

Abiotrophy (*ab-i-ot'-ro-fe*) [*a,* priv.; *βίος,* life; *τροφή,* nourishment]. Degeneration or decay due to defective vital endurance.

Abiotus (*ab-i-o'-tus*) [*ἀβίωτος,* insupportable]. Incapable of vitality. Non-viable; approaching death.

Abipsia (*ab-ip'-se-ah*). See *Adipsia* (Illus. Dict.).

Ablactate (*ab-lak'-tāt*) [*ablactare,* to wean]. To accustom a nursling to food other than mother's milk; to wean.

Ablateur (*ab-lat-ur*) [Fr.]. See *Ablator* (Illus. Dict.). **A. vulcanique,** a cautery-iron employed in the castration of domestic animals.

Ablation. (See Illus. Dict.) 2. The abatement or diminution of the acute symptoms of a malady.

Ablepharia. (See Illus. Dict.) Cf. *Microblepharia, Schizoblepharia, Cryptophthalmos.* **A., Partial,** a congenital defect in one or more of the eyelids. **A., Total,** a congenital condition in which there is either a total absence of eyelids or the interpalpebral fissure.

Ablepharus (*ab-lef'-ar-us*). An individual affected with ablepharia.

Abluentia (*ab-lu-en'-she-ah*) [*abluere,* to wash away]. Cleansing applications, abstergents.

Abolitionism (*ab-o-lish'-un-izm*) [*abolitio,* an abolishing]. A movement originating in England to abolish the regulation and control of prostitution by the health-officers. Also applied to the movement to abolish vivisection.

Abomasus (*ab-o-ma'-sus*). See *Abomasum* (Illus. Dict.).

Abortion, Abortus. (See Illus. Dict.) 2. An aborted fetus. 3. In botany and zoology the partial or complete

arrest of development of an organ. **A., Accidental,** abortion due to accident. **A., Ampullar,** tubal abortion from the ampulla of the oviduct. **A., Chronic.** See *A., Habitual* (Illus. Dict.). **A. crebro redeuns.** See *A., Habitual* (Illus. Dict.). **A., Epidemic,** one of many cases occurring about the same time, due to widespread distress, excitement, or privation, or to some form of poisoning such as ergotism. **A., Induced,** one intentionally brought about. **A., Partial,** the premature loss of one fetus in a case of multiple gestation. **A., Provoked.** See *A., Induced.* **A., Spontaneous,** abortion not attributable to accident or purposive interference. **A., Tubal,** the escape of a fertilized ovum through the abdominal opening of the oviduct into the peritoneal cavity.

Abortive. (See Illus. Dict.) 2. A drug for inducing abortion.

Abraham (*a'-bra-ham*). To sham; to feign sickness or lunacy. **A.-man,** 1. A mendicant lunatic from the Abraham Ward of Bethlehem Hospital, London; they bore a distinctive badge. 2. An impostor who feigned to be a lunatic and begged in the guise of an Abraham-man.

Abranchiate (*ah-brang'-ke-āt*). Having no gills.

Abrastol (*ab-rast'-ol*). See *Asaprol* (Illus. Dict.).

Abreshain. Finely divided white silk, said to be used in the East Indies as an aphrodisiac.

Abroma angusta, L. (See Illus. Dict.) Olutkombul. The bark yields a glutinous sap which is used as an emmenagog. Dose 2 grams (grs. 30).

Abrosia (*ab-ro'-ze-ah*) [ἀβρωσία, fasting]. Want of food; fasting.

Abscess, Abscessus. (See Illus. Dict.) Syn., *Ecpyema; Addle; Gathering.* **A., Acute,** one resulting from an acute inflammation of the part in which it is formed; abscessus per fluxum. **A., Amebic,** a variety of abscess found in the liver and lung and containing amebas. **A., Anorectal,** one of the celluloadipose tissue near the anus. **A., Antemammary.** See *A., Supramammary.* **A., Arthrifluent,** a wandering abscess having its origin in a diseased joint. **A. arthriticus,** Musgrave's term for intestinal abscesses due to "gouty dysentery." **A. articuli.** See *Arthritis, Suppurative.* **A., Bartholinian,** an abscess of Bartholin's gland or its duct. **A., Bicameral,** one with two pockets. **A., Biliary,** one connected with the gall-bladder or a bile-duct. **A., Brodie's,** chronic abscess of bone, most frequently of the head of the tibia. **A. capitis sanguineus neonatorum.** See *Cephalhematoma* (Illus. Dict.). **A. carniformis,** Severinus' name for a hard sarcoma of the joints. **A., Cheesy.** See *A., Caseous* (Illus. Dict.). **A., Circumscribed,** one that is limited by an exudation of lymph. **A., Collar-button.** See *A., Shirt-stud* (Illus. Dict.). **A., Consecutive.** See *A., Critical* (Illus. Dict.). **A., Dental.** See *A., Alveolar* (Illus. Dict.). **A., Dermoid,** a small cutaneous abscess characteristic of the *scrofulide phlegmoneuse* described by Hardy. **A., Diathetic,** one due to a diathesis. **A., Diffuse.** See *Infiltration, Purulent.* **A., Douglas,** one formed in the peritoneal folds of Douglas' sac. **A., Dry,** one which disappears without discharging. **A., Emphysematous.** See *A., Tympanitic.* **A., Epithelial,** one located in epithelial tissues. **A., Fixation,** an abscess produced by the subcutaneous injection of an irritant, as a treatment of grave septicemia. **A. flatuosus.** See *A., Tympanitic.* **A., Follicular,** inflammation of single follicles of the mucosa. **A. frigidus scrofulosus.** See *A., Scrofulous.* **A. gangrænescens, A. gangrænosus.** See *Anthrax* (Illus. Dict.). **A., Gas.** See *A., Tympanitic.* **A., Glandular,** one formed about a lymph-gland. **A., Gravitation,** one in which pus formed in one part of the body tends to migrate, usually to portions deeper or lower down, in the direction gravity would take it. **A., Hematic,** one due to an extravasated blood-clot. **A., Hemorrhagic,** one containing blood. **A., Hepatic,** abscess of the liver. **A., Hypostatic.** See *A., Wandering.* **A., Idiopathic,** one not attributable to any other disease. **A., Iliac,** a wandering abscess of the iliac region. **A., Infecting Mitral,** one due to a lymph embolus caused by endocarditis. **A., Interlamellar, of the Membrana Tympani,** one following myringitis or otitis media, and occurring between the laminas of the substantia propria of the tympanic membrane. **A., Intramastoid,** one of the mastoid process of the temporal bone. **A., Ischiorectal,** one of the ischiorectal fossa. **A., Lacrimal,** one of the lacrimal sac. **A. lactis.** See *A., Milk* (Illus. Dict.). **A., Lumbar,** a wandering abscess of the lumbar region. **A., Lymphatic,** 1. The suppuration of a lymphatic gland. 2. An enlarged bursa mucosa. **A., Mammary, Subcutaneous.** See *A., Supramammary.* **A., Marginal,** one located near the anal orifice. **A., Mastoid,** suppuration occurring in the cells of the mastoid portion of the temporal bone. **A., Mediastinal,** suppuration in the mediastinum. **A., Metastatic,** an abscess secondary to pyemia and ulcerous endocarditis, but not occurring through septicemia. They are usually of embolic origin and generally located in the lungs and liver. **A., Microscopic,** any minute collection of necrosed cells. **A. mucocarnosus botryoides labii vulvæ,** a lobulated outgrowth of the labium pudendi majus. **A., Mural** one forming in the abdominal wall. **A. nucleatus** See *Furunculus* (Illus. Dict.). **A. oculi.** See *Panophthalmitis purulenta.* **A., Osteopathic,** one due to disease of a bone. **A., Otic Cerebral, A., Otitic Cerebral,** an abscess of the brain, following a purulent disease of the inner ear. **A., Paget's.** See *A., Residual* (Illus. Dict.). **A., Parametric, A., Parametritic** a form occurring frequently between the folds of the broad ligament of the uterus or in the neighboring cellular tissue. **A., Paranephric, A., Paranephritic** one occurring in the tissues about the kidney. **A. pectoris.** See *Empyema* (Illus. Dict.). **A. per consestum, A. per decubitum.** See *A., Wandering.* **A. per fluxum.** See *A., Acute.* **A., Perimetric A., Perimetritic,** pus within the peritoneum originating from inflammation of the peritoneal covering of the uterus. **A., Perinephric,** one occurring in the region immediately surrounding the kidney. **A., Peripleuritic,** one that occurs beneath the parietal pleura as the result of pleurisy, a diseased rib, or an injury. **A., Periproctitic,** one in the loose areolar tissue surrounding the lower part of the rectum. **A. perisinuosus,** one resulting from infection of the region about a sinus. **A., Peritoneal,** a collection of softened exudate which has become encysted in cases of peritonitis. **A., Peritonsillar,** one that forms in acute tonsillitis around one or both tonsils. **A. pneumococcalis,** one due to infection by pneumococci. **A., Postcecal,** one located back of the cecum. **A., Postfascial.** See *A., Subfascial.* **A., Postmammary.** See *A., Supramammary.* **A., Postpharyngeal.** See *A., Retropharyngeal.* **A., Posttyphoid,** chronic abscess following typhoid. **A., Prelacrimal,** an abscess due to caries of the lacrimal or the ethmoid bone, producing a swelling at the inner canthus immediately below the upper margin of the orbit. **A., Preperitoneal.** See *A., Subperitoneal.* **A., Primary,** one arising at the seat of infection. **A., Progressive Ulcerative of the Cornea.** See *Keratitis of Reapers* (Illus. Dict.). **A., Puerperal,** a variety seen in infants

which cutaneous nodules become softened and painful. **A., Retroesophageal,** one situated dorsad of the esophagus. **A., Retromammary.** See *A., Subpectoral.* **A., Retroperitoneal.** See *A., Subperitoneal.* **A., Retropharyngeal,** one formed between the vertebral column and the posterior wall of the pharynx; postpharyngeal abscess. **A., Scrofulous,** one due to tuberculous degeneration of bone or lymph-glands: abscessus frigidus scrofulosis; strumous abscess. **A., Secondary.** Same as *A., Embolic* (Illus. Dict.). **A., Septicemic,** one resulting from septic infection or accompanying septicemia. **A., Spermatic,** one involving the seminiferous tubules. **A., Spinal,** one due to necrosis or disease of a vertebra. **A., Spirillar,** Verneuil's name for an abscess containing spirilla from the saliva. **A. spirituosus.** See *Aneurysm* (Illus. Dict.). **A., Stitch,** one formed about a stitch or suture. **A., Strumous.** See *A., Scrofulous.* **A., Subaponeurotic,** one beneath an aponeurosis or fascia. **A., Subareolar,** one beneath the alveolar epithelium of the nipple. **A., Subfascial,** one beneath a fascia; postfascial abscess. **A., Submammary,** one lying between the mammary gland and the chest-wall. Syn., *Postmammary* or *Retromammary abscess.* **A., Subpectoral,** one beneath the chest muscles. **A., Subperitoneal,** one arising between the parietal peritoneum and the abdominal wall. Syn., *Preperitoneal abscess.* **A., Subphrenic,** one located beneath the diaphragm. **A., Sudoriparous,** an abscess due to inflammation of obstructed sweat-glands. **A., Supramammary,** one in the subcutaneous tissue over the breast. **A., Sympathetic,** a secondary or metastatic abscess at a distance from the part at which the exciting cause has acted (e. g., a *bubo*). **A., Temporosphenoidal,** one situated in the temporosphenoidal lobe. **A., Thoracis.** See *Empyema* (Illus. Dict.). **A., Tympanitic,** one containing gas generated by putrefaction. Syn., *Abscessus flatuosus, Gas abscess.* **A., Urethral,** 1. Suppuration of a urethral lacuna, a lacunar abscess. 2. One involving the circumurethral tissue. **A., Urinary,** one resulting from extravasation of urine. **A., Urinous,** one containing urine mingled with the pus. **A., Verminous, A., Worm,** one containing intestinal worms, from communication with the intestines. **A., Wandering,** one in which the pus has traveled along the connective-tissue spaces and points at some locality distant from its origin. Syn., *Hypostatic abscess, Abscessus per congestum, A. per decubitum.*

abscessed (*ab'-sesd*). Affected with or caused by an abscess, as "abscessed teeth."

abscission. (See Illus. Dict.) 4. The suppression of a physiologic function.

absinthiate (*ab-sin'-the-āt*). A salt of absinthic acid.

absinthiated (*ab-sin'-the-āt-ed*). 1. Mixed with absinthe. 2. Containing wormwood.

absinthiatum (*ab-sinth-i-a'-tum*) [L.]. Absinthe; wormwood wine.

absinthic (*ab-sinth'-ik*). Due to the action of absinthe. Cf. *Epilepsy, Absinthic.*

absolute (*ab'-so-lut*) [*absolvere*, to complete]. Perfect, entire, unconditional. **A. Temperature.** See *Temperature.* **A. Zero.** See *Zero.*

absorbefacient (*ab-sorb-e-fa'-shent*) [*absorptio*, absorption; *facere*, to make]. Favoring or tending to produce absorption.

absorbent. (See Illus. Dict.) 2. Taking up by suction, imbibing.

absorptio (*ab-sorp'-she-o*). See *Absorption.* **A. morbosa.** See *Absorption, Excrementitial* (2). **A. pulmonalis.** See *Absorption, Pulmonary* (Illus. Dict.). **A. sana.** See *Absorption, Physiologic.*

Absorption. (See Illus. Dict.) **A., Chylous,** the act or process of the entrance of the oil globules of the chyle into the central canals of the intestinal villi. **A., Coefficient of,** that number which represents the volume of a gas absorbed by a unit volume of water at 0° C. and at a barometric pressure of 760 mm. **A. of Decomposition, A. of Dissimilation.** See *A., Internal.* **A., Excrementitial,** 1. The absorption of fluid excretions by the mucosa. 2. The absorption of excretions or morbid products by the blood (bile, pus). Syn., *Pathologic Absorption, Absorptio morbosa.* **A., External.** (See Illus. Dict.) 2. The introduction of pabulum or medication applied to the exterior of the body or of an organ. **A., Internal,** 1. The absorption of waste products by the tissues; absorption of decomposition, of disassimilation. 2. The taking up of pabulum by the tissues; absorption of nutrition; molecular, nutritive, organic absorption. **A., Lymphatic,** that which occurs in lymphatic vessels. **A., Molecular, A., Nutritive, A., Organic.** See *A., Internal* (2). **A., Pathologic.** See *A., Excrementitial* (2). **A., Physiologic,** a phenomenon forming an important part of the digestive process, caused in part by the vital activity of the epithelial cells and in part by the physical laws of imbibition, diffusion, and osmosis. Syn., *Absorptio sana.* **A., Purulent,** 1. *A., Excrementitial* (2). 2. Pyemia. **A., Recrementitial,** the absorption of surplus secretions. **A., Respiratory.** See *A., Pulmonary* (Illus. Dict.). **A. Spectrum.** See under *Spectrum* (Illus. Dict.). **A. Tube.** See under *Tube* (Illus. Dict.). **A., Ulcerative,** that by which an ulcer forms or extends its area.

Abstersion (*ab-ster'-shun*) [*abstergere*, to remove]. The act of purifying or cleansing.

Abstractive (*ab-strac'-tiv*). An expressed juice or extract.

Abuse (*ab-ūs'*) [*abusus*, a using up]. Rape. **A., Self-,** masturbation.

Acacanthrax (*ak-ah-kan'-thraks*) [*a*, priv.; *κακός*, bad; *ἄνθραξ*, a carbuncle: pl., *acacanthraces*]. Non-malignant anthrax.

Acantha. (See Illus. Dict.) 2. The spinal column. 3. Spina bifida.

Acanthabolus. See *Acanthobolus.*

Acanthobolus (*ak-an-thob'-ol-us*) [*ἀκανθα*, a thorn; *βάλλειν*, to strike]. Forceps resembling the volsella, for removing foreign bodies from the soft parts. Syn., *Acanthabolus, Acanthavola.*

Acanthoma. (See Illus. Dict.) **A., Alveolar,** a form in which an alveolar structure marks the new growths. **A. simplex.** See *Hyperacanthosis.* **A., Warty,** a variety forming wart-like elevations of the skin.

Acanthotheca (*ak-an-tho-the'-ka*) [*ἀκανθα*, a spine; *θήκη*, a case]. See *Parasites, Table of Animal* (Illus. Dict.).

Acanthulus (*ak-an'-thu-lus*). An instrument for removing thorns from wounds.

Acardiacus. (See Illus. Dict.) **A. acephalus,** one in which the head is wanting, the thorax rudimentary, the pelvis and contiguous parts perfectly formed. **A., Amorphous,** a shapeless lump with only rudiments of organs. Cf. *Acephalus, Acormus, Teratoma.*

Acardinate (*ak-ar'-din-āt*) [*a*, priv.; *cardo*, a hinge]. Lacking a hinge.

Acardius (*ah-kar'-de-us*). Affected with congenital absence of the heart. An acardiac monster.

Acarodermatitis. (See Illus. Dict.) **A. autumnalis,** that variety produced by *Leptus autumnalis.* See *Parasites, Table of Animal* (Illus. Dict.).

Acarophobia (*ak-ar-o-fo'-be-ah*) [*ἀκαρι*, a mite; *φόβος*, fear]. Morbid fear of the itch.

Acarpia (*ah-karp'-e-ah*) [ἄκαρπια]. Sterility, barrenness, unfruitfulness.

Acatalepsia (*ah-kat-al-ep'-se-ah*). Same as *Acatalepsy* (Illus. Dict.).

Acataleptic. (See Illus. Dict.) 2. A person affected with acatalepsy.

Acathectic (*ah-kath-ek'-tik*) [ἀκάθεκτος, ungovernable]. Not able to retain. **A. Jaundice.** See *Jaundice.*

Accelerator (*ak-sel'-e-ra-tor*) [*accelerare*, to hasten]. 1. A nerve carrying motor impulses to the heart. 2. A muscle which hastens a physiologic discharge. **A. partus**, an abortifacient or ecbolic means.

Accentuated (*ak-sent'-u-a-ted*). Abnormally or unusually distinct, as respiratory or heart sounds.

Accessispinal (*ak-ses-e-spi'-nal*). Coues' name for a muscle which is accessory to a spinal muscle.

Accessorii Willisii, Accessory Nerves of Willis. See under *Nerves.*

Accessorius (*ak-ses-o'-re-us*) [pl., *accessorii*]. 1. Contributory in a secondary degree; accessory. 2. An accessory. See *Muscles, Table of* (Illus. Dict.); and under *Nerves.*

Accipenserin (*ak-se-pen'-sur-in*). See *Acipenserin.*

Accipiter. (See Illus. Dict.) **A. quinqueceps**, a five-headed occipiter bandage. **A. triceps**, a three-headed occipiter bandage.

Accommodation. (See Illus. Dict.) **A., Amplitude of.** See *A., Range of.* **A., Asthenopia of**, subnormal power of the function of accommodation, or the pain or discomfort from accommodative effort. **A., Binocular**, the combined accommodation of the two eyes. **A., Breadth of.** See *A., Range of.* **A., Line of.** See *Lines, Table of* (Illus. Dict.). **A., Mechanism of.** See *A. of the Eye* (Illus. Dict.). **A., Negative**, the opposite of positive accommodation, the refractive power of the eye being lessened. **A., Positive**, that when the eye being focused for a more distant object is required for fixation upon a nearer point. **A., Range of Relative**, the range of accommodation at the command of the eye for any particular degree of convergence. **A., Region of**, the extent controlled by the eye within which it distinguishes objects clearly from the state of rest to that of maximum accommodation. **A., Spasm of**, a term used to express excessive or persistent contraction of the ciliary muscle, following the attempt to overcome error of refraction. It simulates myopia. **A., Helmholtz's Theory of**, that the increased convexity of the lens is produced by a relaxation of the suspensory ligament, thus removing the influence which tends to flatten the lens and permitting the latter by its elasticity to become more convex. **A., Schoen's Theory of**, that the contraction of the ciliary muscle produces the same effect on the lens as is produced upon a rubber ball when held in both hands and compressed with the fingers. **A., Tscherning's Theory of**, by the contraction of the anterior part of both the radiating and circular fibers of the ciliary muscle the ciliary processes are drawn backward, and the suspensory ligament pulled backward and outward; pressure of the anterior portion of the muscle causes the increased convexity of the lens.

Accommodative (*ak-om'-o-da-tiv*) [*accommodare*, to adjust]. Pertaining to the function of accommodation, or resulting from it.

Accretion. (See Illus. Dict.) 3. An accumulation of foreign matter in any cavity.

Accubation (*ak-u-ba'-shun*) [*accubare*, to recline]. 1. A reclining posture; the taking to one's bed. 2. The act of lying in bed with another person.

Accumulation (*ak-u-mu-la'-shun*) [*accumulare*, to heap up]. 1. An amassing or collecting together. 2. A mass, heap or aggregation. **A., Fecal**, an excessive aggregation of feces in the large intestine; coprostasis.

Acelia, Acœlia (*ah-se'-le-ah*) [*a*, priv.; κοιλία, a cavity]. The absence of a natural cavity. Syn., *Acelosis.*

Acelomate, Acelomic, Acœlomate, Acœlomic (*ah-sel'-om-āt, -ik*). Destitute of a proper body-cavity.

Acelosis, Acœlosis (*ah-sel-o'-sis*). See *Acelia.*

Acephalia. (See Illus. Dict.) **A. spuria.** See *Hemiacephalia.*

Acephalocyst, Acephalocystis. (See Illus. Dict.) A hydatid consisting only of a membranous sac containing fluid. **A. endogena**, a sterile echinococcus cyst proliferating endogenously. **A. eremita**, a solitary sterile hydatid. *A. sterilis.* **A. exogena**, a sterile echinococcus cyst proliferating exogenously. **A. granulosa**, a sterile echinococcus cyst with granular walls. **A. multifida**, a sterile echinococcus cyst with branch-like prolongations. **A. ovis tragelaphi** (Cobbold). See *Echinococcus hominis.* **A. ovoidea**, Laënnec, a variety studded with whitish spheroidal bodies. **A. plana**, Laënnec's name for certain concretions found in the sheaths of tendons and in muscles. **A. prolifera**, a multiple, sterile echinococcus cyst. *A. socialis.* **A. socialis.** See *A. prolifera.* **A. sterilis.** See *A. eremita.* **A. surculigera**, a sterile echinococcus cyst with sucker-like prominences.

Acephalophorous (*ah-sef-al-of'-or-us*) [*a*, priv.; κεφαλή, head; φέρειν, to bear]. Destitute of a distinct head.

Acephalorrhachus (*ah-sef-al-or-a'-kus*) [*a*, priv.; κεφαλή, head; ῥάχις, spine]. A monster destitute of head and vertebral column.

Acephalos (*ah-sef'-al-os*). See *Acephalus.*

Acephalostoma (*ah-sef-al-os'-to-mah*). Same as *Acephalostomus* (Illus. Dict.).

Acephalothorax (*ah-sef-al-o-tho'-raks*). A monster destitute of head and thorax. Syn., *Acephalothorus.*

Acephalus. (See Illus. Dict.) **A. dibrachius**, an acephalus with two upper limbs in a more or less rudimentary state. **A. dipus**, an acephalus with two more or less developed lower extremities. **A. monobrachius**, one with one upper extremity, a cervical vertebra, and one or two more or less developed lower extremities. Syn., *Acephalobrachia.* **A. monopus**, one with only one lower extremity, more or less developed. Syn., *Acephalopodus.* **A. paracephalus.** See *Paracephalus* and *Hemiacephalus.* Cf. *Myelencephalus, Anencephalus.* **A. sympus**, one in which the trunk ends in a long conical point at the end of which are attached one or two feet.

Acephaly (*ah-sef'-al-e*). See *Acephalia* (Illus. Dict.).

Acerate (*as'-er-āt*) [*acer*, sharp]. 1. A salt of aceric acid. 2. Sharp-pointed, acicular.

Acerbous (*ah-serb'-us*). See *Acerb* (Illus. Dict.).

Acercus (*ah-sur'-kus*) [ἀκερκος, without a tail]. A monstrosity without a tail or the coccygeal vertebra.

Acerdol (*as'-ur-dol*). MnO_2K_2KOH, an oxidation product of potassium and manganese. It is used as an oxidizer and disinfectant.

Aceritous (*ah-ser'-e-tus*). See *Acerotus* (Illus. Dict.).

Acerode (*as'-er-od*). See *Aceride* (Illus. Dict.).

Acervuloma (*ah-ser-vu-lo'-mah*) [*acervulus*, little heap; pl., *acervulomas, acervulomata*]. See *Psammoma.*

Acervus (*ah-ser'-vus*) [L., a heap]. Brain-sand. See *Acervulus* (Illus. Dict.).

Acesodyne, Acesodynous (*ah-ses'-o-din, -us*) [ἀκεσώ, δυνος]. Allaying pain, anodyne.

cesphoria (*ah-ses-fo'-re-ah*) [ἄκεσις, a remedy; φέρειν, to bear]. A cure, a healing.

cesphorous (*ah-ses'-for-us*). Healing, curing.

cestoma (*as-es'-to-mah*) [ακεστός, curable]. The mass of young granulation tissue which later forms the cicatrix.

cestrum (*as-es'-trum*) [ἄκεστρον]. A remedy.

cetabulose (*as-et-ab'-u-lōs*). See *Acetabuliform* (Illus. Dict.).

cetabulum. (See Illus. Dict.) **A. cotyle,** the articular cavity of the innominate bone. **A. humeri.** See *Glenoid Cavity* (Illus. Dict.). **A. uterina,** a placental cotyledon.

cetacetate (*as-et-as'-et-at*). See *Acetoacetate.*

cetal. (See Illus. Dict.) 2. A mixture said to consist of acetic ether and oils of cloves, bergamot, lavender, lemon, menthol, orange, rosemary, thyme, and absolute alcohol. **A. Dimethyl.** See *Methylal* (Illus. Dict.).

cetaldehyd Oxim. See *Aldoxim* (Illus. Dict.).

cetaldoxim (*as-et-al-doks'-im*). See *Aldoxim* (Illus. Dict.).

cetamidoantipyrin (*as-et-am-id-o-an-ti-pi'-rin*). A crystalline compound used as antipyrin.

cetamidobenzoyleugenol (*as-et-am-id-o-ben-zo-il-u'-jen-ol*). See *Acetaminol.*

cetamidophenol (*as-et-am-id-o-fen'-ol*). $C_6H_4OH.NH.C_2H_3O$. An oxidation-product of acetanilid; *Hydroxyantifebrin.*

cetaminol (*as-et-am'-in-ol*). $C_{18}H_{23}NO_4$. A reaction-product of paranitrobenzoyl chlorid with eugenol-sodium, followed by reduction and acetylization. It occurs as white scales or crystalline powder, soluble in alcohol and insoluble in water, and melting at 160° C. It is used in pulmonary tuberculosis. Syn., *Paraacetamido-benzoyleugenol; Acetamido-benzoyl.*

cetanilid. (See Illus. Dict.) **A., Ammoniated,** a mixture of acetanilid, 25 parts; ammonium carbonate, 10 parts; sodium bicarbonate, 5 parts; sugar of milk, 60 parts. It is recommended as causing less depression than acetanilid alone. **A., Monobromated.** See *Antipyrin* (Illus. Dict.).

cetaria (*as-et-a'-re-ah*) [pl. of *acetarium,* a pickle]. Articles of food prepared with vinegar.

cetarious (*as-et-a'-re-us*) [*acetarium,* a pickle or salad]. Suited to making salads or pickles.

cetas (*as'-et-as*). An acetate or salt of acetic acid.

cetated (*as'-et-a-ted*). Containing an acetate, acetic acid, or vinegar.

cetic. (See Illus. Dict.) **A. Acid Amide.** See *Acetamid* (Illus. Dict.). **A. Acid Esters.** See *Methyl Acetate,* and *Ether, Acetic.* **A. Acid Salts,** (1) readily soluble crystalline salts formed from the bases; (2) basic salts formed from iron, aluminium, lead, and copper; sparingly soluble in water; (3) alkali salts, which have the property of combining with a molecule of acetic acid to produce acid salts. **A. Aldehyd.** See under *Aldehyd.* **A. Anhydrid,** $C_4H_6O_3$, a colorless, mobile liquid, highly refractive and with an odor of acetic acid. Sp. gr. 1.080 at 15° C.; boils at 136°–138° C. Syn., *Acetyl oxid; Acetic oxid;* so-called *Anhydrous acetic acid.* **A. Ether.** See under *Ether* (Illus. Dict.). **A. Fungus,** any one of several minute fungoid organisms capable of inciting and maintaining acetic fermentation, as first proved by Pasteur in 1864. Cf. *Bacteria, Table of* (Illus. Dict.).

cetica (*as-et'-ik-ah*) [L.]. Medicated vinegars. Syn., *Acetica medicata.*

cetidin (*as-et'-id-in*). See *Ether, Acetic* (Illus. Dict.).

cetification (*as-et-e-fi-ka'-shun*) [*acetum,* vinegar; *facere,* to make]. The production of vinegar by acetic fermentation.

Acetify (*as-et'-i-fi*). To transform into vinegar.

Acetimeter, Acetimetric, Acetimetry. See *Acetometer; Acetometry* (Illus. Dict.); *Acetometric.*

Acetis (*ah-se'-tis*) [L.]. See *Acetite.*

Acetite (*as'-et-it*). 1. An acetate. 2. See *Mannitan Diacetate.*

Acetmethylanilid (*as-et-meth-il-an'-il-id*). Same as *Exalgin* (Illus. Dict.).

Acetoacetate (*as-et-o-as'-et-at*). A salt of acetoacetic acid.

Acetoacetic Esters. $CH_3.CO.CH_2.CO_2R$. Liquids possessing an ethereal odor, produced by the action of metallic sodium upon acetic esters; they dissolve with difficulty in water and can be distilled without decomposition.

Acetoarsenite (*as-et-o-ar'-sen-it*). A salt composed of an acetate and an arsenite of the same base.

Acetobenzidin (*as-et-o-ben'-zid-in*). See *Benzidin* (Illus. Dict.).

Acetobromid (*as-et-o-brom'-id*). An acetic-acid salt in which part of the hydrogen of the acid radicle has been replaced by bromin.

Acetocaustin (*as-et-o-kaws'-tin*). A 50% solution of trichloracetic acid; it is used as a caustic for corns.

Acetochlorid (*as-et-o-klor'-id*). A salt composed of an acetate and a chlorid of the same base.

Acetodibromoxalid (*as-et-o-di-brom-oks'-al-id*). See *Xylidin* (Illus. Dict.).

Acetoglycocoll (*as-et-o-gli'-ko-kol*).

$CH_2<\begin{matrix}NH.C_2H_3O.\\CO_2H.\end{matrix}$ A substance resembling a monobasic acid, obtained from the action of acetylchlorid on glycocoll silver and of acetamid on monochloracetic acid; it is soluble in alcohol, melts at 206° C. Syn., *Acetamidoacetic acid; Aceturic acid; Glycocineacetyl.*

Acetoglycollate (*as-et-o-gli'-kol-at*). A salt of acetoglycollic acid.

Acetoguanamin (*as-et-o-gwan'-am-in*). See *Methylguanamin* (Illus. Dict.).

Acetoiodid (*as-et-o-i'-od-id*). A double salt containing the acetate and iodid of the same radicle.

Acetol (*as'-et-ol*). 1. See *Acetylcarbinol.* 2. A remedy for toothache, said to consist of acetic acid, 8.46%; alum, 3.07%; water, 88.5%, with a small proportion of essential oils of sage, clove, and peppermint.

Acetolactate (*as-et-o-lak'-tāt*). A salt of acetolactic acid.

Acetolic, Acetolicum (*as-et'-ol-ik, as-et-ol'-ik-um*). Prepared with vinegar.

Acetoluid (*as-et-ol'-u-id*). See *Tolylacetamid.*

Acetomel (*as-et'-o-mel*). See *Oxymel* (Illus. Dict.).

Acetometric (*as-et-o-met'-rick*). Pertaining to acetometry; *acetimetric.*

Aceton. 1. See *Acetone* (Illus. Dict.). 2. A proprietary remedy for headache and influenza.

Acetonal (*as-et'-on-al*). Aluminium and sodium acetate.

Acetonamins (*as-et-on-am'-ins*). A series of basic substances obtained by the action of ammonia on acetone.

Acetonasthma (*as-et-on-az'-mah*) [*aceton; asthma*]. Attacks of dyspnea similar to uremic asthma, accompanied with restlessness, headache, nausea, vomiting, transient amaurosis, and acetonuria, apparently in connection with the last.

Acetonate (*as-et'-on-at*). A salt of acetonic acid.

Acetone, Aceton. (See Illus. Dict.) Syn., *Mesitic alcohol; Mesityl alcohol; Methyl acetyl; Acetylmethyl.* It is used as an anesthetic and anthelmintic. Dose, 15–20 m. **A.chloroform,** $HO.C(CH_3)_2CCl_3$, a compound formed by the addition of potash to equal

weights of acetone and chloroform. It occurs as white crystals sparingly soluble in water, more freely in alcohol and glycerin. Its 1% aqueous solution is called *Aneson*. It is used as a hypnotic and anesthetic. Dose, 15–20 gr. Syn., *Chloretone; Trichlortertiary butyl alcohol; Trichlorpseudobutyl alcohol.* **A.diethylsulfon.** See *Sulphonal* (Illus. Dict.). **A., Monochlorated,** C_3H_5ClO, a colorless liquid having a pungent odor obtained by chlorinating acetone. It has a sp. gr. 11.162 at 16° C.; boils at 119° C.; miscible in alcohol, ether, and chloroform; insoluble in water. **A.phenylhydrazon,** $(CH_3)_2C : N_2HC_6H_5$, one of the nitrogen derivatives of the ketone. It melts at 16° C. and boils at 165° C. (91 mm.). **A.resorcin,** $C_{15}H_{16}O_4 + H_2O$, a combination of resorcin with acetone and fuming hydrochloric acid added hot. It occurs in small anhydrous prisms, soluble in alkaline solutions, insoluble in water, alcohol, ether, and chloroform. It melts at 212°–213° C. It is used as resorcin.

Acetonin (*as-et'-on-in*). 1. A body produced by the action of ammonia on acetone. 2. Dehydrotriacetonamin (*q. v.*).

Acetonitrate (*as-et-o-ni'-trāt*). A double salt, the acetate and iodid of the same radicle.

Acetonitril (*as-et-o-ni'-tril*). $CH_3 . CN$ or C_2H_3N. A liquid having an agreeable odor, prepared by distilling acetamid with P_2O_5. It may also be produced from prussic acid and diazomethane. It melts at —41° C., boils at 81.6° C., and has a sp. gr. of 0.789 (15° C.). Syn., *Methyl cyanid; Ethannitril.*

Acetonyl (*as-et'-on-il*). $CH_2 — CO — CH_3$. A univalent radicle obtained from acetone by taking away one atom of hydrogen.

Acetoorthoamidochinolin (*as-et-o-or-tho-am-id-o-kin'-ol-in*). $C_9H_6N(NHCH_3CO)$. A colorless, crystalline compound supposed to have antipyretic properties. It melts at 102.5° C.

Acetophenetidin (*as-et-o-fen-et'-id-in*). See *Phenacetin* (Illus. Dict.).

Acetophenoneorthooxyquinolin (*as-et-o-fen-on-or-tho-oks-e-kwin'-ol-in*). $C_2H_6NO . CH_2 . CO . C_6H_5$, a base obtained by interaction between a halogen compound of acetophenone and orthoquinolin in the presence of solvents and an alkali. It forms well-defined salts, is soluble in volatile solvents, melts at 130° C. It is said to have hypnotic and antineuralgic properties; is odorless, tasteless, and nonirritating.

Acetophenonphenetidin (*as-et-o-fen-on-fe-net'-id-in*). A condensation-product of acetophenone and paraphenetidin. **A. Citrate,**

$$C_6H_4<\begin{matrix}OC_2H_5\\N=C(CH_3)(C_6H_5)\end{matrix} . H_3C,$$

lemon-yellow needles, soluble in ether and hot alcohol, insoluble in water; melts at 88° C. It is antipyretic and antineuralgic. Dose, 0.5–1 gm. (8–15 gr.). Syn., *Malarin.*

Acetopropionate (*as-et-o-pro-pi'-on-āt*). A salt of acetopropionic acid.

Acetopyrin, Acetopyrina (*as-et-o-pi'-rin, -ah*). A mixture of antipyrin and acetyl salicylic acid occurring as a whitish crystalline powder soluble with difficulty in cold water, ether, and petroleum ether, readily soluble in warm water, alcohol, chloroform, and warm toluol. It is antipyretic. Dose, 7 gr. 6 times daily. Syn., *Antipyrin acetylsalicylate.* **A. Acetosalicylate,** antipyretic, analgesic, sedative; employed in influenza, bronchitis, rheumatic headache, sciatica, hemicrania, and acute articular rheumatism.

Acetorthoamidotoluol. See *Acetorthotoluid.*

Acetorthotoluid (*as-et-or-tho-tol'-u-id*). $C_6H_4(CH_3)NH . COCH_3$, or $C_9H_{11} . NO$. Antipyretic, colorless, acicular crystals, slightly soluble in water. Soluble in alcohol and ether, melting at 107° C. and boiling at 296° C. Dose, 0.1–0.3 gm. (1½–5 gr.). Syn. *Acetorthoamidotoluol; Ortho-tolylacetamid.*

Acetose (*as'-et-ōz*). See *Acetous* (Illus. Dict.).

Acetosity (*as-et-os'-e-te*). The state of being acetous or sour; sourness, acidity.

Acetosodacetate (*as-et-o-sod-as'-et-āt*). An acetoacetate in which an atom of hydrogen is replaced by an atom of sodium.

Acetosodethylacetate (*as-et-o-sod-eth-il-as'-et-āt*). An acetoacetate in which 2 atoms of hydrogen are replaced by an atom of sodium and a molecule of ether.

Acetospirin (*as-et-o-spi'-rin*). See *Acopyrin.*

Acetosuccinate (*as-et-o-suk'-sin-āt*). A double salt of acetic acid and succinic acid.

Acetosulfid (*as-et-o-sul'-fid*). A double salt composed of an acetate and a sulfid of the same base.

Acetosyl (*as-et'-o-sil*). See *Acetyl* (Illus. Dict.).

Acetotoluid (*as-et-o-tol'-u-id*). See *Tolylacetamid.*

Acetoxyl (*as-et-oks'-il*). See *Acetyl* (Illus. Dict.). **A. amid.** See *Acetamid* (Illus. Dict.). **A. Hydrate.** See *Acid, Acetic* (Illus. Dict.).

Acetoyl (*as-et'-o-il*). See *Acetyl* (Illus. Dict.).

Acetozone (*as-et'-o-zōn*). See *Benzoylacetylperoxid.*

Acetparaamidosalol (*as-et-par-ah-am-id-o-sal'-ol*). See *Salophen* (Illus. Dict.).

Acetparamidotoluol (*as-et-par-am-id-o-tol'-u-ol*). Same as *Acetparatoluid.*

Acetparaphenetidin (*as-et-par-a-fe-net'-id-in*). Same as *Phenacetin* (Illus. Dict.).

Acetparatoluid (*as-et-par-a-tol'-u-id*). $C_9H_{11}NO$. A tipyretic, colorless crystals, slightly soluble in water moderately soluble in alcohol; melts at 149° Dose, 1–2 gm. (15–30 gr.). Syn., *Acetparamid toluol; Paratolylacetamid.*

Acetphenetidin (*as-et-fe-net'-id-in*). See *Phenacet* (Illus. Dict.).

Acettoluid (*as-et-tol'-u-id*). See *Tolylacetamid.*

Acetyl. (See Illus. Dict.) Syn., *Acetosyl; Acetoxyl; Othyl.* **A. Anhydrid.** See *Acetic Anhydrid.* **A.benzene.** See *Acetophenone* (Illus. Dict.). **A.bioxydamid.** See *Acetamid* (Illus. Dict.). **Bromid,** C_2H_3BrO, a reaction-product of acetic acid with phosphorus pentabromid; it is a fuming liquid which turns yellow in the air; boils at 81° C. It is used as a reagent. **A.carbinol,** $CH_3 . CO . CH_2O$, a saturated ketol produced by the action of water and barium carbonate upon chloraceton, also by fusing cane and grape-sugar with caustic potash. It is a colorless with a feeble, peculiar odor; boils at 145°–150° C. Syn. *Pyroracemic alcohol; Aceton alcohol; Oxyacetone; Methylketol; Acetol.* **A. Chlorid,** C_2H_3ClO, a reaction-product of acetic acid with phosphorus trichlorid; it is a colorless, highly refracting fuming liquid; sp. gr. 1.1305 at 0° C.; boils at 55° C. It is used as a reagent. **A.ethoxyurethane.** See *Thermodin* (Illus. Dict.). **A.ethylphenylhydrazin,** $C_{18}H_{22}N_4O_2$, colorless needles obtained by heating a solution of ethylene phenylhydrazin with an excess of acetic anhydrid. It is recommended as an antipyretic. Syn., *Phenylhydrazinacetylethyl.* **A.formyl.** See *Aldehyd, Pyroracemic.* **A. Hydrate,** acetic acid. **A. Hydrid.** Same as *Aldehyd.* See under *Aldehyd* (Illus. Dict.). **Iodid,** C_2H_3OI, a reaction-product of acetic acid with iodin and phosphorus; it is a brown fuming liquid; sp. gr. 1.98 at 17° C.; boils at 105°–108° C. **A.isocyanid,** $(C_2H_3O) — N\equiv C$, a liquid in its simple form, but capable of polymerization as a crystalline solid; boils at 93° C. Syn., *Acetic isocyanid; Cyanacetyl.* **A.isoeugenol,** the direct antecedent of vanillin in the manufacture of the synthetic product, and is u

as a substitute for vanillin. **A.leukomethylene-blue.** A colorless form of methylene-blue for internal use. **A.methyl.** See *Acetone* (Illus. Dict.). **A.naphthalin, A.onaphthalene.** See *Acenaphthene* (Illus. Dict.). **A. Oxid.** Same as *Acetic Anhydrid*. **A.para-amidophenylsalicylate.** See *Salophen* (Illus. Dict.). **A.-paraethoxyphenylurethane.** See *Thermodin* (Illus. Dict.). **A.phenylhydrazid, A.phenylhydrazin.** Same as *Hydracetin* (Illus. Dict.). **A.-tannin,** a grayish-yellow, slightly hygroscopic, odorless, tasteless powder, soluble in alcohol, dilute sodium phosphate, s. carbonate, or s. borate; slightly soluble in hot water and ether; insoluble in cold water; melting at 190° C. It is an astringent and is used internally in chronic diarrhea. Externally, it is used in chronic pharyngitis. Dose, 3–7½ grs. (0.2–0.5 gm.). Application 3% solution in 5% sodium phosphate. Maximum dose, 60 grs. (3.9 gm.) daily. Syn., *Tannigen*. **A.thymol,** $C_{12}H_{16}O_2$, a colorless antiseptic liquid with a pungent taste having a specific gravity of 1.009 at 0° C. and boiling at 244.4° C. Syn., *Thymyl acetate*. **A.tribromsalol,** fine, white acicular crystals which melt at 108.5°; insoluble in water, soluble in alcohol. Syn., *Cordyl*. **A.urethane.** See *Urethane* (Illus. Dict.).

Acetylite (*as-et'-il-īt*). A salt of acetylcus acid.

Acetylization (*as-et-il-i-za'-shun*). The act of combining with or producing compounds of acetic acid or acetyl.

Ache. (See Illus. Dict.) 2. To be affected with pain.

Acheilus (*ah-ki'-lus*) [*a*, priv.; *χείλος*, a lip]. A person affected with acheilia.

Acheir (*ah'-kīr*) [*a*, priv.; *χείρ*, the hand]. 1. Acheirous. 2. Said of fishes lacking pectoral fins.

Achilleate (*ak-il-e'-āt*). A salt of achilleic acid.

Achillein, Achilleinum (*ak-il-e'-in, -i'-num*). $C_{29}H_{38}N_2O_{15}$. A glucosid, obtained from *Achillea millefolium* and *A. moschata*. It occurs as a brownish-red, amorphous mass of a strongly bitter taste, soluble in water, less soluble in alcohol, insoluble in ether. It is stated (Pappi) that divided doses up to 30–75 grains cause marked irregularity of the pulse.

Achilleius (*ak-il-li'-us*). The tendo Achillis.

Achilles-jerk. See *Jerk*.

Achilletin (*ak-il'-et-in*). $C_{11}H_{17}NO_4$. A dark, reddish-brown powder, soluble with difficulty in alcohol, insoluble in water, obtained with sugar from achillein by continued boiling in dilute sulfuric acid.

Achillobursitis (*ak-il-o-bur-si'-tis*) [*Achilles-tendon; bursa*, a purse]. Inflammation of the bursas lying approximate to the Achilles-tendon.

Achillorrhaphy (*ak-il-or'-af-e*) [*Achilles-tendon; ῥαφή*, suture]. Suture of the Achilles-tendon; practised by C. Bayer instead of achillotomy for the sake of lengthening the tendon. This is exposed, the length divided in half, the upper end of one side, the lower end of the other, cut across, and both the cut surfaces united by a suture.

Achillotenotomy (*ak-il-o-ten-ot'-o-me*). Same as *Achillotomy*.

Achillotomy (*ak-il-ot'-o-me*) [*Achilles-tendon; τέμνειν*, to cut]. The subcutaneous division of the Achilles-tendon.

Achilus (*ah-ki'-lus*) [*a*, priv.; *χιλός*, green fodder]. 1. Deficient in nourishment. 2. [*a*, very; *χιλός*, green fodder] Abundantly nourished. 3. [*a*, priv.; *χείλος*, a lip] Lacking lips (see *Acheilus*).

Achlorhydria (*ah-klor-hi'-dre-ah*) [*a*, priv.; *χλωρός*, green; *ὕδωρ*, water]. A lack of hydrochloric acid in the gastric secretion.

Achne. (See Illus. Dict.) 3. Froth; frothy sputum.

Acholia. (See Illus. Dict.) 2. Any condition obstructing the escape of the bile into the small intestine. 3. Asiatic cholera. 4. A mild temperament. **A., Pigmentary,** that in which there is a deficiency of the bile, lack of color in the feces, but no jaundice.

Acholic. (See Illus. Dict.) 2. Able to cure jaundice. 3. Due to acholia.

Acholuria (*ah-kol-u'-re-ah*) [*a*, priv.; *χολή*, bile; *οὖρον*, urine]. The absence of bile-pigment in the urine.

Acholuric (*ah-kol-u'-rik*). Relating to acholuria.

Achor. (See Illus. Dict.) Syn., *Tinea; Tinea mucifluа; Sordes capitis*. **A. barbatus.** See *Sycosis* (Illus. Dict.). **A. favosus.** See *Favus* (Illus. Dict.). **A. granulatus,** that forming a crust with a granular appearance. Syn., *Tinea granulata; Impetigo a granulatis*. **A. in facie,** incrusted eczema of the face. **A. lactuminosus, A. larvalis, A. larvatus.** See *A. in facie*. **A. mucifluus,** 1. Favus. 2. Eczema characterized by a mucous discharge. **A. mucosus.** See *A. mucifluus*. **A. scutellatus.** See *Seborrhœa sicca* (Illus. Dict.).

Achores. Pl. of *Achor*. **A. capitis.** See *Scabies capitis*.

Achoria (*ah-kor'-e-ah*) [L.]. See *Achoresis*.

Achoresis (*ah-kor-e'-sis*) [*a*, priv.; *χωρεῖν*, to make room; pl., *achoreses*]. Grossi's term for the diminished capacity of a hollow organ, as of the bladder. Syn., *Achoria*. Cf. *Stenochoria*.

Achras (*ak'-ras*) [*ἀχράς*, the wild pear]. A genus of arboraceous plants of the order *Sapotaceæ*. **A. sapota,** Linn. [*cochitzapotl*, Mex.], the Sapodilla plum; a species indigenous to South America. The fruit is edible, sweet, cloying; said to be beneficial in strangury. The seeds are laxative and diuretic; they are exhibited in emulsion in cases of gravel and renal colic. The bitter astringent bark (*cortex jamaicensis*) has been used as a substitute for cinchona bark. The bark and seeds yield the glucosid sapotin. The sap yields chicle gum.

Achroacytosis (*ah-kro-ah-si-to'-sis*) [*ἀχροεῖν*, to be colorless; *κύτος*, cell]. Abnormal development of lymph-cells.

Achroiocytosis (*ah-kroi-o-si-to'-sis*). Same as *Achroacytosis*.

Achroma. (See Illus. Dict.) Syn., *Achromasia; Achromatia; Achromatosis; Achromodermia; Leukoderma*. **A. vitiligo.** See *Vitiligo*.

Achromacyte (*ah-kro'-ma-sīt*) [*a*, priv.; *χρῶμα*, color; *κύτος*, cell]. A degenerated, decolorized erythrocyte, a "phantom" or shadow corpuscle; also called *Ponfick's shadow corpuscles, Bizzozero's blood-platelets, Hayem's corpuscles or hematoblasts*.

Achromatia (*ah-kro-ma'-she-ah*). See *Achroma* (Illus. Dict.).

Achromatic. (See Illus. Dict.) 2. Relating to achromatin. **A. Spindle.** See *Nuclear Spindle* (Illus. Dict.).

Achromaticity (*ah-kro-mat-is'-it-e*). The state of being achromatic.

Achromatistous (*ah-kro-mat-is'-tus*) [*ἀχρωμάτιστος*, uncolored]. Deficient or unhealthy in color (as in cachexia).

Achromatization (*ah-kro-mat-iz-a'-shun*). The act or process of rendering achromatic.

Achromatize (*ah-kro'-mat-īz*). To render achromatic.

Achromatophile (*ah-kro-mat'-o-fil*) [*a*, priv.; *χρῶμα*, color; *φιλεῖν*, to love]. 1. Showing no affinity for stains. 2. A microbe or histologic element which does not stain readily.

Achromatopsia, Achromatopsy. (See Illus. Dict.) **A., Partial,** a form in which only one pair of colors, which to the normal eye are complementary, appear gray or white. **A., Total,** that in which all the colors

appear as white or gray. Cf. *Acyanoblepsia*, *Anerythropsia*, *Chromatodysopsia*, *Daltonismus*, *Xanthocyanopsia*.

Achromatopsis (*ah-kro-mat-op'-sis*). Color-blindness; achromatopsia.

Achromatosis. (See Illus. Dict.) **A. acquisita**, acquired achromatosis. Cf. *Vitiligo* and *Canities prematura*. **A. congenitalis**, congenital achromatosis. Cf. *Albinismus* and *Poliosis*.

Achromaturia (*ah-kro-ma-tu'-re-ah*) [*a*, priv.; *χρῶμα*, color; *οὖρον*, urine]. A colorless state of the urine.

Achronizoic (*ah-kron'-e-zo-ik*) [*a*, priv.; *χρονίζειν*, to hold out]. A term applied to drugs which are incapable of remaining unchanged for any length of time.

Achroodectin (*ah-kro-o-dek'-tin*) [*ἄχροος*, colorless; *δέκεσθαι*, to receive]. A carbohydrate obtained from the mucin of snails. Syn., *Achrooglycogen*.

Achrooglycogen (*ah-kro-o-gli'-ko-jen*). See *Achroodectin*.

Achroous (*ah'-kro-us*). Devoid of color. See *Achromatistous*.

Achylia. (See Illus. Dict.) **A. gastrica**, Einhorn's term for a condition of the stomach marked by destruction of the glandular structures with resulting absence of chyme, ferment, and even mucus; called *anadenia gastrica* by Ewald.

Achymous (*ah-ki'-mus*) [*a*, priv.; *χύμος*, chyme]. 1. Deficient in chyme. 2. Achylic.

Achyranthes. (See Illus. Dict.) **A. aspera**, Linn., a shrub of India, where the seeds, flowers, and leaves are esteemed in the treatment of hydrophobia, snakebites, ophthalmia, and cutaneous diseases. **A. fruticosa**, Lam., same distribution and uses as the foregoing species.

Aciamid (*as-i'-am-id*) [*acid; amid*]. A body formed on the ammonia type, but possessing an acid character.

Acibromid (*as-e-bro'-mid*). See *Oxybromid*.

Acichlorid (*as-e-klor'-id*). See *Oxychlorid*.

Aciculate (*as-ik'-u-lāt*) [*acus*, a needle]. Needle-shaped; acicular, aciculiform, aciform.

Aciculiform (*as-ik-u'-le-form*). See *Aciculate*.

Acid. (See Illus. Dict.) 2. Sour. 3. Possessing the chemical properties or exhibiting the reaction of an acid. **A., Abietinic.** Same as *A., Abietic* (Illus. Dict.). **A., Absinthic**, an acid obtained by Braconnot from wormwood; it is said to be identical with succinic acid. **A., Acetosulfuric.** See *A., Thioacetic*. **A., Acetylformic.** Same as *A., Pyruvic* (Illus. Dict.). **A., Acetylsalicylic.** See *Aspirin*. **A., Achilleic**, an acid obtained from *Achillea millefolium*, identical with aconitic acid. **A., Adenylic**, a primary nucleinic acid obtained from animal glands and supposed by Kossel to contain only adenin as a nucleinic base, but now known to contain also guanin and a third basic substance termed *cytosin*. **A., Adhatodic**, an acid found in combination with an alkaloid, *vasicin*, in *Adhatoda vasica* (*q. v.*). **A., Agaric, A., Agaricinic.** Same as *A., Agaricic* (Illus. Dict.). **A., Ailanthic, A., Ailantic**, a bitter nitrogenous acid isolated from the bark of *Ailanthus excelsa*. Said to possess medicinal virtue. **A., Alantic.** See *A., Alanthic* (Illus. Dict.). **A.s, Alcohol**, $C_nH_{2n}\begin{matrix}OH\\CO_2H\end{matrix}$, monobasic acids having the properties of the monohydric alcohols. They are distinguished as primary, secondary, and tertiary according as they contain, in addition to the carboxyl group, the group $-CH_2OH$, the radicle $=CHOH$, or the group $\equiv C.OH$. Syn., *Oxyacids*, *Hydroxy-fatty acids*. Cf. *A., Glycollic* (Illus. Dict.). **A.s, Aldehyd**, bodies which combine the properties of a carboxylic acid and of an aldehyd. Cf. *A., Formic* (Illus. Dict.). **A., Aliphatic.** Same as *A., Fatty*. **A., Alizaric, A., Alizarinic.** See *A., Phthalic* (Illus. Dict.). **A., Alkali.** Same as *Amido-acid*. **A., Allantoic**, 1. $C_4H_8N_4O_4$. A monobasic crystalline acid obtained from allantoin by the addition of the elements of a molecule of water. 2. A name formerly given to allantoin under the belief that it was a true acid. **A., Allanturic**, $C_3H_4N_2O_3$, obtained from allantoin on warming with baryta-water or with PbO_2 and by oxidation of hydantoin. Syn., *Lantanuric acid*. **A., Alluric**, $C_5H_6N_4O_4$, yellowish-white crystals, soluble with difficulty in water, obtained from alloxantin by treating it with hydrochloric acid. **A., Allomaleic.** Same as *A., Fumaric*. **A., Aloetic, A., Aloetinic**, $C_{14}H_4N_4O_{10}$, a yellow amorphous powder, soluble in alcohol and slightly in water, obtained from aloes by action of nitric acid; it explodes on heating. Syn., *Tetranitroanthraquinon; Polychromic acid; Aloe purple; Artificial bitter of aloes; Aloitinic acid*. **A., Aloitinic.** See *A., Aloetic*. **A. of Amber.** See *A., Succinic* (Illus. Dict.). **A., Ambreic**, an acid obtained from ambrein by action of nitric acid with heat. **A., Amic**, any one of a class of nitrogenized acids produced by the substitution of amidogen (NH_2) for a hydroxyl molecule in the acid characteristic of a polybasic acid. **A., Amidacetic.** See *Glycin* (Illus. Dict.). **A., Amidisethionic.** See *Taurin* (Illus. Dict.). **A., Amido-.** See under *Amido-acid* (Illus. Dict.). **A., Amidobarbituric.** Same as *Uramil* (Illus. Dict.). **A., Amidocaproic.** See *Leucin* (Illus. Dict.). **A., Amidoethylenlactic.** See *Serin* (Illus. Dict.). **A., Amidoethylsulfonic.** Same as *Taurin* (Illus. Dict.). **A., Amidoglutaric.** See *A., Glutamic*. **A., Amidoglycollic.** See *Glycin* (Illus. Dict.). **A., Amidohydracrylic.** See *Serin* (Illus. Dict.). **A., Amidoisethionic.** See *Taurin* (Illus. Dict.). **A., α-Amidoisobutylacetic.** Same as *Leucin* (Illus. Dict.). **A., Amidolactic.** See *Alanin* (Illus. Dict.). **A., Amidooxyethylsulfonic.** Same as *Taurin* (Illus. Dict.). **A., α-Amidopropionic.** Same as *Alanin* (Illus. Dict.). **A., Amidopyrotartaric.** See *A., Glutamic*. **A., Amidosuccinic.** See *A., Aspartic* (Illus. Dict.). **A., Amidosulfethylic.** See *Taurin* (Illus. Dict.). **A., α-Amidothiolactic.** Same as *Cystein*. (Illus. Dict.). **A., Aminoethan.** See *Glycin* (Illus. Dict.). **A., Ammonchelidonic.** See *A., Chelidonamic*. **A., Amniotic.** See *Allantoin* (Illus. Dict.). **A., Amygdalic**, $C_{20}H_{28}O_{13}$, a crystalline acid obtained from amygdalin by action of alkalies. **A., Amylic.** See *A., Valeric* (Illus. Dict.). **A., Anacardiac**, $C_{22}H_{32}O_3$, a tetratomic acid obtained by Städler from the fruit of *Anacardium occidentale* (cashew nut), occurring in white, radiating, inflammable crystals, with aromatic, slightly burning taste, soluble in alcohol and ether, insoluble in water, melts at 26° C. It is used as an anthelmintic in the form of ammonium anacardate. **A., Anchoic.** Same as *A., Azelaic*. **A., Anchusic.** See *Alkannin* (Illus. Dict.). **A., Anhydrosulfaminbenzoic.** See *Saccharin* (Illus. Dict.). **A., Anhydrous.** See *Anhydrid* (Illus. Dict.). **A., Anilic.** See *A., Mononitrosalicylic*. **A., Anilotic, A., Anilotinic**, $C_7H_5NO_5 + H_2O$, colorless needles soluble in alcohol and ether and slightly soluble in water, melting at 125° C. It is an oxidation product of salicin or salicylic acid by action of nitric acid. Syn., *β-Nitrosalicylic acid*. **A., Animal**, an acid characteristic of or obtained from animal tissues or products. **A., Anisuric**, $C_{10}H_{11}NO_2$, an acid formed by the action of anisyl chlorid on the silver compound of glycocoll; it also occurs in the urine after the ingestion of anise. **A., Anisylous.** See *Aldehyd, Anisic* (Illus. Dict.). **A., Anthemic, A., Anthemidic**, an acid found by Pattone in the bloom of *Anthemis cotula*, L., and *A. arvensis*, L. It forms silky

needles in taste and odor resembling chamomile. It is soluble in water, alcohol, chloroform, and ether. **A., Antimonous, Anhydrous.** Same as *Antimony Oxid, Antimonous.* **A., Antirrhinic,** a volatile acid existing in the leaves of *Digitalis purpurea;* it resembles valerianic acid. **A., Antitartaric.** See *A., Mesotartaric.* **A. of Ants,** formic acid. **A., Apocrenic,** Berzelius' term for a brown amorphous substance obtained from the sediment of chalybeate waters. **A., Apple, A. of Apples.** See *A., Malic* (Illus. Dict.). **A., Arabinic.** Same as *Arabin* (Illus. Dict.). **A., Arachic, A., Arachidic, A., Arachinic,** $C_{20}H_{40}O_2 = C_{19}H_{39}.COOH$, a monobasic fatty acid obtained from oil of peanut, *Arachis hypogæa;* it forms smooth, shining laminas, with pearly luster, soluble in alcohol and ether, melting at 75.5° C. **A., Argentic,** silver monoxid. **A., Aromatized Fatty.** Same as *A., Aromatic* (Illus. Dict.). **A., Arsenious, Vitreous,** the vitreous mass obtained by the resublimation of the "flowers of arsenic" obtained by subliming arsenical pyrite. Cf. *Arsenic Glass, White.* **A., Arsenous.** Same as *A., Arsenious* (Illus. Dict.). **A., Arsinic,** any one of a class of acids formed by the oxidation of arsines or arsonium compounds. Cf. *A., Dimethylarsinic.* **A., Arsonic.** See *A., Arsinic.* **A., Artanthic,** a crystalline acid obtained by Marcotte from matico, the leaves of *Piper angustifolium.* **A., Arthanitic.** See *Cyclamin.* **A., Arvic** [L. *arvum,* tilled soil], an acid obtained from garden-soil. **A., Aseptic,** an antiseptic solution consisting of an aqueous solution of 5 gm. of boric acid in 1000 gm. of hydrogen peroxid (1.5%); 3 gm. of salicylic acid may be added. **A., Asparagic, A., Asparaginic.** Same as *A., Aspartic* (Illus. Dict.). **A., Asparamic.** See *A., Aspartic* (Illus. Dict.). **A., Aspartic, Inactive,** $NH_2C_2H_3(CO_2H)_2$, formed by heating aspartic acid with water or with alcoholic ammonia to 140°–150° C., or with HCl to 170°–180° C. Syn., *Asparacemic acid.* **A., Avivitellinic,** the paranuclein constituent of ovovitellin. **A., Avorninic,** an acid obtained by Kubly from the decomposition of avornin, said to be identical with frangulinic acid. **A., Axinic,** $C_{18}H_{28}O_2$ (?), a saponification product of axin occurring as a brownish oily substance. **A., Azelaic, A., Azelainic,** $C_9H_{16}O_4$, an oxidation product of oleic acid, Chinese wax, castor oil, or cocoanut oil; it occurs in thin plates, soluble in water, alcohol, and in ether, melts at 106°–107° C. and boils at 360° C. Syn., *Anchoic acid: Lepargylic acid; Azelic acid; Azeloinic acid.* **A., Azelic.** Same as *A., Azelaic.* **A., Azeloinic.** See *A., Azelaic.* **A., Azocarbonic.** See *A., Picric* (Illus. Dict.). **A., Azoleic.** See *A., Enanthylic* (Illus. Dict.). **A., Baldrianic.** See *A., Valeric* (Illus. Dict.). **A., Benic.** See *A., Behenic, Table of Fatty Acids* (Illus. Dict.). **A., Benzamic.** See *A., Amidobenzoic* (Illus. Dict.). **A., Benzamidacetic, A., Benzamidocetic.** See *A., Hippuric* (Illus. Dict.). **A., Benzenetetracarbonic.** See *A., Prehnitic* (Illus. Dict.). **A., Bibasic.** See *Acid., Dibasic,* under *Acids* (Illus. Dict.). **A., Bilianic,** $C_{24}H_{34}O_8$, a tribasic acid obtained after dehydrocholalic acid by the oxidation of cholalic acid. **A.s, Biliary,** those obtained from bile. See *A., Chenotaurocholic; A., Glycocholic; A., Hyoglycocholic; A., Hyotaurocholic; A., Taurocholic.* **A., Bilicholinic.** See *A., Choleic.* **A., Bilifulvic.** Same as *Bilifulvin* (Illus. Dict.). **A., Bilirubinic.** Same as *Bilirubin* (Illus. Dict.). **A., Biliverdinic,** $C_8H_9NO_4$, an oxidation product obtained by Küster from biliverdin. **A., Blattic.** See *Antikydropin* (Illus. Dict.) and *Taracanin.* **A., Boletic.** See *A., Fumaric.* **A., Boracic.** Same as *A., Boric.* **A. of Borax,** orthoboric acid. **A., Borocitric,** a combination of boro-acids and citric acids forming a white powder which is used as a solvent for urates and phosphates in urinary calculi, gout, etc. Dose, 0.3–1.3 gm. (5–20 gr.). **A., Borophenylic,** $C_6H_7BO_3$, obtained by the action of phosphorus oxychlorid upon a mixture of boric acid and phenol. It is an antiseptic white powder with a mild aromatic taste, not easily soluble in water, melting at 204° C. It is fatal to lower forms of life, but does not affect the higher forms; *phenylboric acid.* **A., Borosalicylic,** $B(OH)(OC_6H_4.CO_2H)_2$, a combination of boric and salicylic acids in molecular proportion. It is used externally instead of salicylic acid. **A., Botulinic,** Buchner's name for the active principle of poisonous sausage, now known to be a toxic albuminose known as *botulismustoxin,* the product of *Bacillus botulinus,* Van Ermengem. **A., Brazilic.** See *Brasilin* (Illus. Dict.). **A., Brom-,** one in which bromin has replaced one or more atoms of hydrogen in the acid radicle. **A., Bromacetic.** See *A., Monobromacetic.* **A., Bromhydric,** hydrobromic acid. **A., Bursic, A., Bursinic,** a yellow hygroscopic mass obtained from an aqueous extract of *Capsella bursa-pastoris* by the action of lead acetate and ammonia and evaporating. Its aqueous solution is used as ergotin hypodermically, and also internally. **A., Butic, A., Butinic.** See *A., Arachidic.* **A., Cacodylic.** See *A., Dimethylarsenic.* **A., Cahincic, A., Caincic.** See *Cahincin.* **A., Calumbic,** $C_{22}H_{24}O_7$, a yellow amorphous constituent of calumba, the root of *Jateorhiza columba,* found by Bödeker; it is soluble in alcohol and alkaline solutions, nearly insoluble in water. **A., Cambogic,** $C_{30}H_{24}O_4$, the red-yellow acid resin obtained from gamboge; soluble in alcohol and ether. **A., Camphoglycuronic,** $C_{16}H_{24}O_8$, an acid found by Schmiedeberg and Meyer in urine after the ingestion of camphor. There are 2 isomerids, *α-* and *β-camphoglycuronic acids,* the first of which is levorotary. The action of dilute acids converts them into glycuronic acid and campherol. **A., Carballylic.** See *A., Tricarballylic.* **A., Carbocinchomeronic.** See *A., Pyridintricarboxylic.* **A., Carbolic, Camphorated,** a mixture of carbolic acid 1 part and camphor 3 parts. **A., Carbolic, Chlorinated.** See *Trichlorphenol* (Illus. Dict.). **A., Carbolic, Iodized,** a solution of 20 parts of iodin in 76 parts of carbolic acid with the addition of 4 parts of glycerin. It is used as an antiseptic and escharotic. **A., Carbolsulfuric,** a mixture of equal parts of crude carbolic acid and concentrated sulfuric acid. It is used as a disinfectant in 2% to 3% solution. **A., Carbonaceous.** See *Carbon Dioxid.* **A., Carnic,** $C_{10}H_{15}N_5O_5$, a sulfur-free compound resembling antipeptone obtained by Siegfried from milk and muscles. It is soluble in water and warm alcohol and gives several crystalline salts. Whether it is a physiologic constituent of muscle or only an elaboration product is unsettled. **A., Caseic,** 1. Lactic acid (*q. v.*). 2. Of Proust—shown by Braconnot to be a modification of acetic acid combined with an acrid oil. **A., Catechinic, A., Catechuic.** See *Catechin* (Illus. Dict.). **A., Catechuinic,** a decomposition product of catechin by action of caustic potash. **A., Catechutannic,** $C_{15}H_{14}O_6$ (J. Lōwe), reddish-brown lumps, scales, or powder extracted from *Acacia catechu,* Willd., by water. It is soluble in alcohol and slightly in water and is used as an astringent. Ferric salts color it a dirty green. **A., Cathartic.** Same as *A., Cathartinic* (Illus. Dict.). **A., Cerasinic.** See *Cerasin* (Illus. Dict.). **A., Cerebric,** Vauquelin and Frémy's name for impure cerebrin. **A. of Chalk, A., Chalky,** carbonic acid.

A., Chamber, crude dilute sulfuric acid found in the lead chambers in the formation of sulfuric acid from sulfur. **A.-characteristic,** the replaceable hydrogen and the elements immediately bound to it in the molecule of an acid, as the CO . OH of organic acids. **A., Chelidamic.** Same as *A., Chelidonamic.* **A., Chelidonamic,** $C_7H_7NO_6$, an acid derived from chelidonic acid by heating with ammonia. Syn., *Chelidamic acid; Ammonchelidonic acid.* **A., Chelidoninic,** an acid isolated from *Chelidonium majus* by Zwenger, but believed to be identical with succinic acid. **A., Chenocholalic, A., Chenocholic,** $C_{27}H_{44}O_4$, a yellowish powder or amorphous mass, soluble in alcohol and ether, obtained from taurochenocholic acid of goose-bile by boiling with baryta-water. **A., Chenotaurocholic,** $C_{29}H_{49}NSO_6$, an indistinctly crystalline acid found in goose-bile, of which it is the most important biliary acid; it is soluble in water and alcohol. Syn., *Taurochenocholic acid.* **A., Chinic.** See *A., Quinic* (Illus. Dict.). **A., Chinovic.** See *A., Quinovic.* **A., Chlorophenic.** See *Chlorophenol* (Illus. Dict.). **A., Chlorophenisic.** See *Trichlorphenol* (Illus. Dict.). **A., Chlorophenylic, A., Chlorphenylic.** See *Chlorphenol* (Illus. Dict.). **A., Chlorrhodic, A., Chlorrhodinic,** a compound of rhodium sesquioxid with chlorin; it is said to be formed in the decomposition of pus. **A., Choleic,** $C_{21}H_{40}O_{41}$ (Lassar-Cohn), a cholalic acid named by Latschinoff which always occurs in small amount in ox-bile, and is probably identical with desoxycholalic acid. On oxidation choleic acid first yields *dehydrocholeic acid,* $C_{24}H_{34}O_4$, and afterward *cholanic acid.* **A., Choleinic,** 1. $C_{25}H_{42}O_4$, an acid found by Latschinoff in small amount in ox-bile, forming needles or tablets. 2. Taurocholic acid. **A., Cholesteric,** $C_{12}H_{16}O_7$, an acid obtained by Tappeiner from the oxidation of cholalic acid with potassium bichromate and sulfuric acid. This must not be confounded with cholesterinic acid. **A., Cholesterinic,** $C_8H_{10}O_5$, a dibasic acid obtained from cholesterin and from cholalic acid by action of nitric acid; it occurs as a gum-like, yellow, hygroscopic body with an acrid taste. **A., Cholic.** (See Illus. Dict.) 2. See *A., Glycocholic* (Illus. Dict.). **A., Cholodinic,** $C_{24}H_{38}O_4$, obtained from the dehydration of cholic acid; it occurs as a resinous mass, devoid of color, soluble in alcohol, insoluble in water. **A., Choloidanic,** $C_{16}H_{24}O_7$, obtained from cholalic acid by action of nitric acid with heat; it forms filiform prisms almost insoluble in cold water. **A., Choloidic,** $C_{24}H_{38}O_4$. See *A., Choloidinic* (Illus. Dict.). **A., Chondroidinsulfuric.** See *A., Chondroitinsulfuric.* **A., Chondroitic.** See *A., Chondroitinsulfuric.* **A., Chondroitinsulfuric,** $C_{18}H_{27}NSO_{17}$ (Schmiedeberg), occurs, according to Mörner, in all varieties of cartilage and in the inner coats of the arteries; it has also been found in amyloid livers. It appears as a white amorphous powder, easily soluble in water, forming an acid solution. Syn., *Chondroitic acid; Chondroitinsulfuric acid; Chondrose; Chondroglycose; Chondroglucose.* **A., Chrysinic.** See *Chrysin* (Illus. Dict.). **A., Chrysophanic, Medicinal.** See *Chrysarobin* (Illus. Dict.). **A., Cilianic,** $C_{20}H_{30}O_{10}$, an oxidation product of cholalic acid. **A., Cimicic,** $C_{18}H_{28}O_2$, a monobasic acid forming yellow crystals obtained from a fetid oil produced from the bug *Raphigastes punctipennis,* Lap. **A., Cobric,** Blyth's name for a very poisonous crystalline substance he claims to have separated from cobra venom. **A., Colombic.** See *A., Calumbic.* **A., Colopholic, A., Colophonic,** an acid obtained from turpentine; it is used in plasters. **A., Columbic.** See *A., Calumbic.* **A., Comosic,** an acid obtained from the bulbs of *Muscari comosum* and believed to have physiologic properties similar to saponin. **A., Copahuvic.** See *A., Copaivic.* **A., Copaivic,** $C_{20}H_{30}O_2$, an almost colorless, coarsely crystalline powder, obtained from copaiba; it is soluble in alcohol, ether, and benzene. **A., Cornic.** See *Cornin* (Illus. Dict.). **A., Cotarnic,** $C_{11}H_{12}O_5$, a dibasic acid derived from cotarnin by action of dilute nitric acid. **A., Cresotic, A., Cresotinic,** $C_8H_8O_3$, an aromatic hydroxy acid of which 3 isomeric compounds may be formed by the action of sodium and carbonic anhydrid on the 3 modifications of cresol. They all occur in acicular crystals. The para compound, melting at 151° C., is used as an antipyretic in the form of sodium cresolate. Dose, 2–20 gr.; max. dose, 60 gr. Syn., *Oxytoluic acid; Homosalicylic acid.* **A., Cresylsalicylic** found in the mother liquor accompanying salicylic acid when prepared by Kolbe's process. **A., Crithmic,** an oxidation product of the volatile oil of *Crithmum maritimum,* L. **A., Crocic.** See *A., Crocoic* (Illus. Dict.). **A., Crotonic,** $CH_3 . CH : CH . CO_2H$, a monobasic acid forming monoclinic crystals or trimetric plates soluble in water and ligroin, melting at 72° C. and boiling at 185° C. It is obtained from crude wood-vinegar, or produced by the oxidation of crotonaldehyd. **A., Crotonoleic.** Same as *A., Tiglic.* **A., Crotonolic.** See *A., Tiglic.* **A., Cryptophanic** $C_{10}H_{18}N_2O_{10}$, an acid found by Thudichum to exist in small quantities in human urine. **A., Cubebic,** $C_{15}H_{14}O_7$ (?), a white waxy mass, turning brown on exposure, obtained from cubeb berries, the unripe fruit of *Piper cubeba,* soluble in alcohol and ether and alkaline solutions, and used as a diuretic. Dose, 5–15 gr. in pills several times daily. **A., Cumaric.** See *A., Coumaric* (Illus. Dict.). **A., Cuminuric,** a nitrogenous acid found in urine and produced in the body by the conjugation of glycocoll with cuminic acid. **A., Cyanilic.** See *A., Tricyanic* (Illus. Dict.). **A., Cyanurmonamic.** See *Ammelid* (Illus. Dict.). **A., Cynurenic,** $C_{10}H_7NO_3$, a decomposition product of proteids, found by Liebig in dogs' urine; it is a dibasic crystalline acid, soluble in alcohol and melts at 253° C. Syn., *Kynurenic acid.* **A., Dammar,** $C_{40}H_{56}$, a crystalline resinous acid the chief constituent of Australian dammar (kauri gum). **A., Dammaric.** See *A., Dammarylic.* **A., Dammarylic,** $C_{45}H_{38}O_3$, a constituent of East Indian dammar, according to Huchsohn forming 80% of it; it is insoluble in wet alcohol, but soluble in absolute alcohol. **A., Damolic.** Same as *A., Damalic* (Illus. Dict.). **A., Dehydrocholalic,** $C_{24}H_{34}O_5 + 3H_2O$, an oxidation product of cholalic acid with permanganate. **A., Dehydrocholeic.** See under *A., Choleic.* **A., Delphinic,** an acid first obtained in 1817 by Chevreul from the oil of the dolphin, identical with *A., Valeric* (Illus. Dict.). **A., Dephlogisticated Marine.** Same as *Chlorin* (Illus. Dict.). **A., Desoxycholalic,** $C_{24}H_{40}O_4$, a reduction product of cholalic acid occurring during putrefactive changes. **A., Dextrocamphoric,** camphoric acid prepared from ordinary camphor, which is dextrorotary. Cf. *A., Levocamphoric.* **A., Dextrolactic.** See *A., Sarcolactic* (Illus. Dict.). **A., Dextropimaric,** one of the three acids found by Vesterberg in pimaric acid; it is dextrorotary, melts at 210°–211° C., is insoluble in water, easily soluble in hot alcohol and in glacial acetic acid, from which it crystallizes in large plates. **A., Dextrotartaric,** tartaric acid. **A., Dialuric,** $C_4H_4O_4N_2$, a monobasic acid obtained by the reduction of alloxan with zinc and hydrochloric acid, occurring in needles or prisms, shows a very acid reaction, and forms salts with 1 or 2 equivalents of the metals. It becomes red on exposure, absorbs oxygen, and is converted into alloxan.

Syn., *Tartronylurea*. **A., Diatomic,** one which contains 2 atoms of replaceable hydrogen. **A., Dibromgallic, A., Dibromogallic, A., Dibromotrioxybenzoic.** Same as *Gallobromol*. **A., Dichloracetic,** $CHCl_2 . CO_2H$, produced when chloral is heated with CNK or potassium ferrocyanid and water. It occurs as a caustic, colorless liquid at ordinary temperature, but crystallizes at a low temperature. Sp. gr. 1.522 at 15° C.; boils at 189°–191° C.; soluble in water and alcohol. It is used as an escharotic in skin diseases. **A., Digitalic,** a fixed acid obtained by Morin from the leaves of *Digitalis purpurea*, L., occurring as white needles of acid taste and reaction and peculiar insipid taste, very easily soluble in alcohol and water, less soluble in ether. **A., Dihydrated,** one which is combined with 2 molecules of water. **A., Dihydric.** Same as *A., Diatomic*. **A., Dihydroxy, A., Dioxy,** acids formed by replacing 2 of the hydrogen atoms of any acid radicle by 2 molecules of hydroxyl. **A., Di-iodosalicylic,** $C_7H_4I_2O_3$, a white crystalline powder, soluble in alcohol and ether, slightly soluble in water, and melting at 220°–230° C. It is antipyretic, analgesic, and antiseptic, and is used in rheumatism and gout. Dose, 8–20 grains three or four times daily in wafers. Maximum dose, 30 grains. **A., Diiodparaphenolsulfonic.** See *Sozoiodol* (Illus. Dict.). **A., Dimethylarsenic,** $As(CH_3)_2OOH$, a substance formed by the oxidation of cacodyl, occurring in large permanent prisms, odorless and slightly sour. It is soluble in water and alcohol and melts at 200° C. It is considered not to be toxic, and because of its solubility is easily absorbed. Syn., *Cacodylic acid; Kakodylic acid*. **A., Dimethylprotocatechuic.** See *A., Veratric* (Illus. Dict.). **A., Dioxybenzoic.** See *A., Protocatechuic* (Illus. Dict.). **A., Dioxyphenylacetic.** See *A., Homogentisinic*. **A., Ditartaric.** See *A., Tartralic*. **A., Ditartrylic.** See *A., Tartralic*. **A., Dithiochlorsalicylic,** $SC_6H . Cl . OH . COOH$, a reddish-yellow powder obtained by heating a mixture of salicylic acid and sulfur chlorid to 140° C. It is recommended as an antiseptic. **A., Dithiosalicylic,** $C_{14}H_{10}S_2O_6$, obtained from salicylic acid and sulfur chlorid heated to 150° C., and existing in two modifications differing in the solubility of their salts. It is an antiseptic, analgesic, antipyretic yellowish-gray powder, partly soluble in water. Its lithium and sodium salts only are used in medicine as substitutes for salicylic acid. **A., Dracic, A., Draconic, A., Draconylic.** See *A., Anisic* (Illus. Dict.). **A., Elaic.** See *A., Elaidic* (Illus. Dict.). **A., Elaiodic.** See *A., Ricinoleic* (Illus. Dict.). **A., Eleodic, A., Elæodic.** See *A., Ricinoleic* (Illus. Dict.). **A., Ergotic** or **Ergotinic,** a volatile principle obtained from ergot of rye, occurring as a yellowish-brown, hygroscopic powder, soluble in water and dilute alcohol. It is oxytocic. **A., Erythric.** 1. Same as *Erythrin* (Illus. Dict.). 2. Brugnatelli's name for alloxan. **A., Ethanethiolic.** See *A., Thioacetic*. **A., Ethidenelactic.** See *A., Lactic* (Illus. Dict.). **A., Ethmethacetic.** See *A., Methylethylacetic*. **A., Ethylacetic.** See *A., Butyric* (Illus. Dict.). **A., Ethylenelactic,** $CH_2(OH) . CH_2 . CO_2H = C_3H_6O_3$, an acid isomeric with ethidene lactic acid or the lactic acid of fermentation, is obtained from acrylic acid by heating with aqueous sodium hydroxid to 100° C. and in various other ways. It is a thick uncrystallizable syrup; on heating it loses water and is converted into acrylic acid. Syn., *Hydracrylic acid; β-Oxypropionic acid; β-Hydroxypropionic acid*. **A., Ethylenephenylhydrazinsuccinic,** $C_{20}H_{22}N_4O_6$, an acid obtained from an alcoholic solution of ethylenephenylhydrazin and succinic anhydrid by boiling. It occurs in acicular crystals soluble in water. It is used as an antipyretic. **A., Ethylidenelactic,** lactic acid. **A., Excretolic,** Marcet's name for an oily body found in human feces. **A. of Fat,** Crell's name for an acid distilled from fat, and subsequently proved to be acetic acid. **A., Fellanic,** $C_{50}H_{72}O_6 + 3H_2O$, an acid obtained by Berzelius from putrescent bile by action of hydrochloric acid. **A., Fellic,** $C_{23}H_{40}O_4$, a crystalline cholalic acid obtained by Schotten from human bile; it is due to admixture with this acid that cholalic acid from human bile differs in appearance from that obtained from other sources. **A., Fellinic.** Same as *A., Fellic*. **A., Ferrihydrocyanic,** $H_3F_2Cy_6$, lustrous, brownish-green needles, gradually decomposing in the air, formed from the decomposition of lead ferricyanid by means of dilute sulfuric acid. It is soluble in water and alcohol. Syn., *A., Ferricyanic; Hydroferricyanic acid; Hydrogen cyanid; Hydroferricyanhydric acid*. **A., Ferrohydrocyanic,** $H_4F_2Cy_6$, a white crystalline powder turning blue in moist air; soluble in water. It is the product of potassium ferrocyanid and dilute hydrochloric acid. Syn., *A. Ferrocyanic; Hydrogen ferrocyanid*. **A., Ferulaic.** See *A., Ferulic* (Illus. Dict.). **A., Formylic,** formic acid. **A., Frangulic, A., Frangulinic,** $C_{14}H_8O_4 + 1\frac{1}{2}H_2O$, obtained from frangulin by boiling with dilute acids. It occurs as yellowish-brown needles or tablets, soluble in alcohol, melting at 252°–254° C. It is used as a laxative. Syn., *A. Avorninic*. **A., Fumaric,** $C_4H_4O_4$, a dibasic acid obtained from *Fumaria officinalis*, L., several species of fungi and other plants, and also from decomposing malic acid. It forms small needles, or scales, soluble in water, subliming at 200° C. It is a feeble tonic. Syn., *Allomaleic acid; Boletic acid; Glaucic acid; Lichenic acid; Paramaleic acid; Phenaconic acid*. **A., Furfuracrylic,** $C_7H_6O_3$, a crystalline acid obtained by oxidation of furfuracrolein and isomeric with salicylic acid; it crystallizes from hot water in long brittle needles melting at 135° C. **A., Furfuracryluric,** an acid excreted in the urine and formed in the body by the conjugation of glycocoll with furfuracrylic acid. **A., Gadic, A., Gadinic,** $C_{28}H_{56}O_4$, a peculiar fatty acid obtained by Luck (1857) from turbid cod-liver oil. It forms crystals melting at 60°–63° C. **A., Gæidic, A., Gæidinic,** $C_{16}H_{30}O_2$, a monobasic acid isomeric with hypogeic acid and obtained from it by warming with nitric acid, occurring in colorless crystals melting at 38° C. Soluble in alcohol and in ether, insoluble in water. **A., Gallamic,** an acid obtained from tannin by the action of a mixture of ammonia and ammonium sulfite. **A., Gallotannic,** the tannin of nutgalls. **A. of Galls,** gallic acid. **A., Gaultheric.** See *Methyl Salicylate*. **A., Gelsemic,** a fluorescent acid obtained by v. Wormsley from *Gelsemium sempervirens;* it occurs in tasteless, odorless, acicular crystals, soluble in 100 parts of cold water and readily in warm water, ether, and chloroform. **A., Glucuronic.** See *A., Glycuronic* (Illus. Dict.). **A., Glutamic, A., Glutaminic,** $CH_2 . CH_2 . CH(NH_2) . (COOH)_2$, a dibasic acid produced by boiling albuminous substances with dilute mineral acids. It forms small shining crystals soluble with difficulty in cold water, more readily soluble in boiling water, but separating out on cooling, melting at 193° C. Syn., *Amidoglutaric acid*. **A., Glutanic.** See *A., Glutamic*. **A., Glycerinocarbolic,** an antiseptic and disinfectant substance obtained from carbolic acid and glycerin. It is soluble in water and alcohol. **A., Glycerinophosphoric, A., Glycerinphosphoric,** $C_3H_9PO_6$, a dibasic acid in combination with the fatty acids and cholin as lecithin in the yolk of eggs, in bile, in the brain, and in the nervous tissue. It is formed by mixing glycerin with metaphosphoric acid.

It is a pale yellow oily liquid, without odor but having a sour taste, soluble in water and alcohol, and is used in treatment of neurasthenia, tabes, etc. Dose, 0.1–0.3 gm. (1½–5 gr.) three times daily. **A., Glycerinsulfuric,** $C_3H_8SO_6$, a monobasic body forming a series of salts called glycerosulfates. Syn., *A., Sulfoglyceric.* **A., Glycerolphosphoric, A., Glycerophosphoric.** See *A., Glycerinphosphoric.* **A., Glycerolsulfuric, A., Glycerosulfuric.** See *A., Glycerinsulfuric.* **A., Glyceryltricarbonic.** See *A., Tricarballylic.* **A., Glycoluramic.** See *A., Glycoluric* (Illus. Dict.). **A., Glycosuric,** an acid first found by Marshall in alcaptonuric urine and again recently. It is now believed to be identical with homogentisinic acid. **A., Glycyrrhizic,** an amorphous, brown-yellow, resinous substance with a sweet taste, obtained from the root of *Glycyrrhiza glabra,* L., and *G. echinata,* L.; it is a tribasic acid and the active constituent of licorice; it swells in cold water without dissolving, but in hot water forms a clear yellow jelly, readily soluble in weak alcohol but scarcely soluble in absolute alcohol and in ether. **A., Glyoxal.** See *A., Glyoxylic* (Illus. Dict.). **A., Glyoxalic.** See *A., Glyoxylic* (Illus. Dict.). **A.-green.** See *Pigments, Table of.* **A., Guaiacic,** 1. $C_8H_8O_3$, obtained by Righini (1837) from guaiacum wood or resin; it crystallizes in colorless needles, soluble in alcohol and ether. 2. See *A., Guaiaresinic.* **A., Guaiacolcarbonic, A., Guaiacolcarboxylic,** $C_8H_8O_4$, a monobasic crystalline acid, melting at 150° C. It is antiseptic and antipyretic. **A., Guaiaconic,** $C_{19}H_{20}O_5$ (Hadelich, 1862), a constituent of guaiac resin in the proportion of 70%, occurring as a light brown amorphous substance fusing at 100° C.; readily soluble in alcohol, ether, and chloroform, insoluble in water. Its solutions are levorotary. **A., Guaiacresin.** See *A., Guaiaresinic.* **A., Guaiaresinic, A., Guaiaretic,** $C_{20}H_{26}O_4$, a dibasic acid extracted by Hlasiwetz (1859) from guaiac resin, of which it forms about 10%, by the action of alcoholic potash or by quicklime. It forms a crystalline salt with the former and an amorphous compound with the latter. The crystals are soluble in ether, alcohol, benzol, chloroform, carbon disulfid, and acetic acid, insoluble in ammonia and water, melt below 80° C., and volatilize without decomposition. It gives a grass-green coloration with ferric chlorid. **A., Gummic.** See *Arabin* (Illus. Dict.). **A., Gurjunic,** $C_{22}H_{34}O_4$, a constituent of gurjun balsam occurring in opaque crystalline masses of weak acid reaction, melting at 220° C., soluble in absolute alcohol or in ether, slowly in benzene; insoluble in water and dilute alcohol. **A., Gymnenic,** $C_{32}H_{55}O_{12}$, a greenish-white amorphous powder with a harsh acid taste, soluble in alcohol and chloroform and slightly soluble in water and ether. It is obtained from the leaves of *Gymnena sylvestre,* R. Br., and obtunds the taste for bitter or sweet things, but not for sour, pungent, or astringent ones. It is used as a mouth-wash in 12% hydro-alcoholic solution before taking nauseous medicines. **A., Helvelic,** $C_{12}H_{20}O_7$, an acid obtained from fresh belladonna, occurring as a yellow transparent syrupy liquid of strong acid reaction. **A., Helvellaic,** an acid which destroys red blood-corpuscles, obtained by Böhm from juice of the mushrooms belonging to the genus *Helvella.* **A., Hematic, A., Hæmatic,** a yellow crystalline body derived by Treviranus from carbonized red blood-corpuscles by action of sodium carbonate and washing with alcohol. **A., Hematoxylic, A., Hæmatoxylic.** See *Hematoxylin* (Illus. Dict.). **A., Hendecatoic** or **Hendecoic.** See *A., Undecylic, Table of Fatty Acids* (Illus. Dict.). **A., Heptoic.** See *A., Enanthylic* (Illus. Dict.). **A., Heptylacetic.** See *A., Pelargonic* (Illus. Dict.). **A., Heptylcarbonic.** See *A., Caprylic* (Illus. Dict.). **A., Heptylic.** See *A., Enanthylic* (Illus. Dict.). **A., Hexabasic,** an acid containing 6 atoms of hydrogen replaceable by bases. **A., Hidrotic,** $C_5H_9NO_7$, a noncrystallizable acid obtained by Favre from perspiration, soluble in water and alcohol and evolving ammonia when heated. **A., Homosalicylic.** See *A., Cresotic.* **A., Homotoluic, A., Homotoluylic.** See *A., Hydrocinnamic* (Illus. Dict.). **A., Hydantoin-hydroparacumaric.** Same as *A., Tyrosinhydantoinic.* **A., Hydra-.** See *A., Hydrogen.* **A., Hydracrylic,** $C_3H_6O_3$, an acid isomeric with lactic acid. See *A., Ethylenelactic.* **A., Hydrantoic.** See *A., Glycoluric* (Illus. Dict.). **A., Hydrated,** one united with the elements of water. **A., Hydrochinonsulfuric,** an ethereal acid found in small quantities in the urine after phenol-poisoning. **A., Hydrocyanic, Aqueous,** the hydrocyanic acid obtained by distillation, which contains a certain percentage of water before removal by fractional distillation and desiccation. **A., Hydrocyanic, Inhalation of.** See *A., Hydrocyanic, Vapor* (Illus. Dict.). **A., Hydrocyanic, Syrup of,** a preparation consisting of dilute hydrocyanic acid, 1 part; syrup, 125–200 parts. **A., Hydroferricyanhydric.** See *A., Ferrihydrocyanic.* **A., Hydroferricyanic.** See *A., Ferrihydrocyanic.* **A., Hydrofluosilicic,** H_2SiF_6, a dibasic acid obtained from silicon tetrafluorid by dissolving it in water. Its aqueous solution is a colorless, transparent, acrid, fuming liquid; it volatilizes at 49° C. without a residue. Syn., *A., Silicofluoric.* **A., Hydrogen,** an acid containing hydrogen. **A., Hydroparacumaric** $C_9H_{10}O_3$, a derivative of tyrosin and formed in the human system during the process of intestinal putrefaction; it may be prepared from paracoumaric acid by action of sodium amalgam, forming small prisms, soluble in alcohol, water, and ether, and melting at 125° C. Syn., *Oxyphenylpropionic acid.* **A., Hydrospiroylic,** the volatile oil of *Spiræa ulmaria.* **A., Hydrotic.** See *A., Hidrotic.* **A., Hydroxyacetic.** See *A., Glycollic* (Illus. Dict.). **A., Hydroxyoleic.** See *A., Ricinoleic* (Illus. Dict.). **A., Hydroxyphenylamidopropionic.** See *Tyrosin* (Illus. Dict.). **A., Hyoglycocholic,** $C_{27}H_{43}NO_5$, a crystallizable glycocholic acid found in pig's bile, usually occurring as a resinous mass, soluble in alcohol, insoluble in water. **A., Hyotaurocholic,** $C_{26}H_{45}NSO_8$, a biliary acid which as a sodium salt is found in small amount in the bile of swine; it is analogous to hyoglycocholic acid. **A., Hypogeic, A., Hypogæic,** $C_{16}H_{30}O_2$, a monobasic acid found by Gössmann and Scheven (1855) in peanut (*Arachis hypogæa*) oil, occurring as fine colorless stellate groups of needles which melt at 33° C. and solidify again at 28–30° C.; soluble in alcohol and ether; insoluble in water. **A., Hypoxanthylic.** See *A., Sarcylic.* **A., Ichthulinic,** a substance obtained by Levene from the ichthulin of codfish eggs, similar in composition to avivitellinic acid. **A., Ichthyolsulfonic,** $C_{28}H_{38}S_3O_6$, an acid produced from Tyrolean bituminous mineral by the action of sulfuric acid; it is strongly acid and contains about 16.4% of sulfur. It is antiphlogistic and astringent, and is used in the form of its salts, chiefly "ichthyol," the ammonium salt. **A., Indigosulfonic, A., Indigosulfuric** $C_{16}H_{10}S_2N_2O_8$, obtained from indigotin by the action of 15 parts of fuming sulfuric acid; it occurs as an amorphous blue solid or paste, soluble in water or alcohol. Syn., *Indigotindisulfonic acid; Sulfoindylic acid; Sulfoindigotic acid; Sulfindylic acid; Soluble indigo blue.* **A., Indigotic.** See *A., Mononitrosalicylic.* **A., Indigotindisulfonic.** See *A., Indigosulfonic.* **A., Indigotinmonosulfonic,** $C_{16}H_9N_2O_2 \cdot SO_3H$, a purple

powder, soluble in water and alcohol, obtained from indigotin by action of 7–10 parts of fuming sulfuric acid. Syn., *Sulfopurpuric acid; Phenicinsulfuric acid.* **A., Indoxylsulfonic, A., Indoxylsulfuric,** $C_8H_6NO.SO_3K$, indoxyl sulfate of potassium, derived from indol of the intestine by oxidation and excreted normally in small amount in the urine but increased by putrefactive changes in the body; it occurs in colorless gleaming tablets and plates easily soluble in water. Syn., *Animal indican; Indican of urine.* **A., Inorganic,** a mineral acid or one in which the carboxyl group CO.OH is absent. **A., Inosinic,** $C_{10}H_{13}N_4O_8P$, a primary nucleinic acid occurring in muscle tissue and containing hypoxanthin as a base. **A., Iodoboric,** a compound of boric and iodic acids. **A., Iodoortho-oxybenzoic.** See *A., Monoiodosalicylic.* **A., Iodosalicylic.** See *A., Monoiodosalicylic.* **A., Iodosobenzoic,** $C_6H_4.OI.CO.OH_2$, a compound analogous in action to iodoform. **A., Iodotannic.** See *Iodotannin* (Illus. Dict.). **A., Isethionuric.** See *A., Taurocarbamic.* **A., Isobutylcarbonic, A., Isobutylcarboxylic.** See *A., Valeric, Normal.* **A., Isobutylformic.** See *A., Isovaleric.* **A., Isolactic,** lactic acid. **A., Isopropylacetic.** See *A., Isovaleric.* **A., Isotartaric,** Laurent and Gerhardt's name for tartralic acid. **A., Isouric,** $C_5H_4N_4O_3$, an acid, isomeric with uric acid, obtained by boiling alloxanthin and cyanamid, forming a heavy insoluble powder. **A., Isovaleric,** $(CH_3)_2.CH.CH_2.CO_2H$, an isomer of valeric acid, obtained from oil of valerian or from oxidation of amyl alcohol, occurs as a transparent, colorless, oily liquid with odor of valerian and old cheese; melts at 51° C., boils at 174° C. Sp. gr. 0.9470 at 0° C. Used in nervous affections. Max. dose, 10 drops; per day 40 drops. Syn., *Monohydrated valerianic acid; Valerianic acid; Primary pentoic acid; Isobutyl carboxyl; Isopropylacetic acid.* **A., Jatrophic.** See *A., Crotonic,* in *Table of Fatty Acids* (Illus. Dict.). **A., Jecoleic,** an acid forming one of the essential constituents of cod-liver oil and isomeric with doeglic acid. **A., Jervic,** $C_{14}H_{19}O_{12}$, a tetrabasic crystalline acid found in the root of *Veratrum album,* L. **A., Kakodylic.** See *A., Dimethylarsenic.* **A., Karabic, A. karabique.** See *A., Succinic.* **A., Ketonic,** one derived from a ketone by substituting the acid characteristic CO.OH for an atom of hydrogen. **A., Kinic.** See *A., Quinic* (Illus. Dict.). **A., Kinovic.** See *A., Quinovic.* **A., Kombic,** a compound obtained by Fraser in the lead precipitate from an aqueous solution of alcoholic extract of strophanthin. It is freely soluble in water and of strongly acid reaction. **A., Kresotic.** See *A., Cresotic.* **A., Kresylic.** See *Cresol* (Illus. Dict.). **A., Kynurenic.** See *A., Cynurenic.* **A., Lactolactic.** See *A., Lactylolactic.* **A., Lactylolactic,** $C_6H_{10}O_5$, a monobasic acid obtained from a solution of lactic acid heated to 130° to 140° C. It occurs as an amorphous, pale yellow mass, soluble in alcohol and water, soluble with difficulty in water. Syn., *Lactyl lactate; Lactolactic acid · Lactic anhydrid; Lactyl anhydrid.* **A., Lanoceric,** $C_{30}H_{60}O_4$, an acid resulting from the saponification of lanolin; it melts at 104° C. **A., Lanopalminic,** $C_{16}H_{32}O_3$, resulting from the saponification of lanolin. It melts at 87°. **A., Lantanuric.** See *A., Allanturic.* **A., Lapachoic,** $C_{15}H_{14}O_3$, Paternó's name for the coloring-matter of lapacho wood, a species of *Bignonia.* It forms yellow prisms melting at 138° C., giving a beautiful red color with alkalis and with sulfuric acid a blood-red coloration. **A., Leucamic.** See *Leucin* (Illus. Dict.). **A.s, Leucinic,** acids obtained by oxidation of leucins. **A., Levocamphoric, A., Lævocamphoric,** camphoric acid prepared from matricaria camphor; it is levorotary. **A., Levopimaric, A., Lævopimaric,** a modification of pimaric acid crystallizing in rhombic pyramids which melt at 140°–150° C., soluble in alcohol. Its levorotation is at times as great as the dextrorotation of dextropimaric acid. **A., Levotartaric,** the levorotary variety of tartaric acid. **A., Lichenic.** See *A., Fumaric.* **A., Lithenic, A., Lithic,** uric acid. **A., Lithobilic,** a bile-acid found in bezoar stones. **A., Lithofellic, A., Lithofellinic,** $C_{28}H_{36}O_4$, a crystalline acid and chief constituent of the bezoar stones from a Persian antelope; melting-point 204° C. **A., Lithuric,** $C_{13}H_{19}NO_9$, an acid obtained in only one instance from the urine of the ox. **A., Lizaric,** $C_{20}K_{10}O_9$, a crystalline acid obtained by Debus from the coloring-matter of madder. **A., Lobelic,** a crystalline acid found in *Lobelia inflata,* L., forming small yellow needles soluble in water, alcohol, and ether. **A., Loco,** the toxic principle of loco weed, *Astragalus mollissimus.* **A., Lokainic, A., Lokaonic,** $C_{42}H_{48}O_{27}$, a dibasic acid found by v. Kayser in lokao (Chinese green), occurring as a powdery blue-black mass which assumes a metallic gleam on pressure; it is insoluble in water, alcohol, ether, chloroform, or benzene; soluble in alkalis, with a clear blue color. Syn., *Lokain.* **A., Lokanic,** $C_{36}H_{36}O_{21}$, a glucosid obtained from lokainic acid by action of dilute sulfuric acid with heat; insoluble in water, alcohol, ether, and chloroform. Its alkaline solution is violet-blue, which by diluting becomes rose-red. Syn., *Lokaetin.* **A., Lupamaric,** the bitter acid of hops. **A., Lysuric,** $C_6H_{12}(COC_6H_5)_2N_2O_2$, a substance obtained by Drechsel from lysin by action of benzoyl chlorid and homologous with ornithuric acid. **A., Maleic** or **Maleinic,** $C_4H_4O_4$, obtained from malic acid by distillation; it occurs in prisms, soluble in water, alcohol, and ether, melting at 130° C., boiling at 160° C. **A., Margaric, A., Margarinic,** $C_{17}H_{34}O_2$, an acid apparently not existing in the fats, as was supposed, obtained by boiling cetyl cyanid with alcoholic potash; it occurs as transparent crystals or white amorphous powder, melts at 59°–60° C. and boils at 227° C. at 100 mm. Syn., *Heptadecoic acid.* **A., Margaritic.** See *A., Ricinostearic.* **A., Margarous,** Chevreul's name for stearic acid. **A., Marine,** hydrochloric acid. **A., Melanurenic, A., Melanuric.** See *Ammelid* (Illus. Dict.). **A., Mephitic,** carbon dioxid. **A., Mesitylenuric,** $C_{11}H_{13}NO_3$, a nitrogenous acid found in urine and produced in the body by the conjugation of glycocoll with mesitylenic acid. **A., Mesotartaric,** inactive tartaric acid obtained by heating 30 parts of tartaric acid with 4 parts of water for 2 hours to 165° C. **A., Mesoxalluric.** See *A., Alloxanic* (Illus. Dict.). **A., Metaboric,** HBO_2, a monobasic acid formed from boric acid by heating it to 100° C. **A., Metachlorhippuric,** $C_6H_4Cl.CO.NHCH_2.CO.OH$, a tenacious amorphous substance, somewhat soluble in boiling water, excreted in the urine after the ingestion of monochlorbenzoic acid. **A., Metacopaivic,** $C_{22}H_{31}O_4$, an acid found by Strauss in Maracaibo copaiva balsam occurring in white flakes, melting at 205°–206° C., easily soluble in alcohol, in ether, in caustic potash, and in ammonia, insoluble in water. **A., Metaiodoorthooxyquinolinsulfonic.** See *Loretin.* **A., Metallic,** an inorganic acid in which the acid radicle is a metal or metallic oxid. **A., Metanitrosalicylic, Asymmetric,** $C_7H_5NO_5$, a nitroderivative of salicylic acid occurring in colorless needles soluble in alcohol and 1475 parts of hot water at 150° C., melting at 228° C. Syn., *α-Nitrosalicylic acid.* **A., Metaphosphoric, Diluted,** a solution of 780 grains of

metaphosphoric acid in distilled water sufficient to make 16 fluidounces. **A., β-Methylalphaindolcarboxylic.** See *A., Skatolcarbonic.* **A., Methylamidoacetic.** Same as *Sarcosin* (Illus. Dict.). **A., Methylamidoanisic,** $C_6H_7(NH.CH_3)O_2$, an isomer of tyrosin. **A., Methylcrotonic.** See *A., Tiglic.* **A., Methylethylacetic,** $CH_3 — C_2H_5 — CH.COOH$, an isomer of valeric acid, occurring as a liquid, boiling at 175° C.; sp. gr. 0.9410 at 21° C. Syn., *A., Ethmethacetic; β-Butyl carbonic acid; α-Methyl butyric acid.* **A., Methylguanidinacetic.** See *Creatin* (Illus. Dict.). **A., Methylguanidoacetic.** See *Creatinin* (Illus. Dict.). **A., Methylhydantoic, A., Methylhydantoinic,** $C_4H_8N_2O_3$, a uramic acid appearing in the urine after the ingestion of sarcosin or methylglycocoll; also obtained by prolonged heating together of urea and sarcosin in baryta-water. **A., of Milk,** lactic acid. **A., Mineral.** See *A., Inorganic.* **A., Monatomic,** one which contains one atom of replaceable hydrogen. **A., Moniodosalicylic.** See *A., Monoiodosalicylic.* **A., Monobromacetic,** $C_2H_3BrO_2$, produced by heating acetic acid with bromin; it occurs as white shining tablets, rapidly deliquescing and strongly corrosive on the skin. It is soluble in water, melts at 51° C., and boils at 208° C. It is escharotic and antiseptic. Syn., *A., Bromacetic.* **A., Monohydrated,** an acid combined with one molecule of water. **A., Monohydric.** Same as *A., Monatomic.* **A., Monoiodoortho-oxybenzoic.** See *A., Monoiodosalicylic.* **A., Monoiodosalicylic,** $C_7H_5IO_3$, produced by boiling salicylic acid with iodin and alcohol; it occurs as long needles or white crystalline powder, soluble in alcohol and ether and very slightly in water; it melts at 198° C. It is used in acute articular rheumatism. Dose, 15–45 grains per day. **A., Mononitrosalicylic,** $C_6H_3(NO_2)OH.CO_2H$, an acid obtained by action of nitric acid on indigo, or on salicylic acid. Syn., *A., Indigotic; Nitrospiroylic acid; Nitro-anilic acid; Anilic acid.* **A., Monosulfindigotic.** See *A., Indigosulfonic.* **A., Morinic.** See *Morin* (Illus. Dict.). **A., Morintannic.** See *Maclurin* (Illus. Dict.). **A., Morphoxylacetic,** $C_{17}H_{18}NO_3.C.H_2CO_2H$, a narcotic similar to morphin but weaker. **A., Muriatic, Dephlogisticated,** chlorin. **A., Muriatic, Oxygenated,** chlorin. **A., Muriatic, Superoxygenated,** chloric acid. **A., Myoctonic, A., Myoctoninic,** an acid found by Peckolt in *Psychotria marcgravii,* occurring as a yellowish, oily narcotic and extremely poisonous liquid. **A., β-Naphthalinsulfonic,** $C_{10}H_7.SO_3H$, an acid occurring in white opalescent scales with generally a tinge of red, freely soluble in water and alcohol, slightly in ether. It is a sensitive reagent for albumin. **A., Naphthionic,** $C_{10}H_6(NH_2).SO_3H$, an acid obtained from naphthylamin by action of ammonium sulfite, occurring as a white powder dissolving in about 4000 parts of cold water, but more freely soluble in alkaline liquids. Solutions fluoresce deep reddish-blue. It is recommended as an antidote for nitrite poisoning; also in the treatment of acute iodism and in troubles of the bladder originating in the alkalescence of the urine. Dose, 3–4 gm. (40–60 gr.) daily. Syn., *α-Naphthylamin-sulfonic acid.* **A., Naphthoic,** $C_{11}H_8O_2$, a crystalline substance of which 2 isomeric compounds may be formed by saponification of the 2 modifications of naphthonitril. **A., α-Naphthylaminsulfonic, A., Naphthylaminalphasulfonic.** See *A., Naphthionic.* **A., Naphtoic.** See *A., Naphthoic.* **A., Narcotic.** See *Narcotin* (Illus. Dict.). **A., Naucleic.** See *Catechin* (Illus. Dict.). **A., Neurolic,** $C_{50}H_{90}PO_{17}$, a decomposition product of myeloidin, analogous to oleophosphoric acid and to cerumen, occurring as a viscous red substance with rancid odor. Syn., *Acide névrolique.* **A., Neurostearic,** $C_{18}H_{36}O_2$, a fatty acid obtained by Thudichum in brain-tissue, isomeric with stearic acid but melting at 84° C. **A., Neurotic,** a sticky, red phosphoreted compound, obtained from treating a combination of myeloidin and lead oxid with sulfureted hydrogen. Syn., *Acide névrotique.* **A., Nitric, Alcoholic,** a distillate of 1 part of nitric acid with 3 parts of alcohol. **A., Nitric, Anhydrous,** nitrogen pentoxid. **A., Nitric, Monohydrated,** pure nitric acid. **A., Nitro-,** an acid produced from another acid by replacing the hydrogen with nitryl (NO_2). **A., Nitroanilic.** Same as *A., Mononitrosalicylic.* **A., Nitrogenous,** one containing nitrogen. **A., Nitrohydrochloric, Dilute,** nitric acid, 40 parts; hydrochloric acid, 180 parts; distilled water, 780 parts. **A., α-Nitrosalicylic.** See *A., Metanitrosalicylic.* **A., β-Nitrosalicylic.** See *A., Anilotic.* **A., Nitrosonitric,** fuming nitric acid. **A., Nitrospiroylic.** See *A., Mononitrosalicylic.* **A., Nordhausen,** brown fuming sulfuric acid first manufactured at Nordhausen. **A., Nucleic** or **Nucleinic,** any one of a group of organic acids containing C, H, O, N, and a large proportion of P. The nucleinic bases are present in the nucleinic acid radicles as organic compounds. The nucleinic acids occur in nature, free or in combination with albumins, when they are called primary acids. On decomposition they yield nucleinic bases, and according to their origin are termed sperm nucleinic acid, thymonucleinic acid, yeast-nucleinic acid, etc. According to Kossel, there are in reality only 4 true nucleinic acids, viz., adenylic acid, guanylic acid, sarcylic (hypoxanthylic) acid, and xanthylic acid. On decomposition the primary acids give rise to secondary acids which contain more phosphorus than the primary acids and may or may not give rise to xanthin bases on further decomposition; according to Simon, they may be divided into acids of the type of *plasminic acid* and of *thyminic acid* respectively. **A., Oleophosphoric,** Frémy's name for the phosphoreted fat found in brain-substance. **A., Oleoricinic.** See *A., Ricinoleic* (Illus. Dict.). **A., Omicholic,** $C_5H_5NO_4$, a red resinous substance extracted by Thudichum from urine, soluble in ether and alcohol, and showing a green fluorescence. **A., Opheliac, A., Opheliac,** $C_{13}H_{30}O_{10}$, an acid isolated by v. Höhn from chirett the leaves of *Swertia chirata,* occurring as a yellow brown acid syrup with a bitter taste and odor characteristic of gentian, and readily soluble in water, alcohol, and in ether. **A., Orceic.** Same as *Orce* (Illus. Dict.). **A., Orthoamidosalicylic,** $C_6H_3(NH_2)(OH)COOH$, a gray, amorphous, slightly sweet, odorous powder obtained by reduction of orthonitr salicylic acid and insoluble in water, alcohol, a ether. It is employed in chronic rheumatism. Do 0.25–0.5 gm. (3–7 gr.). **A., Orthoboric.** S *Boron* (Illus. Dict.). **A., Orthocholic,** $C_{24}H_{40}O_5 + H_2O$, a name given by Thudichum to the form cholic acid produced by the decomposition of magnesium with hydrochloric acid, occurring in prisms. **Orthocresotic,** $C_8H_8O_3$, an acid obtained from ort cresol by reaction with sodium and carbon diox forming long white needles, soluble in alcohol, in eth and in chloroform, melting at 164° C. Syn., *Orthohon salicylic acid; Orthooxymetatoluic acid.* **A., C thohydrazinparabenzoic. A., Orthohydrazi parahydroxybenzoic, A., Orthohydrazinpar oxybenzoic.** See *Orthin* (Illus. Dict.). **A., C thohydroxybenzoic,** salicylic acid. **A., Orthoox metatoluic.** See *A., Orthocresotic.* **A., Orthoox phenolsulfonic, A., Orthophenolsulfonic,**

Orthophenolsulfuric. See *Aseptol* (Illus. Dict.). **A., Orthosilicic,** $H_4SiO_4 = SiO_2 . 2H_2O$, a tetrabasic acid, known only in aqueous solution, produced by dialyzing a solution of an alkaline silicate previously treated with HCl; it forms a colorless liquid which coagulates to a gelatinous mass on standing. Syn., *Silicic acid.* **A., Orthosulfocarbolic.** See *Aseptol* (Illus. Dict.). **A., Orthoxybenzoic,** salicylic acid. **A., Orthoxyphenylsulfurous.** See *Aseptol* (Illus. Dict.). **A., Oxacetic.** See *A., Glycollic* (Illus. Dict.). **A., Oxalacetic,** Dumas' name for tartaric acid. **A., Oxuric,** Vauquelin's name for impure alloxanic acid. **A., Oxygen,** an acid which contains more oxygen than is requisite for saturation. **A., Oxymandelic,** $C_8H_8O_4$, an acid found by Schultzen and Riess in urine in a case of acute yellow atrophy of the liver, forming shining flexible needles, easily soluble in alcohol, in ether, and in hot water, slightly soluble in cold water, melting at 162° C. **A., Oxymuriatic,** 1. Hydrochloric acid. 2. Chloric acid. 3. Chlorin. **A., Oxynaphthoic.** See *A., Alphaoxynaphthoic* (Illus. Dict.). **A., β-Oxynaphthoic,** $C_{11}H_8O_3$, obtained from sodium β-naphthol by the action of carbon dioxid with heat. It is a surgical antiseptic. Syn., *β-Naphtholcarboxylic acid; β-Carbonaphtholic acid.* **A., Oxynaphthylorthooxytoluylic.** See *Epicarin.* **A., Oxyphenylamidopropionic.** See *Tyrosin* (Illus. Dict.). **A., Oxyphenylsulfuric.** See *A., Sulphocarbolic* (Illus. Dict.). **A., β-Oxypropionic.** See *A., Ethylenelactic.* **A., Oxyquinolin Carbonic.** See *A., Cynurenic.* **A., Oxytoluic.** See *A., Cresotic.* **A., Oxytoluyl,** substances formed by oxidation of toluene. **A., Palicouric,** an acid found by Peckolt in *Psychotria marcgravii,* occurring in stellate groups of odorless needles, with acid taste, soluble in water, insoluble in alcohol, and having no poisonous properties. Cf. *Myoctonic Acid.* **A., Paraamidobenzolsulfonic.** See *A., Sulphanilic* (Illus. Dict.). **A., Parabanic.** See *Oxalylurea* (Illus. Dict.). **A., Paracamphoric,** an optically inactive variety of camphoric acid prepared by mixing camphoric acid from ordinary camphor (*dextrocamphoric acid*) with that made from matricaria camphor (*levocamphoric acid*). **A., Paraellagic.** Same as *A., Rufigallic* (Illus. Dict.). **A., Parafumaric.** See *A., Maleic.* **A., Paraoxyphenylacetic,** $C_8H_8O_3$, a decomposition product of proteids in the intestine, found in minute quantities in the urine. **A., Paraoxyphenylglycolic,** an acid found in urine under pathologic conditions, as in acute yellow atrophy. **A., Paraoxyphenylpropionic,** $C_6H_4(OH) . C_2H_4 . COOH$, an acid formed from tyrosin in the putrefactive changes of proteids in the intestine and found in small quantities in the urine. **A., Paraphenolsulfonic.** See *A., Sulphocarbolic* (Illus. Dict.). **A., Pararosolic.** See *Aurin* (Illus. Dict.). **A., Paratartaric.** See *A., Racemic* (Illus. Dict.). **A., Parilinic, A., Parillinic.** See *Smilacin* (Illus. Dict.). **A., Paroxyphenyleneamidopropionic.** See *Tyrosin* (Illus. Dict.). **A. of Pearls,** acid phosphate of sodium. **A., Pentabasic,** one containing 5 carboxyl groups. **A., Pentatomic,** one containing 5 atoms of replaceable hydrogen. **A., Perbromic,** $BrO_3 . OH$, an oily colorless liquid formed from perchloric acid by action of bromin. **A., Periodic,** $HIO_4 + 2H_2O$, an acid obtained from iodin by the action of concentrated perchloric acid occurring in white deliquescent crystals which turn yellow on exposure to the air. It is soluble in water and alcohol, slightly in ether, and melts at 130°–133° C. It is a powerful oxidizer. Syn., *Heptaiodic acid.* **A., Phenaceturic,** $C_{10}H_{11}NO_3 = C_6H_5 . CH_2CO . NH . CH_2 . COOH$, an acid produced in the animal body by a grouping of the phenylacetic acid, $C_6H_5 . CH_2 . COOH$, formed by the putrefaction of the proteids with glycocoll. It has been prepared by Salkowski from horse's urine, and probably occurs in human urine. [Hammarsten and Mandel.] **A., Phenic, A., Phenylic.** See *A., Carbolic* (Illus. Dict.). **A., Phenicinsulfonic, A., Phenicisulfuric.** See *A., Indigotinmonosulfonic.* **A., Phenol,** carbolic acid. **A., Phenolsulfonic.** See *A., Sulphocarbolic* (Illus. Dict.). **A., Phenylaceturic.** See *A., Phenaceturic.* **A., Phenylhydrazinlevulinic.** See *Antithermin* (Illus. Dict.). **A., Phenylic,** carbolic acid. **A., Phenylsalicylic,** $C_{13}H_{10}O_3$, a white antiseptic powder, soluble in alcohol, ether, and glycerin, but very slowly in water; it is used as a surgical dressing as iodoform. Syn., *Orthoxydiphenylcarbolic acid; Phenylorthooxybenzoic acid.* **A., Phenylsulfuric.** See *A., Sulphocarbolic* (Illus. Dict.). **A., Phocenic.** See *A., Valeric* (Illus. Dict.). **A., Phœnicinsulfonic.** See *A., Indigotinmonosulfonic.* **A., Phosphoantimonic,** a yellowish, very acid substance obtained from antimonium pentachlorid by the action of concentrated aqueous solution of sodium phosphate (Schulze). It is used as an alkaloid reagent. **A., Phosphoric, Anhydrous,** P_2O_5, obtained from phosphorus by complete combustion, occurring as a bulky, light, white deliquescent powder, soluble in water. It is used as a chemical agent. **A., Phosphoric, Glacial, A., Phosphoric, Monobasic.** See *A., Metaphosphoric* (Illus. Dict.). **A., Phosphoric, Tribasic,** ordinary phosphoric acid. **A., Photosantonic.** See *Photosantonin* (Illus. Dict.). **A., Physetic, A., Physetoleic,** an isomer of hypogeic acid and contained in the spermaceti oil found in cavities of the head of the sperm whale (*Physeter macrocephalus*). It melts at 30° C. It differs from hypogeic acid in not yielding sebacic acid on distillation. **A., Picroacetic,** a saturated solution of picric acid in 1% acetic acid. **A., Picrochromic,** a mixture of picric acid (solution saturated in water) 10 vols.; 1% chromic acid solution 25 vols.; water 65 vols. **A., Picrohydrochloric,** a mixture of water 100 vols.; hydrochloric acid (of 25% HCl) 8 vols.; picric acid as much as will dissolve. **A., Picronitric,** a mixture of water 100 vols.; nitric acid (of 25% N_2O_5) 5 vols.; picric acid as much as will dissolve. **A., Picronitrochromic,** a mixture of 1 part of picronitric acid and 4 parts 1% chromic acid. **A., Picronitroosmic,** a mixture of picronitric acid 6 vols.; 2% osmic acid 1 vol. **A., Picrosulfuric,** a mixture of distilled water 100 vols.; sulfuric acid 2 vols.; picric acid as much as will dissolve (about 25%). Syn., *A., Concentrated or undiluted picrosulfuric.* **A., Pimaric,** $C_{20}H_{30}O_2$, an acid obtained from powdered gallipot resin by action of dilute alcohol, very similar to sylvic acid and passing into it when distilled *in vacuo.* It occurs in crusts of microscopic crystals, soluble in boiling alcohol and ether, melting at 210° C. Recent investigations show that pimaric acid consists of three isomerids, one of them the pimaric acid described by Laurent, dextropimaric acid, and levopimaric acid (*q. v.*). **A., Pimentic.** See *Eugenol* (Illus. Dict.). **A., Pipitzahoic, A., Pipitzahoinic,** $C_{15}H_{20}O_3$, a purgative principle discovered by Rio de la Loza in species of *Perezia,* and also obtained from *Trixis radiale,* occurring in glossy golden scales, soluble in alcohol and ether, melting at 103°–104° C. It is used as a mild drastic. Dose, 0.2–0.3 gm. (3–5 gr.). **A., Pivalic.** See *A., Valeric, Tertiary.* **A., Plasminic,** a secondary nucleinic acid obtainable from yeast. It is soluble in water and precipitates albumins in acid solution. Its phosphoric acid radicle is capable of forming a true organic iron compound containing 1% of iron. It does not

give Millon's nor the biuret reaction and contains no sulfur. On decomposition with mineral acids by boiling it yields nucleinic bases and phosphoric acid [Simon]. **A., Podocarpinic,** $C_{17}H_{22}O_3$, an acid found as the principal constituent of the resin of *Podocarpus cupressina*, R. Br. **A., Polyatomic,** one containing several atoms of replaceable hydrogen. **A., Polybasic,** acids containing several carboxyl groups. **A., Polychromic.** See *A., Aloetic.* **A., Polyhydric.** Same as *A., Polyatomic.* **A., Propenyltricarboxylic.** See *A., Tricarballylic.* **A., Propionic,** $C_3H_6O_2$, an oxidation product of propylic alcohol; it is a clear colorless liquid with an odor like butyric and acetic acids and a specific gravity of 1.013 at 0° C.; it is miscible with water and boils at 141° C. **A., Propionylsalicylic,** a compound obtained from salicylic acid by action of anhydrous propionic acid. It is used in gout and rheumatism. **A., Pseudacetic, A., Pseudoacetic.** See *A., Propionic.* **A., Purreic, A., Purrheic.** Same as *A., Euxanthic* (Illus. Dict.). **A., Pyridincarbonic,** picolinic acid. See under *Picolinic* (Illus. Dict.). **A., Pyridintricarboxylic, A., Pyridintricarbonic,** $C_8H_5NO_6$, an oxidation product of cinchona alkaloids; it is a white crystalline powder, soluble in water and alcohol, and melting at 250° C. It is antipyretic, antiseptic, and antiperiodic, and is used in whooping-cough, typhoid and intermittent fevers, etc., and externally as an injection in urethral inflammation. Dose, 10 grains 5 times daily. Syn., *A., Carbocinchomeronic.* **A., Pyro-,** an acid formed from another acid by action of heat. **A., Pyroglucic.** See *Pyrodextrin* (Illus. Dict.). **A., Pyroguaiacic.** See *Guaiacol* (Illus. Dict.). **A., Pyrolactic.** See *Lactid* (Illus. Dict.). **A., Pyroleic.** See *A., Sebacic* (Illus. Dict.). **A., α-Pyrolidincarbonic,** $C_5H_9NO_2$, a product of proteid cleavage differing from all others in having a nitrogen-containing ring. **A., Pyrolithic.** See *A., Tricyanic* (Illus. Dict.). **A., Pyrolivilic, A., Pyroolivilic,** an oily liquid obtained by Sobrero by dry distillation of olivil having the composition and properties of eugenol, and is either identical with this or with isoeugenol. **A., Pyronecarboxylic.** Same as *A., Comanic* (Illus. Dict.). **A., α-Pyronedicarboxylic.** See *A., Chelidonic* (Illus. Dict.). **A., Pyroracemic.** See *A., Pyruvic* (Illus. Dict.). **A., Pyrosorbic.** See *A., Maleic.* **A., Pyrouvic.** See *A., Pyruvic* (Illus. Dict.). **A., Quassic,** $C_{30}H_{40}O_{10}$, a dibasic crystalline acid obtained by decomposing quassin with hydrochloric acid. **A., Quercetic, A., Quercetinic,** $C_{15}H_{10}O_7 + 3H_2O$, an acid obtained from quercetin by action of caustic potash, forming silky needles, easily soluble in alcohol and in ether, sparingly soluble in water; it reduces silver solutions and with ferric chlorid gives an intensely blue-black color. **A., Quercitric.** See *Quercitrin* (Illus. Dict.). **A., Quillayaic.** See *A., Quillaic* (Illus. Dict.). **A., Quinethonic,** $C_{14}H_{18}O_9$, an acid found in the urine after administration of phenetol. **A., Quinolincarboxylic.** See *A., Cinchoninic* (Illus. Dict.). **A., Quinopicric,** a mixture of quinin and cinchonin picrates, occurring as a brownish powder; it was proposed as a succedaneum for quinin sulfate. **A., Quinovic,** $C_{24}H_{38}O_4$ (Hlasiwetz and Gilm.), a decomposition product of quinin; a tasteless, white, crystalline powder; dextrorotary; soluble in ether and chloroform, slightly in alcohol, insoluble in water. Syn., *Kinovic acid.* **A. Radicle.** See under *Radicle.* **A., Rapic, A., Rapinic,** $C_{18}H_{34}O_2$, an acid found in rape oil as glycerol ester. **A.-reaction.** See under *Reaction.* **A., Regianic,** $C_8H_6O_7$, a black amorphous acid obtained by Phipson from the shells of unripe butternuts, *Juglans cinerea.* With alkalis it forms soluble purple salts and with lead oxid an insoluble brown-violet salt. **A., Resorcindisulfonic,** $C_6H_6S_2O_8 + 2H_2O$, obtained from resorcin by the action of sulfuric acid, occurring as deliquescent needles, soluble in water and alcohol. **A., Ricinic,** an acid obtained from castor oil by dry distillation or by saponification. **A., Ricinostearic,** an acid produced in the saponification of castor oil. Syn., *A., Margaritic.* **A., Sabadillic.** See *A., Tiglic.* **A., Saccharinic.** See *A., Saccharic* (Illus. Dict.). **A., Saccharolactonic,** an aldehydic acid midway between gluconic acid and saccharinic acid occurring in the animal body as a transformation product of the latter. **A., Salicylacetic, A., Salicyloacetic,** $C_9H_8O_5$, a reaction product of sodium salicylate in a soda solution with sodium monochloracetate, occurring in lustrous leaflets, soluble in boiling water and alcohol; slightly in cold water, ether, chloroform, and benzene; melts at 188° C. It is antiseptic and used as salicylic acid. Syn., *Acetosalicylic acid; Salicyloxyacetic acid; Salicylhydroxyacetic acid.* **A., Salicylhydroxyacetic.** See *A., Salicyla etic.* **A., Salicylous.** See *Aldehyd, Salicylic* (Illus. Dict.). **A., Salicyloxyacetic.** See *A., Sal acetic.* **A., Salicylsulfonic, A., Salicylsulfuric.** See *A., Sulfosalicylic.* **A., Santalic.** Same as *San talin* (Illus. Dict.). **A., Santoic,** $C_{15}H_{20}O_4$, yellow granular or rhombic crystals, isomeric but not identical with santoninic acid, obtained by boiling santonin with baryta-water. It is soluble in alcohol, ether, and chloroform, and melts at 171° C. **A., Santonic.** See *A., Santoninic* (Illus. Dict.). It is also applied to *A., Santoic.* **A., Santous,** $C_{15}H_{20}O_3$, a product of the reduction of santonin with hydriodic acid; it i dextrorotary and melts at 179° C. **A., Sarcylic,** a pri mary neucleinic acid yielding hypoxanthin on decom position. Syn., *A., Hypoxanthylic.* **A., Sclerotic.** Se *A., Sclerotinic* (Illus. Dict.). **A., Scoparic.** Se *Scoparin* (Illus. Dict.). **A., Scymnolsulfuric,** a acid found in the bile of the shark (*Scymnus bore alis*). **A., Scytodephic, A., Scytodepsic,** tanni acid. **A. of Sea Salt,** hydrochloric acid. **A., Seba cinic, A., Sebacylic,** sebacic acid. See under *Seba* (Illus. Dict.). **A., Selenous, A., Selenious,** H_2SeO_3 a diatomic, diabasic acid obtained from selenium b the action of hot nitric acid, crystallizing in colorless long, transparent prisms, soluble in water with heat. A **Selinic,** a peculiar acid found by Peschier in the roo of *Peucedanum palustre.* **A., Septic,** nitric acid. **A Shikiminic,** $C_7H_{10}O_5$, a monobasic acid obtained fro the fruits of *Illicium anisatum,* L. It is a crystallin powder melting at 178°–180° C. It is converted int protocatechuic acid on fusion with potash. **A., Sil cic,** 1. SIO_2, a snow-white bulky powder obtaine from a solution of silicates by the action of miner acid. It is soluble in a hot alkali solution; preci tated silica. 2. See *A., Orthosilicic.* **A., Silicc fluorhydric, A., Silicofluoric.** See *A., Hy fluosilicic.* **A., Skatolacetic,** $C_8H_5(CH_3)N \cdot CH_2 \cdot CO_2H$, a product of the decay of albuminates, meltir at 134° C. **A., Skatolamidoacetic,** according Nencki, an acid existing preformed in the pro molecule. **A., Skatolcarbonic, A., Skatolcarboxyli** $C_{10}H_9NO_2$, an acid formed during the process of a minous putrefaction, and a normal constituent of hum urine. It melts at 165° C. Syn., *A., β-Methylindol dolcarboxylic.* **A., Skatolsulfuric,** $C_9H_8NSO_4H$, a acid appearing as the potassium salt in the urine aft administration of skatol. It has been observed in co siderable quantity in diabetic urine. **A., Skatoxy glycuronic,** a substance formed in the body by co gation of skatol and glycocoll and eliminated in t urine. **A., Skatoxylsulfuric.** See *A., Skatolsulf*

ric. **A., Sozoiodolic.** See *Sozoiodol* (Illus. Dict.). **A., Spermanucleinic,** $C_{40}H_{51}N_{14}O_{17}.2P_2O_5$, a primary nucleinic acid occurring in semen; it contains xanthin, hypoxanthin, and adenin as bases, and gives rise to levulinic acid. **A., Sphacelinic,** an acid, regarded as the constituent of ergot, which causes gangrene and develops the cachexia of the disease. **A., Spiræic, A., Spiroylous.** See *Aldehyd, Salicylic* (Illus. Dict.). **A., Stearophanic.** See *A., Stearic* (Illus. Dict.). **A., Stearoricinic.** See *A., Ricinostearic.* **A., Stibious.** Sb_2O_3, white or grayish crystalline powder used as an expectorant and emetic. See *Antimonium oxid* (Illus. Dict.). Syn., *Anhydrous antimonious acid; Antimonious oxid of antimony; Antimony trioxid.* **A., Stibous,** $C_{15}H_{12}O_5$ (Gmelin), a crystalline substance from oil of bitter almonds by action of fuming sulfuric acid. **A., Strychninic.** Same as *A., Igasuric* (Illus. Dict.). **A., Styrolic, A., Styrylic.** See *A., Cinnamic* (Illus. Dict.). **A., Sudoric.** See *A., Hidrotic.* **A. of Sugar,** oxalic acid. **A., Sulfaminbarbituric.** See *A., Thionuric.* **A., Sulfazotized,** a class of acids formed from potassium nitrite by action of sulfurous acid. **A., Sulfindigotic, A., Sulfindylic.** See *A., Indigosulfonic.* **A., Sulfo-.** See *A., Thio-.* **A., Sulfoanilic.** See *A., Sulphanilic* (Illus. Dict.). **A., Sulfocarbovinic.** See *A., Xanthic* (Illus. Dict.). **A., Sulfocholeic.** See *A., Taurocholic* (Illus. Dict.). **A., Sulfocyanhydric.** **A., Sulfocyanic,** CNHS, rhodanic acid (Illus. Dict.). **A., Sulfoindigotic.** See *A., Indigosulfonic.* **A., Sulfoindylic.** See *A., Indigosulfonic.* **A., Sulfonilic.** See *A., Sulphanilic* (Illus. Dict.). **A., Sulfophenic.** See *A., Sulphocarbolic* (Illus. Dict.). **A., Sulfophenolic,** phenolsulfonic acid. See under *Phenolsulphonic* (Illus. Dict.). **A., Sulfopurpuric.** See *A., Indigotinmonosulfuric.* **A., Sulfosalicylic,** $C_7H_6SO_6$, an acid obtained from salicylic acid by the action of sulfuric anhydrid, occurring as white crystals soluble in water and alcohol, melting at 120° C., and colored an intense violet-red by ferric chlorid. It is used as a test for albumin in urine. Syn., *A., Salicylsulfonic.* **A., Sulfothiocarbonic.** See *A., Xanthogenic.* **A., Sulfotumenolic.** See *Tumenol* (Illus. Dict.). **A., Sulfuric, English,** ordinary sulfuric acid. **A., Sulfuric, Fuming,** $H_2SO_4.SO_3$, an oily liquid, fuming in the air, obtained by roasting ferrous sulfate. Syn., *Nordhausen oil of vitriol; Nordhausen acid.* **A., Sulfurocarbolic,** a combination of sulfuric and carbolic acids, used as an antiseptic. **A., Sumbulic, A., Sumbulolic.** See *A., Angelic* (Illus. Dict.). **A., Sylvic, A., Sylvinic,** $C_{20}H_{30}O_2$, a constituent of colophony which appears after much research to be a mixture of two acids, one dextrorotary, the other levorotary. **A., Tanningenic, A., Tanningic.** See *Catechin* (Illus. Dict.). **A., Tartaric, Inactive.** See *A., Mesotartaric.* **A. of Tartar,** tartaric acid. **A., Tartarous,** tartaric acid. **A., Tartralic,** $C_8H_{10}O_{11}$ (Schiff), Frémy's name for a dibasic acid, occurring as an amorphous deliquescent mass obtained by heating ordinary tartaric acid to 140°–150° C. Syn., *A., Ditartrylic; Isotartaric acid; Ditartaric acid.* **A., Tartrelic,** $C_8H_6O_{10}$, is produced when tartaric acid is heated for some time to 180° C. It forms deliquescent crystals. **A., Taurocarbamic,** $C_3H_8N_2SO_4$, a uramic acid appearing in the urine after the ingestion of taurin. **A., Taurylic,** Städeler's name for a substance discovered in cow's urine which proved to be cresol. **A., Temulentic,** $C_{12}H_{42}NO_{19}$, a crystalline acid isolated from seeds of *Lolium temulentum,* to which the vertigo produced by the ingestion of this grass is attributed. **A., Tetraboric,** $H_2B_4O_7$, boric acid heated to 160° C., forming a glassy mass. Syn., *Pyroboric acid.* **A., Tetrahydric.** Same as *A., Tetratomic.* **A., Tetrathiodichlorsalicylic,** $(S_2:C_6HCl[OH]COOH)_2$, obtained from salicylic acid by the action of sulfuryl chlorid and heat; it occurs as a reddish-yellow powder, soluble in aqueous alkalis. It is antiseptic and used as a dusting-powder. **A., Tetratomic,** an acid having 4 atoms of replaceable hydrogen. **A., Thebolactic,** an acid found as a constant ingredient of opium, but later identified as ordinary lactic acid. **A., Thiacetic.** See *A., Thioacetic.* **A., Thiacetylenic.** See *A., Thioacetic.* **A., Thio-,** an acid in which sulfur is substituted for oxygen. **A., Thioacetic,** C_2H_4OS, a clear, pungent, sour liquid with a sulfureted hydrogen odor, obtained from glacial acetic acid and phosphorus pentasulfid. It boils at 93° C.; sp. gr. 1.074 at 10° C. It is used as a substitute for sulfureted hydrogen in analysis. Syn., *Ethanthiolic acid; Thiacetylenic acid; Thiacetic acid; Acetosulfuric acid.* **A., Thiocyanic.** See *A., Rhodanic* (Illus. Dict.). **A., Thiolinic,** a dark mass, consisting of linseed oil and sulfur dioxid, used in skin diseases. Syn., *Sulfurated linseed oil; Thiolin.* **A., Thioncarbonthiol.** See *A., Xanthogenic.* **A., Thionuric, A., Thiouric,** $C_4H_5N_3SO_6$, a dibasic crystalline acid obtained from heating alloxan with ammonium sulfite. Syn., *Sulfaminbarbituric acid.* **A., Thiophenic,** $C_4H_3S.COOH$, an oxidation product of thiophen and analogous in properties to benzoic acid. **A., Thiophenuric,** $C_7H_7NSO_3$, an acid formed in the body by the conjugation of glycocoll with thiophenic acid and eliminated in the urine. **A., Thiosalicylic,** $C_7H_6SO_2$, a brownish-yellow mass obtained from amidobenzoic acid by the successive action of nitrous acid and sulfureted hydrogen; a surgical antiseptic. **A., Thymic.** See *Thymol* (Illus. Dict.). **A., Thyminic,** $C_{16}H_{23}N_3O_{12}P_2$, a secondary nucleinic acid obtained from adenylic and other primary nucleic acids after the separation of the nucleinic bases. On decomposition with strong sulfuric acid it yields a crystalline substance called *thymin.* **A., Thymolsulfonic,** $C_{10}H_{14}SO_4$, obtained from thymol by the action of sulfuric acid. It occurs in pearly crystalline plates, soluble in water and alcohol, melting at 91°–92° C. **A., Thymonucleinic,** $C_{25}H_{36}N_9O_{20}P_3$, a primary nucleinic acid occurring in the thymus gland and containing adenin and guanin as bases; it gives rise to levulinic acid. **A., Tiglic, A., Tiglinic,** $C_5H_8O_2$, an acid found in croton oil and Roman cumin oil, is a mixture of glycerol esters of various fatty acids, crystallizes in triclinic tablets soluble in hot water, melts at 64.5° C., boils at 198.5° C., and has an aromatic odor. Syn., *A., α-Methylcrotonic; Crotonolic acid.* **A., α-Toluic, A., α-Toluylic.** See *A., Phenylacetic* (Illus. Dict.). **A., Toluric,** $C_{10}H_{11}NO_3$, a nitrogenous acid found in the urine and derived from the conjugation of glycocoll with toluic acid. **A., Toncic.** See *Coumarin* (Illus. Dict.). **A., Toxicodendric,** according to Maisch, the active toxic principle contained in *Rhus toxicodendron.* **A., Tribasic,** an acid having 3 replaceable hydrogen atoms. **A., Tricarballylic,** $C_3H_5(CO_2H)_3$, is obtained as a by-product in the manufacture of beet-sugar and forms rhombic crystals soluble in alcohol and water, melting at 158° C. Syn., *A., Carballylic; Propenyltricarboxylic acid; Glyceryltricarbonic acid.* **A., Trichlorbutylglycuronic,** an acid occurring in the urine and produced in the body by conjugation of trichlorbutyl alcohol and of butyl chloral hydrate with glycuronic acid. **A., Trichlorcarbolic.** See *Trichlorphenol* (Illus. Dict.). **A., Trichlorphenic.** See *Trichlorphenol* (Illus. Dict.). **A., Trimethacetic, A., Trimethylacetic.** See *A., Valeric, Tertiary.* **A., Trimethylcarbincarbonic.** See *A., Valeric, Tertiary.*

A., Tuberculinic, Ruppel's name for the nucleinic acid contained in the tubercle bacillus to which substance its toxic action is attributed. **A., Tumenolsulfonic,** a substance obtained from tumenol by action of fuming sulfuric acid; used as a dusting-powder. **A., Tyrosinhydantoinic,** $C_{10}H_{10}N_2O_3 + H_2O$, one of the uramic acids forming large transparent crystals and occurring in the urine after the administration of tyrosin. Syn., *A., Hydantoin hydroparacumaric.* **A., Ulmic** or **Ulminic,** $C_{40}H_{30}O_{18}$ (?), a brown amorphous mass obtained from decomposing vegetable matter; it is slightly soluble in alkaline solutions. **A., Umbellic.** (See Illus. Dict.) 2. Persoz's name for anisic acid. **A., Umbellulic,** an acid obtained from the seeds of California laurel, *Umbellularia californica.* **A.s, Uramic,** a series of carbamid, —CONH compounds occurring in the urine after the ingestion of amidoacids. They comprise methyl-hydantoinic acid, taurocarbamic acid, uramido-benzoic acid, and tyrosinhydantoinic acid or hydantoin hydroparacumaric acid. They are found after the ingestion of sarcosin or methylglycocoll, of taurin, amidobenzoic acid, and tyrosin respectively. [Simon.] **A., Uramidobenzoic,** $C_8H_8N_2O_3$, a uramic acid appearing in the urine after the ingestion of amidobenzoic acid. **A., Uranic.** See *Uranium Oxid, Red.* **A., Ureous.** See *Xanthin* (Illus. Dict.). **A. of Urine,** 1. Phosphoric acid. 2. Uric acid. **A., Urobenzoic.** See *A., Hippuric* (Illus. Dict.). **A., Urobutylchloric,** $C_{10}H_{15}Cl_3O_7$, or $C_{10}H_{17}Cl_3O_7$, a substance found in the urine after administration of butyl chloral. **A., Urocanic, A., Urocaninic,** $C_{12}H_{12}N_4O_4$, an aromatic acid found in dog's urine. **A., Urochloralic,** an acid found in the urine after ingestion of chloral and formed in the body by conjugation of chloral with glycuronic acid. **A., Uroerythric.** See *Uroerythrin* (Illus. Dict.). **A., Uroleucinic.** See *A., Uroleucic* (Illus. Dict.). **A., Uronitrotoluic,** $C_{13}H_{15}NO_9$, an acid found in the urine after ingestion of orthonitrotoluene, occurring as a crystalline mass resembling asbestos with strong acid reaction and very soluble in water and alcohol. **A., Uroproteic,** $C_{66}H_{116}N_{20}SO_{54} + nH_2O$, an acid found in the urine of dogs that had been fed exclusively upon meat. **A., Urosulfic.** Same as *A., Thiouric.* **A., Uroxanic,** $C_5H_8N_4O_6$, a dibasic acid obtained from an alkaline solution of uric acid exposed for some months to the action of air free from carbon dioxid. **A., Urrhodinic, A., Urrhodonic,** a highly aromatic substance isolated from urine, forming brown stellate aggregations of soluble crystals. **A., Urushic,** a monobasic volatile acid obtained from *Rhus vernicifera.* **A., Uryllic.** Same as *A., Uric* (Illus. Dict.). **A., Uvic, A., Uvinic.** See *A., Racemic* (Illus. Dict.). **A., Valeric, Active.** See *A., Methylethylacetic.* **A., Valeric, Normal,** $CH_3(CH_2)_3CO_2H$, an isomer of valeric acid, first prepared by Lieben and Rossi from pentonitril (C_4H_9CN), is a liquid with odor of normal butyric acid, boiling at 186° C., melting at 59° C. Sp. gr. 0.9568 at 0° C.; Syn., *Pentoic acid; Normal propylacetic acid; Isobutyl carbonic acid.* **A., Valeric, Tertiary,** $(CH_3)_3C.CO_2H$, a fatty crystalline acid containing a tertiary alcohol radicle discovered by Butlerow, who obtained it synthetically from tertiary butyl alcohol; melts at 35° C., boils at 163° C. Syn., *A., Pivalic; Trimethylacetic acid; Pseudovaleric acid; Trimethacetic acid; Pinalic acid; Trimethylcarbincarbonic acid.* **A., Vanadinic.** See *Vanadium Bronze, Table of Pigments* (Illus. Dict.). **A., Vanillic, A., Vanillinic,** $C_6H_3.O4.OCH_3COOH$, an oxidation product of vanillin, forming colorless needles soluble in water, in alcohol, and in ether, melting at 211° C. Syn., *A., Methylprotocatechuic.* **A.s, Vegetable,** acids found in vegetable juices or structure. **A., Viburnic,** ordinary valeric acid discovered in *Viburnum opulus.* **A., Vieric.** See *Vierin.* **A.s, Vinic,** acids obtained from alcohol by action of acids. **A., Vitriolic,** sulfuric acid. **A., Xanthogenic,** HO.CS.SH, an acid not existing in the free state; the xanthates are obtained from it. Syn., *Sulfothiocarbonic; Thioncarbonthiol acid.* **A.s, Xanthoproteic,** nitrogenous substances obtained from solutions of proteids by action of nitric acid. **A., Xanthylic,** a primary nucleinic acid yielding xanthin on decomposition. **A., Xanthylicnucleinic.** See *A., Xanthylic.* **A., Xeronic,** $C_8H_{12}O_4$, a pyrocitric acid known in the form of its anhydrid as a liquid with peculiar smell, with sweet-bitter taste, sparingly soluble in water, and boiling at 242° C. **A., Xylonic,** an oxidation product of xylose. **A., Yeast-nucleinic,** $C_{40}H_{59}N_{16}O_{22}.2P_2O_5$, a primary nucleinic acid occurring in yeast; it contains a carbohydrate group, as Kossel was able to obtain from it a hexose and a pentose. **A.-yellow.** See *Pigments, Table of* (Illus. Dict.). **A., Zizyphic,** Latour's name for a crystalline acid found in an aqueous extract of the wood of the jujube tree, *Zizyphus sativa.*

Acidifiant (*as-id-if'-i-ant*) [*acidum,* acid; *fieri,* to become]. Acid-forming.

Acidifier (*as-id-if-i'-ur*). One who or that which confers the properties of an acid upon a substance. Formerly oxygen was regarded as the essential "acidifying principle" or element.

Acidify (*as-id'-if-i*). 1. To convert into an acid. 2. To render sour, to acidulate.

Acidifying Principle. See under *Acidifier.*

Acidimetric (*as-id-e-met'-rik*). Pertaining to acidimetry.

Acidity. (See Illus. Dict.) **A. of the Stomach,** sourness of the stomach due to oversecretion of acid or to fermentation of the food.

Acidness (*as'-id-ness*). Same as *Acidity.*

Acidobasic, Acidobasigenous (*as-id-o-ba'-sik, as-id-o-ba-sij'-en-us*) [*acidum,* acid; *βάσις,* a foundation *γεννᾶν,* to produce]. Combining acid and basic characters.

Acidometer (*as-id-om'-et-ur*). See *Acidimeter* (Illus. Dict.).

Acidometric (*as-id-o-met'-rik*). See *Acidimetric.*

Acidopeirastica. See *Akidopeirastica.*

Acidophil, Acidophile (*as-id'-o-fil*) [*acidum,* acid; *φίλος,* loving]. 1. Susceptible of imbibing acid stains. 2. A substance having an affinity for acid stains.

Acidophilic, Acidophilous (*as-id-of'-il-ik, -us*). Having special affinity for acid stains. Cf. *Acidophil.*

Acidosis (*as-id-o'-sis*) [*acidum,* acid]. A condition of acidity.

Acidoxyl (*as-id-oks'-il*). A compound of an acidyl or acid radicle with oxygen.

Acidulant (*as-id'-u-lant*). Capable of imparting acidity or sourness.

Acidulate (*as-id'-u-lāt*) [*acidulare,* to make sour]. To render acid or sour.

Acidulum (*as-id'-u-lum*) [L. dim. of *acidum*]. An acid salt.

Acidyl (*as'-id-il*). The radicle of an organic acid, particularly those hydrocarbons of the formula C_nH_{2n-1}.

Acidylated (*as-id'-il-a-ted*). Combined with the radicle of a fatty acid (acidyl).

Acies. (See Illus. Dict.) 4. A ridge occurring at the intersection of two planes—as of bones. **A. digitorum manus,** the phalanges of the fingers taken together from their resemblance to a line of spears. **A. diurna.** See *Hemeralopia* (Illus. Dict.). **A. vespertina.** See *Nyctalopia* (Illus. Dict.).

Aciesis (*as-i-ē'-sis*). See *Acyesis.*

Aciform (*as'-e-form*) [*acus*, a needle; *forma*, form]. Needle-shaped; acicular, aciculate, aciculiform.

Acin (*as'-in*). See *Acinus* (Illus. Dict.).

Acinal (*as'-in-al*). Pertaining to an acinus; acinous.

Acineses. See *Akineses.*

Acinesic, Acinetic. See *Akinetic.*

Acinosa tunica. See *Tunica acinosa.*

Acinose (*as'-in-ōs*). See *Acinous.*

Acinosus (*as-in-o'-sus*) [L.]. Resembling grapes, acinous.

Acinotubular (*as-in-o-tu'-bu-lar*) [*acinus*, a grape; *tubulus*, a tube]. Applied to a gland or other structure having tubular acini or secreting sacs.

Acinous (*as'-in-us*) [*acinus*, a grape]. 1. Relating to an acinus or having acini. 2. Resembling a grape or a cluster of grapes; composed of granular concretions; acinose.

Acipenserin (*as-e-pen'-sur-in*). $C_{25}H_{72}N_{16}O_9$. A protamin obtained from the sturgeon, *Acipenser stellatus.*

Acleidian (*ah-kli'-de-an*) [a, priv.; κλεις, the collar-bone]. Without clavicles.

Acme. (See Illus. Dict.) 2. Acne; an acne papule; a wart.

Acmeochlorosis, Acmæochlorosis (*ak-me-o-klor-o'-sis*). See *Chlorosis adultorum.*

Acmeopimelorrhea, Acmæopimelorrhœa (*ak-me-o-pim-el-or-e'-ah*). See *Seborrhœa oleosa* (Illus. Dict.).

Acmeopolysarcia, Acmæopolysarcia (*ak-me-o-pol-e-sar'-se-ah*). See *Polysarcia adultorum.*

Acna (*ak'-nah*). See *Acne.*

Acne. (See Illus. Dict.) Syn., *Acne varus; Whelk; Stone pock; Acné boutonneuse; Acné éruptive.* **A. albida.** See *Milium* (Illus. Dict.). **A., Arthritic,** a form common in adults, especially in women at the climacteric and thought to be connected with the arthritic diathesis. **A. artificialis e bromio, A. artificialis e pice, A. artificialis ex iodinio.** See *A., Bromin-; A., Tar-; A., Iodin-.* **A. boutonneuse.** See *Acne.* **A., Bromin-, A., bromata,** that due to internal use of bromin. **A. cheloidienne.** See *Dermatitis papillaris capillitii* (Illus. Dict.). **A., Chlorin-,** a form described by Herxheimer, occurring among men engaged in manufacturing hydrochloric acid. The skin of the face was pigmented, comedones and pustules of varying size were thickly scattered over the face, brow, scalp, neck, back, upper thorax, genitals, and inner surface of the thighs. Atheromas and curious cornifications resembling those of Darier's disease were present on the scalp. **A. coagminata,** a form of bromin-acne in which the groups of closely aggregated pustules form thick patches covered with scabs of dried pus, presenting beneath a dusky red and often moist surface. **A., Concrete.** See *Seborrhœa sicca* (Illus. Dict.). **A., Congestive.** See *Acne rosacea* (Illus. Dict.). **A. contagiosa,** an inoculable pustular disease of horses, said to differ from horsepox. **A. cornea.** Same as *Ichthyosis follicularis* (Illus. Dict.). **A., Elephantiasic.** See *Rhinophyma* (Illus. Dict.). **A. ephebica,** a form peculiar to puberty. **A., Epileptic,** acne in an epileptic; it is sometimes due to ingestion of bromin. **A. éruptive.** See *Acne* (Illus. Dict.). **A. ex usu picis.** See *Acne, Tar-.* **A., Fluent-.** See *Seborrhœa oleosa* (Illus. Dict.). **A. granulosa.** See *A., cachecticorum* (Illus. Dict.). **A. hordeolans, A. hordeolaris,** a form with the pustules arranged in linear groups. **A., Iodin-, A. iodata, A. jodata,** acne due to internal use of iodin or its compounds. **A. luposa.** See *A. telangiectodes.* **A. medicamentosa,** acne due to the internal administration of certain drugs—as iodin, bromin, etc. **A. miliaris,** 1. Milium. 2. A pustular variety of A. rosacea. **A., Miliary Arthritic.** See *A. cachecticorum* (Illus. Dict.). **A., Miliary Scrofulous,** a variety of the disease usually occurring on the forehead; the pustules are small, discrete, or confluent, and often arranged in geometric figures. **A. molluscoidea, A. molluscum.** See *Molluscum contagiosum* (Illus. Dict.). **A., Penicilliform.** See *Tinea asbestina* and *seborrhœa amianthacea* (Illus. Dict.). **A., Pilous,** a variety of the disease in which the pustules involve the hair-bulbs. **A., Pilous, Umbilicated,** a variety of the disease in which each pustule is umbilicated and pierced by a hair. **A. psydracia,** term used by Sauvage to designate pustular acne. **A. punctata albida.** See *Milium* (Illus. Dict.). **A., Pustulous Disseminated,** the name given by Bazin to A. simplex. **A. rhinophyma.** Same as *A. hypertrophica* (Illus. Dict.). **A. rosacea congestiva.** See *A. hypertrophica* (Illus. Dict.). **A. rosacea hypertrophica.** See *A. hypertrophica* (Illus. Dict.). **A. rosacea pustulosa.** See *Rosacea pustulosa.* **A. scorbutica,** that associated with scurvy. Syn., *Purpura maculosa.* **A. sebacea cornea.** See *Darier's Disease* (Illus. Dict.). **A. sebacea molluscum.** See *Atheroma* (Illus. Dict.). **A., Sebaceous, Crusty.** See *Seborrhœa sicca* (Illus. Dict.). **A., Sebaceous, Dry, A. sebacea exsiccata.** See *Xeroderma* (Illus. Dict.). **A., Sebaceous, Fluent.** See *Seborrhœa oleosa* (Illus. Dict.). **A. sécretante,** a comprehensive term used by Bazin for anomalies of sebaceous secretion, including acne punctata and acne sebacea. **A. solaris,** a form due to exposure to the sun, marked by red papules that seldom suppurate, occurring on the nose, lower eyelids, and cheeks. **A., Squamous,** a form described by Astruc, perhaps seborrhœa sicca. **A. strophulosa.** See *Milium* (Illus. Dict.). **A., Syphilitic, A. syphilitica,** a form with inflammation in the follicles appearing in scattered, pointed pustules with copper-colored base. Syn., *Acneiform syphiloderm.* **A., Tar-,** that due to prolonged application of tar to the skin, marked by red inflammatory papules with black points in the centers. Syn., *Acne ex usu picis.* **A. telangiectodes, A. teleangeiectodes,** Kaposi's name for a nonpustular disease having its origin in the hair-follicles and presenting smooth, shining, circumscribed hemispheric nodules, pale-pink to brownish-red in color, from a pinhead to a cherrystone in size. Epithelial cyst formation and degeneration of the hair-follicle attends it. Syn., *Disseminated follicular lupus simulating acne; Acne luposa; Lupus miliaris; Lupus follicularis acneiformis; Acute disseminated nodular tuberculous lupus.* **A., Tennesson's,** a disseminate variety of acne cornea. **A. of the Throat.** See *Pharyngitis, Follicular* (Illus. Dict.). **A. tuberata, A. tuberculosa.** See *A. indurata* (Illus. Dict.). **A., Tuberculoid.** See *Molluscum contagiosum* (Illus. Dict.). **A., Tuberculous, Umbilicated.** See *Molluscum contagiosum* (Illus. Dict.). **A. umbilicata.** See *Molluscum contagiosum* (Illus. Dict.). **A., Varicose,** a form described by Astruc characterized by dilated superficial capillaries. **A. varioliformis.** (See Illus. Dict.) 2. See *Molluscum contagiosum* (Illus. Dict.). **A. varus.** See *Acne* (Illus. Dict.). **A. vulgaris indurata.** See *A. indurata* (Illus. Dict.). **A. vulgaris simplex.** See *A. simplex* (Illus. Dict.). **A. vulgaris tuberata.** See *A. indurata* (Illus. Dict.).

Acneform, Acneiform (*ak'-ne-form, ak-ne'-e-form*). Resembling acne.

Acnemia. (See Illus. Dict.) 2. A condition marked by total absence of legs.

Acnemous (*ak'-ne-mus*) [a, priv.; κνήμη, leg]. Having imperfect calves; having no legs.

Acoathed (*ak-ōthd'*). A Dorsetshire term for sheep affected with liver disease.

Acocantherin. See under *Acokanthera venenata.*

Acoccygeus (*ah-kok-sij'-e-us*) [*a*, priv.; *κόκκυξ*, coccyx]. Destitute of a coccyx.

Acodin (*ak'-o-din*). A preparation used in dentistry said to consist of aconite, iodin, tannic acid, and glycerin.

Acoesis (*ak-o-e'-sis*). See *Audition* (Illus. Dict.).

Acoeton, Acoetos, Acoetus (*ak-o'-e-ton, -tos, -tus*). See *Oxymel* (Illus. Dict.).

Acognosia (*ah-kog-no'-ze-ah*). See *Aceognosia* (Illus. Dict.).

Acography (*ak-og'-raf-e*) [*ἄκος*, a remedy; *γράφειν*, to write]. A description of remedies.

Acoin C. (*ak'-o-in*). Hydrochlorate of di-para-anysil-mono-para-phenetyl-guanidin, a white powder, used in 1% aqueous solution as a local anesthetic. It is a powerful disinfectant and first introduced into medical practice by Darier for anesthesia of the eye.

Acoitus (*ak-o'-it-us*). See *Oxymel* (Illus. Dict.).

Acokanthera (*ak-o-kan-the'-ra*) [*ακωκή*, a point; *ἀνθηρός*, blooming]. A genus of plants of the order *Apocynaceæ*. **A. abyssinica** yields an African arrow-poison, *mshangu*, secured from a decoction of the branches, the toxic property due to a crystalline glucosid, $C_{29}H_{46}O_3$, described by Brieger in 1902. **A. deflersii** and **A. schimperi** are used as arrow-poisons in Africa. The poisonous principles are crystalline glucosids. **A. venenata**, G. Don., a species indigenous to southern Africa, where a decoction of the bark is used by the natives to poison arrows. The poisonous principle is a glucosid, *acocantherin*, similar to or identical with *ouabaïn*.

Acolabis (*ak-ol'-ab-is*) [*ἀκίς*, a point; *λαβίς*, forceps]. A double-toothed artery forceps devised by Puppi.

Acolyctin (*ak-o-lik'-tin*). Hübschmann's name for an alkaloid derived from *Aconitum lycoctonum*, Linn. According to Wright and Luff, it is identical with aconin and pseudaconin; but according to Dragendorff and Spohn, it is a decomposition product of lycaconitin and myoctonin.

Acomus. (See Illus. Dict.) 2. See *Acosmus.*

Acone (*ak'-on e*) [L.]. 1. A whetstone. 2. A levigation appliance. 3. A mortar.

Aconitate (*ak-on'-it-āt*). A salt of aconitic acid.

Aconitin (*ak-on'-it-in*). (See Illus. Dict.) 2. $C_{33}H_{45}NO_{12}$ (Dunstan), an intensely poisonous alkaloid from *Aconitum napellus* and other species; it occurs as white flat crystals of slightly bitter taste, soluble in alcohol, ether, chloroform, and hot water; melts at 184°–186° C. Dose, $\frac{1}{200}$ gr. (0.0003 gm.). Syn., *Aconiticum; Aconitinum; Aconitium.* 3. See *Aconitina.* **A., Amorphous**, a mixture of several bases found in the bulbs of *Aconitum napellus.* Its principal constituent is aconitin and picroaconitin. It is about 15 to 20 times less poisonous than pure crystallized aconitin. **A., British**, $C_{36}H_{49}NO_{12}$ (Wright), the alkaloid prepared by Morson from *Aconitum ferox*, Wall. It is a yellowish-white crystalline powder, soluble in hot water, slightly soluble in alcohol, ether, and chloroform. Dose, $\frac{1}{250}$ gr. (0.00026 gm.). Also called *English Aconitin, Acraconitin, Morson's Napellin* or *Pure Aconitin, Hübschmann's Pseudaconitin, Flückiger's Nepalin.* **A. Bromhydrate.** See *A., Hydrobromate.* **A., Duquesnel's.** See *A. Nitrate.* **A., English.** See *A., British.* **A. Hydrobromate**, $C_{33}H_{43}NO_{12}HBr + 2\frac{1}{2}H_2O$ (Jürgens.), from crystalline aconitin, occurring as small white tablets, soluble in water and alcohol; melts at 163° C. Dose, the same as the crystalline alkaloid. **A. Hydrochlorate**, $C_{33}H_{43}NO_{12}HCl + 3H_2O$ (Jürgens.), a white crystalline powder from crystalline aconitin, soluble in water and alcohol. Dose, about the same as the alkaloid. Syn., *Aconitin chlorhydrate, A. hydrochlorite.* **A. Nitrate**, $C_{33}H_{45}NO_{12}HNO_3$, fine white prisms or rhombic crystals, soluble in alcohol, slightly in water; it is highly poisonous and is used in neuralgia and rheumatism. Dose, about the same as the alkaloid. Syn., *Duquesnel's aconitin.* **A. Phosphate**, a salt of aconitin. It occurs as white crystalline powder, or as a yellowish-white amorphous powder. Soluble in water and alcohol. **A. Salicylate**, a salt of aconitin occurring as a white crystalline powder or as a yellowish-white amorphous powder. Soluble in water and in alcohol. **A. Sulfate**, $(C_{33}H_{43}NO_{12})_2H_2SO_4$, a salt of aconitin occurring as a crystalline powder, in glass-like lumps, or as a yellowish-white amorphous powder. It is soluble in water and in alcohol.

Aconitina (*ak-on-it-i'-nah*). An impure aconitin, or combination of principles obtained from the root of *Aconitum napellus*, Linn., as prepared by Morson. It occurred in white grains free from odor, with a sharp bitter taste, not volatile, easily fusible, soluble in alcohol and ether and in 60 parts of water at 60° F. or 100 parts at 212° F. Its salts do not crystallize, but form gum-like masses. It was regarded by the eclectics as "too powerful a poison to be used internally," but was recommended externally in form of tincture or ointment in neuralgia or rheumatism.

Aconitium (*ak-o-ne'-she-um*). See *Aconitin.*

Aconitum. (See Illus. Dict.) 2. A genus of herbs of the natural order *Ranunculaceæ.* **A. anthora**, Linn., a species native to Europe and the Orient, and northern Asia. The roots have been employed in the treatment of thoracic affections. **A. cammarum**, Linn., a species native to Europe. Used as a source of aconitin. This is probably the species employed by Baron Stoerk, of Vienna, who introduced aconite into modern practice in 1762. **A. ferox**, Wall., a species indigenous to the Himalayan region. The root is employed externally, in tincture, for the treatment of rheumatism; it is the source of British aconitin or *pseudaconitin*, and of the arrow-poison known as *Butsnab-bikh, bikh, bish, biskh*, or *Visha*, employed in killing tigers and other troublesome animals. It is regarded as the most formidable poison of India. **A. fischeri**, Reichb. a species indigenous to Siberia, but said to grow in the mountains of the western United States. It differs but little from *A. napellus* in physiologic action. **A. heterophyllum**, Wall., a shrub, native of the Himalayan region. The root, known as *Atees, Atis*, or *Utees*, is sold in fine white powder as a tonic and febrifuge. It is intensely bitter and slightly astringent, and contains considerable starch, which is prepared as food. It yields the nonpoisonous alkaloid *atisin.* **A. japonicum**, Decne., a Japanese species (*tsaouwoo*), the rhizomes of which are kept in Japanese drug-stores along with those of some six other species, usually preserved in vinegar, in urine, or by drying. Several alkaloids have been separated, of which *japaconitin* is said to be the most poisonous of all aconite alkaloids. **A. luridum**, Hook. fil., a Himalayan species occurring in commerce with *A. ferox.* **A. lycoctonum**, Linn., a species indigenous to Europe and northern Asia. The leaves are said to be eaten as a potherb, though avoided by cattle. The root yields 4 alkaloids: *lycaconitin, myoctonin, lycaconin*, and *acolytin.* **A. paniculatum**, Lamarck, a European species said to serve as a source of aconitin, although it is almost inert.

Acontyl (*ak-on'-it-il*). $C_6H_3O_3$. The trivalent radicle of aconitic acid.

Acopos (*ah'-ko-pos*) [*a*, priv.; *χόπος*, pain, that is to say calmative]. 1. A class of anodyne medicines. 2. The "refreshing" stone, described by Pliny as "like niter in appearance, porous and starred with drops of gold; gently boiled with oil and applied as an unguent it relieves lassitude." 3. *Anagyris fetida*, Linn. (*q. v.*). 4. Applied by Apuleius to manna.

Acopria (*ah-kop'-re-ah*). See *Acoprosis* (Illus. Dict.).

Acoprous (*ah-kop'-rus*). Characterized by the absence of excrement in the bowels.

Acopyrin (*ak-o-pi'-rin*). A combination of aspirin and antipyrin; it is used in rheumatism. Dose, 0.5 gm. 5 or 6 times daily.

Acoria. (See Illus. Dict.) 2. Temperance in eating. 3. A nervous affection of the stomach characterized by a sense of satiety.

Acorn-chocolate. See under *Chocolate.* **A.-sugar.** See *Quercit* (Illus. Dict.).

Acorum (*ak'-or-um*) [*ἄκορον*]. The root of the sweet-flag, *Acorus calamus*, Linn.

Acorus (*ak'-or-us*) [*ἄκορος*, the sweet-flag]. A genus of herbs belonging to the natural order *Aroideæ.* **A. calamus,** Linn., sweet-flag, a species common in swamps throughout Europe and the United States; the rhizome is used as a carminative and aromatic. It yields acorin and calamus oil.

Acosmia. (See Illus. Dict.) 3. Ataxia. 4. Baldness. 5. Any deformity giving rise to irregularity of the features. Syn., *Acosmy.*

Acosmus (*ak-oz'-mus*). Affected with acosmia. Syn., *Acosmus.*

Acosmy (*ak-oz'-me*). See *Acosmia.*

Acouometer. (See Illus. Dict.) 2. An instrument devised by Marage arranged to give a typical sound of a vowel, which may be used as a standard to which other sounds may be referred.

Acouphonia (*ah-koo-fo'-ne-ah*). See *Acouophonia* (Illus. Dict.).

Acousia (*ah-koo'-se-ah*) [*ἀκουσία*, constraint]. Involuntary action

Acousmetric, Acousmometric (*ah-koos-met'-rik, ah-koos-mo-met'-rik*). Pertaining to the auditory sense or to the power of estimating the relative distance of sounds. Syn., *Acusmetricus; Acusmometricus.*

Acoustica (*ah-koos'-te-ka*). Remedies for impaired hearing.

Acousticon (*ah-koos'-tik-on*). An ear-trumpet.

Acoutometer (*ah-koo-tom'-et-er*). Same as *Acoumeter* (Illus. Dict.).

Acquisitus (*ah-kwi-zit'-tus*) [*acquirire*, to acquire]. Acquired, said of habits, diseases, etc., not congenital or inherited.

Acracholia (*ak-ra-ko'-le-ah*) [*ἀκραχολία*]. A fit of passion; passionateness.

Acraconitin (*ak-ra-kon'-it-in*). See *Aconitin, British.*

Acracy (*ak'-ra-se*). See *Acrasia* (Illus. Dict.).

Acraldehyd (*ak-ral'-de-hīd*). Bauer's name for croton aldehyd. See under *Croton* (Illus. Dict.).

Acranius (*ah-kra'-ne-us*) [*a*, priv.; *κρανιον*, cranium]. A monster wholly or partly destitute of cranium.

Acratotherm (*ah-krat'-o-thurm*) [*a*, priv.; *χρατός*, mixed; *θερμή*, heat]. 1. A hot spring yielding water pure and soft through absence of mineral constituents. 2. The water of a hot spring having a low percentage of saline constituents.

Acratothermal (*ah-krat-o-thurm'-al*). Applied to baths prepared from mineral water of high temperature but with low percentage of solid constituents (50 gr. to a gallon). See under *Bath.*

Acribometer (*ak-re-bom'-et-ur*) [*ἀκριβής*, accurate; *μέτρον*, a measure]. A device for measuring minute objects.

Acridity (*ak-rid'-it-e*) [*acer*, sharp]. 1. The quality of being acrid, cutting, pungent, bitter, irritative or corrosive. Syn., *Acritude; Acridness; Acrity.*

Acridophagy (*ak-rid-of'-a-je*) [*ἀκρίς*, the locust; *φαγεῖν*, to eat]. 1. The practice of feeding upon locusts. 2. An Ethiopian disease supposed to be due to immoderate diet of locusts or to the penetration of the skin by these or other insects. 3. The condition of sores infested with maggots.

Acrisis, Acrisy (*ak'-ris-is, ak'-ris-e*). See *Acrisia* (Illus. Dict.).

Acritude (*ak'-rit-ūd*). See *Acridity.*

Acrity (*ak'-rit-e*). See *Acridity.*

Acro (*ak'-ro*). See *Acron.*

Acroblast (*ak'-ro-blast*) [*ἀκρος*, extreme; *βλαστός*, a germ]. Kollmann's term for that part of the germinal membrane of the embryo which gives rise to blood-vessels filled with blood and probably connective tissue. Cf. *Poreutes.*

Acroblastic (*ak-ro-blas'-tik*) [*ἀκρος*, extremity; *βλαστος*, a germ]. Germinating at the end. Monocotyledonous.

Acrobustitis (*ak-ro-bus-ti'-tis*). Same as *Acrobystitis.*

Acrobystia. (See Illus. Dict.) 2. Circumcision.

Acrobysticus (*ak-ro-bis'-tik-us*). Preputial.

Acrobystitis. (See Illus. Dict.) 2. Inflammation of the sheath of the penis in the horse.

Acrocheiron (*ak-ro-ki'-ron*). See *Acrocheir* (Illus. Dict.).

Acrochordus (*ak-ro-kord'-us*). See *Acrochordon* (Illus. Dict.).

Acrocolia (*ak-ro-ko'-le-ah*) [pl. of *ἀκροκώλιον*]. The extremities of the body, especially of the lower animals.

Acrocomia (*ak-ro-ko'-me-ah*) [*ἄκρον*, the top; *κόμη*, hair]. A genus of plants of the order *Palmæ.* **A. lasiospatha,** Mart., a species native of the West Indies. The pulp of the fruit is edible and the bitter nuts yield a valuable oil. **A. sclerocarpa,** Mart., the great macaw tree, a species native throughout tropical America. One of the most highly prized palms of Brazil, Guiana, and the Antilles. The wood is useful for construction, and yields an alimentary farina resembling sago. The fibers are of value for textile uses. The young leaves form one of the best of palm cabbages and a fine salad with oil and vinegar. The nut yields a valuable oil having the consistency of butter and an odor like violets. It is largely used in soap-making and is deemed a sovereign remedy by the natives in affections of the joints, "bone-ache," etc.

Acrocyanosis (*ak-ro-si-an-o'-sis*) [*ἄκρον*, an extremity; *κύανος*, blue]. Blueness of the extremities due to vasomotor disturbance.

Acrodactylum (*ak-ro-dak'-til-um*) [*ἄκρον*, apex; *δάκτυλος*, a finger]. The apex, tip, or upper aspect of a digit.

Acrodynia. (See Illus. Dict.) Syn., *Pedionalgia epidemica; Erythema epidemicum.* 2. Clarus' term for a rheumatic disorder of the nerves.

Acrodyny (*ak'-ro-din-e*). See *Acrodynia.*

Acroganglion (*ak-ro-gang'-gle-on*) [*ἄκρος*, apex; *γάγγλιον*, ganglion]. The vertical brain of invertebrates.

Acrokinesis (*ak-ro-kin-e'-sis*). See *Acrocinesis* (Illus. Dict.).

Acrol (*ak'-rol*). C_3H_4. Acrolein (C_3H_4O) deprived of its oxygen.

Acroleate (*ak-ro'-le-āt*). See *Acrylate.*

Acromia (*ak-ro'-me-ah*) [*ακρωμία*, the shoulder]. 1. The acromion. 2. The withers of a horse.

Acromis, Acromium (*ak'-ro-mis, ak-ro'-me-um*). Same as *Acromion* (Illus. Dict.).

Acromphalium, Acromphalum. See *Acromphalus.*

Acromphalus. (See Illus. Dict.) 3. The remains of the umbilical cord attached to the child.

Acromyle (*ak-rom'-il-e*) [ἀκρον, a point; μύλη, patella]. The patella.

Acron (*ak'-ron*) [L. pl. *acrones*]. 1. The apex or extremity of a structure or organism. 2. An irritating ointment.

Acronarcotic. (See Illus. Dict.) 2. An agent which combines an irritating and obtunding effect; acting either directly upon the peripheral nerves when applied externally, or upon the brain and spinal cord, producing paralysis, convulsions, and narcosis.

Acronychia (*ak-ro-ne'-ke-ah*) [ἀκρον, point; ὀνυξ, nail]. The tip of the nail.

Acronychous (*ak-ron'-ik-us*) [ἀκρώνυχος]. Furnished with claws, nails, or hoofs; achronychous.

Acropinacon (*ak-ro-pin'-ak-on*) [*acrolein; pinacone*]. $C_6H_{10}O_2$. A substance obtained from acrolein by action of nascent hydrogen. Syn., *Acrylic pinacon.*

Acroplethysmograph (*ak-ro-pleth-iz'-mo-graf*). See *Plethysmograph* (Illus. Dict.).

Acrosaline (*ak-ro-sa'-lin*) [*acer*, sharp; *sal*, salt]. Having acrid and saline properties.

Acrosarcous (*ak-ro-sar'-kus*) [ἀκρον, apex; σάρξ, flesh]. Having a fleshy extremity or apex.

Acrose (*ak'-rōz*). A substance isolated from the condensation products of glycerose (an oxidation product of glycerol) and formaldehyd and forming the starting-point for the synthesis of fruit-sugar, grape-sugar, and monnose.

Acrostichum (*ak-ros'-tik-um*) [ἀκρον, a point; στίχος, a line of writing]. A genus of ferns of the order *Polypodiaceæ.* **A. aureum,** Linn., a tropical species; the rhizome is used in decoction, for dysentery and disease of the spleen. A salt prepared from the leaves is applied to ulcers. **A. dichotomum,** Förskäl, an Arabian species [*medjabese* or *mejahoese*]; the leaves are applied to burns. **A. flavens,** Humb. and Bonpl., a South American species, used as a laxative. **A. furcatum,** Forster, an Australian species having edible rhizomes. **A. huacsaro,** Ruiz., a Peruvian species; the rhizomes enter commerce as a substitute for the true *Radix calaguala.* [Cf. *Polypodium calaguala,* Ruiz.] It is said to be sudorific and anthelmintic. **A. sorbifolium,** Willd., a West Indian species. The juice is mixed with oil, ginger, and pepper, and used as a cataplasm in sick headache.

Acroteriasis (*ak-ro-te-ri-a'-sis*) [ἀκρωτηριάζειν, to cut off the extremities]. Mutilation by the loss of an extremity, especially a hand or foot. In teratology, the absence of such a part.

Acroteriasmus (*ak-ro-te-ri-as'-mus*). Same as *Acroteriasis.*

Acroteric (*ak-ro-ter'-ik*) [ἀκρωτήρια, the extremities]. Relating to the extremities; applied to conditions in which the extremities are most affected.

Acroterion (*ak-ro-te'-re-on*). See *Acroteria* (Illus. Dict.).

Acroteriosis (*ak-ro-te-ri-o'-sis*). See *Acroteriasis.*

Acrothorax (*ak-ro-thōr'-aks*) [ἀκροθώραξ, slightly drunk]. 1. Easily intoxicated. 2. On the point of intoxication.

Acrothymiosis, Acrothymium (*ak-ro-thi-me-o'-sis, ak-ro-thi'-me-um*) [ἄκρος, pointed; θύμιον, a large wart]. See *Condyloma acuminatum.*

Acrotrophoneurosis (*ak-ro-tro-fo-nu-ro'-sis*) [ἄκρον, an extremity; τροφή, nourishment; νεῦρον, nerve]. A trophic disturbance of the extremities of central origin.

Acrozymus (*ak-ro-zim'-us*) [ἀκρόζυμος, slightly leavened]. Impregnated with leaven.

Acryl (*ak'-ril*). See *Allyl* (Illus. Dict.).

Acrylate (*ak'-ril-āt*). A salt of acrylic acid; acroleate.

Act (*akt*) [*agere*, to put in motion]. The fulfilment of a purpose or function. **A., Imperative,** the act of an insane person in response to an imperative morbid impulse. **A., Sexual.** See *Coitus* (Illus. Dict.).

Actinesthesia (*ak-tin-es-the'-se-ah*) [ἀκτίς, a ray; αἰσθησις, sensation]. The capacity of certain larvas which are destitute of any apparent visual organ for perceiving light and distinguishing the direction in which it appears.

Actiniform (*ak-tin'-e-form*) [ἀκτίς, a ray; *forma*, form]. Ray-shaped; radiate.

Actinism. (See Illus. Dict.) 2. The radiation of heat or light, or that branch of science which treats of it.

Actinium (*ak-tin'-e-um*) [ἀκτίς, a ray]. A supposed element discovered by Phipson in 1881 in association with zinc. It is metallic and is said to resemble titanium.

Actinobacillosis (*ak-tin-o-bas-il-o'-sis*) [ἀκτίς, ray; *bacillus*]. A disease of cattle and other domestic animals due to a bacillus which produces radiate structures in the affected tissues. It is of frequent occurrence in Argentina. Potassium iodid acts almost as a specific.

Actinobolia (*ak-tin-o-bo'-le-ah*) [ἀκτινοβολεῖν, to radiate]. 1. A term formerly used to express the process by which the impulses of the will are conveyed to the different parts of the body. 2. Van Helmont's term for the phenomena now included under hypnotism.

Actinobolism, Actinobolismus (*ac-tin-ob'-o-lizm, ak-tin-ob-o-liz'-mus*). See *Actinobolia.*

Actinocerate, Actinocerous (*ak-tin-os'-ur-āt, -us*) [ἀκτίς, a ray; κέρας, a horn]. Having horn-like processes radiately arranged.

Actinochemistry (*ak-tin-o-kem'-is-tre*) [ἀκτίς, a ray; χημεία, chemistry]. Chemistry which deals with the decomposition of substances by light.

Actinodermatitis (*ak-tin-o-dur-ma--ti'-tis*) [ἀκτίς, a ray; δέρμα, the skin]. Cutaneous lesions produced by application of the x-rays. Syn., *Radiodermatitis.*

Actinogram (*ak-tin'-o-gram*) [ἀκτίς, ray; γράφειν, to write]. The record made by the actinograph.

Actinograph (*ak-tin'-o-graf*). An apparatus to measure the actinism of sunlight.

Actinography. See *Actinology.*

Actinology. (See Illus Dict.) 2. The science of the chemic action of radiant light; actinography. 3. The part of zoology which treats of the *Radiata.*

Actinolyte (*ak-tin'-o-lit*) [ἀκτίς, a ray; λύειν, to loose]. An apparatus designed for use in actinotherapy.

Actinomeris (*ak-tin-om'-ur-is*) [ἀκτίς, a ray; μερις, a portion]. A genus of plants of the order *Compositæ.* **A. helianthoides,** Nutt., a North American species, said to be beneficial in cases of gravel and dropsy.

Actinometer (*ak-tin-om'-et-er*) [ἀκτίς, a ray; μετρον, measure]. An apparatus for determining the intensity of the solar heat-rays.

Actinometry (*ak-tin-om'-et-re*). The measurement of the intensity of the radiation of the sun.

Actinomycotic (*ak-tin-o-mi-kot'-ik*). Dependent upon or pertaining to actinomycosis.

Actinophthalmic (*ak-tin-of-thal'-mik*) [ἀκτίς, a ray; ὀφθαλμός, the eye]. Furnished with eyes the choroidal tapetum of which has a high capacity for reflecting light.

Actinotherapy (*ak-tin-o-ther'-ap-e*) [ἀκτίς, a ray; θεραπεία, therapy]. The therapeutic use of actinic rays.

Action. (See Illus. Dict.) **A., After-,** the brief persistence of negative variation of the electric current in tetanized muscle. **A.s, Animal,** voluntary movements. **A. of Arrest.** See *Inhibition* (Illus. Dict.). **A., Automatic.** See *A., Reflex* (Illus. Dict.). **A. Capillary.** See *Attraction, Capillary* (Illus. Dict.

A., Catalytic, A., Contact. See *Catalysis* (Illus. Dict.). **A., Cumulative.** See under *Cumulative* (Illus. Dict.). **A.-current.** See under *Current* (Illus. Dict.). **A., Diastaltic.** See *A., Reflex* (Illus. Dict.). **A., Electrocapillary,** electric phenomena resulting from chemic reaction between dissimilar fluids connected by a capillary medium. **A., Inhibitory.** See *Inhibition* (Illus. Dict.). **A., Local,** the production of currents between different parts of the same cell of a galvanic battery. **A.s, Natural,** the vegetative functions. **A., Peristaltic.** See *Peristalsis* (Illus. Dict.). **A.s, Private,** those which concern only individual parts. **A.s, Pseudomotor,** Heidenhain's term for phenomena resulting from stimulation of the chorda tympani after section of the hypoglossal nerve; movements due to vascular or lymphatic engorgement. **A.s, Public,** those that concern the body as a whole as contrasted with private action. **A.s, Respective.** Same as *A., Private.* **A., Safety-valve,** the incomplete closure of the tricuspid valve, especially in cases of resistance in the pulmonary circulation. **A., Sexual,** functioning of the generative apparatus. **A.s, Vital,** those essential to the continuance of vitality, as of the heart and lungs.

Activate (*ak'-tiv-āt*) [*actitare*, to act]. To render active.

Active, Optically. Possessing optic rotatory power.

Activital (*ak-tiv'-it-al*). Relating to activities.

Activity. (See Illus. Dict.) **A., Optic,** the property (discovered by Biot in 1815) of certain chemic molecules to rotate the plane of polarization, due to the presence of one or several asymmetric carbon atoms in the molecule of every optically active body. Cf. *Rotatory Power.* **A., Sense of Muscular.** See *Muscular Sense*, under *Muscular* (Illus. Dict.).

Actol (*ak'-tol*). The commercial name for silver lactate (*q. v.*).

Acuate (*ak'-u-āt*) [*acuere*, to sharpen]. 1. Sharp. 2. To render sharp, pungent, or corrosive.

Acuclosure (*ak-u-klo'-zūr*) [*acus*, needle; *claudere*, to close]. A method of arresting hemorrhage by the aid of a needle which holds the artery closed for a day. It embraces *acupressure* and *acutorsion.*

Acuductor (*ak-u-duk'-tor*) [*acus*, a needle; *ducere*, to lead]. A needle conductor.

Acuition (*ak-u-ish'-un*) [*acuere*, to sharpen]. Increased effect of a drug's action by the addition of another drug.

Aculeatociliatus (*ak-u-le-at-o-sil-e-at'-us*) [*aculeus*, a sting; *cilium*, an eyelash]. Beset with stiff bristles or cilia.

Aculeous (*ak-u'-le-us*). Having the form of a spine, prickle, or sting.

Acumen (*ah-ku'-men*) [L.]. A tapering point, a sting; a bony projection applied especially to the tuberosity of the ischium. **A. nasi,** the pointed contraction of the nose preceding death.

Acumination (*ak-u-min-a'-shun*) [*acuminare*, to sharpen]. The state of being taper-pointed, or the process of becoming so.

Acuophonia. See *Acouophonia* (Illus. Dict.).

Acupunctation (*ak-u-punk-ta'-shun*). See *Acupuncture* (Illus. Dict.).

Acupunctural (*ak-u-punk'-tu-ral*). Used for acupuncture.

Acupuncture. (See Illus. Dict.) **A., Electrolytic.** See *Electropuncture.* **A., Multiple,** the operation of making a number of punctures.

Acusia (*ah-koo'-se-ah*) [*ἀκούειν*, to hear]. The faculty of hearing; audition.

Acusimeter, Acusiometer (*ah-koo-sim'-et-er, ah-koo-se-om'-et-er*). Same as *Acoumeter* (Illus. Dict.).

Acustica (*ah-koos'-tik-ah*). See *Acoustics* (Illus. Dict.).

Acutangulatus (*ak-u-tang-u-la'-tus*). Having acute angles.

Acuticostal (*ak-u-te-kos'-tāl*) [*acutus*, sharp; *costa*, a rib]. Having projecting ribs.

Acutissimus (*ak-u-tis'-im-us*) [superlative of *acutus*, acute]. Exceedingly acute, malignant.

Acyanobleptic (*ah-si-an-o-blep'-tik*). Affected with or pertaining to acyanoblepsia.

Acyclia (*ah-sik'-le-ah*) [*a*, priv.; *κυκλεῖν*, to circulate]. An arrest of the circulation of body-fluids.

Acyclic (*ah-sik'-lik*). (See Illus. Dict.) 2. Not characterized by a self-limited course. Cf. *Cyclic.*

Acyesis, Acyisis. (See Illus. Dict.) 3. Incapacity for natural delivery. Syn., *Aciesis.*

Acyeterion (*as-i-et-e'-re-on*) [*ἀκυτήριον*, an abortive drug]. An abortifacient procedure, drug, or instrument. Syn., *Acyterion; Acyterium.*

Acyoblepsia (*as-i-o-blep'-se-ah*). Same as *Acyanoblepsia* (Illus. Dict.).

Acystonervia, Acystoneuria (*ah-sis-to-nur'-ve-ah, -nu'-re-ah*). See *Acystinervia* (Illus. Dict.).

Acysturotrophia (*ah-sist-u-ro-tro'-fe-ah*) [*a*, priv.; *κύστις*, the bladder; *οὖρον*, urine; *τροφεῖν*, to nourish]. Atrophy of the urinary bladder.

Adæmonia. See *Ademonia* (Illus. Dict.).

Adaggregated (*ad-ag'-re-ga-ted*) [*ad*, to; *aggregare*, to adhere to]. Attached by some part of the body.

Adamantoblast (*ad-am-ant'-o-blast*). See *Ameloblast* (Illus. Dict.).

Adamicus (*ad-am'-ik-us*). Pertaining to or resembling Adam; said of any red earth (owing to the myth that Adam was made of red earth). Cf. *Terra adamica.*

Adamkiewicz's Serum. See *Cancroin* (Illus. Dict.).

Adanto blaka. A malady common among the negroes of the gold coast and of frequent prevalence in the tropic zone, due to an animal parasite.

Adapter (*ad-ap'-ter*) [*adaptare*, to adjust]. 1. Anything which serves the purpose of fitting one thing to another. An instrument by means of which the direct electric current may be adapted to the various forms of electrotherapeutic treatment. 2. A piece of tubing used to connect the neck of a retort with a receiver. 3. A microscope attachment for centering or decentering the illuminating apparatus. 4. A collar used to fit an objective to a different nose-piece than that for which it was made.

Adaption (*ad-ap'-shun*). See *Adaptation* (Illus. Dict.).

Adarcion, Adarcis, Adarcos (*ad-ar'-se-on, ad-ar'-sis, ad-ar'-kos*). See *Adarce* (Illus. Dict.).

Adarenalin. See *Adrenalin.*

Adclivitas (*ad-kliv'-it-as*) [*acclivitas*, an ascent; pl., *adclivitates*]. A prominence, projection, or elevation. **A. tibiæ,** the irregular tract (spinous process, spina media, eminentia intercondyloidea) between the articulating facets on the head of the tibia.

Add-add (*ad'-ad*). The Abyssinian name for the leaves of *Celastrus serratus* (*q. v.*).

Adde (*ad'-e*) [imperative sing. of *addere*, to add]. Add; a direction used in prescription writing.

Addephagous. See *Adephagous* (Illus. Dict.).

Addiment (*ad'-im-ent*) [*addere*, to add]. Ehrlich and Morgenroth's term (1899) for an active thermolabile substance (destroyed by a temperature of 56° C.) contained in normal serum and capable of rendering the immune body of Ehrlich active, and setting up bacteriolysis and hemolysis. See *Complement.*

Addimentary (*ad-im-ent'-ar-e*). Pertaining to addiment.

Additamentum. (See Illus. Dict.) **A. ad sacrolumbalem.** See *Muscles.* **A. necatum,** the olecranon. **A. suturæ lambdoidalis,** the occipitomastoid

suture. **A. ulnæ**, the radius. **A. uncatum ulnæ**, the olecranon.

Addition (*ad-ish'-un*) [*addere*, to add]. The formation of a molecule by the direct union of two or more different molecules without decomposition. **A., Compound.** See under *Compound*. **A. Product.** See under *Product*. **A.-reaction.** See under *Reaction*.

Addle (*ad'l*) [AS., *adl*, diseased]. A provincial name for abscess.

Adduct (*ad-ukt'*) [*adducere*, to bring toward]. To draw toward the median line of a body.

Adductorius (*ad-ukt-o'-re-us*) [*adducere*, to lead to]. Adducent. **Adductoria fila.** See *Prosphyses*.

Adelodermatous, Adelodermous (*ad-el-o-dur'-mat-us, ad-el-o-dur'-mus*) [ἀδηλος, not seen; δέρμα, skin]. Having concealed integument; as invaginated tracts.

Adelos, Adelus (*ad-e'-los, -lus*) [ἄδηλος, not seen]. 1. Inappreciable, not apparent, insensible (said of dermal transpiration). 2. Obscure, ill-defined (said of symptoms).

Adelostomatous (*ad-el-o-sto'-mat-us*) [ἀδηλος, not seen; στόμα, the mouth]. Having the mouth concealed.

Adelphia. (See Illus. Dict.) 2. A form of monstrosity characterized by the union of two organisms above, the lower portions being separated.

Adelphism (*ad-el'-fizm*). See *Adelphia* (Illus. Dict.).

Adelphixia, Adelphixis (*ad-el-fiks'-e-ah, ad-el-fiks'-is*) [ἀδελφιξις, brotherhood]. The sympathy or relationship of the different parts of the body in disease.

Adelphotaxy (*ad-el-fo-taks'-e*) [ἀδελφός, brotherhood; τάσσειν, to arrange]. The tendency of motile cells to arrange themselves into definite positions.

Adenandra (*ad-en-an'-drah*) [ἀδήν, a gland; ἀνήρ, a man]. A genus of plants of the order *Rutaceæ*. **A. uniflora**, Willd., a species native of southern Africa. The leaves are used for sophistication of buchu.

Adenanthera (*ad-en-an-the'-rah*) [ἀδήν, a gland; ἀνθηρός, blooming]. A genus of plants of the order *Leguminosæ*. **A. pavonina**, Linn., a species indigenous to tropical Asia. A decoction of the leaves is used in rheumatism, the root as an emetic, and the scarlet lenticular seeds are used as weights (averaging 4 grains) and in treatment of hydrophobia and epilepsy. The wood yields a red dye.

Adenasthenia (*ad-en-as-the'-ne-ah*) [ἀδήν, gland; ἀσθένεια, weakness]. A disorder of the stomach characterized by diminished and enfeebled secretion without anatomic lesion.

Adendric (*ah-den'-drik*) [*a*, priv.; δένδρον, tree]. Unprovided with dendrons.

Adendritic (*ah-den-drit'-ik*) [*a*, priv.; δένδρον, tree]. Without dendrites.

Adenectomy (*ad-en-ek'-to-me*) [ἀδήν, a gland; ἐκτέμνειν, to cut out]. The excision of a gland.

Adenectopic (*ad-en-ek-top'-ik*). Pertaining to adenectopia.

Adenemphratic (*ad-en-em-frat'-ik*). Pertaining to adenemphraxis.

Adenia. (See Illus. Dict.) **A.s, Angibromic,** Piorry's term for diseases of the glandular adnexa of the digestive tract. **A., Leukemic,** that form accompanied by increase in the number of the white blood-corpuscles. **A., Simple,** that form which is unaccompanied by any increase in the number of the white blood-corpuscles.

Adeninhypoxanthin (*ad-en-in-hi-po-xanth'-in*). $C_5H_5N_5 + C_5H_4N_4O$. A compound of adenin and hypoxanthin first observed by Kossel and isolated by Bruhns, occurring in thick, starch-like, semitransparent masses, becoming white and chalky.

Adenitis. (See Illus. Dict.) Syn., *Phlegmasia adenosa; Phlegmasia glandulosa*. **A. axillaris,** inflammation of the axillary glands. **A. cervicalis syphilitica,** an engorgement of the cervical lymphatic glands; a sign of syphilitic infection. **A., Chancrous.** See *Bubo, Virulent*. **A. cubitalis,** Grünfeld's term for inflammation of the epitrochlear lymphatic gland. **A. e blennorrhœa.** See *Bubo, Gonorrheal*. **A. e sclerosi.** See *Adenosclerosis* (Illus. Dict.) and *Bubo, Indolent*. **A. exulcerata,** Grünfeld's term for ulceration following suppurating bubo. **A. ex ulcere contagiosa.** See *Bubo, Virulent*. **A. femoralis,** Grünfeld's term for inflammation of the lymphatic glands in the subinguinal triangle. **A. gangrænosa,** Grünfeld's term for inflammation of a lymphatic gland resulting in gangrene. **A. hyperplastica,** Grünfeld's term for a bubo in which plastic exudation predominates. **A. inguinalis.** See *Bubo* (Illus. Dict.). **A., Lymphatic.** See *Lymphadenitis* (Illus. Dict.). **A. Meibomian,** inflammation of one or more Meibomian glands. Cf. *Chalazion*. **A., Mesenteric,** inflammation of the lymphatic glands of the mesentery. **A. palpebrarum contagiosa.** See *Conjunctivitis, Purulent*. **A. pubica,** bubo of the pubic region, often accompanied by suppurative lymphangitis of the dorsum of the penis. **A. scrofulosa equorum.** See *Strangles* (Illus. Dict.). **A., Syphilitic, Primitive.** See *Bubo, Syphilitic*. **A. universalis,** a widespread induration of the lymphatic glands accompanying primary syphilis. **A. venerea.** See *Venereal Bubo* (Illus. Dict.). **A. vulvovaginalis,** inflammation of the vulvovaginal gland.

Adenoblast. (See Illus. Dict.) 2. Haeckel's name for an embryonic cell which forms a gland.

Adenocellulitis (*ad-en-o-sel-u-li'-tis*) [ἀδήν, a gland; *cellula*, a small cell]. Inflammation of a gland and the surrounding cellular tissue.

Adenochondrius (*ad-en-o-kon'-dre-us*) [ἀδήν, gland; χόνδρος, cartilage]. Involving both glands and cartilage. Cf. *Arthrophyma adenochondrium*, a swelling of the glands and cartilage of a joint.

Adenocyst (*ad-en'-o-sist*) [ἀδήν, a gland; κύστις, a bladder]. A cystic lymphatic gland; a glandular cyst. Cf. *Adenocystoma* (Illus. Dict.).

Adenodermia (*ad-en-o-dur'-me-ah*) [ἀδήν, a gland; δέρμα, skin]. Disease of the glands of the skin.

Adenofibrosis (*ad-en-o-fi-bro'-sis*) [ἀδήν, a gland; *fibra*, a fiber]. Fibroid degeneration of a gland, particularly the inflammatory neoplasms involving sudoriparous glands, due to infection with *Botryomyces*. Cf. *Botryomycosis*.

Adenographer (*ad-en-og'-ra-fur*). A writer on glands.

Adenographia, Adenography (*ad-en-o-graf'-e-ah, ad-en-og'-raf-e*) [ἀδήν, a gland; γράφειν, to write]. A treatise on glands. Cf. *Adenology* (Illus. Dict.).

Adenohypersthenia (*ad-en-o-hi-pur-sthe'-ne-ah*) [ἀδήν, a gland; ὑπέρ, over; σθένος, strength]. Excessive activity of the glands. **A. gastrica,** a condition characterized by the secretion of gastric juice abnormally rich in hydrochloric acid or excessive in quantity.

Adenoid. (See Illus. Dict.) **A. Cancer.** See *Adenocarcinoma* (Illus. Dict.). **A. Face.** See *Facies*. **A. Growth.** See *A. Vegetations* (Illus. Dict.). **A. Muscle.** See *Thyroadenoideus*, under *Muscle*.

Adenoids. See *Adenoid vegetations* (Illus. Dict.).

Adenolipomatosis (*ad-en-o-lip-o-mat-o'-sis*) [ἀδήν, gland; λίπος, fat]. A diseased condition of the lymphatic system characterized by fatty deposits in the neighborhood of the neck, axillas, and groins. It is generally unattended with pain. Syn., *Multiple lipomas; Symmetric lipomas of nervous origin*.

Adenolymphatocele (*ad-en-o-lim-fat'-o-sēl*). See *Lymphatocele* (Illus. Dict.).

enolymphitis (*ad-en-o-lim-fi'-tis*). See *Lymph-*
...enitis Illus. Dict.).

enolymphoma (*ad-en-o-lim-fo'-mah*) [ἀδήν, gland; *lymphe*, lymph]. A combined adenoma and lymphoma. See *Lymphadenoma* (Illus. Dict.).

enoma. (See Illus. Dict.) 2. Any tumor which has its characteristic feature, tubes or spaces lined with epithelium, whether or not it arises from or is connected with a gland (White). **A., Acinous,** that involving acinous or racemose glands. **A., Alveolar,** one that contains alveolar or acinous gland-structure. **A., Blepharo-.** See *Blepharoadenoma* (Illus. Dict.). **A. carcinomatodes renis** (Klebs), a renal neoplasm probably derived from aberrant adrenal tissue in the kidney. Cf. *Rests, Adrenal,* and *Strumæ lipomatodes aberratæ renis* (Grawitz). **A. carcinomatosum, A., Carcinomatous.** See *Adenocarcinoma* (Illus. Dict.). **A., Cylindric.** See *A., Tubular.* **A., Cylindrocellular.** See *Cystoma proliferum glandulare* and *C. p. papillare.* **A., Cystic.** See *Adenocystoma* (Illus. Dict.). **A. diffusum,** hyperplasia of the mucous membrane with predominance of glandular elements. **A. fibromatosum.** See *Adenofibroma* (Illus. Dict.). **A. fibrosum,** a fibrous growth in the stroma of a gland. **A., Heteropodous,** one arising from the metastasis of normal glandular tissue. **A., Lupiform.** See *Lupus erythematosus* (Illus. Dict.). **A., Multiglandular,** one composed of an aggregation of small glands. **A. myomatosum.** See *Adenomyoma* (Illus. Dict.). **A. myxomatosum.** See *Adenomyxoma* (Illus. Dict.). **A., Papillary, A. papilliferum,** a form arising from either the alveolar or tubular adenoma through stronger growth of the epithelium and the formation of papillas of connective tissue. **A. polyposum,** polypous formations which consist of overgrown glands. **A., Racemose.** See *A., Acinous.* **A., Renal,** glandular carcinoma of the kidney. See *Strumæ lipomatodes aberratæ renis* (Grawitz) and *Rests, Adrenal.* **A. sarcomatosum.** See *Adenosarcoma* (Illus. Dict.). **A. simplex,** simple hyperplasia of glandular tissue. **A. sudiparum,** multiple papule-like cystic growths of the sweat-glands. Syn., *Epithelioma adenoides cysticum.* **A. sudoriparum,** a cutaneous tumor involving hyperplasia of the sweat-glands. Cf. *Hidrosadenitis* (Illus. Dict.). **A., Tubular,** one after the type of tubular glands. **A., Umbilical,** a tumor at the navel originating through the coalescence of Meckel's diverticulum with the umbilical ring through which the intestinal mucosa appears in the navel. Syn., *Intestinal ectropia.* Cf. *Cystadenoma, Neoplasma* (Illus. Dict.). **A., Uniglandular,** an adenoma involving but a single gland.

nomatome (*ad-en-o'-mat-ōm*) [*adenoma*; τομή, a cutting]. Cutting forceps or scissors for use in the removal of adenomatous growths.

nomatous (*ad-en-o'-mat-us*). Pertaining to an adenoma; characteristic of glandular hyperplasia.

nomeningeal (*ad-en-o-men-in'-je-al*) [ἀδήν, a gland; μῆνιγξ, a membrane]. Pertaining to or affecting the glands of a membrane. Cf. *Fever, Adenomeningeal.*

nomyoma. (See Illus. Dict.) **A., Branchiogenic,** cyst-formation in consequence of the inflammation of the mucous bursa in the median line of the neck.

nomyxosarcoma (*ad-en-o-miks-o-sar-ko'-mah*). A rare combination of malignant tumor forms (observed in the cervix uteri); a primary adenoma with secondary sarcoma and finally myxomatous degeneration of the stromas.

nonervous (*ad-en-o-nurv'-us*). See *Adenoneurotic* (Illus. Dict.).

nonkos, Adenonkosis (*ad-en-ong'-kos, ad-en-ongko'-sis*). See *Adenoncus* and *Adenoncosis* (Illus. Dict.).

Adenopathia, Adenopathy. (See Illus. Dict.) **A., Angibromic.** See *Adenias, Angibromic.* **A., Primary,** the lymphadenitis resulting from primary syphilitic infection. **A.s, Syphilitic,** the enlarged and indurated cervical, inguinal, and cubital glands symptomatic of syphilitic infection. **A., Tracheobronchial, A., Tracheobronchic,** hypertrophy of the peribronchial lymphatic glands observed in the course of various diseases, causing spasmodic cough. **A., Tracheolaryngeal,** inflammation and hypertrophy of the tracheolaryngeal lymphatic glands.

Adenopharyngeal (*ad-en-o-far-in'-je-al*) [ἀδήν, gland; φάρυγξ, pharynx]. 1. Pertaining to the thyroid gland and the pharynx. 2. See under *Muscles.*

Adenophora (*ad-en-of'-or-ah*) [ἀδήν, a gland; φέρειν, to bear]. A genus of plants of the order *Campanulaceæ.* **A. tracheloides,** Maxim., a species indigenous to China, where the root is used as an expectorant and emollient. **A. verticillata,** Fischer, a species found in Japan and northern Asia; it has properties similar to the foregoing.

Adenosarcorrhabdomyoma (*ad-en-o-sar-ko-rab-do-mi-o'-mah*). A neoplasm composed of the elements of sarcoma, adenoma, and rhabdomyoma.

Adenosis. (See Illus. Dict.) **A. scrofulosa.** See *Scrofula* (Illus. Dict.).

Adenostyles (*ad-en-os'-til-ēz*) [ἀδήν, a gland; στῦλος, a pillar]. A genus of plants of the order *Compositæ.* **A. alpina,** Kern., and **A. viridis,** Cass., two species indigenous to Europe, are employed in infusion for the treatment of coughs.

Adenosynchitonitis (*ad-en-o-sin-ki-ton-i'-tis*) [ἀδήν, gland; σύν, with; χιτών, a covering]. 1. Inflammation of the Meibomian glands. 2. Ophthalmia neonatorum.

Adenotome (*ad'-en-o-tōm*) [ἀδήν, a gland; τομή, a cutting]. An instrument for incising a gland.

Adenotomic (*ad-en-o-tom'-ik*). Pertaining to adenotomy.

Adenotyphus (*ad-en-o-ti'-fus*). See *Typhoid Fever* (Illus. Dict.).

Adeps. (See Illus. Dict.) 2. Fatness. 3. Animal fat. **A. anguillæ,** the fat of eels. **A. anseris,** goose-grease. **A. colli equini,** the fat of the neck of the horse, used in veterinary practice. **A. curatus,** a preparation of lard, 48 parts, and 1 part of Peruvian balsam. **A. ex fele,** cat's grease. **A. lanæ hydrosus.** See *Lanolin.* **A. medullæ bovis,** beef marrow. **A. mineralis.** See *Petrolatum* (Illus. Dict.). **A. ossium.** See *Ossalin.* **A. ovillus, A. ovis,** mutton tallow. **A. oxygenatum,** oxygenated lard. **A. pedum tauri,** neat's-foot oil. **A. petrolei.** See *Petrolatum* (Illus. Dict.). **A. porci, A. porcina.** See *A. suillis* (Illus. Dict.). **A. taxi,** badger's grease.

Adermogenesis, (*ah-dur-mo-jen'-es-is*) [*a*, priv.; δέρμα, skin; γένεσις, generation]. Deficient cutaneous development.

Adesmia. (See Illus. Dict.) 2. A genus of plants of the order *Leguminosæ.* **A. balsamica,** Bert., and **A. balsamifera,** Hook., are indigenous to Chili and yield a balsam used as a vulnerary.

Adgenic, Adgenicus (*ad-jen'-ik, ad-jen'-ik-us*) [*ad*, to; *gena*, the chin]. Attached to the genial tubercles or apophyses.

Adhatoda (*ad-ha-to'-da*) [from the Tamil name]. A genus of plants of the order *Acanthaceæ.* **A. hyssopifolia,** Nees., a species native of South Africa; the willow-leaved Malabar nut; bitter, aromatic. **A. vasica,** Nees., a species native of tropical Asia. The

Malabar nut. The juice of the leaves is used as an expectorant. The leaves, flowers, and root are considered antispasmodic and are given in asthma and intermittent fever; also in rheumatism. The fresh flowers are bound over the eyes in cases of ophthalmia. In decoction the leaves with other remedies are used as an anthelmintic. The nut is emmenagog and used to expel the dead fetus. [Boerhaave.]

Adhesion Figures. See under *Figure.*

Adhesive. (See Illus. Dict.) 2. Resulting in or attended with adhesion.

Adhesiveness (*ad-he'-siv-nes*) [*adhærere*, to adhere]. 1. That power, state, or quality of a substance which enables it to adhere to some dissimilar substance. 2. In phrenology, the faculty or organ that is the seat of the desire for companionship. 3. The faculty of pertinacity, referred to the upper occipital convolutions.

Adhesol (*ad-he'-sol*). A surgical dressing said to contain copal resin, 350 parts; benzoin, 30 parts; oil of thyme, 20 parts; α-naphthol, 3 parts; tolu balsam, 30 parts; ether, 1000 parts.

Adhibition (*ad-hib-ish'-on*) [*adhibere*, to employ]. The use or administration of a remedy.

Adhyoid (*ad-hi'-oid*). Adherent to the hyoid bone.

Adiaphora (*ah-di-af'-or-ah*). Neutral or inert substances. Cf. *Adiaphorous* (Illus. Dict.).

Adiaphorosis (*ah-di-af-or-o'-sis*). See *Adiaphoresis* (Illus. Dict.).

Adiaplast (*ad-i'-a-plast*) [ἀδιάπλαστος, not yet formed]. An abortion.

Adiarthrotos (*ah-di-ar-thro'-tos*) [ἀδιάρθωτος, not jointed]. 1. Without joints, unjointed. 2. Inarticulate (applied to speech).

Adiathermic (*ah-di-a-thur'-mik*) [*a*, priv.; διά, through; θερμαίνειν, to heat]. Impervious to radiant heat.

Adiemorrysis, Adiæmorrhysis (*ah-di-e-mor'-e-sis*) [*a*, priv.; διά, through; αἷμα, blood; ῥοῦς, flowing]. Failure of the circulation of the blood through the veins, due to some obstruction.

Adietetic (*ah-di-et-et'-ik*) [*a*, priv.; διαιτητικός, relating to diet]. 1. Unwholesome for food. 2. Unmindful of dietetic requirements.

Adin (*ad'-in*). See *Bubo* (Illus. Dict.).

Adipalis (*ad-ip'-al-is*) [*adeps*, fat]. Belonging to or derived from fat, greasy.

Adipatum (*ad-ip'-a-tum*). An ointment base said to consist of lanolin, vaselin, paraffin, and water.

Adipatus (*ad-ip'-at-us*) [L.]. Adipose.

Adipid (*ad'-ip-id*) [*adeps*, fat]. Any fatty proximate principle derived from animal matter.

Adipocele (*ad'-ip-o-sēl*) [*adeps*, fat, χηλή, rupture]. A true hernia with hernia sac, containing only fatty tissue.

Adipocellular (*ad-ip-o-sel'-u-lar*). Made up of fat and connective tissue.

Adipocera (*ad-ip-o-se'-rah*). See *Adipocere* (Illus. Dict.). **A. cetosa,** spermaceti.

Adipocira (*ad-ip-o-si'-rah*). See *Adipocere* (Illus. Dict.).

Adipociriform (*ad-ip-o-sir'-e-form*). Resembling adipocere.

Adipofibroma (*ad-ip-o-fi-bro'-mah*). A combined fatty and fibrous tumor.

Adipolysis (*ad-ip-ol'-is-is*) [*adeps*, fat; λύσις, dissolution]. The cleavage or hydrolysis of fats in the process of digestion by the action of a fat-splitting enzyme. Cf. *Steapsin.*

Adipolytic (*ad-ip-o-lit'-ik*). 1. Efficacious in the digestion or cleavage of fats. 2. An agent efficient in fat-digestion. Cf. *Steapsin.*

Adipometer (*ad-ip-om'-et-ur*) [*adeps*, fat; μέτρον, a measure]. An instrument for the estimation of fat.

Adiposis. (See Illus. Dict.) **A. dolorosa,** a dystrop of the subcutaneous connective tissue, somewhat sembling myxedema, and characterized by format of nodules of soft tissue throughout the connect tissue of the body; persistent pain and bronchit Dercum's disease.

Adipositas. (See Illus. Dict.) **A. cordis,** a fatty c dition of the heart.

Adiposuria (*ad-ip-o-su'-re-ah*). See *Pimeluria* a *Lipuria* (Illus. Dict.).

Adipsa (*ad-ip'-sah*) [neut, pl. of *adipsus*, with thirst]. 1. Remedies to allay thirst. 2. Foods wh do not produce thirst.

Adit (*ad'-it*) [*aditus*, entrance]. An entrance, tonym of exit.

Aditus. (See Illus. Dict.) **A. ad antrum,** the ou side of the attic, opening upward, backward, and ward into the mastoid antrum. It gives lodgment the head of the malleus and the greater part of incus. **A. ad aquæductum Sylvii,** the entranc the ventricular aqueduct situated at the lower poste angle of the third ventricle of the brain. **A. ad fundibulum,** a smaller canal extending from the t ventricle into the infundibulum; it is also called *re* **A. ad laryngem.** See *A. laryngis* (Illus. Dict.).

Adjuster. (See Illus. Dict.) 2. A device for hold together the two ends of a silver wire suture, to se approximation of the parts without strains on the sues.

Adjusting-cone (*ad-just'-ing-kōn*). An instrument ascertaining the distance between the axes of the when they are parallel.

Admaxillary (*ad-maks'-il-a-re*). Pertaining to m lary structures. Cf. *Gland, Admaxillary.*

Admove, Admoveatur (*ad'-mo-ve, ad mo-ve-a'-*[imper. sing. and 3d pers. sing., subj., pass., of *a vere*, to apply]. Apply; let there be applied; d tions used in prescription-writing.

Adnasal (*ad-na'-sal*) [*ad*, near to; *nasus*, the no Pertaining to the nose. See under *Bone.*

Adnexopexy (*ad-neks'-o-peks-e*). Surgical elevatio the prolapsed ovary and tube.

Adnexum (*ad-neks'-um*) [L. pl., *adnexa*]. An ap dage. **Adnexa oculi,** the appendages of the as the lids and lacrimal apparatus. **Adnexa u** the ovaries and fallopian tubes.

Adonidin. (See Illus. Dict.) **A. tannate,** yellow brown powder soluble in alcohol, slightly solubl water; it is used as the glucosid.

Adonin (*ad'-on-in*). Same as *Adonidin* (Illus. Dic

Adonis (*ad-o'-nis*) [*Adonis*, a youth loved by Ve A genus of European herbs belonging to the *Ranunculaceæ.* **A. flammea,** Jacq., a species n of Europe and the Orient. The leaves are used vesicant. **A. vernalis,** L., a species indigenou Europe and northern Asia. The root affords a dye, and adonit (*q. v.*). **A. vernalis, Tincture** it is used as a cardiac stimulant, antipyretic, and retic. Dose, 3–20 ♏. Poison. Antidotes: em tannin, brandy, ammonia, and opium.

Adonit (*ad'-o-nit*). $C_5H_7(OH)_5$. An optically ina pentite occurring in *Adonis vernalis*, forming parent needles, soluble in alcohol and water, m at 102° C.

Adopter (*ad-op'-ter*). See *Adapter.*

Adorbital (*ad-orb'-it-al*) [*ad*, near to; *orbita*, o Pertaining to the orbit. See under *Bone.*

Adosculation. (See Illus. Dict.) 2. An articul in which one part is inserted into the cavit another.

Adoxa (*ad-oks'-ah*) [*a*, priv.; δόξα, honor]. A of plants of the order *Caprifoliaceæ.* **A. mosch**

lina, Linn., a species found in Europe, northern Asia, and North America. It has been used as a detergent and antispasmodic.

dracanthin, Adracantin (*ad-ra-kan'-thin, -tin*). See *Bassorin* (Illus. Dict.).

draganthin (*ad-ra-gan'-thin*). See *Bassorin*.

drenalin (*ad-ren'-al-in*). $C_{10}H_{15}NO_3$ (Takamine). The active principle of the suprarenal gland, isolated and named by Jokichi Takamine in 1901. It occurs as minute white crystals soluble in water slightly acidulated with hydrochloric acid. **A. chlorid,** used in solution of 1 : 10,000 to 1 : 1000 in surgical operations on the eye, ear, nose, urethra, etc.; it acts as a powerful astringent, hemostatic, and heart tonic.

drenitis (*ad-ren-i'-tis*). Inflammation of the adrenals.

drenoxin (*ad-ren-oks'-in*) [*adrenal; oxygen*]. Sajous' name for an organic compound or oxidizing substance formed in the lungs by the internal secretion of the adrenals combined with the atmospheric oxygen. He claims that this substance endows the blood-plasm with its oxidizing properties.

dsternal (*ad-sturn'-al*) [*ad*, near to; *sternum*]. Pertaining to or situated near the sternum.

dstrictio (*ad-strik'-she-o*) [*adstringere*, to draw together; pl., *adstrictiones*]. 1. The retention of any natural excretion. 2. The action of an astringent. 3. The ligation of a blood-vessel. **A. alvei,** constipation.

dstrictory (*ad-strikt'-or-e*). Astringent.

dulterant (*ad-ul'-tur-ant*). 1. The substance used in the process of sophistication. 2. One who adulterates.

dvancement. (See Illus. Dict.) **A. of the Round Ligaments,** an operation for replacement of the uterus by taking up "the slack of the round ligaments." See under *Operations.* **A. of Tenon's Capsule.** See *T., Capsulae* (Illus. Dict.).

dventitia. (See Illus. Dict.) **A. capillaris.** See *Perivascular* (Illus. Dict.).

dventitial (*ad-ven-tish'-al*). See *Adventitious* (Illus. Dict.).

dynamia, Adynamy. (See Illus. Dict.) **A. uteri,** atony of the uterus. **A. virilis.** See *Impotence* (Illus. Dict.).

dynamicoataxic (*ad-in-am-ik-o-at-aks'-ik*). Pertaining to or characterized by adynamia and ataxia.

dynamon, Adynamum (*ad-in'-am-on, -um*) [*ἀδύναμος*, without strength]. A preparation of must resembling sterilized grape-juice.

dynasia, Adynatia (*ad-in-a'-ze-a, ad-in-a'-she-a*). See *Adynamia* (Illus. Dict.).

edes (*a-e'-dēz*) [*ἀηδής*, unpleasant]. A genus of dipterous insects (mosquitos) founded by Meigen (1818), belonging to the suborder *Nemocera* and to the family *Culicidae*. Palpi in both sexes less than one-half as long as the proboscis; upper side of thorax without a line of bluish scales [Coquillet]. **A. fuscus,** O. S., the only species found in the United States, and that rare; color brownish with golden-yellow scales on the thorax and crown; white bands on the abdomen.

egle (*e'-gle*) [*αἰγλη*, splendor]. A genus of rutaceous plants. **A. marmelos,** the bael or bel tree, is a native of India, where the root, leaves, flowers, fruit, and bark are used in medicine. It furnishes the fruit known as Bengal quince, a nutritious fruit used in dyspepsia and constipation. A decoction of the dried unripe fruit is used in diarrhea; the rind furnishes a yellow dye.

erate (*a'-er-āt*). To supply with air; to charge with gas; to oxygenate, carbonate, etc; to arterialize.

erated. (See Illus. Dict.) 2. Charged with oxygen; oxygenated, arterialized.

Aeration. (See Illus. Dict.) 2. The act or operation of providing with pure air. Syn., *Aerosis.* 3. E. Darwin's term for arterialization.

Aerator (*a'-er-a-tor*). A machine for forcing gas or air into liquids.

Aerelaterometer (*a-er-el-at-ur-om'-et-ur*). See *Elaterometer.*

Aeremotoxia, Aeræmotoxia (*a-er-em-o-toks'-e-ah*). See *Aerhemoctonia* (Illus. Dict.).

Aerenterasic (*a-er-en-tur-a'-sik*) [*ἀήρ*, air; *ἔντερον*, the intestine]. Flatulent, tympanitic.

Aerenterectasis (*a-er-en-tur-ek'-ta-sis*). See *Aerenterectasia* (Illus. Dict.).

Aerethmia (*a-er-eth'-me-ah*). See *Emphysema* (Illus. Dict.).

Æreus (*e'-re-us*). Pertaining to copper, brass, or bronze; bronzed. Cf. *Cutis ærea.*

Aerhematoxia (*a-er-hem-a-toks'-e-ah*). See *Aerhemoctonia* (Illus. Dict.).

Aerhydrous (*a-er-hi'-drus*) [*ἀήρ*, air; *ὑδωρ*, water]. Containing air and water.

Aeric (*a-er'-ik*). Capable of oxidation.

Aericolous (*a-er-ik'-ol-us*) [*aer*, air; *colere*, to inhabit]. Inhabiting the air.

Aerifer (*a-er'-if-ur*). See *Aeriferous* (Illus. Dict.).

Ærifer (*e'-re-fur*) [*æs*, brass; *ferre*, to bear]. Containing copper, brass, or bronze.

Aeriform (*a-er'-i-form*) [*aer*, air; *forma*, form]. Air-like, gaseous.

Aerify (*a-er'-e-fi*) [*aer*, air; *facere*, to make]. 1. To fill with air; to combine with air. 2. To change to a gaseous state.

Aerivorous (*a-er-iv'-or-us*) [*aer*, air; *vorare*, to devour]. Living upon air. Cf. *Aerobiotic.*

Aerize (*a'-er-īz*). 1. To aerate or aerify. 2. To convett into the gaseous state.

Aeroanaerobic (*a-er-o-an-a-er-o'-bik*). Applied to organisms which are both aerobic and anaerobic.

Aerobia. (See Illus. Dict.) **A., Obligate,** organisms dependent upon free oxygen at all times; never anaerobic.

Aerobian (*a-er-o'-be-an*). 1. Same as *Aerobe.* 2. Pertaining to an aerobe; requiring free oxygen.

Aerobion (*a-er-o'-be-on*). Same as *Aerobe* (Illus. Dict.).

Aerobioscope (*a-er-o-bi'-o-skōp*) [*ἀήρ* air; *βίος*, life; *σκοπεῖν*, to examine]. Of Sedgwick-Turner, an apparatus, consisting of a glass tube of special form for collecting and filtering the bacteria from the air.

Aerobious (*a-er-o'-be-us*). See *Aerobiotic* (Illus. Dict.).

Aerocele (*a-er'-o-sēl*) [*ἀήρ*, air; *χηλή*, rupture]. A rare affection, consisting of a tumor varying with respiration, found in the thyroid region, usually unilateral, with walls resembling mucosa and containing mucous or mucopurulent matter. It is sometimes congenital, but oftener the result of violent coughing or straining. The acquired cases may disappear spontaneously. Syn., *Aerial bronchocele; Aerial goiter; Pneumatocele; Tracheocele; Hernia of the trachea; Luftkropf.*

Aerocolpos (*a-er-o-kol'-pos*) [*ἀήρ*, air; *κόλπος*, vagina]. Dilation of the vagina by means of air.

Aeroconoscope (*a-er-o-kon'-os-kōp*). See *Aeroconiscope* (Illus. Dict.).

Aerocystoscope (*a-er-o-sist'-o-skōp*). Same as *Aerourethroscope.*

Aerocystoscopy (*a-er-o-sist-os'-ko-pe*). See *Aerourethroscopy* (Illus. Dict.).

Aerodensimeter (*a-er-o-den-sim'-et-er*). See *Manometer* (Illus. Dict.).

Aerodiaphanometer (*a-er-o-di-af-an-om'-et-er*). See *Lactometer* (Illus. Dict.).

Aerodiaphthoroscope (*a-er-o-di-af-thor'-o-skōp*) [*ἀήρ*,

air; *διαφθορά*, corruption; *σκοπεῖν*, to examine]. An apparatus for estimating the purity of the atmosphere. Syn., *Diathoroscopium.*

Aeroductor (*a-er-o-duk'-tor*) [*aer*, air; *ducere*, to lead]. An apparatus to prevent asphyxia in the fetus when the aftercoming head is retained.

Aerodynamic (*a-er-o-di-nam'-ik*). Of or pertaining to aerodynamics.

Aerodynamics (*a-er-ō-di-nam'-iks*) [*ἀήρ*, air; *δίναμις*, energy]. The science which treats of the laws regulating the motion of elastic fluids, their properties and mechanical effects when in motion.

Aerogoniscope (*a-er-o-gon'-is-kōp*). See *Aeroconiscope* (Illus. Dict.).

Aerographer (*a-er-og'-raf-ur*) [*ἀήρ*, air; *γράφειν*, to write]. One who treats of the air and its properties.

Aerography (*a-er-og'-raf-e*). Wireless telegraphy.

Aerohydrotherapy. See *Aerohydropathy* (Illus. Dict.).

Aerologia (*a-er-o-lo'-je-ah*). See *Aerology* (Illus. Dict.).

Aerologic (*a-er-o-loj'-ik*). Of or pertaining to aerology.

Aerologist (*a-er-ol'-o-jist*). One versed in aerology.

Aeromechanics (*a-er-o-me-kan'-iks*). See *Pneumatics* (Illus. Dict.).

Aerometric (*a-er-o-met'-rik*). Of or pertaining to aerometry.

Aeromicrobe, Aeromicrobion (*a-er-o-mi'-krōb, -kro'-be-on*). See *Aerobe* (Illus. Dict.).

Aeroniscope (*a-er-on'-is-kōp*). See *Aeroconiscope* (Illus. Dict.).

Aeroperitonia. See *Aeriperitonia* (Illus. Dict.).

Aerophagy (*a-er-of'-a-je*) [*ἀήρ*, air; *φαγεῖν*, to eat]. The imbibing and swallowing of air, especially observed in hysteric patients; called cribbing or crib-biting in horses. It occurs among some lower animals when frightened.

Aerophane (*a-er'-o-fān*) [*ἀήρ*, air; *φάνειν*, to show]. Thin or transparent as air.

Aerophil (*a-er'-o-fil*) [*ἀήρ*, air; *φιλεῖν*, to love]. An open-air loving person or creature.

Aerophilous (*a-er-of'-il-us*). Fond of the open air.

Aerophobe (*a-er'-o-fōb*) [*ἀήρ*, air; *φόβος*, fear]. One who dislikes or dreads the open air; aerophobus.

Aerophobic (*a-er-o-fo'-bik*). Afraid of a draft, or of contact with the open air.

Aerophobus (*a-er-o-fo'-bus*). An aerophobe.

Aerophorous (*a-er-of'-ur-us*) [*ἀήρ*, air; *φέρειν*, to bear]. Containing or conducting air; aeriferous.

Aerophthora (*a-er-of'-thor-ah*) [*ἀήρ*, air; *φθορά*, corruption]. Vitiation of the air. Syn., *Aerodiaphthora.*

Aerophthoricus (*a-er-of-thor'-ik-us*) [*ἀήρ*, air; *φθορά*, corruption]. Relating to or affected by vitiated air.

Aerophysic (*a-er-o-fis'-ik*) [*ἀήρ*, air; *φυσᾶν*, to blow]. Inflated; distended with air; flatulent.

Aeropleuria (*a-er-o-plu'-re-ah*). See *Pneumothorax* (Illus. Dict.).

Aeropneumonasia (*a-er-o-nu-mon-a'-se-ah*). See *Emphysema, Pulmonary* (Illus. Dict.).

Aeroporotomy (*a-er-o-por-ot'-o-me*) [*ἀήρ*, air; *πόρος*, a pore; *τομή*, a cutting]. The operation of admitting air to the lungs, as by intubation or tracheotomy.

Aerosis. (See Illus. Dict.) 2. Refrigeration by means of an air-current.

Aerosphere (*a'-er-o-sfēr*) [*ἀήρ*, air; *σφαῖρα*, a globe]. The atmosphere.

Aerostathmion (*a-er-o-stath'-me-on*) [*ἀήρ*, air; *σταθμίον*, a balance]. An instrument for estimating the variations of temperature and weight of the atmosphere.

Aerostatic (*a-er-o stat'-ik*). Of or pertaining to aerostatics; airy, pneumatic.

Aerostatics (*a-er-o-stat'-iks*) [*ἀήρ*, air; *στατικός*, causing to stand]. That branch of pneumatics which treats of the equilibrium, pressure, and mechanic properties of quiescent air or gases.

Aerothermotherapy (*a-er-o-thur-mo-ther'-ap-e*) [*ἀή* air; *θέρμη*, heat; *θεραπεία*, therapy]. Treatment wi hot air.

Aerotractor (*a-er-o-trak'-tor*) [*aer*, air; *trahere*, draw]. See *Tractor, Air-.*

Aerotympanal (*a-er-o-tim'-pan-al*) [*ἀήρ*, air; *τύπανο* a drum]. Pertaining to the air and the tympanu Cf. *Air, Innate.*

Aerourethroscope (*a-er-o-u-reth'-ro-skōp*) [*ἀήρ*, a *οὐρήθρα*, urethra; *σκοπεῖν*, to examine]. An inst ment modified from the endoscope used in aeroure roscopy. Syn., *Aerocystoscope.*

Aeroxerotes (*a-er-o-zer'-o-tēz*) [*ἀήρ*, air; *ξερός*, dr Dryness of the air.

Aeroxerotic, Aeroxeroticus (*a-er-o-zer-ot'-ik, -u* Relating to or caused by the dryness of the air.

Aerozol (*a-er-o-zol'*) [*ἀήρ*, air; *ὄζειν*, to smell]. mixture of essential oils containing 75% of ozone is used by inhalation in catarrhal affections.

Aerva (*a-er'-vah*) [Ar.]. A genus of plants of the or *Amarantaceæ*. **A. lanata,** Juss., a species native tropical Asia and Arabia. It furnishes *chaya* rc which contains a mucilaginous principle and has b used as a diuretic, in strangury, and as a depurative

Æscigenin (*es-ij'-en-in*). See *Escigenin.*

Æsciorcin, Æsciorsinol. See *Esciorsin.*

Æsculetin. See *Esculetin* (Illus. Dict.).

Æsculus (*es'-ku-lus*) [L., the Italian oak]. A ge of sapindaceous shrubs and trees; buckeye. **glabra,** Ohio buckeye. The bark is tonic, astring and antiperiodic. Dose, of fluid extract, 10–20 (0.6–1.2 c.c.). **A. hippocastanum,** horse-chestr The bark is tonic, astringent, antiperiodic. Fluid tract, dose, 20–60 ♏ (0.12–3.7 c.c.). **A. pavia,** buckeye. The bark has been used as a febrifuge. fruit is said to be an active convulsant.

Æsthema (*es-the'-mah*) [*αἰσθημα*; pl. *æsthemat* A perception, sensation, sense.

Æthal. See *Ethal* (Illus. Dict.).

Æthomma (*eth-om'-ah*) [*αἰθός*, of a burnt color; *ὀμ* the eye]. 1. Paré's term for a pigmented condi of the humors and tunics of the eye. 2. Kühn's t for a morbid condition marked by flashes of light flame appearing before the eye.

Æthusa (*e-thu'-sah*) [*αἴθειν*, to light up]. A genus umbelliferous herbs. **A. cynapium,** L., fool's p ley. It is stomachic, diuretic, and emmenagog.

Affection. (See Illus. Dict.) **A., Parainfectic** one in which the symptoms or conditions are only directly related to the disease named; a by-cond or accessory infection of certain diseases character by the appearance of symptoms attributable to a or secondary infection, as in the case of noma oc ring in cases of measles and due to infection diphtheria. **A., Pneumogastropituitous.** See *tussis* (Illus. Dict.). **A., Polyuric.** See *Lith* (Illus. Dict.). **A., Primary,** one independent of preceding disease. **A., Secondary,** one that complication or sequel of a preexisting disease. **Vaporous.** See *Vapors* (Illus. Dict.).

Affectus. (See Illus. Dict.) **A. flatulentus,** h chondriasis, melancholia, vapors. **A. hyderoc** dropsy. **A. hystericus,** hysteria. **A. implica** a complicated disease. **A. magnus** [Hippocrat epilepsy. **A. melancholicus,** melancholia. **mirachialis,** abdominal pain or disease. **A. p cordialis.** See *Hypochondriasis;* or *Melan* (Illus. Dict.). **A. spasmodico-convulsivus la rum.** See *Tic douloureux* (Illus. Dict.).

ánitas (*af-in'-it-as*). See *Affinity* (Illus. Dict.). **A. djuta.** See *Affinity, Mediating.* **A. animalium,** hylogenetic relationship among animals. **A. appropriata, A. approximata.** See *Affinity, Mediating.* **A. compositionis.** See *Affinity of Composition.* **A. divellens.** See *Affinity, Divellent.* **A. mixonis.** See *Affinity of Composition.* **A. producta.** ee *Affinity, Developed.* **A. quiescent.** See *Affinity of Aggregation.* **A. reciproca.** See *Affinity, Reproca.* **A. synthetica.** See *Affinity, Chemic* Illus. Dict.).

nity. (See Illus. Dict.) 2. In biology, morphologic, hysiologic, and phylogenetic relationship between rganisms. **A. of Aggregation,** cohesive attracon; the mechanical affinity of similar molecules nding to the formation of masses. Syn., *A., Quiesnt; Affinitas quiescens.* **A., Alternating Elective.** ee *A., Reciprocating.* **A., Appropriate.** See *A., dducing.* **A., Complex.** See *A., Double.* **A. f Composition,** the tendency of substances to unite rectly without previous decomposition. Syn., *Affinitas compositionis; A. mixtionis; A., Simple; A., ngle; A., Compound; A., Mixing.* **A., Compound.** See *A. of Composition.* **A., Compound lective.** See *A., Double.* **A., Developed,** that exbited by compounds, but which was not possessed the constituents separately. Syn., *Affinitas prota; Resulting affinity; Secondary affinity.* **A., ivellent,** the tendency to form new compounds at e expense of decomposition of those previously exting. Syn., *Affinitas divellens; Separating affinity.* **., Double, A., Double Elective,** that in which o new compounds result from a double decomposition. yn., *A., Complex; A., Compound elective.* **A., lementary,** 1. That which exists between the eleents of two or more compounds. 2. Physicochemic elationship of elementary substances. **A. of Heat,** e tendency of certain bodies to absorb heat with nsequent decomposition, and recomposition on oling. **A., Imparted, A., Intermediate.** See *., Mediating.* **A., Indirect.** See *A., Elective* Illus. Dict.). **A., Inducing, A., Inductive.** See *., Mediating.* **A. of an Intermedium.** See *A., dducing.* **A., Mechanical.** See *A. of Aggregaon.* **A., Mediating,** that by virtue of which a subance lacking the power of combination with a cerin substance secures it by preliminary combination ith another. Syn., *A., Appropriate; A., Imparted; ., Intermediate; A., Inducing; A., Inductive; A. an Intermedium; Affinitas adjuta; A. appropriata; . approximata.* **A., Mixing, A. of Mixture.** See *. of Composition.* **A., Morbid,** the tendency of ertain affections to exist synchronously or as sequels. **A. for Oxygen,** inflammability. **A., Quiesent.** Same as *A. of Aggregation.* **A., Reciprocal,** chemic attraction between the elements of secondary compound; tending, under altered onditions, to the reformation of the primary compound. Syn., *Alternating elective affinity; Affinitas eciproca.* **A., Resulting, A., Secondary.** See *A., Developed.* **A., Separating.** See *A., Divellent.* **., Simple.** See *A. of Composition.* **A., Simple Elective,** that exhibited by a simple body for a single lement of a compound. Syn., *A., Single elective.* **., Single.** See *A. of Composition.* **A., Single Elective.** See *A., Simple Elective.* **A. of Solution,** that existing between a dissolved substance and s solvent. **A., Vital,** the selective action or chemioaxis exhibited by the several tissues of an organism or their peculiar pabulum.

ion, Affioni [Turkish]. Crude opium; it contains egularly 10% of morphin; offium.

Affixion (*af-ik'-shun*) [*affigere,* to fasten]. Adhesion.

Affuse (*af-uz'*) [*affundere,* to pour upon]. To sprinkle or pour upon from a height; to shower.

Affusio (*af-u'-se-o*) [L. pl., *affusiones*]. 1. An affusion. 2. A suffusion. 3. An infusion. 4. A cataract. **A. frigida.** See *Affusion, Cold.* **A. oculi,** cataract. **A. orbicularis.** See *Placenta uterina* (Illus. Dict.).

Affusion. (See Illus. Dict.) **A., Cold,** Currie's method of treating fevers by pouring cold water over the patient. Syn., *Affusio frigida.*

Afibroma (*ah-fi-bro'-mah*) [*a,* priv.; *fibra,* a fiber]. A mass of fibrous tissue which is not arranged so as to form a tendon or fascia.

Afim, Afion, Afioun, Afiun. Same as *Affion.*

Aforous (*ah'-fo-rus*) [*a,* priv.; *forare,* to pierce]. Without an opening.

African Horse-sickness. See under *Horse.*

Afrodyn (*af'-ro-din*) [ἀφροδίσια, venery]. An aphrodisiac, the principal ingredient of which is said to be the tincture of *Moyrapuama.*

Afros (*af'-ros*) [ἀφρός]. Scum, foam, froth.

Aftannin (*af-tan'-in*). A liquid used in veterinary practice and said to be a combination of 5% of glycerin, 1.5% of formaldehyd, and an infusion of herbs.

After-action. (See Illus. Dict.) **A., Inner,** that involving the whole muscle or muscular fiber. **A., Terminal,** that affecting only the ends of the muscular fibers.

After-current (*af-ter-kur'-ent*). See under *Current* (Illus. Dict.).

Aftergilding (*af-ter-gild'-ing*). A term introduced by Apathy to designate the process of treating nerve-tissues with salts of gold after fixation and hardening. Cf. *Foregilding.*

After-image. (See Illus. Dict.) **A., Colored,** a retinal impression of an object seen, which remains after the object has left the field of vision; it may be either of the natural color or of a complementary color. **A., Positive-complementary,** a retinal impression of a color complementary to that of the original object.

Afterproduction (*af-ter-pro-duk'-shun*). A new growth; neoplasm.

After-shaft. See *Hyporhachis* (Illus. Dict.).

After-sound (*af-ter-sownd'*). An auditory sensation or impression remaining after the causative vibrations have ceased.

After-vision (*af-ter-vizh'-on*). The perception of an after-image.

Afthorn (*aft'-horn*). See *Cornu, Posterior* (Illus. Dict.).

Afyun [Ar.]. See *Affion.*

Agalactos (*ah-gal-ak'-tos*) [ἀγάλακτος, without milk]. A woman without milk in her breasts.

Agalactous. (See Illus. Dict.) 3. Capable of diminishing the secretion of milk. 4. Suckled at the same breast.

Agal-agal. See *Agar-agar* (Illus. Dict.).

Agalasia (*ah-gal-a'-se-ah*). See *Agalactia* (Illus. Dict.). **A. contagiosa,** an epidemic, contagious disease of sheep and goats, marked by drying-up of the milk.

Agalax (*ah-gal'-aks*) [ἀγάλαξ]. See *Agalactous.*

Agaric. (See Illus. Dict.) 2. A term broadly applied to fungi of several genera. **A., Astringent.** See *Polyporus fomentarius,* L.; and *P. igniarius,* L. **A., Bug.** See *Amanita muscaria,* L. **A., Larch.** See *Polyporus officinalis,* Vill. **A., Purging.** See *Polyporus officinalis,* Vill. **A., Surgeons'.** See *Polyporus fomentarius,* L.; and *P. igniarius,* L. **A., White.** See *Polyporus officinalis,* Vill.

Agariciform (*ag-ar-is'-e-form*). Mushroom-shaped.

Agaricin. (See Illus. Dict.) 2. An alkaloid identical

with amanitin. 3. An impure alcoholic extract of the agaric, *Polyporus officinalis*. It has been used in doses of 1 to 3 gr. (0.065 to 0.195 gm.) three times a day, against colliquative sweats. It is a valuable remedy, free from danger and effective.

Agaricinous (*ag-ar-is'-in-us*). See *Agaric* (Illus. Dict.). Resembling or relating to an agaric.

Agaricoid (*ag ar'-ik-oid*). Resembling a mushroom.

Agaricon, Agaricum (*ag-ar'-ik-on, -um*). White agaric, *Polyporus officinalis*, Vill.

Agaricus (*ag-ar'-ik-us*) [ἀγαρικόν of Dioscorides, from *Agaria*, a former district of Poland or Sarmatia, whence the Greeks derived the larch agaric]. A large genus of hymenomycetous fungi; mushrooms and toadstools. Cf. *Polyporus amanita*. **A. chirurgorum.** See *Polyporus fomentarius*, L.; and *P. igniarius*, L. **A. rubra**, D. C., and **A. sanguinea**, Bull. These species, indigenous to France, were formerly included under *A. ruber*, D. C. They yield the alkaloid agarythrin, and the rose-red coloring-matter ruberin.

Agarythrin (*ag-ar'-ith-rin*). A yellowish-white alkaloid extracted by ether from *Agaricus rubra*, D. C., and *A. sanguinea*, Bull. It has a bitter taste and leaves a burning sensation in the mouth.

Agastria (*ah-gas'-tre-ah*) [*a*, priv.; γαστήρ, the stomach]. Organisms having no internal digestive cavities.

Agastronomia (*ah-gas-tron-o'-me-ah*). See *Agastroneuria* (Illus. Dict.).

Agathis (*ag'-ath-is*) [ἀγαθίς, a heap]. A genus of plants of the order *Coniferæ*. **A. australis**, Steud., the Kauri tree of New Zealand. It affords Kauri-copal or Australian dammar. **A. loranthifolia**, Salisb., a lofty tree of Malay Peninsula, Sunda Islands, Moluccas, and Philippines. It is one of the chief sources of East Indian or Indian dammar.

Agavose (*ag'-av-ōz*). $C_{12}H_{22}O_{11}$. A saccharobiose obtained from the stalks of *Agave americana*.

Age. (See Illus. Dict.) **A. of Consent**, in medico-jurisprudence the age at which a minor is considered capable of consenting to sexual intercourse; it is usually that of 12 years in girls, and 14 years in boys. **A. critique**, the climacteric. **A., Marriageable, A., Nubile.** See *Nubility* (Illus. Dict.). **A. of Puberty.** See *Puberty* (Illus. Dict.).

Agenesia, Agenesis. (See Illus. Dict.) **A. corticalis**, incomplete development of the cortical gray cells. **A. dysspermia.** See *Bradyspermatism* (Illus. Dict.).

Agennesia, Agennesis (*ah-jen-e'-se-ah, ah-jen'-e-sis*). See *Agenesia* (Illus. Dict.).

Agenosomia (*ah-jen-o-so'-me-ah*) [*a*, priv.; γεννᾶν, to beget; σῶμα, body]. Defective development of the genitals.

Ager (*a'-jur*) [L., pl. *agri*]. 1. A field. 2. Growing in fields. **A. chymicus**, the field of the chemist; water. **A. naturæ**, the uterus.

Agerasy (*aj-er'-as-e*). See *Agerasia* (Illus. Dict.).

Ageusia, Ageusis. (See Illus. Dict.) **A., Central**, that due to lesion of the cerebral centers of the gustatory nerves. **A., Conduction**, that due to lesion in the nerves between their origin and distribution. **A., Peripheral**, that due to disorder of the ends of the nerves of taste.

Agger. (See Illus. Dict.) **A. perpendicularis, A. ponticulus.** Same as *Eminence of the Scapha*. **A. valvularum venarum**, a small projection at the union of the valves of a vein with the vessel-wall.

Agglutinability (*ag-lu-tin-ah-bil'-it-e*). Capacity for agglutination.

Agglutinant. (See Illus. Dict.) 2. A remedy promoting the repair of wounds by favoring nutrition.

Agglutinantia (*ag-glu-tin-an'-she-ah*). Agglutinants.

Agglutinatio (*ag-lu-tin-a'-she-o*). Agglutination. **maxillæ inferioris**, trismus. **A. pilorum**, the placement of ingrowing eyelashes by means of cous matter on a probe.

Agglutination. (See Illus. Dict.) 2. A coagulat phenomenon accompanying hemolysis or bacteriol thought by Gruber to be due to some deleterious ef on the membrane of the bacteria or blood-corpus which makes them sticky.

Agglutinin (*ag-lu'-tin-in*) [*agglutinare*, to paste A specific principle occurring in the blood-serum of animal affected with a disease of microbic origin capable of causing the clumping of the bacteria pe liar to that disease, as exemplified in the Widal action. It was first described by Gruber and Durh in 1896.

Agglutitio (*ag-glu-tish'-e-o*) [*ad*, against; *glutire*, swallow]. Difficult deglutition; an obstruction to sw lowing.

Agglutogenic (*ag-glu-to-jen'-ik*) [*agglutinin*; *genō* to produce]. Relating to substances from which glutinins originate.

Aggregated, Aggregatus (*ag'-re-ga-ted, ag-re-ga'-t* See *Aggregate* (Illus. Dict.).

Aghil [East Indian]. Aloes-wood.

Agila-wood. Aloes-wood.

Agillochum (*ah-gil'-o-kum*). Aloes-wood.

Aginin (*aj'-in-in*). A yellow substance derived fr decomposition of axinic acid.

Agitator (*aj'-it-a-tor*) [*agitare*, to excite]. Any paratus for stirring or shaking substances; a glass used for stirring.

Aglactation (*ag-lak-ta'-shun*). Same as *Agala* (Illus. Dict.).

Aglossia. (See Illus. Dict.) 2. Dumbness; se impairment of speech.

Aglossostomatographia (*ah-glos-o-sto-mat-o-gra ah*) [*a*, priv.; γλῶσσα, the tongue; στόμα, the mou γράφειν, to write]. A treatise on aglossostomas.

Aglossostomia (*ah-glos-o-sto'-me-ah*) [*a*, priv.; γλῶ tongue; στόμα, the mouth]. The condition mouth without a tongue.

Aglossostomographia (*ah-glos-o-sto-mo-graf'-e-* See *Aglossostomatographia*.

Aglottia (*ah-glot'-e-ah*). See *Aglossia* (Illus. Dict.

Agmina (*ag'-min-ah*) [pl. of *agmen*, a troop]. multitude. **A. digitorum manus**, the digital pha ges.

Agnoia (*ag-noi'-ah*). See *Agnea* (Illus. Dict.).

Agnolin (*ag'-no-lin*). Purified wool fat; adeps lan

Agnosia (*ag-no'-se-ah*) [*a*, priv.; γνῶσις, a rec ing]. Loss of the perceptive faculty which recognition of persons and things.

Agnus (*ag'-nus*) [L.]. A lamb. **A. christus.** *Ricinus communis*. **A. scythicus.** See *Cib barometz* and *Pengawahr dijambi*.

Agonal (*ag'-on-al*) [*agon*, a struggle]. Strugg relating to the death-struggle.

Agoniadin. (See Illus. Dict.) It is used in i mittent fever. Dose, 2–4 gr. (0.12–0.25 gm.).

Agonious (*ag-o'-ne-us*) [*a*, priv.; γωνια, an an Without an angle.

Agonistic (*ag-o-nis'-tik*) [ἀγωνία, a struggle]. Re to, due to, or occurring at the time of the death-ag

Agopyrin (*ag-o-pi'-rin*). An influenza remedy s contain salicin, 4 gr.; ammonium chlorid, ½ cinchonin sulfate, ⅓ gr.

Agot (*ag'-ot*). See *Caget* (Illus. Dict.).

Agraphia. (See Illus. Dict.) **A., Absolute**, a va in which no letters can be formed. **A., Acoustic**, of capacity to write from dictation. **A. amnemon** a form in which letters can be written, but wit

onveying any meaning. **A. atactica,** that form in which letters cannot be formed from lack of muscular ordination. **A., Literal, A. literalis.** See *A., literalis.* **A., Optic,** inability to copy writing, but bility to write from dictation. **A., Verbal,** a variety n which a number of words without meaning can be written. Cf. *Paragraphia.*

raphic (*ag-raf'-ik*). Pertaining to agraphia.

rippinus (*ah-grip-ē'-nus*). Relating to foot presentation. Cf. *Partus agrippinus.*

ron [East Indian]. A disease which occurs in ndia, marked by roughening of the tongue, with fissures.

rophyma. See *Agriophyma* (Illus. Dict.).

rostemmin (*ag-ros-tem'-in*) [ἀγρός, a field; στέμμα, garland]. An alkaloid isolated from seeds of corncockle, *Lychnis githago.*

rosteography, Agrosteology. See *Agrostography,* (Illus. Dict.).

rypnia. (See Illus. Dict.) **A. excitata,** insomnonce from mental excitement. **A. pertæsa,** that due external disturbing influences. **A. senilis,** inomnia of the aged.

rypnic (*ah-grip'-nik*). Affected with sleeplessness; grypnetic.

uadura (*ah-gwah-thu'-rah*) [Sp.]. Rheumatism or spasmodic contraction of the leg-muscles affecting orses and mules.

uaja, Aguajas. See *Ajuagas.*

ue. (See Illus. Dict.) Syn., *Intermittent fever; eriodic fever: Malarial fever; Marsh fever: Paluil fever: Miasmatic fever.* **A., Dead.** See *A., umb* (Illus. Dict.). **A., Face,** tic douloureux. **A., Fever and,** intermittent fever. **A.-fit,** a paroxysm f shivering. **A.-grass, A.-root,** *Aletris farinosa.* **A., Irregular.** See *A., Dumb* (Illus. Dict.). **A., Partial,** ague attended with pain which is limited to ome part or organ. **A.-proof,** not susceptible to alaria. **A., Quartan,** intermittent fever in which the roxysms recur every fourth day. **A., Quintan,** inrmittent fever in which the paroxysms occur every th day. **A., Quotidian,** intermittent fever with ily paroxysms. **A.-spell.** See *A.-fit.* **A.-struck,** ffering from an onset of ague.

ued (*ā'-gud*). Affected with ague.

uish (*ā'-gu-ish*). Resembling or relating to ague; ffected with ague.

uishness (*ā'-gu-ish-ness*). The condition of being ffected with ague.

urin (*ag'-u-rin*). A compound of sodium theoromate and sodium acetate; it is recommended as a uretic, in doses of 1.5 gm. (24 gr.).

(a) [M. E., *Eyle*]. 1. To be out of health. 2. slight indisposition. 3. Garlic. **A., Horn,** an emic disease of cattle marked by coldness of the rns. **A., Wetherbee,** a popular name for progresve muscular atrophy, from having affected several ccessive generations of a Massachusetts family of at name.

anthus. (See Illus. Dict.) 2. A genus of shrubs nd trees of the order *Simarubeæ.* **A. excelsa,** a rge tree of India; it furnishes an aromatic bark used y the natives in dyspepsia. **A. malabarica,** D. C., tree of India; the bark is tonic and febrifugal, and elds a resinous juice, *Muttee-pal,* which is used in ysentery and bronchitis.

idin (*ah-ī'-o-din*). A preparation of the thyroid land and tannin. It is a tasteless powder, of which tch gram is said to represent 10 gm. of the fresh lands and to contain 0.4% of iodin. It is used in yxedema.

pathia, Aipathes. See *Aeipathia* (Illus. Dict.).

Aipi [S. A.]. The cassava plant. See *Manihot.*

Air. (See Illus. Dict.) **A., Artificial, of Boyle,** the mixture of gases generated by vegetable fermentation. **A., Breathing.** See *A., Tidal* (Illus. Dict.). **A., Complementary.** See *A., Complemental* (Illus. Dict.). **A., Controllable.** See *Vital Capacity* (Illus. Dict.). **A., Dephlogisticated Nitrous,** nitrogen monoxid. **A., Empyreal,** oxygen. **A., Expiratory.** Same as *A., Expired* (Illus. Dict.). **A., Factitious,** carbon dioxid. **A., Heavy Combustible, A., Heavy Inflammable.** See *Methane* (Illus. Dict.). **A., Hepatic,** hydrogen sulfid. **A., Inflammable,** hydrogen; also methane. **A., Innate,** the air contained in the tympanic cavity. Syn., *Aer ingenitus; Aer innatus.* **A., Nitrous,** Priestley's name for nitrogen dioxid. **A., Solid, of Hales,** carbon dioxid; so called because of its property of forming solid carbonates with metallic oxids. **A., Supplementary.** See *A., Reserve* (Illus. Dict.). **A., Vitriolic, A., Vitriolic Acid,** Priestley's name for sulfur dioxid.

Air-break Wheel, Air-breaking Wheel. An arrangement by means of which the sparks may be promptly extinguished when using a 110-volt continuous current to excite a coil; the spark formed at the contact-brushes when the coil is energized is blown out instantaneously by the air-blast.

Airing-court. A patients' garden connected with an asylum or sanatorium.

Airoform (*ār'-o-form*). Same as *Airol.*

Airogen (*ār'-o-jen*). See *Airol.*

Airol (*ār'-ol*). See *Bismuth Iodosubgallate.*

Aisthesia, Aisthesis. See *Esthesia* (Illus. Dict.).

Aitch-bone (*āch'-bōn*) [*natis,* rump]. The bone of the buttock; the rump-bone. Syn., *Ach-bone; Achebone; Nache- or Nage-bone; Haunch-bone.*

Ajacol, Ajakol (*ah'-ja-kol*). Same as *Guaethol.*

Ajava-seeds. See *Ajowan* (Illus. Dict.).

Ajouain, Ajowaen, Ajowains. See *Ajowan* (Illus. Dict.).

Ajuagas (*ah-wah'-gas*) [Sp.]. An ulceration affecting the hoofs of horses and mules.

Akatamah (*ak-ah-tah'-mah*). The native West Central African name for an endemic peripheral neuritis of obscure origin marked by numbness and intense prickling and burning in the presence of cold or damp.

Akathisia (*ah-kath-ē'-e-ah*) [*a,* priv.; καθίζειν, to be seated]. A name given by Lad Haskovec to a form of rhythmic chorea in which the patient is unable to remain seated; the affection resembles astasia-abasia.

Akebia (*ak-ē'-be-ah*) [Jap., *akebi*]. A genus of plants belonging to the order *Berberaceæ.* **A. quinata,** a Japanese species, the fruit of which is emollient.

Akestoma (*ak-es'-to-mah*). See *Acestoma.*

Akidopeirastica (*ak-id-o-pi-ras'-tik-ah*) [ἀκίς, a point; πειραζειν, to make a trial of]. Exploratory incision or puncture.

Akineses (*ah-kin-ē'-sēz*) [*a,* priv.; κινεῖν, to move]. Neuroses characterized by loss of power of motion.

Akinesis. (See Illus. Dict.) **A., Cerebral,** that in which the lesion is in the cerebrum. **A., Crossed,** a motor paralysis on the side opposite that in which the lesion exists. **A. iridis,** rigidity or immobility of the iris. **A., Reflex.** impairment or loss of reflex action. **A., Spinal,** motor impairment due to a lesion of the cord.

Akinetic (*ah-kin-et'-ik*). See *Acinetic* (Illus. Dict.). 2. Diminishing muscular power. 3. An agent lessening muscular action. Syn., *Akinesic.*

Aknemia. See *Acnemia.*

Aknemous. See *Acnemous.*

Akoulalion (*ah-koo-la'-le-on*) [ἀκούειν, to hear; λάλος,

speech]. A mechanical contrivance to aid defective audition used in training the deaf and dumb to speak.

Akouphone (*ah'-koo-fōn*) [*ἀκούειν*, to hear; *φωνή*, sound]. A mechanism to aid defective hearing.

Akratotherm. See *Acratotherm.*

Akratothermal. See *Acratothermal.*

Aktinography (*ak-tin-og'-raf-e*). See *Actinography.*

Ala. (See Illus. Dict.) 2. The arm or shoulder; in animals, the shoulder-blade. **A. alba lateralis,** the nucleus of the glossopharyngeal nerve. **A. alba medialis,** the hypoglossal nucleus. **Alæ atlantis,** the transverse processes of the atlas. **A. auriculæ.** See *A. auris* (Illus. Dict.). **A. descendens,** the pterygoid process of the sphenoid bone. **Alæ diaphragmatos,** the lateral segments of the diaphragm. **A. ethmoidalis,** the expansion at the end of the crista galli of the ethmoid. **A. fornicis,** the posterior pillar of the fornix. **Alæ internæ clitoridis,** the labia minora. **Alæ laterales,** 1. The great wings of the sphenoid bone. 2. Wing-like processes on each side of the nasal spine of the frontal bone. **A. lobus centralis,** a lateral part of the central lobe of the cerebellum. **A. magna,** one of the greater wings of the sphenoid. **Alæ magnæ ossis sphenoidei or sphenoidis.** Same as *Alæ majores* (Illus. Dict.). **Alæ minimæ ossis sphenoidei,** two small bony protuberances on each side of the ethmoidal spine of the sphenoid. **Alæ minores clitoridis,** the labia minora. See *Labium minor* (Illus. Dict.). **Alæ minores ossis sphenoidei,** the lesser wings of the sphenoid. **Alæ muliebres minores,** the labia minora. **Alæ narium.** See *A. nasi* (Illus. Dict.). **Alæ orbitales ossis sphenoidei,** the lesser wings of the sphenoid. **Alæ ossis sphenoidalis,** the greater and lesser wings of the sphenoid. **Alæ ossis sphenoidei descendentes,** the pterygoid plates of the sphenoid. **A. palatina, A. pterygoidea,** the pterygoid process of the sphenoid. **Alæ parvæ ingrassiæ, Alæ parvæ ossis sphenoidei,** the lesser wings of the sphenoid. **Alæ processus vermiformis lobuli centralis,** the lamellas of the superior vermiform process of the cerebellum, connected with its central lobe. **Alæ pterygoideæ,** the pterygoid processes of the sphenoid bone. **Alæ pudendi muliebris,** the labia majora and labia minora. **Alæ septi cartilagineæ narium.** See *A. nasi* (Illus. Dict.). **Alæ spinæ nasalis,** the processes seen on each side of the nasal spine of the frontal bone. **Alæ temporales ossis sphenoidei,** the greater wings of the sphenoid. **Alæ uvulæ,** a medullary layer running from the posterior part of the uvula of the cerebellum to the amygdalas. **A. vomeris,** the lateral projections of the superior thick border of the vomer.

Alabastrine (*al-a-bas'-trēn*). 1. Relating to or resembling alabaster. 2. Naphthalene.

Alacreatin (*al-a-kre'-at-in*) [*alanin; creatin*]. $C_4H_9N_3O_2$. A base isomeric with creatin obtained from a combination of alanin and cyanamid by action of ammonia. Syn., *Guanidopropionic acid.*

Alacreatinin (*al-a-kre-at'-in-in*). $C_4H_7N_3O$. A crystalline body isomeric with creatinin, formed by the dehydration of alacreatin. Syn., *Lactylguanidin.*

Alactia (*ah-lak'-te-ah*). See *Agalactia* (Illus. Dict.).

Alalia. (See Illus. Dict.) **A., Mental,** form observed in children, which consists in inability to speak through excessive stammering. Cf. *Lalophobia, Dyslalia, Mogilalia, Paralalia* (Illus. Dict.). **A., Relative.** Same as *A., Mental.*

Alangin, Alanginum (*al-an'-jin, -um*). An amorphous principle from *Alangium lamarckii,* soluble in alcohol, in ether, and in chloroform; it is used as a febrifuge and emetic.

Alangium (*al-an'-je-um*) [*Alangi,* Malabar name]. genus of trees of the natural order *Cornaceæ,* growi in India. **A. lamarckii,** sage-leaved alangium; tree growing in rocky places in Malabar. The juice the root is anthelmintic. The root is cathartic, emet and antipyretic.

Alanin. (See Illus. Dict.) **A., Mercuric.** *Mercury amidoproprionate.*

Alant (*ah-lant*) [Ger.]. The genus *Inula.* **A., Tr** *Inula helenium;* elecampane.

Alanthol (*al-an'-thol*). See *Alantol* (Illus. Dict.).

Alantic (*al-an'-tik*) [Ger., *alant,* elecampane]. taining to or derived from elecampane. **A. Anhydr** $C_{15}H_{20}O_2$, a crystalline substance derived from the r of elecampane, melting at 66° C.

Alantois. See *Allantois* (Illus. Dict.).

Alantotoxicon (*al-an-to-toks'-e-kon*). See *Allantot con* (Illus. Dict.).

Alar. (See Illus. Dict.) 2. Relating to the shoul or axilla.

Alares [Pl. of *alaris*]. (See Illus. Dict.) 1. pterygoid muscles. 2. The wings of the sphenoid.

Alaris. (See Illus. Dict.) 2. See under *Muscles.*

Alation (*al-a'-shun*). The state of being winged; arrangement and disposition of the wings.

Alatus (*al-a'-tus*). 1. Winged. 2. An individua whom there is a marked backward projection of scapulas.

Alba. (See Illus. Dict.) **A., Reticular,** the ret lated layer of alba on the anterior half of the unci gyrus. Syn., *Substantia reticularis alba.*

Albaras, Albarras [Ar.]. A skin disease charac ized by the formation of white, shining patches. S *White leprosy; Baras; Barras.*

Albargin (*al-bar'-jin*). A 15% compound of si and gelatose (a transformation product of glue). yellow powder, freely soluble in water, used in t ment of gonorrhea in injections of 0.2% solution 4 times daily.

Albation (*al-ba'-shun*). See *Albefaction.*

Albefaction (*al-be-fak'-shun*) [*albus,* white; *facere* make]. The act or process of blanching or rend white.

Albiceris, Albicerus (*al-bis'-er-is, -us*) [L.]. Pa light yellow.

Albification (*al-bif-ik-a'-shun*). See *Albefaction.*

Albinism, Albinismus. (See Illus. Dict.) Syn., *phosis; Leukæthiopia; Achromatosis; Leukop Albitudo.* **A., Acquired, A. acquisita.** See (Illus. Dict.). **A., Partial,** congenital absen pigmentation in certain parts of the skin, appearin irregular, white, sharply defined spots. Especi characteristic are the changes of color in the hair, observed in negroes. The hairs are white and upon skin devoid of pigment, or normally col Syn., *Poliosis circumscripta.*

Albinistic (*al-bi-nis'-tik*). Relating to albinism.

Albinoism (*al-bi'-no-izm*). See *Albinism* (I Dict.).

Albitudo (*al-bi-tu'-do*). See *Albinism* (Illus. Dict

Albizzia. (See Illus. Dict.) **A. amara,** Wil species of India, where the bark is used as a toni in astringent lotions. **A. anthelmintica,** B the Abyssinian tree which furnishes museum. **A. lebbek,** Willd., the *labach* of the Arabians, the tree of India, a native of upper Egypt, but cultiva the East and West Indies. It furnishes a vari gum arabic. The wood is the *black wood* of ritius. The leaves are used in baths and fomento for rheumatism and in ophthalmia; the powdered in ulcers and snake wounds; the seeds, as an a gent, and an oil expressed from the seeds is tak in

leprosy. **A. myriophylla,** an East Indian species, where the natives make a kind of beer from the bark, **A. odoratissima,** an East Indian tree bearing white fragrant flowers. The juice of the bark, with lime-juice and turmeric boiled in cocoanut oil, is used as an external application in leprosy and chronic ulcers.

lboferrin (*al-bo-fer'-in*). An odorless, light-brown powder readily soluble in cold water. It is said to consist of albumin, 90.14%; iron, 0.68%; phosphorus, 0.324%; amidonitrogen, 0.13%; and mineral substances, 9.5%. It is indicated in chlorosis, anemia, etc. Dose, 1–3 gm. (gr. 15–45) for children; 3–5 gm. (gr. 45–75) for adults, per day.

lboflavescent (*al-bo-fla-ves'-ent*) [*albus,* white; *flavescere,* to turn a light yellow]. Yellowish-white.

lbolactescent (*al-bo-lak-tes'-ent*) [*albus,* white; *lactescere,* to turn to milk]. Milk-white.

lbolin (*al'-bol-in*). See *Albolene* (Illus. Dict.).

lbor (*al'-bor*) [*albus,* white]. 1. A whiteness. 2. Egg-albumin. 3. [Ar., *al bûl.*] Urine. **A. cutis, A. nativus,** albinism. **A. ovi,** white of egg.

lbuginea. (See Illus. Dict.) 2. A layer of white fibrous tissue investing an organ or part. Syn., *Tunica albuginea.*

lbuginean (*al-bu-jin'-e-an*). Resembling or belonging to the albuginea.

lbugineous. (See Illus. Dict.) 3. Belonging to the albuginea, particularly the *A. oculi.*

lbuginous (*al-bu'-jin-us*) [*albus,* white]. Albuminous.

lbukalin (*al-bu'-kal-in*). $C_8H_{16}N_2O_6$. A substance found in leukemic blood.

lbulus (*al'-bu-lus*) [dim. of *albus*]. Whitish.

lbum (*al'-bum*) [*albus,* white]. A substance characterized by whiteness. **A. candiense,** bismuth subnitrate. **A. canis.** See *A. græcum.* **A. ceti,** spermaceti. **A. græcum,** the dung of dogs fed upon bones, and whitened by exposure. It was formerly used in medicine. **A. hispaniæ, A. hispanicum,** blanc d'Espagne, bismuth subnitrate. **A. nigrum,** the dung of rats and mice, formerly used as a diuretic and purgative. **A. ovi,** white of egg.

bumen, Solution of. A filtered solution of the white of an egg triturated in 4 ounces of distilled water. **A., Test Solution of,** a solution of the white of an egg triturated in 100 c.c. of distilled water and filtered. **A.-water,** cool water into which the white of an egg has been stirred, with flavoring.

bumenize (*al-bu'-men-iz*). To cover with the white of egg

bumin. (See Illus. Dict.) Syn., *Coagulable animal lymph: Coagulable lymph of the serum.* **A., Acid.** See *Syntonin* (Illus. Dict.). **A., Alkali.** See *Albuminate* (Illus. Dict.). **A., Animal,** that occurring in animal tissues and fluids. **A., Cerebral.** See *Neurin* (Illus. Dict.). **A., Coagulated,** albumin modified by heat or by means of chemic substances so as to be insoluble in water, in dilute acid or alkaline solutions, or in neutral salt solutions. **A., Crystalline,** a crystalline form of albumin found by Grübler in pumpkin seeds and by Rittenhausen in hemp and sesame seeds; the two findings differ in composition. **A., Floating.** See *A., Circulating* (Illus. Dict.). **A., Fuhs's Tests for.** See under *Tests.* **A., Hematinic.** See *Serum-albumin* (Illus. Dict.). **A., Imperfect,** one which fails to give all the ordinary reactions. **A., Incipient,** Prout's name for imperfect albumin occurring in chyle. **A., Insoluble,** 1. See *A., Coagulated.* 2. An acid or alkali albumin, because it cannot be dissolved in distilled water. **A., Lacto-,** an albumin occurring in milk and distinguished from serum-albumin by its degree of action upon the plane of polarization. **A., Meta-.** See under *Paralbumin* (Illus. Dict.). **A., Nonretractile,** albumin which coagulates in a state of uniform diffusion. Cf. *A., Retractile.* **A., Para-.** See *Paralbumin* (Illus. Dict.). **A., Retractile,** albumin which on coagulation does not remain suspended in a state of diffusion, but forms concrete particles. **A., Salivary.** See *Ptyalin* (Illus. Dict.). **A., Soluble,** one that is soluble in distilled water. **A., Storage,** albumin stored in the tissues. **A., Whey,** an albuminous substance obtained from whey.

Albuminas (*al-bu'-min-as*) [L.]. An albuminate.

Albuminate. (See Illus. Dict.) Syn., *Pepton anhydrid.* **A., Acid.** See *Syntonin* (Illus. Dict.). **A., Alkali-.** See *Albuminate.*

Albuminid (*al-bu'-min-id*). Acid albumin, syntonin.

Albuminiform (*al-bu-min'-e-form*). Resembling albumin.

Albuminimetry (*al-bu-min-im'-et-re*). The quantitative estimation of the albumin in a liquid.

Albuminization (*al-bu-min-i-za'-shun*). The act or process of conversion into albumin.

Albuminize (*al-bu'-min-iz*). To convert into albumin.

Albuminocasein (*al-bu-min-o-ka'-ze-in*). See *Amygdalin* (Illus. Dict.).

Albuminochlorid (*al-bu-min-o-klo'-rid*). Albumin combined with a chlorid.

Albuminofibrin (*al-bu-min-o-fi'-brin*). A compound of albumin and fibrin.

Albuminofibrinous, Albuminofibrous (*al-bu-min-o-fi'-brin-us, -brus*). Consisting of albumin and fibrin.

Albuminogelatinous (*al-bu-min-o-jel-at'-in-us*). Composed of albumin and gelatin.

Albuminoglutinous (*al-bu-min-o-glu'-tin-us*). Composed of albumin and gluten.

Albuminoidal (*al-bu-min-oid'-al*). See *Albuminoid* (2) (Illus. Dict.).

Albuminometry. See *Albuminimetry.*

Albuminopurulent (*al-bu-min-o-pur'-u-lent*). Containing albumin and pus.

Albuminosa (*al-bu-min-o'-sa*). Remedies or dietetics containing albumin.

Albuminosic (*al-bu-min-o'-sik*). Relating to albuminose.

Albuminuretic (*al-bu-min-u-ret'-ik*). 1. Causing albuminuria. 2. A drug which causes albuminuria.

Albuminuria. (See Illus. Dict.) **A. acetonica, A., Anoxemic,** albuminuria due to asphyxia. **A., Acute,** acute Bright's disease. **A., Bamberger's Hematogenic,** albuminuria occurring during the later stages of severe anemia. **A., Cachectic,** albuminuria due to cachexia. **A., Cantharidic,** that due to poisoning by cantharides. **A., Cardial.** See *A., Cardiac* (Illus. Dict.). **A., Catarrhal,** albuminuria due to distribution of or changes in the renal epithelium. **A., Chronic,** chronic Bright's disease. **A., Cicatricial,** a form in which epithelial desquamation is assumed to be replaced by tissue incapable of restraining the transudation of albumin from the blood. **A., Colliquative,** that due to great disassimilation of the blood-corpuscles or adipose tissue. **A., Consumptive.** See *A., Colliquative.* **A., Dystrophic,** that dependent upon imperfect formation of the blood-corpuscles. **A., Emulsion,** that in which the urine has a milky turbidity due to minute corpuscular elements. **A., Exudative,** Gubler's name for albuminuria partially due to the filtration of albumin through the membranes of the kidney and also to the presence in the urine of products of inflammation, as in cases of nephritis. **A., Fatty.** See *Chyluria* (Illus. Dict.). **A., Globular,** that due to destruction of blood-corpuscles or dependent upon the presence of blood in

the urine. **A. longa**, chronic albuminuria. **A., Normal.** See *A., Physiologic* (Illus. Dict.). **A., Orthostatic**, a form dependent upon an upright posture. **A., Partial**, a form in which it is assumed that only certain tubules are affected. Syn., *A. parcellaire.* **A., Pathologic**, that distinguished from physiologic albuminuria by being due to disease. **A., Permanent**, that due to a lasting disease which makes the albuminuria a permanent condition. **A., Persistent.** See *A., Permanent.* **A., Phosphatic**, albuminuria accompanied by phosphaturia. **A., Pretuberculous**, a condition observed in young persons as a premonitory stage of tuberculosis, believed to be due to the congestive action of the tuberculous virus upon the renal structure. **A. renalis.** See *A., Nephrogenous* (Illus. Dict.). **A., Residual**, a form in which a small amount of albumin may persist, following an attack of nephritis. **A., Saturnine**, that due to lead-poisoning. **A., Scarlatinal**, that due to scarlatina. **A., Sero-, A., Serous.** See *A., True* (Illus. Dict.). **A., Spastic**, that due to a convulsive attack. **A., Toxic**, that due to the presence of a toxin. **A., Transitory.** See *A., Temporary* (Illus. Dict.). **A., Transudative**, that due entirely to filtration of albumin through the membranes of the kidney. **A. vera.** See *A., True* (Illus. Dict.).

Albuminurious (*al-bu-min-u'-re-us*). See *Albuminuric* (Illus. Dict.).

Albumoscope (*al-bu'-mo-skōp*) [*albumin; σκοπεῖν*, to examine]. An appliance for determining the presence and amount of albumin in urine.

Albumosuria. (See Illus. Dict.) **A., Bence-Jones'.** See *A., Myelopathic.* **A., Myelopathic**, a condition marked by persistent occurrence of albumose in the urine accompanied by softening of the bones owing to multiple myelomas.

Alburnoid (*al-burn'-oid*). Having the appearance of alburnum.

Albus (*al'-bus*) [L.]. White.

Alcaligen (*al-kal'-ij-en*). 1. See *Alkaligenous* (Illus. Dict.). 2. Nitrogen.

Alcar (*al'-kar*) [*ἄλκαρ*, a defense]. A remedy.

Alcargen (*al-kar'-jen*). See *Acid, Dimethylarsenic.*

Alcarnose (*al-kar'-nōz*). A nutrient preparation containing maltose combined with albumoses.

Alchemilla (*al-ke-mil'-ah*) [Ar., *alkemelyeh*]. A genus of rosaceous plants. The root and leaves of **A. vulgaris**, ladies' mantle, a common European species, have been used as an astringent, diuretic, and vulnerary.

Alchornin. See *Alcornin* (Illus. Dict.).

Alchymy (*al'-ke-me*) [Ar., *Al-Kimia*]. 1. Alchemy. 2. An alloy of copper and arsenic having the appearance of silver.

Alcoate (*al'-ko-at*). See *Alcoholate* (Illus. Dict.).

Alcogel (*al'-ko-jel*). A jelly-like combination of alcohol and silicic acid.

Alcogene (*al'-ko-jēn*) [*alcohol; γεννᾶν*, to bring forth]. The cooler of a still.

Alcohate (*al'-ko-hāt*). See *Alcoholate* (Illus. Dict.).

Alcohol. (See Illus. Dict.) **A., Aceton-.** See *Acetylcarbinol.* **A., Albuminous**, a solution of the white of egg stirred into ordinary alcohol. **A., Aldehyd**, a body possessing at the same time the properties of an alcohol and an aldehyd. **A., Allylic.** See *A., Allyl* (Illus. Dict.). **A., Ammoniated**, spirit of ammonia. See under *Ammonium* (Illus. Dict.). **A., Amylic, Tertiary.** See *Amylene hydrate* (Illus. Dict.). **A., Anisic, A., Anisylic.** See *A., Anisyl* (Illus. Dict.). **A., Aqueous.** See *A., Hydrated.* **A., Bornyl.** See *Borneol* (Illus. Dict.). **A., Butyric.** See *A., Butyl* (Illus. Dict.). **A., Campholic, A., Camphyl.** See *Borneol* (Illus. Dict.). **A., Caproic, A., Caproil, A., Caproilic. A., Caproyl, A., Caproylic.** See *A., Hexyl* (Illus. Dict.). **A., Capryl, A., Caprylic.** See *A., Octyl* (Illus. Dict.). **A., Caustic**, sodium ethylate. **A., Cerotyl.** See *A., Ceryl* (Illus. Dict.). **A., Cetic, A., Cetyl-.** See *Ethal* (Illus. Dict.). **A., Chlorethyl**, C_2H_5OCl, a substitution product of ethyl alcohol in which 1 atom of hydrogen is replaced by 1 atom of chlorin. **A., Cinnamic, A., Cinnamyl, A., Cinnamylic**, $C_9H_{10}O$, yellowish needles or crystalline masses obtained from the distillation of styracin. It is soluble in alcohol, ether, water, glycerin, and benzin; melts at 30°–33° C.; boils at 250° C. It is antiseptic and is a deodorizer in a 12.5% glycerin solution. Syn., *Styrilic alcohol; Crystallized styrone.* **A., Cinnylic.** See *A., Cinnamic.* **A., Common**, ethyl alcohol. **A. of Crystallization.** See under *Crystallization.* **A., Cymyl.** See *A., Cumin* (Illus. Dict.). **A., Deodorized**, ethyl alcohol filtered through charcoal to remove coloring and odorous matters. **A., Diacid.** See *A., Diatomic* (Illus. Dict.). **A., Dibromopropyli**, $C_3H_6Br_2O$, a colorless liquid obtained from allyl alcohol by action of bromin. It boils at 219° C. **A. Diethylene, A., Diethylenic**, $C_4H_{10}O_3$, diethylene oxyhydrate, a liquid boiling at 250° C. **A., Druggist's**, ordinary ethyl alcohol prepared by distillation. **A., Ethalic.** See *Ethal* (Illus. Dict.). **A. Ethylene, A., Ethylenic.** See *Glycol* (Illus. Dict.). **A., Ethylic.** See *A., Ethyl* (Illus. Dict.). **A. Fatty**, one obtained from a hydrocarbon of the fatty series. **A., Furfuryl-, A., Furfurylic**, C_4H_3O-CH_2OH, an alcohol, not yet obtained in the free state, of which furfurol is the aldehyd. **A., Glycer, A., Glyceryl, A., Glycyl.** See *Glycerin* (Illus. Dict.). **A., Hecdecatylic.** See *Ethal* (Illus. Dict.). **A., Hendecatyl.** See *A., Undecatyl* (Illus. Dict.). **A., Hexabasic, A., Hexacid, A., Hexatomic.** See *A., Hexahydric* (Illus. Dict.). **A., β-Hexone.** See *Dulcitol* (Illus. Dict.). **A., Hydrated**, ethyl alcohol containing water from which it cannot be freed by distillation. **A., Iso-**, an alcohol derived from a hydrocarbon containing carbon atoms which directly unite with more than 2 other carbon atoms. **A., Isopropylic.** See *A., Amylic* (Illus. Dict.). **A., Isopropyl**, C_3H_8O, a colorless mobile liquid obtained from propyl iodid by action of lead hydroxid. Sp. gr. 0.791 at 15° C.; boils at 82°–83° C.; mixes with water, alcohol, and ether. Syn., *Secondary propyl alcohol. Pseudopropyl alcohol.* **A., Lactuceryl**, $C_{18}H_{\ldots}$, white needles fusing at 162° C., derived from lactucerin by action of potash; it is soluble in ether, chloroform, and in hot alcohol. **A., Ligneus.** See *A., Methyl* (Illus. Dict.). **A., Melicyl.** See *Mellissyl* (Illus. Dict.). **A., Melinic-, A., Melissic, A., Melissylic.** See *A., Mellissyl* (Illus. Dict.). **A., Mentholic, A., Menthyl, A., Menthylic.** See *Menthol* (Illus. Dict.). **A., Mesitic, A., Mesyl.** Kane's names for acetone. **A., Methylic-, Triethylated.** See *Triethylcarbinol.* **A., Methylic-, Trimethylated.** See *Trimethylcarbinol.* **A., Monacid, A., Monad, A., Monobasic.** See *A.s, Monovalent* (Illus. Dict.). **A., Monochlorethyl, A., Monochlorethylic.** See *Ethylene chlorhydrin.* **A., Myricic, A., Myricyl.** See *A., Mellissyl* (Illus. Dict.). **A., Myristic**, $C_{14}H_{30}O$, a substance obtained from spermaceti. **A., Octoic, A., Octylic.** See *A., Octyl* (Illus. Dict.). **A., Orthooxybenzic.** See *Saligenin* (Illus. Dict.). **A., Paraoxymethylbenzyl.** See *A., Anisyl* (Illus. Dict.). **A., Perfumers'**, deodorized ethylic alcohol. **A., Phytyl.** Siewert's name for cerin, a crystalline precipitate

tained from an aqueous extract of cork by action of hot alcohol. **A., Phenallyl.** See *A., Cinnamic.* **A., Phenethyl,** $C_2(C_6H_5)H_4$. OH, ethyl alcohol in which phenyl replaces hydrogen. **A., Phenyl,** carbolic acid. **A., Phenylallylic.** See *A., Cinnamic.* **A., Phytosteryl.** See *Phytosterin* (Illus. Dict.). **A., Pinacolic.** See *A., Hexyl* (Illus. Dict.). **A., Propenyl,** glycerin. **A., Pyroligneus,** methyl alcohol. **A., Pyroracemic.** See *Acetylcarbinol.* **A., Quebrachyl.** See *Quebrachol.* **A., Styrilic.** Same as *A., Cinnamic.* **A., Styronyl, A., Styryl.** See *A., Cinnamic.* **A., Sycoceryl** [*σῦκον*, fig; *κηρός*, wax], $C_{18}H_{30}O$, an alcohol obtained from the resin of *Ficus rubiginosa* of New South Wales. It crystallizes in silky needles; melts at 90° C. **A., Tertiary Trichlorbutyl.** See *Acetonechloroform.* **A., Tetryl, A., Tetrylic.** See *A., Butyl* (Illus. Dict.). **A., Thio-.** See *Mercaptan* (Illus. Dict.). **A., Toluylic.** See *A., Tolyl* (Illus. Dict.). **A., Triacid, A., Tribasic.** See *A., Triatomic* (Illus. Dict.). **A., Trichloramidoethylic.** See *Chloralammonia.* **A., Trichlorbutidene.** See *Chloralbutylicum* (Illus. Dict.). **A., Trichlorpseudobutyl.** See *Acetonechloroform.* **A., Trichlortertiary-butyl.** See *Acetonechloroform.* **A., Trimethylene,** $C_3H_6(OH)_2$, a thick, sweet liquid. Syn., *Primary propylene glycol.* **A., Vanillyl.** See *Vanillin* (Illus. Dict.). **A., Wood.** See *A., Methyl.* **A., Xylenic.** See *A., Methyl* (Illus. Dict.).

Alcoholated (*al-ko-hol-a'-ted*). Subjected to the action of alcohol; prepared with alcohol.

Alcoholdyscrasia (*al-ko-hol-dis-kra'-se-ah*) [*alcohol; dyscrasia*]. The characteristic form of chronic alcoholism.

Alcoholeum (*al-ko-ho'-le-um*). A tincture, particularly one prepared from the dried plant.

Alcoholicity (*al-ko-hol-is'-it-e*). The alcoholic strength of any substance containing alcohol.

Alcoholist (*al-ko-hol'-ist*). An individual affected with alcoholism.

Alcoholmeter (*al-ko-hol'-me-ter*). See *Alcoholometer* (Illus. Dict.).

Alcoholomania (*al-ko-hol-o-ma'-ne-ah*). Morbid craving for intoxicating beverages.

Alcoholosis (*al-ko-hol-o'-sis*). See *Alcoholism* (Illus. Dict.).

Alcoholparalysis (*al-ko-hol-par-al'-is-is*). A disease of confirmed inebriates accompanied by paralytic appearances, tremor, disturbances of coordination, and anesthesia. Its prognosis is relatively favorable.

Alcoholpseudoparalysis (*al-ko-hol-su-do-par-al'-is-is*). Same as *Alcoholparalysis.*

Alcohometer (*al-ko-hom'-et-ur*). See *Alcoholometer* (Illus. Dict.).

Alcometrical (*al-ko-met'-rik-al*). Relating to the estimation of the amount of alcohol in a liquid.

Alcoolature (*al-ko-o-la-chur*) [Fr.]. Filtered preparations made from fresh plants macerated in alcohol.

Alcor (*al'-kor*). Calcined copper.

Alcornoc, Alcornoco. See *Alcornoque* (Illus. Dict.).

Aldehyd. (See Illus. Dict.) **A., Acetic, A., Acetyl-.** See *Acetaldehyd* (Illus. Dict.). **A., Acr-.** See *Crotonaldehyd* (Illus. Dict.). **A., Acryl, A., Acrylic.** See *Acrolein* (Illus. Dict.). **A.-alcohol.** See under *Alcohol.* **A.-alcoholate,** $C_4H_{10}O_2$ an addition compound of acetic acid and ethyl alcohol. **A., Allyl-.** See *Acrolein.* **A.-ammonia,** C_2H_7NO, small rhombic crystals which turn brown on exposure, obtained from aldehyd by action of dry ammonia; soluble in water, slightly soluble in ether; melts at 70°–80° C.; boils at 100° C. It was found by Dōbereiner, and named by Liebig. Syn., *Ammoniated ethylic aldehyd: Acetylammonium; Ammonium aldehydate; Ethidene hydramin.* **A., Aromatic,** an aldehyd obtained as an oxidation product of a primary aromatic alcohol and in turn giving rise by oxidation to a monobasic aromatic acid. **A.-base.** See *Aldin* (Illus. Dict.). **A., Benzoic.** See *Benzaldehyd* (Illus. Dict.). **A.-blue,** the coloring-matter obtained from a solution of rosanilin in sulfuric acid by action of aldehyd. **A., Brom-,** a substitution compound of ethylene in which one or more atoms of hydrogen are replaced with bromin. **A., Campholic.** See *Borneol* (Illus. Dict.). **A., Caprylic,** $C_8H_{16}O$, a colorless liquid with a pungent odor, obtained by distillation of sodium ricinoleate and sodium hydrate, boiling at 171° C.; sp. gr. 0.918 at 20° C. Syn., *Actoic aldehyd.* **A. Characteristic,** the univalent radicle C(H) = O common to the aldehyds. **A., Chlor-,** one of a class of substitution compounds of ethylene in which one or more atoms of hydrogen are replaced by chlorin. **A., Collidine, A., Collinic,** an oxidation product of albuminoids and gelatin; a colorless, viscid oil with odor like oil of cinnamon. **A., Crithmic,** an oily, pungent liquid obtained with crithmic acid from volatile oil of *Crithmum maritimum* by action of nitric acid; it dissolves in alcohol and in ether. **A., Crotonic.** See *Crotonaldehyd* (Illus. Dict.). **A., Dihydroxybenzoic.** See *A., Protocatechuic* (Illus. Dict.). **A., Ethalic.** See *A., Hexdecatylic* (Illus. Dict.). **A.-ether.** See *Crotonaldehyd* (Illus. Dict.). **A., Ethylic.** See *Acetaldehyd* (Illus. Dict.). **A., Ethylmethylprotocatechuic.** See *Ethylvanillin.* **A., Euodic-.** See *A., Aromatic.* **A., Furfurancarboxylic.** See *Furfurol* (Illus. Dict.). **A., Glycolyl,** $CH_2(OH)$. CHO, an oxidation product of tartaric acid when digested with water at 50°–60° C. **A.-green.** See *Pigments, Table of* (Illus. Dict.). **A., Heptoic, A., Heptylic.** See *A., Enanthylic* (Illus. Dict.). **A., Isobutylic, A., Isobutyryl,** C_4H_8O, a transparent, colorless, highly refractive, pungent liquid; sp. gr. 0.797 at 15° C.; soluble in alcohol; boils at 61° C. **A., Isopropylbenzoic.** See *A., Cumic* (Illus. Dict.). **A., Isovaleral, A., Isovaleric,** $C_5H_{10}O$, a pungent, oily liquid, with an odor of apples, obtained from oxidation of amyl alcohol; sp. gr. 0.804 at 15° C.; miscible in alcohol and ether; boils at 92.5° C. **A., Mannitic-.** See *Mannitose* (Illus. Dict.). **A., Mesitic,** a substance isomeric with acrolein produced by Kane by action of nitric acid on acetone. **A., Meta-.** See *Metaldehyd.* **A., Methoxybenzoic, A., Methyloxybenzoic,** $C_6H_4O(CH_3)COH$, a compound occurring in two varieties: (1) *Orthomethyloxybenzoic aldehyd,* an oily liquid boiling at 230° C. (2) See *A., Anisic* (Illus. Dict.). **A., Methylprotocatechuic.** See *Vanillin* (Illus. Dict.). **A., Methylsalicylic.** See *A., Methyloxybenzoic.* **A., Octoic.** See *A., Caprylic.* **A., Œnanthic, A., Œnanthylic-.** See *A., Enanthylic* (Illus. Dict.). **A., Orthohydroxybenzoic-, A., Orthoxybenzoic-.** See *Aldehyd, Salicylic* (Illus. Dict.). **A., Oxybutyr-, A., Oxybutyric.** See *Aldol* (Illus. Dict.). **A., Para-.** See *Paraldehyd* (Illus. Dict.). **A., Paraethylic.** See *Paraldehyd* (Illus. Dict.). **A., Paramethyloxybenzoic.** See *A., Anisic-* (Illus. Dict.). **A., Paramucic.** See *Furfurol* (Illus. Dict.). **A., Phenylacetic,** C_8H_8O, a liquid boiling at about 207° C. and becoming a resinous mass. **A., Piperomylic-.** See *Piperonal* (Illus. Dict.). **A., Propylic** or **Propyl.** See *A., Propionic* (Illus. Dict.). **A., Pyromucic.** See *Furfurol* (Illus. Dict.). **A., Pyroracemic,** CH_3. CO. CHO, a yellow volatile oil obtained by boiling isonitrosoaceton with dilute sulfuric acid. Syn., *Acetylformyl; Methylglyoxal; Propanalon.* [Richter.] **A.-radicle.** See *Radicle.* **A.-resin,** a

brownish resinous body obtained by heating acetaldehyd with alkalis. **A., Rutic-,** $C_{10}H_{20}O_4$, a substance contained in oil of rue. **A., Succinic,** $C_4H_6O_2$, a colorless liquid obtained from succinic acid. **A., Thiacetic,** C_2H_4S; ethylidene sulfid, a substance not yet completely isolated. **A.,Thio-,** an aldehyd in which the oxygen in the aldehyd characteristic is replaced with sulfur. **A., Thioacetic-.** See *A., Thiacetic.* **A., Thioformic, A., Thyoformic.** See *Methylene sulfid.* **A., Toluic, A., Toluylic,** C_8H_8O, a substance occurring in three isomeric forms, all of which are liquids. **A., Tribrom-, A., Tribromated.** See *Bromal* (Illus. Dict.). **A., Trichlor-.** See *Chloral* (Illus. Dict.). **A., Trichlorbenzoic,** $C_6H_2Cl_3 . CHO$, a solid substance occurring in two isomeric forms. **A., Trichlorinated.** See *Chloral* (Illus. Dict.). **A., Vanillic.** See *Vanillin* (Illus. Dict.). **A., Vinic.** See *Acetaldehyd* (Illus. Dict.).

Aldehydase (*al-de-hi'-dāz*). An oxydase occurring in the liver, capable of oxidizing salicylic aldehyd to the corresponding acid and supposed to be closely concerned in the functions of that organ.

Ale-hoof (*āl-huf*) [*ale;* AS., *heafod,* head]. The ground-ivy, *Nepeta glechoma,* which was used in making ale before the introduction of hops.

Aleipsis (*al-i'-psis*) [ἀλειψις, an anointing]. Steatosis, fatty degeneration. **A. aucta.** See *Hypersteatosis.* **A. diminuta.** See *Asteatosis* (Illus. Dict.).

Alembroth. (See Illus. Dict.) **A.-salt.** See *Mercury-ammonium chlorid, Fusible.*

Alephanginus (*al-e-fan-ji'-nus*). See *Aloetric* (Illus. Dict.).

Aleptic (*al-ep'-tik*). See *Aliptic* (Illus. Dict.).

Alepton, P. (*al-ep'-ton*). Colloidal ferromanganese peptonate.

Alepton, S. Colloidal ferromanganese saccharate.

Aletris. (See Illus. Dict.) 2. [ἀλετρίς, a female grinder of corn]. A genus of plants belonging to the natural order *Hæmodoraceæ.*

Aleukocytosis (*ah-lu-ko-si-to'-sis*) [*a,* priv.; λευκός, white; κύτος, cell]. A diminished or insufficient formation of leukocytes.

Aleurites (*al-u-ri'-tēz*) [ἀλευρίτης, made of flour]. A genus of euphorbiaceous plants. The seeds of **A. cordata,** Steud., the tung-tree of China and Japan, yield an oil called Chinese wood-oil, which is extensively used in the arts, and in medicine in skin diseases, ulcerations, and carbuncles. **A. triloba,** Forst., the candle-nut tree of India and the South Pacific islands and planted in the West Indies; yields from its seeds a fixed oil called Spanish or Belgaum walnut oil, which has mild cathartic properties acting as castor oil.

Aleuron (*al-u'-ron*) [ἀλευρον]. 1. Wheat flour. 2. See *Aleurone* (Illus. Dict.). **A.-crystals, A.-grains, A.-granules.** Same as *Aleurone.*

Aleuronic (*al-u-ron'-ik*). Relating to aleurone; also to wheat flour.

Alexeterium (*al-eks-e-te'-re-um*) [ἀλεξητήρ, a defender: pl., *alexeteria*]. An external defensive remedy against poison or infection, as distinguished from *alexipharmac,* an internal remedy. The plural *alexeteria* was formerly used to designate remedies in general, but applied later to those used against the poisonous bites of animals.

Alexia. (See Illus. Dict.) **A., Cortical,** a variety of Wernicke's sensory aphasia produced by lesions of the left gyrus angularis. **A., Motor,** inability to read aloud what is written or printed, although it is comprehended. **A., Optical,** inability to comprehend written or printed words. **A., Subcortical,** that due to interruption of the direct connection between the optic center and the gyrus angularis.

Alexipharmac. (See Illus. Dict.) 2. Acting as an internal antidote.

Alexipharmaceutic (*al-eks-e-far-ma-su'-tik*). See *Alexipharmac.*

Alexipharmatic (*al-eks-e-far-mat'-ik*). See *Alexipharmac.*

Alexipyretic. (See Illus. Dict.) 2. Acting as a febrifuge.

Alexocyte (*al-eks'-o-sīt*) [ἀλέξειν, to ward off; κύτος, a cell]. Hankin's name for an amphophil leukocyte

Alfalfa (*al-fal'-fah*) [Ar., *alfac*]. See *Medicago sativa.*

Alfontin (*al-font'-in*). See *Alfonsin* (Illus. Dict.).

Algal (*al'-gal*) [*alga,* a seaweed]. Relating to *Alga.*

Algaroba (*al-ga-ro'-ba*) [Ar., Al-Kharrûbah, the carob tree]. 1. The Mezquit tree, *Prosopis juliflora.* 2. The carob bean, the pods of *Ceratonia siliqua,* L.

Algarobia (*al-ga-ro'-be-ah*). 1. See *Prosopis.* 2. Mezquit, the resin of *Prosopis juliflora.*

Algarobilla, Algarrobilla (*al-gar-o-bil'-ah*). The pod of *Cæsalpinia brevifolia,* Baill., and *Prosopis juliflora.* This drug contains over 60% of tannin and a large amount of ellagic acid.

Algedon. See *Algedo* (Illus. Dict.).

Algefacient (*al-je-fa'-shent*) [*algor,* cold; *facere,* to make]. Cooling, refrigerant.

Algen (*al'-gen*) [*alga,* a seaweed]. $C_{20}H_{12}O_{12}$, an oil substance resembling furfurol, derived from seaweed by distillation. Syn., *Fucusol.*

Algeology (*all-je-ol'-o-je*). See *Algology* (Illus. Dict.

Algeoscopy (*al-je-os'-kop-e*). Synonym of *Cryoscopy.*

Algesia. (See Illus. Dict.) 2. Hyperesthesia as regards the sensation of pain; also neuralgia.

Algesimeter. (See Illus. Dict.) **A., Björnström's,** to test the sensibility of the skin. **A., Boas,** an instrument for determination of the sensitiveness over the epigastrium.

Algia (*al'-je-ah*). See *Algesia.*

Algid. (See Illus. Dict.) **A.-state,** the cold stage of disease.

Algidism, Algidity (*al'-jid-izm, al-jid'-it-e*) [*algidus,* cold]. A marked sense of coldness; chilliness. **Progressive.** See *Sclerema neonatorum* (Illus. Dict.

Algidness (*al'-jid-nes*). See *Algidism.*

Algific (*al-jif'-ik*) [*algidus,* cold]. Relating to or causing cold.

Alginate (*al'-jin-āt*) [*alga,* a seaweed]. Any salt of alginic acid.

Alginoid (*al'-jin-oid*) [*algin;* εἶδος, likeness]. Resembling algin; applied to metallic compounds of alginic acid.

Alginuresis (*al-jin-u-re'-sis*). See *Algeinuresis* (Illus. Dict.).

Algiomotor (*al-je-om'-o-tor*) [ἄλγος, pain; *motor,* a mover, *culus,* a muscle]. Causing pain in the muscles.

Algogenic (*al-go-jen'-ik*) [ἄλγος, pain; γεννᾶν, to produce]. 1. Causing neuralgic pain. 2. [*algidus,* cold; *generare,* to generate]. Lowering the body-temperature below the normal.

Algogenin (*al-goj'-en-in*). A body derived from fermented animal matter, which produces a fall of temperature when administered to animals.

Algoid (*al'-goid*) [*alga,* seaweed; εἶδος, likeness]. Resembling the group *Algæ* (see Illus. Dict.).

Algolagnia (*al-go-lag'-ne-ah*) [ἄλγος, pain; λαγνεία, venery]. Sexual perversion in which pain enjoined or endured plays a part. Cf., *Sadism; Masochi*

Algometry. (See Illus. Dict.) **A., Electric,** a comparative estimation of the pain produced by an indu electric current.

Algopsychalia (*al-go-si-ka'-le-ah*). See *Psychoal*

gose (*al'-gōz*) [*algidus*, cold]. Extremely cold.

gospastic, Algospasticus (*al-go-spast'-ik, -us*) [ἄλ-, pain; σπαστικός, a pulling]. Resembling or of the nature of painful cramps.

gous (*al'-gus*). Pertaining to *Algæ*.

nandal (*al-nan'-dal*) [Ar., *Al' handhal*]. Colocynth. **A., Trochisci-,** troches consisting of 5 parts of colocynth pulp and 1 part of gum arabic. Dose, 3–12 gr.

icyclic (*al-i-sik'-lik*) [ἄλειφαρ, fat; κύκλος, a circle]. Pertaining to any hydroaromatic derivative having a ring-formation, carbocyclic, but approaching the aliphatic derivatives in chemic behavior. Syn., *Aliphatic cyclic*.

ienated (*al-yen-a'-ted*) [*alienare*, to withdraw]. 1. Insane. 2. Gangrenous.

ienatio (*al-yen-a'-she-o*). See *Alienation* (Illus. Dict.). **A. partis,** gangrene.

ienation, Mental. A term embracing every aberration from normal mental activity.

ienism (*āl'-yen-izm*) [*alienare*, to deprive of reason]. The study and treatment of mental disorders.

ima (*al-i'-mah*) [ἄλιμος, without hunger]. Nutritious substances.

iment. (See Illus. Dict.) **A., Accessory, A., Adjective,** a condiment. **A., Substantive,** a food with nutritive value as distinguished from a condiment.

imental. See *Alimentary* (Illus. Dict.).

imentary, Curative. See *Alimentotherapy*.

imentation. (See Illus. Dict.) **A., Artificial.** See *Feeding, Artificial* (Illus. Dict.). **A., Artificial-, Forced.** See *Feeding, Forced* (Illus. Dict.). **A., Iodic-,** the administration of iodin with the food. **A., Voluntary-,** the nourishment of those who are willing to be fed, but are incapacitated.

imentative (*al-im-ent'-a-tiv*). Relating to nourishment.

imentativeness, Alimentiveness (*al-im-ent'-a-tiv-nes, al-i-ment'-iv-nes*). The natural instinct for taking food.

mentotherapy (*al-im-ent'-o-ther'-ap-e*). The treatment of disease by systematic feeding.

nite (*al'-in-it*). A commercial pure culture of *Bacillus Allenbachiensis*, claimed to have the power of fixing free nitrogen and of producing nitrogenous compounds in soil.

njection (*al-in-jek'-shun*) [*alcohol; inicere*, to inject]. A process of preserving anatomic specimens by repeated injections of alcohol.

phatic (*al-e-fat'-ik*) [ἄλειφαρ, fat]. Fatty. **A.-cyclic.** See *Alicyclic*.

sphenoidalia (*al-is-fe-noid-a'-le-ah*). The greater wings of the sphenoid.

zaramid (*al-iz-ar'-am-id*). $C_{14}H_8O_2\left\{\begin{matrix}OH\\NH_2\end{matrix}\right.$. A brown crystalline substance obtained from boiling a dilute solution of alizarin in ammonia. Syn., *Amidoanthraquinon*.

zarein (*al-iz-ar'-e-in*). See *Alizarimid*.

-zari. The oriental name for madder.

zaric (*al-iz-ar'-ik*). Relating to or having the nature of alizarin.

zarimid (*al-iz-ar'-im-id*). $C_{14}H_7NO_2$. A violet-red substance obtained from flocculent precipitated alizarin by action of ammonia with heat; it becomes nearly black on drying. Syn., *Alizarein*.

zarin. (See Illus. Dict.) **A., Blue-green.** See under *Pigment*. **A.-bordeaux.** See under *Pigment*. **A.-green.** See *Pigments, Conspectus of* (Illus. Dict.). **A.-indigo-blue.** See under *Pigment*. **A.-yellow.** See *Gallacetophenon* (Illus. Dict.).

Alk [Ar., *Ulk*]. A gum resin from the terebinth tree, *Pistacia terebinthus*, L.

Alkadermic (*al-ka-dur'-mik*) [*alkali; δέρμα*, skin]. Pertaining to or containing an alkaloid used in subcutaneous injection.

Alkahol. See *Alcohol*.

Alkalescence. (See Illus. Dict.) **A. of the Humors,** a tendency of the system to alkaline or putrid fermentation.

Alkalescentia (*al-kal-es-ent'-she-ah*). 1. Alkalescence. 2. Alkalinizing drugs or agents.

Alkali. (See Illus. Dict.) **A., Acetated Vegetal,** potassium acetate. **A., Acetated Volatile,** ammonium acetate. **A., Aerated,** a combination of an alkali with carbonic acid; potassium, sodium, or ammonium carbonate. **A., Aerated Fixed Mineral-,** sodium carbonate. **A., Aerated Fixed Vegetal,** potassium carbonate. **A., Aerated Volatile,** ammonium carbonate. **A.-albuminate,** a soluble powder used as a culture-medium in bacteriology. **A., Animal-,** ammonia. **A., Deliquescent,** potash. **A., Effervescing-,** a carbonate of an alkali. **A., Effervescing Fixed Mineral,** sodium carbonate. **A., Effervescing Fixed Vegetal,** potassium carbonate. **A., Effervescing Volatile,** ammonium carbonate. **A., Marine,** soda. **A., Mephitic Volatile,** ammonium carbonate. **A.-metal,** a metal of which the oxid combines with water to form an alkali. **A., Mineral-,** any inorganic alkali. **A., Organic,** one forming an essential constituent of an organism. **A., Prussian-,** a cyanid of an alkali-metal. **A., Urinary-,** ammonia. **A., Vegetal,** potash; also applied to the alkaloids. **A., Volatile,** ammonium; also ammonium carbonate.

Alkalifiable (*al-kal-if-i'-a-bl*). Capable of being converted into an alkali.

Alkalify (*al-kal'-if-i*). To transform into an alkali.

Alkalimetric (*al-kal-i-met'-rik*). Relating to alkalimetry.

Alkalious (*al-kal'-e-us*). Alkaline.

Alkalithia (*al-kal-ith'-e-ah*). An effervescent preparation used in rheumatism, said to contain 1 gr. caffein, 5 gr. lithium bicarbonate, 10 gr. sodium bicarbonate, in each heaping teaspoonful. Dose, 1 heaped teaspoonful 3 times daily in a large glass of water.

Alkalizate (*al-kal'-iz-āt*). 1. To render alkaline. 2. Alkaline. 3. An alkaline substance.

Alkaloid. (See Illus. Dict.) **A., Animal.** See *Leukomain* (Illus. Dict.). **A., Artificial,** one produced synthetically. **A., Cadaveric** or **Putrefactive.** See *Ptomain* (Illus. Dict.). **A., Glucosid,** a substance which exhibits the characteristics of an alkaloid, but is capable of decomposition into sugar and another substance when acted upon by dilute acid. **A., Narcotic,** an alkaloid having narcotic properties.

Alkaloimeter (*al-kal-o-im'-et-ur*). A modification of the alkalimeter for estimating the amount of an alkaloid in a solution.

Alkaloimetry (*al-kal-o-im'-et-re*). The quantitative estimation of alkaloids.

Alkaluretic. (See Illus. Dict.) 2. A drug rendering the urine alkaline.

Alkametric (*al-ka-met'-rik*) [*alkali; μέτρον*, a measure]. Pertaining to a metric dose of an alkaloid.

Alkane (*al'-kān*). See *Paraffin* (2) (Illus. Dict.).

Alkanin. See *Alkannin* (Illus. Dict.).

Alkargen (*al-kar'-jen*) [*alkarsin; γεννᾶν*, to produce]. Dimethylarsenic acid, obtained from alkarsin by the action of water.

Alkasal (*al'-ka-zal*). See *Aluminium-potassium salicylate*.

Alkatrit (*al'-ka-trit*) [*alkali; triturare*, to rub together]. A triturate made from an alkaloid.

Alkeïnes (*al'-ke-inz*). A collective name for the ethers formed from the alkines.

Alkekengin (*al-ke-ken'-jin*). See *Physalin.* **A., Silicated,** a compound of alkekengin and silica.

Alkekenji (*al-ke-ken'-ji*) [Ar., *Al-kâkenj*]. The fruit of the common winter cherry, *Physalis alkekengi* (*q. v.*).

Alkene (*al'-kēn*). See *Olefin* (Illus. Dict.).

Alkermes (*al-kur'-mēz*). See *Kermes* (Illus. Dict.).

Alkine (*al'-kin*). Any member of the acetylene series of hydrocarbons. Syn., *Alkamin.*

Alkylamin (*al-kil'-am-in*). One of those bodies which result from the introduction of univalent alkyls into ammonia for its hydrogen; one, two, or three hydrogen atoms of the ammonia molecule may suffer this replacement, thus yielding *primary* or *monalkylamins* having the general formula $NH_2(C_nH_{2n+1})$; *secondary* or *dialkylamins* having the general formula $NH(C_nH_{2n+1})(C_pH_{2p+1})$; and *tertiary* or *trialkylamins* of the general formula $N(C_nH_{2n+1})(C_pH_{2p+1})(C_qH_{2q+1})$.

Alkylate (*al'-kil-āt*). A compound derived from a monatomic alcohol by replacement of the hydroxyl hydrogen by a metal.

Alkylation (*al-kil-a'-shun*). The exchange of hydroxylic hydrogen atoms for methyl groups.

Alkylene (*al'-kil-ēn*). See *Olefin* (Illus. Dict.).

Alkylic (*al-kil'-ik*). Pertaining to or of the nature of an alkyl.

Alkylogen (*al-kil'-o-jen*). A haloid salt of an alcohol radicle.

Allachesthesia (*al-ah-kes-the'-se-ah*) [*ἀλλαχῆ*, in another place; *αἴσθησις*, sensation]. Erroneous localization of tactile impressions differing from allochiria in the respect that the sensation is felt on the same side of the body, but in a different place from that in which the irritation occurs.

Allanate (*al'-an-āt*). A salt of allanic acid.

Allantis (*al-an'-tis*). The allantois.

Allantoate (*al-an'-to-āt*). A salt of allantoic acid.

Allantodes. See *Allantoides.*

Allantoic. (See Illus. Dict.) **A. Fluid.** See *Liquor amnii spurius.*

Allantoid. (See Illus. Dict.) 3. The allantois. **A. Animal.** See *Allantoidian* (Illus. Dict.). **A. Liquid.** See *Liquor amnii spurius.*

Allantoides (*al-an-to'-id-ēz*) [L.]. 1. Allantoid. 2. A sausage. 3. The great toe. 4. The allantois.

Allasia (*al-a'-ze-ah*) [*ἀλλᾶς*, a sausage]. A genus of plants belonging to the order *Cucurbitaceæ.* **A. payos,** an African species the leaves of which are used as a poultice to hasten parturition.

Allaxis (*al-aks'-is*) [*ἀλλάσσειν*, to vary]. Metamorphosis, transformation; the act or process of conversion into some other condition or thing. Syn., *Allage.*

Allay (*al-a'*). See *Alloy* (Illus. Dict.).

Allectuary (*al-ek'-tu-a-re*). See *Electuary.*

Allen's Fusible Cement. A composition for cementing porcelain teeth to a plate.

Allen's (Charles W.) Iodin Test. See under *Pityriasis versicolor.*

Allene (*al-ēn'*). $CH_2{=}C{=}CH_2$. An isomer of allylene. Syn., *β-Allylene; Isoallylene.*

Alleotic. (See Illus. Dict.) 2. A remedy or agent having an alterative action.

All-heal. (See Illus. Dict.) 2. A panacea.

Alliarius (*al-i-a'-re-us*) [*allium*, garlic]. Garlicky.

Alliatus (*al-i-a'-tus*). Made with garlic.

Allidene (*al'-id-ēn*). C_3H_4. A bivalent radicle found in acrolein.

Alligation (*al-ig-a'-shun*). See *Alloy* (Illus. Dict.).

Alligator (*al-e-ga'-tor*) [Sp., *el legarto*, the lizard]. A genus of reptiles. **A. sinensis,** the Chinese alligator, the scales of which are used in the treatment of syphilis.

Alliotic (*al-e-ot'-ik*). See *Alleotic* (Illus. Dict.).

Allituric (*al-it'-u-rāt*). A salt of allituric acid.

Allo-. 1. A prefix used in chemistry to designate a body which has been rendered more stable by heat; also used to represent isomerism when there is "relative asymmetry."

Allochesthesia. See *Allachesthesia.*

Allochroism (*al-ok'-ro-izm*) [*ἄλλος*, other; *χρῶμα*, color]. 1. Variation in color. 2. A change of color.

Alloeomorphia, Alloeomorphosis. See *Allomorphism* (Illus. Dict.).

Alloeopathy. See *Allopathy* (Illus. Dict.).

Allogotrophia (*al-o-go-tro'-fe-ah*) [*ἄλλος*, other; *τρόφειν*, to nourish]. The nourishment of one part of the body at the expense of some other part.

Alloiosis, Alloiotics. See *Alleosis, Alleotic* (Illus. Dict.).

Allomorphic, Allomorphous, Allomorphus (*al-o-mor'-fic, -us*). Affected with allomorphism.

Allomorphosis (*al-o-mor-fo'-sis*). See *Allomorphism* (Illus. Dict.).

Allopalladium (*al-o-pal-a'-de-um*). A crystalline variety of palladium.

Allophanamid (*al-o-fan-am'-id*). See *Biuret* (Illus. Dict.).

Allophanate (*al-of'-an-āt*). A salt of allophanic acid.

Allophanic (*al-o-fan'-ik*) [*ἀλλοφανής*, appearing otherwise]. Changing in color or appearance. **A. amid.** See *Biuret* (Illus. Dict.).

Allotherm (*al'-o-thurm*) [*ἄλλος*, other; *θέρμα*, heat]. An organism whose temperature is directly dependent on its culture-medium.

Allotrieccrisis. See *Allotriecrisis* (Illus. Dict.).

Allotriolith (*al-o-tri'-o-lith*) [*ἀλλότριος*, strange; *λίθος*, stone]. A calculus composed of unusual material formed in an abnormal situation.

Allotriophagist (*al-o-tri-of'-a-jist*). A person addicted to allotriophagy.

Allotriophagous (*al-o-tri-of'-a-gus*). Relating to depraved appetite for innutritious substances.

Allotriophagy. (See Illus. Dict.) Syn., *Pellacia.* The eating of innutritious and indigestible substances.

Allotriotectic, Allotriotecticus (*al-o-tri-o-tek'-tik, -us*). Relating to allotriotexis (Illus. Dict.).

Allotropic (*al-ot'-ro-pik*) [*ἄλλος*, other; *τροπή*, a change]. Relating to or marked by isomerism.

Alloxamid (*al-oks-am'-id*) [*alloxan; ammonia*]. A substance, $C_8H_4N_4O_4$, obtained from alloxan by the action of ammonia.

Alloxanate (*al-oks'-an-āt*). A salt of alloxanic acid.

Alloxanic (*al-oks-an'-ik*). Obtained from or having the nature of alloxan.

Alloxanthin. See *Alloxantin* (Illus. Dict.).

Alloxin (*al-oks'-in*) [*allantoin*]. Any of a series of xanthin bases, the result of the splitting up of chromatin, and which on oxidation produce uric acid.

Alloxur, Alloxuric (*al-oks'-ur, al-oks-u'-rik*). A term applied by Kossel and Krüger to the xanthin bases from the fact that these, like uric acid, contain alloxan and urea groups. **A. Bases, A. Bodies,** xanthin, hypoxanthin, guanin, paraxanthin, adenin.

Alloxuremia (*al-oks-u-re'-me-ah*) [*alloxur; urea; αἷμα*]. Toxemia due to the resorption of the xanthin or alloxur bases.

Alloxuria (*al-oks-u'-re-ah*) [*ἄλλος*, other; *ὄξις*, sharp; *οὐρεῖν*, to urinate]. The pathologic secretion of alloxur bodies (uric acid, xanthin, hypoxanthin, paraxanthin, adenin, carnin, etc.) in the urine.

Allus (*al'-us*) [L.]. The great toe. **A. pollex,** the thumb.

llyl. (See Illus. Dict.) Syn., *Allylum; Acryl; Propenyl.* **A. Acetate,** 1. $C_3H_5 . C_2H_3O$, an aromatic liquid with sharp taste, boiling at 103°–104° C. 2. A salt of allylacetic acid. **A. Acid Sulfate.** See *A. Sulfate.* **A.-aldehyd,** acrolein. **A. Borate,** $(C_3H_5)_3BO_3$, a liquid giving off pungent irritating vapors which cause a flow of tears; it boils at 168°–175° C. **A. Bromid,** C_3H_5Br, a liquid with pungent odor; sp. gr. 1.436 at 15° C.; soluble in alcohol and ether; boils at 70°–71° C. Syn., *Bromopropylene.* **A. Carbamin,** $CN . C_3H_5$, a liquid obtained by heating allyl iodid with silver cyanid; it has an extremely foul and penetrating odor; boils at 96°–106° C. Syn., *Allyl cyanid; Allyl isocyanid.* **A. Carbimid,** $CO . NC_3H_5$, a foul liquid causing tears, found by Cahours and Hofmann in silver cyanate by action of allyl iodid. Syn., *Allyl isocyanate; Allyl carboxylamin; Allyl pseudocyanate.* **A.-carboxylamin.** See *A. Carbimid.* **A. Chlorid,** C_3H_5Cl, a pungent liquid; sp. gr. 0.937 at 20° C.; boils at 45° C. Syn., *Chlorotritylen.* **A. Chlorobromhydrin.** See *Chlorobromhydrin.* **A. Cyanamid.** See *Sinamin* (Illus. Dict.). **A. Dioxid,** $C_6H_{10}O_3$, a colorless liquid obtained from allyl alcohol by action of glycerin and oxalic acid; sp. gr. 1.16 at 16° C.; boils at 171°–172° C.; soluble in water, alcohol, and chloroform. Syn., *Diallyl oxid.* **A.-ethyl.** See *Amylene* (Illus. Dict.). **A.ethyl Oxid, A.ethylic Oxid.** See *Ether, Allylethyl.* **A.ethylic,** containing both allyl and ether. **A. Formate,** $C_4H_6O_2$, a liquid having the odor of mustard, boiling at 82°–83° C., formed in the preparation of formic acid from glycerol and oxalic acid. **A. and Glyceryl Oxid.** See *Triallylin* (Illus Dict.). **A. Hydrate,** allyl alcohol. **A. Hydrid.** See *Propylene* (Illus. Dict.). **A. and Hydrogen Sulfate.** See *A. Sulfate.* **A. and Hydrogen Sulfid.** See *A. Hydrosulfid.* **A. Hydrosulfite, A. Hydrosulfid,** $C_3H_5 . SH$, a mercaptan obtained by Cahours and Hofmann from an alcoholic solution of potassium hydrosulfid by action of allyl iodid; it is a liquid boiling at 90° C. Syn., *Allyl mercaptan; Allyl and hydrogen sulfid.* **A. Iodid,** C_3H_5I, a pungent liquid; sp. gr. 1.848 at 12° C.; soluble in alcohol; boils at 100°–102°C. It is a reaction product of phosphorus, iodin, and allyl alcohol. **A. Isocyanate.** See *A. Carbimid.* **A. Isocyanid.** See *A. Carbamin.* **A. Isosulfocyanate, A. Isosulfocyanid.** See *A. Mustard Oil* (Illus. Dict.). **A.-mercaptan.** See *A. Hydrosulfid.* **A.methyl,** a radicle composed of allyl and methyl. **A.methyl Oxid, A.methylic Oxid.** See *Ether, Allylmethyl.* **A.methylic,** composed of allyl and methyl. **A. Monobromid.** See *A. Bromid.* **A. Monochlorid.** See *A. Chlorid.* **A. Monoiodid.** See *A. Iodid.* **A. Mustard-oil.** Syn., *A. pseudosulfocyanate; A. pseudothiocyanate; A. isothiocyanate; A. isosulfocyanate; A. thiocarbimid.* **A. Nitrate,** $C_3H_5 . NO_3$, a mobile liquid of pungent odor, boiling at 106° C., formed from silver nitrate by action of allyl bromid. **A. Oxalate,** $C_8H_{10}O_4$, an oily liquid with odor of mustard. **A. Oxid.** See *Ether, Allyl.* **A.-phenol,** $C_9H_{10}O$, a body obtained from anisic aldehyd by action of potash; it forms laminar crystals. **A. and Phenyl Oxid.** See *Ether, Allylphenyl.* **A.-phenylic,** containing allyl and phenyl. **A.phenylic Oxid.** A.phenyl Oxid. See *Ether, Allylphenyl.* **A.-piperidin,** $C_8H_{15}N$, a liquid boiling at 140° C. **A. Pseudocyanate.** See *A. Carbimid.* **A. Pseudosulfocyanate, A. Pseudothiocyanate.** See *A. Mustard Oil* (Illus. Dict.). **A. Rhodanate.** See *A. Thiocyanate.* **A. Sulfate,** $C_3H_5HSO_4$, a substance acting as a monobasic acid and forming salts called allylsulfates. Syn., *Allylsulfuric acid; Allyl and hydrogen sulfate.* **A. Sulfid.** (See Illus. Dict.) It is stomachic and sedative. Dose, 1 tablespoonful of a 1 : 600 mixture every ½ hour. It is also used as an enema in cholera and subcutaneously in 0.5% solution in sterilized olive oil in tuberculosis. **A. Sulfocarbamid.** See *Thiosinamin* (Illus. Dict.). **A. Sulfocyanate, A. Sulfocyanid.** See *A. Thiocyanate.* **A.-sulfourea, A.-sulfurea.** See *Thiosinamin* (Illus. Dict.). **A. Thioalcohol.** See *A. Hydrosulfid.* **A. Thiocarbamid.** See *Thiosinamin* (Illus. Dict.). **A. Thiocarbimid.** See *A. Mustard Oil* (Illus. Dict.). **A. Thiocarbonate,** a salt of allylthiocarbonic acid. **A. Thiocyanate,** $NC . SC_3H_5$, a colorless, strongly refracting oily liquid with odor of garlic and hydrocyanic acid, isomeric with allyl mustard oil and producing headache, nervous excitement, and nausea when inhaled. Syn., *Artificial oil of mustard; Allyl sulfocyamid.* **A.-thiourea.** See *Thiosinamin* (Illus. Dict.). **A. Trichlorid.** See *Trichlorhydrin.* **A.-urea,** $CO . N_2H_3(C_3H_5)$, large prismatic crystals, easily soluble in water, and melting at 241° C.

Allylene (*al'-il-ēn*). $CH_3 . C \equiv CH$. A gas with strong odor, taking fire readily and burning with a smoky flame; was first obtained by Markownikow by heating propylene bromid with alcoholic potash. Syn., *Propine: Methylacetylene.*

Allylenic (*al-il-en'-ik*). Relating to allylene.

Allylic (*al-il'-ik*). Relating to allyl.

Allylid (*al-il-id*). A direct combination of allyl with a base.

Alnus. (See Illus. Dict.) 2. A genus of shrubs and trees of the order *Cupuliferæ.* **A. glutinosa,** Medic., common European alder; has astringent bark and leaves, which are used in intermittent fever and as an application in wounds and ulcers. **A. serrulata,** Willd., smooth, American, or tag alder, and **A. incana,** Medic., have similar qualities. The latter is recommended as a hemostatic. **Fl. Ext.** of *A. serrulata:* Dose, 30–60 ♏ (1.8–3.7 c.c.).

Alocasia (*al-o-ka'-ze-ah*). A genus of plants belonging to the order *Aroideæ.* The juice of **A. montana,** a native of the East Indies, is used as a stimulant and rubefacient.

Aloe. (See Illus. Dict.) 2. A genus of plants belonging to the lily family. **A. succotrina,** Lam., **A. vera,** L., **A. spicata,** L., and **A. perryi,** Baker, yield the bulk of the commercial aloes. **A.-bitter,** a bitter principle obtained from aloes by evaporation of the aqueous extract from which the aloe-resin has been extracted. **A.-bitter, Artificial,** a body obtained from aloes by action of nitric acid. **A.-resin,** an amorphous resinous constituent of aloes obtained as a deposit from a hot aqueous solution of aloes on cooling.

Aloephanginus (*al-o-e-fan-ji'-nus*). See *Aloetic* (Illus. Dict.).

Aloes (*al'-ōz*). The plants of the genus *Aloe* and also the inspissated juice of a number of the species. **A., Barbadoes,** that derived from *Aloe vera,* L. It is imported from the Barbadoes Islands. **A., Bethelsdorp,** the finest Cape aloes, which is collected at the Bethelsdorp Mission. **A., Bitter of.** See *Atem* (Illus. Dict.); also *Aloe-bitter.* **A., Cape,** that derived from *Aloe spicata,* L., *A. ferox,* Mill., and other species growing abundantly at Cape of Good Hope, whence it is imported. **A., Curaçoa,** resembles Barbadoes aloes, but has a different odor and appears to be produced by *Aloe vera, A. spicata,* and *A. succotrina,* and partly by *A. chinensis,* Steud. **A., East Indian.** See *A., Socotrine.* **A., Horse.** See *A., Caballine* (Illus. Dict.). **A., Jafferabad,** the product of *Aloe abyssinica,* Lam.; it is also called *Mocha aloes.* **A., Mineral,** bitumen. **A., Musam-**

bra, aloes made in India from *Aloe vera*, L. **A.-purple.** See *Acid, Aloetic.* **A., Shining,** Cape aloes. **A., Socotrine,** that obtained from *Aloe perryi* and *A. succotrina;* it is tonic and cathartic. **Fld. Ext.,** dose, 1–6 gr. (0.065–0.4 gm.). **A., Zanzibar.** See *A., Socotrine.*

Aloetamid (*al-o-et'-am-id*). $C_{17}H_3(NH_2)(NO_2)_2$. A body obtained from aloetic acid by action of dilute ammoniacal gas.

Aloetic. (See Illus. Dict.) 2. A preparation containing aloes.

Aloetica (*al-o-et'-ik-ah*). Preparations containing aloes.

Alogy. See *Alogia* (Illus. Dict.).

Aloid (*al'-oid*). Resembling the genus *Aloe* or aloes.

Aloisol (*al-o-is-ol'*). An oily liquid obtained from the distillation of aloes with quicklime.

Alopecia. (See Illus. Dict.) Syn., *Lapsus capillorum; Lapsus pilorum; Defluxio capillorum; Vulpis morbus.* **A., Accidental, A. area.** See *A. areata* (Illus. Dict.). **A., Cachectic,** that due to general malnutrition. **A. eczematodes,** baldness due to eczema. **A., General.** See *A. universalis* (Illus. Dict.). **A. leprosorum,** the falling of the hair occurring in leprosy. **A. localis congenita,** congenital baldness limited to circumscribed regions. **A., Natural,** congenital baldness or that due to old age. **A. neuritica.** (See Illus. Dict.) 2. Falling of the hair from neuritic atrophy. **A. normalis,** infantile and senile baldness. **A. pityrodes,** a gradual lessening of the hair with abundant desquamation of epithelium and sebaceous matter. **A. præmatura, A., Premature, Idiopathic.** See *A., Presenile.* **A. præsenilis, A., Presenile,** baldness resembling senile alopecia in general character, but occurring at an earlier age. **A., Symptomatic,** loss of hair through local causes, and in circumscribed regions. **A. unguis, A. unguium,** the falling of the nails. Syn., *Onychoptosis.* **A. universalis congenita,** congenital baldness affecting the whole body.

Alopeciatus (*al-o-pe-she-a'-tus*). Characterized by or affected with alopecia.

Alopecic (*al-o-pe'-sik*). 1. Relating to alopecia. 2. An individual affected with alopecia.

Alopecy (*al'-o-pe-sy*). See *Alopecia* (Illus. Dict.).

Alpenstich (*alp'-en-stik*) [Ger.]. A form of severe pleurisy or pleuropneumonia with typhoid symptoms peculiar to mountainous regions. It occurred as an epidemic in the Swiss Alps in 1771 and in north Germany in 1832. See *Alpflecken.*

Alpestris (*al-pes'-tris*) [L.]. Applied to organisms growing on mountains below the snow line. Syn., *Alpigenous.*

Alpflecken (*alp-flek'-en*) [Ger.]. Blue spots sometimes occurring on the skin after Alpenstich.

Alpha. (See Illus. Dict.) 2. The fiber of esparto grass. **A.eigon,** a compound of iodin and albumin containing 15% of iodin and soluble in water. **A.eunol.** See under *Eunol.* **A.leukocyte,** one disintegrating during blood-coagulation.

Alphabet (*al'-fa-bet*) [ἄλφα, βῆτα, first and second letters of the Greek alphabet]. The letters forming the elements of a written language. **A., Braille-,** a system of letters consisting of elevated points, for the use of the blind. **A., Chemic,** Lully's system, in which each letter of the alphabet had a symbolic signification.

Alphabetum chymicum (*al-fa-be'-tum kim'-ik-um*). See *Alphabet, Chemic.*

Alphasol (*al'-fa-sol*). A commercial preparation used as an antiseptic in rhinology and laryngology.

Alphene (*al-fen'*). N_2H_4C. A hypothetic radicle. **A. Sulfid.** See *Ammonium Sulfocyanate.*

Alphenols (*al-fe-nols'*). A class of compounds having the characteristics of both alcohols and phenols.

Alphodeopsoriasis (*al-fo-de-o-so-ri-a'-sis*) [ἀλοώδης, leprous; ψωρίασις, psoriasis]. A form of psoriasis resembling leprosy.

Alphodermia (*al-fo-dur'-me-ah*) [ἀλφός, white; δέρμα, the skin]. Achromatosis; any disease marked by lack of pigmentation.

Alphodes (*al'-fo-dēz*). See *Alphoid.*

Alphoid (*al'-foid*). Resembling alphos; leprous.

Alphol (*al'-fol*). $C_{17}H_{12}O_3$. The salicylic ether of α-naphthol, a white crystalline powder, soluble in alcohol, in ether, and in fatty oils, insoluble in water; melts at 83° C. It is an internal antiseptic. Dose, 8–15 gr. (0.52–1 gm.) 3 times daily. Syn., *Betol.*

Alphous (*al'-fus*). Relating to alphos.

Alphus. See *Alphos* (Illus. Dict.). **A. confertus,** a scrofulous form of impetigo with clustered lesions attended with formation of white crusts. **A. leuce,** Plenck's name for a skin disease marked by white spots, which penetrate the skin deeply and involve the hairs, and if pricked a milky water exudes. Syn., *Vitiligo leuce; Leuce.* **A. simplex,** Plenck's name for a skin disease marked by white patches not involving the hairs and wandering from one part to the other, with roughening of the skin. **A. sparsus,** a scrofulous disseminated ecthyma attended with formation of white crusts.

Alpigenous (*al-pij'-en-us*). See *Alpestris.*

Alpine (*al'-pin*). Inhabiting regions above the forest line, or among perpetual snow on mountains.

Alpinin [*Alpinia*]. $C_{17}H_{12}O_6$. A constituent of the coloring-matter of galangal root.

Alsidium (*al-sid'-e-um*) [ἀλσώδης, woody, bushy]. A genus of *Algæ*, belonging to the order *Florideæ.* **A. helminthochortus,** Agardh., a species found in the Adriatic and Mediterranean and especially on the coast of Corsica. It chiefly constitutes the Corsican moss (*q. v.*) of commerce. Cf. *Gigartina acicularis,* L. and *Desmaretia aculeata,* L.

Alsol (*al'-sol*). Aluminium acetotartrate.

Alstonamin (*al-sto-nam'-in*). See *Alstonin.*

Alstonia (*al-sto'-ne-ah*) [*Charles Alston,* 1683–1760 Scotch physician and botanist]. A genus of apocynaceous trees and shrubs. **A. constricta,** F. Muel., the Australian fever-tree, yields the alkaloid alstonin. The bark is tonic, antiperiodic, and antipyretic, and is used in intermittent fevers. **Fl. Ext.,** dose, 30–60 m (1.8–3.7 c.c.). **A. scholaris,** R. Br., the devil-tree, a native of the East Indies, furnishes dita bark; it is tonic, astringent, antiperiodic, and anthelmintic.

Alstonicin (*al-ston'-is-in*). An alkaloid obtained from *Alstonia constricta.*

Alstonidin (*al-ston'-id-in*). An alkaloid isolated from *Alstonia constricta;* it is soluble in ether and in chloroform.

Alstrœmeria (*al-strum-e'-re-ah*) [*Claudius Alstrœmerius,* a Swedish botanist]. A genus of herbs of the order *Amaryllidaceæ.* **A. ligtu,** a South American plant, furnishes Talcahuana arrowroot.

Alteration. (See Illus. Dict.) 2. Castration.

Alterative. (See Illus. Dict.) 2. Changing; alterant; reestablishing healthy nutritive processes. 3. Producing thirst.

Alternator (*awl'-tur-na-tor*). An apparatus for converting the direct dynamo current into an alternating current.

Althæa. (See Illus. Dict.) 2. A genus of plants of the order *Malvaceæ.* The root of **A. rosea,** hollyhock, is used as a substitute for *A. officinalis.* **Unguentum Althææ,** an ointment composed of marshmallow root, 2 parts; turmeric, flaxseed, and fenugreek, each

1 part; water, 70 parts; lard, 44 parts; yellow wax, 6 parts. Syn., *Diaithæas.*

Althain (*al'-tha-in*). A substance found by Bacon in marshmallow root, identical with asparagin.

Althionate (*al-thī'-on-āt*) [alcohol; θεῖον, sulfur]. A salt of althionic acid.

Alum. (See Illus. Dict.) 2. To treat with alum. **A., Alumina-,** a mixture of alum and aluminium sulfate. **A., Aluminium-,** an alum composed of a double sulfate of aluminium and another radicle. **A., Burnt,** alum dried by heat; a spongy, pulverizable substance. It is used as an astringent and on fungous growths. Dose, 5–30 gr. (0.333-1.944 gm.). Syn., *Calcined alum; Alumen exsiccatum; Alumen ustum.* **A., Cæsium.** See *Aluminium and cæsium sulfate.* **A., Cæsium and Rubidium.** See *Aluminium, cæsium, and rubidium sulfate.* **A.-cake,** impure aluminium sulfate containing about 12% of alum and soluble in water. **A., Calcined.** See *A., Burnt.* **A.-cataplasm, A. Curd,** an application for sore eyes consisting of white of egg coagulated with alum. **A., Chrome, A., Chromic, A., Chromium.** See *Chromium and potassium sulfate.* **A., Compound Powder of,** a combination of 2 parts of crude alum and 1 part of kino. Syn., *Alumen kinosatum.* **A., Concentrated,** aluminium sulfate. **A., Copper.** See *Copper, Aluminated.* **A., Cubic,** that occurring in crystalline cubes. **A., Dried.** See *A., Burnt.* **A., English,** ordinary alum. **A., Feather, A., Feathered,** 1. Alum occurring in a fibrous form. 2. Asbestos. **A., Ferric.** See *A., Iron.* **A., Flowers of,** that occurring in a white efflorescent layer upon minerals which have been subjected to heat. **A., Hairy.** Same as *A., Feather.* **A.-hematoxylin,** a purple stain for tissues obtained from an alcoholic solution of hematoxylin by addition of an aqueous solution of potassium alum. **A. Hydrate,** aluminium hydrate. **A., Ice.** See *A., Roman.* **A., Indium,** indium and ammonium sulfate. **A., Iron,** iron and potassium sulfate or a double sulfate of iron and another radicle. **A., Liquid,** combined alum, alumina, and iron oxid. Syn., *Rock butter.* **A., Manganese,** a double sulfate of manganese and another radicle, particularly manganese and potassium sulfate. **A., Manganic Ammonium.** See *Manganese* and *Ammonium sulfate.* **A.-meal,** alum in the form of a very fine powder. **A., Melian,** alum from Melos. **A., Muriated,** aluminium chlorid. **A.-ointment,** an unguent composed of lard, alum, and turpentine. **A., Plumose.** See *A., Feather.* **A., Porous,** aluminium sulfate rendered porous by treating the solution from which it crystallizes with sodium bicarbonate. **A., Potash-, A., Potassa, A., Potassic, A., Potassium-,** an alum containing potassium, particularly ordinary alum, or aluminium and potassium sulfate (*q. v.*). **A.-poultice.** See *A.-cataplasm.* **A., Roach, A., Roche, A., Rock,** a pure alum tinged with pink, brought from Rocca in Syria. **A.-rock.** See *Alunite.* **A., Roman,** an alum obtained from Tolfa, Italy, where it is made from alunite; it forms crystalline cubes, often of orange-red hue. **A., Round,** that shaped into round masses by hand. **A., Scissile,** native alum occurring in efflorescent form. **A., Scotch,** a form of ammonia-alum containing potash, made near Paisley. **A., Soluble.** See *A., Concentrated.* **A.-stone.** See *Alunite.* **A., Thallic, A., Thallium,** aluminium and thallium sulfate $Al_2(SO_4)_3 . Tl_2SO_4 + 24H_2O$.

Alumeniferous. See *Aluminiferous* (Illus. Dict.).

Alumenized (*al-ū'-men-izd*). Treated or mixed with alum.

Alumia. See *Alumina* (Illus. Dict.).

Alumil (*al'-u-mil*). Alumina in combination with acids.

Alumin. See *Alumina* (Illus. Dict.).

Aluminaris, Aluminarius (*al-u-min-a'-ris, -a'-re-us*). See *Aluminous.*

Aluminated (*al-u-min-a'-ted*). Combined with alum, alumina, or aluminium.

Aluminatum (*al-u-min-a'-tum*). A decoction of ½ oz. of alum in a pint of lemon juice, used in treatment of pustules on the face.

Aluminatus. See *Aluminated.*

Aluminic, Aluminicus (*al-u-min'-ik, -us*). Relating to or having the nature of alum.

Aluminiform (*al-u-min'-e-form*). Resembling alum in form and appearance.

Aluminite (*al-u'-min-it*). Native hydrous sulfate of aluminium occurring in small snow-white or yellowish roundish masses.

Aluminium. (See Illus. Dict.) **A. Acetate,** $Al_2O.4C_2H_3O_2 - 4H_2O$, a white granulated powder or a gummy mass, insoluble in water. It is used as an internal and external disinfectant. Dose, 5–10 gr. (0.3–0.6 gm.) 3 times daily. **A. Acetoborate,** translucent hygroscopic scales or granules, soluble in water; it is antiseptic and disinfectant. **A. Acetoglycerinate,** glycerite of aluminium acetate, a white powder of vinegar-like odor, not easily soluble in water and having one-fifth the strength of aluminium acetotartrate; it is used in 50% solution in diseases of the nose, throat, and ear. **A. Acetotartrate,** an energetic nontoxic disinfectant and astringent, occurring in yellowish granules or transparent scales, with a sour taste; it is slowly but easily soluble in water, insoluble in alcohol, ether, and glycerin. It is applied in 0.5% to 2% solutions in diseases of the air-passages; for chilblains 50% solution. **A.-alum.** See under *Alum.* **A.-amalgam,** an alloy of aluminium and mercury. **A. and Ammonium Salicylate.** See *Salicylate, Ammoniated.* **A. and Ammonium Sulfate.** See *A. Ammoniæ* (Illus. Dict.). **A. Arsenate,** $Al\,As_6O_{21}$, a combination of aluminium and arsenic acid. **A. Benzoate,** $Al_2(C_7H_5O_2)_6$, a white crystalline powder. **A. Bichromate,** $Al_2Cr_2O_7$, red crystals soluble in water. **A. Borate,** $2Al_2O_3B_2O_3 + 3H_2O$, a white granular powder soluble in water. **A. Boroformate,** shining, pearl-like, colored crystals, with sweet, faintly astringent taste; soluble in water and dilute alcohol, prepared from freshly precipitated aluminium hydrate dissolved in 2 parts of formic acid, 1 part of boric acid, and 7 parts of water. It is used as an astringent and antiseptic. **A. Borotannate,** a reaction-product from tannic acid with borax and aluminium sulfate containing 76% tannin, 13.23% alumina, 10.71% boric acid; a light-brown powder, soluble in dilute tartaric acid, insoluble in water; used as a disinfectant and astringent in skin diseases, applied pure or attenuated in ointment or dusting-powder. Syn., *Cutal; Cutol.* **A. Borotannotartrate,** a compound of aluminium borotannate and tartaric acid; it is soluble in water and is used externally in skin diseases and in gonorrhea in 0.5% to 10% solution. Syn., *Soluble cutal* or *cutol.* **A. Borotartrate,** white crystals, with astringent taste; soluble in water. An energetic, astringent, nonirritant antiseptic, used externally in inflammatory diseases of the throat and nose, and applied in substance or in solution with the addition of glycerin. Syn., *Boral* **A. Bromid,** Al_2Br_6, white shining plates; soluble in water and alcohol; melts at 93° C. In combination with aluminium chlorid it is used as a gargle in diphtheria or taken internally. **A.-bronze,** a hard, malleable, yellow alloy of 1 part aluminium with 9 parts of copper. **A. and Cæsium and Rubidium Sulfate,** $Al_2CsRb(SO_4)_4 + 24H_2O$, soluble in water.

Syn., *Cæsium and rubidium alum.* **A. and Cæsium sulfate,** $Al_2(SO_4)_3Cs_2SO_4 + 24H_2O$, octohedral crystals soluble in water. Syn., *Cæsium alum.* **A. Carbid,** AlC_3, soluble in hot concentrated nitric acid. **A. Caseinate,** an intestinal astringent. Dose, 4–5 gr. (0.25–0.3 gm.). **A. Chlorid,** Al_2Cl_6, colorless hexagonal plates, which fume in moist air. It is soluble in water, alcohol, and ether, and melts at 180°–185° C. It is astringent and antiseptic, and is also used in bleaching teeth. **A. Citrate,** a compound of aluminium and citric acid forming a white powder if the acid is in excess or a gummy body soluble in water. It is astringent and antiseptic. **A. Fluorid,** Al_2Fl_6, a reaction-product of alumina, fluorspar, and hydrochloric acid gas with heat, forming colorless crystals slowly soluble in cold water, but readily in hot water. It is antiseptic. **A. Gallate, Basic,** a brown antiseptic dusting-powder made by precipitating a solution of aluminium sulfate with a solution of gallic acid to which sodium hydrate had been added. Syn., *Gallol.* **A.-gold.** See *A.-bronze.* **A. Hydroxid.** See *A. Hydrate* (Illus. Dict.). **A. Hypophosphite,** $Al_2(PO_2H_2)_6$, a white powder soluble in water. **A. Iodid,** Al_2I_6, a reaction-product of aluminium and iodin at a high temperature in sealed tubes, forming colorless crystals, soluble in water and in alcohol and carbon bisulfate, and melting at 185° C. It is used as an antiseptic. **A. and Iron Sulfate,** $Al_2(SO_4)_3$-$FeSO_4 + 24H_2O$, a crystalline, astringent substance. Syn., *Ferrosoaluminic sulfate.* **A. Monohydrate.** See *A. Oxydihydrate.* **A. Naphthol Disulfonate, A. Naphtholsulfonate.** See *Alumnol* (Illus. Dict.). **A. Nitrate,** $Al_2(NO_3)_6$, light prismatic crystals decomposing at 150° C. Syn., *Argillaceous niter.* **A., Oleate of,** $Al(C_{18}H_{33}O_2)_2$, a yellowish mass soluble in alcohol, in ether, in benzene, and in oleic acid. It is used as an antiseptic in skin diseases. **A. Oxalate,** $Al_2(C_2O_4)_3 + H_2O$, a white powder, with sweet astringent taste, formed from aluminium trihydrate by action of oxalic acid. **A. Oxid,** alumina, Al_2O_3, a white, amorphous powder obtained by ignition of aluminium hydrate. **A. Oxid, Precipitated.** See *A. Hydrate* (Illus. Dict.). **A. Oxydihydrate,** $Al_2O_2(OH)_2$, a substance occurring native as a mineral. **A. Palmitate,** $Al(C_{16}H_{31}O_2)_2$, white or yellowish granular masses, soluble in alcohol, turpentine, and petroleum. **A. Paraphenolsulfonate, A. Phenolsulfonate.** See *A. Sulfocarbolate.* **A. and Potassium Paraphenolsulfonate,** Al_2K_2-$([C_6H_6]\,OHSO_3)_2$, a combination of paraphenolsulfuric acid with potassium aluminate; colorless crystals soluble in water. It is used as an antiseptic and astringent wash in indolent ulcers. **A.-potassium Salicylate,** a highly astringent substance with antiseptic properties, obtained by action of potassium acetate on A. salicylate. Syn., *Alkasol.* **A. and Potassium Sulfate.** See *Alum* (Illus. Dict.). **A. and Potassium Sulfocarbolate,** $Al_2K_2(C_6H_4$-$HSO_4)_8$, an antiseptic, astringent, and styptic; it is used externally in a 5% to 20% aqueous solution in cases of cancer and putrid ulcerations, and as a mouth-wash. **A. Rhodanid.** See *A. Sulfocyanate.* **A. and Rubidium sulfate,** $Al_2Rb_2(SO_4)_4 + 24H_2O$. Soluble in 44 parts of water at 17° C. **A. Salicylate,** $Al(C_7H_5O_3)_3$, a reddish-white antiseptic powder used in nasal catarrh and ozena. Syn., *Salumin.* **A. Salicylate, Ammoniated,** a yellowish-white powder used as an antiseptic and astringent in inflammation of the nose and throat by dry insufflations or painting with a 20% solution in 50% of glycerin and 30% of water. Syn., *Soluble salumin.* **A.-salts,** combinations of aluminium with acids, particularly with oxyacids. **A. Silicate,** $Al_2(SiO_3)_3$, white masses. **A. Silicofluorid,** $Al_2F_6 \cdot 3SiFl_4$, a white powder. **A.-silver,** a hard white alloy of aluminium and silver. **A. and Sodium Silicate,** $Na_2SiO_3Al_4(SiO_4)_3$, obtained by adding aluminium hydrate to a boiling solution of sodium silicate and sodium hydrate. It is used in surgical dressings. **A. and Sodium Sulfate.** See *Alum sodæ* (Illus. Dict.). **A. Sozoiodolate,** light needles very soluble in water and in alcohol. It is used as an antiseptic wash in 2% to 3% solution. **A. Stearate,** $Al(C_{18}H_{35}O_2)_2$, a white mass soluble in warm alcohol, turpentine, and benzene. **A. Sulfate,** $Al_2(SO_4)_3 + 18H_2O$, white, odorless, crystalline lumps or powder with a sweet astringent taste, soluble in 1.2 of water. It is an external antiseptic, caustic, and astringent. Applied in concentrated solution or 1 : 20 to 1 : 100 solutions. **A. Sulfid,** Al_2S_3, bitter yellow crystals obtained by heating aluminium in the presence of sulfur. **A. Sulfocarbolate,** $Al_2(C_6H_4HSO_4)_6$, white crystals with slight phenol odor and astringent taste; soluble in water, in glycerin, and in alcohol. It is a recommended antiseptic in cystitis and suppurating sores. Syn., *Sozal.* **A. Sulfocyanate,** a white crystalline deliquescent solid, soluble in water. **A. Tannate,** a compound of aluminium and tannic acid. **A. Tannotartrate,** yellowish-white plates or powder soluble in water; used as an astringent and antiseptic insufflation or gargle in laryngeal or catarrhal troubles. Syn., *Soluble tannal.* **A. Tartrate,** $Al_2C_4H_4O_6$, a white powder. **A. Tersulfate,** normal aluminium sulfate. **A. Trihydrate.** See *A. Hydrate* (Illus. Dict.). **A. and Zinc Sulfate,** $Al_2(SO_4)_3ZnSO_4$, a white crystalline powder, soluble in water. It is used as a caustic.

Aluminol. See *Alumnol* (Illus. Dict.).

Aluminous (*al-u'-min-us*). Relating to or containing alum, aluminia, or aluminium. **A.-chalybeate,** a term applied to mineral waters containing alum and iron.

Aluminum (*al-u'-mi-num*). See *Aluminium* (Illus. Dict.).

Alumish, Alumy (*al'-um-ish, al'-um-e*). Having the properties of alum.

Aluniferous (*al-un-if'-ur-us*). See *Alumniferous* (Illus. Dict.).

Alunite (*al'-un-it*) [Fr., *alun*, alum]. Aluminium and potassium subsulfate; a grayish or yellowish-white substance first found at Tolfa, Italy. Syn., *Alum-rock; Alum-stone.*

Alunogen (*al-u'-no-jen*) [Fr., *alun*, alum]. Native aluminium sulfate.

Alunol (*al'-un-ol*). An ointment said to consist of ichthyol, sulfur, oil of cade, lanolin, and oleates of zinc and aluminium.

Alutel. See *Aludel* (Illus. Dict.).

Alveated (*al'-ve-a-ted*) [*alveatus*, hollowed out like a trough]. Honeycombed; channeled; vaulted like a beehive.

Alveola (*al-ve'-o-lah*) [*alveus*, a trough]. A little depression.

Alveolarectasia (*al-ve-o-lar-ek-ta'-ze-ah*). See *Emphysema, Pulmonary* (Illus. Dict.).

Alveolaris, Alveolary (*al-ve-o la'-ris, al-ve'-o-la-ri*). Alveolar.

Alveoliform (*al-ve'-ol-e-form*). Shaped like an alveolus.

Alveolin (*al ve'-o-lin*). A chemic substance obtained by Frenzel from the alveolar network in the deutomerites of gregarines.

Alveolomaxillary (*al-ve-o-to-maks'-il-a-re*). The buccinator muscle.

Alveolus. (See Illus. Dict.) Syn., *Phatne; Phatnion; Phatnium.* 2. A cavity, depression, pi

cell, or recess. **A. laryngeus.** See *Pouch, Laryngeal* (Illus. Dict.).

lveus. (See Illus. Dict.) 2. A cavity or excavation. **A. ampullascens, A. ampullescens, A. ampullosus.** See *Receptaculum chyli* (Illus. Dict.). **A. cornu ammonis.** See *A. hippocampi* (Illus. Dict.). **A. urogenitalis.** See *Uterus masculinus* (Illus. Dict.).

lvinus (*al-vī'-nus*). 1. See *Alvine* (Illus. Dict.). 2. Suffering from intestinal disorders.

lvus [pl. and gen. *alvi*]. (See Illus. Dict.) 2. Diarrhea. **A. adstricta, A. astricta,** a greater degree of constipation than alvus dura. **A. cita,** diarrhea. **A. coacta,** constipation. **A. compacta, A. compressa, A. constipata.** See *A. adstricta.* **A. dura,** constipation. **Alvi excretio,** defecation. **Alvi fluxus,** diarrhea. **A. fluens, A. fluida, A. fusa, A. liquida, A. mollis,** diarrhea. **A. renis,** the pelvis of the kidney. **A. segnis.** See *A. adstricta.* **A. soluta,** diarrhea. **A. suppressa,** constipation. **A. tarda,** delayed or nonfrequent defecation. **A. tenax,** constipation.

yssum (*ah-lis'-um*) [*a*, priv.; λύσσα, madness]. A genus of annual herbs belonging to the order *Cruciferæ*, many species of which are called madwort from their former use in the treatment of insanity.

yssus (*al-is'-us*). Preventing or curing rabies.

yxia (*al-iks'-e-ah*) [ἀλυξις, a shunning]. A genus of apocynaceous evergreen shrubs of tropical Asia and Australia. **A.-camphor,** a crystalline exudate occurring on the inner surface of alyxia bark. It has an aromatic taste and the odor of tonka beans; readily soluble in alcohol and in ether, moderately so in hot water. **A. stellata,** Roxb., a climbing shrub of Java, the bark of which (*cortex alyxiæ*) has a bitter, aromatic taste and the odor of tonka beans, is used in the East Indies in pernicious fever and in Europe as a perfume. It contains a volatile oil, an acrid aromatic resin, bitter extractives, and gum.

lyxis. See *Alysm* (Illus. Dict.).

ma (*ah'-ma*) [ἀμη, a water pail]. An enlargement at the end opposite the ampulla of a bony canal of the labyrinth of the internal ear.

macrine (*ah-mak'-rin*) [*a*, priv.; μακρός, long; ἰνός, of a nerve or fiber]. A term applied by Ramón y Cajal to a nerve-cell absolutely devoid of axis-cylinder processes. **A. Cells.** See under *Cell.*

madou. (See Illus. Dict.) **A., Nitrated,** amadou rendered inflammable by saturating with a solution of niter. **A. de Panamá,** a hemostatic prepared from the leaf-hairs of *Miconia holosericea*, D. C.

malgam. (See Illus. Dict.) 2. Any soft alloy. 3. A compound of different things. **A., Dental,** compounds of a basal alloy of silver and tin with mercury, used for filling teeth. Gold, platinum, copper, zinc, and bismuth are frequently added as third metal to the basal alloy.

malgamate (*am-al'-gam-āt*). To unite a metal in an alloy with mercury. To unite two dissimilar substances. To cover the zinc elements of a galvanic battery with mercury.

manita (*am-an-ē'-tah*) [ἀμανῖται, a sort of fungi]. A genus of fungi. **A. muscaria,** fly-fungus, fly agaric, bug agaric, a very poisonous species used in killing flies, has marked excitant and narcotic properties. It has been used topically in cancerous tumors and ulcers and internally in epilepsy, skin diseases, as an excitant in paralysis, and as an antihidrotic in tuberculosis. It contains the alkaloids muscarin and amanitin.

mara. (See Illus. Dict.) 2. The bitter alkaloids. 3. [ἀμάρα, a trench.] A sewer, drain, or stream. In the plural, *amaræ*, the hollows of the outer ear.

maracinus (*am-ar-as'-in-us*) [L.]. Relating to or containing marjoram.

Amaranthus (*am-ar-an'-thus*) [ἀμάραντος, unfading]. A genus of annual herbs belonging to the natural order *Amarantaceæ*, containing many edible and medicinal species. **A. blitum,** a European species used as an emollient. Syn., *Herba bliti.* **A. campestris,** Willd., a native of India, is given for relief in strangury.

Amarantous (*am-ar-an'-tus*). Unfading; relating to a member of the genus *Amaranthus.*

Amarescent (*am-ar-es'-ent*). Growing bitter; slightly bitter.

Amaril (*am'-ar-il*) [Sp., *amarillo*, yellow]. The poison induced by *Bacillus icteroides.*

Amarillic (*am-ar-il'-ik*). Pertaining to yellow fever. Cf. *Serum antiamarillic* and *Amarylism.*

Amaroids (*am'-ah-roids*). All distinctly bitter vegetable extractives of definite chemic composition other than alkaloids and glucosids. Their names end in *in* or *inum.* Also called "bitter principles." [White.]

Amarol (*am'-ar-ol*). See *Ingestol.*

Amarulence (*am-ar'-u-lenz*) [*amarulentus*, full of bitterness]. Bitterness.

Amarulent (*am-ar'-u-lent*). Bitter.

Amarum (*am-a'-rum*) [*amarus*, bitter]. 1. A bitter. 2. Magnesium sulfate. **A., Genuine,** magnesium sulfate. **A. purum,** any simple bitter.

Amarylism (*am'-ar-il-izm*) [Sp., *amarillo*, yellow]. Yellow fever.

Amarythrin (*am-ah-rith'-rin*). See *Picroerythrin* (Illus. Dict.).

Amastesis (*am-as-tē'-sis*). See *Amasesis* (Illus. Dict.).

Amathia (*am-ah'-the-ah*). See *Amazia* (Illus. Dict.).

Amaurosis. (See Illus. Dict.) Syn., *Paropsis amaurosis; Gutta serena; Cataracta nigra.* **A., Alcoholic,** that due to misuse of alcohol. **A., Amblyopic,** amblyopia. **A. a myosi, A. a synchisi.** See *Synizesis* (Illus. Dict.). **A. atonica,** that due to physical debility. **A., Burns'.** See *A., Postmarital* (Illus. Dict.). **A., Cat's Eye.** See under *Amaurotic* (Illus. Dict.). **A. centralis,** that due to disorder of the central nervous system. **A. compressionis,** cerebral amaurosis caused by pressure upon the optic nerve. **A. congestiva,** that due to cerebral congestion. **A. dimidiata.** See *Hemiopia* (Illus. Dict.). **A., Diurnal.** See *Nyctalopia* (Illus. Dict.). **A. epileptica,** that occurring during an epileptic seizure. **A., Epileptiform, A., Epileptoid,** sudden blindness not confined to epileptics, but considered by some to be epileptic in its nature. Dilation of the retinal veins has been noted, but no changes in the retinal arteries have been observed. Syn., *Retinal epilepsy; Ophthalmemicrania.* **A. exanthematica,** that attending eruptive diseases. **A. ex hæmorrhagia, A. ex hyperopsia,** an incurable, inexplicable blindness occurring suddenly after hemorrhages, especially of the stomach. **A., Glycosuric.** See *A., Diabetic* (Illus. Dict.). **A. intermittens larvata,** a blindness, often unilateral, occurring with mild intermittent fever, which is frequently followed by atrophy of the optic nerve. **A., Intermittent,** amaurosis occurring as a complication of intermittent fever. It usually begins with the chill and endures until the sweating stage. **A. luminis.** See *Hemeralopia* (Illus. Dict.). **A., Muscular.** See *Asthenopia, Accommodative* (Illus. Dict.). **A., Narcotic,** that due to the use of narcotics. **A., Neuralgic.** See *A., Reflex* (Illus. Dict.). **A., Nocturnal.** See *Hemeralopia* (Illus. Dict.). **A. partialis fugax.** See *Teichopsia* (Illus. Dict.). **A. pellagrosa,** blindness attending pellagra. **A., Progressive,** the progressive atrophy of the intraocular optic nerve-endings. **A., Quinin,** that due to large doses of quinin. **A. reflectoria, A. reflexa.** See *A., Reflex* (Illus. Dict.). **A., Rachialgic.**

See *A., Spinal.* **A., Saturnine,** a form which appears to be due to the direct action of lead upon the substance of the optic nerve; in many cases modified by optic neuritis arising from it or the partial appearance of encephalopathia saturnina. Cf. *Nephritis interstitialis.* **A., Simulated,** feigned blindness. **A., Spasmodic,** blindness due to convulsions. **A., Spinal,** that caused by atrophy of the optic nerve, due to lateral or multiple sclerosis. **A. sympathica, A., Sympathetic,** functional disorder of one eye from reflex transmission of disease of the other eye. **A., Symptomatic,** that due to disease located away from the eye. **A., Syphilitic,** that due to syphilis. **A., Tobacco.** See *Amblyopia nicotiana.* **A., Toxic,** a term including all forms due to systemic intoxication. **A., Traumatic,** that due to injury. **A., Trifacial,** reflex amaurosis due to irritation of the trigeminus. **A. uræmica, A., Uremic,** sudden transitory blindness occurring as a symptom in renal diseases. **A. venenata.** See *A., Toxic.* **A. venerea.** See *A., Syphilitic.*

Amaurotic Family Idiocy. See under *Idiocy.*

Ambelania (*am-bel-ah'-ne-ah*) [from the South American name]. A genus of plants of the order *Apocynaceæ.* **A. acida,** Aubl., a species growing in Guiana, the pared fruit of which is edible. The skin is mildly purgative and is used in dysentery.

Amber. (See Illus. Dict.) Syn., *Edes.* **A., Apples of.** See *Pomander* (Illus. Dict.). **A.-balsam,** the residue left in the retort after rectification of amber oil. **A., Black.** See *Ambra nigra.* **A., Colophony of.** See *A.-balsam.* **A., Factitious,** fraudulent substitutions for amber. **A., Gray,** ambergris. **A., Liquid,** the gum of the tree *Liquidamber styraciflua.* **A., Soluble,** a cement consisting of equal amounts of amber and linseed oil. **A., Spirit of,** the sour liquid, consisting chiefly of succinic acid, produced in the distillation of succinum.

Ambergrease, Ambergreese (*am'-bur-gres*). See *Ambergris* (Illus. Dict.).

Ambia (*am'-be-ah*). Bitumen. **A. monard,** a liquid bitumen with odor and properties of tacamahac obtained from a spring near the Indian Ocean.

Ambidexious. See *Ambidextrous* (Illus. Dict.).

Ambidexterity (*am-be-deks-ter'-it-e*). Ability to use both hands equally well; ambidextrousness.

Ambilevous (*am-be-le'-vus*) [*ambo,* both; *lævus,* on the left side]. Unskilful in the use of both hands.

Ambiopia (*am-be-o'-pe-ah*). See *Diplopia* (Illus. Dict.).

Ambitus (*am'-bit-us*) [*ambire,* to surround]. A circumference. **A. cerebelli,** Burdach's term for the cerebellum, pons, and oblongata taken together.

Amblotic. (See Illus. Dict.) 2. An abortifacient drug or agent.

Amblotica (*am-blot'-ik-ah*). Abortifacients.

Amblyope (*am'-ble-ōp*). A person affected with amblyopia.

Amblyopia. (See Illus. Dict.) Syn., *Obfuscatio; Offuscatio.* **A., Amaurotic,** that due to atrophy of the optic nerve or destruction of the centers of vision. **A., Anemic,** that due to anemia. **A., Asthenic,** that due to weakness either local or general. **A., Blockade,** a peculiar anemic condition affecting the eyesight, due to unhygienic conditions. **A. centralis simplex,** slight hyperemia of the disc, with diminished acuity of vision, without distinct scotoma or disordered color-perception, and with normal peripheral field. **A., Cerebral,** that due to disease of the brain substance. **A., Congestive,** that due to congestion, frequently attending insufficient action of the skin or kidneys. **A. crapulosa,** that due to alcoholic excess. **A., Crossed, A. cruciata,** amblyopia always occurring through lesion of the brain, in which dimness of vision with contraction of the field of vision exists in the eye on the side opposite to the lesion. **A., Diabetic,** that accompanying diabetes. **A. dimidiata.** See *Hemianopsia* (Illus. Dict.). **A. Diurnal,** nyctalopia. **A. erethica,** impaired vision sometimes attending hyperesthesia of the genitals. **A. ex abusa, A. from Abuse,** defective vision due to any excess. **A. from Nonuse.** See *A. ex anopsia* (Illus. Dict.). **A. fugax.** See *A., Transient.* **A., Glycosuric.** See *A., Diabetic.* **A. irritabilis.** See *A. erethica.* **A., Lead,** that due to lead-poisoning. **A. luminis.** See *Hemeralopia* (Illus. Dict.). **A. luscorum,** amblyopia with a central scotoma. **A. meridiana.** See *Nyctalopia* (Illus. Dict.). **A. nicotiana, A. of Smokers,** that due to excess in tobacco. **A., Nocturnal.** See *Hemeralopia* (Illus. Dict.). **A. potatorum,** that due to alcoholic excesses. **A., Quinin.** See *Amaurosis, Quinin.* **A., Saturnine.** See *A., Lead.* **A. tenebrarum.** See *Nyctalopia* (Illus. Dict.). **A., Toxic,** blindness due to any form of systemic poisoning. **A., Transient, A. transitoria,** a temporary blindness occurring at times with acute maladies in which there is impoverishment of the blood. **A., Uremic.** See *Amaurosis, Uremic.*

Amblyopsa, Amblyopsia (*am-ble-op'-sah, am-ble-op-se-ah*). See *Amblyopia* (Illus. Dict.).

Amblyopy (*am-ble-o'-pe*). See *Amblyopia.*

Amblyoscope (*am'-ble-os-kōp*) [ἀμβλωπιά, dimness of vision; σκοπεῖν, to look]. Claud Worth's instrument by means of which an amblyopic eye is trained to take its share in vision.

Amboceptoid (*am-bo-sep'-toid*). A degenerated amboceptor which has lost its binding group (haptophore) on the one hand for the cell, or on the other hand for the complement.

Amboceptor (*am-bo-sep'-tor*) [*ambo,* both; *capere,* to receive]. In Ehrlich's lateral-chain theory, an immune body having two uniting processes. Syn., *Intermediary body* (Ehrlich); *Copula* (Müller); *Sensitizer, Substance sensibilisatrice* (Bordet); *Desmon* (London); *Philocytase; Hemotoxic sensitizer* (Metchnikoff).

Ambra (*am'-bra*) [L.]. 1. Amber. 2. Ambergris. Spermaceti. **A. alba,** 1. Spermaceti. 2. A light colored variety of amber obtained in Brazil. **A. atrum.** See *A. nigra.* **A. cineracea, A. cinereus, A. cineria, A. cineritia.** See *Ambergris* (Illus. Dict.). **A. flava, A. fulvum.** See *Succinum* (Illus. Dict.). **A. nigra,** general name for any dark colored amber or ambergris or dark resinous substance also lignite and jet. **Ambræ poma.** See *Pomander* (Illus. Dict.).

Ambrain (*am'-bra-in*). A nonnitrogenous body, the chief constituent of ambergris; it is insoluble in water and not changed by boiling alkalis; soluble in alcohol, ether, and oils.

Ambreate (*am'-bre-āt*). A salt of ambreic acid.

Ambreic (*am'-bre-ik*). Relating to ambrein.

Ambulacral. (See Illus. Dict.) 2. Relating to locomotion or its functions.

Ambulance. (See Illus. Dict.) 3. In Europe a portable military hospital and its equipments accompanying the army in its movements. **A. chaser,** a "shyster" lawyer who drums up accident damage cases against firms and corporations.

Ambulant (*am'-bu-lant*). See *Ambulatory* (Illus. Dict.).

Ambulatorium (*am-bu-la-to'-re-um*) [L.]. A dispensary.

Ambuliped (*am-bu'-lip-ed*) [*ambulare,* to walk; *pes,* a foot]. Furnished with feet fitted for walking.

mbustial (*am-bust'-she-al*) [*amburere*, to scorch]. Caused by a burn.

mbustum (*am-bust'-um*). See *Ambustion* (Illus. Dict.). **A. ex frigore**, frost-bite.

me [Jap.]. 1. Japanese maltine, a nutrient of honey-like consistency and color and of a sweet taste, prepared from rice, barley-malt, and water.

mebaenteritis (*am-e-bah-en-ter-i'-tis*). Chronic enteritis due to invasion of *Amœba coli*.

mebiform (*am-e'-be-form*). See *Ameboid*.

mebism, Amœbism, Amebaism, Amœbaism (*am'-e-bizm, am-e'-ba-izm*). A pathologic condition due to the invasion of amebas into the system.

mebula, Amœbula (*am-e'-bu-lah*). E. Ray Lankester's name for the amebiform parasite which develops from the exotospore of the malaria parasite.

meburia (*am-e-bu'-re-ah*). The occurrence of amebas in the urine.

melia. (See Illus. Dict.) 2. See *Ameleia* (Illus. Dict.).

melid (*am'-el-id*). See *Ammelid* (Illus. Dict.).

melin (*am'-el-in*). See *Ammelin* (Illus. Dict.).

meliorator (*am-el'-yo-ra-tur*) [*ad*, to; *melior*, better]. An animal of superior quality selected for propagation, to improve the breed.

menomonomania (*ah-men-o-mon-o-ma'-ne-ah*). See *Amenomania* (Illus. Dict.).

menorrhea, Amenorrhœa. (See Illus. Dict.) Syn., *Paramenia obstructionis; Amenia.* **A., Accidental.** See *A., Secondary* (Illus. Dict.). **A. chlorotica**, that associated with chlorosis. **A., Congenital.** See *A., Primitive* (Illus. Dict.). **A., Constitutional**, that caused by some constitutional disorder. **A. destillatoria**, in retention of the menses, the discharge drop by drop of the menstrual flow. **A. difficilis.** See *Dysmenorrhœa* (Illus. Dict.). **A. emansionis.** See *A., Primitive* (Illus. Dict.). **A., Functional**, that not due to a structural disease. **A. hymenica**, retention of the menses through imperforation of the hymen. **A., Idiopathic.** See *A., Functional.* **A., Organic**, that due to atrophy of the uterus or some other structural disease. **A., Ovarian, A., Radicle**, that due to nonovulation. **A., Simple**, that not due to incomplete development. **A. suppressa, A. suppressionis**, suppression of the menses. **A., Symptomatic**, that due to a morbid condition of the body.

menyl (*am'-en-il*). C_5H_9. A radicle, being amyl with 2 atoms of hydrogen removed.

merind (*am'-ur-ind*) [*America; Indian*]. An inclusive term for the aboriginal race of American Indians.

merindian (*am-ur-ind'-yan*). Pertaining to an American autochthon.

meristic (*ah-mer-is'-tik*) [*a*, priv.; *μέρος*, a part]. Not segmented.

mertume. (See Illus. Dict.) 2. Bitterness.

mesial (*ah-me'-ze-al*) [*a*, priv.; *μέσος*, middle]. Thrown out of the middle line.

mesiality (*ah-me-ze-al'-it-e*). The throwing of a part, as the pelvis, to one side of the mesial line of the figure.

metamorphosis (*ah-met-ah-mor'-fo-sis*) [*a*, priv.; *μεταμόρφωσις*, change]. The absence of metamorphosis.

methane (*am-e-thān'*) [*amic; ether*]. An ether of an amic acid.

methystin (*am-e-this'-tin*). A violet pigment obtained from cacothelin by action of hydrogen sulfid.

metra (*ah-met'-rah*). See *Ametria* (Illus. Dict.).

metria. (See Illus. Dict.) 2. [*a*, priv.; *μέτρον*, a measure.] Immoderation; asymmetry. [Galen.]

metrohemia, Ametrohæmia (*ah-met-ro-he'-me-ah*) [*a*, priv.; *μήτρα*, womb; *αἷμα*, blood]. A defective uterine blood-supply.

Ametrope (*ah'-met-rōp*) [*a*, priv.; *μέτρον*, a measure; *ὄψις*, sight]. An individual affected with ametropia

Ametrous (*ah-met'-rus*). Lacking a uterus.

Amianthinopsy (*am-e-an-thin-op'-se*). [*a*, priv.; *ἰανθινος*, violet-colored; *ὄψις*, sight]. Violet-blindness; incapacity to distinguish violet rays.

Amiantinus (*am-i-an-te'-nus*). Greenish-white in color.

Amid. (See Illus. Dict.) **A. Acid,** 1. An amido-acid. 2. An amid as distinguished from an amin or alkamid. **A., Allophanic.** See *Biuret* (Illus. Dict.).

Amidated (*am'-id-a-ted*). Converted into an amid; compounded with amidogen.

Amidethane (*am-id-eth-ān'*). See *Ethylamin* (Illus. Dict.).

Amidic (*am-id'-ik*). See *Amic* (Illus. Dict.).

Amidin. (See Illus. Dict.) **A., Tegumentary.** See *Amylin.*

Amidinus (*am-id-e'-nus*). See *Amylin.*

Amidoacetal (*am-id-o-as'-et-al*). $NH_2CH_2(O.C_2H_5)_2$. A poisonous body boiling at 163° C.; it paralyzes the respiratory center.

Amidoacetophenetidin (*am-id-o-as-et-o-fe-net'-id-in*). See *Phenocoll* (Illus. Dict.).

Amidoanthraquinone (*am-id-o-an-thra-kwin'-ōn*). See *Alizaramid.*

Amidoantipyrin (*am-id-o-an-te-pi'-rin*). Yellow acicular crystals, melting at 109° C. It is antipyretic.

Amidoazobenzene (*am-id-o-az-o-ben'-zēn*). See *Anilin Yellow*, in *Pigments, Conspectus of* (Illus. Dict.).

Amidobenzene, Amidobenzol (*am-i-do-ben'-zēn, -zol*). See *Anilin* (Illus. Dict.).

Amidocaffein (*am-id-o-kaf'-e-in*). $C_6H_9(NH_2)N_4O$. Fine acicular crystals obtained by heating brom-caffein with alcoholic ammonia.

Amidocamphor (*am-id-o-kam'-for*). $C_{10}H_{14}(NH_2)(OH)$. A strongly basic substance obtained by reduction of nitrocamphor.

Amidochromic (*am-id-o-kro'-mik*). Containing amidogen and chromium as a trivalent radicle.

Amidocumene, Amidocumol (*am-id-o-ku'-mēn, -mol*). See *Cumidin* (Illus. Dict.).

Amidocymene (*am-id-o-sim-ēn'*). $C_{10}H_{15}N$. A homolog of toluidin. Syn., *Cymidene.*

Amidodimethylbenzene (*am-id-o-di-meth-il-ben'-zēn*). See *Xylidin* (Illus. Dict.).

Amidoethane (*am-id-o-eth-ān'*). See *Ethylamin* (Illus. Dict.).

Amidoguaiacol (*am-id-o-gwi'-ak-ol*). A product of acetoanisidin, by nitration and reduction. It melts at 184° C. The salts are employed in the preparation of colors and medicines.

Amidoguanidin (*am-id-o-gwan'-id-in*). $NH{:}C<^{NHNH_2}_{NH_2}$. Produced by the reduction of nitroguanidin and nitroso-guanidin with zinc dust and acetic acid. It forms crystalline compounds with dextrose, galactose, and lactic acid, but decomposes readily when in a pure condition and breaks down when boiled with acids.

Amidolica (*am-id-ol'-ik-ah*) [Fr., *amidon*, starch]. Any pharmaceutic compounds made with starch.

Amidomalonylurea (*am-id-o-mal-on-il-u'-re-ah*). See *Murexan* or *Uramil* (Illus. Dict.).

Amidomesitylene (*am-id-o-mes-it'-il-ēn*). $C_9H_{13}N$. A liquid boiling at 230° C. Syn., *Amidotrimethylbenzene; Mesidin.*

Amidomethane (*am-id-o-meth-ān'*). See *Methylamin* (Illus. Dict.).

Amidosuccinamid (*am-id-o-suk-sin-am′-id*). See *Asparagin* (Illus. Dict.).

Amidosulfonal (*am-id-o-sul′-fon-al*). Amido-acetone-ethyl-disulfon, a sedative.

Amidosulfonate (*am-id-o-sul′-fon-āt*). A salt of amido-sulfonic acid.

Amidoxylene (*am-id-o-zi′-lēn*). See *Xyliden* (Illus. Dict.).

Amidum (*am′-id-um*). See *Amidogen* (Illus. Dict.).

Amil (*am′-il*). See *Amyl.*

Amimid (*am-im′-id*). See *Amidin* (Illus. Dict.).

Aminicus (*am-in′-ik-us*). See *Amic* (Illus. Dict.).

Aminoform (*am-in′-o-form*). See *Urotropin.*

Amisatin (*am-is′-at-in*). $C_{48}H_{39}N_{11}O_9$. A yellow powder obtained from the decomposition of isatin with ammonia.

Ammi. (See Illus. Dict.) **A. majus,** L., a European species; the pericarp of the seeds is carminative and stimulant. Syn., *Semen ammios; Semen majoris.* **A. visnaga,** Lam., the *kellah* of the Arabs, furnishing *kellin.* The fruit is used in a tonic and astringent lotion; the seeds are antipyretic, the leaves emollient.

Ammic (*am′-ik*). See *Ammoniac.*

Ammion (*am′-i-on*). See *Minium,* under *Pigments, Inorganic* (Illus. Dict.).

Ammodytes (*am-od′-it-ēz*) [ἄμμος, sand; δύειν, to get into]. Vegetable organisms growing in sand. Syn., *Psammodytes.*

Ammon (*am′-on*). A compound of anhydrous ammonia with an anhydrid.

Ammonanamid (*am-on-an-am′-id*). See *Ammonol.*

Ammonemia, Ammonæmia. See *Ammoniemia* (Illus. Dict.).

Ammonia. (See Illus. Dict.) **A.-alum.** See *Alum ammoniæ* (Illus. Dict.). **A., Anhydrous,** NH_3, ammonia gas liquefied by cold and pressure, producing intense cold by its evaporation. It boils at 38.5° C., at 760 mm. **A. Bihydrosulfate.** See *Ammonium Sulfhydrate.* **A., Caustic,** an aqueous solution of ammonia of sufficient strength to produce vesication. **A., Mustard Oil.** See *Thiosinamin* (Illus. Dict.).

Ammoniac. (See Illus. Dict.) 2. Relating to ammonia. 3. Relating to ammoniacum.

Ammoniferous (*am-on-if′-ur-us*) [*ammoniacum; ferre,* to bear]. Yielding ammoniacum.

Ammonimeter. See *Ammoniameter* (Illus. Dict.).

Ammonioaluminic (*am-o-ni-o-al-u′-min-ik*). Containing ammonia and aluminium.

Ammoniometer. See *Ammoniameter* (Illus. Dict.).

Ammonionitrometry (*am-o-ni-o-ni-trom′-et-re*) [*ammonium; nitrogen; μέτρον,* a measure]. An analytic method of estimating separately the amount of ammonia, nitrogen, and nitric acid contained in a compound.

Ammonium. (See Illus. Dict.) **A. Anacardate,** an ammonium compound of the resinous acids of cashew nut, *Anacardium occidentale,* L. It is a doughy mass, soluble in alcohol and used as a hair-dye. **A. Arsenate,** $(NH_4)_2HAsO_4$, white crystals soluble in water, used as an alterative in skin diseases. Dose, ½ gr. (0.003 gm.), gradually increased, 3 times daily. **A. Arsenite,** NH_4AsO_2, a white powder soluble in water. **A. Biborate.** See *A. Borate.* **A. Bichromate,** $(NH_4)_2Cr_2O_7$, orange-colored prisms, soluble in water. **A. Bifluorid,** $NH_4F.HF$, colorless rhombic prisms, soluble in water, easily volatile; its vapors are acrid. **A. Bimalate,** $NH_4HC_4H_4O_5$, large rhombic prisms without color, soluble in 3 parts water. **A. Binoxalate, A. Bioxalate,** $NH_4HC_2O_4 + H_2O$, colorless prisms, soluble in water. **A. Biphosphate,** $(NH_4)_2HPO_4$, white transparent prisms, soluble in water. **A. Bisulfate,** NH_4HSO_4, rhombic crystals, soluble in water. Dose, 10–30 gr. (0.65–1.94 gm.). **A. Bisulfite,** NH_4HSO_3, a soluble crystalline powder. It is antiseptic and used internally in fermentative dyspepsia, externally in skin diseases. Dose, 10–30 gr. (0.6–1.9 gm.). **A. Bitartrate,** $NH_4HC_4H_4O_6$, a white crystalline acid powder. It is used in the manufacture of baking powder. **A. Borate,** $2(NH_4HB_2O_4) + 3H_2O$, small transparent, rhombic, efflorescent crystals of alkaline taste and reaction, soluble in water. It is used in renal colic; in combination with codein it is used in tuberculosis of the lungs. Dose, 10–20 gr. (0.65–1.3 gm.) every hour in water with licorice. **A. Borobenzoate,** a white powder used as an intestinal antiseptic. **A. Carbamate,** $NH_4NH_2CO_2$, a white crystalline, volatile powder, a reaction-product of carbon dioxid and ammonia gas. It is a stimulant. Syn., *Anhydrid of ammonium carbonate.* **A. Carbazotat.** See *A. Picrate* (Illus. Dict.). **A. Carbolate,** $C_6H_5O.NH_4$, crystalline masses, soluble in water; it is antiseptic and antipyretic. Dose, 2–6 gr. (0.13–0.39 gm.). Syn., *Ammonium phenate; A. phenyla.* **A. Chromate,** $(NH_4)_2CrO_4$, yellow needles, soluble in water. **A. Citrate,** $(NH_4)_3C_6H_5O_7$, a white soluble powder. Syn., *Neutral ammonium citrate.* **A. Citrate with Iron Phosphate,** a tonic, astringent and emmenagog used in dyspepsia and amenorrhea. Dose, 5–10 gr. (0.32–0.65 gm.). **A. Citrate with Iron Pyrophosphate,** light green scales with sweet taste, soluble in water. It is tonic, emmenagog, and chalybeate. Dose, 3–8–15 gr. (0.2–0.52–1 gm.). Syn., *Robiquet's soluble ferric pyrophosphate.* **A. Cyanate,** NH_4OCN, obtained from vapor of cyanic acid in contact with dry ammonia; forms flocculent mass soluble in water. **A. Cyanid,** NH_4CN, an extremely poisonous substance produced from heating sal ammoniac and dry potassium ferrocyanide; it decomposes into azulmic acid. The vapor is inflammable, burning with a yellow flame. **A. Dithiocarbamate,** $CH_6N_2S_2$, yellow hygroscopic prisms, a reaction-product of ammonia and carbon disulfid. **A. Dithiocarbonate,** $CO(SNH_4)_2$, a yellowish liquid with an odor of ammonia. It is proposed as a substitute for sulfureted hydrogen and sulfid of ammonia in the quantitative analysis of the metals. **A. Embelate,** the ammonium salt of embellic acid, $NH_4C_9H_{11}O_2$; a tasteless red powder, soluble in dilute alcohol. It is a teniacide. Dose, children, 3 gr. (0.2 gm.), adults, 6 gr. (0.4 gm.). **A. Ethylsulfate,** $NH_4C_2H_5HSO_4$, a reaction-product of barium ethylsulfate and ammonium sulfate. **A. Ferricyanid,** $(NH_4)_3Fe(CN)_6 + 3H_2O$, shining red prisms, soluble in water. **A. Ferrocyanid,** $(NH_4)_4Fe(CN)_6 + 6H_2O$, white or greenish crystals turning blue when exposed to air, soluble in water. **A. Fluorid.** (See Illus. Dict.) It is recommended in dyspeptic flatulence, 16 grains dissolved in 10 fluidounces of distilled water, 1 tablespoonful to be taken after each meal. **A. Formate,** NH_4CHO_2, colorless crystals, soluble in water, gr. 1.271; it is used in chronic paralysis. Dose, 5 (0.32 gm.). **A. Gallate,** $NH_4C_7H_5 + H_2O$, small colorless, acicular crystals, soluble in water. **Glycerinophosphate,** $(NH_4)_2PO_4C_3H_5(OH)_2$, soluble in water. It is used in neurasthenia, Addison's disease, etc. Dose, 3–4 gr. (0.2–0.25 gm.) several times daily. **A. Hippurate,** $NH_4H(C_9H_8NO_3)_2 + H_2O$, small colorless prisms, soluble in water and alcohol, slightly soluble in ether. **A. Hydrosulfate.** See *A. Sulfhydrate.* **A. Hypophosphite,** $NH_4PH_2O_2 + H_2O$, white laminate crystals, soluble in water. Dose, 10–30 gr. (0.65–2 gm.) 3 times daily. **A. Hyposulfite.** See *A. Thiosulfite.* **A. Ichthyolsulfonate.** See *Ichthyol* (Illus. Dict.). **A. and Ir**

Tartrate, a reddish-brown substance. Dose, 10–30 gr. (0.65–1.9 gm.). **A. Lactate,** $NH_4C_3H_5O_3$, a clear, colorless, syrupy liquid, soluble in water and alcohol. It decomposes when warm. **A. Mellitate,** $(NH_4)_2C_{12}H_4O_{12} + 4H_2O$, a white powder or prisms, soluble in water; obtained by boiling powdered mellite in ammonia solution of ammonium carbonate. **A. Metavanadate.** See *A. Vanadate.* **A. Molybdate,** $(NH_4)_2MoO_4$, colorless prisms; decomposes by water, efflorescent in the air, soluble in dilute solution of ammonium chlorid. **A. Mucate,** $(NH_4)_2C_6H_8O_8$, white crystalline powder, soluble in water. **A. muriate.** See *A. Chlorid* (Illus. Dict.). **A. Nitrite,** NH_4NO_2, indistinct crystals or clear yellow liquid, soluble in water, decomposes with heat. **A. Oleate,** $NH_4C_{18}H_{33}O_2$, a jelly liquefying with heat, soluble in alcohol and ether. Syn., *Ammonia soap.* **A. Oxalate,** $(NH_4)_2C_2O_4 + H_2O$, shining rhombic prisms, soluble in water. **A. Oxalurate,** $NH_4C_3H_3N_2O_4$, silky needles, soluble in hot water, obtained from ammonium parabanate with hot water. **A. Oxaminate,** $NH_4C_2H_2NO_3$, obtained from ammonia with an alcoholic solution of ethyl oxalate. **A. Palmitate,** $NH_4C_{16}H_{31}O_2C_{16}H_{32}O_2$, a hard, white, soapy mass, soluble in hot alcohol and ether, insoluble in cold water, and decomposing by much water. **A. Perchlorate,** NH_4ClO_4, large colorless crystals, soluble in 5 parts of water. **A. Persulfate,** $(NH_4)_2S_2O_8$, colorless crystals, soluble in water with turbidity. It is a disinfectant and deodorizer. Application, 0.5% to 2% solution. **A. Phenate.** See *A. Carbolate.* **A. Phenylacetamid.** See *Ammonol.* **A. Phosphate, Dibasic,** $(NH_4)_2HPO_4$, colorless, odorless prisms, soluble in 4 parts of water. It is used in rheumatism and gout. Dose, 5–20 gr. (0.32–1.3 gm.) 3 or 4 times daily in ½ oz. water. **A. Phosphate, Tribasic,** $(NH_4)_3PO_4 \cdot 3H_2O$, semisolid crystalline mass, or short needles, soluble in water. **A. Phosphite,** $(NH_4)_2HPO_3 + H_2O$, colorless crystals, soluble in water. **A. Picramate,** $NH_4C_6H_4N_3O_5$, dark orange-red crystals, soluble in water. **A. Picrocarminate,** dark-red powder, soluble in water. **A. Picronitrate.** See *A. Picrate* (Illus. Dict.). **A. Purpurate.** See *Murexid* (Illus. Dict.). **A. Pyrophosphate,** $(NH_4)_2P_2O_7$, crystalline powder or crystals, soluble in water. **A. Rhodanid.** See *A. Sulfocyanate.* **A. Salicylate,** $NH_4C_7H_5O_3$, colorless prisms, soluble in water. It is an antirheumatic, antipyretic germicide, and expectorant. Dose, 2–10 gr. (0.13–1.3 gm.). **A. Selenate,** NH_4HSeO_4, colorless crystals. **A. Selenite,** $(NH_4)_2SeO_3$, colorless crystals, soluble in water. **A. Silicofluorid,** $2NH_4F \cdot SiF_4$, a white crystalline powder, soluble in water and an energetic antiseptic and reconstituent. It is used by inhalation in diseases of the nose and throat. **A. Stearate,** $NH_4C_{18}H_{35}O_2$, a hard, white, soapy mass, soluble in hot alcohol, insoluble in cold water. **A. Succinate,** $(NH_4)C_4H_4O_4$, colorless prisms, soluble in water; recommended 1 part in 120 parts of water as a specific in cramp colic. Dose, 1 tablespoonful every 15 minutes. **A. Sulfethylate.** See *A. Ethylsulfate.* **A. Sulfhydrate,** NH_4HS, colorless crystals which grow rapidly yellow on exposure to the air. It is soluble in water. **A. Sulfite,** $(NH_4)_2SO_3$, deliquescent crystalline powder, soluble in water. It is an antiseptic used in fermentative dyspepsia. Dose, 5–20 gr. (0.3–1.3 gm.). Applied externally in skin diseases, 1 part in 10 parts of water. **A. Sulfocarbolate,** $NH_4C_6H_4HSO_4$, white crystalline powder, soluble in water; antiseptic. Dose, 1–5 gr. (0.06–0.3 gm.). **A. Sulfocyanate, A. Sulfocyanid,** NH_4CNS, large, colorless, deliquescent crystals, a reaction-product from carbon disulfate, alcohol, and concentrated ammonia water. It is soluble in alcohol and water. **A. Sulfoichthyolate.** See *Ichthyol-ammonium.* **A. Sulforicinate,** brown ointment-like masses, soluble in alcohol and water. It is antiseptic and deodorant and applied in 20% solution in skin diseases or on ulcerated mucous membranes. **A. Sulfovinate.** See *A. Ethylsulfate.* **A. Tartrate,** $(NH_4)_2C_4H_4O_6$, clear crystals, soluble in water. It is an expectorant. Dose, 5–30 gr. (0.3–2 gm.). **A. Tellurate,** $(NH_4)_2TeO_4$, white amorphous powder, soluble in dilute acid. **A. Thiocyanate.** See *A. Sulfocyanate.* **A. Thionurate,** $(NH_4)_2C_4H_3N_3SO_6 + H_2O$, white crystals, soluble in water. It is a reaction-product of alloxan boiled with ammonium carbonate and A. sulfite. **A. Thiosulfate,** $(NH_4)_2S_2O_3$, soluble in water; antiseptic. Dose, 5–30 gr. (0.3–1.9 gm.) in water. **A. Tungstate,** fine white crystalline powder or needles, soluble in water. **A. Uranate,** a reaction-product from sodium uranate by ammonium chlorid or sulfate, $(NH_4)U_2O_7$; a yellow amorphous powder. **A. Urate,** $(NH_4)C_5H_3N_4O_3$, white crystalline powder, slightly soluble in water. It is antiseptic and used in 4% ointment in chronic eczema. **A. Vanadate,** NH_4VO_3, yellow or white crystals or white powder, soluble with difficulty in water. **A. Wolframate.** See *A. Tungstate.*

Ammoniuria (*am-o-ni-u'-re-ah*) [*ammonia; οὖρον*, urine]. A condition marked by excess of ammonia in the urine.

Ammonol (*am'-on-ol*). $C_6H_5NH_2$. Ammoniated phenylacetamid; pale yellow crystals, said to be analgesic and antipyretic. Dose, 5–20 gr. (0.3–1.3 gm.). **A. Salicylate,** a remedy for headache. Dose, 8 gr. (0.5 gm.).

Ammonoxyl (*am on-oks'-il*) [*ammonia; oxygen*]. A univalent radicle of the formula NH_4.

Amnesia, Amnesis. (See Illus. Dict.) **A. a pathemate,** that due to emotional excitation. **A. a temulentia,** that due to inebriety. **A., Auditory Verbal,** loss of memory as regards spoken words. **A. plethorica,** that due to plethora. **A., Retrograde,** the loss of the memory for incidents and events which occurred a shorter or longer time before the attack of the disease. Besides that which results from severe infectious disease and from forms of epilepsy, it may be *traumatic* and *hysteric.* Cf. *Lagopathy.* **A., Tactile,** destruction of the tactile memory-images due to disease of the tactile perceptive area. **A. Verbal,** loss of memory as regards words.

Amnial (*am'-ne-al*). See *Amniotic* (Illus. Dict.).

Amnic (*am'-nik*). See *Amniotic.*

Amnicolous (*am-nik'-ol-us*) [*amnis*, a stream; *colere*, to inhabit]. Applied to organisms growing in or dwelling beside a river.

Amniocleptic, Amnioclepticous (*am-ne-o-klep'-tik, -us*) [*ἀμνιον*, amnion; *κλεπτειν*, to steal away]. Relating to the unmarked escape of the liquor amnii.

Amniomantia (*am-ne-o-man'-she-ah*) [*ἀμνίον*, a young lamb; *μαντεία*, divination]. Prophesying according to the relation of the amnion to the new-born child.

Amnion. (See Illus. Dict.) Syn., *Agnina membrana; Agnina pellicula; Membrana agnina; Agnina tunica; Abgâs; Abghas.* 2. See *Sac, Embryonic* (Illus. Dict.). 3. Red sulfid of mercury. **Amnii Liquor.** See under *Liquor* (Illus. Dict.).

Amnios (*am'-ne-os*). 1. The liquor amnii. 2. The amnion.

Amœbism, Amœboism. See *Amebism.*

Amœbula. See *Amebula.*

Amœburia. See *Ameburia.*

Amok (*am-ok'*) [Malay, to run]. See *Amuck* (Illus. Dict.).

Amoo (*ah-moo'*). A New Zealand litter consisting of a netted hammock attached to somewhat flexible side poles, which are connected near their ends by cross-pieces. It is recommended as a conveyance for the wounded.

Amor (*am'-or*) [L.]. Love. **A. insanus.** See *Erotomania* (Illus. Dict.). **A. sui**, love of self; vanity. **A. veneris**, Columbus' term for the clitoris.

Amorpha (*ah-mor'-fah*) [*a*, priv.; *μορφή*, shape]. 1. A cutaneous eruption having no definite form. 2. A macula. 3. Apparent diseases in which no lesions can be discovered. 4. Intertrigo. **A. infantilis, A. lactantium,** infantile intertrigo. **A. vulgaris,** intertrigo.

Amorphogranular (*ah-mor-fo-gran'-u-lar*). Composed of shapeless granules.

Amorphopygagra (*ah-mor-fo-pi-gag'-rah*) [*ἀμορφος*, without form; *πυγή*, the rump; *ἄγρα*, a seizure]. Spasmodic attacks of pain in the anus.

Amorphosis (*ah-mor-fo'-sis*). See *Anamorphosis* (Illus. Dict.).

Amparthrosis (*am-par-thro'-sis*). See *Amphiarthrosis* (Illus. Dict.).

Ampelin (*am'-pel-in*) [see *Ampelite*]. A mixture of various oils found in coal-tar; it is a liquid resembling creasote.

Ampelite (*am'-pel-īt*) [*ἀμπελῖτες*, relating to a vine, because it was used to destroy insects upon vines]. A bituminous earth.

Ampelography (*am-pel-og'-ra-fe*) [*ἀμπελος*, a grape-vine; *γράφειν*, to write]. A description of grape-vines or a treatise upon their growth and cultivation.

Ampelology (*am-pel-ol'-o-je*). The science of vines and their cultivation.

Amperometer (*am-per-om'-et-ur*). Same as *Ampèremeter* (Illus. Dict.).

Amphamphoterodiplopia (*am-fam-fo-ter-o-dip-lo'-pe-ah*). See *Amphodiplopia* (Illus. Dict.).

Ampharkyochrome (*am-far-ke'-o-krōm*) [*ἀμφί*, around; *ἄρκυς*, net; *χρῶμα*, color]. Applied by Nissl to a form of arkyochrome nerve-cells in which the intensely stainable radiating nodal points of the network are joined in the cell-body by darkly stained, thick bridges.

Amphauxesis, Amphauxis (*am-fawks-e'-sis, am-fawks'-is*) [*ἀμφι*, around; *αὔξεσις*, increase]. Growth or increase by concentric circles. Syn., *Amphiphya.*

Amphemerina. (See Illus. Dict.) Syn., *Latica; Methemerina.* **A. hungarica.** See *Typhus Fever* (Illus. Dict.).

Amphemerinus (*am-fem-er'-in-us*). Quotidian.

Amphemeros, Amphemerus (*am-fem'-ur-os, -us*). 1. Quotidian. 2. A quotidian fever.

Amphiarkyochrome (*am-fe-ar-ke'-o-krōm*). See *Ampharkyochrome.*

Amphiastral (*am-fe-as'-tral*). Relating to an amphiaster.

Amphibiology (*am-fe-bi-ol'-o-je*) [*ἀμφί*, both; *βίος*, life; *λόγος*, discourse]. The science of the nature, structure, and life-history of *Amphibia.*

Amphicentric (*am-fi-sen'-trik*) [*ἀμφί*, both; *κέντρον*, a point]. Originating and ending in the same vessel.

Amphicroic (*am-fe-kro'-ik*) [*ἀμφί*, on both sides; *κρούειν*, to test]. Having the power to turn blue litmus-paper red and red litmus-paper blue.

Amphicytula (*am-fe-sit'-u-lah*) [*ἀμφί*, on both sides; *κύτος*, cell]. The parent cell of an amphiblastic ovum.

Amphid. (See Illus. Dict.) 2. Having a twofold character.

Amphidesmic, Amphidesmous (*am-fe-des'-mik, -mus*) [*ἀμφί*, on both sides; *δεσμός*, a band, a fetter]. Furnished with a double ligament.

Amphigastrula (*am-fe-gas'-tru-lah*) [*ἀμφί*, on both sides; *γαστήρ*, belly]. The gastrula of an amphiblastic ovum.

Amphigenous. (See Illus. Dict.) 2. Amphoteric.

Amphigonic (*am-fe-gon'-ik*) [*ἀμφί*, on both sides; *γονή*, offspring]. Relating to bisexual generation.

Amphimerinos (*am-fe-mer'-in-os*). See *Amphemerinos.*

Amphimicrobian (*am-fe-mi-kro'-be-an*) [*ἀμφί*, on both sides; *μίκρος*, small; *βίος*, life]. Both aerobian and anaerobian.

Amphiphagia (*am-fe-faj'-e-ah*) [*ἀμφί*, on both sides; *φαγεῖν*, to eat]. Capacity for eating all kinds of food.

Amphiphya (*am-fe-fi'-ah*) [*ἀμφίφυα*, the growth of suckers around a tree]. See *Amphauxesis.*

Amphitrichous (*am-fit'-rik-us*) [*ἀμφί*, on both sides; *θρίξ*, a hair]. Applied to the type of flagellation in bacteria which has a single flagellum at each pole.

Amphodontous (*am-fo-don'-tus*) [*ἀμφί*, on both sides; *ὀδούς*, a tooth]. Having teeth in both jaws.

Amphogenous (*am-fo'-en-us*). See *Amphoteric.*

Amphophil. (See Illus. Dict.) 2. A substance readily stained by both acid and basic dyes.

Amphore. (See Illus. Dict.) 2. A two-handled vessel for holding liquids; a jar, bottle. 3. A Roman measure containing 40 liters. A Greek measure containing 26¼ liters.

Amphoteric. (See Illus. Dict.) 2. Neutral, double, twofold; partaking of the character of two opposites amphoterous.

Amphoterous (*am-fo'-ter-us*). See *Amphoteric.*

Amplexus (*am-pleks'-us*) [L., an embrace]. 1. Ar embracing; coitus. 2. Embraced, surrounded.

Amplicollis (*am-ple-kol'-is*) (*amplus*, large; *collis* neck]. Having the neck or constricted part of an or gan abnormally large.

Amposis (*am-po'-sis*) [*ἀμπωσις*]. See *Ampotis.*

Ampotis (*am-po'-tis*) [*ἀμπωτις*, the retiring of stream]. 1. The return of humors inward from the surface of the body. 2. A normal or morbid absorption of a body-fluid.

Ampulla. (See Illus. Dict.) 2. A bulla or blister **A., Galen's,** a dilation of the vena magna galeni occurring in the middle of Bichat's fissure, between the splenium and the quadrigeminal bodies. It receives the two basilar and several small cerebral and cerebellar veins. **A., Henle's,** 1. The fusiform dilation of the vas deferens near its junction with the seminal vesicle. 2. The expanded outer half of the fallopian tube. **A. lorenzini,** the dilated internal end of Lorenzini's tubes.

Ampullaceous (*am-pul-a'-shus*). 1. Flask-shaped, big-bellied, gibbous. 2. Relating to an ampulla. 3. Attended with the formation of bullas or blebs.

Ampullar, Ampullate (*am-pul'-ar, am'-pul-āt*). Relating to an ampulla; shaped like an ampulla.

Ampullitis (*am-pul-ī'-tis*). Inflammation of an ampulla, more especially that of the vas deferens.

Amputation. (See Illus. Dict.) **A., Intrapyretic** Same as *A., Intermediary* (Illus. Dict.). **A., Medi otarsal,** 1. Chopart's amputation. See *Table Operations* (Illus. Dict.). 2. An amputation through the tarsus, preserving the scaphoid bone. **A., Sub astragalar,** a partial amputation of the foot, leaving only the astragalus. **A., Supracondylar.** See *Gritti's Amputation, in Table of Operations* (Illus. Dict.). **A., Tertiary,** that performed after the inflammatory reaction stage has passed.

Amputatus (*am-pu-ta'-tus*) [*amputare*, to cut off]. Amputated, cut off. 2. An individual who has undergone amputation.

Amurcarious (*am-ur-ka'-re-us*). Containing amurca or related to it.

Amurga (*am-ur'-gah*). See *Amurca* (Illus. Dict.).

Amussis (*am-us'-is*) [L., a carpenter's rule or level; ..., *amusses*]. One of two portions into which a median fissure divides the posterior commissure of the brain.

Amyasthenia. See *Amyosthenia* (Illus. Dict.).

Amyasthenic. See *Amyosthenic* (Illus. Dict.).

Amyctic (*am-ik'-tik*) [ἀμυκτικός, mangling]. 1. Caustic, irritating. 2. A caustic or corrosive drug.

Amydriasis (*ah-mid-ri'-ah-sis*). See *Mydriasis* (Illus. Dict.).

Amyelic (*ah-mi'-el-ik*). Relating to amyelia; lacking spinal cord.

Amyelonic (*ah-mi-el-on'-ik*). 1. Amyelic. 2. Without marrow.

Amyelous (*ah-mi'-el-us*). See *Amyelic.*

Amygdala. (See Illus. Dict.) 3. See *Tubercle, Amygdaloid* (Illus. Dict.). **Amygdalæ cerebelli.** See *Tubercle, Amygdaloid* (Illus. Dict.). **Amygdalæ persicæ cortex,** peach-tree bark. A homeopathic remedy for vomiting of infants and of pregnancy, and also in whooping-cough. Dose of tincture, 10–30 drops.

Amygdalate (*am-ig'-dal-āt*). 1. A salt of amygdalic acid. 2. A pharmaceutic emulsion made with almonds. Containing almonds.

Amygdalectomy (*am-ig-dal-ek'-to-me*) [αμυγδάλη, almond; ἐκτομή, a cutting out]. Excision of a tonsil.

Amygdalia (*am-ig-da'-le-ah*). The tonsils.

Amygdalin, Amygdalina. (See Illus. Dict.) **A., Amorphous,** a very hygroscopic, yellow, transparent vitreous mass obtained from cherry-laurel leaves; it is very bitter; soluble in water and ether. Syn., *Laurocerasin.*

Amygdalitis. (See Illus. Dict.) 2. Quinsy; cynanche tonsillaris.

Amygdaloglossus (*am-ig-dal-o-glos'-us*). See *Muscles, table of* (Illus. Dict.).

Amygdalophenin. See *Amygdophenin.*

Amygdaloplethora (*am-ig-dal-o-pleth'-or-ah*) [ἀμυγδάλη, an almond; πληθώρη, fulness]. Tonsillar congestion.

Amygdalotomy. (See Illus. Dict.) **A. Rash.** See under *Rash.*

Amygdophenin (*am-ig-dof'-en-in*). $C_6H_4(OC_2H_5)N\cdot OC.CH(OH)C_6H_5$, a grayish-white crystalline powder, derived from paramidophenol. It is antirheumatic. Dose, 1 gm. (15 gr.) from 1 to 6 times daily, in powder. Syn., *Phenylglycolphenetidin.*

Amygmus (*am-ig'-mus*) [ἀμυγμός]. Scarification.

Amyl. (See Illus. Dict.) **A. Acetate,** $C_7H_{14}O_2$, a colorless, transparent liquid, with aromatic odor; sp. gr. 0.876; soluble in alcohol and ether; boils at 133° C. **A. Alcohol, Tertiary.** See *Amylene Hydrate* (Illus. Dict.). **A. Amidoformate.** See *A. Carbamate.* **A. Benzoate,** $C_{12}H_{16}O_2$, a transparent liquid; sp. gr. 1.004 at 0° C.; soluble in alcohol; boils at 260.7° C. **A. Bromid,** $C_5H_{11}Br$, a transparent, colorless liquid, soluble in alcohol; sp. gr. 1.219 at 0° C.; boils at 120° C. It is antiseptic and germicidal. **A. Butyrate,** $C_9H_{18}O_2$, a clear liquid soluble in alcohol; sp. gr. 0.882 at 0° C.; boils at 178° C. **A. Carbamate,** $C_6H_{13}NO_2$, a reaction product of carbonic acid and amyl alcohol; it occurs in white acicular crystals, soluble in alcohol and ether, and slightly in water; boils at 220° C.; melts at 60° C. **A. Carbamid.** See *A. Pseudocyanate.* **A. Carbamid, Tertiary.** See *A. Urea, Tertiary.* **A. Carbolate,** $C_{11}H_{16}O$, white plate-like crystals, soluble in alcohol; melts at 90°–95° C.; boils at 220° C. **A. Chlorid,** $C_5H_{11}Cl$, a colorless liquid obtained from isoamyl and hydrochloric acid; soluble in alcohol; boils at 100° C.; sp. gr. 0.880 at 15° C. **A. Chlorocarbonate,** $C_6H_{11}ClO_2$, a liquid reaction-product of phosgene and isoamyl alcohol; sp. gr. 1.032 at 15° C.; boils at 154.3° C. **A. Colloid,** a fluid preparation consisting of amyl hydrid, 480 parts; aconitin, 1 part; veratrin, 6 parts; collodion, to 960 parts. It is painted on the skin in neuralgia, sciatica, etc. Syn., *Anodyne colloid.* **A. Cyanid,** $C_6H_{11}N$, obtained from heptoic acid amid and bromin in sodium hydrate solution; boils at 150°–155° C. **A. Formate,** $C_6H_{12}O_2$, a colorless liquid, the reaction-product of glycerin, oxalic acid, and fusel oil; sp. gr. 0.874 at 21° C.; soluble in alcohol; boils at 123° C. **A. Hydrid,** a fractional product of petroleum ether; it is an antiseptic. Syn., *Hydramyl; Pentylene; Pentylhydrid.* **A. Iodid,** $C_5H_{11}I$, an oily liquid, the reaction-product of isoamylic alcohol, iodin, and phosphorus; sp. gr. 1.467 at 0° C.; soluble in alcohol; boils at 148° C. It is sedative and antiseptic, and is used as an inhalation in dyspnea. **A. Mercaptan.** See *A. Sulfhydrate.* **A. Nitrate,** $C_5H_{11}NO_3$, a reaction-product of isoamyl alcohol, urea nitrate, and nitric acid. A heavy, colorless liquid, soluble in alcohol; sp. gr. 0.999 at 20° C.; boils at 148° C. **A. Nitrite, Carbonated,** amyl nitrite saturated with carbonic oxid; it is used as amyl nitrite by inhalation. **A., Nitrite, Carbureted,** amyl nitrite saturated with carbon monoxid. It is suggested as a substitute for pure amyl nitrite, to obviate pressure in the head and other secondary objectionable properties. **A. Oxid,** $C_{10}H_{22}O$, a malodorous liquid; sp. gr. 0.799 at 0° C.; boils at 170°–175° C. Syn., *Amyl ether; Amylic ether; Diamyl ether.* **A. Phenate.** See *A. Carbolate.* **A. Phosphate,** a combination of amyl and phosphoric acid. Syn., *Amylphosphoric acid.* **A.-phosphate,** a salt of amylphosphoric acid. **A. Propionate,** $C_8H_{16}O_2$, a liquid soluble in alcohol; boils at 160° C.; sp. gr. 0.887 at 0° C. **A. Pseudocyanate,** $O{=}C{=}N-C_5H_{16}$, a liquid boiling at 100° C. **A. Salicylate,** a compound obtained from the action of chlorin on a saturated solution of salicylic acid in amylic alcohol. It is a colorless liquid, almost insoluble in water, and is said to have the sedative properties of the amylic derivatives as well as antirheumatic qualities. It is used in acute rheumatism. Dose, 10 capsules of 3 gr. each, daily. **A. Sulfhydrate,** $C_5H_{12}S$, a clear, foul-smelling liquid; sp. gr. 0.835 at 21° C.; boils at about 120° C. **A. Sulfid,** $(C_5H_{11})_2S$, obtained by reaction of amyl chlorid with alcoholic potassium sulfid. It is a clear liquid with the odor of onions; sp. gr. 0.843 at 20° C.; boils at 213°–216° C. **A. Sulfocyanate,** $C_6H_{11}NS$, a clear liquid obtained as a reaction-product from potassium amyl sulfate and potassium sulfocyanate; boils at 197° C. **A.-urea, Tertiary,** $C_6H_{14}N_2O$, acicular crystals, slightly soluble in water and melting at about 151° C. **A. Urethane.** Same as *A. Carbamate.* **A. Valerate, A. Valerianate,** $C_{10}H_{20}O_2$, a clear liquid, soluble in alcohol and ether; boils at 188°–190° C. It is a cholesterin solvent and is used as a sedative in gall-stone colic. Dose, 2–3 gr. (0.15 gm.). Syn., *Apple oil.*

Amylacea (*am-il-a'-se-ah*) [*amylum*, starch]. Starchy foods.

Amylamid (*am-il'-am-id*). See *Isoamylamin* (Illus. Dict.).

Amylamin (*am-il'-am-in*). See *Isoamylamin* (Illus. Dict.). **A. Hydrochlorate,** $C_5H_{14}NCl$, a reaction-product of amyl cyanate, potassium hydrate, and hydrochloric acid, occurring as deliquescent scales or crystals. It is an antipyretic. Dose, 7–15 gr. (0.45–1 gm.).

Amylate (*am'-il-āt*). 1. A combination formed by the replacement of the hydrogen of the hydroxyl mole-

cule in amyl alcohol with a metal or basic radicle. 2. A compound of starch with a radicle.

Amylene. (See Illus. Dict.) **A. Bromid,** $C_5H_{10}Br$, an oily liquid; boils at 170°–175° C. with decomposition. **A.-chloral,** $CCl_3 . CH . OH . O . C . (CH_3)_2 C_2H_5$, dimethyl-ethyl-carbinol-chloral, an oily liquid with odor of camphor, obtained by fusion of equal parts of chloral and amylene hydrate. It is insoluble in cold water, but miscible with alcohol, ether, acetone, and fatty oils; sp. gr. 1.24. It is hypnotic. Syn., *Dormiol.* **A. Iodid,** $C_5H_{10}I_2$, a liquid derived from amylene dimethyl keton by hydroiodic acid with heat; boils at 182°C. with decomposition.

Amylenization (*am-il-en-iz-a'-shun*). The production of anesthesia by means of amylene.

Amylidene (*am-il'-id-ēn*) [ἄμυλον, starch]. C_4H_9. A bivalent radicle isomeric with amylene. Syn., *Pentylidene.*

Amylin (*am'-il-in*). The insoluble tegumentary portion of a starch granule. It does not differ in composition from the soluble interior part. Syn., *Farinose; Tegumentary amidin; Starch cellulose; Amylocellulose.*

Amylism (*am'-il-izm*). The toxic condition produced by amyl alcohol.

Amylobacter (*am-il-o-bak'-tur*) [ἄμυλον, starch; βακτήριον, a little rod]. A genus of *Schizomycetes* established by Trécul and characterized by a period of development in which it contains starch in its interior.

Amylocarbol (*am-il-o-kar'-bol*). An antiseptic solution said to consist of crude phenol, 9 parts; amyl alcohol, 160 parts; soap, 150 parts; water to make a liter.

Amylocellulose (*am-il-o-sel'-u-lōz*). See *Amylin.*

Amyloform (*am-il'-o-form*). An odorless white powder produced by the chemic combination of starch with formaldehyd. It is nontoxic, quite insoluble, and is not decomposed under 180° C. It is recommended as a surgical antiseptic.

Amylohydrolysis (*am-il-o-hi-drol'-is-is*) [ἄμυλον, starch; ὕδωρ, water; λύσις, solution]. The hydrolysis of starch.

Amylohydrolytic (*am-il-o-hi-dro-lit'-ik*). Relating to the hydrolysis of starch.

Amyloid. (See Illus. Dict.) 2. A starchy substance. 3. Glycogen. 4. Virchow's name for a waxy body found in animal tissue as a result of disease and resembling starch, only in the one particular that it was stained by iodin. Cf. *Amyloid Degeneration* (Illus. Dict.). 5. A carbohydrate derived from cellulose by action of concentrated sulfuric acid; like starch, it is colored blue by iodin and is used in the manufacture of parchment paper.

Amyloidosis (*am-il-oid-o'-sis*). See *Amyloid Degeneration* (Illus. Dict.).

Amyloiodoform (*am-il-o-i-o'-do-form*). A blue-black powder consisting of a mixture of iodin and amyloform. It is used as a substitute for iodoform.

Amylon (*am'-il-on*) [L.]. 1. Starch. 2. Glycogen. 3. A principle found in grape-juice.

Amylophosphin (*am-il-o-fos'-fin*), **A., Primary.** A phosphin in which the hydrogen is replaced by amyl. **A., Secondary.** See *Diamylphosphin.* **A., Tertiary.** See *Triamylphosphin* (Illus. Dict.).

Amylosclema (*am-il-o-skle'-mah*) [ἄμυλον, starch; σκλῆμα, dryness]. The bran of starch.

Amyon (*ah-mi'-on*) [ἄμυος, not muscular]. An emaciated limb showing the muscles indistinctly.

Amyos (*ah-mi'-os*). See *Amyous* (Illus. Dict.).

Amyostasia (*ah-mi-o-sta'-se-ah*) [*a*, priv.; μῦς, muscle; στάσις, a staying]. A morbid tremor of the muscles, as in chorea.

Amyotaxia (*ah-mi-o-taks'-e-ah*) [*a*, priv.; μῦς, muscle; τάξις, arrangement]. Motor disturbance of the muscles, of spinal or cerebral origin.

Amyus (*ah'-me-us*). See *Amyous* (Illus. Dict.).

Amyxis (*ah-miks'-is*) [ἀμύσσειν, to scarify]. Scarification.

Amyxodes (*ah-miks-o'-dez*) [*a*, priv.; μύξα, mucus] 1. Deficient in mucus; relating to amyxia. 2. Scarified; relating to amyxis.

Anacampsis (*an-ah-kamp'-sis*) [ἀνακάμπτειν, to bend back]. A flexure.

Anacamptometer (*an-ah-kamp-tom'-et-ur*) [ἀνακάμπτειν, to bend back; μέτρον, a measure]. An apparatus for measuring reflexes.

Anacar (*an'-ak-ar*) [ἀνάκαρ]. Up to or toward the head.

Anacathartic. (See Illus. Dict.) 2. An expectorant emetic, or sternutatory drug or agent.

Anacephaleosis (*an-ah-sef-al-e-o'-sis*) [ἀνακεφαλαίωσις, a summary]. Fienus' term for man regarded as a microcosm of the animal kingdom.

Anacestos, Anacestus (*an-ah-ses'-tos, -tus*) [*a*, priv.; ἀκεστός, curable]. Incurable.

Anachlorhydria (*an-ah-klor-hi'-dre-ah*). The lack of hydrochloric acid in the gastric juice.

Anacid (*an-as'-id*) [*av*, priv.; *acidum*, acid]. Slight acid; subacid; not having the normal amount of acidity.

Anacidity (*an-as-id'-it-e*). The lack of normal acidity; subacidity; inacidity.

Anadenia. (See Illus. Dict.) **A. gastrica,** Ewald's name for achylia gastrica. **A. ventriculi.** See *Achylia gastrica.*

Anadesma (*an-ah-dez'-mah*) [ἀναδέσμη, a fillet]. A band or fascia.

Anadosis. (See Illus. Dict.) 3. Chylification. 4. The distribution of nutrient fluids in the organism.

Anadrome (*an-ad'-ro-me*) [ἀναδρομή, a running up]. 1. An upward determination of the blood. 2. A part ascending from the lower to the higher portion of the body. 3. The ascent of sap in plants. 4. See *Cardiobus hystericus* (Illus. Dict.).

Anæmasia, Anæmasis. See *Anemia* (Illus. Dict.).

Anaerobe (*an-a'-er-ōb*). See *Anaerobion.*

Anaerobion (*an-a-er-o'-be-on*) [*av*, priv.; ἀήρ, air; βίος, life]. Pasteur's term for an organism capable of living without air or free oxygen.

Anagoge, Anagogia (*an-a-go'-je, an-a-go'-je-ah*) [ἀναγωγή, a bringing up]. Vomiting. **A. hæmatis sanguinis,** a rush of blood to the head.

Anagyrin. (See Illus. Dict.) **A. Hydrobromid.** $C_{14}H_{18}N_2O_2HBr$. Small, white, shining scales, soluble in water and alcohol, melting at 265° C. It is used as a heart stimulant.

Anagyris (*an-a-ji'-ris*) [ἀνά, backward; γυρός, curved]. A genus of leguminous plants. **A. fœtida,** L., a shrub of southern Europe, contains anagyrin and cytisin, acid and a fatty oil. The leaves and seeds are purgative and emetic.

Anakhre. Synonym of *Goundou* (*q. v.*).

Analdia (*an-al'-de-ah*) [*a*, priv.; ἀλδαίνειν, to nourish]. See *Marasmus* (Illus. Dict.).

Analepsis. (See Illus. Dict.) 2. Suspension, as in a swing. 3. Epilepsy with gastric aura.

Analeptol (*an-al-ep'-tol*). A tonic preparation said to contain phosphorus, $\frac{1}{100}$ gr.; nux vomica extract, 2 gr.; cinchona, 2 gr.; coca leaves, 1 gr., and the additions of aromatics.

Analgesia. (See Illus. Dict.) **A. panaris,** synonym of *Morvan's disease.*

Analogy (*an-al'-o-je*) [ἀνάλογος, conformable]. Similarity in function or origin between parts or organs without identity.

nalosis (*an-al-ō'-sis*) [*ἀνάλωσις*, expenditure]. A wasting away; atrophy.

:altos (*an-al'-tos*) [*a*, priv.; *ἅλς*, salt]. Not salted.

nalysis. (See Illus. Dict.) **A., Absorptiometric,** the determination of the composition of gaseous bodies by observation of the amount of absorption which occurs on exposure to a liquid in which the coefficient of absorption of different gases is already known. **A., Clinical,** a thorough examination of symptoms, lesions, and history to determine the nature of a disease and its cause. **A., Colorimetric,** analysis by means of comparison of the colors of solutions with those of standard test-solutions. **A., Dry,** that by means of blowpipe, etc.; also spectral analysis. **A., Eudiometric.** See *A., Gasometric* (Illus. Dict.). **A., Immediate.** See *A., Proximate* (Illus. Dict.). **A., Indirect,** a quantitative estimation of the elements of a compound obtained not by isolating them, but by causing them to form new combinations and observing the relation of the molecular weight of these to that of the original body. **A., Inorganic,** that of inorganic matter. **A., Microchemic,** chemic analysis with the aid of a microscope. **A. per menstrua,** analysis by successive subjection of the substance to various solvents. **A., Polariscopic,** analysis conducted with the polariscope. **A., Prismatic,** spectral analysis. **A., Radiation,** a method of analysis based upon discoveries of Becquerel and taking advantage of the comparative radioactivity of various metals. **A., Spectrometric, A., Spectroscopic.** See *A., Spectral* (Illus. Dict.). **A., Thermometric,** analysis by means of observation of the varying temperature produced by the interaction of substances mixed or combined together. **A., Titration.** See *A., Volumetric* (Illus. Dict.). **A., Weight, A. by Weight.** See *A., Gravimetric* (Illus. Dict.). **A., Wet,** analysis conducted by means of solutions and precipitations.

Analyst (*an'-al-ist*). The person who makes an analysis; analyzer.

Analyzer. (See Illus. Dict.) 2. An analyst. 3. An apparatus for recording the excursions of tremor movements.

Amid (*an'-am-id*) [*a*, priv.; *ammonia*]. A compound formed from an amid by abstracting the ammonia.

Amirta (*an-am-ir'-ta*) [East Indian]. A genus of menispermaceous plants. **A. paniculata,** Coleb., a climbing shrub of the East Indies, contains picrotoxin and cocculin. It has powerful action on the central nervous system. It is used as an insecticide and fish poison.

Amnestics (*an-am-nes'-tiks*) [*ἀνάμνησις*, a recalling to mind]. The investigation of a patient's history and its relation to his condition.

Amorphism (*an-ah-mor'-fizm*). See *Anamorphosis.*

Amorphosis. (See Illus. Dict.) 2. In optics, that process by which a distorted image is corrected by means of a curved mirror. **A., Catoptric,** correction of a distorted image by means of a conic or cylindric mirror. **A., Dioptric,** correction of a distorted image by means of a pyramidal glass.

Anabasia (*an-an-ah-a'-ze-ah*) [*a*, priv; *ἀνάβασις*, ascending]. A form of aboulia manifested by incapacity to ascend heights.

Anastasia (*an-an-as-ta'-ze-ah*) [*a*, priv.; *ἀνάστασις*, rising up]. A form of aboulia characterized by inability to rise from a sitting posture.

Androus. (See Illus. Dict.) 2. Unmarried; impotent.

Aphia. (See Illus. Dict.) 2. A state of abnormal sensitiveness to the touch. 3. A state in which nothing can be learned by palpation.

Anaphora (*an-af'-or-ah*) [*ἀναφορά*, a bringing up]. 1. A bringing up, as by coughing. 2. Recovery from illness. 3. Rush of blood to the head. 4. A violent inspiration or respiration.

Anaphoresis (*an-af-or-ē'-sis*) [*a*, priv.; *φορεῖν*, to carry]. A diminution in the activity of the sweat-glands.

Anaphoretic (*an-ah-for-et'-ik*). 1. Checking perspiration. 2. An agent that checks the secretion of sweat.

Anaphoria (*an-af-ō'-re-ah*) [*ἀνά*, up; *φορεῖν*, to bear]. An upward tendency of the eyes and of the visual axes.

Anaphrodite (*an-af'-ro-dīt*). An individual affected with anaphrodisia.

Anaphroditism (*an-af-rod'-it-izm*). See *Anaphrodisia* (Illus. Dict.).

Anaphylactic (*an-ah-fil-ak'-tik*) [*a*, priv.; *φύλαξ*, a guardian]. 1. Having the property of diminishing immunity instead of reinforcing it. 2. A serum which diminishes immunity.

Anaplasis (*an-ah-pla'-sis*). See *Anaplasty* (Illus. Dict.).

Anaplasm (*an'-ah-plazm*). See *Anaplasty* (Illus. Dict.).

Anarthria. (See Illus. Dict.) Absence of vigor. **A. centralis,** partial aphasia due to central lesion. **A. literalis,** stammering.

Anarthrous. (See Illus. Dict.) 2. Lacking vigor. 3. Inarticulate.

Anasalpin (*an-ah-sal'-pin*). See *Adeps lanæ.*

Anasarca. (See Illus. Dict.) Syn., *Catasarca; Episarcidium; Hydrodermus; Intercus; Hydrops cellularis.* **A., Acute,** a form in which the flesh preserves its normal color and the depression made by the finger disappears quickly. **A. a fluxu,** that due to loss of body-fluids, as in diarrhea or diabetes. **A. americana,** a South American disease marked by sleepiness, headache, debility, and swelling of the abdomen, said to be due to the ingestion of sea-crabs. **A., Essential,** that due to malnutrition. **A. exanthematica,** that attributed to the suppression of an exanthem, especially erysipelas. **A. urinosa,** that due to suppression of urine. Syn., *Urinary leukophlegmasia.*

Anasarcin (*an-ah-sar'-sin*). A remedy for dropsy, said to consist of the active principles of *Oxydendron arboreum, Sambucus nigra,* and *Urginea scilla.*

Anasin (*an'-as-in*). See *Aneson.*

Anasomia (*an-ah-sō'-me-ah*) [*ἀνά*, upon; *σῶμα*, body]. A deformed condition in which the limbs are abnormally adherent to the body.

Anaspadiac (*an-ah-spa'-di-ak*) [*ἀνά*, up; *σπᾶν*, to draw]. A person affected with anaspadias.

Anaspasis (*an-ah-spa'-sis*) [*ἀνασπᾶν*, to draw up]. 1. A contraction. 2. Revulsion.

Anaspasmus (*an-ah-spaz'-mus*). See *Anaspasis.*

Anastasis. (See Illus. Dict.) 2. An upward afflux of the body humors. 3. Resuscitation of one apparently dead. 4. The rising of a patient from his bed or evils resulting from it.

Anastatic. (See Illus. Dict.) 2. A restorative remedy.

Anastigmatic (*an-ah-stig-mat'-ik*). Free from astigmatism; said especially of photographic objectives which are corrected for astigmatism as well as for spherical and chromatic aberration. One or more of the lenses are usually composed of Jena glass.

Anastomosis. (See Illus. Dict.) 2. A whetting of the appetite. **A. Button.** See *Murphy's Button* (Illus. Dict.). **A. par canal collateral,** that of an artery rejoining its trunk. **A. by Convergence,** the junction of two parallel arteries to form a common trunk. **A., Elliptic,** that between approximate nerve-trunks in which the uniting fibers form part of an ellipse. **A.,**

Entero-, intestinal anastomosis. **A., Hyrtl's,** the transection of two arteries. Syn., *Dehiscentia decussantium.* **A., Jacobson's,** the tympanic plexus.

Anastomotic. (See Illus. Dict.) 2. Sharpening the appetite. 3. Aperient. 4. Causing dilation of the peripheral bloodvessels. 5. A communicating artery or vein. See *Tables of Arteries and Veins* (Illus. Dict.).

Anastomotica (*an-as-to-mot'-ik-ah*). 1. A communicating artery or vein. 2. Tonic, aperient, or deobstruent medicines.

Anastomotris (*an-as-to-mo'-tris*) [L., pl. *anastomotrides*]. Any kind of a dilating instrument.

Anastrophe (*an-as'-tro-fe*) [*ἀναστρέφειν*, to turn upside down]. Inversion, particularly of the viscera.

Anatipes (*an-at'-e-pez*) [*anas*, duck; *pes*, foot]. Duck-footed.

Anatomicochirurgic (*an-a-tom-ik-o-ki-rur'-jik*). Relating to anatomy and surgery.

Anatomicomedical (*an-at-om-ik-o-med'-ik-al*). Relating to medicine and anatomy or to medical anatomy.

Anatomicopathologic (*an-at-om-ik-o-path-o-loj'-ik*). Relating to pathologic anatomy.

Anatomicophysiologic (*an-at-om-ik-o-fiz-e-o-loj'-ik*). Relating to anatomy and physiology.

Anatomicosurgical (*an-at-om-ik-o-sur'-je-kal*). Relating to anatomy and surgery.

Anatomiless (*an-at-om'-il-es*). Structureless, amorphous.

Anatomize (*an-at'-om-īz*). To dissect.

Anatomography (*an-at-o-mog'-ra-fe*) [*ἀνατομία*, anatomy; *γράφειν*, to write]. A treatise on anatomy.

Anatomophilus (*an-at-o-mof'-il-us*) [*ἀνατομή*, anatomy; *φιλεῖν*, to love]. A lover of anatomy.

Anatomy. (See Illus. Dict.) 1. The science of organic structure. 2. The structure of an organism with reference to its parts and functions. 3. A treatise on or manual of dissection. 4. The minute examination or analysis of the properties or parts of a thing. 5. A skeleton. **A., Analogical.** See *A., Comparative.* **A., Anomalous,** the science of anatomic monstrosities or anomalies. **A., Artistic,** that branch of anatomy treating of the external form of men and animals, their osseous and muscular systems, and the relative size of different parts and members of their bodies. **A., General,** that branch of descriptive anatomy treating of the structure and physiologic properties of the tissues and their arrangement into systems without regard to the disposition of the organs of which they form a part. **A., Medical,** the application of anatomy to a study of the causation and symptomatology of nonsurgical diseases. **A., Physiologic,** an anatomic study of tissues in respect to their functions. **A., Practical,** dissection. **A., Transcendental,** anatomy as related to theories of type, and evolution. **A., Vegetable,** the branch of botany which treats of the relative position, form, and structure of the organs of plants.

Anatresis (*an-at-re'-sis*) [*ἀνατιτρᾶν*, to bore through]. Perforation; trephining.

Anatripsiology (*an-ah-trip-si-ol'-o-je*). See *Anatripsology* (Illus. Dict.).

Anatripsis. (See Illus. Dict.) 2. A crushing, as of calculi. 3. Itching; scratching to allay itching.

Anatropia (*an-at-ro'-pe-ah*) [*ἀνά*, up; *τρέπειν*, to turn]. The condition of the ovule when completely inverted.

Anaxone (*an-aks'-ōn*) [*an*, priv.; *ἄξων*, an axle]. A neurone entirely devoid of axis-cylinder processes; called also *amacrine cell.*

Anazotic (*an-az-o'-tik*) [*av*, priv., *azotum*, nitrogen]. Without azote or nitrogen.

Anazyme (*an'-a-zim*). The commercial name for a combination of carbolic and boric acids; it is a substitute for iodoform.

Anceps (*an'-seps*) [L.]. 1. Two-headed. 2. Doubtful, uncertain, dangerous.

Anchietin (*an-ke'-et-in*). A crystalline organic base isolated from the bark of *Anchietea salutaris.*

Anchlorhydria (*an-klor-hi'-dre-ah*). See *Anachlorhydria.*

Anchoate (*ang'-ko-āt*) [*ἀγχειν*, to strangle]. A sal of anchoic acid.

Achone (*ang'-ko-ne*) [*ἀγχειν*, to strangle]. A spasmodic constriction of the throat observed in hysteria.

Anchorage. (See Illus. Dict.) 2. In dentistry, th means adopted for the retention of a dental filling particularly its initial portion.

Anchoralis (*an-ko-ra'-lis*) [*ancora*, an anchor]. Th coronoid process of the ulna.

Anchyroides (*an-kir-oid'-ēz*). See *Anchoralis.*

Ancistropodous (*an-sis-trop'-o-dus*) [*ἀγκιστρον*, hook; *πούς*, a foot]. Furnished with hooked claws feet.

Ancistrum (*an-sis'-trum*) [*ἀγκίστρον*, a fish-hook]. surgical hook.

Ancyra (*an'-si-rah*) [*ἄγκυρα*, an anchor]. A hook.

Anda, A.-acu, A.-Assu. The fruit and seeds of t plant *Joannesia princeps.* It is used in diseases the liver. Dose, 2 seeds in emulsion.

Andar-tap [*fever within the body*]. A vernacul term in India for trypanosomiasis.

Andirin (*an-dī'-rin*). A brown coloring-matter c tained from the wood of *Andira anthelminthica*; it soluble in water and in oils.

Androgeneia (*an-dro-jen-i'-ah*) [*ἀνδρογένεια*, a mar race]. 1. The development of man. 2. The gene tion of males, descent by the father's side.

Androlepsia (*an-dro-lep'-se-ah*) [*ἀνδροληψία*, a seiz of men]. The process of fecundation in the female

Androme (*an'-drōm-e*). See *Andrum* (Illus. Dict.

Andromedotoxin. See *Andrometoxin.*

Andrometoxin (*an-drom-et-oks'-in*) [*Andromeda*; τικόν, poison]. A poisonous anodyne principle fo by Plugge (1883) in *Andromeda japonica*, occurrin *Kalmia latifolia* and some other ericaceous plants, found in poisonous honey from Trebizond. The t property of that mentioned by Xenophon was proba due to it. It forms acicular crystals, soluble in alcoh in ether, in chloroform, and is more soluble in c than in hot water. It inhibits the respiratory cent

Andronia (*an-dro'-ne-ah*) [*ἀνήρ*, a man]. The stron principle of a compound.

Andronym (*an'-dro-nim*) [*ἀνήρ*, a man; *ὄνυμα* name]. A word derived from a man's name; epon

Androsymphysia, Androsymphysis (*an-dro-sim-e-ah, an-dro-sim'-fiz-is*) [*ἀνήρ*, a man; *σύν*, toget *φύειν*, to grow]. 1. A monstrosity formed by fusion of two male fetuses. 2. The growing toge of the male genitalia.

Anebous (*an-e'-bus*) [*ἀνηβος*]. Not come to m estate; not having reached puberty.

Anecestus (*an-e-ses'-tus*). See *Anacestus.*

Anecpyetous (*an-ek-pi-e'-tus*) [*ἀνεκπύητος*]. 1. suppurating. 2. Preventing suppuration; insup able.

Anectasin (*an-ek'-ta-sin*) [*av*, priv.; *ἐκ*, out of; *τέ* to stretch]. A product of bacterial action with a fluence on the vasomotor nerves contrary to *ce* (*q. v.*).

Anedeus (*an-e'-de-us*) [*a*, priv.; *αἰδοια*, the genit Lacking genital organs.

Aneilesis (*an-i-le'-sis*) [*ἀνειλεῖν*, to roll together]. 1 See *Aneilema* (Illus. Dict.). 2. Twisting of the in athletics. 3. Evolution.

Anelectric. (See Illus. Dict.) 2. A good condu a substance which readily parts with electricity.

anelectrotonize (*an-el-ek-trot'-ton-iz*) [*av*, priv.; *ἤλεκτρον*, electricity; *τόνος*, tension]. To render anelectrotonous.

anemasia, Anemasis (*an-e-maz'-e-ah, an-e-maz'-is*). See *Anemia*. **A. epizootica**, a disease of young mules marked by prostration, slight, rapid pulse, and hardness of the abdomen, usually proving fatal in from 6 to 24 hours. Autopsy reveals pale lungs and thin blood deficient in fibrin.

anemia, Anæmia. (See Illus. Dict.) **A., Addison's, A., Biermer's,** pernicious anemia. **A., Bothriocephalous,** that caused by *Bothriocephalus latus*. **A., Cerebral,** a lack of blood in the brain. **A., Chlorotic.** See *Chloranemia* (Illus. Dict.). **A., Cytogenic.** See *A., Idiopathic* (Illus. Dict.). **A., Essential Febrile.** See *A., Progressive Pernicious* (Illus. Dict.). **A., Essential Malignant, A., Essential Pernicious.** See *A., Progressive Pernicious* (Illus. Dict.). **A., Fecal.** See *Stercoremia* (Illus. Dict.). **A., Globular,** a form marked by diminution of the number of red blood-corpuscles. **A. infantum pseudoleukæmica,** a form of primary anemia described by v. Jaksch as peculiar to the young child. Morse holds that chlorosis is a condition wholly foreign to infantile life and that v. Jaksch's disease does not represent a distinct clinical entity. [DaCosta.] **A., Miners'.** See *Uncinariasis*. **A., Myelogenous,** anemia attended with hyperplasia of myelogenous tissue. **A., Paludal,** anemia associated with or caused by malaria. **A., Pernicious, Runeberg's Type of,** a form of pernicious anemia with remissions. **A., Pseudoleukemic** (of v. Jaksch). See *A. infantum pseudoleukæmica*. **A., Spinal,** a deficient blood-supply to the spinal cord. **A., Splenic,** chronic anemia with enlarged spleen, blood-changes, chloranemia, leukopenia, hemorrhages from the stomach, and pigmentation of the skin. **A. spuria acutissima,** Winternitz's term for profound anemia due to trauma in which no blood was lost, but a stasis of blood occurred in the larger vessels. **A., Tropic.** See *Uncinariasis*. **A., True,** anemia caused by hemorrhages. **A., Tunnel.** See *Uncinariasis*.

anemious (*an-em'-e-us*) [*ἄνεμος*, the wind]. Growing in windy exposures.

anemochrous (*an-em'-ok-rus*) [*ἀναιμος*, bloodless; *χροιά*, the skin]. Pallid, without color.

anemonism (*an-em'-on-izm*) [*ἀνεμώνη*, wind-flower]. Poisoning from ingestion of fresh ingredients of ranunculaceous plants (ranunculus, anemone, clematis), which yield anemonol. It gives rise to inflammation of the mouth, stomach, intestines, and kidney.

anemopathy (*an-em-op'-ath-e*) [*ἄνεμος*, wind; *πάθος*, disease]. Therapeutic treatment by inhalation.

anemosarcous (*an-em-o-sar'-kus*) [*ἀναιμος*, bloodless; *σάρξ*, flesh]. Having white flesh.

anemoscope (*an-em'-o-skōp*) [*ἄνεμος*, wind; *σκοπεῖν*, to look]. An instrument to determine the speed of wind.

anemydria, Anæmydria (*an-em-id'-re-ah*) [*a*, priv.; *αἷμα*, blood; *ὕδωρ*, water]. Insufficiency of the watery element in blood.

anencephalemia (*an-en-sef-al-e'-me-ah*). See *Anencephalohemia* (Illus. Dict.).

anenterate (*an-en'-tur-āt*). Same as *Anenterous* (Illus. Dict.).

anenomatic (*an-er-o-no-mat'-ik*). See *Andronym*.

anesime (*an-es'-im-e*). See *Aneson*.

anesin (*an'-es-in*). Same as *Aneson*.

aneson (*an'-es-on*). **1.** An old name for dill. **2.** The commercial name of a watery solution containing 1% of acetonechloroform, recommended as a local anesthetic instead of cocain. As a hypnotic it is used in doses of 8 gr.

Anesthecinesis, Anæsthecinesis (*an-es-the-sin-e'-sis*) [*a*, priv.; *αἰσθησις*, feeling; *κίνησις*, movement]. A condition marked by loss of sensibility and motor capacity.

Anesthesia. (See Illus. Dict.) **A., Central,** that due to disease of nerve-centers. **A., Cerebral,** that due to disease of the cerebrum. **A., Dolorous, of Liebreich,** the transient but painful anesthesia produced by the injection of water in sufficient quantity to edematize the papillary layer of the derm and subjacent layers. The pain is due to the inhibitory swelling of the cells. **A., Efferent,** that due to disorder of the nerve terminations, disturbing their conductivity. **A., Electric,** anesthesia caused by the passage of an electric current through a part. **A., Facial,** anesthesia of those parts to which the sensory branches of the fifth cranial nerve are distributed. **A., General,** that of the whole body; loss of perception and consciousness. **A., Genital,** the absence of the sensation attending coitus. **A., Girdle,** a zone of anesthesia encircling the body, due to circumscribed disease of the spinal cord. **A., Gustatory.** Same as *Ageusia* (Illus. Dict.). **A., Hemiplegic.** See *Hemianesthesia* (Illus. Dict.). **A., Infiltration,** local anesthesia effected by subcutaneous injections. **A., Javanese,** that produced by pressure upon the carotids. **A., Korff's.** See under *Anesthetic*. **A., Mixed,** that partially produced and prolonged by the administration of morphin or other cerebral anodyne before the anesthetic is given. **A., Muscular,** absence of muscular sensibility, as in locomotor ataxia. **A., Olfactory.** See *Anosmia* (Illus. Dict.). **A., Optical.** See *Amaurosis* (Illus. Dict.). **A., Primary,** temporary insensibility to slight pain in the beginning of anesthesia. **A., Rectal,** local anesthesia induced by means of an anesthetic placed in the rectum. **A., Regional,** the suppression of all sensorial impressions made upon a region by blocking their path in the nerve-trunks, paralyzing the peripheral nerve-endings, or anesthetizing the sensory centers in the cerebral cortex itself. **A., Schleich Infiltration.** See under *Anesthetic*. **A., Schneiderlin's.** See under *Anesthetic*. **A., Spinal.** See under *Anesthetic, Corning-Bier Method*. **A., Subarachnoid.** See under *Anesthetic, Corning-Bier Method*. **A. by Suggestion,** hypnotism. **A., Tactile,** loss or impairment of the sense of touch. **A., Thermic,** loss of the perception of heat; thermoanesthesia. **A., Unilateral.** See *Hemianesthesia* (Illus. Dict.).

Anesthesin (*an-es-the'-sin*).

$C_6H_4{<}^{NH_2}_{COOC_2H_5}$. E. Ritsert's name for paramidobenzoic acid ester; a white, tasteless, odorless powder, soluble with difficulty in cold water, more soluble in hot water, readily in alcohol, ether, acetone, chloroform, and fatty oils; it is used as a local anesthetic.

Anesthesis (*an-es-the'-sis*). See *Anesthesia*.

Anesthetic, Anæsthetic. (See Illus. Dict.) **2.** Relating to, attending, or producing anesthesia. **Bégot's Local Anesthesia Mixture,** cocain hydrochlorate, 0.04, and spartein sulfate, 0.05; this is dissolved in 1 or 2 c.c. of boiled water. **Bernard's Method.** See *Nussbaum's Method* (Illus. Dict.). **Bonain's Mixture** for anesthesia of the external surface of the tympanic membrane. Phenol, menthol, cocain hydrochlorate, āā 1.0; or phenol 2.9, menthol 0.5, cocain hydrochlor. 1.0. **Ceci's Mixed Morphin-cocain;** the local anesthetic action of an analgesic drug is preceded or supplemented by the action of morphin or other cerebral anodyne. **Chloroform-oxygen.** See *Wohlgemuth's Method*. **Cole's Method,** the use of ether preceded by nitrous oxid gas. **Corning-Bier Method,** the spinal subarach-

noid method. It consists in the injection of a solution of cocain hydrochlorate into the subarachnoid space through a puncture made in the lumbar or lumbosacral region. **Crile's (Geo. W.) Blocking Method,** identical in principle and technic with the Corning-Bier method except that it is applied at a higher level, by injecting the brachial plexus in the supraclavicular space. **Cushing's Method,** the morphin-cocain-chloroform-anesthesia; in addition to a preliminary hypodermic of morphin the local anesthetic action of cocain or other local analgesic is preceded or supplemented by the effects of a general inhalation-anesthetic, such as chloroform. **Edinburgh Method,** consists in giving as little chloroform as will bring about rapid and complete narcosis as evinced by lack of reflexes and muscular excitability. **Franck-Rosenberg's Method,** the preliminary cocainization of the nares before the use of chloroform. **Gerster's Method.** Same as *Franck-Rosenberg's Method.* **Heinze and Braun's Solution** for general infiltration: β-eucain, 0.1; sodium chlorid, 0.8; distilled water, 100. **High-frequency Currents** are used in dental surgery; 300,000 alterations per second and 150 to 200 milliamperes. **Hydrogen Dioxid** injected under the epidermis is recommended for complete and immediate anesthesia. **Infiltration, Neural Method,** preliminary infiltration of the derm precedes the cocainization of the nerve-fibers which supply the area of the operation. **Intraneural Method,** after preliminary anesthesia of the skin the large nerve-trunks that supply the region are brought to view by dissection, and are directly injected with the needle. **Isotonic Solution,** in anesthesia, any solution of the same specific gravity and the same freezing-point as the normal tissue; it can be employed without causing pain from osmotic disturbances. **Kocher's Method.** Same as *Poitou-Duplessy's Method.* **Korff's Method,** a modification of Schneiderlin's, in that the use of hypodermic injections of scopolamin hydrobromate, 4 dmg. (1-161 gr.), and morphin, 1 cg. (1-7 gr.), is followed by the administration of a few drops of chloroform by the mask. **Krogin's Method.** Same as *Oberst's Method.* **Kummer's Method** of local anesthesia, the application of an elastic constrictor to intensify the action of ether spray. **Lohmann's (W.) Solution,** 4% β-eucain solution with 8% of sodium chlorid. **Luxenburger's Solution,** a 2% solution of nirvanin. **M. S. Mixture,** ether, 57 parts; chloroform, 43 parts. **Oberst's Method** of inducing local anesthesia: the injection of a weak solution of cocain along the nerve-trunks supplying the parts. **Paraneural Method,** the anesthetizing solution is injected in the vicinity of the nerve-trunk or as closely as possible to the nerve supplying the area of operation. **Poitou-Duplessy's Method,** the use of ethyl bromid as a preliminary to etherization. **Reclus' Solution,** a 2% β-eucain solution. **Schleich Infiltration Method,** local anesthesia produced by the hypodermic injection of cocain, combined with a weak salt solution, and by the addition of a little morphin the anesthetic action is prolonged. (Cocain hydrochlorate, 1½ gr.; morphin hydrochlorate, ⅓ gr.; common salt, 3 gr., dissolved in 3 ounces and 3 drams of sterilized water.) **Schleich Method for General Anesthesia,** the administration of small doses of chloroform, petroleum ether, and sulfuric ether. **Schneiderlin's Method,** the use of a combination of scopolamin hydrobromate (hydrobromate of hyoscin), 3 dmg. (=1-200 gr.), and morphin, 1 cg. (=1-7 gr.). To be administered hypodermically and repeated after 1 or 2 hours. It is asserted to be absolutely free from danger to life. **Scopolamin-morphin.** See *Korff's Method.* **Spinal Subarachnoid Method.** See *Corning-Bier Method.* **Tait and Caglieri's Method,** spinal cocainization by injection of cocain in the sixth cervical intervertebral space. **Tuffier's Method.** See *Corning-Bier Method.* **Wohlgemuth's Method,** the use of oxygen combined with chloroform by means of a special apparatus.

Anesthyl (*an-es-thil'*), a local anesthetic said to consist of ethyl chlorid, 5 parts; methyl chlorid, 1 part.

Anestrous (*an-es'-trus*). Pertaining to the long period of sexual quiescence (*anestrum*) characteristic of some female animals. Cf. *Proestrous; Metestrous; Diestrous.*

Anestrum (*an-es'-trum*) [*a*, priv.; οἶστρος, gad-fly]. Heape's term for the period of sexual rest in which the generative organs lie fallow and which intervenes between the sexual seasons. Cf. *Estrus* (Illus. Dict.); *Metestrum; Proestrum; Diestrous; Monestrous.*

Anethated (*an'-e-tha-ted*) [ἄνηθον, dill]. Containing dill or anise.

Anethol. (See Illus. Dict.) **A. Liquid,** an isomeric modification of anethol; it is an antiseptic, oil-like liquid. Syn., *Isanethol.*

Anetholquinin. See *Quinin Anisate.*

Anethoxylon (*an-eth-oks'-il-on*) [ἄνηθον, dill; ξύλον, wood]. Dill-root, the root of *Peucedanum graveolens.*

Anetodermia (*an-et-o-dur'-me-ah*) [ἄνετος, relaxed; δέρμα, skin]. Relaxation of the skin.

Aneurism (*an'-u-rizm*). See *Aneurysm.*

Aneuros (*ah-nu'-ros*) [ἄνευρος, without sinews]. Feeble, inelastic, relaxed.

Aneurosis (*ah-nu-ro'-sis*) [*a*, priv.; νεῦρον, a nerve]. A lack of nerves.

Aneurysm, Aneurysma. (See Illus. Dict.) Syn., *Abscessus spirituosus.* **A., Active,** cardiac dilation with hypertrophy. **A., Acute,** an ulceration of the heart-wall which by communicating with one of the chambers of the heart forms an aneurysmal pouch. **A., Axillary,** that affecting the axillary artery. **A., Bell's,** aneurysmal varix. **A., Bone.** See *Osteoaneurysm* (Illus. Dict.). **A., Capillary.** See *A., Miliary.* **A. Circumscribed,** an aneurysm, either true or false, in which the contents are still within the artery though there may be rupture of one or two of its coats. **A. cirsoides arteriæ lienalis,** cirsoid aneurysm of the splenic artery. **A. cordis,** aneurysmal bulging of the heart-wall. **A., Cystic.** See *A., Sacculated* (Illus. Dict.). **A., Cystogenic,** one formed by the rupture of a cyst into the lumen of an artery. **A., External** 1. One remote from the great body-cavities. 2. One in which the cavity of the tumor is entirely or chiefly outside of the inner coat of the artery. **A. of the Heart.** 1. See *A., Acute.* 2. Any dilation of the heart. **A., Hernial,** one in which the internal coat of the artery, with or without the middle coat, forms the aneurysmal sac which has forced its way through an opening in the outer coat. **A., Idiopathic,** one not due to any of the usual causes. **A., Innominate,** that of the innominate artery. **A., Internal,** an aneurysm situated within one of the great body-cavities. **A., Lateral,** an aneurysm projecting on one side of a vessel, the rest of the circumference being intact. **A. Miliary,** a sac-like dilation of an arteriole, often the size of a pin's head. **A., Osteoid,** a pulsating tumor of a bone. See *Osteoaneurysm* (Illus. Dict.). **A. Partial.** 1. See *A., Lateral.* 2. An aneurysmal dilation of a portion of the heart. **A., Passive, A. Passive Cardiac,** cardiac dilation with thinning of the heart-wall. **A., Peripheral, A., Peripheric,** one involving the whole circumference of an artery. **A. Racemose.** See *A., Cirsoid* (Illus. Dict.). **A. Rasmussen's,** dilation of an artery in a tuberculous cavity; its rupture is a frequent cause of hemorrhage. **A., Spontaneous,** any aneurysm not due to trauma

., **Subclavicular,** an aneurysm of the axillary artery a point too high to admit of ligation below the avicle. **A., Surgical.** See *A., External.* **A., aricose.** See *A., Arteriovenous* (Illus. Dict.).

urysmus (*an-u-riz'-mus*). 1. A dilation; the for- tion of an aneurysm. 2. Aneurysm.

x (*an'-eks*). An abbreviation of anode excitation.

ractuosity. (See Illus. Dict.) 2. Any spiral turn winding; an interruption; a detour. **A., Ethmoi-l,** an ethmoidal cell.

ectasia (*an-jec-ta'-ze-ah*). See *Angiectasis* (Illus. ct.).

ei. See *Angi.*

elate (*an'-jel-āt*) [*angelicus,* angelic]. A salt of gelic acid.

elicate (*an-jel'-ik-āt*). See *Angelate.*

elicin (*an-jel'-is-in*) [*angelicus,* angelic]. $C_{15}H_{20}$- A fine, colorless, crystalline substance from the ot of *Archangelica officinalis;* has an aromatic taste, soluble in alcohol and ether, and melts at 126.5° C.

i (*an'-je*). Inguinal buboes.

idiospongus (*an-je-di-o-spon'-gus*) [ἀγγεῖον, a le vessel; σπόγγος, a sponge]. See *Angiomyces.*

iectasia, Angeiectasia (*an-ji-ek-ta'-zhe-ah*). See *ngeiectasis* (Illus. Dict.).

iectatic (*an-je-ek-tat'-ik*). Relating to angiectasia.

iectopic (*an-je-ek-top'-ik*). Relating to angiectopia.

ielcosis (*an-je-el-ko'-sis*). See *Angielcus* (Illus. ct.).

ieurysm (*an-il'-u-rizm*) [ἀγγεῖον, a vessel; εὐρύνειν, widen]. See *Angiectasis* (Illus. Dict.).

ileucitis (*an-je-lu-si'-tis*). Same as *Angioleucitis* llus. Dict.).

ina. (See Illus. Dict.) **A., Accessory.** See *scess, Retropharyngeal.* **A. anginosa.** See *Scar- na anginosa* (Illus. Dict.). **A. aphthosa, A., phthous,** a form attended with the formation of thæ in some part of the throat. **A. aquosa œde- atosa,** edema of the glottis. **A. arthritica.** See *nanche dysarthritica.* **A. bronchialis, A. bron- iorum,** chronic bronchitis. **A., Cachectic,** a form urring in cachectic subjects marked by whitish ap- arance on the upper layers of the epithelium of the ynx. **A. cantatorum.** See *Pharyngitis, Granu-* (Illus. Dict.). **A. carbuncularis, A. carbun- losa,** a form of anthrax attended with erysipelas, ecting the throat of swine. **A., Cardiac,** angina ctoris. **A., Catarrhal,** a pharyngitis in which the reased secretion from the pharynx and tonsils is at t mucous, but changes to mucopurulent and finally comes purulent. **A., Chancriform.** See *Tonsil- is, Herpetic* (Illus. Dict.). **A., Chronic, A. ericorum.** See *Pharyngitis, Granular* (Illus. ct.). **A., Croupous.** See *Croup* (Illus. Dict.). cruris, intermittent lameness. **A. cum tumore,** insy. **A., Diphtheric, A., Diphtheritic,** diphtheria. **. Diphtheroid.** See *Tonsillitis, Herpetic* (Illus. ct.). **A., Dry,** chronic dry catarrh of the throat. **ductus aerei, A. ductus aerii,** a form marked by inful respiration. **A., Epiglottidean,** edema of the ttis. **A., Erythematous.** See *A., Catarrhal.* **A. anthematica,** that attending any eruptive disease. **exsudativa,** croup. **A., Fibrinous,** a noninfec- us disease of the throat simulating diphtheria, rked by the formation of a layer of fibrinous exuda- n which is chiefly confined to the tonsils. The nstitutional symptoms are slight. **A., Follicular,** rgyman's sore throat. See *Pharyngitis, Granular* llus. Dict.). **A., Gangrenous,** any disease of the roat producing gangrene. Syn., *Laqueus gutturis.* **., Glandular, A., Granular.** See *Pharyngitis, ranular* (Illus. Dict.). **A., Guttural,** inflammation of the mucosa of the isthmus of the fauces. **A., Herpetic,** angina observed in connection with smallpox and herpes, marked by formation of vesicles in the throat, which may be attended with patches of exudation. **A. hippocratis,** scrofulous disease of the cervical vertebras; so called because it often interfered with swallowing and breathing. **A. humida,** croup. **A., Infective.** See *A. serpiginosa* (Illus. Dict.). **A. lacunaris,** infectious tonsillitis marked by the presence of *Staphylococcus albus* and *S. aureus* in the follicles. Syn., *Pharyngotonsillitis lacunaris.* **A. linguaria.** See *Glossitis* (Illus. Dict.). **A. loweriana,** edema of the glottis. **A. ludovici.** See *A., Ludwig's* (Illus. Dict.). **A., Lymphatic.** See *A., Catarrhal.* **A. maligna** [Heredia, 1673]; synonym of *Diphtheria.* **A. maxillaris,** mumps. **A. morbillosa, A., Morbillous,** that which accompanies measles. **A. nasalis,** coryza. **A. notha.** See *A., Catarrhal.* **A., Oidial, A. oidiea,** angina due to the fungus *Oidium.* **A. Pastils,** pastils consisting of cocain and antipyrin. **A., Pharyngeal,** angina limited to the walls of the pharynx. **A., Phlegmonous,** 1. An inflammation of the mucous and submucous tissues of the throat, with a tendency to extend more deeply, attended by edematous swelling. 2. Acute inflammation of the deep-seated structures of the throat, with a tendency to pus-formation. **A. pituitosa.** Same as *A., Catarrhal.* **A. puerorum epidemica** [Bartholinus, 1646]. A synonym of *Diphtheria.* **A. pulposa.** See *A., Pultaceous.* **A., Pultaceous,** one marked by the presence of whitish or grayish patches which are easily detached, as they are not true exudations. **A., Putrid.** See *A., Gangrenous.* **A., Rheumatic,** a form of catarrhal angina in rheumatic persons, marked by sudden onset of intense pain in swallowing. **A. scirrhosa,** difficult deglutition due to a scirrhous tumor. **A. serosa, A., Serous,** 1. Catarrhal angina. 2. Edema of the glottis. **A. sicca.** See *A., Dry.* **A. squirrosa.** See *A. scirrhosa.* **A., Streptococcous,** angina due to streptococci. **A., Stridulous.** See *Laryngismus stridulus* (Illus. Dict.). **A. suffocatoria.** Synonym of *Membranous Croup.* **A., Superficial.** See *A., Catarrhal.* **A. synochalis,** quinsy. **A., Thymic,** 1. Laryngismus stridulus. 2. Bronchial asthma. **A., Toxic,** that due to systemic poison. **A. ulcerosa, A., Ulcerous, A. ulcusculosa,** inflammation and ulceration of the throat. **A. uvularis,** inflammation of the uvula. Syn., *Staphylitis.* **A. varicosa,** dyspnea due to enlarged tonsillar vessels. **A. variolosa,** the angina of smallpox. **A. vera, A. vera et legitima,** quinsy. **A., Vincent's,** diphtheroid angina (ulceromembranous angina) due to *Bacillus pseudodiphtheriæ.*

Anginal (*an'-jin-al*). Relating to angina.

Anginophobia (*an-ji-no-fo'-be-ah*) [*angina;* φόβος, fear]. Morbid fear of angina pectoris.

Anginose (*an'-jin-ōs*). Affected with angina.

Angioataxia (*an-je-o-at-aks'-e-ah*) [ἀγγεῖον, vessel; ἀταξία, want of order]. An irregularity in the tension of the blood-vessels.

Angioblast (*an'-je-o-blast*) [ἀγγεῖον, vessel; βλαστός, a germ]. An embryonic cell developing into vascular tissue.

Angiocardiokinetic (*an-je-o-kar-de-o-kin-et'-ik*) [ἀγγεῖον, a vessel; καρδία, heart; κινεῖν, to move]. 1. Stimulating or affecting the action or movements of the heart and bloodvessels. 2. A drug which stimulates or affects the movements of the heart and bloodvessels.

Angiocavernous (*an-je-o-kav'-ur-nus*). Relating to angioma cavernosum.

Angioceratodeitis. See *Angiokeratoditis.*

Angiocheiloscope (*an-je-o-ki'-lo-skōp*) [ἀγγεῖον, a vessel; χεῖλος, a lip; σκοπεῖν, to look]. An instrument

by means of which the blood circulation in the capillaries of the mucosa of the lips is magnified for observation.

Angiocinesis. See *Angiokinesis.*

Angiodystrophia, Angiodystrophy (*an-je-o-dis-tro'-fe-ah, -dis'-tro-fe*) [ἀγγεῖον, a vessel; δυς, bad; τροφή, nourishment]. Defective nutrition of the vessels.

Angioelephantiasis (*an-je-o-el-e-fan-ti'-as-is*). See *Elephantiasis telangiectodes* (Illus. Dict.).

Angiofibroma (*an-je-o-fi-bro'-mah*). A fibrous degenerating angioma.

Angiohelcosis. See *Angielcus* (Illus. Dict.).

Angiohemia (*an-je-o-he'-me-ah*). See *Angiemia.*

Angiohydrography (*an-je-o-hi-drog'-ra-fe*). See *Hydrangiography.*

Angiohydrotomy (*an-je-o-hi-drot'-o-me*). See *Hydrangiotomy.*

Angioitis (*an-je-o-i'-tis*). See *Angiitis* (Illus. Dict.).

Angiokeratoditis (*an-je-o-ker-at-o-di'-tis*) [ἀγγεῖον, vessel; κέρας, cornea]. Vascular keratitis.

Angiokinesis (*an-je-o-kin'-e-sis*) [ἀγγεῖον, a vessel; κινεῖν, to move]. Excitation or action of the blood-vessels.

Angioleukasia (*an-ge-o-lu-ka'-she-ah*) [ἀγγεῖον, vessel; λευκός, white; ἔκτασις, dilation]. Dilation of the lymphatics.

Angioleukectasia (*an-je-o-lu-kek-ta'-she-ah*). See *Angioleukasia.*

Angioleukemphraxis (*an-je-o-lu-kem-fraks'-is*) [ἀγγεῖον, a vessel; λευκός, white; ἔμφραξις, a stoppage]. Obstruction of the lymphatics.

Angioleukography (*an-je-o-lu-kog'-raf-e*) [ἀγγεῖον, a vessel; λευκός, white; γράφειν, to write]. Lymphangiography; a description of the lymphatics.

Angioleukology (*an-je-o-lu-kol'-o-je*). See *Lymphangiology* (Illus. Dict.).

Angiolipoma (*an-je-o-lip-o'-mah*). See *Angioma, Tuberous.*

Angiolith (*an'-je-o-lith*) [ἀγγεῖον, vessel; λίθος, stone]. A venous calculus, phlebolith.

Angiologist (*an-je-ol'-o-jist*) [ἀγγεῖον, vessel; λόγος, science]. A person devoted to the study of blood-vessels and lymphatics.

Angioma, Angeioma. (See Illus. Dict.) **A. arteriale.** See *Aneurysm by Anastomosis* (Illus. Dict.). **A. arteriale racemosum.** See *Aneurysm, Cirsoid* (Illus. Dict.). **A. capillare.** See *Nevus* (Illus. Dict.). **A. cavernosum renis.** See *Strumæ lipomatodes aberratæ renis* (Illus. Dict.). **A. circumscriptum.** See *A., Cavernous* (Illus. Dict.). **A. congenitum.** See *Nevus* (Illus. Dict.). **A. conjunctivæ,** one in the conjunctiva, where it may be developed primarily or occur as an extension of a palpebral angioma. **A., Fissural,** Virchow's name for a nevus which he judged, from its location corresponding to that of a fetal fissure, might be due to a disposition to form anomalies on the part of the region adjacent to the fissures. **A., Flat.** See *Nævus flammeus* (Illus. Dict.). **A., Lipogenous.** See *A., Tuberous.* **A., Lymphatic.** See *Lymphangioma* (Illus. Dict.). **A., Plexiform,** one consisting of enlarged, tortuous capillaries forming a patch varying in color from claret to steel-blue; if there is great increase of blood-vessels, the growth has the character of a tumor, and large examples of this variety are lobular in structure. **A. proliferum mucosum.** See *Cylindroma* (Illus. Dict.). **A. prominens.** See *Nævus vascularis tuberosus.* **A., Racemose Arterial.** See *Aneurysm, Cirsoid* (Illus. Dict.). **A., Telangiectatic,** one composed of dilated bloodvessels. **A., Tuberose, A., Tuberous,** one occurring in subcutaneous tissue and presenting the appearance of a lipoma as it gradually replaces the adipose tissue, or it may be accompanied by a true fatty growth. **A., Varicose, A. venosum, A., Venous.** See *A., Cavernous* (Illus. Dict.).

Angiomatosis (*an-je-o-mat-o'-sis*). A condition favoring the production of angiomas.

Angiomyces (*an-je-o-mi'-sez*) [ἀγγεῖον, a vessel; μύκης, a fungus, an excrescence]. A fungoid or spongy dilation of the capillaries.

Angiomyocardiac (*an-je-o-mi-o-kar'-de-ak*) [ἀγγεῖον, vessel; μῦς, muscle; καρδία, the heart]. Pertaining to the muscles of the vessels of the heart.

Angiomyopathy (*an-je-o-mi-op'-ath-e*) [ἀγγεῖον, vessel; μῦς, muscle; πάθος, affection]. Any affection of the vessels involving the musculature.

Angiomyosarcoma (*an-je-o-mi-o-sar-ko'-mah*). A tumor containing elements of angioma, myoma, and sarcoma.

Angioneurectomy (*an-je-o-nu-rek'-to-me*) [ἀγγεῖον, vessel; νεῦρον, nerve; ἐκτομή, excision]. Resection of all the cord-elements of the prostate except the vas with its artery and vein.

Angioneuroedema (*an-je-o-nu-ro-e-de'-mah*) [ἀγγεῖον, a vessel; νεῦρον, nerve; οἰδέειν, to swell]. Acute edema due to increased irritability of the vasodilators.

Angioneurosis. (See Illus. Dict.) **A., Cerebral** that due to lesion in the vasomotor centers of the cerebral cortex or in the conducting paths connecting them with vasomotor centers in the oblongata. **A., Cutaneous,** 1. One that leaves on certain cutaneous surfaces a corresponding pallor or flush according as the innervation of the superficial arteries is augmented or diminished. 2. See *Dermatosis, Neurotic.* **A., Peripheral,** one affecting the peripheral nervous system; it may be either direct or reflex. **A., Spinal,** that due to a lesion of the spinal cord or oblongata.

Angionitis (*an-je-o-ni'-tis*). See *Angiitis* (Illus. Dict.).

Angionosis (*an-je-o-no'-sis*) [ἀγγεῖον, a vessel; νόσος, disease]. See *Angiopathy* (Illus. Dict.).

Angiopancreatitis (*an-je-o-pan-kre-at-i'-tis*). Inflammation of the vascular tissue of the pancreas.

Angiophorous (*an-je-of'-or-us*) [ἀγγεῖον, a vessel; φορεῖν, to bear]. Applied to tissue which accompanies and supports vessels.

Angioplegmus (*an-je-o-pleg'-mus*). See *Perplication* (Illus. Dict.).

Angioplerosis (*an-je-o-pler-o'-sis*) [ἀγγεῖον, a vessel; πλήρωσις, a filling up]. Engorgement of the vessels.

Angioplerotic, Angeiopleroticus (*an-je-o-pler-ot'-ik, -us*). Relating to vascular engorgement.

Angioploce (*an-je-op'-lo-se*) [ἀγγεῖον, a vessel; πλοκή, a twining]. See *Perplication* (Illus. Dict.).

Angiopressure (*an-je-o-presh'-ur*). The production of hemostasis by means of angiotribe and forceps without ligation.

Angiopyra, Angeiopyretos (*an-je-o-pi'-rah, -re'-tos*) [ἀγγεῖον, vessel; πῦρ, fever]. Inflammatory fever. [Albert.]

Angiorhigosis (*an-je-o-ri-go'-sis*) [ἀγγεῖον, a vessel; ῥίγος, cold]. Rigidity of the vessels.

Angiosclerosis (*an-je-o-skler-o'-sis*) [ἀγγεῖον, a vessel; σκλήρος, hard]. The induration and thickening of the walls of the bloodvessels.

Angioscopy (*an-je-os'-ko-pe*) [ἀγγεῖον, a vessel; σκοπεῖν, to look]. Inspection of the capillaries with an angioscope.

Angiosteogenic, Angiosteogenous (*an-je-o-ste-o-jen'-ik, an-je-o-ste-oj'-en-us*) [ἀγγεῖον, a vessel; ὀστέον, a bone; γεννᾶν, to produce]. Relating to, producing or produced by calcification of the vessels.

Angiosteogeny (*an-je-os-te-oj'-en-e*). Calcification of the vessels. Syn., *Angiosteosis; Angiostosis.*

Angiosymphysis (*an-je-o-sim'-fiz-is*) [ἀγγεῖον, vessel; σύν, together; φύειν, to grow]. The growing together of vessels.

Angiosynizesis (*an-je-o-sin-e-ze'-sis*) [ἀγγεῖον, a vessel; συνιζάνειν, to collapse]. The collapse of the walls of a vessel and subsequent growing together.

Angiotelectasis. See *Angiotelectasia* or *Teleangiectasis* (Illus. Dict.).

Angiotenic (*an-je-o-ten'-ik*) [ἀγγεῖον, a vessel; τείνειν, to stretch]. Due to or marked by distention of the bloodvessels.

Angioteria (*an-je-o-te'-re-ah*) [ἀγγεῖον, a vessel; τέρας, a wonder]. An abnormal development of the vascular system.

Angiothlipsis (*an-je-o-thlip'-sis*) [ἀγγεῖον, a vessel; θλίβειν, to rub, to gall]. The abrasion of a vessel.

Angiotitis (*an-je-o-ti'-tis*) [ἀγγεῖον, a vessel; οὖς, ear]. 1. Inflammation of the bloodvessels of the ear. 2. Angiitis.

Angiotome, Angeiotome (*an'-je-o-tōm, an'-ji-o-tōm*) [ἀγγεῖον, vessel; τομή, a cutting]. The vascular tissue of an embryonic metamere.

Angiotomist (*an-je-ot'-o-mist*) [ἀγγεῖον, a vessel; τέμνειν, to cut]. One devoted to the anatomy of the vascular system.

Angiotomy. (See Illus. Dict.) 2. That branch of anatomy relating to the vascular system.

Angiotribe (*an'-je-o-trīb*) [ἀγγεῖον, a vessel; τρίβειν, to grind or bruise]. A clamp furnished with powerful jaws used by Tuffier in vaginal hysterectomy to occlude arteries.

Angiotripsy (*an-je-o-trip'-se*) [ἀγγεῖον, vessel; τρίβειν, to rub]. Vascular torsion and compression by means of the angiotribe.

Angiouromalacia (*an-je-o-u-ro-mal-a'-she-ah*) [ἀγγεῖον, vessel; οὖρον, urine; μαλακία, a softening]. Softening of the vessels of the urinary tract.

Angiouropathy (*an-je-o-u-rop'-ath-e*) [ἀγγεῖον, vessel; οὖρον, urine; πάθος, disease]. Any disease of the urinary vessels.

Angiourostenosis (*an-je-o-u-ro-sten-o'-sis*) [ἀγγεῖον, vessel; οὖρον, urine; στένωσις, contraction]. Constriction of the urinary vessels.

Angitis (*an-jī'-tis*). See *Angiitis* (Illus. Dict.).

Angle. (See Illus. Dict.) **A. of Aberration.** See *A. of Deviation* (Illus. Dict.). **A., Basiopic.** See *A., Basilar* (Illus. Dict.). **A.s, Distal,** the angles formed by the union of the other surfaces of the tooth crown with the distal surface. **A., Great, of the Eye,** the inner angle of the eye. **A.s, Incisal,** in dentistry, the angles of the various lateral surfaces of the tooth crowns at their junction with the incisal surface. **A.s, Labial.** 1. See *A.s of the Lips* (Illus. Dict.). 2. In dentistry, the angles of the labial surface of the tooth crown which join the other surfaces. **A., Mesial,** the angles formed at the junction of the mesial surfaces of a tooth crown with the other surfaces. **A., Nasal** (of the eye), the inner angle of the eye. **A., Pelvivertebral.** Same as *A. of Inclination* (of pelvis) (Illus. Dict.). **A., Principal,** the angle formed by that side of a prism receiving the incident ray with the side from which the refracted ray escapes. **A., Rolandic,** the acute angle formed by the fissure of Rolando with the superior border of the cerebral hemisphere. **A. of Supination of the Hand, A. of Supination of the Radius,** the extent to which the hand is capable of being supinated; about 180°. **A., Sylvian,** the angle formed by the posterior limb of the Sylvian fissure with a line perpendicular to the superior border of the hemisphere. **A., Temporal** (of the eye), the outer canthus of the eye. **A., Tubal.** See *A. of the Uterus* (Illus. Dict.).

Angola Seeds (*an-gō'-lah*) [*Angola*, a province in western Africa]. Jequirity beans, the seeds of *Abrus precatorius*, L. **A.-weed,** the lichen *Roccella tinctoria* furnishing litmus.

Angor. (See Illus. Dict.) **A. animi,** a sense of imminent dissolution. **A. pectoris,** angina pectoris.

Angosturin (*ang-gos-tu'-rin*). See *Cusparin*.

Angræcum (*an-gre'-kum*) [Malay, *angrek*]. A genus of orchids. **A. fragrans,** Thou., an East Indian species, has peculiarly fragrant leaves, with pungent, aromatic taste, and is used under the name of *faham* as a substitute for Chinese tea, and has a similar effect on the system.

Angu [West Indian]. 1. Cassava bread. 2. A Malay name for asafetida.

Anguicidal (*ang-gwi-sī'-dal*). Destructive to snakes.

Anguicide (*ang'-gwi-sīd*) [*anguis*, a snake; *cædere*, to kill]. Anything destructive to snakes.

Anguiform (*ang'-gwi-form*) [*anguis*, a snake; *forma*, form]. Serpent-shaped.

Angular. (See Illus. Dict.) 2. A bone which, together with the supraangular, strengthens the upper or articular part of the jaw in birds and reptiles. Syn., *Angulare*.

Angulate, Angulated (*ang'-gu-lāt, ang'-gu-la-ted*) [*angulus*, an angle]. Furnished with a definite number of angles. Cf. *Angulose*.

Angulation (*ang-gu-la'-shun*). The formation of angular loops in the intestines.

Angulilabialis (*an-gu-le-la-be-a'-lis*). See *Depressor anguli oris, Muscles, Table of* (Illus. Dict.).

Anguliscapulohumeral (*ang-gu-le-skap-u-lo-hu'-mur-al*). See *Teres major, Muscles, Table of* (Illus. Dict.).

Angulose, Angulous (*ang-gu-lōs, -us*) [*angulus*, an angle]. Full of angles; furnished with an indefinite number of angles, as opposed to *angulate*.

Angustation (*ang-gus-ta'-shun*) [*angustare*, to narrow]. A narrowing, a stricture; stenosis.

Angustimanous (*ang-gus-tim'-an-us*) [*angustus*, narrow; *manus*, a hand]. Furnished with narrow hands.

Angustura. (See Illus. Dict.) **A., False,** *Strychnos nux-vomica*, the bark of which is often mixed with the cusparia bark.

Angyomyces (*an-je-o-mī'-ses*). See *Angiomyces*.

Anhæmasia, Anhæmia. See *Anemia* (Illus. Dict.).

Anhalonin (*an-hal-o'-nin*) [*Anhalonium*, a genus of cacti]. $C_{12}H_{15}NO_3$. A poisonous alkaloid from *Anhalonium lewini*, Henning, forming colorless needles, soluble in a large quantity of water, very soluble in ether, alcohol, chloroform, benzin, and petroleum ether. It forms salts with the ordinary acids. **A. Hydrochlorate,** $C_{12}H_{15}NO_3HCl$, white crystalline powder, soluble in alcohol, ether, and chloroform; melts at 85° C. It is a cardiac and respiratory stimulant and is used as strychnin in angina pectoris, asthma, and pneumothorax.

Anhedonia (*an-he-do'-ne-ah*) [*av*, priv.; ἡδονή, delight]. A complete loss of the sensation of pleasure in acts normally pleasant.

Anhelator (*an-hel-a'-tor*) [*anhelare*, to pant]. A person affected with dyspnea.

Anhelitus (*an-hel'-it-us*) [L.]. 1. Respiration. 2. Difficult respiration; asthma.

Anhelose, Anhelous (*an'-hel-ōs, -us*). Panting, out of breath.

Anhemasia, Anhematosia. See *Anemia* (Illus. Dict.).

Anhomomerous (*an-ho-mom'-ur-us*) [*a*, priv.; ὁμος, the same; μέρος, a part]. Composed of dissimilar articulations.

Anhydration (*an-hi-dra'-shun*) [*a*, priv.; ὑδωρ, water].

1. See *Dehydration* (Illus. Dict.). 2. The state or condition of not being hydrated.

Anhydric (*an-hi'-drik*). See *Anhydrous* (Illus. Dict.).

Anhydrite (*an-hi'-drit*). Anhydrous calcium sulfate.

Anhypnia (*an-hip'-ne-ah*). See *Anypnia* (Illus. Dict.).

Anianthinopsy (*an-e-an-thin-op'-se*) [*av*, priv.; *ἰάνθινος*, violet-colored; *ὄψις*, sight]. An inability to recognize violet tints.

Anidros, Anidrus (*an-id'-ros, -us*) [*ανίδρως*]. Marked by the absence of perspiration.

Anidrosis. (See Illus. Dict.) **A. crystallina.** See *Uridrosis crystallina* (Illus. Dict.).

Anile (*an'-il*) [*anus*, an old woman]. Imbecile; like an old woman.

Anilema (*an-il-e'-ma*). See *Aneilema* (Illus. Dict.); and *Aneilesis.*

Anilesis (*an-il-e'-sis*). See *Aneilesis.*

Anilevator (*an-i-le-va'-tor*). The levator ani. See *Muscles, Table of* (Illus. Dict.).

Anilidmetarsenite (*an-il-id-met-ar'-sen-it*). $C_6H_6NO_2ASC_6H_5NHAsO_2$. A white, odorless powder with slight saline taste, containing 37.69% of arsenic, about half as much as arsenious acid. It dissolves in water up to 20% and is used by subcutaneous injection in skin disease. Dose, ¼–3 gr. of 20% solution per day. Syn., *Atoxyl.*

Anilin. (See Illus. Dict.) Syn., *Phenylamin; Benzidam; Crystalline; Cyanol.* **A. Acetate,** $C_8H_{11}NO_2$, a thick oil without color, soluble in water and alcohol. **A. Camphorate,** $(C_6H_5NH_2)_2C_{10}H_{16}O_4$, white or reddish crystals, soluble in 30 parts of water, 10 parts of glycerin; readily soluble in alcohol and ether. It is antispasmodic. **A. Hydrobromate,** $C_6H_8.NBr$, white crystals, soluble in water and alcohol. **A. Hydrochlorate,** C_6H_8NCl, needles or lamellas, soluble in water and alcohol, melting at 190°–192° C. **A. Hydrofluorate,** C_6H_7NFl. **A. Hydrosilicofluorate,** a reaction-product of water and anilin silicofluorate. **A. Nitrate,** $C_6H_8N_2O_3$, white acicular crystals or prisms, soluble in water and alcohol; decomposes at 190° C. **A. Orange,** $C_7H_5N_2O_5K$, potassium or ammonium salts of dinitroorthocresol and dinitroparacresol. It is a reddish-yellow powder, soluble in water. It is used in dyeing fabrics, and improperly in coloring butter, etc. **A. Oxalate,** $C_8H_9O_4N$, small white prisms, soluble in water and slightly in alcohol. **A. Pink, A. Rose.** See *Safranin* (Illus. Dict.). **A. Purple.** See *Mauvein* (Illus. Dict.). **A. Tribromid,** $C_6H_4Br_3N$, long colorless needles, melting at 119° C., boiling at 300° C., obtained from anilin by action of bromin. Syn., *Tribromoanilin.* **A. Yellow.** See *Aurin; Chrysanilin;* and *Pigments, Conspectus of* (Illus. Dict.).

Anilinophile. (See Illus. Dict.) 2. A tissue or element staining readily with anilin.

Anilipyrin (*an-il-i-pi'-rin*). A feebly toxic white powder, consisting of acetanilid, 1 part; antipyrin, 2 parts, melted together. It is more soluble in water than either of its constituents. Dose, 8–16 gr.

Anima. (See Illus. Dict.) 3. A current of air; the breath; the mind; consciousness. In the plural, *Animæ*, the swimming-bladders of herring, used as a diuretic. **A. aloes,** refined aloes. **A. brutalis,** the blood. **Animæ deliquium,** syncope. **Animæ gravitas,** an offensive breath. **A. hepatis,** iron sulfate, from its supposed efficacy in liver disease. **Animæ pathemata,** mental affections. **A. stahliana, A., Stahl's,** the vital principle of plants or animals.

Animalculist. (See Illus. Dict.) 2. One skilled in the study of animalcula. 3. One who supports the theory of animalculism. Cf. *Animist.*

Animalculovism (*an-im-al-ku-lo'-vizm*) [*animalculum*, a little animal; *ovum*, an egg]. The theory that the embryo is produced conjointly by the spermatozooid and the ovule.

Animalculovist (*an-im-al-ku-lo'-vist*). One who holds the doctrine of animalculovism.

Animalist (*an'-im-al-ist*). See *Animalculist.*

Animality (*an-im-al'-it-e*). The state of having an animal nature.

Animiferus (*an-im-if'-ur-us*) [*anime; ferre*, to bear]. Yielding anime.

Animirtin. See *Anamirtin* (Illus. Dict.).

Animist (*an'-im-ist*). One who holds the doctrine of animism. Cf. *Animalculist.*

Animus (*an'-im-us*) [L.]. The mind; the soul; the breath; life.

Aniodol (*an-i'-o-dol*). A glycerin solution of trioxymethylene, useful as an antiseptic in 1% solution.

Aniridism, Aniridismus (*an-ir-id'-izm, -iz'-mus*). See *Aniridia* (Illus. Dict.).

Anisalol (*an-is'-al-ol*). $C_6H_4(OCH_3)CO_2C_6H_5$. The phenyl ester of anisic acid forming colorless crystals. It is antirheumatic and analgesic. Dose, 8–15 gr. (0.5–1 gm.).

Anisalyl (*an-is'-al-il*) [*anisic; alcohol*]. C_8H_9O. The univalent radicle of anisic alcohol. **A. Hydrate,** anisic alcohol.

Anisamate (*an-is'-am-āt*) [*anisum*, anise]. A salt of anisamic acid.

Anisamid (*an-is'-am-id*). $C_8H_9NO_2$. The amid of anisic acid; anisyl amid.

Anisate (*an'-is-āt*) [*anisum*, anise]. A salt of anisic acid.

Anisated (*an-is-a'-ted*). Containing anise.

Anise. (See Illus. Dict.) **A., Bengal,** Ajowan seed, the seed of *Carum copticum.* **A., China,** star anise. See *Illicium anisatum.* **A., French,** fennel, *Fœniculum vulgare.* **A., Orinoco.** See *Nectandrum cymbarum.* **A., Siberian, A., Star.** See *Illicium anisatum.* **A.-tree, Florida.** See *Illicium floridanum.*

Anisette (*an'-is-et*) [*anisum*, anise]. A liqueur prepared by the distillation of the seeds of star anise, fennel and coriander with water and alcohol and the addition of sugar.

Anishumin (*an-is-hu'-min*) [*anisum*, anise; *humus*, the ground]. A dark substance derived from the action of acetyl chlorid upon anisic aldehyd. It is insoluble in water, ether, and alcohol.

Anishydramid (*an-is-hi'-dram-id*). $C_{24}H_{24}N_2O$. Snowy crystals obtained by the action of ammonia upon anisic aldehyd.

Anisidin (*an-is'-id-in*). $N(C_7H_7O)H_2$. A base obtained from nitranisol by action of ammonium sulfid in alcoholic solution; with acids it forms crystalline compounds. Syn., *Methylphenidin; Methylamidophenol.* **A. Citrate,** an analgesic similar to phenetidin citrate.

Anisoate (*an-is'-o-āt*) [*anisum*, anise]. A salt of anisoic acid.

Anisochromatic (*an-is-o-kro-mat'-ik*) [*ἄνισος*, unequal *χρῶμα*, color]. Not having the same color throughout; said of solutions containing two pigments used in testing for color-blindness.

Anisodactylus (*an-is-o-dak'-til-us*) [*ἄνισος*, unequal *δάκτυλος*, a finger]. With unequal digits.

Anisoin (*an-is-o'-in*). 1. A substance isomeric with anethol, produced by action of a combination of chlorin and iodin on oil of anise. 2. $C_{16}.H_{16}O_4$, a crystalline substance obtained from anisic aldehyd by prolonged action of alcohol and potassium cyanid.

Anisomelia (*an-is-o-me'-le-ah*) [*ἄνισος*, unequal; *μέλος*, limb]. An inequality between corresponding limbs.

nisomeria (*an-is-o-me'-re-ah*) [ἀνισος, unequal; μέρος, part]. The condition of having unequal organs or parts in successive series.

nisometrope (*an-is'-o-me-trōp*) [ἀνισος, unequal; μέτρον, measure; ὤψ, the eye]. A person with dissimilar refractive power of the two eyes.

nisotachys (*an-is-ot'-a-kis*) [ἀνισος, unequal; ταχύς, quick]. Applied to an accelerated pulse of varying rapidity.

nisotrophy (*an-is-ot'-ro-fe*) [ἀνισος, unequal; τρέπειν, to turn]. The quality of being doubly refractive or of being unequally refractive in different directions; the state or quality of being unequally responsive to external influences.

nisotropy (*an-is-ot'-ro-pe*) [ἀνισος, unequal; τροπή, a turning]. In embryology, Pflüger's term for the presence of a predetermined axis.

nisphincter (*an-e-sfink'-tur*). See *Sphincter ani, External, Table of Muscles* (Illus. Dict.).

nisyl. (See Illus. Dict.) **A. chinin,** $C_6H_4 . OCH_3 . CO . O . C_{20}H_{23}N_2O$, a quinin ester, insoluble in water, readily soluble in alcohol; melts at 87°–88° C. **A. Hydrate.** See *Acid, Anisic* (Illus. Dict.).

nitin (*an'-it-in*). A brownish, hygroscopic powder, chthyosulfonic acid, obtained from ichthyol. Its 33% queous solution combines with phenols, etc., to form nitols.

nitol (*an'-it-ol*). Any one of the soluble compounds ormed by anitin with phenols, cresols, etc.; they possess germicidal properties.

kle. (See Illus. Dict.) **A., Tailor's,** a ganglion r synovial sac over the external malleolus in tailors, ue to their constrained posture when at work. **A., Valgus,** a debilitated condition of the ankle-joint due o laxity of the internal lateral ligament, permitting he foot to act as in talipes valgus.

kola (*an-ko'-lah*) [Hind.]. The bitter, emetic root-ark of *Alangium lamarckii*, Thwaites, a tree of tropical Asia and Africa. It is used in India in skin diseases and leprosy.

kyla, Ankyle (*ang'-kil-ah, -e*) [ἀγκύλη, anything ent]. 1. An angular part, particularly the elbow. 2. Ankylosis of a joint with flexion. 3. Abnormal dhesion of parts.

kylenteria (*ang-kil-en-te'-re-ah*). See *Ankylenteron* (Illus. Dict.).

kylocheilon, Ankylochilon. See *Ankylocheilia* (Illus. Dict.).

kylodeire, Ankylodere, Ankyloderis (*ang-kil-o-di-, -de-re, -is*) [ἀγκύλος, crooked; δειρή, the neck]. Wryneck; torticollis.

kyloglossum (*ang-kil-o-glos'-um*). 1. Tongue-tie. 2. Adhesion of the tongue to any part of the mouth. Syn., *Olophonia linguæ frenata.*

kylomele (*ang-kil-o-me'-le*) [ἀγκύλη, a loop; μέλος, limb]. 1. The abnormal growing together of limbs (as of the fingers and toes). 2. Relating to or affected with abnormal adhesion of the limbs to each other.

kylosed (*ang'-kil-ōzd*). Fixed by ankylosis.

kylosis. (See Illus. Dict.) **A., Capsular,** that due to cicatricial shrinking of the joint capsule. **A., Cartilaginous,** a form observed as a sequel of subacute coxitis in the young, marked with great muscle tension, and absence of suppuration; the cartilages may remain intact for a long time although the shrunken synovial membrane has ceased to secrete. **A., Central,** that due to causes present within the joint. **A., Extracapsular,** that due to causes exterior to the joint. **A., Fibroid, A., Fibrous.** See *A., Ligamentous* (Illus. Dict.). **A., Generalized,** ankylosis affecting many joints, or a tendency toward it. **A., Intracapsular,** adhesion of the joints through masses of bone, connective tissue, or cartilage within the joint proper. **A., Muscular,** that due to muscular contraction.

Ankylourethria (*ang-kil-o-u-re'-thre-ah*). See *Ankylurethra.*

Ankylurethra, Ankylurethria (*ang-kil-u-re'-thrah, -re'-thre-ah*) [ἀγκύλη, a noose; οὐρήθρα, the urethra]. Urethral stricture or atresia.

Annectant (*an-ek'-tant*) [*ad*, to; *nectere*, to bind]. Connecting, linking.

Annularis (*an-u-lar'-is*) [L., relating to a ring]. 1. Ring-shaped. 2. The ring finger. 3. The cricoid cartilage. **A. ani.** See *Sphincter ani, Table of Muscles.* **A. posterior,** the fourth dorsal interosseous muscle. **A. prior,** the second palmar interosseous muscle. See *Muscles, Table of.*

Annulate (*an'-u-lāt*). Characterized by, made up of, or surrounded by rings.

Annuliferous (*an-u-lif'-ur-us*) [*annulus*, a ring; *ferre*, to bear]. Marked with rings.

Annuliform (*an-u'-le-form*) [*annulus*, a ring; *forma*, shape]. Ring-shaped.

Annulus [pl., *annuli*]. (See Illus. Dict.) **Annuli, Böttcher's.** See *Rings, Böttcher's.* **Annuli cartilaginei,** the incomplete cartilaginous rings of the trachea. **A. cartilagineus.** See *A. tendinosus.* **A. cruralis,** the femoral ring. **A. errans.** See *A. migrans.* **A. fibrosus.** (See Illus. Dict.) 2. Firm connective tissue containing elastic fibers surrounding the auriculoventricular openings of the heart. Syn., *Annulus fibrosus atrioventricularis.* **A. inguinalis abdominalis,** the internal abdominal ring. **A. inguinalis cutaneus,** the external abdominal ring. **A. interauricularis.** See *A. ovalis* (Illus. Dict.). **A. migrans,** a disease of the tongue marked by crescentic bands of rash spreading over its dorsal surface and sometimes affecting the sides and under surface. Syn., *Annulus errans.* **A. papillarum linguæ,** the annular margin of the depression in which the circumvallate papillas are situated. **A. senilis.** See *Arcus senilis* (Illus. Dict.). **A. tendineus, A. tendinosus.** 1. See *Ring, Arnold's Tendinous.* 2. The anterior border of the ciliary ligament. **A. tympanicus.** See *Ring, Tympanic* (Illus. Dict.). **A. ventriculi,** the pylorus. **A. vulvæ.** See *Ostium, Vaginal* (Illus. Dict.).

Anocavernosus (*an-o-kav-ur-no'-sus*). See *Bulbocavernosus* (Illus. Dict.).

Anocelia, Anocœlia (*an-o-se'-le-ah*) [ἀνω, upward; κοιλία, a cavity]. The thorax.

Anoceliadelphous (*an-o-se-le-ah-del'-fus*) [ἀνω, upward; κοιλία, a cavity; ἀδελφος, a brother]. United by the thorax or upper part of the abdomen.

Anocheilum, Anocheilus. See *Anochilon.*

Anochilon, Anocheilon, Anochilos (*an-o-ki'-lon, -los*) [ἀνω, upward; χεῖλος, a lip]. 1. The upper lip. 2. An individual having a large upper lip.

Anochiloschisis (*an-o-ki-los-ki'-sis*) [ἀνω, upward; χεῖλος, a lip; σχίζειν, to split]. An operation of splitting the upper lip, for reducing its size.

Anodal. (See Illus. Dict.) **A. Closure,** the closure of an electric circuit with the anode placed in relation to the muscle or nerve which is to be affected. **A. Closure Clonus. A. Closure Contraction.** See *Contraction, Anodal Closure.* **A. Duration,** the duration of an anodal clonus contraction.

Anode. (See Illus. Dict.) **A., Soluble,** Sprague's term for an anode formed of the metal which is deposited.

Anodermous (*an-o-aur'-mus*) [*a*, priv.; δέρμα, the skin]. Without the appearance of an epidermis.

Anodic. (See Illus. Dict.) 2. Ascending. 3. Anodal.

Anodinia (*an-o-din'-e-ah*) [*a*, priv.; *ὀδις*, the pain of childbirth]. Absence of labor pains.

Anodinous (*an-od'-in-us*). Without labor pains.

Anodont, Anodontous, Anodous (*an'-o-dont, an-o-dont'-us, an'-od-us*) [*a*, priv.; *ὀδούς*, a tooth]. Toothless.

Anodyne. (See Illus. Dict.) 2. Relieving pain.

Anodynin (*an-o-di'-nin*). See *Antipyrin* (Illus. Dict.).

Anœodochium (*an-e-o-do'-ke-um*) [*ἀνοος*, without understanding; *δοχός*, a receptacle]. A lunatic asylum.

Anoesia, Anoetia. (See Illus. Dict.) **A. adstricta,** melancholia.

Anoint (*an-oint'*) [*inunguere*, to besmear]. To rub with oil or with an oily substance.

Anomalism (*an-om'-al-izm*) [*ἀνώμαλος*, strange]. Deviation from the normal order or standard.

Anomalology (*an-om-al-ol'-o-je*) [*ανώμαλος*, strange; *λόγος*, science]. The science of anomalies.

Anomalonomy (*an-om-al-on'-o-me*) [*ἀνωμαλία*, irregularity; *νόμός*, a law]. The science of the laws governing anomalism.

Anomaloporous (*an-om-al-op'-or-us*) [*ἀνώμαλος*, strange; *πόρος*, a pore]. Having pores of unequal size.

Anomalotrophies (*an-om-al-ot'-ro-fēz*) [*ἀνώμαλος*, strange; *τροφή*, nourishment]. Diseases consisting in anomalies of nutrition.

Anomalotrophy (*an-om-al-ot'-ro-fe*). An anomaly of nutrition.

Anomeomeria, Anomœomeria (*an-om-e-o-me'-re-ah*) [*ἀνόμοιος*, unlike; *μέρος*, a part]. The condition of being heterogeneous.

Anomia (*an-o'-me-ah*). 1. See *Anomaly* (Illus. Dict.). 2. [*a*, priv.; *ὄνομα*, name.] Loss of ability to name objects or to recognize names.

Anommatous (*an-om'-at-us*) [*a*, priv.; *ὄμμα*, the eye]. Without eyes.

Anomocardiasthenia (*an-o-mo-kar-de-as-the'-ne-ah*) [*a*, priv.; *νόμος*, a law; *καρδία*, the heart; *σθένος*, strength]. Irregular heart action; palpitation.

Anomocephala (*an-o-mo-sef'-al-ah*) [*a*, priv.; *νόμος*, law; *κεφαλή*, the head]. A general term for monsters marked by anomalies of the head.

Anomodont, Anomodontous (*an-om'-o-dont, an-om-o-dont'-us*) [*a*, priv.; *νόμος*, law; *ὀδούς*, a tooth]. Having the teeth specialized into canines, incisors, and molars. It was once regarded as characteristic of mammals, but it begins among reptiles, *e. g.*, *Diademodon.*

Anomogangliotrophy (*an-o-mo-gang-gle-ot'-ro-fe*) [*ἀνομος*, irregular; *γάγγλιον*, a knot; *τρόπος*, a turn]. Any irregular formation in the ganglia.

Anomous (*an'-om-us*) [*a*, priv.; *ὦμος*, the shoulder]. Without shoulders.

Anomus (*an-o'-mus*) [L.]. 1. Anomalous. 2. Anomous.

Anona (*an-o'-nah*) [Malay, *manoa*]. A genus of shrubs and trees of the order *Anonaceæ*, native of tropic America. **A. ambotay,** Aubl., a native of French Guiana. The bark is applied to malignant ulcers. **A. glabra,** L., a species growing in the West Indies. The juice of the unripe fruit is applied to ulcers. **A. muricata,** L., sour-sop, rough anona, an American tree, but cultivated in all tropic countries, where the ripe fruit is a favorite food and used in a cooling drink for fevers. The astringent unripe fruit is used in intestinal atony. The bark is astringent and irritant; the root-bark is used in cases of disease resulting from ingestion of poisonous fish; the leaf is anthelmintic and externally a suppurant. **A. obtusifolia** D. C., the edible fruit is used in South America and i the West Indies by the natives as a narcotic. **A. reticulata,** L., sweet-sop, bullock's heart, a West India tree, but cultivated throughout the tropics. The ur ripe dried fruit and seeds are used as an intestin astringent; the kernels of the seeds are very poisonous the leaves are anthelmintic. **A. spinescens,** Mart., o Brazil; the seeds are used to poison vermin; the fru as a poultice. **A. squamosa, L.,** custard-apple; a American tree cultivated throughout the tropics for i fruit, which is used medicinally as *A. muricata.* Th seeds are used to destroy insects; the bark is employe by the Malays and Chinese as a tonic.

Anonal (*an-o'-nal*). Relating to the genus *Anona.*

Anonychosis (*an-o-nik-o'-sis*). 1. See *Anonych* (Illus. Dict.). 2. Decrease of nail-formation.

Anonymos (*an-on'-im-us*) [*a*, priv.; *ὄνομα*, a name The cricoid cartilage.

Anoperineal (*an-o-per-in'-e-al*). Relating to the an and the perineum.

Anopheles (*an-of'-el-ēz*) [*ἀνωφελής*, harmful]. A gen of dipterous insects (mosquitos) founded by Meig (1818), belonging to the family *Culicidæ.* The palpi both sexes are at least almost as long as the probosci proboscis straight or nearly so; colors of body bro and yellowish. [Coquillet.] **A. albimanus,** Wie Neuwied, of Europe, is unrecognized in the Unit States. It has snow-white tarsi. **A. argyritars** Desr., a very beautiful species, with hind feet larg snow-white on the apical half, occurs in Cuba. **bifurcatus,** L., occurs in Canada. **A. christophers** of India, harbors sporozoits, and in districts wh present the endemic index of malaria varies from 4 to 72%. **A. claviger,** Fab.; this supposed spec has been shown by Osten Sachen to have no istence. It never existed either as a type specim or as a scientific concept of a species. [Howard.] **crucians,** Wiedemann; scales of last wing v white marked with three black spots; palpi marl with white at bases of last four joints. **A. macu pennis** (Meigen), Hoffmannsegg; scales of last w vein wholly black; palpi wholly black. This the common form of northern and central Eur and America, and the common agent in the tra mission of the malaria parasite. Syn., *A. quadri culatus,* Say. **A. nigerrimus,** of India, is fo quite apart from human habitations, breeding only marsh water. **A. nigripes,** Staeger, a Europ species unrecognized in the United States. **A. pict** of Europe, not recognized in the United States. **punctipennis,** Say, black mosquito, the hands species found in the United States. It has a yellow white spot occupying three-fourths of the length of front margin of the wing; the scales of the last w vein are white, those at each end black. Syn., *hiemalis,* Fitch. **A. Rossii,** the most widely tributed species in India, breeding in foul water; not carry the parasite of benign nor of malignant ter fever, and in Calcutta, where this is the preva species, the endemic index of malaria is 0.

Anophresia. See *Anophrasia* (Illus. Dict.).

Anopisthius (*an-o-pis'-the-us*) [*a*, priv.; *ὀπισθιος*, longing to the hinder part]. Having a contig mouth and anus; with no distinct anal extremity.

Anoplognathus (*an-o-plog'-nath-us*) [*ἀνοπλος*, unarm *γναθος*, the jaw]. Having unarmed jaws.

Anoptous (*an-op'-tus*) [*ἀνοπτος*, unseen]. Invisi

Anopubic (*an-o-pu'-bik*). Relating to the anus an pubes.

Anorchidia, Anorchidiasis (*an-or-kid'-e-ah, -i-a'-*) See *Anorchism* (Illus. Dict.).

norectal (*an-o-rek'-tal*). Pertaining to the anus and the rectum.

norexis, Anorexy. See *Anorexia* (Illus. Dict.).

norganochemistry (*an-or-gan-o-kem'-is-tre*) [*a*, priv.; ὄργανον, an organ; χημεία, chemistry]. Inorganic chemistry.

norganogenesis (*an-or-gan-o-jen'-e-sis*) [*a*, priv.; ὄργανον, an organ; γενναν, to produce]. 1. The formation of inorganic bodies. 2. The production of definitely formed bodies otherwise than by procreation. Syn., *Anorganogenia.*

norganography (*an-or-gan-og'-raf-e*) [*a*, priv.; ὀργανον, an organ; γράφειν, to write]. The description of inorganic bodies.

norganology (*an-or-gan-ol'-o-je*) [*a*, priv.; ὄργανον, an organ; λόγος, science]. The science of inorganic structures.

norgic (*an-or'-jik*). See *Anorganic* (Illus. Dict.).

norhinus (*an-or-ĕ'-nus*). See *Anorhin* (Illus. Dict.).

noria (*an-or'-e-ah*) [ἀνωρία, untimeliness]. Immaturity.

normal (*ah-nor'-mal*) [*a*, priv.; *norma*, a rule]. Abnormal.

norous (*an'-or-us*). Immature, untimely.

norrhorrhea (*an-or-or-ĕ'-ah*) [*a*, priv.; ὀρρός, serum; ῥοια, a flow]. A diminished or defective secretion of serous substance.

northography (*an-or-thog'-raf-e*) [*a*, priv.; ὀρθός, straight; γράφειν, to write]. Incapacity to write correctly; motor agraphia.

northoscope (*an-or'-tho-skōp*) [*a*, priv.; ὀρθός, straight; σκοπεῖν, to look]. An apparatus invented by Plateau for connecting in one perfect visual image disconnected and incomplete pictures. It consists of two cylinders, the partial pictures on the outer wall of the smaller and inner cylinder being apparently united when seen through vertical slits in the larger and outer cylinder, the two rotating on the same axis. Cf. *Dedaleum, Stroboscope, Thaumatrope.*

noscope (*an'-os-kōp*) [*anus*; σκοπεῖν, to look]. An instrument for examining the first two inches of the rectum.

noscopy (*an-os'-kop-e*). Inspection of the anus by means of the anoscope.

nosmabic (*an-os-mab'-ik*) [*av*, priv.; ὀσμή, smell]. 1. With small olfactory lobes. 2. Not having a keen sense of smell.

nosmatic (*an-oz-mat'-ik*). See *Anosmabic.*

nosmia. (See Illus. Dict.) **A., Afferent,** that due to the loss of the conductivity of the olfactory nerves. **A., Atonic,** that due to impaired nervous power. **A., Central,** that due to cerebral disease. **A., Lithic,** that due to a calculus in the nose. **A., Organic,** that due to disease of the nasal pituitary membrane. **A., Peripheral,** that due to disease of the peripheral ends of the olfactory nerves.

nosmic, Anosmous (*an-oz'-mik, -mus*). 1. Without odor. 2. Having no sense of smell.

nostomosis (*an-os-tom-o'-sis*). See *Anastomosis.*

notous (*an-o'-tus*) [*a*, priv.; οὐς, ear]. Devoid of ears; earless.

notta, Anotto. See *Annotto* (Illus. Dict.).

nourous (*an-u'-rus*) [*a*, priv.; οὐρά, a tail]. Destitute of a tail.

noxemia, Anoxæmia (*an-oks-ĕ'-me-ah*) [*a*, priv.; ὀξύς, sharp; αἷμα, blood]. 1. A lack of oxygen in the blood. 2. See *Anoxyemia* (Illus. Dict.).

noxidic (*an-oks-id'-ik*) [*a*, priv.; ὀξύς, sharp]. Not capable of oxidation.

noxoluin, Anoxolyin (*an-oks-ol'-u-in, -i-in*) [*a*, priv.; ὀξύς, sharp; λύειν, to dissolve]. The substance opposed to oxolyn, which according to Le Conte exists with it in fibrin, albumin, globulin, and casein, and which is not soluble in glacial acetic acid.

Anoxycausis (*an-oks-e-kaw'-sis*) [*a*, priv.; ὀξύς, sharp; καῦσις, a burning]. Combustion without the presence of oxygen.

Anoxyocausis. See *Anoxycausis.*

Anozol (*an'-o-zol*). A combination of iodoform and thymol; deodorous iodoform.

Ansa. (See Illus. Dict.) **A. atlantis,** the uppermost cervical ansa. **A., Cervical,** one of the intercommunicating branches of the anterior cervical nerves. **A., Coccygeal.** See *A. sacralis* (Illus. Dict.). **A., Galvanocaustic,** the wire loop of a galvanic cautery. Syn., *Ligatura candens.* **A. lenticularis,** a bundle of fibers proceeding from the neural laminas between the divisions of the lenticular nucleus. Syn., *Ansa lentiformis; Lenticular loop.* **A. lentiformis.** See *A. lenticularis.* **A. lumbalis, A. lumbaris,** one of the connecting ramifications between the branches of the lumbar nerves. **A. peduncularis.** See *A. of Reil* (Illus. Dict.). **A., Sternal,** the interclavicular notch. **A. subclavialis, A., Subclavian.** See *A. of Vieussens* (Illus. Dict.). **A. supramaxillaris,** one of communication between the ventral and dorsal superior dental nerves.

Ansatus (*an-sa'-tus*) [*ansa*, a handle]. Furnished with a pedicle.

Ansiform (*an'-se-form*) [*ansa*, a handle; *forma*, shape]. Loop-shaped.

Antacidin (*ant-as'-id-in*) [*anti*, against; *acidus*, sour]. Calcium saccharate.

Antaeneasmus (*an-ta-en-e-az'-mus*). See *Anteneasmus.*

Antanacathartic (*ant-an-ah-kath-ar'-tik*) [ἀντί, against; ἀνά, up; κάθαρσις, purgation]. 1. Checking expectoration. 2. An agent which checks expectoration.

Antanemic (*ant-an-ĕ'-mik*) [ἀντί, against; *a*, priv.; αἷμα, blood]. 1. Correcting anemia. 2. A remedy efficient in anemia.

Antaphroditic (*ant-af-ro-dit'-ik*). See *Antaphrodisiac* (Illus. Dict.).

Antasphyctic (*ant-as-fik'-tik*) [ἀντί, against; ἀσφυκτος, pulseless]. 1. Efficient in preventing asphyxia. 2. An agent efficacious in preventing asphyxia.

Antecardium. See *Anticardium* (Illus. Dict.).

Antecornu (*an-te-kor'-nu*). See *Precornu* (Illus. Dict.).

Antectoparasitic (*ant-ek-to-par-as-it'-ik*) [ἀντί, against; ἐκτός, outside; παράσιτος, a parasite]. An antiparasitic remedy for external use.

Antecubital (*an-te-ku'-bit-al*) [*ante*, before; *cubitum*, the elbow]. Situated in front of the elbow.

Antedonin (*an-ted'-on-in*). A pigment obtained from the crinoid *Antedon rosaceæ*, Link., and other species.

Antefixatio uteri. The operative suturing of the uterus in retroflexion.

Antemingens (*an-te-min'-jenz*) [*ante*, forward; *mingere*, to urinate]. A descriptive term applied to certain female animals which in urinating project the stream forward.

Anteneasmum, Anteneasmus (*an-ten-e-az'-mum, -mus*). P. Zacchias' term for a form of dementia marked by restlessness and a suicidal tendency.

Antenergia (*an-ten-ur'-je-ah*) [ἀντί, against; ἐνεργεῖν, to act]. 1. Resistance, counteraction. 2. Reciprocal action.

Antennary (*an-ten-ar'-e*). Relating to antennas.

Antennate (*an-ten'-āt*). Provided with antennas.

Antenniform (*an-ten'-e-form*) [*antenna*, a sail-yard; *forma*, form]. Like an antenna in shape and nature.

Antephialtic. (See Illus. Dict.) 2. A remedy against nightmare.

Antepyretic (*an-te-pi-ret'-ik*) [*ante*, before; *πυρετός*, fever]. Prior to the development of fever.

Antereisis (*ant-er-i'-sis*) [*ἀντέρεισις*, resistance]. The resistance opposed by a dislocation during its reduction.

Anterior. (See Illus. Dict.) 2. In the lower animals, cephalad.

Anterodorsal (*an-te-ro-dor'-sal*) [*anterior*, before; *dorsum*, the back]. Pertaining to the ventral aspect of the dorsum.

Anterointerior (*an-te-ro-in-te'-re-or*) [*anterior*, before; *interior*, inner]. Located ventrally and internally.

Anterointernal (*an-te-ro-in-tur'-nal*) [*anterior*, before; *internus*, inward]. Situated in front to the inner side.

Anteromedian (*an-te-ro-me'-de-an*) [*anterior*, before; *medius*, the middle]. In front and toward the middle.

Anteuphorbium (*ant-u-for'-be-um*) [*ἀντί*, against; *Euphorbia*]. A remedy or drug efficient against the poison of *Euphorbia*.

Anteversioflexion (*an-te-vur-se-o-flek'-shun*). See *Anteversion* (Illus. Dict.).

Anthectic (*an-thek'-tik* or *ant-hek'-tik*) [*ἀντί*, against; *ἑκτικός*, hectic]. 1. Efficacious against tuberculosis. 2. An agent or remedy efficient against tuberculosis.

Anthema (*an'-the-mah*) [*ἀνθεῖν*, to bloom]. An exanthem; a skin eruption.

Anthemen (*an'-them-en*). $C_{10}H_{16}$. A crystalline substance obtained from the flowers of chamomile, *Anthemis nobilis*, L.

Anthemidin (*an-them'-id-in*). 1. A tasteless crystalline principle, probably a glucosid; insoluble in alcohol, ether, and chloroform; obtained from German chamomile, *Matricaria chamomilla*.

Anthemin (*an'-them-in*). A crystallizable base said to be found by Pattone in *Anthemis cotula*.

Anthemis. (See Illus. Dict.) 2. A genus of plants of the order *Compositæ*. **A. cotula**, L., mayweed, cotula, dog's chamomile, madders, morgan, an acrid annual herb naturalized from Europe, where it is used in infusion for nervous diseases. It was the favorite panacea of Morgan Tud, physician to Arthur and his knights of the Round Table.

Anthemol (*an'-them-ol*). $C_{10}H_{16}O$. The angelic or tiglic ether in cumin oil; a thick liquid with odor of camphor. Syn., *Anthemyl alcohol*.

Antheneasmus (*an-then-e-az'-mus*). See *Anteneasmus*.

Anthereon (*an-the'-re-on*) [*ἀνθερέων*, the chin]. That portion of the face on which beard grows.

Antherous (*an'-thur-us*) [*ἀνθηρός*, full of bloom]. Bright, florid; applied to drugs having a metallic luster.

Antherpetic (*ant-her-pet'-ik*) [*ἀντί*, against; *ἕρπης*, herpes]. 1. Efficient against herpes. 2. An efficacious remedy for herpes.

Antherythrin (*anth-er'-e-thrin*) [*ἄνθος*, a flower; *ἐρυθρός*, red]. The red coloring-matter found in flowers.

Anthiarin (*an-thi'-ar-in*). See *Antiarin* (Illus. Dict.).

Anthine (*an'-thēn*) [*ἄνθος*, a flower]. Containing flowers; prepared from flowers.

Anthion (*an'-thi-on*). Potassium persulfate.

Anthocephalous, Anthocephalus (*an-tho-sef'-al-us*) [*ἄνθος*, a flower; *κεφαλή*, a head]. Having a flower-shaped head; *e. g.*, *Tænia anthocephala*.

Anthocoma (*an-tho-ko'-mah*). See *Anthrax* (Illus. Dict.).

Anthogenesis, Anthogeny. (See Illus. Dict.) 2. The production of flowers.

Anthoid (*an'-thoid*) [*ἄνθος*, a flower; *εἶδος*, likeness]. Like a flower.

Anthokirrin (*an-tho-kir'-in*) [*ἄνθος*, a flower; *κιρρός*, tawny]. The yellow coloring-matter contained in the flowers of toadflax, *Linaria vulgaris*.

Anthomania (*an-tho-ma'-ne-ah*) [*ἄνθος*, a flower; *μανία*, madness]. A morbid desire for flowers.

Anthophagus (*an-thof'-ag-us*) [*ἄνθος*, a flower; *φαγεῖν*, to eat]. Eating flowers.

Anthophein, Anthophæin (*an-tho-fe'-in*) [*ἄνθος*, a flower; *φαιός*, dim, dusky]. The brown pigment isolated by Moebius (1900) from the black spots in the corolla of *Vicia faba* and from the petals of species of *Delphinium*. It resembles phycophæin occurring in brown seaweeds, but, unlike it, is dissolved in the cell-sap instead of being present in the solid state in the chromatophores.

Anthorism, Anthorisma (*an'-thor-izm, an-thor-iz'-mah*) [*ἀντί*, against; *ὅρισμα*, a boundary]. A diffuse swelling.

Anthosperm (*an'-tho-spurm*). See *Tetraspore* (Illus. Dict.).

Anthracemia. (See Illus. Dict.) 2. Asphyxia due to carbon monoxid poisoning.

Anthrachinolin. See *Anthraquinolin*.

Anthrachinon. See *Anthraquinone* (Illus. Dict.).

Anthrachryson (*an-thra-kris-on'*) [*ἄνθραξ*, a coal; *χρυσεος*, golden]. C_{14}. H_8O_3. A substance forming red dish-yellow needles, nearly insoluble in water, more easily soluble in alcohol and ether.

Anthraciferous (*an-thras-if'-ur-us*) [*ἄνθραξ*, carbon; *φέρειν*, to bear]. Carbonaceous.

Anthraciform (*an-thras'-e-form*). See *Anthracoid*.

Anthracin (*an'-thras-in*). 1. A poisonous ptomaïn which Hoffa claimed to obtain from cultures of *Bacillus anthracis*. 2. See *Anthracene* (Illus. Dict.).

Anthracina (*an-thras-e'-na*). Melanotic carcinoma.

Anthracine, Anthracinus (*an'-thras-ēn, an-thras-i'-nus*). Coal black.

Anthracion (*an-thras'-e-on*) [*ἀνθράκιον*, a small carbuncle or ruby]. Contagious anthrax.

Anthracoid (*an'-thrak-oid*) [*anthrax; εἶδος*, likeness]. Resembling carbon, anthrax, or the gem carbuncle; anthraciform.

Anthracolemus, Anthracolœmus (*an-thra-kol-e'-mus*) [*ἄνθραξ*, a carbuncle; *λοιμός*, a plague]. Contagious anthrax.

Anthracolepis (*an-thrak-ol'-ep-is*) [*ἄνθρα*, coal; *λεπ* a scale]. Furnished with dark-colored scales.

Anthracoma (*an-thrak-o'-mah*) [*ἄνθραξ*]. A carbuncle.

Anthracopestis (*an-thrak-o-pes'-tis*) [*ἄνθραξ*, carbuncle; *pestis*, a plague]. Malignant anthrax.

Anthracophlyctis (*an-thrak-o-flik'-tis*) [*ἄνθραξ*, a carbuncle; *φλυκτίς*, a pustule]. Malignant anthrax.

Anthracosia, Anthracosis. (See Illus. Dict.) 2. malignant or corroding ulcer; a carbuncle.

Anthraflavon (*an-thra-flav'-on*) [*anthracene; flavus* yellow]. $C_{14}H_8O_4$. A substance acting as a dibasic acid, forming yellow needles subliming without fusion at temperatures above 300° C.

Anthragallol (*an-thra-gal'-ol*). $C_{14}H_8O_5$. A reaction product of benzoic, gallic, and sulfuric acids. It occurs as a dark-brown paste or orange-red acicular crystals soluble in alcohol; melts at 310° C. Sublimes at 200° C. It is used in dyeing. Syn., *Trioxyanthraquinone*.

Anthrahydroquinon (*an-thra-hi-dro-kwin-on'*). $C_{14}H_{10}O_2$. A yellow substance differing from anthraquinon in having two more atoms of hydrogen. Syn., *Oxanthranol*.

Anthranilate (*an-thran'-il-āt*) [*anthrax; anilin*]. salt of anthranilic acid.

Anthraphenol, Anthraphenon (*an-thra-fen'-ol, -on*). $C_{14}H_9OH$. A hydrate of anthracene. There are two isomeric varieties—*anthrol* and *anthranol*.

nthrapurpurin (*an-thra-pur'-pu-rin*) [*anthracene; purpurin*]. $C_{14}H_8O_5$. A derivative of anthraflavic acid and an isomer of purpurin and of flavopurpurin almost identical with the latter; it forms orange-colored needles. **A. Acetate, A. Diacetate,** a fine yellow, tasteless powder, freely soluble in glacial acetic acid and xylol, sparingly so in alcohol; insoluble in water; melts at 175° C. It is used as an aperient and laxative (it colors the urine red). Dose, 0.5 gm. (7½ gr.). Syn., *Purgatin: Purgatol.*

nthraquinolin (*an-thra-kwin'-ol-in*) [*anthrax*, coal; *quina*, bark]. $C_{17}H_{11}N$. A crystalline substance melting at 170° C., boiling at 446° C.; its solutions exhibit an intensely blue fluorescence.

nthrarufin (*an-thra-ru'-fin*) [*anthrax*, coal; *rufus*, red]. $C_{14}H_8O_4$. An isomer of alizarin obtained from β-anthraquinon sulfonic acid; melting-point 280° C.

nthrax. (See Illus. Dict.) Syn., *Splenic fever: Splenic apoplexy; Wool-sorters' disease; Siberian cattle plague; "Jaswa"; Horse sickness; Blackbain; Milzbrand; Plaga ignis; Acacanthrax; Mal vat; Mal de Chabert; Abscessus gangrænescens; Abscessus gangrænosus; Pyra; Loodiana plague* (India). **A., Abdominal, of Camels.** See *Diarrhea, Febrile Intermittent.* **A. abdominalis.** See *Anthrax* (2) (Illus. Dict.). **A., Apoplectic,** a very acute and virulent form of malignant anthrax coming on without premonitory symptoms and chiefly affecting horses and cattle. **A., Contagious,** malignant anthrax. See under *Anthrax* (Illus. Dict.). **A. of Fruit Trees,** a disease caused by *Bacillus butyricus.* See *Table of Bacteria* (Illus. Dict.). **A., Hemorrhoidal,** a contagious form affecting the rectum of animals and marked by evacuations of dark-colored blood. **A. malignus esthonicus,** a form of malignant anthrax said to be prevalent in Esthonia, Russia, during the summer and autumn. Syn., *Pustula esthoniæ; Pustula livida esthoniæ.* **A., Pulmonary,** gangrene of the lungs. **A., Sympathetic.** See *Black-leg* (Illus. Dict.).

nthraxiferous (*an-thraks-if'-ur-us*). See *Anthracoid.*

nthropepiphyte (*an-thro-pep'-e-fīt*) [ἄνθρωπος, a man; ἐπι, upon; φυτόν, a growth]. An exanthem or growth from the skin.

nthrophlogosis (*an-thro-flog-o'-sis*). See *Antritis* (Illus. Dict.).

nthropic, Anthropinic (*an-throp'-ik, an-thro-pin'-ik*) [ἄνθρωπος, man]. Relating to man; human.

nthropithecology (*an-thro-pith-e-kol'-o-je*) [ἄνθρωπος, man; πίθηκος, an ape; λόγος, science]. The doctrine of the evolution of man from the ape.

nthropochemistry (*an-thro-po-kem'-is-tre*) [ἄνθρωπος, man; χημεία, chemistry]. Chemistry as applied to the constituents of the human body.

nthropoform (*an-throp'-o-form*) [ἄνθρωπος, man; *forma*, form]. Man-like.

nthropoglot (*an-throp'-o-glot*) [ἄνθρωπος, man; γλῶσσα, tongue]. An animal having a tongue like a human being.

nthropognosy (*an-thro-pog'-no-se*). See *Anthropology* (Illus. Dict.).

nthropohistography (*an-thro-po-his-tog'-ra-fe*) [ἄνθρωπος, man; ἱστος, a web; γράειν, to write]. Human histology.

nthropolite, Anthropolith (*an-throp'-o-lit, -lith*) [ἄνθρωπος, man; λίθος, stone]. 1. A calculus in the human body. 2. A petrified human body.

nthropology. (See Illus. Dict.) **A., Somatic,** that treating of the physical qualities and conditions of man.

nthropomagnetism (*an-thro-po-mag'-net-izm*). See *Mesmerism* and *Hypnotism* (Illus. Dict.).

nthropomorphism (*an-thro-po-mor'-fizm*) [ἄνθρωπος, man; μορφή, form]. 1. Anthropomorphosis (*q. v.*). 2. The theory which ascribes human attributes to the Deity.

Anthropomorphography (*an-thro-po-mor-fog'-raf-e*) [ἄνθρωπος, man; μορφή, form; γράφειν, to write]. The anatomy of the human organs.

Anthropomorphology (*an-thro-po-mor-fol'-o-je*) [ἄνθρωπος, man; μορφή, form; λόγος, science]. 1. Human anatomy. 2. Anthropomorphosis.

Anthropomorphosis (*an-thro-po-mor-fo'-sis*) [ἄνθρωπος, man; μορφή, form]. The development of the human figure; a change into the shape of a man.

Anthroponomatic (*an-thro-po-no-mat'-ik*) [ἄνθρωπος, man; ὄνομα, a name]. See *Eponymic* (Illus. Dict.).

Anthroponomy (*an-thro-pon'-om-e*) [ἄνθρωπος, man; νόμος, a law]. The sum of what is known concerning the laws which control the formation and functions of the human body.

Anthroponym, Anthroponymic (*an'-thro-po-nim, an-thro-po-nim'-ik*) [ἄνθρωπος, man; ὄνομα, a name]. See *Eponym* (Illus. Dict.).

Anthropopathy (*an-thro-pop'-ath-e*) [ἄνθρωπος, man; πάθη, suffering]. Human capacity for suffering or feeling.

Anthysteric. (See Illus. Dict.) 2. A remedy against hysteria.

Antiabrin (*an-ti-a'-brin*) [*anti*, against; *abrin*]. Ehrlich's term for a hypothetic alexin in the blood of animals rendered immune against abrin.

Antiades (*an-ti'-ad-ēz*) [pl. of ἀντίας, tonsil]. The tonsils.

Antiagglutinin (*an-ti-ag-glu'-tin-in*). A substance opposed in action to an agglutinin (*q. v.*).

Antiagra, Antiagri (*an-te-ag'-rah, -re*) [ἀντίας, a tonsil; ἄγρα, a seizure]. See *Antiadoncus* (Illus. Dict.).

Antiarsenin (*an-te-ar'-sen-in*). The name given by Besredka to an antitoxin produced in rabbits as the result of the administration of arsenic.

Antiarthrin (*an-te-ar'-thrin*). The commercial name for a preparation said to consist chiefly of the extractives of horse chestnut, with salicin, saligenin, dextrose, and hydrochloric acid. It is said to be a specific for gout. Dose, 1 gm.

Antiautolysin (*an-te-aw-to-li'-sin*) [ἀντί, against; αὐτός, self; λίσις, solution]. A substance developed in the blood having the power to restrain the solvent action of autolysin.

Antibacillare (*an-te-bas'-il-ar-e*). A mixture said to consist of creasote, balsam of tolu, glycerin, codein, and sodium arsenate. It is used in tuberculosis.

Antibacterial. (See Illus. Dict.) 2. Opposed to or restraining bacterial action.

Antibacterian (*an-te-bak-te'-re-an*). See *Antibacterial.*

Antibacterin (*an-te-bak'-ter-in*). 1. A pale yellow fluid said to consist of boric acid, 6.25 parts; iron chlorid solution, 1.5 parts; ether chlorate, to make 100 parts. It is used by inhalation in tuberculosis, beginning with 150 gr. daily and increasing to 10 times that quantity. 2. Crude aluminium sulfate mixed with soot.

Antibodies (*an-te-bod'-ez*). Characteristic constituents of the blood and fluids of the immune animal; substances antagonistic to the harmful action of bacteria; *e. g.*, antitoxins, agglutinins, precipitins, etc. They cause the envelope surrounding the bacterial bodies to swell, and on this account they are called by Gruber *glabraficins.* This swelling of the bacteria renders them amenable to the action of the alexins, through which their death ensues. Syn., *Antikörper.* Cf. *Antitoxin; Antihematin.*

Antibrule (*an'-ti-brūl*). A proprietary analgesic, antiseptic, and keratoplastic.

Anticachectic. (See Illus. Dict.) 2. A remedial agent against cachexia.

Anticacochymic (*an-te-kak-o-kim'-ik*) [*ἀντί*, against; *κακός*, bad; *χυμός*, juice]. Anticachectic.

Anticancrin (*an-te-kang'-krin*). See *Caneroin* (Illus. Dict.).

Anticarnivorous (*an-te-kar-niv'-or-us*) [*anti*, against; *caro*, flesh; *vorare*, to devour]. Opposed to flesh-eating; vegetarian.

Anticausodic (*an-te-kaw-sod'-dik*). See *Anticausòtic* (Illus. Dict.).

Anticausticon (*an-te-kaws'-tik-on*) [*ἀντί*, against; *καυστικός*, burning]. A preparation of soluble water glass.

Antichlor (*an'-te-klor*). 1. Sodium thiosulfate. 2. Potassium sulfite.

Antichlorin (*an-te-klor'-in*). A preparation used in anemia and said to consist of glucose, basic bismuth formate, and sodium bicarbonate.

Antichloristic (*an-te-klor-is'-tik*) [*anti; chlorin*]. Capable of neutralizing chlorin.

Anticipation (*an-tis-ip-a'-shun*). See *Prolepsis* (Illus. Dict.).

Anticnesmatic (*an-te-nes-mat'-ik*) [*ἀντί*, against; *κνησμός*, itching]. 1. Efficient against itching. 2. A remedy for itching.

Anticoagulant (*an-te-ko-ag'-u-lant*) [*anti; coagulum*]. 1. Opposed to or preventative of coagulation. 2. A substance preventing coagulation.

Anticoagulin (*an-te-ko-ag'-u-lin*). A substance formed in the body antagonistic in its action to that of a coagulin (*q. v.*).

Anticobrachialis (*an-te-ko-bra'-ki-a-lis*). See *Brachialis anticus, Table of Muscles* (Illus. Dict.).

Anticomma (*an-te-kom'-ah*) [*ἀντί*, against; *κόμμα*, impression of a coin]. See *Anticope.*

Anticomplement (*an-te-kom'-ple-ment*) [*anti; complement*]. A substance held by Ehrlich in his lateral-chain theory to enter into the composition of an antihemolysin (*q. v.*). Cf. *Antiimmune Body* under *Body.*

Anticontagionism (*an-te-kon-ta'-je-on-izm*) [*anti*, against; *contagiosus*, contagious]. Unbelief in contagion.

Anticope (*an-tik'-op-e*) [*ἀντικοπή*, a beating back]. Resonance; reaction; repercussion; counterstroke.

Anticoposcope, Anticoptoscope (*an-te-kop'-os-kōp, an-te-kop'-tos-kōp*) [*ἀντικοπή*, a beating back; *σκοπεῖν*, to examine]. A plessimeter.

Anticornutin (*an-te-kor-nu'-tin*). 1. Topasol G. II, an antiseptic combination of zinc and copper ferrosulfates. 2. Topasol G. IV, a combination of iron, zinc, and calcium sulfate.

Anticoroin (*an-te-ko'-ro-in*). Topasol G. V, an antiseptic combination of zinc, iron, and magnesium sulfates.

Anticrisis (*an-te-kri'-sis*) [*anti; crisis*]. An agent or phenomenon preventing a crisis.

Anticteric (*ant-ik'-tur-ik*) [*anti; icterus*]. 1. Efficient against jaundice. 2. An efficient agent against jaundice.

Anticytolysin (*an-te-si-to-li'-sin*). See *Anticytotoxin.*

Anticytotoxin (*an-te-si-to-toks'-in*). A substance antagonistic in its action to a cytotoxin (*q. v.*).

Anticytoxin (*an-te-si-toks'-in*). See *Anticytotoxin.*

Antidartrous (*an-te-dar'-trus*) [*anti; dartre*]. Efficient against the hypothetic dartrous diathesis of French writers.

Antideixis (*an-te-diks'-is*) [*ἀντί*, against; *δεῖξις*, an exhibition]. A contraindication.

Antidenutritive (*an-te-de-nu'-tre-tiv*) [*anti*, against; *de*, from; *nutrire*, to nourish]. Preventing or opposed to a waste of tissue.

Antideperditive (*an-te-de-pur'-dit-iv*). See *Antidenutritive.*

Antidesma (*an-te-dez'-mah*) [*ἀντί*, equal to; *δέσμη*, a bond]. A genus of plants of the order *Euphorbiaceæ.* **A. alexiteria,** L., an evergreen tree native in Malabar, but growing in the Antilles; the root-bark is used in dysentery and the leaves in decoction for snakebites. **A. bunius,** Spreng, a species of India, has a fruit used as a refrigerant, and the leaves are diaphoretic. **A. zeylanicum,** L., a tree of Ceylon, used as a specific for the bite of the cobra.

Antidiabetic (*an-te-di-ab-et'-ik*) [*anti; diabetes*]. 1. Efficient against diabetes. 2. A remedy for diabetes.

Antidiabeticum (*an-te-di-a-bet'-ik-um*). A preparation recommended for diabetes, said to consist of wheat starch, sugar of milk, sulfur, powdered senna leaves, and fennel. Syn., *Glycosolveol; Glycosolvol.*

Antidiabetin (*an-te-di-ab-e'-tin*). A mixture of saccharin and mannit, used instead of sugar by diabetics.

Antidiastole (*an-te-di-as'-to-le*) [*ἀντιδιαστολή*, distinction]. Differential diagnosis.

Antidiphtherin (*an-te-dif'-thur-in*). A solution containing cultures of *Bacillus diphtheriæ* with 0.2 % of orthocresol and some glycerin. It is used externally and subcutaneously in diphtheria. **A., Klebs',** a preparation obtained by precipitation with alcohol from the culture-fluid of *Bacillus diphtheriæ* after removal of the bacilli.

Antidiphtheriticon (*an-te-dif-ther-it'-ik-on*). A diphtheria remedy said to consist of alcohol 90 parts; oil of birch, 5 parts; oil of beech, 3 parts; potassium carbonate, 1 part; potassium sulfid, 5 parts.

Antidiscratic (*an-te-dis-krat'-ik*). See *Antidyscratic* (Illus. Dict.).

Antidotary (*an-te-do'-tar-e*) [*antidotarium*]. A collection of drugs; dispensary; a dispensatory; a person who dispenses drugs.

Antidotism (*an-tid'-ot-izm*) [*ἀντίδοτος*, given in exchange]. Therapeutic or physiologic antagonism; the possession of antidotal properties; the act of giving antidotes.

Antidromal, Antidromous (*an-tid'-ro-mal, -mus*) [*ἀντί*, against; *δραμεῖν*, to run]. Running in a contrary direction; applied in botany to a spiral arrangement running in the opposite direction from another.

Antidyne, Antidynous (*an'-ti-dīn, an-tid'-in-us*) [*ἀντί*, against; *ὀδύνη*, pain]. Anodyne.

Antidysentericum (*an-te-dis-en-ter'-ik-um*). A proprietary remedy for dysentery and chronic diarrhea, said to consist of myrobalans, pelletierin, extract of rose, and gum arabic.

Antienzym (*an-te-en'-zīm*) [*anti; enzyme*]. A substance found by Frenzel to be secreted by *Gregarinæ* which enables them to neutralize the action of the digestive enzymes of their host.

Antiephialtic (*an-ti-ef-e-al'-tik*). See *Antephialtic* (Illus. Dict.).

Antiepilectic (*an-te-ep-il-ek'-tik*). See *Antepileptic* (Illus. Dict.).

Antierotic (*an-te-er-ot'-ik*). See *Anterotic* (Illus. Dict.).

Antifarcinous (*an-te-far'-sin-us*). Efficient against farcy.

Antifermentative (*an-te-fur-ment'-at-iv*) [*anti*, against; *fermentum*, leaven]. 1. Arresting fermentation. 2. An agent which arrests fermentation.

Antiflatulent (*an-te-flat'-u-lent*). 1. Efficient against flatulence. 2. A remedy for flatulence.

Antifungin (*an-te-fun'-jin*). Magnesium borate.

Antigalactin (*an-te-gal-ak'-tin*). See *Antigalactic* 2 (Illus. Dict.).

ntigermin (*an-te-jur'-min*). A compound of copper and an acid, forming a yellowish-green, tenacious mass soluble in 200 parts of water. It is said to be disinfectant, deodorant, and bactericide.

ntigerminal (*an-te-jur'-min-al*) [*anti*, against; *germen*, germ]. Relating to the pole of the ovum opposed to the germinal pole.

ntihelmintic, Antihelminthic. See *Anthelmintic* (Illus. Dict.).

ntihemagglutinin (*an-te-hem-ag-glu'-tin-in*). A substance opposed in action to the hemagglutinins (*q. v.*).

ntihemolysin (*an-te-hem-o-li'-sin*) [*ἀντί*, against; *αἷμα*, blood; *λύσις*, solution]. A complex substance developed in the blood-serum as the result of inoculations with hemolysins. It is composed of anticomplements and antiimmune bodies.

ntihemolytic (*an-te-hem-o-lit'-ik*). Relating to an antihemolysin; not capable of dissolving blood-corpuscles.

ntihemoptic, Antihemoptyc. See *Anthemoptyc* (Illus. Dict.).

ntihemorrhagic (*an-te-hem-or-aj'-ik*). See *Hemostatic* (Illus. Dict.).

ntihemorrhoidal (*an-te-hem-or-oid'-al*). 1. Effective against hemorrhoids. 2. A remedy for hemorrhoids.

ntihumoralist (*an-te-hu'-mor-al-ist*) [*anti*, against; *humor*, moisture]. One who considers the life of the organism as the sum of the life of all the cells making up its various organs.

ntihydriasis (*an-te-hi-dri-a'-sis*). See *Anhydriasis* (Illus. Dict.).

ntihypnotic. See *Anhypnotic* (Illus. Dict.).

ntihypo (*an-te-hi'-po*). See *Potassium Percarbonate.*

ntihypochondriac. See *Anhypochondriac* (Illus. Dict.).

ntiimmune Bodies. See under *Body.*

ntikathode (*an-te-kath'-ōd*) [*anti; kathode*]. A piece of platinum foil so placed in a Crookes tube as to intercept the kathode rays; being thus rendered fluorescent, it becomes a source of x-rays.

ntilabium (*an-te-la'-be-um*). See *Antelabium* (Illus. Dict.).

ntilactaceous, Antilactescent, Antilactic (*an-te-lak-ta'-shus, -tes'-ent, -tik*). See *Antigalactic* (Illus. Dict.).

ntilactoserum (*an-te-lak-to-se'-rum*). A substance antagonistic in its action to lactoserum (*q. v.*).

ntilepsis. (See Illus. Dict.) 2. A taking root. 3. A taking effect. 4. A seizure; an attack. 5. The support of a bandage.

ntileptic. (See Illus. Dict.) 2. Supporting, assisting.

ntilethargic (*an-te-leth'-ar-jik*). 1. Arresting lethargy; hindering sleep. 2. An agent efficacious against lethargy.

ntilithemic (*an-te-lith-e'-mik*) [*anti; lithemia*]. Correcting lithemia.

ntilithotripsist (*an-te-lith-ot'-ro-pist*) [*ἀντί*, against; *λίθος*, a stone; *τρίβειν*, to rub]. A person opposed to the operation of lithotripsy.

ntilypyrin (*an'-te-le-pi'-rin*). An antipyretic and analgesic substance obtained by heating acetanilid, 1 part, with antipyrin, 2 parts. Dose, 0.462–0.594 gm. (7–8 gr.).

ntilysin (*an-te-li'-sin*) [*anti*, against; *λύσις*, a loosing]. A substance opposed to the activity of a lysin.

ntilysis (*an-til'-is-is*). The condition due to the activity of antilysins.

ntilytic. (See Illus. Dict.) 2. Relating to the action of an antilysin.

ntimellin (*an-te-mel'-in*). A remedy employed in diabetes purporting to be a glucosid separated from the fruit of *Eugenia jambolana*, L.

Antimercurialist (*an-te-mur-ku'-re-al-ist*) [*anti; mercury*]. One opposed to the therapeutic use of mercury.

Antimere. (See Illus. Dict.) 2. A homotype.

Antimerology (*an-te-mer'-ol-o-je*) [*ἀντί*, against; *μέρος*, a part; *λόγος*, science]. The science of homotypic parts.

Antimetropia (*an-te-met-ro'-pe-ah*) [*anti; metropia*]. A condition characterized by the existence of myopia in one eye and hyperopia in the other.

Antimicrobic (*an-te-mi-kro'-bik*) [*anti; microbe*]. Arresting the development of microbes; antibacterial.

Antimigrain (*an-te-mig'-rān*). A proprietary preparation said to consist of caffein, antipyrin, and sugar. Dose, 1.5 gm. Syn., *Antihemicranin.*

Antimonate (*an'-te-mon-āt*). A salt of antimonic acid; a combination of antimony pentoxid with the oxid of another radicle.

Antimonid (*an'-te-mo-nid*). Any binary combination of antimony.

Antimonite (*an'-te-mon-īt*). A salt of antimonious acid.

Antimoniureted (*an-te-mo'-ni-u-ret-ed*). Containing antimony.

Antimonosoantimonate (*an-te-mon-o-so-an'-tim-on-āt*). A combination of an antimonate and an antimonite.

Antimony (*an'-ti-mo-ne*). See *Antimonium* (Illus. Dict.). **A. Alginoid,** a white powder containing 4.5% of antimony obtained by precipitating antimony chlorid with sodium alginate. **A. Arsenate,** a heavy white powder; it is used in syphilitic affections of the skin. Dose, $\frac{1}{50}$ gr. (0.0013 gm.) 4 times daily. **A. Arsenite,** a fine white powder; it is used in skin diseases. **A., Black.** See *Antimonium Sulphid* (Illus. Dict.). **A. Bromid,** $SbBr_3$, a deliquescent crystalline mass, soluble in carbon disulfid: melts at 90°–94° C. **A. Chlorid, Antimonic,** $SbCl_5$, a yellowish liquid with foul smell, which solidifies by absorption of moisture; sp. gr. 2.346 at 20° C.; soluble in water; melts at —6° C. Syn., *A. pentachlorid; A. perchlorid.* **A. Chlorid, Antimonous.** See *A. Chlorid* (Illus. Dict.). **A. Chlorid, Basic.** See *A. Oxychlorid.* **A., Diaphoretic.** See *Potassium Antimonate.* **A. Fluorid,** SbF_3, white crystals soluble in water. **A.-glass,** a dark vitreous mass made by fusing crude antimony. Syn., *Antimonial glass.* **A. Iodid,** SbI_3, red crystals, decomposed by water, soluble in carbon disulfid; melts at 167° C. It is alterative. Dose, ¼–1 gr. (0.016–0.065 gm.), in pills. **A. nitrate,** a compound of antimony and nitric acid formed from antimony trioxid by action of the acid. Syn., *Nitras stibicus.* **A. Oxalate,** $Sb_2O(C_2O_4)_2$, a white powder. **A. Oxid, Antimonic,** Sb_2O_5, white or yellow powder, slowly soluble in hydrochloric acid; reduced to tetroxid at 300° C. **A. Oxid, Antimonous.** See *Antimonium Oxid* (Illus. Dict.). **A. Oxyiodid,** $(SbOI)_2Sb_2O_3$, light yellow crystals. **A. Oxysulfid.** See *Antimonium sulphuratum* (Illus. Dict.). **A. Pentachlorid, A. Perchlorid.** See *A. Chlorid* (Illus. Dict.). **A. Pentasulfid, A. Persulfid.** See *A. Sulfid, Golden.* **A. Pentoxid.** See *A. Oxid, Antimonic.* **A. and Potassium Oxalate,** $SbK_3(C_2O_4)_3 + 6H_2G$, colorless crystals. **A., Red.** See *Antimonium sulphuratum* (Illus. Dict.). **A. Sulfate,** $Sb_2(SO_4)_3$, white powder or long, shining, acicular crystals. **A. Sulfid, Golden,** Sb_2S_5, fine odorless, orange yellow powder; soluble in alkaline solutions. It is alterative, diaphoretic, emetic, and expectorant. Dose, ⅙–1½ gr. (0.011–0.097 gm.) several times daily. **A. Sulfid, Red.** See *Antimonium sulphuratum* (Illus. Dict.). **A. Sulfid, Vitreous.** See *A.-glass.* **A., Tartarated, or Tartarized.** See *Antimonium et Potass tartras.*

(Illus. Dict.). **A. Tartrate,** $(SbO)_2C_4H_4O_6 + H_2O$, white crystalline powder. Used internally as a substitute for arsenic in affections of the skin. Dose, $\frac{1}{10}$ gr. (0.0065 gm.) 3 to 5 times daily. **A. Tetrasulfid,** Sb_2S_4, an orange-colored powder obtained from antimony trichlorid by precipitation with sulfureted hydrogen. **A. Tribromid.** See *A. Bromid.* **A. Trichlorid.** See *Antimonium Chlorid* (Illus. Dict.). **A. Triiodid.** See *A. Iodid.* **A. Trioxid.** See *Antimonium Oxid* (Illus. Dict.). **A. Trisulfid.** See *Antimonium Sulphid* (Illus. Dict.). **A., Vegetable,** boneset. See *Eupatorium perfoliatum* (Illus. Dict.). **A., Vitreous.** See *A.-glass.* **A., White Oxid of.** See *Potassium Antimonate.*

Antimonyl (*an'-tim-on-il*). SbO. The univalent radicle of antimonous compounds.

Antimorphin (*an-te-mor'-fin*). A name given by Fromme to a compound containing salicylic acid, sulfuric acid, glycerin, and morphin in the primary state, not in modified form, as dionin, heroin, etc. It is recommended as a remedy for the cure of the morphin habit.

Antimucorin (*an-te-mu'-kor-in*). Topasol G. III, an antiseptic preparation of iron and zinc sulfate.

Antimycetic (*an-te-mi-se'-tik*) [*ἀντί*, against; *μύκης*, fungus]. 1. See *Actinomycotic* (Illus. Dict.). 2. A fungicide.

Antimydriatic (*an-te-mi-dri-at'-ik*) [*ἀντί*, against; *μυδρίασις*, mydriasis]. 1. Opposed to or arresting dilation of the pupils. 2. A drug efficacious against mydriasis.

Antinausea (*an-te-naw'-se-ah*). A remedy for seasickness, said to consist of cocain and antipyrin.

Antineuritic (*an-te-nu-rit'-ik*). 1. Efficient in neuritis. 2. A remedy against neuritis.

Antineuropathic (*an-te-nu-ro-path'-ik*) [*ἀντί*, against; *νεῦρον*, nerve; *πάθος*, a disease]. 1. Efficient against nervous disorders. 2. A remedy efficient in nervous diseases.

Antinonnin (*an-te-non'-in*) [*anti*, against; *Nounenraupe*, the German name for the caterpillar, *Liparis monarch*]. Sodium orthodinitrocresylate; an odorless, nonvolatile paste, antiseptic and bactericidal, first introduced for the destruction of caterpillars. It is used as a wood preservative and insecticide.

Antinosin (*an-te-no'-zin*) [*ἀντί*, against; *νόσος*, disease]. Tetraiodophenolphthalein, the soluble sodium salt of nosophen; it is a greenish-blue antiseptic powder, used in powder or in solutions of 1 : 1000, for irrigations or gargle.

Antiobesic (*an-te-o-be'-sik*) [*anti; obesity*]. 1. Efficient against corpulence. 2. A remedy for corpulence.

Antiopathic (*an-te-op'-ath-ik*). See *Antipathic* (Illus. Dict.).

Antiophthalmic. See *Antophthalmic* (Illus. Dict.).

Antiopiumist (*an-te-o'-pe-um-ist*). One disapproving of the use of opium.

Antiotomia, Antiotomy (*an-te-o-to'-me-ah, an-te-ot'-om-e*) [*ἀντιάς*, a tonsil; *τέμνειν*, to cut]. Excision of the tonsils.

Antipaludean (*an-te-pal-u'-de-an*) [*anti*, against; *palus*, a marsh]. Efficient against malarial diseases.

Antiparalytic (*an-te-par-al-it'-ik*) [*anti; paralysis*]. 1. Efficient against paralysis. An agent or remedy efficacious in paralysis.

Antiparastata (*an-te-par-as'-tat-ah*) [*ἀντί*, against; *παραστάτης*, testicle]. Cowper's glands.

Antipathic. (See Illus. Dict.) 2. Antagonistic. 3. Anodyne.

Antipathy. (See Illus. Dict.) 2. Morbid disgust or repugnance for particular objects. 3. Allopathy (*q. v.*). 4. An object exciting morbid dislike or aversion. 5. Chemic incompatibility. **A., Insensile,** morbid repugnance excited by the presence of some object which was not perceived by any of the senses. **A., Sensile,** morbid aversion aroused by some appreciable quality of the exciting object.

Antipediculous (*an-te-ped-ik'-u-lus*) [*anti*, against; *pediculus*, louse]. Efficient against lice.

Antiperistasis (*an-te-per-is-ta'-sis*) [*ἀντί*, against; *περίστασις*, a crowd standing round]. 1. The supposed accumulation of the fluids and forces internally in the body as effected by cold or other agent. 2. Opposition of qualities or the intensification of one property by an opposing property or quality.

Antiperonosporin (*an-te-per-o-nos'-por-in*). Topasol G. I, an antiseptic preparation of zinc and copper sulfates.

Antiphlogistic. (See Illus. Dict.) 3. Applied to the pneumatic theory of Lavoisier as having supplanted Stahl's phlogistic theory.

Antiphlogistin (*an-te-flo-jis'-tin*). A paste said to consist of kaolin, glycerin, and antiseptics; it is an efficient substitute for poultices.

Antiphlogosis (*an-te-flo-go'-sis*) [*ἀντί*, against; *φλόγωσις*, inflammatory heat]. 1. The reduction of inflammation. 2. Inflammation purposely excited to counteract other inflammation.

Antiphthiriac, Antiphtheiriac (*an-te-thi'-re-ak*) [*ἀντί*, against; *φθείρ*, a louse]. 1. Efficient against lice or the condition caused by them. 2. An agent effective against lice.

Antiphthisic (*an-te-tiz'-ik*) [*ἀντί*, against; *φθίσις*, a wasting]. Efficient against phthisis. An agent checking phthisis.

Antiphthisin (*an-te-tiz'-in*). Dilute tuberculin, made from the slight residue after precipitation with sodium bismuth iodid.

Antiphysiologic (*an-te-fiz-e-o-loj'-ik*) [*anti; physiology*]. Opposed to physiology.

Antiphytosin (*an-te fi-to'-zin*). A preparation resembling tuberculin.

Antiplasis (*an-te-pla'-sis*). See *Antiplasm.*

Antiplasm (*an'-te-plazm*) [*ἀντί*, equal to; *πλάσμα*, a thing molded]. 1. Formation according to a pattern. 2. Remolding into the normal form.

Antiplastic (*an-te-plas'-tik*). (See Illus. Dict.) 3. Pertaining to antiplasm. 4. Preventing or checking plastic exudation.

Antipodal (*an-tip'-od-al*) [*ἀντί*, opposite; *πούς*, a foot]. Situated directly opposite. **A. Cone,** the cone of astral rays opposite to the spindle-fibers. [v. Beneden.

Antiprecipitin (*an-te-pre-sip'-it-in*). A substance antagonistic to a precipitin (*q. v.*).

Antiprostatitis (*an-te-pros-tat-i'-tis*) [*ἀντί*, before *προστάτα*, the prostate]. Inflammation of Cowper's glands. Syn., *Antiparastatitis.*

Antipurulent (*an-te-pur'-u-lent*). See *Antipyic* (Illus. Dict.).

Antipyonin (*an-te-pi'-on-in*). Sodium tetraborate.

Antipyractic (*an-te-pi-rak'-tik*) [*ἀντί*, against; *πυρέτειν*, to burn]. Incombustible.

Antipyrin. (See Illus. Dict.) **A. Acetylsalicylate.** See *Acetopyrin.* **A. Amygdalate.** See *A. Mandelate.* **A. Bichloral,** a trituration product of 0.4 part of antipyrin with 165.5 parts of chloral hydrate; a hypnotic and analgesic. Maximum dose, 3 gm. (45 gr.). Syn., *Dichloralantipyrin.* **A. Carbolate,** an oily, colorless, odorless fluid, insoluble in cold water, prepared from equal parts of antipyrin and phenol. Syn., *Phenopyrin.* **A. Iodid.** See *Iodopyrin* (Illus. Dict.). **A. Mandelate,** a crystalline compound of antipyrin and amygdalic acid, used as a remedy for whooping-cough. Dose, $3\frac{1}{2}$–8 gr. Syn., *Tussol, Phenylglycollate.* **A. metaoxybenzoate,** a liquid o

tained from a combination of a concentrated alcoholic solution of metaoxybenzoic acid with an aqueous solution of antipyrin. **A.paraoxybenzoate,** a crystalline substance formed by mixing a concentrated alcoholic solution of paraoxybenzoic acid with an aqueous solution of antipyrin; soluble in 130 parts of cold water, slightly soluble in ether, readily soluble in alcohol and boiling water. **A. Salicylate.** See *Salipyrin* (Illus. Dict.). **A.salol,** a brown liquid obtained by fusing together equal parts of salol and antipyrin. It is recommended as an antiseptic and as a hemostatic in uterine hemorrhage, applied by means of cotton tampons. **A. Tannate,** a yellow, flaky, nearly tasteless powder, having a luster like mother-of-pearl; soluble in alcohol and readily decomposed by mineral acids; prepared from antipyrin and tannin, and said to contain 37% of the former and 63% of the latter. Dose, 1.5–3 gm. (24–45 gr.). **A. Tartrate,** $(SbO)_2C_4H_4O_6$, white powder. Dose, $\frac{1}{10}$ gr. 3 times daily.

ntipyrinomania (*an-te-pi-rin-o-ma'-ne-ah*) [*ἀντί*, against; *πυρετός*, fever; *μανία*, madness]. A condition similar to morphinism, due to excessive use of antipyrin. It is marked by nervous excitement.

ntirennene (*an-te-ren'-ēn*). Morgenroth's name for the principle which appears in the blood of an animal following the introduction of rennet. It has the power of impeding the action of rennet on milk.

ntirheumaticum (*an-te-ru-mat'-ik-um*). A compound of sodium salicylate and methylene-blue. It occurs in blue prismatic crystals, soluble in water and alcohol. Dose, 1–1½ gr. (0.06–0.09 gm.).

ntirheumatin (*an-te-ru'-mat-in*). An ointment used in treatment of rheumatism, and said to contain fluorphenetol, 1 part; difluordiphenyl, 4 parts; vaselin, 10 parts; wool-fat, 85 parts.

ntiricin (*an-te-ris'-in*). The antibody to ricin. Its action is inhibited by cold and accelerated by heat.

ntirrheoscope (*an-te-re'-o-skōp*) [*ἀντιῤῥοια*, a flowing back; *σκοπέω*, to view]. J. J. Oppel's device for observing the manifestations of visual vertigo.

ntirubeolous (*an-te-ru-bē'-o-lus*) [*anti*; *rubeola*]. Efficient against measles.

ntisbestic (*an-tis-bes'-tik*) [*ἀντί*, against; *σβέσις*, extinction]. Augmenting strength.

ntiscabin (*an-te-ska'-bin*). A preparation said to consist of β-naphthol, balsam of Peru, soap, glycerin, boric acid, and alcohol. It is used in the treatment of scabies.

ntiscabious (*an-te-ska'-be-us*) [*anti*, against; *scabies*]. Effective against the itch.

ntiscarlatinal (*an-te-skar-lat'-in-al*) [*anti*, against; *scarlatina*]. Efficient against scarlet fever.

ntiscirrhous (*an-te-skir'-us*). Efficient against scirrhus.

ntisensitizer (*an-te-sen'-sit-i-zur*). In Ehrlich's side-chain theory, a substance antagonistic in its action to that of the intermediary body or sensitizer.

ntiseptin. (See Illus. Dict.) 2. A proprietary preparation said to consist of sodium or potassium silicate, 2 parts; and a 0.1% solution of mercuric chlorid, 1 part.

ntisiideric (*an-te-sid-er'-ik*) [*ἀντί*, against; *σίδερος*, iron]. 1. Incompatible with iron, and counteracting its effects; impoverishing the blood. 2. An agent or drug opposed to the action of iron; one which impoverishes the blood.

ntispasmin (*an-te-spaz'-min*). $C_{23}H_{26}NO_3Na - 3Na-C_7H_5O_3$. A compound of 1 molecule of narcein sodium united with 3 molecules of sodium salicylate, occurring as a white, slightly hygroscopic powder containing about 50% of narcein. It is sedative and hypnotic. Dose, $\frac{1}{6}$–1½ gr. (0.01–0.1 gm.).

Antispermotoxin (*an-te-spur-mo-toks'-in*). A substance opposed in its action to spermotoxin.

Antispirochetic (*an-te-spi-ro-ke'-tik*) [*anti*, against; *Spirochæte*, a genus of bacteria]. 1. Arresting the action of bacteria of the genus *Spirochæte*. 2. An agent having this power.

Antistaphylolysin (*an-te-staf-il-o-li'-sin*) [*ἀντί*, against; *Staphylococcus*, a genus of bacteria; *λύσις*, a loosing]. A substance antagonistic to the toxic products of staphylococci, contained in healthy blood-serum.

Antistathmesis (*an-ti-stath-me'-sis*) [*ἀντιστάθμησις*, compensation]. See *Antisecosis* (Illus. Dict.).

Antistatic (*an-tis-tat'-ik*) [*ἀντιστατικός*, fit for resisting]. Antagonistic.

Antisternum (*an-te-stur'-num*) [*ἀντίστερνον*]. The part of the back opposite the breast.

Antistreptococcic (*an-te-strep-to-kok'-sik*) [*anti*, against; *Streptococcus*, a genus of bacteria]. Antagonistic to or preventing the action of streptococci.

Antistreptococcin (*an-te-strep-to-kok'-sin*). 1. The streptococcus-antitoxin. 2. A serum used in erysipelas.

Antisudorin (*an-te-sud'-dor-in*) [*anti*, against; *sudor*, sweat]. A proprietary mixture said to consist of boric, citric, and salicylic acids, borax, glycerin, alcohol, distilled water, and several ethers; it is used to diminish sweating of the feet.

Antitetraizin (*an-te-tet-ra'-iz-in*). A derivative of quinin used in neuralgia. Dose, 3–4 gr. (0.2–0.25 gm.).

Antitonic (*an-te-ton'-ik*). Counteracting the effects of a tonic. A drug having opposite effects to those of a tonic.

Antitoxin. (See Illus. Dict.) 2. The commercial name for a fine white powder said to be a coal-tar product and used as an analgesic and antipyretic. Dose, 10–15 gr. from 1 to 4 hours. **A., Artificial,** an antitoxin prepared by passing an electric current through a toxic bouillon. **A., Diphtheria,** one prepared from the blood-serum of an animal inoculated with *Bacillus diphtheriæ*. **A., Tetanus,** one prepared from the blood-serum of an animal inoculated with *Bacillus tetani*. **A. Unit,** 10 times the amount of serum requisite to neutralize completely 10 times the minimum fatal dose of diphtheria toxin in a half-grown guinea-pig; or the amount of antitoxin which, when inoculated into a guinea-pig of 250 gm. weight, will neutralize 100 times the minimum fatal dose of toxin of standard weight.

Antitrismus (*an-te-tris'-mus*) [*ἀντί*, against; *τρισμός*, a creaking]. A condition in which the open mouth cannot be closed.

Antitussin (*an-te-tus'-in*) [*anti*, against; *tussis*, cough]. An ointment consisting of difluordiphenyl $(C_6H_4F)_2$, 5 parts; vaselin, 10 parts, and lanolin, 85 parts; used as an application in catarrh.

Antitype. (See Illus. Dict.) 2. A form not in conformity with a type.

Antityphoid (*an-te-ti'-foid*). Opposed to typhoid. **A. Extract,** a preparation obtained by injecting repeatedly cultures of typhoid bacilli of increasing virulence into the peritoneal cavity of rabbits. The animals are killed as soon as they do not react to poisonous doses, and extracts are made of the thymus, spleen, bone-marrow, brain, and spinal cord, by soaking these organs in a solution of salt, glycerin, and alcohol, with the addition of some pepsin. The filtrate is injected in typhoid cases.

Antitypic (*an-te-tip'-ik*) [*ἀντί*, against; *τύπος*, a type]. 1. Efficient against the periodic recurrence of a paroxysm or fever. 2. Irregular; not conformable to a type. 3. An antiperiodic.

Antiuratic (*an-tē-u-rat'-ik*). 1. Efficacious against the deposition of urates. 2. An agent that prevents the deposit of urates.

Antivaccinationist (*an-te-vak-sin-ā'-shun-ist*). See *Antivaccinist.*

Antivaccinism (*an-te-vak'-sin-izm*). The belief that vaccination is useless as a preventative of smallpox, and that it is harmful in itself.

Antivaccinist (*an-te-vak'-sin-ist*). One who repudiates the efficacy of vaccination. Syn., *Antivaccinationist.*

Antivariolic (*an-te-var-e-ol'-ik*) [*anti*, against; *variola*]. Efficient against smallpox.

Antivenen, Antivenene. See *Antivenin.*

Antivenin (*an-te-ven'-in*) [*anti*, against; *venenum*, poison]. A serum perfected by Calmette by injecting cobra venom mixed with solutions of calcium hypochlorite into horses. It is used in doses of 10 to 20 c.c. in bites of venomous serpents. Syn., *Antivenene.*

Antivenomous (*an te-ven'-om-us*). Antagonistic to venom; a term applied to immunized animals, to certain serums, and to antitoxins. Cf. *Antivenin.*

Antivermicular (*an-te-vur-mik'-u-lar*) [*anti*, against; *vermis*, a worm]. Anthelmintic.

Antiverminous (*an-te-vur'-min-us*). See *Antivermicular.*

Antivirulent (*an-te-vir'-u-lent*) [*ante*, against; *virus*, a poison]. Effective against viruses.

Antivivisectionist (*an-te-viv-e-sek'-shun-ist*). A person opposed to vivisection.

Antocular (*ant-ok'-u-lar*) [*ante*, before; *oculus*, the eye]. Situated in front of the eye.

Antorbital (*ant-orb'-it-al*) [*ante*, before; *orbita*, the orbit]. Located in front of the orbit.

Antrocele (*an'-tro-sēl*). See *Antracele* (Illus. Dict.).

Antronalgia (*an-tron-al'-je-ah*) [ἄντρον, cave; ἄλγος, pain]. Pain in the antrum.

Antrophore (*an'-tro-for*). Cacao-butter bougies, containing tannin, 5%; resorcin, 5%; thallin sulfate, 2% to 5%; zinc sulfate, 0.5%.

Antrophose (*an'-tro-fōz*) [ἄντρον, a cavity; φῶς, light]. A phose having its origin in the central ocular mechanism.

Antrorrhonchus (*an-tror-rong'-kus*) [ἄντρον, a cave; ῥόγχος, a snoring]. See *Rale, Cavernous* (Illus. Dict.).

Antroscope (*an'-tro-skōp*) [ἄντρον, cave; σκοπεῖν, to look]. An instrument for examining the maxillary sinus.

Antroscopy (*an-tros'-ko-pe*). Inspection of the antrum by means of an antroscope.

Antrotome (*an'-tro-tōm*) [ἄντρον, a cavity; τέμνειν, to cut]. An instrument for the performance of mastoid antrotomy.

Antrotomy (*an-trot'-o-me*). Incision of an antrum.

Antrotympanitis (*an-tro-tim-pan-ī'-tis*) [ἄντρον, a cave; τύμπανον, a drum]. Chronic purulent otitis media.

Antroversion (*an-tro-vur'-shun*). See *Anteversion* (Illus. Dict.).

Antrum. (See Illus. Dict.) **A. auris**, the tympanum. **A. buccinosum**, the cochlea. **A., Cardiac**, Luschka's name for a dilation sometimes found in the esophagus immediately above its passage through the diaphragm. **A., Dental**, the pulp-cavity. **A., Duodenal**, the normal dilation presented by the duodenum near its origin. **A. genæ**, the antrum of Highmore. **A. olfactivum**, the ethmoidal sinuses. **A. pylori, A. pyloricum**, the pyloric part of the stomach. **A., Sphenoid.** See *Sinus, Sphenoid* (Illus. Dict.). **A. tubæ**, a sac-like dilation of the fallopian tube about an inch from the fimbriated extremity, regarded by some as a sign of pregnancy.

Anulus (*an'-u-lus*) [L.]. 1. A ring. 2. The rectum.

Anury (*an'-u-re*). See *Anuria* (Illus. Dict.).

Anus [pl. and gen., *ani*]. (See Illus. Dict.) Syn., *Podex; Potex; Anulus.* 2. The ventral opening of the Sylvian aqueduct. **A., Accidental.** See *A., Artificial* (Illus. Dict.). **Ani incontinentia**, involuntary evacuation of the feces. **A., Infundibuliform**, a relaxed condition of the anus with destruction of the natural folds. **A., Preternatural**, an abnormal aperture serving as an anus, whether congenital, made by operation, or due to disease or injury. Syn., *Fecal fistula; A. præternaturalis.* **A., Preternatural, Ileovaginal, A., Preternatural, Vaginal, A. præternaturalis vestibularis**, the rare abnormality of the rectum opening through the vulva. **A., Rusconi's**, the blastopore. **A., Trumpet-shaped.** See *A., Infundibuliform.* **A., Umbilical**, a preternatural anus located in the umbilical region. **A. vulvovaginalis**, an anal opening communicating with the vulva.

Anusol (*an'-u-sol*). Suppositories recommended in rectal diseases, which are said to contain cacao-butter, zinc oxid, resorcin, bismuth oxyiodid, and balsam of Peru.

Anxietas. (See Illus. Dict.) **A. tibiæ, A. tibiarum** 1. An annoying sensation of restlessness in the muscles of the legs noted in neurasthenia. 2. An irregular movement of the legs. Syn., *Fidgets.*

Anytin (*an'-it-in*). See *Anitin.*

Anytol (*an'-it-ol*). See *Anitol.*

Aorta. (See Illus. Dict.) **A., Anterior**, the smaller of the two branches of the common aorta in man and quadrupeds. It is distributed to the anterior half of the trunk. **A., Ascending.** (See Illus. Dict.) See *A., Anterior.* **A., Cardiac**, that part of the embryonic vascular system giving rise to the aortic arches. **A., Caudal.** See *Artery, Sacral, Media* (Illus. Dict.). **A., Common**, in many quadrupeds that part of the aorta extending from its origin at the heart to the point where it branches into the anterior and posterior aortas. **A., Dorsal**, 1. The embryonic vessel formed by the junction of the two primitive aortas. Syn., *A., Primordial; A., Subvertebral.* 2. The thoracic aorta. **A., Inferior**, the abdominal aorta. **A., Left**, the embryonic division of the vascular system which finally becomes the aorta. **A., Main**, the embryonic vessel formed by the junction of the two primitive aortas. **A., Pectoral**, the thoracic aorta. **A., Pelvic**, the middle sacral artery. **A., Pericardiac**, the part of the aorta within the pericardial cavity. **A., Posterior**, that branch of the common aorta in many quadrupeds which is distributed to the posteriar half of the trunk and to the abdominal limbs. **A., Primitive**, that part of the aorta extending from its origin to the point where it first branches. **A.s, Primitive**, two embryonic branches of the cardiac aorta extending through the first visceral arch and uniting to form the dorsal aorta. **A., Primordial.** See *A., Dorsal* (1). **A., Right**, the embryonic division of the aortic bulb which finally forms the pulmonary artery. **A., Root of**, the origin of the aorta, the heart. Syn., *Radix aortæ.* **A., Subvertebral.** See *A., Dorsal* (1). **A., Superior**, the thoracic aorta. **A., Systemic.** See *A., Left.*

Aortasia (*a-or-ta'-ze-ah*). See *Aortectasia* (Illus. Dict.).

Aortitis. (See Illus. Dict.) **A., Nummular**, characterized by white, circular patches in the inner coat.

Aortoclasia, Aortoclasis (*a-or-to-kla'-ze-ah, -sis*) [*aorta; κλάσις*, a breaking]. Rupture of the aorta.

Aortolith, Aortolite (*a-or'-to-lith, -līt*) [*aorta; λίθος*, a stone]. A calculus formed in the aorta.

Aortolithia (*a-or-to-lith'-e-a*). A calcareous deposition in the aorta.

Aortopathy (*a-ort-op'-ath-e*) [*aorta; πάθος*, disease]. Any disease of the aorta.

Aortosclerosis (*a-ort-o-skler-o'-sis*) [*aorta; σκλήρός*, hard]. Induration of the aorta.

Apallagin (*ap-al'-aj-in*) [*ἀπαλλαγή*, deliverance]. An antiseptic mercury salt of nosophen (*q. v.*).

Apenta (*ah-pen'-tah*). A Hungarian aperient water.

Apeptous (*ah-pep'-tus*) [*a*, priv.; *πέπτειν*, to digest]. 1. Crude, indigestible, uncooked. 2. Apeptic.

Aperception (*ap-ur-sep'-shun*). See *Apperception* (Illus. Dict.).

Aperiodic (*ah-pe-re-od'-ik*) [*a*, priv.; *περίοδος*, a circuit]. Not periodic.

Aperitive. (See Illus. Dict.) 2. Deobstruent. 3. Stimulating the appetite. **A., Hygienic,** hygienic measures for stimulating the appetite.

Apertometer (*ap-ur-tom'-et-ur*) [*aperture; μέτρον*, measure]. An optical device for determining the angle of aperture of microscopic objectives. The apertometer of Abbé, which is mostly used, consists of a semicircular piece of thick glass with the straight edge beveled at 45 degrees. Light entering the curved edge is reflected upward by the beveled edge. This is received by the objective of the microscope. By means of two metal slides moving on the curved edge the exact angle of the light required to fill the back lens of the objective is indicated on the curved edge and can be read off directly.

Aphasia. (See Illus. Dict.) **A., Amnemonic, A., Amnesic, A., Amnestic,** verbal amnesia. **A., Aneural,** motor aphasia. **A., Broca's,** motor aphasia. **A., Commissural.** See *A., Conduction* (Illus. Dict.). **A., Cortical** (Wernicke), **A., Pictorial** (Wyllie), **A., True** (Déjerine), destruction of the function of the auditory speech-center. **A., Functional,** that in which there is no manifest lesion, but it occurs as a result of excitement in hysteria, or in severe constitutional disorders. **A., Grashey's,** aphasia due to diminished duration of sensory impressions, with consequent disturbance of perception and association; it is seen in concussion of the brain and certain acute diseases. **A., Insular,** that in which the lesion is confined to the insula. **A., Jargon,** a form of transcortical aphasia in which the speech is confused, words or syllables being transposed or jumbled together, due to disruption of the tracts associating cortical speech-centers. **A., Kussmaul's,** voluntary mutism, simulating aphasia, which sometimes affects the insane, particularly paranoiacs, with mystic ideas. **A., Lethologic,** verbal amnesia. **A., Mixed,** combined motor and sensory aphasia. **A., Motor Vocal.** See *Aphemia* (Illus. Dict.). **A., Motor-writing.** See *Agraphia* (Illus. Dict.). **A., Optic,** inability to give the names for objects seen, due to interrupted connection between the centers for vision and speech. **A., Opticosensory,** combined optic and sensory aphasia. **A., Pure** or **Isolated** (Déjerine), **A., Subcortical** (Wernicke), **A., Subpictorial** (Wyllie), aphasia arising from a lesion interrupting impulses toward the afferent tracts proceeding to the auditory speech-center. **A., Supracortical, A., Suprapictorial,** that form of a lesion completely severing the connection of the auditory center with the cortical center, but not destroying the auditory speech-center, the afferent tracts proceeding to it or the efferent tracts passing from it to the motor speech-center. **A., Tactile,** inability to recognize objects by the sense of touch, due to lesion in the central parietal lobule. **A., Total, A. universalis,** inability to utter a single word. **A., Wernicke's,** cortical sensory aphasia.

Aphemesthesia (*ah-fem-es-the'-ze-ah*) [*a*, priv.; *φήμη*, voice; *αἴσθησις*, sensation]. Word blindness; word deafness.

Aphemetric (*af-e-met'-rik*). See *Haphemetric* (Illus. Dict.).

Aphengescope (*af-en'-je-skōp*). See *Episcope.*

Aphidious (*af-id'-e-us*) [*aphis*, a plant-louse]. Resembling a plant-louse.

Aphidivorous (*af-id-iv'-or-us*) [*aphis*, a plant-louse; *vorare*, to devour]. Subsisting on plant-lice.

Aphleous, Aphlœous (*af'-le-us, ah-fle'-us*) [*a*, priv.; *φλοιός*, bark]. Destitute of bark.

Aphlogistic (*ah-flo-jist'-ik*) [*a*, priv.; *φλόξ*, a flame]. 1. Noninflammable. 2. Burning without flame.

Aphonetic. See *Aphonic* (Illus. Dict.).

Aphonia, Aphony. (See Illus. Dict.) **A. clericorum,** clergyman's sore-throat. **A., Paralytic.** See *Paralysis, Phonetic* (Illus. Dict.). **A. paranoica,** stubborn silence in the insane. **A., Spastic.** See *Dysphonia spastica* (Illus. Dict.).

Aphorama, Aphorema (*af-o-ra'-ma, -re'-ma*) [*ἀφοράν*, to have in full view]. The state of having projecting eyes, enabling one to see at a distance on each side without moving the head.

Aphoria. (See Illus. Dict.) **A. impercita,** that attributed to aversion. **A. impotens,** that due to impairment of conceptive power. **A. incongrua,** that attributed to nonresponsive condition of the conceptive power to the seminal fluid. **A. paramenica,** that due to menstrual disorder. **A. polyposa,** that attributed to the existence of a uterine polypus.

Aphoric, Aphorous (*af'-or-ik, af'-or-us*) [*ἄφορος*, sterile]. 1. Relating to, causing, caused by, or affected with sterility. 2. Unbearable, insufferable; aphoretous.

Aphose (*ah'-fōz*) [*ἀ*, priv.; *φῶς*, light]. A subjective sensation of shadow or darkness. Cf. *Phose.* **A.s, Norton's.** See *Phoses, Bowditch's.*

Aphrasia. (See Illus. Dict.) **A., Paralytic,** that due to paralysis of the ideation faculty. **A., Superstitious,** the voluntary avoidance of certain words from scruples of nicety or religion.

Aphrenic, Aphrenous, Aphrænous (*ah-fren'-ik, ah'-fren-us, ah-fre'-nus*) [*a*, priv.; *φρήν*, the mind]. Insane.

Aphrodescin, Aphrodæscin (*af-ro-des'-in*) [*ἀφρώδης*, foamy]. $C_{52}H_{82}O_{22}$. A glucosid constituent of the cotyledons of horse-chestnut. It is a colorless amorphous powder, soluble in alcohol and water, its watery solution frothing like soap. Boiled with alkalis it yields butyric and escinic acids.

Aphrodisiasm (*af-ro-diz'-e-azm*) [*ἀφροδισιασμός*, sexual intercourse]. 1. Puberty. 2. Satyriasis.

Aphrodisiography (*af-ro-diz-e-og'-ra-fe*) [*ἀφροδίσια*, venery; *γράφειν*, to write]. A study or description of the physiology of venery or of syphilis.

Aphroditism (*af-ro'-dit-izm*). See *Hermaphrodism* (Illus. Dict.).

Aphronesis (*ah-fro-ne'-sis*) [*a*, priv.; *φρόνησις*, good sense]. Foolishness, silliness, madness.

Aphronia (*ah-fro'-ne-ah*) [*a*, priv.; *φρήν*, the mind]. Apoplexy.

Aphtha, Aphthæ. (See Illus. Dict.) Syn., *Acacos; Acacus; Ophlyctis; Morbus aphthosus; Thrush; Sprue; Angina aphthosa; Aphthous stomatitis.* **A. anginosa,** a form of sore-throat attended by slight fever, redness and enlargement of the fauces, with the formation of small whitish specks on the tongue and mucosa of the throat. It usually occurs in cold, damp weather and in women and children. **A., Cardarelli's.** See *A., Cachectic* (Illus. Dict.). **A. epizootica.** See *Foot and Mouth Disease* (Illus. Dict.). **A. febrilis,** ulcer-

ation of the mouth, extending to the esophagus and stomach, and accompanied by fever. **A. serpens, Aphthæ serpentes.** See *Cancrum oris* (Illus. Dict.). **Aphthæ tropicæ**, a disease of the tropics marked by epigastric fulness, pain, vomiting, diarrhea, and redness of the tongue, with the formation of small, white, painful spots on it. Syn., *Tropical sprue; Psilosis; Gastroenteritis aphthosa indica; Phlegmasia membranæ mucosæ gastropulmonalis.* **A., Valleix's.** See *A., Bednar's* (Illus. Dict.).

Aphthongia. (See Illus. Dict.) **A. laryngea spastica.** See *Dysphonia spastica* (Illus. Dict.).

Aphthous. (See Illus. Dict.) **2.** Presenting the appearance of a surface covered with little ulcers.

Apiaceous (*ap-e-a'-shus*) [*apium*, parsley]. Pertaining to or resembling the genus *Apium*.

Apicatous (*ap-ik-a'-tus*) [*apex*, the top]. Having a well-defined apex.

Apicicurved (*ap-is-e-kurvd'*). With a curved apex.

Apicifixed (*ap-is-e-fiksd'*). Attached by the apex.

Apiciform (*ap-is'-e-form*) [*apex*, the top; *forma*, form]. Sharp-pointed.

Apicilar (*ap-is'-il-ar*) [*apex*, the top]. Attached to or located upon an apex.

Apigenin (*ap-ij'-en-in*) [*apium*, parsley; γεννᾶν, to produce]. $C_{15}H_{10}O_5$. A decomposition product of apiin.

Apiin (*ap'-e-in*) [*apium*, parsley]. $C_{27}H_{32}O_{16}$. A glucosid obtained by Braconnot from the leaves, stems, and seeds of parsley, *Carum petroselinum*. It is a yellowish-white, crystalline powder, soluble in hot water and alcohol, slightly soluble in cold water, insoluble in ether.

Apiol. (See Illus. Dict.) **A., Green,** crude ethereal oil from seeds of parsley, *Carum petroselinum*. It is a greenish oil, soluble in alcohol and ether, and used as an emmenagog and antiperiodic. Dose, in dysmenorrhea, 5–10 ♏ (0.3–0.6 c.c.) 2 or 3 times daily; in malaria, 15–30 ♏ (1–2 c.c.). **A., Liquid,** an alcoholic extract of parsley seed. **A., White.** See *Apiol* (Illus. Dict.).

Apiolin (*ap-e'-ol-in*). Rectified essential oil of parsley, a yellow neutral liquid boiling at about 300° C., soluble in alcohol. It is used as an emmenagog. Dose, 0.2 gm. 2 or 3 times daily.

Apion (*ap'-e-on*) [*apium*, parsley]. A substance obtained from apiolic acid by heating with dilute sulfuric acid; melts at 69° C.

Apiphobia (*ap-e-fo'-be-ah*) [*apis*, a bee; φόβος, fear]. Morbid terror of bees and of being stung by them.

Apirin (*ap'-ir-en*). See *Apyrin*.

Apiropodous (*ap-ir-op'-od-us*) [ἀπειρος, infinite; πούς, a foot]. Having many feet.

Apisin (*ap'-is-in*) [*apis*, a bee]. Bee-poison.

Apisination (*ap-is-in-a'-shun*). Poisoning from the stings of bees.

Apivorous (*ap-iv'-or-us*) [*apis*, a bee; *vorare*, to devour]. Feeding upon bees.

Aplanasia (*ah-plan-a'-ze-ah*) [*a*, priv.; πλανᾶν, to wander]. Entire or nearly entire absence of spheric aberration.

Aplanatio corneæ. See *Applanatio* (Illus. Dict.).

Aplanatism (*ah-plan'-at-izm*). See *Aplanasia*.

Aplastic. (See Illus. Dict.) **3.** Relating to aplasia. **4.** Defective in fibrin. **5.** Applied to inflammations unattended with organizable exudation.

Aplestia (*ah-ples'-te-ah*) [ἀπλησταία, insatiate desire]. Insatiable hunger; acoria.

Aplysiopurpurin (*ap-lis-e-o-pur'-pur-in*) [*Aplysia*, L., a genus of molluscs (ἀπλυσία, filthiness); *purpurin*]. A pigment obtained from the sea hare, *Aplysia depilans*, L., and other species of tectibranchiate molluscs.

Apnea. (See Illus. Dict.) **A., Cardiac,** the period of apnea in Cheyne-Stokes respiration. See under *Respiration* (Illus. Dict.). **A., Nervous,** that due to disorders of the centers of respiration. **A., Placental,** placental tuberculosis. **A., Uterine,** a form of dyspnea observed in hysteric patients, due to no manifest disease. Syn., *Uterine asthma*.

Apneasphyxia, Apnœasphyxia (*ap-ne-as-fiks'-e-ah*). See *Asphyxia* (Illus. Dict.).

Apneic, Apnœic (*ap'-ne-ik, ap-ne'-ik*) [ἀπνόος, breathless]. Relating to or affected by apnea.

Apneology, Apnœologia (*ap-ne-ol'-o-je, ap-ne-o-lo'-je-ah*) [ἀπνόος, breathless; λόγος, science]. The sum of what is known concerning apnea.

Apnous (*ap'-nus*). See *Apneic*.

Apoaconin (*ap-o-ak'-on-in*) [ἀπό, from; *aconin*]. $C_{26}H_{27}O_{10}$. A base derived from aconin.

Apoatropin. (See Illus. Dict.) **A., Hydrochlorate,** $C_{17}H_{21}NO_2HCl$, white crystalline substance, soluble in water and alcohol; melts at 237°–239° C. **A. Sulfate,** $(C_{17}H_{21}NO_2)_2H_2SO_4 + 5H_2O$, white crystals, slightly soluble in water.

Apocaffein (*ap-o-kaf'-e-in*) [ἀπό, from; *caffein*]. $C_7H_7N_3O_3$. A crystalline derivative of caffein.

Apocarphology (*ap-o-kar-fol'-o-je*). See *Carphology* (Illus. Dict.).

Apocenosis. (See Illus. Dict.) **2.** A partial evacuation. In the plural, *apocenoses*, Cullen and Swediaur's term for diseases marked by fluxes and unattended by fever.

Apochromatism (*ap-o-kro'-mat-izm*) [ἀπό, away; χρῶμα, color]. Decolorization.

Apocodein. (See Illus. Dict.) **A., Hydrochlorate,** $C_{18}H_{19}NO_2HCl$, a yellow-gray, very hygroscopic powder, soluble in water. It is expectorant, sedative, and hypnotic. Dose, 3–4 gr. (0.2–0.26 gm.) daily in pills. Injection, ⅛–½ gr. (0.01–0.03 gm.) of 2% solution in water.

Apocopous (*ap-ok'-o-pus*) [ἀπόκοπυς, cut off]. Castrated.

Apocoptic (*ap-o-kop'-tik*) [ἀποκόπτειν, to cut off]. Affected by or occurring from the removal of a part.

Apocrenate (*ap-o-kren'-āt*). A salt of apocrenic acid.

Apocrenic (*ap-o-kren'-ik*) [ἀπό, from; κρήνη, a spring]. Derived from a spring or fountain, as *apocrenic acid*.

Apocynein (*ap-o-sin'-e-in*). A glucosid from *Apocynum cannabinum*, similar in character to digitalein.

Apocynin. (See Illus. Dict.) **2.** A resinous substance obtained from *Apocynum cannabinum*; soluble in alcohol, in chloroform, and in ether; insoluble in water. It is emetic and expectorant.

Apodal (*ap'-od-al*). See *Apodous* (Illus. Dict.).

Apolysin (*ap-ol'-is-in*). $C_6H_4(OC_2H_5)NH_8C_6O_6$. A compound of citric acid and phenetidin, forming a yellowish crystalline powder, soluble in hot water, in alcohol, and in glycerin, melting at 72° C. It is antipyretic and analgesic. Dose, 8.24–90 gr. (0.5–3 gm.) daily. Syn., *Monophenetidin citric acid*.

Apomorphin. (See Illus. Dict.) **A. Sulfate,** $(C_{17}H_{17}NO_2)_2H_2SO_4$, white crystalline powder, very slightly soluble in alcohol and water.

Apomorphosis (*ap-o-mor'-fo'-sis*) [ἀποπορφοῦν, to change the form]. A chemic change by which one substance acting upon another takes something away from it.

Apomythosis. See *Apomyttosis* (Illus. Dict.).

Aponeurosis. (See Illus. Dict.) Syn., *Membrana aponeurotica; Pronervatio; Fascia*. For kinds, see under *Fascia*.

Apophyllate (*ap-of'-il-āt*) [ἀπό, from; φύλλον, a leaf]. A salt of apophyllic acid.

Apophysate (*ap-of'-is-āt*) [ἀπό, from; φύσις, growth]. Furnished with an apophysis.

apophysiform (*ap-o-fiz'-e-form*) [*apophysis; forma*, form]. Having the form of an apophysis.

apophysis (See Illus. Dict.) [Pl., *apophyses.*] For kinds,—Ancyroid, Articular, Basilar, Clinoid, Coracoid, etc.,—see corresponding words under *Process* (Illus. Dict.). **Apophyses, False.** See *Epiphyses* (Illus. Dict.). **Apophyses, Ingrassias'**, the lesser wings of the sphenoid. **Apophyses, True**, those which have never been epiphyses. **A., Vitelline.** Same as *Pedicle, Vitelline.*

apoplexia. (See Illus. Dict.) **A. exquisita, A. fortis.** See *Apoplexy, Entonic.* **A. fortissima,** fulminant apoplexy. **A. intestinalis neonatorum.** See *Melena neonatorum* (Illus. Dict.). **A. myelitica.** See *Apoplexy, Spinal* (Illus. Dict.). **A. temulenta,** that due to inebriety. **A. vera.** See *Apoplexy, Sanguineous.*

apoplexy. (See Illus. Dict.) Syn., *Poplesy.* **A., Amphiblestroid,** retinal apoplexy. **A., Asthenic,** that due to vital depression. **A., Atonic,** that which comes on gradually and does not attain a high degree of development. **A., Atrabilious,** deep melancholy attributed to resorption of bile. **A., Bulbar,** that due to hemorrhage into the substance of the oblongata, causing paralysis of one or both sides of the body, inability to swallow, difficulty in protruding the tongue, dyspnea, gastric disorders, and tumultuous action of the heart. **A., Cardiac,** extravasation of blood into the heart-substance. **A., Cerebral,** that due to hemorrhage into the brain. **A., Chorioid, A., Choroid,** hemorrhage into or upon the tunica choroidea. **A., Congestive,** an apoplectoid condition due to cerebral congestion. **A., Consecutive,** that due to the arrest of some habitual discharge or eruption. **A., Cutaneous,** 1. See *Purpura hæmorrhagica* (Illus. Dict.). 2. A sudden effusion of blood to the skin and subcutaneous tissue. **A., Dysarthritic,** a form accompanying arthritic diseases, in which the pain disappears from the joints, and vertigo, pain in the head, etc., appear. **A., Embolic,** apoplectoid symptoms and loss of consciousness due to cerebral emboly. **A., Entonic,** a form marked by sudden and severe symptoms. Syn., *Apoplexia fortis.* **A., Epileptic,** coma with epileptoid symptoms, sometimes observed in cerebral and acute inflammatory diseases. **A., Febrile,** paroxysmal fever attended with deep sleep and stertor. Syn., *Apoplexia febricosa.* **A., Fulminant,** a sudden and fatal apoplexy. **A., Heat,** sunstroke. **A., Hemorrhagic,** that due to extravasation of blood into or upon the brain. **A., Hepatic,** hemorrhage into the liver-substance. **A., Hydrocephalic,** coma due to hydrocephalus. **A., Hysteric,** an apoplectoid condition due to hysteria. **A., Imperfect.** See *A., Atonic.* **A., Intermeningeal.** See *A., Meningeal.* **A., Inverted.** See *Catalepsy* (Illus. Dict.). **A., Meningeal,** an escape of blood within the skull or vertebral canal, but not into the brain-substance or spinal cord. **A., Mephitic,** asphyxia from the inhalation of carbon dioxid or other noxious gas. **A., Milk,** a form attributed to a metastasis of the milk. **A., Muscular,** an escape of blood into the muscular tissue. **A., Narcotic,** an apoplectoid condition due to narcotic poison. **A., Nervous,** 1. Acute anemia of the brain. 2. A condition marked by symptoms of cerebral congestion and hemorrhage which are due to functional disturbance of the nervous system. **A., Nodular Pulmonary,** escape of blood into the air-cells of the lungs. **A. of the Ovary, A., Ovarian,** hemorrhage into the stroma of the ovary, through the rupture of a follicle, converting the organ into a cyst or hematoma. The blood is gradually absorbed, though it gives rise to great pain; the cause is unknown. **A., Pancreatic,** extravasation of blood into the parenchyma of the pancreas, possibly due at times to hysteric neurosis. [Holth.] **A., Parturient.** See *Collapse, Parturient* (Illus. Dict.). **A., Phlegmonous,** a condition attributed to inflammation of the brain and its membranes; it is marked by delirium, fever, severe headache, conjunctival injection, lacrimation, and a hard pulse. **A., Pituitous,** serous apoplexy. **A., Placental, A., Placentary,** escape of blood into the placental substance. **A., Primary.** See *A., Nervous* (2). **A., Progressive,** that in which there is a very gradual increase of the paralysis and other symptoms. **A., Puerperal.** See *Collapse, Parturient* (Illus. Dict.). **A., Pulmonary, Vascular,** very acute and extensive congestion of the lungs leading to apoplectic appearances and a fatal termination. **A., Renal,** escape of blood into the renal substances. **A., Retinal,** hemorrhage into the substance of the retina. **A., Rheumatic,** rheumatic meningitis. **A., Sanguineous,** hemorrhage into or upon the brain. **A., Serous,** that due to an effusion of serous matter into or upon the brain. **A., Spasmodic,** slight transitory paralysis. **A., Splenic.** (See Illus. Dict.) 2. Escape of blood into the substance of the spleen. **A., Subconjunctival,** effusion of blood beneath the conjunctiva. **A., Suppurative,** that due to purulent processes and fever. **A., Symptomatic,** that attributed to another disease or to the arrest of some habitual evacuation. **A., Uncircumscribed Pulmonary,** a diffuse effusion of blood into the intervesicular tissue attended with rupture of the pulmonary texture and at times of the pleura. **A., Uterine,** escape of blood into the muscular tissue of the uterus. **A., Uteroplacental,** hemorrhage into the decidua serotina. **A., Venous,** that due to congestion of the veins. **A., Verminous,** an apoplectoid condition due to intestinal worms. **A., Vitular.** See *Collapse, Parturient* (Illus. Dict.). **A., Weak,** that due to the action of depressing causes upon an exhausted encephalon or a reduced condition of the general system.

Apopseudaconin (*ap-o-su-dak'-on-in*). $C_{27}H_{39}NO_8$. An amorphous base derived from pseudaconin by dehydration.

Apopseudaconitin (*ap-o-su-dak-on'-it-in*). $C_{26}H_{47}NO_{11}$. A product of pseudaconitin by dehydration.

Apoquinamin (*ap-o-kwin'-am-in*). $C_{19}H_{22}N_2O$. An artificial alkaloid occurring as a white amorphous substance derived from quinamin, conquinamin, or quinamidin by action of hydrochloric acid.

Aporocephalous (*ap-o-ro-sef'-al-us*) [ἄπορος, difficult to distinguish; κεφαλή, the head]. With a head scarcely distinguishable.

Aposcenosis (*ap-os-sen-o'-sis*). See *Apocenosis* (Illus. Dict.).

Aposthume (*ap'-os-thūm*). See *Apostem* (Illus. Dict.).

Apothermous (*ap-o-thur'-mus*) [ἀπό, away from; θέρμη, heat]. Lacking heat.

Apothesis. (See Illus. Dict.) **A. funiculi umbilicalis,** the reposition of an abnormally protruded umbilical cord.

Apous (*ah'-pus*). See *Apodous* (Illus. Dict.).

Apparatus. (See Illus. Dict.) 3. A collection of pathologic phenomena. 4. Cystotomy. 5. The stage preceding eruption in an exanthematous fever. **A., Absorbent,** the blood-vessels and lymphatics. **A., Acoustic, A., Auditory,** the external and internal ear, the auditory canal, the tympanum, and the eustachian tube. **A. magnus, A. major,** median cystotomy. **A. minor,** lateral lithotomy. **A., Segmental.** See *Nephridia* (Illus. Dict.). **A., Sound-conducting,** a collective term for the auricle, external auditory canal, tympanum, eustachian tube, and mastoid cells.

A., Sound-perceiving, that part of the organism concerned in the perception of sound, consisting of the auditory nerve, and its center of origin and peripheral distribution, or the organs of the labyrinth. **A., Urinary,** the kidneys, ureters, bladder, and urethra. **A., Uropoietic,** the kidneys.

Apparition. (See Illus. Dict.) 2. The sudden aggregation of scattered principles into an element or corpuscle.

Appendage. (See Illus. Dict.) **A., Auricular.** (See Illus. Dict.) 2. Virchow's name for a round or elongated cartilaginous prominence in front of the tragus **A.s, Cutaneous, A.s, Dermal,** the nails, hair, sebaceous glands, and sweat-glands. **A.s, Fetal,** the placenta, amnion, chorion, and umbilical cord. **A., Pineal,** the epiphysis. **A., Pituitary,** the hypophysis. **A.s, Uterine,** the ovaries and oviducts.

Appendalgia (*ap-end-al'-je-ah*) [*appendix; ἄλγος*, pain]. Pain in the appendicial region.

Appendectomy (*ap-en-dek'-to-me*). See *Appendicectomy.*

Appendical, Appendicial (*ap-en'-dik-al, ap-en-dish'-al*). See *Appendicular* (Illus. Dict.).

Appendicectomy (*ap-en-dis-ek'-to-me*) [*appendix; ἐκτομή*, excision]. Excision of the vermiform appendix.

Appendiciform (*ap-en-dis'-e-form*) [*appendix; forma*, form]. Having the form of an appendage.

Appendicitis. (See Illus. Dict.) Syn., *Ecphyaditis; Skolikoiditis; Paratyphlitis; Epityphlitis; Miserere; Abscess of iliac form.* **A., Gangrenous.** See *Appendix, Gangrenous.* **A. larvata,** an incipient or latent form of appendicitis. **A. obliterans,** that resulting in the obliteration of the lumen of the appendix.

Appendicostomy. See *Operation, Wier's.*

Appendiculate (*ap-en-dik'-u-lāt*). Having appendages or protruding accessory parts.

Appendix. (See Illus. Dict.) **A. epididymidis,** the vas aberrans. **A. fallopianæ.** See *A. epiploicæ* (Illus. Dict.). **A., Gangrenous,** that in which the appendix is found gangrenous and sloughing, usually with one or more perforations and free leakage, a large section of the right groin full of lemon-colored or septic fluids, a puddle of filth underneath the cecum and ileum, the omentum fixed with a cluster of bowel adhesions beneath. [Price.] Syn., *Green groin.* **A. lobularis,** the flocculus. **A., Suprasphenoid, A. ventriculi,** the hypophysis.

Apple. (See Illus. Dict.) **A.-head,** broad, thick frontal regions. The name applied to the skull in dwarfs. Cf. *Cat-head.* **A.-scab,** the fungus *Fusicladium dendriticum.*

Applicate, Applied (*ap'-lik-āt, ap-lid'*). See *Appressed.*

Apposition. (See Illus. Dict.) 2. An addition of parts. 3. Development by accretion.

Appressed (*ap-rest'*) [*apprimere*, to press to]. Having a surface laid closely to something, but without adhesion. Syn., *Applicate; Applied; Adplicatus; Adpressus.*

Appropriation. (See Illus. Dict.) 2. The chemic combination of two substances.

Approximation (*ap-roks-im-a'-shun*) [*approximare*, to approach]. A pretense of delivering a patient from disease and of causing him to communicate it to some other organism brought close to him.

Apron. (See Illus. Dict.) **A., Masonic,** a support, attached to the waist, for the penis and testicles in gonorrheal cases. **A., Pudendal.** See *A., Hottentot* (Illus. Dict.).

Apselaphesis (*ap-sel-af'-e-sis*). See *Apselaphesia* (Illus. Dict.).

Apsyxia (*ap-siks'-e-ah*). See *Apsychia* (Illus. Dict.).

Aptyalia. (See Illus. Dict.) 2. Psychic salivation; debility and general disorder from loss of oxydases due to excessive expectoration.

Apyknomorphous (*ah-pik-no-morf'-us*) [*a*, priv.; *πυκνός*, compact; *μορφή*, form]. Applied by Nissl to feebly stained cells, or those in which the stainable portions are not arranged in close proximity.

Apyous (*ah'-pi-us*) [*a*, priv.; *πύον*, pus]. Nonpurulent; wanting in pus.

Apyrectic (*ah-pir-ek'-tik*). See *Apyretic* (Illus. Dict.).

Apyrenus (*ah-pir-e'-nus*) [*a*, priv.; *πυρήν*, the stone of a fruit]. Without a stone or pit.

Apyrin (*ah-pi'-rin*). An alkaline substance said to be contained in cocoanuts.

Apyrous (*ah'-pir-us*) [*a*, priv.; *πῦρ*, fire]. 1. Unchanged by extreme heat; refractory to heat.

Aqua. (See Illus. Dict.) **A. ferrata,** a chalybeate water. **A. levico,** water from springs at Levico in the Tyrol, containing arsenic, iron, and copper. **A. nivalis, A. nivata,** snow water. **A. oculi,** the aqueous humor. **A. omnium florum,** a liquid distillation-product of cow dung collected during the month of May; it was used in pulmonary tuberculosis. **A. putealis, A. puteana,** well-water.

Aquapuncture. (See Illus. Dict.) 2. The hypodermic injection of water as a placebo.

Aquate (*ak'-wāt*) [*aquatus*, mixed with water]. 1. Combined with water; watery. 2. The molecular combination of an element or radicle with water.

Aqueduct, Aquæductus. (See Illus. Dict.) **A., Communicating, Aquæductus communicationis,** a small canal sometimes found at the junction of the mastoid part of the temporal bone with the petrosa, which transmits a venous branch to the end of the transverse sinus. **A., Temporal,** an inconstant canal at the dorsal part of the superior angle of the petrosa, transmitting the squamosapetrosal sinus. **A., Ventricular.** See *A. sylvii* (Illus. Dict.).

Aqueoigneous (*ak-we-o-ig'-ne-us*) [*aqua*, water; *ignis*, fire]. Relating to or obtained by the action of water and heat, or superheated water.

Aquiferous (*ak-wif'-ur-us*) [*aqua*, water; *ferre*, to bear]. Carrying water.

Aquiform (*ak'-wi-form*) [*aqua*, water; *forma*, form]. Like water.

Aquigenous (*ak-wij'-en-us*) [*aqua*, water; *gignere*, to produce]. Growing in the water.

Aquiparous. (See Illus Dict.) 2. Depositing ova or bringing forth offspring in the water.

Aquomembranitis (*ak-wo-mem-bran-i'-tis*). See *Aquocapsulitis* (Illus. Dict.).

Aquosity. (See Illus. Dict.) 2. A watery liquid.

Aquozon (*ak'-wo-zon*). Ozonized, distilled, and sterilized water, containing 3% by volume of ozone.

Aquula. (See Illus. Dict.) **A. acustica, A. auditura, A. labyrinthi, A. labyrinthi externa,** the perilymph. **A. labyrinthi interna, A. labyrinthi membranacei,** the endolymph.

Arachamid (*ar-ak'-am-id*) [*Arachis*, a genus of plants; *ammonia*]. $(C_{20}H_{39}O_2N_2)N$. A compound obtained from oil of peanuts by action of ammonia.

Arachidate (*ar-ak'-id-āt*). A salt of arachidic acid.

Arachin (*ar'-ak-in*). $C_{20}H_{40}O_2$. A glyceryl of arachidic acid. It occurs as the chief constituent of Rambutan tallow obtained from the seeds of *Nephelium lappaceum*, L.

Arachnitis. (See Illus. Dict.) Syn., *Leptomeningitis externa; Arachnodeitis; Arachnoiditis; Arachnomeningitis; Arachnoitis.* **A., Rhachidian, A., Spinal,** spinal meningitis.

achnodeitis, Arachnoditis (*ar-ak-no-di'-tis*). See *Arachnitis* (Illus. Dict.).

achnodermous (*ar-ak-no-dur'-mus*) [ἀράχνη, a spider's web; δέρμα, the skin]. Having a very thin skin.

achnoid. (See Illus. Dict.) 2. The arachnoid membrane. Syn., *Membrana media cerebri; Meninx; Meningium; Meninx arachnoidea; Meninx media; Meninx serosa.* 3. Pertaining to a membrane. Thready, feeble, araneous; said of the pulse.

achnoideitis (*ar-ak-noi-di'-tis*). See *Arachnitis* (Illus. Dict.).

achnoitis (*ar-ak-no-i'-tis*). See *Arachnitis* (Illus. Dict.).

achnology (*ar-ak-nol'-o-je*) [ἀράχνη, a spider; λόγος, science]. The study or science of spiders. Syn., *Araneology.*

achnolysin (*ar-ak-nol'-is-in*) [ἀράχνη, a spider; λύσις, a loosing]. A very active hemolytic substance extracted from spiders. It is destroyed by heating to 70° or 72° C., and is probably identical with Kobert's toxalbumin of spiders.

achnophilous (*ar-ak-nof'-il'-us*) [ἀράχνη, a spider; φίλειν, to love]. Applied to fungi growing upon dead spiders.

adietin (*ar-al-i'-et-in*). See *Araliretin.*

adiin (*ar-a'-le-in*). A glucosid found by v. Holden in the bark of *Aralia spinosa.* A white crystalline powder, soluble in water and alcohol, insoluble in ether, benzol, and chloroform.

aliretin (*ar-al-ir'-e-tin*). A decomposition-product of araliin.

ana picacaballo. Horse-biter, a poisonous species of *Mygale* or bird spider found in Central America.

aneiform (*ar-an-e'-i-form*) [*aranea*, a spider; *forma*, form]. Shaped like a spider.

anein (*ar-an'-e-in*) [*aranea*, a spider]. A liquid obtained from the punctured abdomen of spiders. It is used as an embrocation in homeopathic practice.

aneoid (*ar-an'-e-oid*) [*aranea*, a spider; εἶδος, likeness]. Spider-like.

aneology (*ar-an-e-ol'-o-je*) [*aranea*, a spider; λόγος, science]. See *Arachnology.*

aneous. (See Illus. Dict.) 2. Applied to a thready, feeble pulse. 3. Consisting of separate filaments.

arabin (*ar-ar'-ab-in*). See *Arabin* (Illus. Dict.).

aracio. The South American name for *Sagotia racemosa*, Baill., a euphorbiaceous plant used as a tonic and aphrodisiac.

aucaria (*ar-aw-ka'-re-ah*) [*Arauco*, a province in Chili]. A genus of plants of the order *Coniferæ.* **A. braziliana**, A. Rich., yields part of the gum ammar (*q. v.*) of commerce.

bacin (*ar'-bas-in*) [*Arbacia*, Gray, a genus of the *Echinidæ* (*arbacia*, similar)]. A histon-like body obtained from spermatozoa of the sea-urchin, *Arbacia punctulata*, Blains.

boricolous (*ar-bor-ik'-ol-us*) [*arbor*, a tree; *colere*, to inhabit]. Growing upon or living in trees.

borization. (See Illus. Dict.) **A., Terminal,** 1. The branched end of a sensory nerve. 2. A motor end-plate. **A., Vascular,** a tree-like branching of blood-vessels.

butose (*ar'-bu-tōz*). A crystalline substance consisting of glucose, 35%; arbutin, 55%; and water, 10%. It is obtained in the extraction of arbutin from *Arctostaphylos uva ursi.*

c. (See Illus. Dict.) 2. A segment of a circle. **A., Bigonial** (of lower jaw), a measurement around the anterior margin of the jaw. **A., Diastaltic Nerves,** Marshall Hall's term for the nerves concerned in a reflex action. **A., Frontal,** the measurement from the nasion to the bregma. **A., Maximum Transverse,** the measurement across the face from points just anterior to the external auditory meati. **A., Nasomalar,** measurement between the outer margins of the orbits over the nasion. **A., Occipital,** measurement from the lambda to the opisthion. **A., Parietal,** measurement from the bregma to the lambda. **A., Voltaic,** the band of light formed by the passage of a strong electric current between two adjacent carbon points.

Arcade (*ar-kād'*) [*arcus*, an arch]. 1. A series of arches; an arch. 2. The bow of a pair of spectacles. **A., Crural,** Poupart's ligament. **A., Flint's,** the arteriovenous arch about the base of the renal pyramids. **A., Temporal, A., Temporal, Inferior,** the zygoma. **A., Temporal, Superior,** the orbital arch.

Arcatura (*ar-ka-tu'-rah*) [*arcus*, a bow]. A condition of horses marked by the undue outward curvature of the forelegs.

Arcein (*ar'-se-in*). Arecolin hydrobromate; it is an active myotic.

Arch. (See Illus. Dict.) 2. A part of a circle. **A., Abdominothoracic,** the lower boundary of the front of the thorax. **A., Alveolar,** that marking the outlines of the alveolar processes of the jaw. **A., Anastomotic,** one uniting two veins or arteries. **A., Anterior** (of the arm), a plexus anterior to and above the elbow, formed by a division of the anastomotic artery of the arm and divisions of the ulnar and radial recurrent arteries. **A., Anterior hyoid,** a general term which includes the tympanohyal, epihyal, stylohyal, and ceratohyal arches. **A.s, Aortic,** a series of pairs of vascular arches situated in the branchial arches of the vertebrate embryo and the adult *Branchiatæ*, uniting the cardiac and dorsal aortas. They are five in the human embryo, the first and second pairs of which disappear at an early stage; the carotid arteries are formed from the third pair, the arch of the aorta and the subclavian arteries from the fourth pair; the fifth disappears on the right side, but on the left forms the pulmonary artery, the ductus arteriosus, and the aorta. **A. of the Atlas, Anterior,** that part of the atlas lying ventrad to its articular surfaces. **A. of the Atlas, Posterior,** the part of the atlas lying dorsad to its articular surfaces. **A.s, Axillary,** twigs of the latissimus dorsi sometimes passing over the vessels and nerves to the anterior part of the axilla, where they disappear in the tissues. **A., Carpal, Anterior,** a network on the anterior aspect of the wrist, composed of little branches of the carpal divisions of the radial and ulnar arteries. **A., Carpal, Dorsal,** one formed on the dorsum of the wrist by the junction of the posterior carpal branch of the radial artery and a similar one of the ulnar. **A.s, Cephalic.** See *A., Postoral* (Illus. Dict.). **A.s, Cervical,** the fourth and fifth postoral arches. **A. of the Colon,** the transverse colon. **A., Cortical,** that portion of the renal substance which stretches from one column to another and surrounds the base of the pyramids. **A., Costal,** the arch of the ribs. **A., Cotylopubic,** the pubic arch. **A., Cotylosacral,** one formed by the sacrum and the osseous structures extending to the coxofemoral joints. Syn., *Standing arch.* **A., Cricothyroid,** a curved artery extending across the cricothyroid ligament, formed by the junction of a branch from each superior thyroid artery. **A., Crural, Deep.** See *A., Femoral, Deep.* **A., Cubital,** the arched end of the anterior carpal artery at the knee of many quadrupeds. **A., Dental,** 1. The parabolic curve formed by the cutting-edges and masticating surfaces of the teeth. 2. The alveolar arch. **A., Dorsal** (of the arm), a plexus above and below the elbow on the dorsal aspect of the

arm, formed by divisions of the anastomotic artery and the profunda, radial, and ulnar recurrent arteries. **A., Dorsal** (of the foot), one on the dorsum of the foot, which unites the tarsal and metatarsal branches of the dorsal artery of the foot. **A., Dorsal Vertebral,** the neural arch. **A., Epencephalic,** the bones lying over the epencephalon, uniting in man to form the occipital bone. Syn., *Neurooccipital arch.* **A., Facial,** the first postoral arch. **A. Femoral, Deep,** a band of fibers originating apparently in the transverse fascia, arching across the crural sheath and attached to the middle of Poupart's ligament and the pectineal line. Syn., *Deep crural arch.* **A.s of the Foot,** certain arches formed by the bones of the foot; the most distinct is the transverse in the line of the tarsometatarsal articulations. The inner longitudinal is composed of the os calcis, the astragalus, the navicular, the three cuneiforms, and the first three toes, and the outer longitudinal is made up by the os calcis, the cuboid, and the fourth and fifth toes. **A., Gluteal,** an opening in the gluteal fascia transmitting the gluteal vessels and nerves. **A., Hemal,** Owen's term for the inferior loop of the typical vertebra. It is so called because it surrounds the essential portion of the vascular system. It is formed dorsally by the centrum, laterally by the pleurapophyses and hemapophyses, and inferiorly by the hemal spine. Syn., *A., Infravertebral; A., Subcentral; A., Vertebral ventral.* **A., Hyoid,** the second branchial arch of vertebrates. Syn., *A., Lingual; A. of tongue; A., Parietohemal.* **A., Infravertebral.** See *A., Hemal.* **A., Inguinal,** Poupart's ligament. **A., Ischiadic,** the space included between the dorsal borders of the ischia of the horse. **A., Ischiopubic,** that formed by the pubis and the ischiopubic branches. **A., Ischiosacral,** one formed by the sacrum, the descending branches of the ischia, and the ilia lying between. Syn., *Sitting arch.* **A., Jugal,** the zygoma. **A., Langer's Axillary,** the thickened border of fascia which forms a bridge across the bicipital groove. **A., Laryngeal,** Callender's term for one in the embryo composed of a membranous plate extending from the lower portion of the skull and developing into the inferior constrictor muscle, the cartilages of the larynx, the superior portion of the trachea, and the thyroid body. **A.s, Lateral Inferior** (of the skull), the bones encircling the mouth, nose, and larynx. **A.s, Lateral Superior,** the bones encircling the cerebrum, the cerebellum, and the oblongata. **A.s, Limb,** the pectoral and pelvic arches. **A., Lingual,** the hyoid arch. **A., Mandibular,** the first branchial arch, developing into the lower jaw. Syn., *A., Maxillary.* **A., Maxillary,** 1. See *A., Mandibular.* 2. See *A., Palatomaxillary.* **A., Meckel's Crural,** Poupart's ligament. **A., Mesencephalic,** one formed by the basisphenoid, alisphenoid, parietal, and mastoid bones. Syn., *A., Neuroparietal.* **A., Nasal,** one uniting the two frontal veins. **A., Neural,** the superior loop of the typical vertebra inclosing the neural canal. **A., Neurofrontal.** See *A., Prosencephalic.* **A., Neuronasal.** See *A., Rhinencephalic.* **A., Neurooccipital.** See *A., Epencephalic.* **A., Neuroparietal.** See *A., Mesencephalic.* **A., Occipitohemal.** See *Girdle, Shoulder* (Illus. Dict.). **A., Orbital,** the superior margin of the orbit. **A., Osteoblastic,** those formed imperfectly or completely by the osteoblasts, arising from the bony trabeculas already developed and finally becoming bony. **A., Palatal,** the concavity of the hard palate when seen in transverse section. **A. of the Palate, Posterior,** that formed by the posterior pillars of the fauces. Syn., *A., Palatopharyngeal.* **A., Palatine,** that formed by the anterior pillars of the fauces. Syn., *Anterior arch of the palate.* **A., Palatomaxillary,** one formed by the palatine, maxillary, and premaxillary bones or their analogs; it is looked upon as the hemal arch of the nasal vertebra. Syn., *A., Maxillary.* **A., Palatopharyngeal.** See *A. of Palate, Posterior.* **A., Palmar, Deep.** See *A., Palmar* (Illus. Dict.). **A., Palmar, Superficial,** the continuation of the ulnar artery across the palm. **A., Parietohemal.** See *A., Hyoid.* **A., Pectoral.** See *Girdle, Shoulder* (Illus. Dict.). **A., Pelvic,** the bones of the pelvis considered as the hemal arches of the sacral vertebras. **A., Pharyngeal,** the fifth pair of branchial arches. **A., Posthyoid,** the fourth and fifth of the postoral arches. **A.s, Postoral, Visceral. A.s, Poststernal.** See *A., Post-oral* (Illus. Dict.). **A.s, Preoral.** (See *Plates, Facial* Illus. Dict.). **A. prop,** a support for correction of flat-foot. **A., Prosencephalic,** one considered as the neural arch of the frontomandibular vertebra; it is formed by the frontal presphenoid, and orbitosphenoid bones. Syn., *A. Neurofrontal.* **A., Radial.** See *A., Palmar* (Illus. Dict.). **A., Rhinencephalic,** the neural arch of the nasal vertebra, formed by the vomer and the prefrontal and nasal bones. Syn., *A., Neuronasal.* **A., Rich lan's,** the arch of the mesentery which is attached to the transverse mesocolon. **A., Scapular, A., Scapuloclavicular, A., Scapulocoracoid.** See *Girdle, Shoulder* (Illus. Dict.). **A., Senile.** See *Arc senilis* (Illus. Dict.). **A., Sitting.** See *A., Ischiosacral.* **A.s, Skeletal.** See *A., Post-oral* (Illus. Dict.). **A., Standing.** See *A., Cotylosacral.* **A. Stylohyoid,** the hemal arch of the parietal vertebra formed by the stylohyal, epihyal, ceratohyal, basihyal, glossohyal, and urohyal bones. **A.s, Subaxial.** See *A., Post-oral* (Illus. Dict.). **A., Subcarpal,** in mammalian quadrupeds the analog of the palmar arch in man. **A., Subcentral,** the hemal arch. **A., Subocular. A., Suborbital.** See *A., Zygomatic* (Illus. Dict.). **A., Subpubic.** See *A. of Pubes* (Illus. Dict.). **A., Superciliary.** See *Ridge, Superciliary* (Illus. Dict.). **A., Supracarpal,** in quadrupeds the analog of the superficial palmar arch of man; it is formed by the junction of the epicondylar artery and branches of the posterior radial arteries. **A., Supravertebral,** the neural arch. **A.s, Tarsal,** the arches of the palpebral arteries. **A., Temporal,** the zygomatic arch. **A. Tergal.** Same as *A., Dorsal.* **A., Thyrocartilaginous,** a communicating branch between the superior thyroid arteries of the two sides, lying at about the level of the angle of the thyroid cartilage. **Thyrohyal, A., Thyrohyoid,** the third of the postoral arches; it develops into the hyoid body and the greater cornua of the hyoid bone. **A. of Tongue.** See *A., Hyoid* (Illus. Dict.). **A., Tonsillar.** See *Isthmus of the Fauces* (Illus. Dict.). **A., Trabecular,** one formed by the junction of the middle trabeculæ of the skull, containing the hypophysis and the infundibulum. **A.s, Vascular,** the postoral arches. **A., Vertebral,** 1. A neural arch. 2. A hemal arch. **A., Vertebral, Ventral.** See *A., Hemal.* **A., Visceral.** See *A., Post-oral* (Illus. Dict.).

Archæism (*ar'-ke-izm*). The theory of the archæus.

Archæus. (See Illus. Dict.) 2. v. Helmont's name for the vital principle of an organism.

Archelogy (*ar-kel'-o-je*) [*ἀρχή*, a beginning; *λόγος*, science]. The study of the foundation principles of anthropology.

Archetype. (See Illus. Dict.) 2. That essential spirit or substance which, according to the cabalistic theory, gave rise to all the events of life and all the phenomena of nature under the influence of good devils, or stars. [Park.]

chigony. See *Archegony* (Illus. Dict.).

chimorphic (*ar-ke-morf'-ik*) [ἀρχος, a chief; μορφή, ne form]. Dominant by virtue of superiority. **A. Races,** the dominant active races; civilized races (*Kulturvölker*).

chineuron (*ar-ke-nu'-ron*) [ἀρχή, beginning; νεῦρον, a nerve]. 1. A primitive neuron. 2. The neuron at which the impulse starts in any physiologic act involving the nervous system.

chitype (*ar'-ke-tip*). See *Archetype*.

chocystosyrinx (*ar-ko-sist-o-sir'-inks*) [ἀρχός, anus; κύστις, bladder; σῦριγξ, fistula]. A retrovesical fistula.

choplasm, Archoplasma (*ar'-ko-plazm, ar-ko-plaz'-ah*) [ἀρχων, a ruler; πλάσμα, a thing formed]. Boveri's term for the substance from which the attraction-sphere, the astral rays, and the spindle-fibers of mitosis are derived and of which they consist; also called *Kinoplasm*.

chyle (*ar-kil'-le*) [ἀρχή, a beginning; ὕλη, matter]. See *Protyle* (Illus. Dict.).

ocele (*ar'-ko-sēl*). See *Archocele* (Illus. Dict.).

tation. (See Illus. Dict.) 3. Constipation; constriction.

tura (*ark-tu'-rah*) [*arctus*, pressed close together]. The condition resulting from an ingrowing nail. Syn., *A. unguis, A. unguium; Onychosis arctura*. See *Arctation* (Illus. Dict.).

turin (*ark'-tu-rin*). A bitter substance obtained from arbutin.

tuvein, Arctuvin (*ark-tu'-ve-in, ark'-tu-vin*). A substance derived from arbutin by action of sulfuric acid with heat.

ula (*ark'-u-lah*) [*arcula*, a casket]. The orbit. **. cordis,** the pericardium.

us. (See Illus. Dict.) **A. atlantis anterior.** See *Arch of the Atlas, Anterior*. **A. atlantis posterior.** See *Arch of the Atlas, Posterior*. **A. faucium, . glossopalatinus.** See *Arch, Palatine*. **A. medialaris.** See *Fornix* (Illus. Dict.). **A. senilis ntis.** See *Cataract, Incipient*. **A. tendineus.** See *White line* (of pelvic fascia) (Illus. Dict.). **A. nguium.** See *Lunula* (Illus. Dict.). **A. vasculosi nales,** arches at the bases of the Malpighian pyramids, formed by anastomoses of tiny ramifications of e renal artery. They give off vessels supplying the rtex of the kidneys, the Malpighian corpuscles, and e capillary plexuses about the uriniferous tubules. n., *Fornices vasculosi renum*.

a. (See Illus. Dict.) 2. Applied by Celsus to any rm of baldness. **A., Alisphenoid,** the surface of e great wing of the sphenoid. **A., Anesthetic,** a gion of the body naturally destitute of sensory rves; one which has become abnormally anesthetic. **. Anteroparietal,** the outer surface of the parietal ne lying in front of the parietal eminence. **A., uditory,** the cerebral center for hearing. **A., roca's,** the medial portion of the anterior olfactory e. Syn., *A. parolfactoria; Gyrus olfactorius edialis*. **A., Broca's Olfactory,** the posterior end the gyrus rectus lying anteriorly to the mesial root the olfactory tract. Syn., *Trigonum olfactorium*. **. Catchment,** the district or water-shed over which e rainfall is impounded for purposes of water-supply. **. Cord,** that part of the cortex in which lesions uld produce degeneration of the spinal cord. **A. ibrosa.** See *Macula cribrosa* (Illus. Dict.). **A., ural.** See *Space, Interpeduncular*. **A., Crypt,** in collection of crypts the area surrounding one of the pts. **A. diffluens,** alopecia areata. **A., Diffraction,** a clear area seen in the microscopic image around bodies of greater or less refractive power, and which by Nägeli and Schwendener was referred partly to the direct reflection of the incident light at the edge of the body in question, partly to the interference of this reflected light which comes through unreflected. [Bütschli.] **A., Fetal, A., Germ, A., Germinal.** See *A. germinativa* (Illus. Dict.). **A., Frontal,** the convex surface of the frontal bone. **A., Frontoparietal,** that included in the frontal lobe of the cerebrum and the ascending parietal gyrus. **A., Glove,** an area of anesthesia observed in cases of multiple neuritis embracing hand and wrist. **A., Intercalated.** See *A., Nonnucleated*. **A., Intercrural.** See *Space, Interpeduncular* (Illus. Dict.). **A. johnstoni** (Joh.). See *A., Celsus* (Illus. Dict.). **A., Martegiani's,** the slight widening of the hyaloid canal at its beginning in front of the optic disk. **A., Midfrontal,** the mesal portion of the frontal area. **A., Motor,** the gyri on each side of the Rolandic fissure containing the centers for voluntary motion. **A., Nonnucleated,** one of the clear spaces found at times between the endothelial cells of blood-vessels; they have no nuclei, are smaller than endothelial cells, and are considered to be due to the removal of parts of the surrounding endothelium. **A. nummulata,** coin-shaped patches of alopecia areata. **A., Occipital,** the portion of the brain below the occiput. **A., Opaque.** See *A. opaca* (Illus. Dict.). **A., Parietal,** the part of the brain below the parietal bone. **A., Placental,** that part of the uterine wall to which the placenta is attached. **A., Posteroparietal,** the part of the external surface of the parietal bone lying behind the parietal eminence. **A., Rolandic,** the excitomotor area of the cerebral hemispheres, comprising the ascending frontal and ascending parietal convolutions. **A., Septal,** the inner surface of each of the laminas which make up the septum lucidum. **A., Serpens.** See *Ophiasis* (Illus. Dict.). **A. serpiginosa,** alopecia areata with a tendency to spread peripherally. **A., Spencer's,** a cortical area in the frontal lobe just outside of the olfactory tract and anterior to the point where it joins the temporosphenoid lobe, as indicated by the crossing of the Sylvian artery. Faradic stimulation of this area influences the respiratory movements, causing stoppage of the respiration when sufficiently intense. **A., Superofrontal,** the upper part of the frontal area. **A., Transparent.** See *A. pellucida* (Illus. Dict.). **A. ventriculi quarti,** the floor of the fourth ventricle. **A.s, Viscerocutaneous,** areas of skin and viscera corresponding to different spinal segments, useful in electrotherapy. **A., Visual,** the occipital lobe and the angular gyrus. **A., vitellina,** the yolk area outside the area vasculosa in mesoblastic eggs. **A., Vocal,** the portion of the glottis lying between the vocal bands.

Areca (*ar-e'-kah*). A genus of East Indian palms. **A. catechu** is extensively distributed throughout the tropics of Asia, where it has been cultivated from earliest times. It furnishes the betel-nut (*q. v.*); the powdered nut is used as a vermifuge.

Arecaidin (*ar-e-ka'-id-in*). $C_7H_{11}NO_4$. An acid contained in areca-nut, of which arecolin is its methyl ether.

Arecain (*ar-e'-ka-in*). $C_7H_{11}NO_2 + H_2O$. A poisonous teniacidal alkaloid obtained from areca-nut, forming colorless crystals soluble in water, insoluble in alcohol, in ether, and in benzol.

Arecolin. (See Illus. Dict.) **A. Hydrobromate,** $C_8H_{13}NO_2HBr$, white crystals soluble in water and alcohol. It is used as a myotic, applied in 1% solution, and in treatment of glaucoma. In veterinary practice it is used as a cathartic and anthelmintic. Injection for horse, ½–1 gr.

Areflexia (*ar-e-fleks'-e-ah*) [*a*, priv.; *reflectere*, to bend back]. The failure of a reflex; areflexion.

Areflexion. See *Areflexia.*

Arenarious (*ar-e-na'-re-us*) [*arena*, sand]. Growing in sand.

Areniferous (*ar-en-if'-ur-us*) [*arena*, sand; *ferre*, to bear]. Containing sand; contaminated by sand.

Areniform (*ar-en'-e-form*) [*arena*, sand; *forma*, shape]. Like sand.

Areola. (See Illus. Dict.) **A., Chaussier's,** the areola of inflammatory induration of a malignant pustule. **A., Primary,** cell-spaces still containing cartilage cells in the matrix of ossifying cartilage-bone. Syn., *Primary marrow cavities; Medullary spaces.*

Areosis, Aræosis (*ar-e-o'-sis*) [*αραίωσις*]. The process of becoming less compact; dilution.

Argental (*ar-jen'-tal*) [*argentum*, silver]. Containing silver.

Argentamid (*ar-jen'-tam-id*). An antiseptic liquid preparation of silver.

Argentamin (*ar-jen'-tam-in*). A colorless alkaline liquid consisting of an 8% solution of silver phosphate in a 15% aqueous solution of ethylenediamid. It is applied in gonorrhea and conjunctivitis in 1 : 4000 solution. Syn., *Ethylenediamid silver phosphate.*

Argentan (*ar'-jen-tan*). An alloy of copper, 16 parts; zinc, 3–10 parts; nickel, 4–12 parts, with traces of tin, iron, and lead. Syn., *German silver; Packfong.*

Argentate (*ar'-jen-tāt*). A salt of argentic acid.

Argentation. (See Illus. Dict.) 2. The act of silvering. 3. The process of injecting mercury into the vessels of an anatomic specimen. 4. Argyria.

Argentiferous (*ar-jen-tif'-ur-us*) [*argentum*, silver; *ferre*, to bear]. Producing or containing silver.

Argentific (*ar-jen-tif'-ik*) [*argentum*, silver; *facere*, to make]. Transforming into silver.

Argentine. (See Illus. Dict.) 2. A mineral composed of calcium carbonate and silica. 3. Metal coated with silver.

Argentol (*ar'-jen-tol*). $C_9H_5N.OH.SO_3Ag$. Silver quinaseptol, a yellow powder sparingly soluble in water; used as a surgical antiseptic and astringent in ointment 1 : 100 or 2 : 100, in solution 1 : 1000 to 3 : 1000.

Argentous (*ar-jen'-tus*). Containing silver; applied to a compound containing a relatively larger amount of silver than an ordinary silver compound (argentic compound).

Argentum. (See Illus. Dict.) See also *Silver.* **A. colloidale.** See *Silver, Colloidal.* **A. corneum,** horn-silver, silver chlorid. **A. factum,** wrought silver. **A. finum.** See *A. regis.* **A. foliatum,** silver leaf. **A. fugitivum,** quicksilver; mercury. **A. fulminans, A. fulminicum,** fulminating silver. **A. fusum,** 1. Mercury. 2. Fused silver nitrate. **A. purissimum, A. purum,** pure metallic silver. **A. regis,** coin-silver, containing in 24 parts 23 of pure silver. **A. repurgatum,** refined silver. **A. sophisticum,** copper arsenate. **A. vivum,** quicksilver; mercury.

Argil (*ar'-jil*) [*ἀργιλλος*, white clay]. Aluminium oxid.

Argillaceous (*ar-jil-a'-shus*) [*ἀργιλλος*, white clay]. Clay-like; composed of clay.

Arginin (*ar'-jin-in*). $C_6H_{14}N_4O_2$. A highly nitrogenous substance discovered by E. Schultze in etiolated seedlings of lupin, artichoke tubers, and malt acrospire. It resembles creatinin in its chemic character. Syn., *Guanidin a-amido-valeric acid.*

Argon (*ar'-gon*) [*ἀργός*, idle, inactive]. An inert gaseous element discovered in the atmosphere by Lord Rayleigh and Wm. Ramsay (1894). Its symbol is A, atomic weight, 19.7.

Argonin (*ar'-go-nin*). Silver casein.

Argyrescetin, Argyræscetin (*ar-jir-es'-e-tin*). $C_{21}H_{30}O_6$ (?). A dissociation product of argyrescin.

Argyrescin, Argyræscin (*ar-jir-es'-in*) [*ἀργ*ρος, silver; *Æsculus* (*q. v.*)]. $C_{27}H_{42}O_{12}$. A bitter glucosid found by Rochleder in the cotyledons of the horse-chestnut. It is readily soluble in alcohol, acetic acid, and alkalis. It is insoluble in ether and forms a frothy mixture with water.

Argyric (*ar-jir'-ik*) [*ἄργυρος*, silver]. Silvery; relating to silver or its effects; argentic.

Argyrol (*ar'-jir-ol*). A very soluble silver salt obtained by Barnes and Hille (1902) by combining a proteid of wheat with 30% of silver. It is used in gonorrhea. Syn., *Silver vitellin.*

Arhinencephalia. See *Arrhinencephalia.*

Aribin (*ar'-ib-in*). $C_{23}H_{20}N_4$. A bitter, crystalline alkaloid found by Rieth (1861) in arariba bark, from the Brazilian tree *Sickingia rubra.*

Arica Bark. See *Cusco Bark* (Illus. Dict.).

Aricin, Aricina (*ar'-is-in, ar-is'-in-ah*) [*Arica*, a Peruvian province]. An alkaloid discovered by Pelletier (1829) in Arica bark.

Aridura. (See Illus. Dict.) 2. Hectic fever.

Aristocardia (*ar-is-to-kar'-de-ah*) [*ἀριστερός*, left; *καρδία*, heart]. Deviation of the heart to the left s

Aristolochia. (See Illus. Dict.) **A. rotunda,** a species of southern Europe, with offensive odor and bitter taste, employed as an emmenagog and in gout.

Aristophagy (*ar-is-tof'-aj-e*) [*ἄριστος*, best; *οὐ*, eat]. The eating of the best; term proposed by Josiah Oldfield as a substitute for vegetarianism.

Arki. See *Arsa.*

Arkyochrome (*ar'-ke-o-krōm*) [*ἀρκυς*, a net; *χρῶμα*, color]. A somatochrome nerve-cell, in which the stainable portion of the cell-body appears in the form of network.

Arkyostichochrome (*ar-ke-o-stik'-o-krōm*) [*ἀρχ*, net; *στίχος*, a row or rank; *χρῶμα*, a color]. Applied by Nissl to a nerve-cell in which the chromophilic particles of its cell-body present a combination of both the striated (stichochrome) and net (arkyochrome) arrangements, so that it is difficult to decide which dominates; *e. g.*, the Purkinje cell of the cerebral cortex.

Arm. (See Illus. Dict.) **A., Milk,** phlegmasia dolens in the arm.

Arma (*ar'-mah*) [L., arms]. Appendages or elements of an organism serving as a means of defense or any other special purpose. **A. ventris,** the generative organs.

Armagnac (*ar-man-yak'*). A variety of French brandy.

Armamentarium. (See Illus. Dict.) **A. lucinæ,** outfit of obstetric instruments.

Armature. (See Illus. Dict.) 2. Any protective investment of an organism. 3. A condenser.

Armillate (*ar'-mil-āt*) [*armilla*, a bracelet, a ring]. Furnished with rings.

Armipes (*ar'-mip-ēz*) [*arma*, arms; *pes*, the foot]. Having the feet furnished with means of defense; *e. g.*, claws or spines.

Arnatta, Arnatto (*arn-at'-ah, -o*). See *Annotto* (Illus. Dict.).

Aromatize (*ar-o'-mat-īz*) [*ἀρωμα*, spice]. To make aromatic; to spice.

Arophene (*ar'-o-fēn*). A proprietary dental anesthetic.

Arrest. (See Illus. Dict.) 2. A disease of a lung character affecting the hind leg of horses between the gham and postern. **A., Action of,** inhibition (

Arrhenal (*ar'-en-al*). A monomethyl sodium arsenate

recommended in treatment of tuberculosis. Dose, ½ gr. daily.

rrheumatic (*ar-u-mat'-ik*) [*a*, priv.; *ῥεῦμα*, a flux]. Free from a flux or from rheumatism.

rrhinencephalia (*ar-in-en-sef-a'-e-ah*) [*a*, priv.; *ῥίς*, nose; *ἐγκέφαλος*, the brain]. A form of partial anencephalia in which there is malformation of the nose.

rrosion (*ar-o'-shun*) [*arrodere*, to gnaw]. The gnawing or destruction of vessel-walls by ulcerous processes.

rsa [Tartar]. A rectified spirituous liquor made from kumyss. It is called *araca* before it is rectified.

rsenamin (*ar-sen'-am-in*). See *Hydrogen Arsenid.*

rsenate. (See Illus. Dict.) **A., Acid,** a monohydric or dihydric arsenate. **A., Basic,** an arsenate combined with the oxid or hydrate of a base. **A., Dihydric,** 1. An acid arsenate containing 2 atoms of hydrogen. 2. See *Pyroarsenic Acid* (Illus. Dict.). **A., Monohydric,** 1. An acid arsenate containing 1 atom of hydrogen. 2. Metarsenic acid, $HAsO_3$, a crystalline substance obtained from arsenic acid by heating above 200° C. **A., Neutral,** 1. A normal arsenate. 2. A pyroarsenate. **A., Trihydric,** arsenic acid.

rsenauro (*ar-sen-aw'-ro*). A double bromid of gold and arsenic; 10 m contains $\frac{1}{12}$ gr. each of gold and arsenic bromids. It is alterative and tonic. Dose, 5–15 m (0.3–9.9 c.c.) in water 3 times daily.

rsendiethyl (*ar-sen-di-eth'-il*). $As(C_2H_5)_3$. A univalent radicle. **A. Iodid,** $As(C_2H_5)_2I$, an oily yellow liquid, insoluble in water.

rsendimethyl (*ar-sen-di-meth'-il*). See *Cacodyl* (Illus. Dict.).

rsendiphenyl (*ar-sen-di-fen'-il*). $As(C_6H_5)_2$. A univalent or trivalent radicle. **A. Chlorid,** $As(C_6H_5)_2Cl$, an oily liquid. **A. Trichlorid,** a solid, decomposing by water into diphenylarsenic acid.

rsenethyl (*ar-sen-eth'-il*). $As(C_2H_5)$. A bivalent or quadrivalent radicle.

rsenhemol (*ar-sen-hem'-ol*). A compound of hemol and 1% of arsenious acid, forming a brown powder. It is used as a substitute for arsenic as an alterative and hematinic. Dose, 0.1 gm. 3 times daily.

rsenic. (See Illus. Dict.) **2.** Arsenious acid. **3.** Containing arsenic. **A., Butter of.** See *A. Chlorid.* **A. Caseinate,** a soluble arsenic compound for internal administration. **A. Chlorid,** $AsCl_3$, a colorless, oily liquid decomposed by water; sp. gr. 2.205 at 0° C.; boils at 130° C.; soluble in alcohol, ether, and oils. Dose, $\frac{1}{60}$–$\frac{1}{15}$ gr. (0.001–0.004 gm.). Syn., *Butter of arsenic; Chlorid of caustic arsenic.* **A. Disulfid,** As_2S_2, occurs native as realgar, forming orange-yellow rhombic prisms with resinous luster. Syn., *Sandaraca; Red sulfid of arsenic; Red arsenic.* An artificial disulfid of arsenic is prepared in the arsenic works and contains about 15% of arsenic and 27% of sulfur. Syn., *Red arsenic glass; Ruby sulfur; Red orpiment.* **A. Flowers,** a fine white powder formed by the sublimation of arsenious acid. **A. Glass,** term applied to the vitreous mass obtained either by heating arsenical pyrites with sulfurous ores, or by the resublimation of the "flowers of arsenic" obtained by subliming arsenical pyrites. Syn., *White arsenic glass.* **A., Red.** See *A. Disulfid.* **A. Sulfid, Red.** See *A. Disulfid.* **A. Sulfid, Yellow.** See *A. Trisulfid.* **A. Trichlorid.** See *A. Chlorid.* **A., Trioxid, A., White.** See *Acid, Arsenious* (Illus. Dict.). **A. Trisulfid,** As_2S_3, translucent, lemon-colored, rhombic prisms, occurring in nature; sp. gr. 3.46; a corrosive and depilating agent recommended for removal of warts. Syn., *Orpiment; Auri pigmentum; Yellow sulfid of arsenic; Arsenicum* (Pliny); *Arsenii sulfidum citrinum; King's yellow.*

Arsenicalism (*ar-sen'-ik-al-izm*). See *Arsenism* (Illus. Dict.).

Arsenicate (*ar-sen'-ik-āt*). To impregnate with arsenic.

Arseniciasis (*ar-sen-is-i-a'-sis*). See *Arsenism* (Illus. Dict.).

Arsenicophagus (*ar-sen-ik-of'-a-gus*) [*ἀρσενικόν*, arsenic; *φαγεῖν*, to eat]. One addicted to arsenic eating.

Arseniomolybdate (*ar-sen-e-o-mol-ib'-dāt*). A salt of arseniomolybdic acid.

Arseniophosphate (*ar-sen-e-o-fos'-fāt*). A compound of a base with both arsenic and phosphoric acids.

Arseniophthisis (*ar-sen-e-o-tis'-is*). See *Arsenism* (Illus. Dict.).

Arseniotungstate (*ar-sen-e-o-tung'-stāt*). A salt of arseniotungstic acid.

Arsenmethyl (*ar-sen-meth'-il*). $As(CH_3)$. A bivalent or quadrivalent radicle.

Arsenmethylate (*ar-sen-meth'-il-āt*). A salt of arsenmethylic acid.

Arsinyl (*ar'-sin-il*). The proprietary name for disodiummethyl-arsenate, a nontoxic substance allied to cacodyl and free from its garlicky odor. It is said to be a powerful tonic. Dose, ½ gr. twice daily.

Arsitriol (*ar-sit'-re-ol*). A calcium glycerophosphate.

Arsonvalization (*ar-son-val-iz-a'-shun*) [*d'Arsonval*, a French physiologist and physicist]. The therapeutic application of Tesla currents. Syn., *Teslaization.*

Arsycodile (*ar-sik-od'-il-e*). A chemically pure cacodylate of sodium (sodium dimethyl arsenic), a nontoxic salt indicated in emaciating diathesis. Dose, ½ gr. (0.025 gm.) 4 times daily.

Artanitin (*ar-tan'-it-in*). See *Cyclamin.*

Artar Root (*ar'-tar root*). A drug from west Africa, probably the root of *Xanthoxylum senegalense.*

Artarin (*ar'-tar-in*). An alkaloid, $C_{20}H_{17}NO_4$, from artar root; it is a cardiac stimulant, with action similar to veratrin.

Artate (*ar'-tāt*) [*artāre*, to compress]. Constricted, compressed.

Artemisia. (See Illus. Dict.) **A. abyssinica,** an African species yielding the drug *zerechtit,* applied to relieve cramps in the final stages of malaria. **A. arborescens,** L., of southern Europe, is stomachic and tonic, and is used as *A. absinthium.* **A. chinensis,** L., of Asia, is employed by the Chinese as a tonic and emmenagog, and the down covering the leaf-surface in the preparation of moxa. **A. frigida,** Willd., wild sage, mountain sage, sierra salvia. An herb of western United States introduced as a substitute for quinin in the treatment of periodic fevers. Also of service in diphtheria, rheumatism, and scarlet fever. Dose, of the fluid extract, ʒj–ij. Unof. **A. mexicana,** Willd., an American species, is said to be a stimulant, emmenagog, and anthelmintic. **A. pontica,** L., Roman wormwood, a perennial growing in Europe and Asia, has a pleasant odor and taste and is used as a tonic and stimulant; it is burned in Egypt during the plague to ward off contagion. **A. santonica,** L., a species of Persia and Tartary, a variety of wormseed sometimes imported from Russia. **A. spicata,** an Alpine species with strong aromatic properties. **A. tridentata,** Nutt., sage-brush, a shrub of the elevated portion of western North America, containing a pungent volatile oil. It is diaphoretic and stimulant. The Indians use an infusion of the plant as remedial for colds and headache and as a vermifuge. **A. trifida,** Nutt., a kind of sage-brush found in the valleys of Utah and Wyoming, with properties similar to *A. tridentata.*

Artereurysm (*ar-ter'-u-rizm*). See *Aneurysm* (Illus. Dict.).

Arteriasis (*ar-te-ri-a'-sis*) [ἀρτηρία, an artery]. Degeneration of an artery; it may be either calcareous or fatty.

Arteriitis (*ar-te-re-i'-tis*). See *Arteritis*.

Arteriochalasis (*ar-te-re-o-kal-a'-sis*) [ἀρτηρία, artery; χάλασις, a slackening]. Arterial atony.

Arteriodialysis (*ar-te-re-o-di-al'-is-is*) [ἀρτηρία, artery; διάλυσις, dissolution]. Attenuation of the arterial walls with or without rupture.

Arteriodiastasis. (See Illus. Dict.) 2. See *Arteriectopia* (Illus. Dict.). 3. The divergence of two arteries that lie near each other normally.

Arteriodiplopiesmus (*ar-te-re-o-dip-lo-pi-ez'-mus*) [ἀρτηρία, artery; διπλόος, twofold; πιεσμός, pressure]. D'Etiolles' procedure for obtaining rapid coagulation of the blood in that part of an artery lying between two points upon which simultaneous pressure is made.

Arterioid (*ar-te'-re-oid*) [ἀρτηρια, artery; εἶδος, likeness]. Resembling an artery.

Arteriolith (*ar-te'-re-o-lith*) [ἀρτηρία, artery; λίθος, stone]. A calculus in an artery from calcification of a thrombus.

Arteriomalacosis (*ar-te-re-o-mal-ak-o'-sis*). See *Arteriomalacia* (Illus. Dict.).

Arteriometer (*ar-te-re-om'-et-ur*) [ἀρτηρία, artery; μέτρον, measure]. An instrument for measuring the changes in the caliber of a pulsating artery.

Arteriopalmus (*ar-te-re-o-pal'-mus*) [ἀρτήρία, artery; παλμός, palpitation]. Throbbing of the arteries.

Arterioperissia, Arterioperittia (*ar-te-re-o-per-is'-e-ah, -it'-e-ah*) [ἀρτηρία, an artery; περισσός, excessive]. Abnormal or excessive arterial development. Syn., *Peritarteria; Perrissoarteria.*

Arteriopituitous (*ar-te-re-o-pit-u'-it-us*) [*arteria*, artery; *pituita*, mucus]. Applied to the blood-vessels of the nasal passages.

Arterioplegmus (*ar-te-re-o-pleg'-mus*) [ἀρτηρία, an artery; πλέγμα, anything twined or plaited]. Perplication.

Arterioploce (*ar-te-re-op'-lo-se*) [ἀρτηρία, an artery; πλοκή, twining]. Perplication.

Arteriorrhaphy. See *Operation, Matas'*.

Arterioscenographia (*ar-te-re-o-sen-o-graf'-e-ah*) [ἀρτηρία, an artery; σκηνογραφία, the art of scene painting]. Delineation of arteries.

Arteriosteogenesis (*ar-te-re-o-ste-o-jen'-e-sis*) [ἀρτηρία, an artery; ὀστέον, a bone; γένεσις, production]. Calcification of an artery.

Arteriosteosis, Arteriostosis (*ar-te-re-os-te-o'-sis, ar-te-re-os-to'-sis*). See *Arteriosteogenesis.*

Arteriotrepsis (*ar-te-re-o-trep'-sis*) [ἀρτηρία, an artery; τρέψις, torsion]. See *Arteriostrepsis* (Illus. Dict.).

Arteritis. (See Illus. Dict.) 2. Inflammation of the external coat of an artery. **A. syphilitica,** endarteritis deformans caused by syphilis. **A. umbilicalis,** septic inflammation of the umbilical arteries in the newborn.

Arteriversion (*ar-te-re-vur'-shun*) [*arteria*, an artery; *vertere*, to turn]. The correct term for *aerterioversion.*

Artery. (See Illus. Dict.) **A., Abdominal.** See *A., Circumflex Iliac, Deep* (Illus. Dict.). **A., Abdominal, External or Subcutaneous.** 1. See *A. Epigastric, Superficial* (Illus. Dict.). 2. See *A., Pudic, External or Superior* (Illus. Dict.). **A., Abdominal, Posterior.** See *A., Epigastric, Deep* (Illus. Dict.). **A., Acetabular,** a branch of the internal circumflex artery distributed to the hip-joint. **A., Alar.** 1. See *A., Alar, Thoracic* (Illus. Dict.). 2. See *A., Axillary.* **A.s, Allantoic.** See *A., Umbilical* (Illus. Dict.). **A., Alveolar, Inferior.** See *A., Mandibular* (Illus. Dict.). **A., Alveolar, Posterior.** See *A., Dental, Posterior* (Illus. Dict.). **A., Alveolar, Superior.** See *A., Dental, Superior* (Illus. Dict.). **A.s, Anastomotic,** those which connect other arteries more or less remote from each other **A., Anastomotic** (of the thigh). See *Anastomotica magna* (of superficial femoral) (Illus. Dict.). **A., Anastomotic, Transverse,** a division of the anterior peroneal artery which anastomoses with a branch of the posterior tibial artery. **A., Anastomotica magna** (of the thumb), a branch of the radial artery running between the metacarpal bone of the thumb and the muscles lying over it and branching into the palmar collateral arteries. **A., Anonymous.** See *A., Innominate* (Illus. Dict.). **A., Aortic Uterine,** a branch of the abdominal aorta, which arises a little below the renal artery, descends upon the psoas muscle; is distributed to the ovary, the oviduct, and the side of the uterus, and anastomoses with the hypogastric uterine artery. It is the internal spermatic artery of the female. Syn., *A., Uteroovarian.* **A., Apoplectic,** the carotid artery. **A.s, Articular** (of the arm). See *A., Circumflex, Anterior* and *Posterior* (of axillary) (Illus. Dict.). **A., Articular** (of the head of the fibula), a branch of the anterior tibial artery, extending beneath the fibula to the tibiofibular articulation; it is covered by the origins of the peroneus longus and extensor digitorum muscles. **A., Articular** (of the maxilla), a branch of the superficial temporal artery, distributing a twig to the temporomaxillary articulation and others which enter the ear with the facial nerve. **A.s, Articular, Inferior** (of the knee), the internal and external articular arteries of the knee. **A., Articular, Inferior External** (of the knee), the branch of the popliteal artery anastomosing with the other articular arteries, at the forepart of the knee joint. It passes beneath the outer head of the gastrocnemius muscle, the external lateral ligament of the knee, and the tendon of the biceps femoralis muscle, and rests upon the external semilunar cartilage. **Articular, Inferior Internal** (of the knee), a branch of the popliteal artery distributed to the outer part of the knee and connecting with the other articular arteries of the knee after running downward and inward along the upper border of the popliteus muscle. **A., Articular, Middle** (of the elbow), a small division of the ulnar artery, and sometimes of the radial, extending to the radioulnar orbicular ligament. **A., Atloidomuscular,** in veterinary anatomy an inconstant branch of the occipital artery, given off beneath the transverse process of the atlas and distributed to the surrounding parts. **A., Auditory, Internal,** a division of the first part of the internal maxillary artery; it enters the tympanum by the Glaserian fissure and is distributed to the tympanum. **A., Auricular, Anterior,** a varying number of branches of the temporal artery, distributed to the anterior portion of the auricle, the lobule, and to a portion of the external meatus, and connecting with branches of the posterior auricular. **A., Azygos** (of the tongue), a small artery formed by the junction of branches of the dorsal arteries of the tongue; it extends along the median line of the dorsum of the tongue. **A., Brachial, Common.** See *A., Subclavian* (Illus. Dict.). **A., Brachial, Deep.** See *A., Circumflex, Posterior* (of the axillary) (Illus. Dict.). **A.s, Bronchial, Anterior,** branches of the internal mammary artery supplying the bronchi. **A.s, Bronchial, Inferior Posterior,** branches of the thoracic aorta distributed to the bronchi. **A.s, Bronchial, Left,** two branches given off by the left side of the thoracic aorta supplying the dorsal surface of the left bronchus and

ne tissue of the left lung. They are called the upper nd lower or superior and inferior left bronchial arteries. **A., Bronchial, Right,** a branch of the aortic inter- ostal artery; or, in common with the upper left ronchial, of the thoracic aorta. It is distributed to ne right lung. **A., Bronchial, Superior.** See *A., Bronchial, Anterior* (Illus. Dict.). **A., Bron- hoesophageal,** in veterinary anatomy a branch of ne posterior aorta given off to the right of the first ntercostal arteries and extending forward to the bifur- ation of the trachea, between the aorta and the esoph- gus, where its division makes the bronchial arteries. ., **Bulbourethral,** a branch of the artery of the enis or of the artery of the cavernosum distributed to ne bulb of the urethra. **A., Cardiac, Left.** See *A., oronary, Left* (Illus. Dict.). **A., Cardiac, Right.** ee *Artery, Coronary, Right;* and *A., Pyloric* (Illus. ict.). **A.s, Carpal, Dorsal,** the posterior radio- rpal and posterior ulnocarpal arteries. **A. of the avernous Sinus, Posterior,** a branch of the internal rotid artery given off within the carotid canal and pplying the posterior clinoid process, the fourth, fth, and sixth cranial nerves, and the adjacent dura. .s, **Cecal,** in veterinary anatomy branches of the great esenteric artery distributed to the walls of the cecum. .s, **Central System of,** Heubner's and Duret's rm for the primary or secondary branches of the rcle of Willis; they are distributed to the central nglions of the brain. **A., Cerebellar, Inferior osterior,** a branch of the vertebral or of the basilar tery, originates near the pons, extends backward and utward to the forepart of the vallecula, and there ivides, distributing to the lower and back portion of ne cerebellum. **A., Cerebral, Anterior Middle.** ee *A., Termatic* (Illus. Dict.). **A., Cerebrospinal,** n veterinary anatomy one of the end-branches of the ccipital artery; it passes into the spinal canal by the nterior foramen of the atlas and forms two branches, ne anterior one of which united with its fellow of the pposite side forms the basilar artery, and the posterior ne joining in a similar manner makes the anterior edian spinal artery. **A., Cervical.** (See Illus. Dict.) See *A., Basilar* (Illus. Dict.). **A., Cervical, osterior,** a branch of the cervicoscapular artery hich connects with the superficial cervical artery nd supplies the levator anguli scapulæ and the lenius colli muscles. **A., Cervical, Superior, A., ervicomuscular,** in veterinary anatomy a branch of ne axillary artery supplying the first intercostal space nd the lower cervical muscles. **A., Cervicoscap- lar.** See *A., Cervical, Transverse* (Illus. Dict.). ., **Charcot's,** the artery of cerebral hemorrhage, ne of the lenticulostriate arteries that passes through ne outer part of the putamen. **A.s, Choroid, Su- erior Anterior,** branches of the posterior cerebral rtery distributed to the choroid plexus. **A., Choroid, uperior Posterior,** a branch of the superior cere- ellar artery which connects with the anterior choroid rteries. It is distributed to the valve of Vieussens, ne epiphysis, and the quadrigeminal bodies. **A., ircumflex** (of the coronary cushion), a superficial ascular arch around the coronet of the horse's hoof, ade up of the anterior branches of the coronary rcle. **A., Circumflex** (of the heart), the dorsal anch of the left coronary artery of the heart dis- ibuted to its dorsal surfaces. **A., Circumflex, In- erior** (of the foot), a loop of the preplantar artery of ne horse's foot; it sends off several small branches the villous tissue of the foot. **A., Circumflex, capular,** a division of the subscapular artery, passing etween the subscapularis and teres muscles to the nfraspinous fossa of the scapula. **A., Coccygeal, Lateral,** in veterinary anatomy the continuation of the lateral sacral artery extending along each side of the sacrum. **A., Coccygeal, Middle,** in veterinary anat- omy that branch of the sacral artery which passes along the inferior surface of the caudal vertebras, between the two depressor muscles, to the extremity of the tail. **A.s, Cohnheim's Terminal,** terminal arteries without anastomoses. **A., Colic, Direct,** in veterinary anatomy a branch of the superior mesenteric artery extending along the colon; unites with the retro- grade colic artery and forms an arterial arch. **A., Colic, Posterior,** in the horse an artery extending along the free margin of the colon. **A., Colic, Retro- grade,** in veterinary anatomy that branch of the superior mesenteric artery which ascends the colon and anastomoses with the direct colic artery. **A., Colic, Superior.** See *A., Colic, Middle* (Illus. Dict.). **A., Colic, Superior Right.** See *A., Colic Right* (Illus. Dict.). **A., Collateral** (of the cannon). See *A., Metatarsopedal.* **A.s, Collateral** (of the knee), the articular arteries of the knee. **A., Collateral, Deep, A., Collateral, Radial, Anterior,** a branch of the pro- funda radial artery accompanying the upper part of the radial nerve for a short distance and distributed to the back part of the arm. **A., Collateral, External.** See *A., Radial Profunda* (Illus. Dict.). **A., Col- lateral, External** (of the arm). See *A. profunda superior* (Illus. Dict.). **A., Collateral, Great.** See *A. profunda superior* (Illus. Dict.). **A., Collateral, Internal.** See *A. profunda inferior* (Illus. Dict.). **A., Collateral, Middle,** a division of the superior profunda artery of the arm supplying the triceps muscle. **A., Collateral, Superior External** (of the knee). See *A., Articulator, Superior External* (of the knee) (Illus. Dict.). **A., Communicating,** one establishing communication between two arteries. **A., Communicating, Anterior** (of the brain), one uniting the anterior cerebral arteries at the entrance of longitudinal fissure of the brain. **A., Communi- cating, Inferior** (of the foot), in the horse any one of the several branches of the plantar arch. **A.-con- strictor,** an instrument for compressing an artery. **A., Coracoradial,** in veterinary anatomy a division of the humeral artery running to the biceps muscle. **A. of the Corpora quadrigemina, Middle,** a branch of the dorsal cerebral artery terminating in fine divisions in the quadrigeminal space. **A.s of the Corpus striatum, External.** See *A., Lenticulostriate* (Illus. Dict.). **A.s, Cortical System of,** Heubner and Duret's term for the arteries distributed to the cerebral cortex and the parts immediately beneath it. **A., Crotaphite.** See *A., Temporal* (Illus. Dict.). **A.s, Curling** (of the placenta), twisted ramifications of the umbilical arteries supplying the surface of the placenta. **A.s, Digital, Collateral,** those extending along the margins of the fingers and toes. **A.s, Digital, Dorsal,** 1. Divisions of the dorsal interosseous arteries of the foot distributed to the sides of the dorsum of the toes. 2. The dorsalis pollicis, the dorsalis indicis, and the divisions of the interosseous arteries of the hand dis- tributed to the sides of the dorsum of the fingers. **A.s, Digitofibular,** the digital arteries on the fibular side of the toes. **A.s, Digitoradial,** the digital arteries on the radial side of the fingers. **A.s, Digitotibial,** the digital arteries on the tibial side of the toes. **A.s, Digitoulnar,** the digital arteries on the ulnar side of the fingers. **A., Dorsal** (of the clitoris), one of the end-branches of the internal pudic artery of the female; it is distributed to the glans and prepuce of the clitoris. **A., Dorsal** (of the little toe), a branch of the dorsalis pedis or the metatarsal artery given off on the fibular side of the dorsum of the little toe. **A., Dorsal** (of

the nose), a branch of the internal maxillary or of the ophthalmic artery extending down from the internal angle of the eye on the dorsal aspect of the nose. **A., Dorsal, Inner** (of the thumb), a branch of the radial artery which is given off opposite to the base of the metacarpal bone of the thumb; it supplies the radial side of the dorsum of the thumb. **A., Dorsal, Posterior** (of the penis), in veterinary anatomy the analog of the dorsal artery of the penis in man. **A.s, Dorsocarpal.** See *A.s, Carpal, Dorsal.* **A.s, Dorsointerosseous.** See *A., Interosseous, Dorsal* (Illus. Dict.). **A.s, Dorsoradial,** the dorsal digital arteries on the radial side of the fingers. **A., Dorsoulnar,** the dorsal digital arteries on the ulnar aspect of the fingers. **A., Esophageal Aortic,** branches of the thoracic aorta distributed to the esophagus, pericardium, and pleura. **A., Externoarticular, Superior.** See *A., Articular, Superior External* (Illus. Dict.). **A., Femoropopliteal,** in veterinary anatomy a branch of the popliteal artery distributed to the dorsum of the leg and thigh. **A.-forceps,** a hemostat. **A., Frontal,** a branch of the ophthalmic artery; it ascends the inner part of the orbital arch and supplies the periosteum, muscles, and integument of the middle forehead. **A.s, Frontal, External and Inferior,** a division of the middle cerebral artery; it is distributed to the outer third of the lower surface of the third frontal gyrus. **A.s, Frontal, Posterior and Internal,** branches of the anterior cerebral artery distributed over the precuneus. **A., Funicular.** (See Illus. Dict.) 2. See *A., Deferential;* and *A., Spermatic, External* (Illus. Dict.). **A., Gastric, Great, Left.** See *A., Gastric* (Illus. Dict.). **A., Gastric, Left.** See *A., Gastroepiploic, Left* (Illus. Dict.). **A., Gastrohepatic, Superior.** See *A., Gastric* (Illus. Dict.). **A.s, Gastroomental,** the right and left gastroepiploic arteries. **A.s, Gill-arch,** the aortic arches. **A., Glossofacial.** See *A., Facial* (Illus. Dict.). **A., Guttural, Inferior.** See *A., Thyroid, Inferior* (Illus. Dict.). **A., Hepatic, Biliary.** See *A., Hepatic, Right* (Illus. Dict.). **A., Hepatic, Left,** a right-angled branch of the hepatic artery, entering the liver at the left end of the transverse fissure; it gives off branches to the Spigelian lobe. **A., Humeral, Deep,** in veterinary anatomy a branch of the brachial artery supplying the extensor muscles of the front leg and the parts adjacent to the olecranon. **A., Hypogastric, Uterine.** See *A., Uterine* (Illus. Dict.). **A., Iliac, Posterior.** See *A., Gluteal* (Illus. Dict.). **A., Iliacofemoral,** 1. In veterinary anatomy, a branch of the internal iliac artery supplying the muscles of the dorsum of the thigh. 2. In the plural, applied to some insignificant rami of the obturator artery in man. **A., Iliomuscular.** See *A., Iliolumbar* (Illus. Dict.). **A.s, Intercostal, Collateral,** the rami of the aortic intercostal arteries lying on the superior margins of the ribs. **A., Internoarticular, Superior.** See *A., Articular, Superior Internal* (Illus. Dict.). **A., Interosseous, First Dorsal** (of the foot). See *A. dorsalis hallucis* (Illus. Dict.). **A., Ischiadic.** (See Illus. Dict.) 2. A branch of the lateral sacral artery, which occurs in some quadrupeds; it passes under the upper part of the vastus longus muscle and supplies the ischiotibial muscles. **A., Ischioclitorian.** See *A. of the Clitoris* (Illus. Dict.). **A.s, Laminal, Anterior,** in the horse, divisions of the plantar arch ascending into the laminar tissue. **A., Maxillomuscular,** in veterinary anatomy a branch of the external carotid artery supplying the internal pterygoid and masseter muscles. **A., Mediocolic.** See *A., Colic, Middle* (Illus. Dict.). **A.s, Medullary,** 1. Those supplying the medullary substance of the brain. 2. The nutrient arteries. **A., Mesenteric, Great,** in veterinary anatomy the analog of the superior mesenteric artery in man. **A., Mesenteric, Small,** in veterinary anatomy a branch of the abdominal aorta supplying the lower part of the colon and rectum. **A., Mesentericoduodenal.** See *A., Pancreaticoduodenal, Inferior* (Illus. Dict.). **A.s, Metacarpal, Interosseous, Posterior,** in veterinary anatomy two branches of the radiopalmar artery supplying the posterior parts of the metacarpus. **A., Metatarsopedal,** in ungulates one of the two terminal branches of the pedal artery; it follows the metatarsus and divides into the collateral arteries of the digits. **A., Muscular, Great Anterior** (of the thigh). See *A., Femoral, Superficial* (Illus. Dict.). **A., Muscular, Great Posterior** (of the thigh). See *A., Femoral, Deep* (Illus. Dict.). **A., Muscular Superficial** (of the thigh), a branch of the femoral artery supplying the muscles of the dorsum of the thigh. **A., Nasal, Lateral, Great.** See *A., Sphenopalatine* (Illus. Dict.). **A., Nutrient** (of the fibula), a small branch of the peroneal artery distributed to the fibula. **A., Nutrient, Inferior** (of the femur), a branch of the third perforating artery of the thigh, entering the femur above the middle. **A., Occipital.** (See Illus. Dict.) 2. A branch of the posterior cerebral artery distributed to the occipital gyri and surrounding part. **A., Occipital, Retrograde.** See *A., Atloidomuscular.* **A., Occipitodorsal,** a branch of the cervicopulmonary artery supplying the dorsal pectoral and the lateral cranial regions in the toad. **A., Occipitomuscular,** in many of the lower animals one of the terminal branches of the occipital artery supplying the occiput. **A., Optic, External Dorsal,** a division of the posterior cerebral artery ascending through the substance of the crus and distributed to the adjacent part of the thalamus. **A., Palatine, Anterior,** the continuation of the pterygopalatine artery distributed to the anterior pillars of the fauces and the adjacent gums. **A., Palatolabial.** See *A., Facial;* and *A., Palatine, Superior* (Illus. Dict.). **A.s, Palpebral, Internal,** the palpebral branches given off by the ophthalmic artery. **A., Parietal, Middle,** that branch of the middle cerebral artery which, ascending the fissure of Rolando, is distributed to its convolutions and at times to the anterior portion of the first parietal gyrus. **A., Parietal, Posterior,** a branch of the middle cerebral artery supplying the inferior parietal and first temporal gyri. **A.s, Perforating, Anterior** (of the foot), inconstant communicating branches between the dorsal digital arteries of the foot and the plantar arch. **A., Perforating, First** (of the thigh), a branch of the deep femoral artery which arises at the lower border of the pectineus muscle, perforates the adductor brevis and magnus muscles, to which it gives off branches; it is distributed to the semitendinosus, semimembranosus, and the gluteus maximus muscles. **A., Perforating, Fourth** (of the thigh), a division of the deep femoral artery supplying the short head of the biceps muscle. **A.s, Perforating, Inferior** (of the hand), branches of the dorsal interosseous arteries connecting them with the palmar digital arteries. **A., Perforating, Middle** (of the thigh). See *A., Perforating, Second* (of the thigh). **A., Perforating, Second** (of the thigh), that branch of the deep femoral artery which arises just below the lower border of the pectineus muscle and which after perforating the adductor magnus and longus muscles supplies the muscles of the posterior portion of the thigh. Also called *Middle perforating artery of the thigh.* **A., Perforating, Superior** (of the hand), the three branches of the palmar arch which, passing through the

part of the three inner interosseous spaces of the hand, anastomose with the dorsal interosseous arteries. **A., Perforating, Superior** (of the thigh). See *A., Perforating, First* (of the thigh). **A., Perforating, Third** (of the thigh), that branch of the deep femoral which is distributed to the adductor magnus muscle. Also called *Inferior perforating artery of the thigh.* **A.s, Pericardiacophrenic,** the pericardiac divisions of the internal mammary artery connecting with sternal ramifications of the same artery and with branches of the superior phrenic, bronchial, and intercostal arteries to form the subpleural mediastinal plexus. **A., Perephalic.** See *A., Carotid, External* (Illus. Dict.). **A., Perineal.** 1. Same as *A., Perineal, Superficial,* the trunk from which the superficial and transverse perineal arteries have their origin. 2. See *A. of the Corpus cavernosum* (Illus. Dict.). **A., Perineal, Deep.** See *A. of the Corpus cavernosum* (Illus. Dict.). **A., Placental.** See *Vein, Umbilical* (Illus. Dict.). **A., Plantar, Superficial.** See *A., Metatarsal.* **A., Pollicar.** See *A. princeps pollicis* (Illus. Dict.). **A., Popliteal Articular,** the articular arteries of the knee. **A., Postcribral.** See *A., Perforating, Posterior* (Illus. Dict.). **A., Precribral.** See *A., Perforating Anterior* (Illus. Dict.). **A., Prehumeral,** in veterinary anatomy that branch of the brachial artery which descends between the heads of the coracohumeral muscle and supplies the mastoidohumeral and other muscles of the shoulder-joint. **A., Preplantar, A., Preplantar Ungual,** in veterinary anatomy that branch of the digital artery which descends through the preplantar fissure, and supplies the bulb of the heel and the villous and laminal tissues of the foot. **A., Prepubic,** in veterinary anatomy that branch of the external iliac or femoral artery which, after passing through the crural ring, is divided into two branches. They are the analogs of the superficial epigastric, the epigastric, and external pudic arteries of man. **A., Prevertebral,** in veterinary anatomy that branch of the occipital artery which is distributed to the meninges and to the rotator muscles of the head. **A., Pudic, External, Middle,** an inconstant branch of the superficial epigastric artery distributed to the integument of the lower part of the abdomen, to the scrotum of the male, and the labia of the female. **A., Pudic, Subcutaneous External.** See *A., Pudic, External Superior* (Illus. Dict.). **A., Pudic, Superficial,** the superior external pudic artery. **A., Radiocarpal.** See *A., Radial Carpal* **A.s, Retinal,** the central artery of the retina and the upper and lower arteries on the nasal side and on the temporal side of the optic nerve. **A., Rough,** the trachea; a term used by Fabricius and other writers of the Middle Ages. Syn., *Arteria aspera.* **A., Sacral, Anterior.** See *A., Sacral, Middle* (Illus. Dict.). **A.s, Sacrolateral.** See *A., Sacral, Lateral* (Illus. Dict.) **A., Sacromedian.** See *A., Sacral, Middle* (Illus. Dict.). **A., Saphena,** in veterinary anatomy that branch of the femoral artery which descends the leg along with the saphenous vein, and which supplies the hollow of the back and the integumental tissues of the anterior lower third of the leg. **A., Saphenous, Great.** See *A., Saphenous* (Illus. Dict.). **A., Scapular, Common.** See *A., Subscapular* (1) (Illus. Dict.). **A., Scrotal, Anterior.** (See Illus. Dict.) 2. The end of the inferior external pudic artery on the ventral part of the scrotum. **A.s, Segmental,** arteries distributed to the embryonic segments. **A. of the Septum narium,** 1. The nasopalatine artery. 2. A branch of the coronary artery of the upper lip distributed to the nasal septum. **A., Spermatic, Internal.** In the male it is the spermatic artery proper; in the female it is the aortic uterine artery (*q. v.*). **A., Spinal, Dorsal.** See *A., Spinal, Posterior* (Illus. Dict.). **A., Spinal, Ventral.** See *A., Spinal., Anterior* (Illus. Dict.). **A.s, Spiral.** See *A.s, Uteroplacental* (Illus. Dict.). **A.s, Straight** (of the kidney), those branches of the renal artery which, arising at the bases of the pyramids of Malpighi, terminate at their apices in venous plexuses. **A., Subaponeurotic External Pudic.** See *A., Pudic, External, Deep* (Illus. Dict.). **A.s, Subpontine,** branches of the basilar artery to the pons. **A., Subzygomatic,** in veterinary anatomy a branch of the external carotid artery, supplying the masseter muscle. **A., Superficial** (of the abdomen). See *A., Pudic, External, Superficial* (Illus. Dict.). **A., Suprarenal, Aortic.** See *A., Capsular* (Illus. Dict.). **A., Sural, Superficial,** branches of the sural arteries supplying the integument of the calf of the leg. **A., Sylvian,** the middle cerebral artery. **A., Tarsal, Transverse,** the internal and external tarsal arteries taken together. **A., Thyroid, Accessory,** in veterinary anatomy the analog of the middle thyroid artery in human beings. **A., Tympanic, Anterior.** See *A., Auditory, External.* **A.s, Ulnar, Digital,** any or all of the digital arteries on the ulnar sides of the fingers. **A., Ulnar profunda** (of the hand), the deep terminal portion of the ulnar artery just before the formation of the superficial palmar arch. **A., Ulnocarpal, Posterior,** that branch of the ulnar artery extending across the back of the wrist, and, uniting with a similar branch of the radial artery, aids in forming the posterior carpal arch. **A.s, Umbilicofetal,** those arteries of the fetus which convey fetal blood through the umbilical cord to the chorionic villi of the placenta; they arise from the hypogastric arteries. **A., Urethral.** See *A. of the Bulb* (Illus. Dict.). **A., Uterine, Aortic, A., Uteroovarian.** Same as *A., Aortic Uterine.* **A. of the Vas deferens.** See *A., Deferential* (Illus. Dict.). **A.s, Vertebral, Inferior,** the embryonic aortic arches. **A., Volar** (of the little finger), that branch of the superficial palmar arch of the ulnar artery which passes to the radial side of the palmar surface of the little finger. **A.s, Volar Digital.** See *A.s, Volar Radial,* and *A., Volar Ulnar.* **A.s, Volar Interosseal.** See *A., Interosseous, Palmar* (Illus. Dict.). **A.s, Volar Perforant, Inferior,** the inferior perforating arteries of the hand. **A.s, Volar Radial,** all or any of the digital arteries on the radial side of the palmar surface of the fingers. **A., Volar Ulnar** (of the little finger), that branch of the deep palmar arch or of the ulnar artery which passes to the ulnar side of the palmar surface of the little finger. **A., Zinn's,** the central artery of the retina.

Arthanita (*ar-than-it'-ah*) [L.]. The plant *Cyclamen europæum* and also an ointment from it.

Arthanitin (*ar-than'-it-in*). See *Cyclamin.*

Arthragrosis (*ar-thrag-ro'-sis*) [ἄρθρον, a joint; ἄγρα, seizure (pl., *arthragroses*)]. Gout. In the plural, gouty disorders affecting the skin.

Arthralgia. (See Illus. Dict.) Syn., *Arthroneuralgia; Articular neuralgia.* **A. saturnina,** pain in the joints and rigidity and cramps in the approximate muscles; it is symptomatic of lead-poisoning.

Arthrectasia, Arthrectasis (*ar-threk-ta'-ze-ah, ar-threk-ta'-sis*) [ἄρθρον, a joint; ἔκτασις, dilation]. Dilation of a joint-cavity.

Arthredema, Arthrœdema (*ar-thred'-e-mah*) [ἄρθρον, a joint; οἴδημα, a swelling tumor]. Edema affecting a joint.

Arthremphyte (*ar-threm'-fīt*) [ἄρθρον, joint; ἐν, in; φύειν, to grow]. See *Arthrolith.*

Arthrentasis (*ar-thren-ta'-sis*) [ἄρθρον, a limb; ἔντασις, a stretching]. Distortion of the limbs due to gout.

Arthric (*ar'-thrik*) [ἄρθρον, a joint]. Pertaining to a joint.

Arthrifluent (*ar-thri-flu'-ent*) [ἄρθρον, a joint; *fluere*, to flow]. Applied to abscesses proceeding from a diseased joint.

Arthritic. (See Illus. Dict.) 2. Relating to a joint.

Arthritis. (See Illus. Dict.) **A. aberrans,** retrocedent gout. **A., Acute,** acute joint-inflammation, particularly that due to gout. Syn., *A. vera.* **A., Acute Serous,** acute synovitis. **A. alba.** See *Enteritis, Pseudomembranous* (Illus. Dict.). **A. americana.** See *Frambesia* (Illus. Dict.). **A. arthrodynia,** gout. **A., Asthenic, A., Atonic.** See *Gout, Atonic.* **A. asthmatica,** a form observed in elderly persons subject to asthma, and mitigated by an attack of the latter. **A., Atrophic.** Synonym of *Charcot's Joint Disease.* **A., Atypic,** gout deviating from the normal course. Syn., *Anomalous arthritis.* **A., Blennorrhagic,** gonorrheal rheumatism. **A. calida,** acute arthritis. **A., Chronic,** a form in which the joints are not so much affected as are other parts of the body. **A., Chronic Atrophic.** Synonym of *Charcot's Joint Disease.* **A., Chronic Rheumatic** (Adams). See *Osteoarthritis* (Illus. Dict.). **A., Chronic Strumous.** See *A. fungosa* (Illus. Dict.). **A., Diaphragmatic,** angina pectoris. **A., Dry.** See *Osteoarthritis* (Illus. Dict.). **A., Erratic,** retrocedent or metastatic gout. **A. febricosa,** a mild form attending remittent fever. **A. febrisequa,** a form occurring as the sequel of a fever. **A. fixa,** that confined to the joint first attacked. **A. frigida.** See *A., Chronic.* **A., Gelatinous.** See *A. fungosa* (Illus. Dict.). **A., Gonorrheal,** gonorrheal synovitis. **A. hiemalis,** winter gout, a form occurring less frequently in summer than in other seasons. **A. hydrarthros.** See *Hydrarthros* (Illus. Dict.). **A., Internal.** See *A., Visceral.* **A., Intervertebral.** See *Spondylarthritis* (Illus. Dict.). **A. ischias,** gout in the hip. **A. larvata, A., Latent,** a masked form not manifested by the usual symptoms. **A. maxillaris,** rheumatoid arthritis of the temporomaxillary joint. **A., Melancholic,** a mild form due to debility. **A.. Metastatic, Retrograde,** retrocedent gout. **A. nodosa.** See *Osteoarthritis* (Illus. Dict.). **A. planetica,** retrocedent gout. **A. podagra,** gout in the feet. **A., Retrograde,** suppressed gout. **A. rheumatismo superveniens.** See *Osteoarthritis* (Illus. Dict.). **A. sicca, Arthrite sèche** [Fr.]. See *Osteoarthritis* (Illus. Dict.). **A., Strumous.** See *A. fungosa* (Illus. Dict.). **A., Subdiarthrodial,** a form of fungous arthritis in which fleshy granulations occur between the bone and the cartilage of the joint. **A., Suppurative,** arthritis attended with purulent joint infiltration; purulent arthritis. Syn., *Abscessus articuli.* **A. syphilitica,** gonorrheal rheumatism; also the nocturnal pains of syphilis. **A. tabidorum atrophica.** Synonym of *Charcot's Joint Disease.* **A., Tuberculous,** tuberculosis of a joint. **A. typica,** acute arthritis. **A., Uratic.** See *A. urica.* **A., Urethral,** gonorrheal rheumatism. **A. urica,** gout attributed to excessive formation of uric acid. Syn., *A. uratica; Panarthritis urica; Uarthritis.* **A. vaga,** metastatic or retrocedent gout. **A. venerea.** See *A. syphilitica.* **A. vera.** See *A., Acute.* **A. vertebralis,** a breakdown of the intervertebral disks. **A., Visceral,** gout affecting an internal organ, with alternating attacks in the joints.

Arthritolith (*ar-thrit'-o-lith*). See *Artholith.*

Arthroarctia (*ar-thro-ark'-te-ah*). See *Arthrostenosis.*

Arthrobacterium (*ar-thro-bak-te'-re-um*) [ἄρθρον, joint; *Bacterium*]. A bacterium forming arthrospores. See *Bacteria, Table of* (Illus. Dict.).

Arthrocace. (See Illus. Dict.) **A. agniculorum** a disease observed in lambs, pigs, calves, and co soon after birth and attributed to blood-poisoning fr inflammation of the umbilical vein. **A. coxarum** See *Coxalgia* (Illus. Dict.). **A. pullorum equinorum.** See *A. agniculorum.* **A., Senile,** changes the joints occurring in the aged. **A. vitulorum.** S *A. agniculorum.*

Arthrocarcinoma (*ar-thro-kar-sin-o'-mah*) [ἄρθρο a joint; καρκίνωμα, carcinoma]. Carcinoma affecti a joint.

Arthrocenchriasis (*ar-thro-sen-kri'-as-is*) [ἄρθρον, joint; κεγχρίας, like a grain of millet]. A milia eruption occurring about a joint.

Arthrocleisis (*ar-thro-kli'-sis*) [ἄρθρον, a joint; κλείειν to shut]. See *Arthrodesis* (Illus. Dict.).

Arthrodactylous (*ar-thro-dak'-til-us*) [ἄρθρον, a join δάκτυλος, a finger]. Having articulated digits.

Arthroectasia, Arthroectasis (*ar-thro-ek-ta'-se-a -ek'-ta-sis*). See *Arthrectasis.*

Arthrohyal (*ar-thro-hi'-al*). See *Stylohyal* (Ill Dict.).

Arthrohydrin (*ar-thro-hi'-drin*). See *Synovin* (Ill Dict.).

Arthrolith (*ar'-thro-lith*) [ἄρθρον, a joint; λίθος stone]. One of the free bodies which occur in joi arising from the segmentation of warty outgrowths joint cartilage or of synovial membrane. Syn., *Arth phyte; Arthremphyte; Joint-bodies; Joint-mi Mures articulares; Corpora mobilia articulorum; C pora libera articulorum; Tophus arthriticus. throtophus.*

Arthrolithiasis (*ar-thro-lith-i'-as-is*) [ἄρθρον, a joi λίθος, a stone]. Gout.

Arthrology (*ar-throl'-o-je*) [ἄρθρον, a joint; λό science]. The science of joints.

Arthromeningitis. (See Illus. Dict.) **A. chron** See *Hydrarthrosis* (Illus. Dict.). **A. crouposa,** ovitis with membranous exudate; a rare affection scribed by Bonnet. **A. gonorrhœica,** gonorr rheumatism. **A. prolifera.** See *Arthritis fun* (Illus. Dict.).

Arthronempyesis (*ar-thron-em-pi-e'-sis*). See *throempyesis* (Illus. Dict.).

Arthroneuralgia (*ar-thro-nu-ral'-je-ah*). See *thralgia* (Illus. Dict.).

Arthroparalysis (*ar-thro-par-al'-is-is*) [ἄρθρον, a j *paralysis*]. Paralysis of a limb.

Arthropathology (*ar-thro-path-ol'-o-je*) [ἄρθρον, j πάθος, disease; λόγος, science]. The branc pathology dealing with joint-diseases.

Arthropathy. (See Illus. Dict.) **A., Ataxic Tabetic.** See *Arthropathy* (Illus. Dict.). **A., tebral,** arthropathy with depressions and rug of the vertebras.

Arthroperissia (*ar-thro-per-is'-e-ah*) [ἄρθρον, a περισσός, unusual]. An abnormal number of lim joints.

Arthroperittia (*ar-thro-per-it'-e-ah*). See *perissia.*

Arthrophlogosis. (See Illus. Dict.) **A. deform** chronic osteoarthritis. **A. externa,** inflam around a joint. **A. fibrosa.** See *Arthritis* (Illus. Dict.). **A. interna,** inflammation with joint. **A. synovialis.** See *Synovitis* (Illus. D

Arthrophlysis (*ar-throf'-lis-is*) [ἄρθρον, a joint; an eruption]. Gout accompanied with a cut eruption. **A. cardiaca.** See *Miliaria arthrit* **vulgaris.** See *Eczema arthriticum.*

Arthrophyma (*ar-thro-fi'-mah*) [ἄρθρον, a joint φῦμα, a tumor]. A tumefaction of a joint. **A. chondrium.** See *Arthritis fungosa* (Illus. Di

rthrophyte (*ar'-thro-fīt*) [ἄρθρον, a joint; φυτόν, a growth]. See *Arthrolith.*

rthropyosis (*ar-thro-pi-o'-sis*). See *Pyarthrosis* (Illus. Dict.).

rthrorrhagia (*ar-thro-ra'-e-ah*) [ἄρθρον, a joint; ῥηγνύναι, to burst forth]. Hemorrhage into a joint.

rthrorrheumatism (*ar-thro-ru'-mat-izm*) [ἄρθρον, a joint; *rheumatism*]. Articular rheumatism.

rthrosia. (See Illus. Dict.) **A. coxendicis,** sciatica. **A. hydrarthrus.** See *Arthritis fungosa* (Illus. Dict.). **A. podagra complicata,** retrocedent gout. **A. podagra larvata,** atonic gout. **A. thoracis.** See *Neurasthenia* (Illus. Dict.).

rthrosteitis (*ar-thro-ste-i'-tis*) [ἄρθρον, a joint; ὀστέον, bone]. Inflammation of the bone about a joint.

rthrostenosis (*ar-thro-sten-o'-sis*) [ἄρθρον, a joint; στένωσις, a narrowing]. Contraction of a joint.

rthrosteophyma (*ar-thro-ste-o-fi'-mah*) [ἄρθρον, a joint; ὀστέον, bone; φῦμα, tumor]. A tumor of the bone in a joint.

rthrosteresis (*ar-thro-ster-e'-sis*) [ἄρθρον, a limb; στέρησις, loss]. The absence of a limb or limbs.

rthrostitis (*ar-thro-sti'-tis*). See *Arthrosteitis.*

rthrosymphysis (*ar-thro-sim'-fiz-is*) [ἄρθρον, joint; σύμφυσις, a growing together]. See *Ankylosis* (Illus. Dict.).

rthrotophus (*ar-thro-to'-fus*). See *Arthrolith.*

rthrotrauma (*ar-thro-traw'-mah*) [ἄρθρον, a joint; τραῦμα, an injury]. An injury to a joint.

rthrotropia (*ar-thro-tro'-pe-ah*) [ἄρθρον, a limb; τροπή, a turning]. Torsion of a limb.

rthrotyphoid (*ar-thro-ti'-foid*). Typhoid fever with articular involvement.

rthroxerosis (*ar-thro-zer-o'-sis*) [ἄρθρον, a joint; ξηρώσις, a dry state]. Chronic osteoarthritis.

rticle (*ar'-tikl*) [*articulus*, a little joint]. A joint; a segment of a jointed series.

rticularis (*ar-tik-u-la'-ris*). Articular. **A. genu.** See *Subcrureus*, in *Table of Muscles* (Illus. Dict.).

rticulary (*ar-tik'-u-lar-e*). Articular.

rticulatio (*ar-tik-u-la'-she-o*) [L.]. See *Articulation.* **. cardiniformis.** See *Ginglymus*, under *Diarthrosis* (Illus. Dict.). **A. chopartii.** See *Joint, Chopart's.* **. dubia.** See *Amphiarthrosis* (Illus. Dict.). **A. sfrancii,** the tarsometatarsal articulations. **A. otha.** See *Articulation, False.* **A. plana.** See *Arthrodia* (Illus. Dict.).

rticulation. (See Illus. Dict.) 3. The articulating contact of the cusps in the positions of mastication. **A., Abnormal, A., Accidental.** See *A., False.* **A., Amphiarthrodial.** See *Amphiarthrosis* (Illus. Dict.). **A., Arthrodial.** See *Arthrodia* (Illus. Dict.). **A., Ball-and-socket.** See *Enarthrosis* (Illus. Dict.). **A., Band.** See *Syndesmosis* (Illus. Dict.). **A., Bicondylar,** that of two condyles separated by a biconcave fibrocartilage. **. Bitrochlear,** one in which two fibrocartilages intervene between the articulating surfaces. **A. by Contiguity.** See *Diarthrosis* (Illus. Dict.). **A. by Continuity.** See *Amphiarthrosis* (Illus. Dict.). **A., Cup-and-ball.** See *Enarthrosis* (Illus. Dict.). **A., Diarthrodial.** See *Diarthrosis* (Illus. Dict.). **A., False,** a false articulation formed between the end of a dislocated bone and the contiguous parts or between the parts of a broken bone. Syn., *Pseudarthrosis.* **A., Ginglymoid.** See *Ginglymus*, under *Diarthrosis* (Illus. Dict.). **A., Immovable.** See *Synarthrosis* (Illus. Dict.). **A., Mixed.** See *Amphiarthrosis* (Illus. Dict.). **A., Mobile, A., Movable.** See *Diarthrosis* (Illus. Dict.). **A. by Mutual Reception,** that form of ginglymus in which a shallow curved groove articulates with a curved ridge. **A., Neutral.** See *Amphiarthrosis* (Illus. Dict.). **A., Obsolete,** an articulation which is not apparent. **A., Semimobile.** See *Amphiarthrosis* (Illus. Dict.). **A., Supernumerary.** See *A., False.* **A., Supplementary,** a false articulation in which the ends of the fragments become rounded and covered with a fibrous capsule. **A., Synovial,** a joint lubricated with synovia. **A.s, Tarsometatarsal,** the articulations, external, internal, and middle, between the cuboid and metatarsal bones. Syn., *Lisfranc's joint.* **A., Trochoid, A., Wheel-and-axle.** See *Cyclarthrosis* (Illus. Dict.).

Articulatory (*ar-tik'-u-la-tor-e*). Relating to utterance.

Articulus (*ar-tik'-u-lus*) [dim. of *artus*, a joint; pl. and gen., *articuli*]. 1. A joint, a knuckle. 2. A segment, a part, a limb. 3. A moment of time. **A. aqua articulorum,** the synovial fluid. **Articuli coarctatio.** See *Arthrostenosis.* **Articuli dilatatio.** See *Arthrectasis.* **Articuli of the Lenticular Nucleus,** the divisions of the lenticula, the outer one known as the *putamen*, the two or three others constituting the *globus pallidus.* **A. notus, A. novus.** See *Pseudarthrosis* (Illus. Dict.). **A. prænaturalis, A. spurius.** See *Pseudarthrosis* (Illus. Dict.).

Artificial Respiration. (See Illus. Dict.) *Braun's Method:* The injection of 5 or 6 drops of brandy or whisky into the anus. *Calliano's Method:* A modification of Sylvester's; the arms are drawn up so as to expand the thorax and then fixed above and behind the head by fastening the wrists together. Pressing with the hands upon the thorax some 18 to 20 times a minute induced respiration. *Cooke's Method:* The introduction of the lubricated finger into the rectum. *Laborde's Method.* See under *Treatment* (Illus. Dict.). *Rosenthal's Method:* Compression of the knees, hips, and spine in rapid succession in order to induce expiration; inspiration is favored by stretching the body.

Artistomia (*ar-te-sto'-me-ah*) [ἄρτι, exactly; στόμα, a mouth]. 1. Distinctness in utterance. 2. The condition of an aperture, especially in surgical incisions, in which the size is perfectly adapted to the purpose.

Artiyls (*ar'-te-ils*) [ἄρτιος, complete]. Lõwig's name for hydrocarbons of the general formula C_nH_{2n}.

Artocarpus (*ar-to-kar'-pus*) [ἄρτος, bread; καρπός, a fruit]. A genus of trees of the order *Urticaceæ*, including the breadfruit-tree, *A. incisa.* **A. blumei,** an East Indian species with an edible fruit, the oil of which is used in diarrhea; an ointment from the buds and leaves is applied to buboes. **A. integrifolius,** L., Indian Jack-tree, a species native in India; prized for its wood; the root is used in diarrhea and as an external application in leprosy; the root-bark is used as a vermifuge.

Artopta (*ar-top'-tah*) [ἄρτιος, ready, sound; ὀπτός, visible]. H. Deventer's term for puerperas having easy, rapid labor.

Arundo (*ar-un'-do*) [L.]. 1. A reed. 2. A surgical splint. 3. A genus of grasses. **A. donax,** L., Provence cane, a species native in southern Europe, cultivated in England; the rhizome is used as a diuretic, diaphoretic, and antigalactic.

Arycorniculatus (*ar-e-korn-ik-u-la'-tus*). See under *Muscles.*

Arysantorinianus (*ar-e-san-to-rin-i-a'-nus*). See under *Muscles.*

Arysyndesmicus (*ar-e-sin-dez'-mik-us*). See under *Muscles.*

Arytenectomy (*ar-e-ten-ek'-to-me*) [ἀρύταινα, a pitcher; ἐκτομή, a cutting out]. Removal of an arytenoid cartilage, usually the left, in the horse to counteract roaring.

Arytenoid. (See Illus. Dict.) 2. Pertaining to the arytenoid cartilages.

Arytenoidectomy (*ar-e-ten-oid-ek'-to-me*) [*arytenoid*; ἐκτομή, a cutting out]. Removal of an arytenoid cartilage.

Arytenoiditis (*ar-e-ten-oid-i'-tis*). Inflammation of the arytenoid cartilage or muscles.

Asab [Ar.]. An African venereal disease said to differ from syphilis.

Asarene (*as'-ar-ēn*). $C_{10}H_{16}$. A terpene found in oil of *Asarum canadense*.

Asarin (*as'-ar-in*). $C_{12}H_{16}O_3$. See *Asarone* (Illus. Dict.).

Asbestiform (*as-best'-e-form*) [*asbestos*]. Fibrous in structure.

Asbolic, Asbolicous, Asbolicus (*as-bol'-ik, -us*) [ἄσβολος, soot]. Sooty; due to soot; *e. g.*, *Carcinoma scroti asbolicum*.

Asbolin (*as'-bol-in*) [ἄσβολος, soot]. A bitter, acrid, yellow oil extracted from soot; it is used in tuberculosis.

Aschistodactyly (*as-kist-o-dak'-til-e*). See *Aschistodactylism* (Illus. Dict.).

Ascidiate (*as-id'-e-āt*). Shaped like or furnished with an ascidium.

Ascidiform, Ascidioid (*as-id'-e-form, as-id'-e-oid*). See *Asciform*.

Asciform (*as'-e-form*) [ὐσκός, a wine skin]. Shaped like a sac, pouch, flask, pitcher, vase, ascus, or ascidium.

Ascites. (See Illus. Dict.) Syn., *Hydroperitoneum; Hydrops peritonæi; Abdominal dropsy*. **A., Landou's Sign of.** See under *Sign*. **A., Active, A., Acute,** that in which there is a sudden large effusion due to exposure or cold. **A., Chronic,** that in which the effusion is very gradual in progress. **A. cruentus,** hemorrhage into the peritoneum. **A., Encysted.** See *A. saccatus*. **A. exquartana,** that due to quartan intermittent fever. **A., Hydremic,** that caused by or accompanying a watery state of the blood. **A. intercus,** an effusion occurring between the skin and the peritoneum. **A. intermuscularis,** edema of the abdominal muscles. **A., Mechanical, A., Passive,** that due to diseases which retard the blood-current in the portal vein. **A. oleosus.** See *A. adiposus* (Illus. Dict.). **A., Purulent,** an accumulation of pus in the peritoneum. **A. saccatus,** 1. A form in which the effusion is prevented by adhesions or inflammatory exudate from entering the general peritoneal cavity. Syn., *Encysted dropsy of the peritoneum*. 2. An ovarian cystoma. **A. sanguineointurcus,** a hemorrhage under the peritoneum, between it and the abdominal muscles. **A. sanguineoperitonæus,** a hemorrhage into the abdominal muscles. **A., Sanguineous,** a bloody form affecting sheep and lambs. Syn., *Diarrhemia*. **A. sanguineouterinus.** See *Hematometra* (Illus. Dict.). **A., Subcutaneous,** edema of the abdominal walls. **A. urinosus,** an effusion of urine into the peritoneum. **A., Uterine, A. of the Uterus.** See *Hydrometra* (Illus. Dict.). **A. vaginalis,** a collection of liquid within the sheath of the rectus abdominis muscle. **A., Visceral.** See *A., Mechanical*. **A. vulgatior,** a form apparently due to diseased kidneys and preceded by scanty, highly colored urine.

Asclepias. (See Illus. Dict.) 2. A genus of plants of the order *Asclepiadeæ*. **A. longifolia,** Michx., of the western United States, is diaphoretic.

Asclepidin (*as-klep'-id-in*). A proprietary deobstruent preparation said to be obtained from *Asclepias tuberosa*. Dose, 1–5 gr. (1.3–3.7 gm.).

Asclepidora (*as-kle-pe-o-do'-rah*) ['Ασκληπιός, Æsculapius, the god of medicine; δῶρον, a gift]. A genus of plants of the order *Asclepiadeæ*. **A. decumbens** Gray, a species of New Mexico, is used in the treatment of snake-bites.

Asclepion (*as-kle'-pe-on*). $C_{20}H_{34}O_3$. A substance forming odorless, tasteless crystals isolated by Lis (1849) from *Asclepias syriaca*, L.

Ascobacillus (*as-ko-bas-il'-us*). See *Bacteria, Tab of* (Illus. Dict.).

Ascoidium (*as-ko-id'-e-um*) [ὐσκός, a sac; εἶδος, like ness]. A genus of *Infusoria* found in the urine an feces of typhoid fever patients, in sewage, in the excre ment of cattle, and in the cecum of swine.

Ascyphous. (See Illus. Dict.) 2. Without a hea (applied to monsters).

Asebotoxin (*ah-se-bo-toks'-in*) [*a*, priv.; *sebum*, fat *toxicum*, poison]. A poisonous glucosid found b Plugge (1883) in *Pieris japonica*.

Asellin. See *Ptomains, Table of* (Illus. Dict.).

Asemia. (See Illus. Dict.) **A. mimica.** See *Amim* (Illus. Dict.). **A. spuria.** See *Parasemia* (Illu Dict.).

Aseptolin (*ah-sep'-tol-in*). A preparation of pilocarp (0.018%), in an aqueous solution of phenol (2.74% it is used in tuberculosis and in malaria. Dose, 50– ♏ daily, injected subcutaneously.

Ash. (See Illus. Dict.) 2. The incombustible resid of an organic substance that has been burned. 3. tree of the genus *Fraxinus*.

Asialochia (*ah-se-al-o'-ke-ah*). See *Asialia* (Illu Dict.).

Askelia (*ah-ske'-le-ah*) [*a*, priv.; σκέλος, leg]. N development or deficiency of the legs.

Askolin (*as'-ko-lin*). A compound of glycerin and s furous acid.

Asonia (*ah-so'-ne-ah*) [*a*, priv.; *sonus*, a soun Tone deafness.

Asparagin, Asparaginum. (See Illus. Dict.) **Biliary.** See *Taurin* (Illus. Dict.). **A.-mercu** See *Mercury asparaginate*. **A. Sulfate,** $C_4H_8N_2$ H_2SO_4, a syrupy liquid soluble in water.

Asparagus. (See Illus. Dict.) 2. A genus of plants longing to the order *Liliaceæ*. **A. acutifolius** species of southern Europe having properties simila *A. officinalis*, but said to be more efficient medicin than the latter. **A. adscendens,** is used in India a substitute for salep. **A. aphyllus,** indigenous Asia, is diuretic. **A. racemosus,** Willd., and **sarmentosus,** of the old world tropics, are emplo as salep; an infusion of the root of the latter is use prevent the confluence of smallpox pustules.

Asparamid (*as-par'-am-id*). See *Asparagin* (Il Dict.).

Asparmate (*as-par'-māt*). See *Aspartate*.

Asparol (*as'-par-ol*). A liquid extract of *Aspa officinalis*.

Asparolin (*as-par'-ol-in*). A brown liquid said to sist of guaiac, asparagus, parsley, black haw, henbane. It is used as an antispasmodic uterine t Dose, 2–4 drams in hot water.

Aspartate (*as-par'-tāt*). A salt of aspartic acid.

Aspergillin (*as-pur-jil'-in*) [*aspergere*, to scatter]. A pigment obtained by Linossier from the spores of *pergillus niger*. Syn., *Vegetable hematin*.

Aspergillosis (*as-pur-jil-o'-sis*). Pseudotubercul morbid lesions due to some species of *Aspergillus*.

Aspergillus-keratitis (*as-pur-jil-us-ker-at-i'-tis*). neal inflammation due to invasion of a fungus belo to the genus *Aspergillus*. Syn., *Keratomycosis gillina*.

Aspermasia, Aspermia (*ah-spur-ma'-ze-ah, ah me-ah*). See *Aspermatism* (Illus. Dict.).

perous (*as'-pur-us*) [*asper*, rough]. Uneven; having a surface with distinct minute elevations.

persus (*as-pur'-sus*) [*aspergere*, to sprinkle]. Covered with scattered dots or punctures.

phalgesia (*as-fal-je'-ze-ah*) [ἀσφ, their own; ἄλγησις, pain]. Pitres' term for a condition observed in hypnotism, in which intense pain follows the touching of certain articles, and prolonged contact produces convulsions.

phyctic. (See Illus. Dict.) 2. Pulseless.

phyxia. (See Illus. Dict.) Syn., *Abolitio pulsus; Mors apparens.* **A., Algid,** loss of sensibility from cold. **A. a carbone,** that caused by inhaling the fumes of burning charcoal. **A., Cataleptic,** catalepsy. **A. cataphora,** that with brief incomplete remissions. **A., Cholera, A., Choleraic,** a condition of asphyxia occurring in Asiatic cholera. **A. electrica,** that due to electricity or lightning. **A. a fumis,** that due to the inhalation of a poisonous gas. **A., Heat-,** sunstroke. **A. immersorum,** apparent death from drowning. **A., Lethargic,** deep sleep accompanying mental and physical torpor. **A. livida,** the stage of asphyxia in which the vessels of the skin are turgid with blood, imparting a dusky red or blue hue, and the muscles preserve their reflex contractility. **A., Local.** See under *Sphaceloderma* (Illus. Dict.). **A. localis cum gangræna symmetrica,** Raynaud's disease. See *Sphaceloderma* (Illus. Dict.). **A. mephitica, A. musta.** See *A. a fumis.* **A. pallida,** that stage of asphyxia in which there is loss of the reflex contractility of the muscles and the skin is cold and pale. Syn., *Mors putativa.* **A. pestilenta, A., Pestilential,** Asiatic cholera. **A. sideratorum,** loss of consciousness from lightning-stroke. **A., Solar, A. solaris,** sunstroke. **A., Syncopal,** a form of asphyxia in which the heart-cavities are found vacant. **A. Valsalviana,** syncope due to disturbance of cardiac functions. **A. Vigil.** See *Coma Vigil* (Illus. Dict.).

pidin (*as'-pid-in*) [*Aspidium*, a genus of ferns]. $C_{31}H_{32}O_7$. A substance obtained from male-fern.

pidiopsoriasis (*as-pid-e-o-so-ri-a'-sis*) [ἀσπίδιον, a little shield; *psoriasis*]. A form of psoriasis marked by the formation of scutiform scales.

pidiotus (*as-pid-e-o'-tus*) [ἀσπιδιώτης, shield-bearing]. A genus of plant-lice of the family *Coccidæ.* **A. nerii,** oleanderché, a species that infests the oleander, found by Laveran to act as the transmitting agent of the hæmatozoon of malaria.

pidiscos, Aspidiscus (*as-pid-is'-kos, -kus*) [ἀσπιδίσκος, a little shield]. The sphincter ani.

pidol (*as'-pid-ol*) [*Aspidium*, a genus of ferns]. $C_{20}H_{24}O$. A substance isolated by Daccomo from male-fern.

pidospermin. (See Illus. Dict.) A respiratory stimulant and antispasmodic. Dose, 1–2 gr.

pilia (*as-pil'-e-ah*) [ἀσπίλος, stainless]. A genus of plants of the order *Compositæ.* **A. latifolia,** hemorrhage plant, an African herb, has remarkable hemostatic power imputed to it when applied topically, and an infusion is given in pulmonary hemorrhage.

pirin (*as'-pir-in*). The acetic acid ester of salicylic acid; small needles without color or taste, used as an antipyretic and analgesic as sodium salicylate. Dose, 5 gm. Syn., *Acetyl salicylic acid.*

porous (*ah-spo'-rus*) [*a*, priv.; σπόρος, seed]. Without spores.

racou, Assacù. Native names for the South American tree *Hura crepitans*, or its bark and juices used as a remedy in elephantiasis.

sai. The South American name for a beverage made from the fruit of the palm *Euterpe edulis*, Mart.

Assamar (*as'-am-ar*) [*assare*, to roast; *amarus*, bitter]. A bitter principle obtained by Reichenbach from roasting together gum, sugar, starch gluten, etc.

Assanation (*as-an-a'-shun*) [*ad*, to; *sanare*, to make sound]. The improvement of sanitary conditions.

Assay (*as-a'*) [Fr., *assayer*]. 1. The testing or analysis of a metal or drug to determine the relative proportion of its constituents. 2. The substance thus tested. 3. The process of assaying.

Asselin. See *Asellin, Table of Ptomains* (Illus. Dict.).

Assonance (*as'-o-nans*) [*assonare*, to respond to]. A morbid tendency to employ alliteration.

Assuefaction (*as-we-fak'-shun*) [*assuefacere*, to accustom to something]. Assuetude or the establishment of it.

Assuetude (*as'-we-tūd*). Habituation to disturbing influences; the condition of the organism in which it has acquired such tolerance for a drug or poison that the effect it once had is lost.

Astaragazza. An Ethiopian nervous delirium resembling lycanthropy.

Astereognosis (*ah-ste-re-og-no'-sis*) [*a*, priv.; στερεός, solid; γνώσις, knowledge]. Inability to recognize objects by the sense of touch, due to lesion in the central parietal lobule. Syn., *Stereoagnosis.* Cf., *Aphasia, Tactile.*

Asterion. (See Illus. Dict.) 2. A poisonous species of spider (*Lathrodectus conglobatus*) mentioned by Nikander and other early writers.

Asteroid (*as'-ter-oid*) [ἀστρον, a star; εἶδος, likeness]. 1. Stellate. 2. See *Astrocyte.*

Asterol (*as'-ter-ol*). A soluble preparation of mercury sulfocarbolate; it is used as a surgical antiseptic and bactericide.

Asthenia. (See Illus. Dict.) Syn., *Lipopsychia.* 2. An infectious disease of fowls, also called "*Going-light,*" due to *Bacterium astheniæ*, Dawson. **A., Subrenal.** See *Addison's Disease* (Illus. Dict.).

Asthenogenia, Asthenogenesis (*as-then-o-je'-ne-ah, as-then-o-jen'-es-is*) [*a*, priv.; σθένος, strength; γενᾶν, to produce]. The production of asthenia.

Asthenology (*as-then-ol'-o-je*) [*asthenia*; λόγος, science]. The science of asthenia.

Asthenopyra (*as-then-op'-ir-ah*) [*asthenia*; πυρετός, fever]. Fever with asthenia.

Asthma. (See Illus. Dict.) Syn., *A., Bronchial; A., Dynamic; A., Essential; A., Nervous; A., Spasmodic; A., Spasmodic bronchial; A., Simple; A., True.* **A., Abdominal,** that due to some abdominal affection. **A. acutum periodicum infantum.** See *Laryngismus stridulus* (Illus. Dict.). **A., Alveolar,** asthma marked by dilation of the pulmonary alveoli. **A., Arthritic,** 1. That due to gout. 2. Angina pectoris. **A., Bilious.** See *A. dyspepticum* (Illus. Dict.). **A., Bronchial.** See *Asthma.* **A., Cardiovascular,** asthma-like attacks in aged persons, due to cardiovascular changes. **A., Catarrhal,** that attended with increased bronchial secretion. **A., Central,** that due to influence of the central nervous system. **A., Cheyne-Stokes,** dypsnea due to pulmonary congestion in an advanced stage of chronic myocarditis. **A., Congestive,** that attributed to congestion of the digestive organs. **A. cultrariorum,** grinder's asthma. See *Fibroid Phthisis* (Illus. Dict.). **A., Dartrous.** See *A., Exanthematous.* **A. dentientium,** Pagenstecher's name for laryngismus stridulus. **A. diaphragmaticum, A. dolorificum,** angina pectoris. **A., Diathetic,** that due to some diathesis. **A., Diurnal,** that in which the paroxysms occur in the daytime. **A., Dry,** that without sputum. **A., Dynamic.** See *Asthma.* **A., Emotional,** that in which the paroxysms are caused by emotional excite-

ment. **A., Emphysematic,** that accompanied with emphysema of the lungs. **A. equinum,** the dyspnea of broken-winded horses. **A., Essential.** See *Asthma.* **A., Exanthematous,** that due to the recession of an exanthem. **A. ex fœnisicio, A. ex fœno.** See *Fever, Hay* (Illus. Dict.). **A., Flatulent,** dyspnea from flatus. **A., Fuller's, A. fullorum,** a pulmonary affection due to inhaling particles of wool and dust in the manufacture of cloth. **A. gypseum.** See *Fibroid Phthisis* (Illus. Dict.). **A., Hemic.** See *A., Toxic.* **A., Herpetic,** that accompanying cutaneous eruptions. **A., Humid, A. humidum, A. humorale.** See *A., Catarrhal.* **A., Hysteric.** See *Tachypnea* (Illus. Dict.). **A., Idiosyncratic,** that in which the paroxysm is due to the presence of some substance or thing concerning which the patient has an idiosyncrasy. **A. infantum, A. infantum spasmodicum, A. laryngeum infantum.** See *Laryngismus stridulus* (Illus. Dict.). **A. Intermittent, of Children,** laryngismus stridulus. **A., Intrinsic,** that due to direct irritation of the lungs. **A., Laryngeal,** laryngismus stridulus. **A. metallariorum, A. metallicum,** miners' asthma. See *Anthracosis* (Illus. Dict.). **A., Metastatic,** that attributed to the metastasis of some other disorder. **A., Moist,** that attended with expectoration of purulent sputum. **A., Nephritic.** See *A., Uremic.* **A., Nervous, A., Neuropulmonary.** See *Asthma.* **A., Nonorganic,** that not depending upon some other disease. Syn., *A., Idiopathic; A., Primary; A. spontaneum.* **A. occultum.** See *A., Willis' Convulsive.* **A., Organic,** asthma of cardiac origin. **A., Paper-,** niter-paper. **A., Paralytic Bronchial,** a rare form attributed to a relaxed condition of the bronchioles. **A., Peptic.** See *A. dyspepticum* (Illus. Dict.). **A. pituitosum.** See *A., Catarrhal.* **A., Plethoric,** that due to plethora or the retention of some habitual flux. **A., Pneumobulbar,** See's term for a form attributed to pulmonary irritation transmitted to the bronchioles by reflexes through the vagus. **A. pneumodes,** a form in which the sputum is solid or solidifies after expectoration. **A. pneumonicum.** See *A., Catarrhal.* **A. a polypo cordis,** dyspnea with palpitation of the heart, attributed to cardiac concretions. **A., Potter's,** emphysema occurring among the workmen exposed to the dust of potteries. **A. pressoriodolorificum,** angina pectoris. **A., Primary.** See *A., Nonorganic.* **A. puerorum,** Boerhaave's name for laryngismus stridulus. **A. pulverulentorum,** grinder's asthma. See *Fibroid Phthisis* (Illus. Dict.). **A. purulentum,** that due to an abscess in the respiratory passages. **A., Renal.** See *A., Uremic.* **A., Rheumatic,** asthma attributed to a rheumatic diathesis. **A. sanguineum.** See *A., Plethoric.* **A., Saturnine,** asthma due to chronic plumbism. **A., Secondary.** See *A., Symptomatic.* **A. siccum.** See *A., Dry.* **A., Simple, A., Spasmodic.** See *Asthma.* **A. of Solipeds,** pulmonary emphysema in horses, with dyspnea and pulsation in the flanks. Syn., *Pursiness; Pousse; Asthme des solipedes.* **A., Spasmodic Bronchial.** See *Asthma.* **A., Spasmodic, of Children,** laryngismus stridulus. **A. spasmodico arthriticum inconstans,** angina pectoris. **A. spasmodico flatulentum.** See *A., Flatulent.* **A. spasticum, A. spasticum adultorum.** 1. See *A., Dry.* 2. Spasm of the glottis. **A., Spitting.** See *A., Moist.* **A. spontaneum.** See *A., Nonorganic.* **A., Stomachic.** See *A. dyspepticum* (Illus. Dict.). **A., Symptomatic,** that occurring as a symptom of some functional or organic disease. **A. syncopticum,** angina pectoris. **A. thymicocyanoticum,** Kussmaul's name for laryngismus stridulus. **A. thymicum,** Kopp's name for laryngismus stridulus. **A., Thyroid,** asthma attributed to enlargement of th thyroid. **A., Toxic,** that due to disorders of th nervous system through some specific toxic substance **A., Typic,** periodic asthma in which the paroxysm recur at definite intervals. **A., Uremic, A. urino sum,** that frequently accompanying Bright's disea and often due to edema of the lungs. Syn., *A Nephritic; A., Renal.* **A., Urticarial,** that atten ing urticaria. **A. vaporosum.** See *Fibroid Phthis* (Illus. Dict.). **A. venereum,** that attributed syphilis. **A., verminosum,** that attributed to inte tinal worms. **A., Wichmann's,** spasm of the glott **A., Willis' Convulsive,** asthma with sudden ons attributed to an affection of the intercostal nerves.

Asthmaticoscorbutic (*az-mat-ik-o-skor-bu'-tik*). R lating to asthma and scurvy.

Asthmatophthisis (*as-mat-o-tiz'-is*). Pulmonary tub culosis attended with asthma. Syn., *Asthmatic phti*

Asthmatorthopnea, Asthmorthopnea (*az-mat- thop'-ne-ah, az-mor-thop'-ne-ah*) [*asthma; ort nea*]. Orthopnea due to asthma or respiratory struction located in the chest.

Asthmogenic (*az-mo-jen'-ik*) [ἄσθμα, panting; γεν to produce]. Causing asthma.

Astigmatism. (See Illus. Dict.) **A., Abnorm Irregular,** that arising from defective corneal cur ture or abnormality in position or structure of crystalline lens and producing metamorphopsia. **Normal Irregular,** that due to irregularities in crystalline lens, causing an aberration of rays as th traverse the different sectors, and a defective coincide of the images.

Astigmĭa (*ah-stig'-me-ah*) [*a*, priv.; στιγμή, a mat matical point]. See *Astigmatism* (Illus. Dict.).

Astigmic (*ah-stig'-mik*). See *Astigmatic* (Illus. Dic

Astomatous (*ah-sto'-mat-us*). See *Astomous* (Il Dict.).

Astomia (*ah-sto'-me-ah*) [*a*, priv.; στόμα, a mout The condition of having no mouth.

Astragalar (*as-trag'-al-ar*). Relating to the astraga

Astragalocalcaneal (*as-trag-al-o-kal-ka'-ne-al*). lating to the astragalus and the calcaneum.

Astrictive, Astrictory, Astrictus (*as-trik'-tiv, -tu -us*) [*astringere*, to bind]. Styptic, astringent.

Astroblast (*as'-tro-blast*) [ἄστρον, a star; βλαστ germ]. A variety of glia-cell less differentiated the endyma-cells and astrocytes.

Astrocyte (*as'-tro-sit*) [ἄστρον, a star; κύτος, 1. One of the cells derived from the endyma embryonic cerebrospinal canal that, in the cour development, wander toward the periphery, un modification, and form one of the two chief divi of glia-cells, the other divisions being the or endymal cells. They are also called Deiters's 2. A stellate bone-corpuscle.

Astrophobia (*as-tro-fo'-be-ah*) [ἄστρον, a star; fear]. Fear of the stars and celestial space.

Astrophorous (*as-trof'-or-us*) [ἄστρον, a star; to bear]. Having stellate processes.

Astrosphere (*as'-tro-sfer*) [ἄστρον, star; σφαῖρα, sph 1. The radially arranged protoplasmic filament rounding the centrosome in a dividing cell. 2. he central mass of the aster, exclusive of the filame rays, in which the centrosome lies. [Strasburger. 3. The entire aster exclusive of the centrosome. [Boveri.] See *Sphere of Attraction* (Illus. Dict.). *Centro*

Asturian (*as-tu'-re-an*). Relating to Asturias, a province of Spain. **A. Rose.** Syn., *Rosa astu Rosa asturiensis.* 1. Pellagra. 2. Leprosy.

Astysia (*ah-stiz'-e-ah*) [*a*, priv.; στίνειν, to make e Incomplete power to erect the penis.

Asymmetral, Asymmetric (*ah-sim'-et-ral, -ik*).

Having sides unequally developed; having an organ on one side without the corresponding one on the other.

ymmetry. (See Illus. Dict.) **A., Meridional.** See *Astigmatism, Regular* (Illus. Dict.). **A., Unilateral.** See *Hemihypertrophy* (Illus. Dict.).

ymphytous (*ah-sim'-fit-us*) [ἀσύμφυτος]. Distinct; not grown together.

ynclitism (*ah-sin'-klit-izm*) [*a*, priv.; σύν, together; κλίσις, an inclination]. The condition of obliquity of two or more objects to each other; *e.g.*, an oblique presentation of the fetal head at the superior strait of the pelvis.

ynechia (*ah-sin-ek'-e-ah*) [*a*, priv.; σύν, together; ἔχω, in a row]. Absence of continuity in structure.

ynechic (*ah-sin-ek'-ik*). Affected with or due to synechia.

ynergic (*ah-sin-ur'-jik*). Not acting simultaneously or in harmony.

ynergy (*ah-sin-ur'-je*). See *Asynergia* (Illus. Dict.). **A., Progressive Locomotor, A., Motorial.** See *Ataxia, Locomotor* (Illus. Dict.). **A., Verbal,** defective coordination of speech, as in aphasia. **A., Vocal,** faulty coordination of the muscles of the larynx due to chorea.

ynetic, Asynetous (*ah-sin-et'-ik, ah-sin'-et-us*). Affected with asynesia.

ynovia (*ah-sin-o'-ve-ah*) [*a*, priv.; *synovia*]. A deficiency of the synovial fluid.

ynthesis (*ah-sin'-the-sis*) [*a*, priv.; σύνθεσις, a putting together]. A faulty connection of parts.

yntrophy (*ah-sin'-tro-fe*) [*a*, priv.; συντροφία, a growing up together]. Absence of symmetry in growth and development.

ystole, Asystolia. (See Illus. Dict.) **A., Cardiataxic,** transitory asystole due to accelerated heart-action. **A., Cardioplegic.** See *Amyocardia* (Illus. Dict.).

avus (*at'-av-us*) [L.]. An ancestor.

axia. (See Illus. Dict.) **A., Abortive Locomotor.** See *Tabes dolorosa.* **A., Acute,** tabes of rapid development. **A., Alcoholic.** See *Paraplegia, Alcoholic* (Illus. Dict.). **A., Bulbar,** tabes due to a lesion of the pons or oblongata. **A., Cardiovascular,** Ereol's name for exophthalmic goiter. **A., Central,** ataxia due to disorder of the centers of coordination. **A., Cerebellar,** that due to some lesion of the cerebellum; it is manifested by staggering from side to side. **A., Cerebral,** that due to disease of the cerebrum. **A., Choreic,** the incoordination accompanying chorea. **A., Diphtheric,** a sequel of diphtheria preceding diphtheritic paralysis and in which the chief phenomena of locomotor ataxia are present. **A., Hereditary Cerebellar,** Marie (1893); a form of ataxia that resembles Friedreich's in being hereditary, occurring in families; the gait, however, is not the staggering gait of tabes, but the reeling gait of cerebellar disease; the kneejerk is increased instead of being diminished, and there are no deformities. **A., Juvenile.** Synonym of *Friedreich's Disease* (Illus. Dict.). **A., Leyden's,** pseudotabes. **A. mensium, A., Menstrual, A. menstruum.** See *Menstruation, Vicarious* (Illus. Dict.). **A., Moral,** the inconstancy of ideas and will, attended with convulsions and pain, observed in hysteric subjects. **A. motus.** See *Tabes* (Illus. Dict.). **A., Muscular,** muscular incoordination. **A., Paralytic, of the Heart,** a condition marked by dyspnea, weakness of cardiac sounds, palpitation, edema, and dropsy, without any organic heart-disease. **A., Progressive Locomotor.** See *Tabes* (Illus. Dict.). **A., Sensory,** a form regarded as due to disturbance of the nerve-tracts lying between the periphery and the centers of coordination; its existence is denied by some authorities. **A., Spinal.** See *Tabes* (Illus. Dict.).

Ataxiagraph (*at-aks'-e-a-graf*) [ἀταξία, want of order; γράφειν, to write]. An instrument for recording the swaying in ataxia.

Ataxoadynamia (*at-aks-o-ah-di-nam'-e-ah*). Adynamia combined with ataxia.

Ataxodynamy (*at-aks-o-din'-am-e*) [ἀταξία, want of order; δύναμις, power]. Abnormality in the movements of a part or organ.

Ataxophobia (*at-aks-o-fo'-be-ah*) [ἀταξία, want of order; φόβος, fear]. Excessive dread of disorder.

Ataxospasmodic (*at-aks-o-spas-mod'-ik*). Affected with choreic ataxia or relating to it.

Atechnia, Atechny (*at-ek'-ne-ah, at-ek'-ne*) [ἀτεχνία, unskilfulness]. Want of skill; lack of technical knowledge.

Atechnic (*at-ek'-nik*). 1. Unskilful; lacking technical knowledge. 2. An individual lacking technical knowledge.

Atecnia (*at-ek'-ne-ah*) [*a*, priv.; τέκνον, child]. The state of being childless or barren; impotence.

Atees (*at-ez'*). See *Aconitum heterophyllum.*

Atelectasis. (See Illus. Dict.) **A., Absorption,** acquired atelectasis in which the air has been removed by absorption from within, resulting from the plugging of the bronchial tubes. **A., Compression,** acquired atelectasis due to pressure. **A., Obstructive,** that due to obstruction of a bronchial tube. See *A., Absorption.*

Ateleiosis (*at-el-i-o'-sis*) [ἀτελείωσις, not arriving at perfection]. A disease first described by Schaaffhausen, of Bonn (1868), characterized by abrupt onset, the absence of any perceptible cause, conspicuous infantilism with retention of unimpaired intelligence, and marked tardiness in development of the sexual system. Cf., *Progeria.*

Atelencephaly (*at-el-en-sef'-al-e*) [ἀτελής, incomplete; ἐγκέφαλος, brain]. Imperfect development of the brain.

Ateleplasia (*at-el-e-pla'-se-ah*). See *Atelia* (Illus. Dict.).

Atelic (*at'-el-ik*) [ἀτελής, incomplete]. Functionless.

Atelo- (*at'-el-o*). A prefix signifying imperfect development.

Atesin (*at'-es-in*). See *Atisin.*

Athamantin (*ath-am-an'-tin*). $C_{24}H_{30}O_7$. A crystalline substance contained in the root and ripe fruit of *Peucedanum oreoselinum*, Mönch.

Athermal (*ah-thur'-mal*) [*a*, priv.; θέρμη, heat]. Cool; applied to spring-water of a temperature below 15° C.

Athermancy (*ah-thur'-man-se*) [ἀθέρμαντος, not heated]. The state of being impervious to radiant heat.

Athermanous (*ah-thur'-man-us*). Impervious to radiant heat.

Athermic, Athermous (*ah-thur'-mik, -us*). 1. Without fever. 2. See *Athermanous.*

Athermosystaltic (*ah-thur-mo-sist-al'-tik*) [*a*, priv.; θέρμη, heat; συσταλτικός, drawing together]. Applied to muscles which do not contract under the influence of heat.

Atheroma. (See Illus. Dict.) Syn., *Acne sebacea molluscum: Pultatio: Steatoma: Sebaceous cyst: Lupia; Talpa.* **A., Capillary,** the formation of fatty granules in the walls of the capillaries.

Atherosis (*ath-er-o'-sis*). See *Atheromasia* (Illus. Dict.).

Atherospermin (*ath-er-o-spurm'-in*). $C_{20}H_{20}NO_5$ (Zeyer). An alkaloid isolated from the bark of *Atherosperma moschatum.*

Athoracocephalus (*ah-thor-ak-o-sef'-al-us*). See *Cephalogaster* (Illus. Dict.).

Athyrea, Athyria (*ah-thi'-re-ah*) [*a*, priv.; *thyroid*]. The condition arising from absence of the thyroid gland or elimination of its function. Syn., *Myxedema*. Cf. *Thyreoprivus*.

Athyreosis (*ah-thi-re-o'-sis*). Atrophy or absence of the thyroid gland and the pathologic condition consequent upon elimination of its function.

Athyroidea (*ah-thi-roid'-e-ah*). Absence of the thyroid gland.

Athyroidemia (*ah-thi-roid-e'-me-ah*). Davel's name for myxedema.

Athyrosis (*ah-thi-ro'-sis*). See *Athyreosis*.

Atisin (*at'-is-in*) [*Atis*, Indian name for *Aconitum*]. $C_{46}H_{74}N_2O_5$. An alkaloid derived from *Aconitum heterophyllum*, Wall.

Atloaxoid (*at-lo-aks'-oid*). Relating to atlas and axis; atlantoaxial.

Atmiatria, Atmiatrics. See *Atmiatry* (Illus. Dict.).

Atmic (*at'-mik*) [ἀτμός, vapor]. Relating to, due to, consisting of vapor.

Atmidalbumin (*at-mid-al'-bu-min*). A substance standing between the albuminates and the albumoses, obtained by Neumeister at the same time with atmidalbumose.

Atmidalbumose (*at-mid-al'-bu-mōz*). Neumeister's name for a body obtained by the action of superheated steam on fibrin.

Atmidometrograph (*at-mid-o-met'-ro-graf*) [ἀτμός, vapor: μέτρον, a measure; γράφειν, to write]. A self-registering atmidometer.

Atmiometer (*at-mi-om'-et-ur*). A closed cabinet with apparatus for treating diseases by means of atmiatry.

Atmismometer (*at-mis-mom'-et-ur*). See *Atmometer* (Illus. Dict.).

Atmisterion (*at-mis-te'-re-on*). See *Vaporarium* (Illus. Dict.).

Atmocausia, Atmocausis (*at-mo-kaw'-se-ah, -sis*) [ἀτμός, vapor; καῦσις, a burning]. Therapeutic cauterization with steam by means of an atmocautery.

Atmocautery (*at-mo-kaw'-tur-e*). A double-channeled intrauterine catheter provided with fenestras in both tubes.

Atmography (*at-mog'-raf-e*) [ἀτμός, vapor; γράφειν, to write]. A description of vapors and evaporation.

Atmokausis, Atmokautery. See *Atmocausis, Atmocautery*.

Atmology (*at-mol'-oj-e*) [ἀτμός, vapor; λόγος, science]. The science of vapors and evaporation.

Atmolysis (*at-mol'-is-is*) [ἀτμός, vapor; λύσις, loosing]. A method discovered by T. Graham (1808–1869) of separating the ingredients of mixed gases or vapors by means of their different diffusibility through a porous substance.

Atmolyzer (*at-mol-i'-zur*). An apparatus for separating gases by diffusion.

Atmosphere. (See Illus. Dict.) Syn., *Aerosphere*. 2. The pressure exerted by the earth's atmosphere at the level of the sea; it is about 15 pounds to the square inch or 1 kilogram to the square centimeter. 3. In chemistry, any special gaseous medium encircling a body. 4. The climatic state of a locality.

Atmospherilia, Atmosphærilia (*at-mos-fer-il'-e-ah*). A collective name for the chemic constituents of the atmosphere.

Atmospherization (*at-mos-fer-iz-a'-shun*). The conversion of venous into arterial blood by the assumption of oxygen. Cf. *Dearterialization*.

Atmospherology (*at-mos-fer-ol'-o-je*) [*atmosphere*; λόγος science]. The science of atmospheres.

Atmostatics (*at-mo-stat'-iks*) [ἀτμός, vapor; στατικός, standing]. The sum of what is known concerning gases in equilibrium.

Atmotherapy (*at-mo-ther'-ap-e*) [ἀτμός, vapor; θεραπεία, therapy]. A name given by Pitres to the treatment of certain tics by methodic reduction of respiration.

Atomician (*at-om-ish'-an*). See *Atomist*.

Atomism (*at'-om-izm*) [*a*, priv.; τέμνειν, to cut]. 1. The science of atoms. 2. The theory that the universe is composed of atoms.

Atomist (*at'-om-ist*). One who believes in atomism.

Atomistic (*at-om-is'-tik*). 1. Relating to or consisting of an atom. 2. Relating to atomism.

Atomistics (*at-om-is'-tiks*). See *Atomism*.

Atomology (*at-om-ol'-o-je*) [ἄτομος, an atom; λόγος, science]. The science of atoms; atomism.

Atony. (See Illus. Dict.) **A. of the Uterus.** Wigand's second degree of diminished action of the uterus in parturition, marked by too infrequent, weak and imperfect contractions. Syn., *Adynamia uteri*.

Atoxogen (*ah-toks'-o-jen*) [*a*, priv.; τοξικόν, poison; γεννᾶν, to produce]. A defensive substance resembling the enzymes and chemically allied to toxins and antitoxins prepared from the adrenals and spleen of the horse.

Atoxyl (*at-oks'-il*). See *Anilidmetarsenite*.

Atrabilarian (*at-ra-bil-a'-re-an*) [*ater*, black; *bile*, bile]. A melancholy person, subject to biliary disorders.

Atrabilarious, Atrabilious (*at-ra-bil-a'-re-us, at-ra-bil'-yus*). See *Atrabiliary* (Illus. Dict.).

Atrabilin (*at-ra-bil'-in*). A preparation of suprarenal capsule; it is used in eye-diseases.

Atrability (*at-ra-bil'-it-e*). The state of being atrabiliary.

Atrachelia (*ah-trak-e'-le-ah*) [*a*, priv.; τράχηλος, the neck]. Absence or exceeding shortness of the neck.

Atrachelocephalus (*ah-trak-el-o-sef'-al-us*) [ἄτραχηλος, without a neck; κεφαλή, the head]. 1. Affected with atrachelia. 2. A monster with no neck or an abnormally short one.

Atrachelous (*ah-trak'-el-us*). Having no neck or one a very short one; also, beheaded.

Atractenchyma (*at-rakt-en'-ki-mah*) [ἄτρακτος, a spindle; ἐν, in; χεῖν, to pour]. A tissue consisting of spindle-cells.

Atractoid (*at-rakt'-oid*). Spindle-shaped.

Atractylate (*at-rakt'-il-āt*). A salt of atractylic acid.

Atractyligenin (*at-rakt-il-ij'-en-in*). A dissociation product of atractylin by action of dilute caustic potash with heat.

Atractylin (*at-rakt'-il-in*). $C_{20}H_{30}O_6$. A glucoside obtained from the poisonous root of *Atractylis gummifera*, L. It is a sweet, gum-like substance, soluble in water and in alcohol.

Atramentaceous, Atramentarious, Atramentous. See *Atramental* (Illus. Dict.).

Atretocephalus (*ah-tret-o-sef'-al-us*) [ἄτρητος, imperforate; κεφαλή, the head]. A monster with imperforate nostrils or mouth.

Atretocormus (*ah-tret-o-korm'-us*) [ἄτρητος, imperforate; κορμός, the trunk]. A monster having one or more imperforate openings on the trunk.

Atretogastria (*ah-tret-o-gas'-tre-ah*) [ἄτρητος, imperforate; γαστήρ, stomach]. Imperforation of the stomach.

Atretolemia, Atretolæmia (*ah-tret-o-le'-me-ah*) [ἄτρητος, imperforate; λαιμός, the gullet]. Breschet's term for imperforation of the esophagus or pharynx.

Atretorrhinia (*ah-tret-or-in'-e-ah*) [ἄτρητος, imperforate; ῥις, the nose]. Nasal atresia.

Atretostomia (*ah-tret-o-sto'-me-ah*) [ἄτρητος, imperforate; στόμα, the mouth]. Imperforation of the mouth.

Atreturethria (*ah-tret-u-re'-thre-ah*) [*ἀτρητος*, imperforate; *οὐρήθρα*, the urethra]. Imperforation of the urethra.

Atria. Plural of *Atrium* (Illus. Dict.).

Atrichiasis (*ah-trik-i'-as-is*). See *Atrichia* (Illus. Dict.).

Atriplex (*at'-ri-pleks*) [L.]. A genus of plants of the order *Chenopodiaceæ*. **A. hortensis,** L., garden-orache, a species indigenous to Siberia, cultivated in Europe, where it is eaten as spinach; the seeds are emetic and purgative. **A. littoralis,** L., the sea-orache, an annual growing in Europe and on the shore of the Great Lakes of the United States. The leaves are eaten, and the plant yields soda.

Atriplicism (*at-rip'-lis-ism*) [*Atriplex*, a genus of plants]. A form of poisoning from eating uncooked sea-orache, *Atriplex littoralis*. It is characterized by painful infiltration of the backs of the hands and forearms and a sensitiveness to light.

Atrium. (See Illus. Dict.) **A. anterius, A. cordis dextrum,** the right auricle of the heart. **A. cordis sinistrum,** the left auricle of the heart. **A. dextrum cordis,** the right auricle of the heart. **Atria mortis,** the halls of death; a name for the organs most concerned in vital activities—the heart, lungs, and oblongata. **A. posterius cordis, A. sinistrum cordis,** the left auricle of the heart. **A. vaginæ,** the vestibule of the vulva.

Atrolactyl (*at-ro-lak'-til*). $C_9H_9O_2$. The radicle of atrolactic acid. **A. tropein.** See *Aconitin, British*.

Atronol(*at'-ron-ol*). $C_{16}H_{14}$. A substance formed by dry distillation of *α*-isatropic acid. Syn., *Phenyldihydronaphthalen*.

Atrope (*at'-rop*). See *Orthotropous* (Illus. Dict.). **A. line.** See *Lines, Table of* (Illus. Dict.).

Atrophia. (See Illus. Dict.) **A. ab alvi fluxu,** emaciation resulting from diarrhea. **A. ablactatorum,** emaciation due to weaning. **A. acuta jecinoris,** acute yellow atrophy of the liver. **A. a crinibus,** emaciation of infants ascribed to the presence of pricking hairs on their backs. **A. a fascino.** See *A. verminosa*. **A. anglica.** See *A. nervosa*. **A. cachochymica,** that due to indigestible food. **A. cutis linearis,** acute linear atrophy of the skin. **A. cutis propria.** See *Adesmosis* (Illus. Dict.). **A. famelicorum,** emaciation from hunger. **A. glandularis.** See *Tabes mesenterica* (Illus. Dict.). **A. inanatorum,** emaciation from diarrhea. **A. ingravescens musculorum,** progressive muscular atrophy. **A. mesaraica.** See *Tabes mesenterica* (Illus. Dict.). **A. musculorum ingravescens,** progressive muscular atrophy. **A. musculorum lipomatosa.** See *Paralysis, Pseudohypertrophic* (Illus. Dict.). **A. musculorum lipomatosa pseudohypertrophica.** See *Atrophy, Progressive Muscular* (Illus. Dict.). **A. musculorum progrediens, A. m. progressiva,** progressive muscular atrophy. **A. musculorum progressiva pseudohypertrophica.** See *Paralysis, Pseudohypertrophica* (Illus. Dict.). **A. nervea,** atrophy of the nerves **A. nervosa,** gradual emaciation with loss of appetite due to unwholesome and depressing environment. **A. nova, facialis,** progressive facial atrophy. **A. verminosa,** emaciation due to intestinal worms. **A. virginiana.** See *A. nervosa*.

Atrophodermatosis (*at-ro-fo-dur-mat-o'-sis*) [*ἀτροφία*, atrophy; *δέρμα*, skin]. A class of skin-diseases, including atrophoderma, ulodermitis, and scleroderma, characterized by atrophy of the cutis.

Atropholysis (*at-ro-fol'-is-is*) [*ἀτροφία*, atrophy; *λύσις*, a loosing]. A flabby, weak, or ulcerated condition due to insufficient nutrition.

Atrophy. (See Illus. Dict.) 2. To become atrophied. **A., Accidental,** that of a part from compression or cutting off its blood-supply. **A., Amphiblestroid,** retinal atrophy. **A., Amyloid,** that due to amyloid degeneration. **A., Angibromic,** decrease in the size of the lumen of the alimentary canal. **A., Brossard's Type of,** "type fémoral avec griffe des orteils." See *A., Eichhorst's Type*. **A., Buchwald's,** idiopathic, diffuse progressive atrophy of the skin. **A., Cerebral, with Delusions.** See *Paralysis, General* (of the insane) (Illus. Dict.). **A., Charcot-Marie-Tooth's Type of.** See *A., Charcot-Marie's Type*. **A., Chronic Spinal Muscular.** Synonym of *A., Progressive Muscular* (Illus. Dict.). **A., Compression,** atrophy of a part from constant compression. **A., Concentric,** that proceeding from without inward and tending to lessen the capacity of a hollow organ. **A., Concentric, of the Uterus,** that which is evidenced by a marked diminution in the size of the uterus. **A., Congenital,** that due to arrested development. **A., Cruveilhier's.** See *Disease, Aran-Duchenne's* (Illus. Dict.). **A., Cyanotic** (of the liver), atrophy of the parenchyma of the hepatic lobules due to stasis in the venous circulation, causing dilation and congestion of the central veins and adjacent capillaries. **A., Déjerine-Sottas' Type of,** hypertrophic interstitial neuritis of infancy. **A., Duchenne-Landouzy's Type of.** See *A., Landouzy-Déjerine's Type*. **A., Eccentric,** that proceeding from within toward the periphery. **A., Eccentric** (of the uterus), that in which the atrophy is slight and manifested only by a thinning of the uterine walls. **A., Eichhorst's Type of,** the femorotibial type of progressive muscular atrophy. **A., Erb's Juvenile Form of,** the scapulohumeral type of progressive muscular atrophy. **A., Fuchs' Optic,** peripheral atrophy of the bundles composing the optic nerve. **A., Gastrointestinal.** See *Marasmus* and *Athrepsia* (Illus. Dict.). **A., General,** emaciation. **A., Granular,** a form observed in the liver and kidneys, causing diminution in size and attended with excess in formation of connective tissue, with copious supply of granular matter. **A., Granuloproteic,** that due to replacement of proper cell-structure with fine granular masses. **A., Halisteretic,** atrophy of bone manifested only by gradual thinning of the lamellas of the spongy tissue. **A. of the Heart with Contraction,** increased thickness of the heart-walls with diminution of the capacity of the cavities. **A. of the Heart with Dilation,** diminished thickness of the heart-walls with dilation of the cavities. **A. of the Heart, Simple,** diminished thickness of the heart-walls without marked change in the size of its cavities. **A., Hemi-,** atrophy of a lateral half of the body. **A., Hoffmann's Type of.** See *A., Charcot-Marie's Type*. **A., Inactivity,** disappearance of a muscle from disuse. **A., Individual,** Charcot's name for atrophy of individual muscles in different parts, the proximate muscles not being affected. **A., Infantile.** See *Tabes mesenterica* (Illus. Dict.). **A., Landouzy-Déjerine's Type of,** the facioscapulohumeral type of progressive muscular atrophy. **A., Leyden-Moebius' Type of,** a type of progressive muscular atrophy commencing in the calves and often assuming the character of Duchenne's pseudohypertrophic paralysis. **A., Linear** (of the skin). See *Linea albicantes*, in *Lines, Table of* (Illus. Dict.). **A., Mesenteric.** See *Tabes mesenterica* (Illus. Dict.). **A., Muscular, Fatty, A., Muscular, Juvenile, A., Muscular,**

Pseudohypertrophic, Progressive. See *Paralysis, Pseudohypertrophic* (Illus. Dict.). **A., Myopathic, of Adolescents,** Erb's juvenile hereditary form of primary muscular dystrophy. **A., Myopathic Muscular,** that due to disease of the muscles, and not to spinal lesion. **A., Necrobiotic.** See *A., Numerical.* **A., Nervous, Progressive.** See *A., Progressive Nervous.* **A., Neural,** wasting of a nerve due to neuritis and sclerosis. **A., Neurotic,** wasting of a part from disease of the trophic nerves. **A., Numerical,** atrophy of a part with destruction of some of its elements. **A., Parrot's, of the New-born,** athrepsia; primary infantile atrophy or marasmus. **A., Partial, of the Face.** See *A., Progressive Unilateral Facial* (Illus. Dict.). **A., Pathologic,** that due to disease. **A., Peroneal.** See *A., Charcot-Marie's Type.* **A., Physiologic,** the natural atrophy of an organ after its functional activity is concluded. **A., Primary Muscular, in Children,** primary muscular dystrophy. See *A., Idiopathic Muscular* (Illus. Dict.). **A., Progressive Muscular, of Children,** Erb's juvenile hereditary form of primary muscular dystrophy. **A., Progressive Muscular, of the Tongue, Palate, and Lips.** Synonym of *Paralysis, Bulbar* (Illus. Dict.). **A., Progressive Nervous,** Jaccoud's name for atrophy of the spinal nerve-roots due to pressure from a deposit of fibrous substance on the spinal arachnoid. **A., Pure.** See *A., Simple* (Illus. Dict.). **A., Qualitative,** degeneration. **A., Quantitative.** See *A., Simple* (Illus. Dict.). **A. with Rarefaction,** atrophy of an organ with increase in size or without decrease. **A., Sclerotic,** a name for connective tissue found at times deposited in the heart-substance after myocarditis. **A., Senile, of the Lungs** (Dechambre, 1835), atrophic emphysema. **A., Simple Brown,** a condition of the heart in which the muscle-fibers retain their striated appearance, but the muscle-cells are small and contain yellow granules of pigment. **A., Simple Infantile.** See *Marasmus* (Illus. Dict.). **A., Spinal.** See *Tabes* (Illus. Dict.). **A., Subacute Red** (of the liver), acute cirrhosis of the liver. **A., Sympathetic,** atrophy of the second member of a pair of organs following that of the first. **A., Tooth's Type of.** See *A., Charcot-Marie's Type.* **A., Varicose.** See *A., Cyanotic.* **A., Vulpian's Type of.** See *Disease, Aran-Duchenne's* (Illus. Dict.). **A., White,** nerve atrophy, leaving only white connective tissue. **A., Zimmerlin's Type of,** the scapulohumeral type of progressive muscular atrophy distinguished from Erb's type by the absence of secondary lipomatosis.

Atropia (*at-ro'-pe-ah*). See *Atropin* (Illus. Dict.).

Atropic (*at-rop'-ik*). Relating to the genus *Atropa* or to atropin.

Atropidin (*at-rop'-id-in*). See *Hyoscyamin* (Illus. Dict.).

Atropin. (See Illus. Dict.) **A. Acetate,** $C_{17}H_{23}NO_3 . C_2H_4O_2$, stellate, pearly prisms, very soluble in water. **A. Arsenate,** $(C_{17}H_{23}NO_3)_2H_3AsO_4$, a white powder containing 19.72% of arsenic and 80.28% of atropin, soluble in water and in alcohol. **A. Borate,** $(C_{17}H_{23}NO_3)_2B_4O_7$, white scales soluble in water and alcohol, melting at 113°–115° C. It is used in ophthalmic practice. **A. Hydrobromate,** $C_{17}H_{23}NO_3 . HBr$, white crystals soluble in water and in alcohol. It is used as atropin. **A. Hydrochlorate,** $C_{17}H_{23}NO_3HCl$, white crystals soluble in water and alcohol, slightly in ether. Used as atropin. Dose, $\frac{1}{100}$–$\frac{1}{81}$ gr. (0.00065–0.001 gm.). **A. Hydroiodate,** $C_{17}H_{23}NO . HIO_3$, is employed in ophthalmic practice in 0.5% to 1.5% solution. **A. Nitrate,** $C_{17}H_{23}NO_3H . NO_3$, white crystals soluble in alcohol and water. **A. Oleate,** a 2% solution of atropin in oleic acid; it is soluble in ether, benzene, chloroform, and oils. It is a mydriatic, sedative, and anodyne, and is used as an inunction where remedies cannot be administered by the mouth. **A. Salicylate,** $C_{17}H_{23}NO_3C_7H_6O_3$, a colloidal mass, used as atropin. **A. Santonate,** a compound of atropin and santonic acid forming a nonhygroscopic amorphous powder, recommended as a mydriatic. **A. Santoninate,** $C_{17}H_{23}O_3C_{15}H_{20}O_4$, a white powder soluble in water, melting at 113°–115° C. It is used in ophthalmic practice. **A. Stearate,** $C_{17}H_{23}NO_3C_{17}H_{35}CO . OH$, fine white needles, greasy to the touch, melting at 120° C., beginning to decompose at 170° C., and containing 50.43% of atropin. It is soluble in ether and in alcohol. Applied in 1 : 500 oily solution as substitute for oil of belladonna or oil of hyoscyamus. **A. Sulfate,** $(C_{17}H_{23}NO_3)_2H_2SO_4$, white masses of neutral reaction, soluble in 0.4 part of water and in 6 parts of alcohol, melting at 189°–191° C. It is used as atropin. Dose, $\frac{1}{100}$–$\frac{1}{75}$ gr. (0.00065–0.0013 gm.). **A. Tartrate,** $(C_{17}H_{23}NO_3)_2C_4H_6O_6$, amorphous plates, soluble in water and in alcohol, melting at 113°–115° C. It is used as atropin. **A. Valerianate,** $(C_{17}H_{23}NO_3C_5H_{10}O_2)_2 + H_2O$, white crystals soluble in water, in alcohol, and in ether, melting at 113°–116° C.

Atropinization (*at-ro-pin-i-za'-shun*). The production of the physiologic effect of belladonna.

Atropinum, Atropium (*at-ro-pi'-num, at-ro'-pi-um*). See *Atropin* (Illus. Dict.).

Atroscin (*at'-ros-in*). $C_{17}H_{21}NO_4$. An alkaloid isomeric with hyoscin, obtained from *Scopolia carniolica* Jacq. It has a higher rotary power than hyoscin and is from 2 to 4 times stronger in mydriatic action. Syn., *Atrosia.*

Attaint (*at-aint'*) [*attingere*, to touch by striking]. An injury to a horse's leg caused by overreaching.

Attenuant. (See Illus. Dict.) 2. Increasing the fluidity of the blood or other secretions. 3. Lessening the effect of an agent.

Attenuation. (See Illus. Dict.) 2. The state of being thin. 3. A system of dietetics for correction of obesity. 4. The reduction of the toxicity of a pathologic microorganism or a virus by successive cultures or repeated inoculations. 5. The virus or medicine which has undergone attenuation.

Atticoantrotomy (*at-ik-o-an-trot'-o-me*) [*attic; antrum; τέμνειν*, to cut]. The opening of the attic and mastoid process.

Atticomastoid (*at-ik-o-mas'-toid*). Relating to the attic and the mastoid.

Atticotomy (*at-ik-ot'-om-e*) [*attic; τέμνειν*, to cut]. Surgical incision of the attic.

Attidæ (*at'-id-e*). A family of jumping spiders, several species of which are held to be venomous. Cf. *Attus, Hippus.*

Attitude. (See Illus. Dict.) **A., Devergie's** (of **Combat**), a posture of a dead body marked by flexion of the elbows and knees, with closure of the fingers and extension of the ankles.

Attraction-sphere. See *Sphere of Attraction* (Illus. Dict.).

Attractoelectric (*at-rakt-o-e-lek'-trik*). Having the power to attract an electric current.

Attractor (*at-rak'-tor*). See *Attrahens* (Illus. Dict.).

Auchen (*aw'-ken*) [*αὐχήν*, the neck]. The neck or throat or the constricted part of any organ.

Aucheniatria (*aw-ken-i-at'-re-ah*) [*αὐχήν*, the throat; *ἰατρεία*, a healing]. The therapy of throat diseases.

Audition. (See Illus. Dict.) Syn., *Acusia: Acoasis.* **A., Active,** the hearing which occurs during the act of listening. **A., Chromatic.** See *A.*

Colorée (Illus. Dict.). **A., Contre,** the perception by one ear of the vibrations of a tuning-fork placed on the mastoid process on the other side. **A., Mental,** the formation of an idea or mental impression from a remembered sound. **A., Passive,** the perception of sounds without any effort being made to hear them. **A., Verbal-Mental,** mental audition in which the remembered sounds are words.

Auditory Sand. See under *Sand*.

Aura. (See Illus. Dict.) **A., Electric.** See *Wind, Electric* (Illus. Dict.). **A., Epigastric,** a localized epileptic aura.

Aurade, Auradin (*aw'-rād, aw'-rad-in*). A fatty body obtained from oil of orange flowers by Plisson, who regarded it as analogous to ambrein, myricin, ethal, and cerasin. It crystallizes in tasteless, pearly, odorless scales, melting at 131° F.; soluble in water, insoluble in alcohol. Syn., *Neroli camphor*.

Aural. (See Illus. Dict.) 2. Relating to the air or to an aura. 3. See *Aurade*.

Aurammonium (*aw-ram-o'-ne-um*) [*aurum; ammonium*]. A compound in which there is replacement of the hydrogen in ammonium with gold.

Aurantia. (See Illus. Dict.) 2. An orange or oranges.

Aurantiamarin (*aw-ran-ti-am'-ar-in*). A bitter glucosid obtained by Tanret from orange peel.

Aurantiin (*aw-ran'-te-in*). See *Aurantin* (Illus. Dict.).

Aurate (*aw'-rāt*). A salt of auric acid.

Aurea alexandrina (*aw'-re-ah al-eks-an'-drin-ah*). A preparation of opium.

Aureol (*aw-re'-ol*). The commercial name of a hair-dye said to contain menthol, 1%; amidophenol-chlorhydrate, 0.3%; monoamido-diphenylamin, 0.6%; dissolved in 50% alcohol which contains 0.5% sodium sulfite.

Aureola (*aw-re'-o-lah*). See *Areola* (1) (Illus. Dict.).

Aureolary (*aw-re'-ol-ar-e*). Pertaining to the areola of the nipple.

Aureolin (*aw-re'-ol-in*) [*aurum*, gold]. A yellow pigment obtained by heating paratoluidin with sulfur and treating with fuming sulfuric acid. Syn., *Primuline yellow; Carnotin; Sulphin; Polychromin; Thiochromogen*.

Aureosin (*aw-re'-o-sin*). The commercial name for a combination of chlorin and fluorescin.

Auric (*aw'-rik*) [*aurum*, gold]. Pertaining to gold. **A. Anhydrid,** gold trioxid. **A. Hydrate,** gold trihydroxid. **A. Iodid,** gold triiodid. **A. Oxid,** gold trioxid.

Auricle. (See Illus. Dict.) 2. An ear-shaped appendage. 3. A kind of ear-trumpet. **A.-camphor,** a stearoptene obtained by Hünefeld from root of *Primula auricula*, L. **A., Cervical,** congenital cartilaginous remains of the neck, arising about the middle of the sternomastoid as symmetric bodies, occurring in man occasionally and almost constantly present in the goat.

Auricled (*aw'-rik-ld*). See *Auriculate*.

Auricoammonic (*aw-rik-o-am-on'-ik*). Containing gold and ammonium.

Auricobarytic (*aw-rik-o-bar-it'-ik*). Containing gold and barium.

Auricular (*aw-rik-u-lar'-e*). See *Auricular Point* (Illus. Dict.).

Auricularis (*aw-rik-u-lar'-is*). 1. See *Auricular* (Illus. Dict.). 2. The extensor minimi digiti. See *Muscles, Table of* (Illus. Dict.). See also *Nerves, Table of* (Illus. Dict.).

Auriculate, Auriculated (*aw-rik'-u-lāt, -ed*). Furnished with ears or ear-like appendages; auricled.

Auriculiform (*aw-rik-u'-le-form*). Shaped like a little ear.

Auriculocranial (*aw-rik-u-lo-kra'-ne-al*). Pertaining to both the auricle and the cranium.

Auriferous (*aw-rif'-ur-us*) [*aurum*, gold; *ferre*, to bear]. Containing gold; yielding gold.

Aurific (*aw-rif'-ik*). Containing gold.

Auriginosus (*aw-rij-in-o'-sus*). 1. Having the color of gold. 2. Relating to jaundice.

Aurinasal (*aw-re-na'-sal*) [*auris*, ear; *nasus*, nose]. Pertaining to the ear and the nose.

Auris. (See Illus. Dict.) **A. ceti,** the cochlea of the whale, once used as a remedy. **A. externa,** the outer ear. **A. interna, A. intima,** the internal ear. **A. media,** the middle ear. **Aurium tinnitus,** ringing in the ears.

Auriscopy (*aw-ris'-ko-pe*). See *Otoscopy* (Illus. Dict.).

Aurobromid (*aw-ro-bro'-mid*). Gold and potassium bromid.

Aurum. (See Illus. Dict.) For salts see under *Gold*. **A. vegetabile,** pipitzahoinic acid.

Auryl (*aw'-ril*). A — Au = O. A univalent radicle contained in metauric acid.

Auscultator (*aws-kul'-a-tor*). An adept in auscultation.

Auscultoscope (*aws-kul'-o-skōp*). See *Phonendoscope*.

Australene (*aws'-tral-ēn*) [*Pinus australis*, the source of American turpentine]. $C_{10}H_{16}$. Braconnot's name for a liquid, dextrorotary hydrocarbon, the chief constituent of English and American oil of turpentine; it is also found in oils of wormwood and spearmint. Syn., *Dextropinene; Austropyrolene; Austroterebenthene; Austroterebenthine*.

Austroterebenthine (*aws-tro-ter-e-ben'-thēn*). See *Australene*.

Autecic, Autœcic (*aw-te'-sik*). See *Autecious* (Illus. Dict.).

Autemesia (*aw-tem-e'-she-ah*) [*αὐτός*, self; *ἐμεῖν*, to vomit]. Vomiting without manifest cause.

Autilytic (*aw-til-it'-ik*). See *Autolytic*.

Autoambulance (*aw-to-am'-bu-lans*) [*αὐτός*, self; *ambulance*]. An ambulance containing its own motive power.

Autoaudible (*aw-to-awd'-i-bl*) [*αὐτός*, self; *audire*, to hear]. Applied to cardiac sounds audible to the patient.

Autoblast (*aw'-to-blast*) [*αὐτός*, self; *βλαστός*, a germ]. An independent bioblast.

Autocheir (*aw'-to-kīr*) [*αὐτός*, self; *χεῖρ*, hand]. A person who has taken his own life.

Autocheiria (*aw-to-ki'-re-ah*). Suicide.

Autoclinic (*aw-to-klin'-ik*) [*αὐτός*, self; *κλινικός*, pertaining to a bed]. 1. The study of disease in the student's own person. 2. Relating to the study of disease in one's own person.

Autoconduction (*aw-to-kon-duk'-shun*) [*αὐτός*, self; *conduction*]. A term used in electrotherapy for a method of using high-frequency currents, by having the patient or part to be acted upon placed inside of the solenoid, without any direct connection with any part of the circuit. [Jacoby.]

Autocracy, Autocrasy (*aw-tok'-ras-e*) [*αὐτός*, self; *κρατεῖν*, to rule]. 1. The vital principle of an organism. 2. The effort of the vital powers toward the preservation of the organism.

Autocystoplasty (*aw-to-sis-to-plas'-te*) [*αὐτός*, self; *κύστις*, bladder; *πλάσσειν*, to form]. Plastic surgery of the bladder with grafts from the patient's body.

Autocytotoxins (*aw-tō-si-to-toks'-ins*) [*αὐτός*, self; *cytotoxin*]. Cytotoxins produced in the body of the individual by abnormal retention and absorption of the products of degenerated and dead cells.

Autoendoscopy (*aw-to-en-dos′-ko-pe*) [*αὐτός*, self; *endoscopy*]. Self-examination by means of the endoscope.

Autoepidermic (*aw-to-ep-e-durm′-ik*) [*αὐτός*, self; *epidermis*]. Pertaining to or taken from the skin of the person concerned. A form of skin-grafting (*q. v.*).

Autoepilation (*aw-to-ep-il-a′-shun*) [*αὐτός*, self; *epilation*]. The pulling out of one's own hair.

Autofundoscope (*aw-to-fun′-do-skōp*) [*αὐτός*, self; *fundus*, the bottom; *σκοπεῖν*, to look]. An instrument for self-examination of the vessels about the macular region of the eye.

Autogenia (*aw-to-je′-ne-ah*). See *Autogenesis* (Illus. Dict.).

Autogenial (*aw-to-jen′-e-al*). See *Autogenous* (Illus. Dict.).

Autogenous. (See Illus. Dict.) 2. Having a distinct center of development, as parts of bones.

Autognosis (*aw-tog-no′-sis*) [*αὐτός*, self; *γνῶσις*, knowledge]. Knowledge obtained by self-observation.

Autognostic (*aw-tog-nos′-tik*). Relating to autognosis.

Autogony (*aw-toj′-on-e*) [*αὐτογόνος*, self-produced]. The rise of the simplest protoplasmic substances in a formative fluid. [Haeckel.]

Autohypnotic (*aw-to-hip-not′-ik*). 1. Relating to autohypnotism. 2. An individual who can put himself into a hypnotic state.

Autoimmunization (*aw-to-im-u-ni-za′-shun*) [*αὐτός*, self; *immunization*]. Immunization obtained by natural processes at work within the body.

Autoinfection (*aw-to-in-fek′-shun*) [*αὐτός*, self; *inficere*, to infect]. Infection by virus originating within the body or transferred from one part of the body to another.

Autoinfusion (*aw-to-in-fu′-shun*) [*αὐτός*, self; *infundere*, to pour in]. Compulsion of the blood to the heart by bandaging the extremities, compression of the abdominal aorta, etc.

Autointoxication. (See Illus. Dict.) **A., Endogenous**, that due to the action of excessive, unneutralized, or modified discharges from the cells of any tissue acting upon the other tissues without previous discharge from the body; or, that due to the action of products of decomposition and necrosis of any tissue acting in a similar manner; or, that due to microendoparasites or macroendoparasites. **A., Exogenous**, that due to the action of poisons entering the system from without, through the skin, the digestion, the respiratory or genitourinary tract, as by the absorption of retained excreta, or of decomposition- and fermentation-products developed in the external secretions through the action of those secretions [Adami]. **A., Indirect**, that caused by the absorption of retained excrements.

Autoisolysin (*aw-to-is-o-li′-sin*) [*αὐτός*, self; *ἴσος*, equal; *λύσις*, a loosing]. A serum which dissolves the corpuscles of the individual from which it was obtained and also those of another individual of the same species.

Autolavage (*aw-to-lav′-ahj*) [*αὐτός*, self; *lavage*]. The washing out of one's own stomach.

Autolithotomist (*aw-to-lith-ot′-om-ist*) [*αὐτός*, self; *λίθος*, a stone; *τέμνειν*, to cut]. 1. An individual who has practised lithotomy upon himself. 2. An automatic instrument for performing lithotomy.

Autology (*aw-tol′-o-je*) [*αὐτός*, self; *λόγος*, science]. The scientific study of self.

Autolysin (*aw-to-li′-sin*) [*αὐτός*, self; *λύσις*, a loosing]. A lysin capable of dissolving the red blood-corpuscles of the animal in the serum of which it circulates. Cf. *Heterolysin; Isolysin; Hemolysin.*

Autolysis (*aw-tol-is′-is*) [*αὐτός*, self; *λύσις*, a loosing]. 1. Self-digestion of inflammatory exudates and necrotic material within the living body. [Jacoby and Conradi.] 2. The chemic splitting up of the tissue of an organ by the action of an enzyme peculiar to it; described by Mathes as occurring in the placenta. 3. The hemolytic action of the blood-serum of an animal upon its own corpuscles.

Autolytic (*aw-to-lit′-ik*). Relating to autolysis.

Autonomic, Autonomous (*aw-ton-om′-ik, ton′-om-us*). Independent in origin, action, or function.

Autonosographia, Autonosography (*aw-to-no-se-graf′-e-ah, aw-to-nos-og′-raf-e*) [*αὐτός*, self; *νόσος*, sickness; *γραφειν*, to write]. A description of an individual's own disease.

Autoophthalmoscope (*aw-to-of-thal′-mo-skōp*). See *Autophthalmoscope* (Illus. Dict.).

Autophagism (*aw-tof′-aj-izm*). See *Autophagy* (Illus. Dict.).

Autophia (*aw-to′-fe-ah*). See *Autopsy* (Illus. Dict.).

Autophonia. (See Illus. Dict.) 2. [*αὐτός*, self; *φόνος*, murder.] Suicide.

Autophony. (See Illus. Dict.) 2. The altered resonance of the patient's voice as heard by himself.

Autophthalmoscopy (*aw-tof-thal-mos′-ko-pe*). Self-examination of the interior of the eye.

Autophysiotherapeia, Autophysiotherapia (*aw-to-fiz-e-o-ther-ap-e′-ah*) [*αὐτός*, self; *φύσις*, nature; *θεραπεία*, therapy]. Cure by means of nature's restoring power without medicaments.

Autopsychorrhythmia (*aw-to-si-kor-rith′-me-ah*) [*αὐτός*, self; *ψυχή*, mind; *ῥυθμός*, rhythm]. A morbid rhythmic activity of the brain; it is a symptom of grave insanity.

Autoptic, Autoptical (*aw-top′-tik, -al*). Relating to autopsy.

Autorrhinoscopy (*aw-tor-rin-os′-ko-pe*) [*αὐτός*, self; *ῥίς*, the nose; *σκοπεῖν*, to look]. Self-inspection with the rhinoscope.

Autospeculum (*aw-to-spek′-u-lum*) [*αὐτός*, self; *speculum*]. A vaginal speculum for self-examination.

Autospermotoxin (*aw-to-spurm-o-toks′-in*) [*αὐτός*, self; *σπέρμα*, seed; *τοξικόν*, poison]. A specific substance produced in the blood-serum of an animal by intravenous injection of spermatozoa of another animal and which renders the serum of the treated animal toxic for the spermatozoa of both.

Autosterilization (*aw-to-ster-il-iz-a′-shun*) [*αὐτός*, self; *sterilization*]. Sterilization effected by the normal fluids of the body.

Autostylic (*aw-to-sti′-lik*) [*αὐτός*, self; *στῦλος*, a pillar]. Applied to a mandible in which the palatopterygoid articulates directly with the cranium.

Autotelic (*aw-tot′-el-ik*) [*αὐτός*, self; *τέλος*, end]. Existing for its own end or sake. Cf. *Heterotelic.*

Autotemnous (*aw-to-tem′-nus*) [*αὐτός*, self; *τεμνειν*, to cut]. Capable of spontaneous division.

Autotoxicosis. See under *Toxicosis* (Illus. Dict.).

Autotoxicus (*aw-to-toks′-ik-us*) [*αὐτός*, self; *τοξικόν*, poison]. Ehrlich's term for self-poisoning through the formation and action of autocytotoxins in consequence of absorption by the animal of its own degenerate and dead cells.

Autotyphization (*aw-to-ti-fiz-a′-shun*) [*αὐτος*, self; *typhoid*]. The production of a condition resembling typhoid fever from faulty elimination of waste material.

Autoxemia. See *Autotoxemia* (Illus. Dict.).

Autoxenous (*aw-toks′-en-us*) [*αὐτος*, the same; *ξένος*, host]. See *Autecious* (Illus. Dict.).

Auxanogram (*awks-an′-o-gram*) [*αὐξανειν*, to grow; *γράφειν*, to write]. A pure plate culture of micro-

which has been prepared by Beyerinck's auxanographic method in which the colonies indicate which one of several nutrient media is best suited to their growth.

Auxanography (*awks-an-og'-ra-fe*). A method devised by Beyerinck for ascertaining which nutrient media are suitable for a growing microbe. Plate cultures of bad media (*e.g.*, 10% gelatin or 2% agar-agar in distilled water) are stippled with drops of solutions, the nutrient properties of which are to be tested. The species of microbe under examination will then develop strong colonies only on those spots where the requisite pabulum is present.

Auxemeter (*awks-em'-et-ur*). See *Auxometer*.

Auxenometer, Auxesimeter (*awks-en-om'-et-ur, awks-es-im'-et-ur*). See *Auxometer*.

Auxiliaris (*awks-il-i-a'-ris*). 1. See *Auxiliary* (Illus. Dict.). 2. See under *Muscles*.

Auxiliary. (See Illus. Dict.) 2. An adjuvant. **A.s of Respiration,** those muscles concerned in difficult respiration.

Auxiometer (*awks-e-om'-et-ur*). See *Auxometer*.

Auxometer (*awks-om'-et-ur*) [*αὐξειν*, to grow; *μέτρον*, a measure]. 1. A device for estimating the magnifying power of lenses. 2. See *Auxanometer* (Illus. Dict.). 3. A dynamometer. Syn., *Auxemeter; Auxenometer; Auxesimeter; Auxiometer; Auzometer.*

Auzometer (*awz-som'-et-ur*). See *Auxometer*.

Avaisme (*ah'-vah-izm*). A malady from abuse of kava resembling absinthism.

Aval (*a'-val*) [*avus*, an ancestor]. Relating to grandparents.

Avalanch (*av'-al-ansh*) [*ad*, to; *vallem*, acc. of *vallis*, valley]. The phenomenon following two similar excitations of a motor nerve, one near the muscle which it supplies, the other at a distance, the last causing the more active contraction of the muscle.

Avalent (*ah-va'-lent*) [*a*, priv.; *valere*, to be strong]. Without valency.

Avalvular (*ah-valv'-u-lar*) [*a*, priv.; *valvula*, a valve]. Lacking valves.

Avascular (*ah-vas'-ku-lar*) [*a*, priv.; *vasculum*, a small vessel]. Not vascular; bloodless.

Avascularization (*ah-vas-ku-lar-iz-a'-shun*). The act of rendering a part bloodless, as by compression or bandaging.

Avascularize (*ah-vas'-ku-lar-iz*). To render bloodless.

Avenain (*av-e'-na-in*). See *Avenin* (Illus. Dict.).

Avenalin (*av-en'-al-in*). The proteid of oats.

Avenious, Avenous (*ah-ve'-ne-us, ah-ve'-nus*) [*a*, priv.; *vena*, vein]. Lacking veins or nerves.

Avenolith (*av-en'-ol-ith*) [*avena*, oats; *λίθος*, stone]. An intestinal calculus formed around a grain of oats.

Aversion (*av-ur'-shun*) [*avertere*, to turn aside]. A turning aside, as in the displacement of an organ or in metastasis. 2. Nausea.

Avicularia (*av-ik-u-la'-re-ah*) [*avis*, a bird]. A genus of giant spiders of the *Theraphosidæ*, the so-called trap-door, mining, or mason spider. **A. vestiaria** (de Geer), bird spider, the nhandu-guacu of Brazil and tropic America, a poisonous giant spider.

Avirulent (*ah-vir'-u-lent*) [*a*, priv.; *virus*, a poison]. Without virulence.

Avornin (*av-orn'-in*). $C_{16}H_{18}O_8$. A glucosid obtained by Kubly from the bark of avornus, *Rhamnus frangula*, L. It is perhaps identical with impure frangulin.

Avulsio, Avulsion. (See Illus. Dict.) **A. of the Bulb, A. bulbi,** separation of the pupil from its attachments in consequence of complete or almost complete rupture of the tendons of the optic muscles and nerves.

Axanthopsia (*ah-zan-thop'-se-ah*) [*a*, priv.; *ξάνθος*, yellow; *ὄψις*, vision]. Yellow-blindness.

Axes (*aks'-ez*). 1. Plural of *Axis*. 2. A provincial name for ague or its paroxysms.

Axiform (*aks'-e-form*) [*axis; forma*, form]. Shaped like an axis.

Axifugal (*aks-if'-u-gal*) [*axis; fugere*, to flee]. Centrifugal.

Axiniform (*aks-in'-e-form*) [*ἀξίνη*, an ax; *forma*, form]. Shaped like the head of an ax.

Axiobliquus (*aks-e-ob-lik'-wus*). See *Obliquus capitis inferioris*, in *Muscles, Table of* (Illus. Dict.).

Axioplasm (*aks'-e-o-plazm*) [*axis; πλάσμα*, a thing molded]. 2. Waldeyer's term for the delicate stroma of reticular substance holding together the fine fibrillas of the axis-cylinders. Syn., *Neuroplasm.*

Axioscotic (*aks-e-o-sko'-tik*). See *Isochromatic* (Illus. Dict.).

Axipetal, Axipetus (*aks-ip'-et-al, aks-ip'-et-us*) [*axis; petere*, to seek]. Centripetal; applied to the transmission of impulses toward an axon. Syn., *Axopetal.*

Axirectus (*aks-e-rek'-tus*). See *Rectus capitis posticus major*, in *Muscles, Table of* (Illus. Dict.).

Axis. (See Illus. Dict.) **A.-band.** See *A.-cylinder* (Illus. Dict.). **A., Basibregmatic.** See *Line, Basiobregmatic* (Illus. Dict.). **A., Brain,** the isthmus. **A. of the Brim of the Pelvis,** a line imagined to pass through the center of the plane of the pelvic inlet in a direction perpendicular to the plane. **A., Celiac.** See *Artery, Celiac* (Illus. Dict.). **A., Central.** See *A.-cylinder* (Illus. Dict.). **A.-cord.** See *Primitive Streak* (Illus. Dict.). **A.-corpuscle.** See *Corpuscle, Axile.* **A., Craniofacial,** in comparative anatomy the bones making the floor of the cranial cavity. **A.-cylinder Process.** See under *Process* (Illus. Dict.). **A., Electric,** a line connecting the two poles of an electric body. **A., Encephalomyelonic, A., Encephalospinal.** See *Neuraxis.* **A. of the Eye.** See *A., Optical, A., Visual* (Illus. Dict.). **A.-fiber.** See *A.-cylinder* (Illus. Dict.). **A., Hemal,** the aorta. **A., Magnetic,** a line connecting the two poles of a magnet. **A., Neural.** See *A., Cerebrospinal* (Illus. Dict.). **A., Notochordal.** See *Notochord* (Illus. Dict.). **A. of the Outlet of the Pelvis,** a line imagined to pass through the center of the plane of the pelvic outlet in a direction perpendicular to the plane. **A., Pelvic,** an imaginary line passing through all the median anteroposterior diameters of the pelvic canal at their centers. **A.-tractor,** a forceps for making traction in the pelvic axis. **A.-tube.** See *Axis-cylinder* (Illus. Dict.). **A. uteri,** 1. The long diameter of the uterus. 2. A line imagined to pass transversely through the uterus near its junction with the cervix, on which it is said to turn in retroversion.

Axite (*aks'-it*) [*axis*, axis]. Gowers' name for the terminal filaments of the axis-cylinder.

Axodendrite (*aks-o-den'-drit*) [*axis; δένδρον*, a tree]. Lenhossék's term for a nonmedullated, axopetally conducting side fibril on the axons, as distinguished from a cytodendrite or one of the true medullated, cellulifugal collaterals.

Axoid (*aks'-oid*) [*ἄξων*, axis; *εἶδος*, likeness]. 1. Shaped like a pivot. 2. Relating to the second cervical vertebra.

Axolemma. See *Axilemma* (Illus. Dict.).

Axolotl. A Mexican name for tailless amphibians of the genus *Amblystoma.* The flesh is considered analeptic, and a decoction of the skin made into a syrup is used as a remedy in pulmonary affections.

Axometer (*aks-om'-et-ur*) [*ἄξων*, an axis; *μετρον*,

measure]. An instrument used to adjust properly the axes of spectacles to the eyes.

Axon. (See Illus. Dict.) 2. The cerebrospinal axis. 3. Kolliker's term for neurite.

Axoneuron (*aks-o-nu'-ron*) [ἄξων, axis; νεῦρον, nerve]. A neuron the cell-body (nerve-cell) of which lies in the interior of the brain or the spinal cord. The axoneurons are classified as rhizoneurons and endaxoneurons.

Axonia (*aks-o'-ne-ah*) [ἄξων, axis]. Organisms having definite axes.

Axonometer (*aks-o-nom'-et-er*) [ἄξων, axis; μέτρον, a measure]. 1. An instrument used for locating the axis of astigmatism. 2. An apparatus for determining the axis of a cylinder.

Axopetal (*aks-op'-et-al*). See *Axipetal.*

Axoplasm (*aks'-o-plazm*). See *Axioplasm.*

Axospongium (*aks-o-spun'-je-um*) [ἄξων, axis; σπόγγος, a sponge). Held's term for the reticular structure of the axis-cylinder.

Axungia. (See Illus. Dict.) **A. anatis,** the fat of ducks. **A. anguillæ,** eel's fat. **A. anguium,** the fat of snakes. **A. anserina, A. anseris,** goose-grease. **A. ardeæ,** fat of herons. **A. articularis,** synovia. **A. aschiæ, A. aschii, A. asciæ, A. ascii,** the oil of the grayling, *Salmo thymallus.* **A. canis,** dog's fat. **A. caponis,** capon's fat. **A. castorei,** the fat obtained from the oil-sacs of the beaver. **A. castoris,** beaver's fat. **A. cati silvestris,** wild-cat's fat. **A. cetaria,** whale oil. **A. ciconiæ, A. ciconii,** fat from storks. **A. colli equi,** the fat from the neck of the horse. **A. coturnicis,** quail's fat. **A. cuculi,** fat of the cuckoo. **A. cuniculi,** rabbit's fat. **A. curata,** lard. **A. de mumia,** bone-marrow. **A. equi e collo, A. equi e juba.** See *A. colli equi.* **A. erinacei,** hedgehog fat. **A. gadi,** cod-liver oil. **A. gallinæ,** chicken-grease. **A. gruis,** crane's fat. **A. hominis,** human fat. **A. leporina, A. leporis,** hare's fat. **A. lucii piscis,** oil of pike. **A. lunæ,** a variety of calcium carbonate. **A. lupi,** wolf's fat. **A. lutræ,** otter fat. **A. mineralis,** vaselin. **A. pavonis galli,** fat of peacocks. **A. pedis tauri,** neat's-foot oil. **A. phasiani,** the fat of pheasants. **A. phocæ, A. phoci,** the fat of seals. **A. piscina marina,** cod-liver oil. **A. porci, A. porci depurata, A porci lota, A. porcina,** lard. **A. solis terra sigillata,** a yellow clay from Silesia. **A. suilla, A. suis scrofæ,** lard. **A. taxi,** badger's fat. **A. truttæ,** turkey grease. **A. ursi,** bear's grease. **A. vitri,** salt of glass; a scum forming on the surface of molten glass. It is applied as a desiccative and detergent. **A. vulpis,** fat of foxes.

Axungious (*aks-un'-je-us*). Greasy, lard-like.

Ayapana, Ayapano. The South American name for the leaves of the herb *Eupatorium triplinerve,* Vahl., of tropic America. It is stimulant, diaphoretic, and tonic, and is used in infusion externally for wounds and abscesses, internally for gastric disorders, and is recommended as a substitute for tea, coffee, and cocoa.

Aydendron (*ah-e-den'-dron*) [*ai,* S. A. name for the sloth; δένδρον, tree]. A genus of trees of the order *Laurineæ.* **A. cujumary,** a native of Guiana, yields an aromatic nut known as cujumary beans, esteemed as a tonic and stimulant. **A. floribundum,** Meisen, the swamp cinnamon-tree. The abacte cinnamon-tree of Brazil. The powdered seeds are used in leukorrhea; a tincture as a tonic; the pulp of the fruit as an astringent; and a decoction of the leaves for wounds.

Azadirin (*az-ad'-ir-in*). A bitter alkaloid obtained from *Melia azedarech;* it has been used as a substitute for quinin.

Azoamyly (*ah-zo-am'-il-e*) [*a,* priv.; ζῶον, animal; ἄμυλον, starch]. The inability of the cell (hepatic) to store up as much glycogen as in the normal state.

Azobenzid, Azobenzidin, Azobenzin, Azobenzol. See *Azobenzene* (Illus. Dict.).

Azobenzoid (*az-o-ben'-zo-id*). An amorphous white powder derived from oil of bitter almonds by action of ammonia.

Azobenzoidin (*az-o-ben-zo'-id-in*). Hexagonal white prisms obtained from oil of bitter almonds and isomeric with azobenzoid.

Azobenzoyl (*az-o-ben'-zo-il*). $C_{21}H_{15}N_3$. A crystalline substance obtained from crude bitter-almond oil by action of ammonia.

Azocodein (*az-o-ko'-de-in*). An artificial alkaloid obtained from nitrocodein by action of ammonium sulfid.

Azoconydrin (*az-o-kon-id'-rin*). $C_8H_{16}N_2O$. A yellow aromatic oil obtained from coniin by united action of nitrous anhydrid and water. Syn., *Nitrosoconiin.*

Azodifune (*az-o-di-fūn'*). See *Azobenzene* (Illus. Dict.).

Azodiphenyl (*az-o-di-fen'-il*). 1. See *Azobenzene* (Illus. Dict.). 2. $C_{24}H_{18}N_2$, an oxidation-product of hydrazodiphenyl forming orange-red laminas.

Azoic. (See Illus. Dict.) 2. Relating to nitrogen; azotic; nitric.

Azoindol (*az-o-in'-dol*). A red pigment obtained from hydrazoindol by action of acids and alkalis or from indol by action of fuming nitric acid.

Azomarate (*az-om'-ar-āt*). A salt of azomaric acid.

Azomethane (*az-o-meth-ān'*). Hydrocyanic acid.

Azoodynamia (*az-o-o-din-am'-e-ah*) [*a,* priv.; ζωή, life; δύναμις, power]. Lack of vital power.

Azoogenia, Azoogonia (*az-o-o-je'-ne-ah, az-o-o-go'-ne-ah*). See *Azoogeny.*

Azoogeny (*az-o-oj'-en-e*) [*a,* priv.; ζωή, life; γεννᾶν, to produce]. 1. The generation of an organism lacking vital power. 2. The regeneration of an organism having defective vitality.

Azoology (*az-o-ol'-oj-e*) [*a,* priv.; ζωή, life; λόγος, science]. The science of inanimate things.

Azoresorufin (*az-o-rez-o-ru'-fin*). $C_{24}H_{16}N_2O_7$. An amorphous reddish-brown powder or prismatic crystals obtained from azoresorcin by action of sulfuric acid. With alkalis it gives a cinnabar-red color and is a very sensitive reagent for alkalis.

Azotation (*az-o-ta'-shun*). The assimilation of nitrogen from the air by organisms.

Azotid (*az'-o-tid*). 1. A nitrid. 2. An amid or amin.

Azotiferous (*az-o-tif'-ur-us*). Containing nitrogen.

Azotiodic (*az-ot-i-o'-dik*). Containing nitrogen and iodin.

Azotite (*az'-o-tīt*). A nitrite.

Azotization (*az-o-ti-za'-shun*). The combination of a substance with nitrogen.

Azotized (*az'-o-tizd*). Combined with nitrogen.

Azotoluene (*az-o-tol'-u-ēn*). $C_{14}H_{14}N_2$. An oxidation product of toluidin.

Azotometry (*az-o-tom'-et-re*) [*azotum,* nitrogen; μέτρον, measure]. The determination of the amount of nitrogen present in a substance.

Azoturia. (See Illus. Dict.) 2. A disease of horses marked by paralysis of the hindquarters. Syn. *Blackwater.*

Azulmate (*az-ul'-māt*). A salt of azulmin.

Azulmin (*az-ul'-min*) [ME., *azure,* blue; *ulmin* (*q. v.*)]. $C_4H_5N_5O$. A brown body separated from solutions of cyanogen on standing. Syn., *Azulmic acid; Azulminic acid; Azotulmic acid.*

Azyges (*az'-ij-ēz*) [ἄζυγής, unwedded]. The sphenoid bone.

Azymous (*az-i'-mus*) [*a,* priv.; ζύμη, a ferment]. Unfermented.

B

Bablabs, Bablah (*bab'-labz, -lah*). The pods of *Acacia arabica* and several other species; they are used in coughs; the seeds contain 20% of tannin.

Babool, or Babul Bark (*ba-bool'*). The astringent, tonic bark of the babul tree, *Acacia arabica*, of India.

Baccelli's Method. See under *Treatment*.

Baccharin (*bak'-ar-in*). A poisonous alkaloid obtained from *Baccharis coridifolia*, D. C.

Baccharis. (See Illus. Dict.) **B. coridifolia**, D. C., miomio, a South American species very poisonous to cattle and sheep. **B. pilularis**, D. C., kidney plant, a native of the Pacific coast of the United States, is used in cystitis.

Bacciform (*bak'-si-form*) [*bacca*, a berry; *forma*, form]. Berry-shaped.

Bacillemia, Bacillæmia (*bas-il-e'-me-ah*) [*Bacillus; αἷμα*, blood]. The presence of bacilli in the blood.

Bacilliparous (*bas-il-ip'-ar-us*) [*Bacillus; parare*, to produce]. Producing bacilli.

Bacillogenous (*bas-il-oj'-en-us*) [*Bacillus; generare*, to beget]. Due to bacilli; producing bacilli.

Bacillol (*bas'-il-ol*). A coal-tar distillation-product resembling lysol, its active property being due to cresols, of which it contains 52%. It is an oily fluid of faint alkaline reaction, dark brown color, and odor of pitch, readily soluble in water, with sp. gr. of 1.100, and bactericidal in dilute solution. In veterinary practice it is used in 2% solution in the treatment of inflammation of the scabbard.

Bacillophobia (*bas-il-o-fo'-be-ah*) [*Bacillus; φόβος*, fear]. Morbid fear of microbes.

Bacillosis (*bas-il-o'-sis*) [*Bacillus*]. The condition caused by infection with bacilli.

Bacillotuberculosis (*bas-il-o-tu-bur-ku-lo'-sis*). Tuberculosis.

Back. (See Illus. Dict.) **B.-airing**, a term used in hygiene to designate the admission of fresh air to traps by means of a separate ventilating pipe of small diameter. **B., Bicycle,** the rounded shoulders due to riding a bicycle. **B.-knee.** See *Knee*. **B.-rest,** a cloth-covered frame adjusted to any height by means of braces and ratchets, designed to relieve bedridden patients. **B.set,** a relapse of a disease.

Bacteriaceous (*bak-te-re-a'-shus*) [*Bacterium*]. Relating to bacteria.

Bacterian, Bacteric (*bak-te'-re-an, bak-ter'-ik*). See *Bacterial* (Illus. Dict.).

Bacteridial (*bak-ter-id'-e-al*). Relating to the genus *Bacteridium*.

Bacteridium (*bak-ter-id'-e-um*) [*βακτηρίδιον*, a little staff]. A genus of *Bacteria*. See *Bacteria, Table of* (Illus. Dict.).

Bacteriform (*bak-ter'-e-form*) [*Bacterium; forma*, form]. Shaped like a bacterium.

Bacteriogenic (*bak-te-re-o-jen'-ik*) [*Bacterium; generare*, to produce]. Caused by bacteria.

Bacteriohemagglutinin (*bak-te-re-o-hem-ag-lu'-tin-in*). A hemagglutinin produced in the body by the action of bacteria; it is very unstable, being destroyed at 58° C.

Bacteriohemolysin (*bak-te-re-o-hem-o-li'-sin*). A very unstable hemolysin formed in the body by the action of bacteria; it is destroyed at 58° C.

Bacteriolysin (*bak-te-re-ol'-is-in*). A complex substance containing a peptic ferment combined with a bacterial derivative.

Bacteriolysis (*bak-te-re-ol'-is-is*) [*Bacterium; λύσις*, a loosing]. A fermentative process, discovered by Pfeiffer (1894), in which specific ferments act only on certain cells, just as certain yeasts act only on sugars of certain definite constitution. [Vaughan and Novy.] Syn., *Pfeiffer's phenomenon*.

Bacteriolytic (*bak-te-re-o-lit'-ik*). Possessing a disintegrating action upon living bacteria.

Bacteriopathology (*bak-te-re-o-path-ol'-o-je*) [*Bacterium; pathology*]. The science of diseases due to bacteria.

Bacteriophytoma (*bak-te-re-o-fi-to'-mah*) [*Bacterium; φυτόν*, a growth]. A new-growth caused by bacteria.

Bacterioplasmin (*bak-te-re-o-plaz'-min*) [*Bacterium; πλάσμα*, anything formed or molded]. One of several toxic principles or toxalbumins extracted from pathogenic organisms, as of cholera or typhoid fever, by pressure.

Bacterioscopist (*bak-te-re-os'-ko-pist*) [*Bacterium; σκοπεῖν*, to look]. A person devoted to the investigation of bacteria.

Bacteriosis (*bak-te'-re-o-sis*) [*Bacterium*]. The action of bacteria in the system; infection by bacteria.

Bacteriospectrogram (*bak-te-re-o-spek'-tro-gram*) [*Bacterium; spectrum; γράφειν*, to write]. Engelmann's name for a preparation of chromophorous bacteria to demonstrate that the attractive force of a given color of the spectrum is greater in proportion as the latter is retained by the coloring-matter.

Bacteritic (*bak-ter-it'-ik*). Relating to or due to bacteria.

Bacteruria (*bak-ter-u'-re-ah*). See *Bacteriuria* (Illus. Dict.).

Bactridium (*bak-trid'-e-um*) [*βακτηρίδιον*, a little rod]. A genus of fungi.

Baculiform (*bak'-u-le-form*) [*baculum*, a stick; *forma*, form]. Rod-shaped.

Bael, Baele (*ba'-el*). See *Bela* (Illus. Dict.).

Baffine (*baf'-ēn*). A hair-dye consisting of a 2% solution of potassium permanganate.

Bag. (See Illus. Dict.) **B., Air-,** a soft rubber bag which can be inflated with air. **B., Honeycomb-,** a name for the reticulum of a ruminant. **B., Intragastric,** an elastic rubber bag which, when folded over a tube which runs through it, occupies less space than an ordinary stomach-tube, and which has the exact shape of the stomach when it is inflated within that organ. It is employed to obtain the contents of the duodenum.

Bakers' Stigmata. Corns on the fingers from kneading dough.

Balance. (See Illus. Dict.) **B., Electromagnetic,** an apparatus for estimating the intensity of electric currents. **B., Induction,** an apparatus for finding variations in the composition of metals by means of the currents generated by them. **B., Thermic.** See *Bolometer*. **B., Torsion,** an instrument for estimating magnetic attraction and repulsion.

Balaneomphalus (*bal-an-e-om'-fal-us*) [*βαλανεῖον*, a bath; *ὀμφαλός*, the navel]. 1. Furnished with a boss or a round bottom like that on an ancient bath. 2. See *Mesomphalion* (Illus. Dict.).

Balaneum (*bal-an'-e-um*) [*βαλανεῖον*, a bath]. A bath.

Balanocele (*bal-an'-o-sēl*) [*βάλανος*, the glans penis; *κήλη*, a hernia]. The protrusion of the glans through an opening in the prepuce, as occurs in gangrenous phimosis.

Balanopreputial (*bal-an-o-pre-pu'-she-al*) [*βάλανος*, the glans penis; *præputium*, prepuce]. Relating to the glans penis and the prepuce.

Balatin (*bal'-at-in*). The creamy sap from a South

American tree, *Mimusops kauki;* it is used as a varnish and vehicle in skin-diseases.

Balbul. East Indian name for *Babul.*

Balbutiate (*bal-bu-she'-āt*) [*balbus*, stammering]. To stammer; to stutter.

Balenic, Balænic (*bal-en'-ik*) [*balæna*, the whale]. Obtained from a whale; made of whalebone.

Ball. (See Illus. Dict.) 2. In anatomy, any globular part. **B., Bichat's Fat-,** the buccal fat-pad; a mass of fat lying in the space between the buccinator and the anterior border of the masseter; is especially well developed in infants. **B., Gascoigne's,** pulverized Oriental bezoar formed into balls. **B., Martial,** balls made of 2 parts of cream of tartar and 1 part of iron filings; they were used in the preparation of ferruginous baths. Syn., *Boli martis; Globuli martis.*

Ballista (*bal-is'-tah*) [L.]. A military engine. **Ballistæ, Os,** the astragalus, from having been used as a missile in the ballista.

Balloon. (See Illus. Dict.) 2. To distend a body-cavity by means of air-bags or water-bags.

Ballottement. (See Illus. Dict.) **B., Abdominal,** that perceived through the abdominal wall. **B., Cephalic,** the rebound of the fetal head against the hand when depressed through the abdominal wall. **B., Direct.** See *Ballottement* (Illus. Dict.). **B., Indirect.** See *B., Abdominal.* **B., Ocular,** the falling of opaque particles in a fluid vitreous humor after movements of the eyeball. **B., Vaginal.** See *Ballottement* (Illus. Dict.).

Balm. (See Illus. Dict.) **B., Horse.** See *Collinsonia canadensis* (Illus. Dict.).

Balmies (*bal'-mēz*). Half-witted criminals.

Balneal (*bal'-ne-al*) [*balneum*, a bath]. Relating to baths.

Balneation (*bal-ne-a'-shun*) [*balneum*, a bath]. 1. The act of bathing. 2. Balneotherapy.

Balneologic (*bal-ne-o-loj'-ik*) [*balneum*, a bath; λόγος, science]. Pertaining to the science of baths and bathing.

Balneophysiology (*bal-ne-o-fiz-e-ol'-o-je*) [*balneum*, a bath; φύσις, nature; λόγος, science]. The physiology of bathing; the science of the effects of baths upon the system.

Balneotechnics (*bal-ne-o-tek'-niks*) [*balneum*, a bath; τέχνη, an art]. The art of properly preparing baths as to constituents and temperature and the administration of them.

Balsam. (See Illus. Dict.) **B., Acouchi,** a resinous substance obtained from the inspissated juice of *Protium aracouchini*, a tree of Guiana. It is used externally as a vulnerary. **B., Amber,** the residue left after rectification of oil of amber. **B., Becuiba, B., Bicuhiba, B., Bicuhyba.** See *Becuiba* (Illus. Dict.). **B. of Beme,** compound tincture of bezoin. **B., Bengué's Anodyne,** a compound consisting of menthol, 2½ drams; methyl salicylate, 2½ drams; wool-fat, 3 drams. **B., Calaba.** See *Tacamahac, Bourbon.* **B., Carpathian.** See *B., Riga.* **B., Gurjun.** See *Gurjun* (Illus. Dict.). **B., Houmiri, B., Humiri,** the fragrant exudate from the trees *Humiria balsamifera* and *H. floribunda*, natives of South America. It is used as an expectorant and vermifuge. Syn., *Umire.* **B., Jagulaway.** See *B., Tagulavay.* **B., Mecca,** an exudate from *Commiphora opobalsamum.* **B. of Quinquino.** See *B., White.* **B., Riga,** a turpentine from *Pinus cembra* or from *Pinus palustris.* **B., Samaritan,** a mixture of equal parts of oil and wine, heated together, and a tenth part of rosemary leaves. **B., Stimulant,** a mixture of 8 parts of turpentine and 1 part of mustard flour. **B., Storax.** See *Styrax* (Illus. Dict.). **B., Sulfur,** a mixture of 8 parts of olive oil and 1 part of sublimed sulfur heated together. **B., Syriac.** See *B., Mecca.* **B., Tagulavay, B., Tagulaway,** a yellow oil prepared in the Philippines by boiling the bark and twigs of the cebu, *Parameria vulneraria*, Radkl., in cocoanut oil; it is used as a vulnerary and in skin-diseases. Syn., *Cebur; Jagulaway balsam.* **B., Tamacoari,** a dark brown substance obtained from *Caraipa fasciculata*, a tree of Guiana. It is used in the treatment of itch. **B., Traumatic, B., Turlington's.** See *Friar's Balsam* (Illus. Dict.). **B., Umiri.** See *B., Humiri.* **B., White,** 1. A semifluid, somewhat granular substance obtained from fruit of *Myroxylon pereiræ.* 2. A desiccant prepared of equal parts of inspissated vinegar of lead and oil of roses.

Balsamiferous (*bawl-sam-if'-ur-us*) [*balsamum*, balsam; *ferre*, to bear]. Yielding balsam.

Bambouc (*bam'-buk*). See *Bambuc.*

Bambuc, Bambuk. The tree yielding bambuk butter. **B. Butter,** a substance resembling butter, obtained by boiling the kernel of the fatty seeds of the African tree *Butyrospermum parkii*, Kotschy. It was first brought into notice by Mungo Park. Syn., *Shea butter; Galam butter.*

Bananina (*ban-an-in'-ah*). Banana flour, plantain flour; the fruit of *Musa sapientium*, L., dried and pulverized.

Banausea (*ban-aw'-ze-ah*) [βαναυσία, handicraft]. Mechanical work as opposed to mental achievement; Hippocrates' term for the practice of medicine regarded from a commercial standpoint rather than as an art; quackery.

Bancoul. The candlenut-tree. See *Aleurites triloba.* **B. Nut,** the fruit of the candlenut-tree.

Band. (See Illus. Dict.) **B., Absorption.** See *Spectrum, Absorption* (Illus. Dict.). **B.s, Accidental.** See *B.s, Amniotic.* **B.s, Acoustic.** See *Stria, Acoustic* (Illus. Dict.). **B.s, Adventitious.** See *B.s, Amniotic.* **B.s, Amniotic,** bands formed by drawn-out adhesions between the fetus and the amnion where the cavity has become distended through the accumulation of fluid. Syn., *Simonart's bands.* **B., Anogenital,** the rudiment of the perineum; a transverse band of integument completing the division of the cloaca in the embryo. **B., Articulation.** See *Syndesmosis* (Illus. Dict.). **B., Axis.** See *Streak, Primitive* (Illus. Dict.). **B.s of the Brain,** the commissures of the brain. **B., Baillarger's.** See *Layer, Baillarger's.* **B., Broca's Diagonal,** a band of cinerea forming the posterior part of the anterior perforated space and extending from the subcallosal gyrus to the anterior end of the hippocampal gyrus. **B. of the Colon, Anterior.** See *Ligament, Anterior* (of the colon). **B. of the Colon, Inner,** a band-like thickening of the muscular coat running along the inner surface of the ascending and descending colon and the inferior aspect of the transverse colon. **B. of the Colon, Posterior.** See *Ligament, Posterior* (of the colon). **B.s, Constricting,** the intercellular substance at the nodes of Ranvier. **B., Dentate.** See *Fascia dentata* (Illus. Dict.). **B.s, Eyelid.** See *Ligament, Palpebral, External* and *Internal* (Illus. Dict.). **B., Fallopian.** See *Ligament, Poupart's* (Illus. Dict.). **B.s, Fetal.** See *B.s, Fetoamniotic.* **B.s, Fetoamniotic, B.s, Fœtoamniotic,** amniotic bands producing deformities or intrauterine amputation. **B.s, Fontana's,** the wavy arrangement presented by nerve-fibers, which lie alongside each other in loose spirals, in places where considerable mobility is possible. **B., Frontal.** See *B., Head* (Illus. Dict.). **B., Furrowed,** a small band of cinerea uniting the uvula cerebelli with the

tonsillas. **B., Giacomini's,** a grayish band continuous with the dentate gyrus, which passes from the cleft between the hippocampal and uncinate gyruses transversely over the latter and disappears on its ventricular surface. **B. of the Glans Penis,** the frenum of the penis. **B.s, Glenohumeral.** See *Ligament, Glenohumeral* (Illus. Dict.). **B., Hippocampal.** See *Corpus fimbriatum* (Illus. Dict.). **B., Hyaline.** See *Layer, Cuticular.* **B., Iliotibial,** the iliotibial ligament. See *Maissiat's Band* (Illus. Dict.) **B., Kramer's Frontal,** a head band with appliances to hold a eustachian catheter in place so that the surgeon's hands may be free. **B., Maissiat's.** See under *Maissiat* (Illus. Dict.). **B., Mesoblastic,** a band of mesoblastic cells which extends the entire length of the embryo. **B.-nucleus.** See *Claustrum* (Illus. Dict.). **B.s, Parachordal,** the rudiments of the parachordal cartilages in the embryonic cranium. **B., Perioplic.** See *Perioplic.* **B.s, Phonatory,** the vocal cords. **B., Primitive.** See *Axis-cylinder* (Illus. Dict.). **B., Primitive Vertebral.** See *Plate, Lateral Mesoblastic* (Illus. Dict.). **B., Pupillary.** See *Ligament, Ciliary* (Illus. Dict.). **B., Ranvier's Constricting.** See *B., Constricting.* **B., Reil's Covered,** the lateral longitudinal strias; the longitudinal fibers which cross the tranverse strias beneath the fornicate gyrus. **B., Roughton's,** collapse, from atrophy of the tissues, of the zone corresponding to the junction of the alæ nasi with the lateral cartilages. The resulting contact of this zone with the septum causes obstruction during inspiration. **B.s, Simonart's.** See *B.s, Amniotic.* **B., Solly's Arciform.** See *Fibers, Rolando's Arciform.* **B., Soret's,** an absorption band in the extreme violet end of the spectrum of blood; it is characteristic of hemoglobin. **B., Striated Hyaline.** See *Layer, Cuticular.* **B.s, Supraorbital,** the embryonal thickenings above the eyes and to the outer side of them. **B., Tooth,** the involution of epithelium into the substance of the embryonic jaw, from which the enamel organs of the teeth have origin. **B.s, Ventricular** (of the larynx). See *B.s, Vocal, Superior,* under *Vocal* (Illus. Dict.). **B., Vicq d'Azyr's.** See *Layer, Baillarger's.* **B.s, Vocal.** See under *Vocal* (Illus. Dict.). **B.s, Vocal, False.** See *Vocal B.s, Superior* (Illus. Dict.).

Bandage. (See Illus. Dict.) **B., Abdominal.** See *Binder* (Illus. Dict.). **B., Borsch's,** a bandage for one eye. **B., Esmarch's,** an elastic rubber bandage to prevent hemorrhage in amputations. **B., Martin's,** an India-rubber bandage for varicose veins. **B., Ribble's,** the spica bandage for the instep. **B., Startin's,** a bandage impregnated with a mixture of paraffin and stearin. **B., Velpeau's,** a bandage for the shoulder.

Baphiin (*baf'-e-in*) [*βάπτειν*, to dye]. $C_{12}H_{10}O_4$. A crystalline substance soluble in alcohol and ether, obtained from cam-wood, the wood of *Baphia nitida*, a shrub of tropical Africa.

Baphinitin (*baf-in'-it-in*). C_4H_4O. A precipitate obtained by boiling baphiin with aqueous potash.

Baphiniton (*baf-in'-it-on*). $C_{26}H_{26}O_6$. A substance obtained from boiling baphiin with caustic potash in a closed vessel.

Bar [OE., *barre*]. 1. A band or stripe. 2. The part of the upper jaw of a horse destitute of teeth. 3. An arch. 4. A prominence of the symphysis pubis projecting into the pelvic cavity. 5. See *Perioplic.* **B., Articulomeckelian.** See *Cartilage, Meckel's.* **B.s, Hyoid,** the pair of cartilaginous plates forming the second visceral arch. **B., Interureteric.** See *B., Mercier's.* **B., Mercier's,** the transverse curved ridge joining the openings of the ureters on the inner surface of the bladder; it forms the posterior boundary of the trigone. Syn., *Interureteric bar; Bar of the bladder; Plica ureterica.* **B. of the Neck of the Bladder.** See *B., Mercier's.* **B.s, Parachordal.** See under *Parachordal* (Illus. Dict.). **B.s, Trabecular, B.s, Visceral, First.** See *Trabeculæ cranii.*

Barb. (See Illus. Dict.) 3. In veterinary anatomy, a fold on each side of the frenum of the tongue at the opening of the duct of the sublingual gland. 4. A beard-like tuft of long hairy processes.

Barbadoes Distemper. Synonym of *Yellow fever.*

Barbel (*bar'-bel*) [*barba*, a beard]. The fish *Cyprinus barbus;* the roe is used as a purgative in some countries, and causes vomiting and purging if eaten to excess. **B. cholera,** an epidemic of fish-poisoning from eating diseased barbels. The symptoms are identical with those of cholera nostras and are due to a ptomain. Syn., *Gastric ichthyotoxism.*

Barber-surgeons, Association of (France). Established under Louis XIV, abolished by governmental edict 1743. **B., Company of** (Great Britain), founded under Henry VIII; the barbers being restricted to bloodletting and extracting teeth and the surgeons prohibited from "barbery or shaving." In 1745 the two callings were separated by Act of Parliament.

Barium. (See Illus. Dict.) **B. Acetate,** $Ba(C_2H_3O_2)_2 + H_2O$, white prismatic crystals soluble in water. **B. Acrylate,** $Ba(C_3H_3O_2)_2$, a compound of barium and acrylic acid. **B. Adipate,** $BaC_6H_8O_4$, a compound of barium and adipic acid. **B. Allylate,** $(C_3H_5O)_2BaO$, a combination of barium and allyl alcohol, occurring as an amorphous mass. **B. Amidosulfonate,** $BaN_2H_4S_2O_6$, long prisms soluble in water. **B. Amylosulfate,** $Ba(C_5H_{11}SO_4)_2 + 2H_2O$, lustrous crystals soluble in 10 parts of water. **B. Antimonate,** $Ba(SbO_3)_2$, a compound of barium and antimonic acid. **B. Arsenate,** $Ba_3(AsO_4)_2$, a white powder almost insoluble in water. It is used in tuberculosis and in skin-diseases. Dose, $\frac{1}{16}$-$\frac{1}{4}$ gr. (0.004-0.016 gm.). **B. Arsenite.** See *B. Metarsenite.* **B. Benzene Sulfate, B. Benzol Sulfate,** $Ba(C_6H_5SO_3)_2 + H_2O$, pearly tablets soluble in alcohol. **B. Benzoate,** $Ba(C_7H_5O_2)_2 + 2H_2O$, small colorless plates; it is used instead of digitalis as a heart stimulant. **B. Bichromate,** $BaCr_2O_7 + 2H_2O$, deliquescent crystalline masses of a red-brown color, soluble in water containing chromic acid. **B. Binoxalate,** $Ba(HC_2O_4)_2 + 2H_2O$, white crystals soluble in water. **B. Borate,** $BaB_2O_4 + 10H_2O$ (Berzelius), white, light masses. **B. Borotungstate,** $2BaOB_2O_39WO_3 + 18H_2O$, quadratic octahedral crystals soluble in water. **B. Bromate,** $Ba(BrO_3)_2 + H_2O$, white crystalline powder soluble in hot water. **B. Bromid,** $BaBr_2 + 2H_2O$, colorless, crystalline tablets soluble in water and alcohol. **B. Chlorate,** $Ba(ClO_3)_2 + H_2O$, colorless prisms soluble in water, slightly soluble in alcohol. **B. Chromate,** $BaCrO_4$, yellow crystals insoluble in water; it is used as a pigment. Syn., *Yellow ultramarine.* **B. Citrate,** $Ba_3(C_6H_5O_7)_2$, white amorphous powder or crystals **B. Cyanate,** $Ba(CNO)_2$, fine white crystalline powder slightly soluble in water. **B. Cyanid,** $Ba(CN)_2$, white lustrous scales, decomposing to carbonate in the air, soluble in water. **B. Deutoxid.** See *B. Dioxid.* **B. Dichloropropionate,** $Ba(C_3H_3Cl_2O_2)_2 + H_2O$, a compound of barium and dichlorpropionic acid forming lustrous tubular crystals. **B. Dichromate,** $BaCr_2O_7 + 2H_2O$, yellow needles. **B. Dioxid or Peroxid,** BaO_2, heavy, gray-white powder, soluble in dilute acids. **B. Fluorid,** $BaFl_2$, white, finely granular crystalline powder, melting at about 908° C. **B. Formate,** $Ba(CO_2H)_2$, colorless, trans-

parent rhombic prisms soluble in water. **B. Hydrate, B. Hydroxid,** caustic baryta; $Ba(OH)_2 8H_2O$, white quadratic tablets soluble in 20 parts of water at 15° C. It absorbs carbonic acid from the air. **B. Hypophosphite,** $Ba(PH_2O_2)_2 + H_2O$, white crystals soluble in water. **B. Hyposulfate,** $BaS_2O_6 + 2H_2O$, transparent, colorless, rhombic crystals soluble in water. **B. Hyposulfite.** See *B. Thiosulfate.* **B. Iodate,** $Ba(IO_3)_2$, white crystalline powder soluble in hot water. **B. Lactate,** $Ba(C_3H_5O_3)_2 + 4H_2O$, white crystalline hygroscopic powder soluble in water and dilute alcohol. **B. Loretinate, Neutral,** $Ba(I.OH.C_9H_4N.SO_3)_2 + 2\frac{1}{2}H_2O$, orange-colored crystals soluble in water. **B. Malonate,** $Ba(C_3H_2O_4)$, a compound of barium and malonic acid. **B. Manganate,** $BaMnO_4$, emerald-green powder of microscopic prisms or six-sided plates; it has been used as a pigment. **B. Meconate,** a compound of barium and meconic acid; it is used as an anthelmintic. **B. Metarsenite,** $Ba(AsO_2)_2$, a gelatinous mass becoming on drying a heavy powder. **B. Methylsulfate,** $Ba(CH_3SO_4)_2 + 2H_2O$, colorless, transparent, deliquescent crystals, soluble in water and alcohol. **B. Molybdate,** $BaMoO_4$, crystalline, white powder soluble with difficulty in acids. **B. Monosulfid.** Same as *B. Sulfid.* **B. Monoxid,** baryta. **B. Nitrate,** $Ba(NO_3)_2$, colorless, regular, octahedral crystals soluble in water. **B. Nitrite,** $Ba(NO_2)_2 + H_2O$, white crystalline powder or colorless prisms, soluble in water and alcohol. **B. Oleate,** $Ba(C_{18}H_{34}O_2)_2$, white granular masses or white crystalline powder, soluble in alcohol and ether. **B. Oxalate,** $BaC_2O_4 + H_2O$, white powder very slightly soluble in water. **B. Perchlorate,** $Ba(ClO_4)_2 + 4H_2O$, colorless, hygroscopic crystals soluble in water and alcohol. **B. Permanganate,** $Ba(MnO_4)_2$, large orthorhombic crystals of a very deep-red color with a violet reflection, soluble in water. **B. Phosphate,** $BaHPO_4$, fine white powder soluble in water containing ammonium salts, phosphoric and dilute nitric acids. **B. Phosphid,** BaP_2, a gray mass. **B. Phosphite,** $2BaHPO_3 + H_2O$, soft white powder soluble in boiling water. **B. Propionate,** $Ba(C_3H_5O_2)_2$, soluble in water. **B. Protoxid,** baryta. **B. Pyrosulfate,** BaS_2O_7, obtained by treating barium sulfate with fuming sulfuric acid. **B. Salicylate,** $Ba(C_7H_5O_3)_2 + H_2O$, white, stellate, shining needles. **B. Selenate,** $BaSeO_4$, a heavy white powder; it decomposes in hydrochloric acid. **B. Sulfhydrate,** $Ba(SH)_2$, transparent colorless prisms which on exposure change to barium thiosulfate and barium sulfate; it is soluble in water. **B. Sulfid,** BaS, a white phosphorescent powder soluble in water; it is used as an alterant. Dose, ½–1 gr. (0.032–0.065 gm.) in keratin-coated pills. **B. Sulfite,** $BaSO_3$, white powder soluble in warm sulfurous acid. **B. Sulfocarbolate,** $Ba(C_6H_5SO_4)_2$, colorless crystals soluble in water; it is antiseptic. **B. Sulfocyanate, B. Sulfocyanid,** $Ba(SCN)_2$, long, shining, white, deliquescent, acicular crystals, soluble in water and alcohol. **B. Sulfovinate,** $Ba(C_2H_5SO_4)_2 + 2H_2O$, prismatic crystals soluble in water and alcohol. Syn., *B. Ethylsulfate.* **B. Tartrate,** $BaC_4H_4O_6$, a white granular powder soluble in water. **B. Thiosulfate,** $BaS_2O_3 + H_2O$, a white crystalline powder with difficulty soluble in water. **B. Tungstate,** $BaWO_4$, a white powder or lustrous colorless crystals.

Baroelectroesthesiometer (*bar-o-e-lek-tro-es-the-ze-om'-et-ur*) [βαρος, weight; ἤλεκτρον, amber; αἴσθησις, perception; μέτρον, a measure]. An apparatus to determine the amount of pressure when electric sensibility to pain is felt.

Barology (*bar-ol'-o-je*) [βάρος, weight; λόγος, science]. The branch of physics dealing with gravitation.

Barometer. (See Illus. Dict.) **B., Air,** a barometer with air or gas imprisoned above the column of liquid; the variations of atmospheric pressure are indicated by the changes in the volume of this air. **B., Boiling-point,** an instrument for determining the atmospheric pressure through observation of the boiling-point of water. Syn., *Hypsometer; Thermobarometer; Barothermometer.*

Barometric (*bar-o-met'-rik*). Relating to atmospheric pressure, to a barometer, or to barometry.

Barometry (*bar-om'-et-re*). The science of atmospheric pressure and the use of the barometer.

Barometz, Baronetz (*bar'-o-metz, -nets*) [Tartar, *bor annes*, a lamb]. See *Cibotium Barometz.*

Barothermometer (*bar-o-thur-mom'-et-ur*). See *Barometer, Boiling-point.*

Barrel (*bar'-el*) [O. F., *baril*]. 1. The body or trunk of a cow or horse. 2. The tympanum. 3. The quill of a feather.

Barringtonia (*bar-ing-to'-ne-ah*) [*D. Barrington*, an English naturalist]. A genus of plants of the order *Myrtaceæ.* **B. acutangula,** Gaertner, a tree growing in Australia and India. The juice from the leaves mixed with oil is used in skin-diseases; the root is bitter, cooling, and aperient, and is said to be similar to cinchona; the seeds prepared with sago and butter are used in diarrhea. **B. butonica,** Forst., a tree of Australia and India. The outer portion of the fruit is used to stupefy fish. **B. racemosa,** has properties similar to *B. acutangula.*

Barsati (*bar-sat-e'*). A disease affecting horses, considered analogous to cancer. Syn., *Atrophic carcinoma.*

Baryencephalus (*bar-e-en-sef'-al-us*) [βαρύς, heavy; ἐγκέφαλος, within the head]. A person with dull intellect.

Baryglossus (*bar-e-glos'-us*) [βαρύς, heavy; γλῶσσα, the tongue]. An individual suffering from baryglossia.

Baryglottic, Baryglotticus (*bar-e-glot'-ik, -us*). Relating to baryglossia. 2. A person affected with baryglossia.

Barymetry (*bar-im'-et-re*). See *Barometry.*

Baryta, Barytes. (See Illus. Dict.) **B., Caustic.** See *Barium Hydrate.* **B., Synthetic.** See *Barium Sulfate.*

Baryticoargentic (*bar-it-ik-o-ar-jen'-tik*) [*baryta; argentum*]. Containing baryta and silver.

Baryticosodic (*bar-it-ik-o-so'-dik*) [*baryta; sodium*]. Containing baryta and sodium.

Barytin (*bar'-it-in*) [βαρύς, heavy]. 1. Native barium sulfate. 2. See *Jervin.*

Basalia (*ba-sa'-le-ah*) [βάσις, a base]. The metacarpal bones. [Huxley.]

Base. (See Illus. Dict.) **B., Acid-forming, B. Acidifiable,** one which forms an acid by uniting with water. **B., Aldehyd.** See *Aldin* (Illus. Dict.). **B., Animal,** a ptomain.

Basella (*bas-el'-ah*) [Malabar name]. A genus of plants of the order *Chenopodiaceæ.* **B. rubra,** Linn., Malabar nightshade; an esculent herb cultivated throughout India, where the juice of the leaves is given in infantile catarrh and an infusion of the leaves is used as tea.

Basibranchiostegal (*bas-e-brang-ke-os'-te-gal*) [βάσις, base; βράγχια, the gills of fishes; στέγειν, to shelter]. 1. Located behind or at the base of the branchiostegal membrane. 2. The branchiostegal bone.

Basichromatin (*bas-e-kro'-mat-in*) [βάσις, a base; χρῶμα, color]. According to Heidenhain, that portion of the nuclear reticulum stained by basic anilin dyes.

Basidiomycetes (*bas-id-e-o-mi-se'-tēz*) [*basidium*,

spore-producing cell; *μύκης*, a fungus]. A division of fungi comprising genera which produce spores upon basidia.

asidiophore (*bas-id'-e-o-for*) [*basidium*, a spore-producing cell; *φορεῖν*, to bear]. Furnished with basidia.

asification (*bas-if-ik-a'-shun*) [*basis*, a base; *facere*, to make]. The change of a substance into a base.

asifier (*bas-if-i'-ur*) [*basis*, a base; *facere*, to make]. A substance capable of converting a body into a base.

asigenic (*bas-e-jen'-ik*) [*βάσις*, a base; *γεννᾶν*, to produce]. Producing bases.

asihyobranchial (*bas-e-hi-o-brang'-ke-al*) [*βάσις*, a base; *ὑοειδής*, the hyoid; *βράγχια*, the gills of fishes]. Relating to the basihyal bones and the branchiæ.

asilemma (*bas-il-em'-ah*) [*βάσις*, a base; *λεμμα*, a husk]. A basement membrane.

asilopharyngeal (*bas-il-o-far-in'-je-al*). Relating to the basilar process of the occipital bone and to the pharynx.

asilosubnasal (*bas-il-o-sub-na'-zal*). Relating to the basion and to the nasion.

asioalveolar (*bas-e-o-al-ve'-o-lar*). Relating to the basion and to the alveolar point.

asioccipitosphenoidal (*bas-e-o-ok-sip-it-o-sfe-noid'-al*). 1. Relating to the basioccipital bone and the sphenoid.

asiodeltoideus (*bas-e-o-del-toid'-e-us*) [*βάσις*, a base; *Δ δ*, the fourth letter of the Greek alphabet; *εἶδος*, likeness]. See under *Muscles*.

asipresphenoid (*bas-e-pre-sfe'-noid*). 1. Relating to the basisphenoid and presphenoid bones. 2. The basipresphenoid bone.

asophilia (*bas-o-fil'-e-ah*) [*βάσις*, base; *οἰλεῖν*, to drive]. Increase in the number of basophiles in the circulating blood.

asophilic. (See Illus. Dict.) 2. Any histologic structure which stains with basic dyes.

asophobia (*bas-o-fo'-be-ah*) [*βάσις*, a step, walk; *φόβος*, fear]. Complete loss of the ability to walk or stand erect, due to emotional causes, although the muscles concerned are not appreciably impaired.

asophobiac (*bas-o-fo'-be-ak*). 1. A person affected with basophobia. 2. Relating to or affected with basophobia.

assia (*bas'-e-ah*) [*Bassi*, an Italian physician]. A genus of plants of the order *Sapotaceæ*. **B. butyracea**, Roxb., the Indian butter tree, furnishes from its seeds a pure vegetable butter called *Chooric*, esteemed as an application in rheumatism, as an emollient for the hands, as a dressing for the hair, and to adulterate ghee; it is also used for soap-making and for illumination. The fruit is edible and the flowers furnish a sugar equal, if not superior, to date sugar. **B. latifolia**, Roxb., the mahwah tree of central India, where the flowers are eaten by the natives and an intoxicating liquor is distilled from them. The seeds yield a concrete oil in large quantities, which is used for illuminating and to adulterate ghee; the seeds also yield stearic acid on saponification. **B. longifolia**, —, a tree of India, yielding from the bark a gummy exudate which is employed in rheumatism; the bark is astringent and emollient. An oil is expressed from the ripe fruit. **B. oleifera**, A. D. C., an African species the seeds of which furnish an oil used in the Gaboon region as a food and an application for rheumatism. **B. verica**, Blume, a Java species yielding a kind of gutta-percha.

assiate (*bas'-e-āt*). A salt of bassic acid.

assorin. (See Illus. Dict.) 2. A term for all vegetable mucilages.

bastard. (See Illus. Dict.) 3. A hybrid species. 4. A person of illegitimate birth.

Basylous (*bas'-il-us*) [*βάσις*, a base; *ὕλη*, matter]. See *Basigenic*.

Bath. (See Illus. Dict.) 3. A medium, such as sand, water, oil, or other substance, interposed between the fire and the vessel to be heated, in chemic manipulations. **B., Acid-, Scott's.** See *B., Nitrohydrochloric*. **B.s, Acratothermal,** baths prepared from natural mineral waters of high temperature, but in which the gaseous and saline constituents are but small in quantity and of feeble therapeutic action. Syn., *Simple thermal baths; Unmixed thermal baths; Indifferent thermal baths*. **B., Air, Medicated,** a vapor-bath charged with a medicament. **B., Air, Moist-.** See *B., Vapor* (Illus. Dict.). **B., Aludel,** in chemic work a succession of aludels disposed in the form of a chain on a slightly inclined surface. **B., Alum,** a solution of alum in water applied to burns. **B., Ammoniacal, B., Ammoniated,** one containing ammonia or some salt of ammonium. **B., Animal,** 1. One prepared from dung of cattle or the contents of the first stomach of a freshly slaughtered ox. 2. The introduction of the whole body or the part affected with rheumatism into the body-cavity of an animal just slaughtered. **B., Ant-,** one containing 1–2 kg. of crushed ants. **B., Antimonial,** one containing 1–2 oz. of tartar emetic; it is used in skin-diseases. **B., Antirheumatic,** one containing, in sufficient water for the purpose, 100 gm. of oil of turpentine, 10 gm. of oil of rosemary, 50 gm. of sodium carbonate. **B., Antisyphilitic,** a solution of 15 gm. of mercury bichlorid in 500 gm. of water, to be added to the bath at the time of using. **B., Aromatic,** one to which is added an infusion of aromatic herbs, such as lavender, mint, sage, thyme, chamomile, hyssop, rosemary, etc. **B., Artificial,** one prepared to imitate some natural mineral spring or the sea-water. **B., Ash-,** immersion in dry ashes. **B., Astringent,** one prepared with tannin or other astringents to control sweating or in treatment of skin-diseases. **B., Astringent, Most's,** a bath for extensive burns, consisting of a solution of 200 gm. of alum in 6 to 8 pailfuls of cold water and 1 pailful of curdled milk. **B., Balsamic,** one containing tar, turpentine, or the buds and bark of terebinthaceous plants. **B., Box-,** introduction of the body, except the head, into a cabinet supplied with hot-water pipes. **B., Brine-,** one prepared from mineral waters containing sodium chlorid in such quantity that the specific gravity exceeds 1050. **B., Buff-,** one in which the bather is nude. **B., Camphor-,** an inhalation of volatilized camphor. It is used as a sedative and diaphoretic. **B., Carbolized,** a solution of 1 part of carbolic acid in 600 parts of water. It is used to rid animals of ticks. **B., Carbonic-acid, B., Carbonic,** one containing free carbonic acid. **B., Caustic,** one containing some caustic alkali. **B., Cold, Moderately,** one having a temperature of from 15° to 20° C. **B., Cold, Very,** one with temperature below 10° C. **B., Cold-air,** exposure of the body-surface to cold air. **B., Composite, B., Compound.** See *B., Medicated* (Illus. Dict.). **B., Conferva-,** a mud-bath containing a great amount of the silicious shells of algæ. **B., Cool,** one ranging in temperature between 20° and 25° C. **B., Corroborant.** See *B., Stimulating*. **B., Diluted Mud-,** a form of bath much employed at Riga, Pernau, and Hapsal, Russian Baltic resorts. The mud comes from the sea or from boggy ground. **B., Dipolar,** a hydroelectric bath in which the patient does not come in contact with either of the electrodes, but these are immersed in the water at each end of the tub. [Jacoby.] **B., Dish-water,** local application of the greasy water in which dishes have been washed. **B.,**

Douche. See *Douche* (Illus. Dict.). **B., Dry,** one in a medium which is not liquid and does not liquefy on application. **B., Dry-air,** a bath in air that is not charged with excess of moisture. **B., Dung-,** one containing dung, particularly horse-dung; used in treatment of syphilis. **B., Earth-,** an immersion of the body in earth. **B., Eastern,** an Egyptian or a Turkish bath. **B., Effervescent,** a liquid bath containing a free gas which is given off with effervescence. **B., Egyptian,** a modification of the Turkish bath, with rise of temperature to the maximum point, followed by lowering of temperature to the initial point. **B., Elbow-,** immersion of the elbow-joint in running cold water of 8° to 14° C. for from 10 to 20 minutes. **B., Electric,** 1. One in which the medium of the bath and the bather's person are included in the circuit of a galvanic current. 2. A bath in which an electric current is generated by the decomposition of the chemic constituents of the medium. **B., Electrothermal,** a hot bath combined with exposure to the influence of electricity. **B., Emollient,** any bath exerting a soothing action upon the skin. See *B., Bran; B., Gelatinous* (Illus. Dict.). **B., Excitant,** a stimulating bath. **B., Faradic.** See *B., Electric.* **B., Fecula-,** one containing a fecula; *e. g.*, a bran-bath. **B., Ferruginous.** See *B., Iron* (Illus. Dict.). **B., Ferruginous, Artificial,** one prepared by dissolving iron tartrate in the form of martial balls in the water. **B.-fever.** See under *Fever.* **B., Finnish,** a modification of the Russian bath marked by higher temperature. **B., Fir-needle,** one to which a decoction, extract, or oil of the needles of the fir-tree or Norway spruce, *Picea excelsa*, is added as a stimulant to the skin. **B., Fucus-,** one containing seaweed or a decoction of it, imparting sodium chlorid and a small percentage of iodin. **B., Galvanic.** See *B., Electric* (1). **B., Gas-,** one in which a gas is applied to the entire body or an affected part by means of a closed cabinet. **B., Gelatinosulfurous,** a bath containing 1000 gm. of gelatin and 100 gm. of potassium sulfid. **B., Gelatinous.** See *B., Gelatin* (Illus. Dict.). **B., Glycerin-,** 1. A vapor bath or water bath to which glycerin has been added. 2. In chemic manipulation, a bath of glycerin for immersion of substances to be heated to a certain degree. **B., Grape-lees, B., Grape-marc,** immersion in the fermenting marc of grapes after expression of the juice; it is employed in rheumatism. **B., Hot, Very,** a bath having a temperature above 42° C. (107.6° F.). **B., Hydrochloric-acid,** a bath containing 2½ pounds of concentrated hydrochloric acid of sp. gr. 1.18 added to 80 gallons of water. **B., Hydroelectric,** a water-bath charged with electricity. **B., Hydrostatic,** a variety of permanent water-bath in which the patient is supported without total immersion. **B., Hydrosulfureted,** a sulfur-bath with the addition of 2 or 3 drams of hydrochloric acid. **B., Ice-cold,** a bath in water of a temperature between 0° and 5° C. **B., Immersion,** the sudden immersion of a patient in water. **B., Indian,** massage in combination with a Turkish bath. **B., Indifferent.** See *B., Acratothermal.* **B. by Insolation.** See *B., Sun* (Illus. Dict.). **B., Internal,** lavage of the stomach or rectum. **B., Iodin-,** one to which is added a solution of 8 gm. of iodin and 16 gm. of potassium iodid in 600 gm. of water. **B., Irritant,** one which induces irritation of the surface. **B., Kineto-therapeutic,** a water bath in which specified movements are carried out. **B., Lamp.** See *B., Hot-air* (Illus. Dict.). **B., Light-,** 1. See *B., Sun* (Illus. Dict.). 2. Exposure of affected parts to rays of light by means of various apparatus; also of the whole body for inducing perspiration. **B., Lime-,** a bath to which 3 pounds of slaked lime a added at time of using; it is used in gout and in tre ment of itch. **B., Liquid-,** one in which the mediu is liquid. **B., Lukewarm.** See *B., Temperate.* **Malt-,** one containing malt. **B., Marine-air,** t inhalation of sprayed sea-water. **B., Marine-mu** immersion in sea-beach mud with friction; in Scan navia it is considered tonic and alterative. **B., Me icinal.** See *B., Medicated* (Illus. Dict.). **B., Me icinal, Natural,** a bath or water of a spring wh holds medicaments in suspension. **B. of Mediu Temperature,** a bath ranging in temperature betwe 35° and 37° C., which neither raises nor reduces t temperature of the human body. **B. of Mercu Chlorid.** See *B., Antisyphilitic.* **B., Meta B., Metallic,** in chemic manipulation a bath of n metal or alloy in which substances are immerse order to regulate the degree to which they heated. **B., Mineral,** 1. The water of a m spring used as the medium. 2. One to which a s tion of mineral substances has been added. **B., M eral, Artificial.** See *B., Mineral* (2). **B., Mo polar,** a hydroelectric bath in which the wall of metal tub is utilized as a large electrode. The rent entering here is conducted to the entire surfa the body that is in contact with the water and out by means of a large metal electrode the edg which are covered by a rubber pillow so placed the patient can lie upon it without coming in c with the metal. [Jacoby.] Cf. *B., Dipolar.* **Mud-, Sulfureted,** a mud-bath consisting of deposit from sulfur springs. **B., Must-.** See *Grape-lees.* **B., Narcotic,** one to which narcoti gredients have been added. **B., Natural,** m springs. **B., Natural Mud-,** term applied to baths of Saki and other Crimean resorts. **B., N heim,** a natural thermal effervescent (gaseous ated) bath. **B., Nitrohydrochloric, B., N muriatic-acid, B., Nitromuriatic,** a bath conta 1–2 oz. of nitrohydrochloric acid to a gallon of w it is used as a foot- and sponge-bath in liver-dise **B., Nutritive,** one containing wine, milk, or nutritive ingredient. **B., Oak-bark,** one contain decoction of oak-bark and used as an astringent do **B., Oil-,** 1. An emollient bath of oil. 2. A ba hot olive oil impregnated with a variety of spice aromatic substances; used as a prophylaxis a plague. **B., Oriental.** See *B., Egyptian; B. dian; B., Turkish.* **B., Oxygen-,** an inhalat oxygen to correct inadequate aeration of the b also a local application of oxygen gas to gang ulcers. **B., Ozone-.** See *B., Fucus-.* **B., Pi-** an application of bog-earth containing much veg matter and used in gout and rheumatism. **B., Pe- B., Pine-leaf, B., Pine-needle,** a bath contai decoction, extract, or oil of pine-needles; it is u a stimulant in rheumatism. **B. of Plombier** bath to which a solution of 100 gm. of powder atin in hot water is first added and afterward a of 100 gm. of sodium carbonate, 20 gm. each of chlorid and sodium bicarbonate, and 60 gm. of sulfate. **B., Plunge-,** a cold bath into whi patient plunges. **B., Pneumatic.** See *B.* (Illus. Dict.). **B., Potassium Sulfid, B., P sium Sulfuret,** a water-bath with 100 gm. of sul potassa dissolved in it. **B., Saline, B., Salt Salt-water.** See *B., Brine-.* **B., Saline, vescent,** a bath to which a mixture of 500 sodium bicarbonate and 1000 gm. of sodium c added first, followed by the addition of a mix 500 gm. each of water and hydrochloric acid **B., Scott's.** See *B., Nitrohydrochloric acid.* **B., Sea-**

ud. See *B., Marine-mud.* **B., Seaweed.** See *.., Fucus-.* **B., Snow,** immersion of the body or rt of it in snow. **B., Soap-,** one containing soap solved in it. **B., Solid-,** one consisting of solid or mi-solid material covering or surrounding the body. ., **Spout-.** See *Douche* (Illus. Dict.). **B., Steam-, Texican,** a form of vapor-bath used in Mexico, in ich the bather reclines on a bench in a small amber beneath the floor of which the steam is gene- ted and passes into the chamber. **B., Steel-.** See *., Iron* (Illus. Dict.). **B., Still-water,** a bath in iet water, as opposed to surf-bathing. **B., Stimu- ting,** one containing tonic, astringent, or balsamic bstances and believed to have a stimulating effect on e body or part. **B., Sulfuret of Potassium.** See *., Potassium Sulfid.* **B., Sulfureted.** See *B., otassium Sulfid.* **B., Sulfureted Hydrogen,** a s-bath consisting of hydrogen sulfid obtained from composition of the sulfids in sulfur springs. **B., ulfuric-acid,** a chemic bath for immersion of sub- ances to be heated to temperatures below 180° C. ., **Sulfurous, B., Sulfur-vapor.** See *B., Sul- urous-acid* (Illus. Dict.). **B., Surf-,** a bath taken the surf of the sea; the exercise and motion of the aves constitute the chief benefit. **B., Sweat-, B., weating,** a bath to induce a free flow of perspiration; ., a Turkish bath. **B., Tan-,** an astringent bath ntaining tan. **B., Tank-,** a large tank or recep- cle in which a number of persons bathe at once. **B., emperate,** one in which the temperature of the edium is from 25° to 30° C. (77°–80° F.). **B., herapeutic.** See *B., Medicated* (Illus. Dict.). **B., onic,** a cold bath or one which stimulates. **B., Tub,** ne taken in a tub large enough to immerse the entire erson. **B., Tumble-,** a shower-bath. **B., Tur- entine-, B., Turpentine-vapor.** See *B., Anti- heumatic.* **B., Vacuum,** the treatment of parts by bjecting them to a partial vacuum. **B., Vapor-, Medicated,** a vapor-bath charged with some medica- ent. **B., Vichy, Artificial,** a bath containing 500 m. of sodium bicarbonate dissolved in the water. **B., Whey-,** one consisting of whey, used as an emollient. ., **Wine-,** one consisting of wine and used in fevers a stimulant and to reduce temperature. **B., Zinc- hlorid,** a chemic bath of molten zinc chlorid for im- ersion of substances not to be heated beyond 700° C.

Bathmodont (*bath'-mo-dont*) [βαθμός, threshold; ὀδούς, oth]. Having the molars obliquely ridged.

Bathmotropic (*bath-mo-tro'-pik*) [βαθμός, threshold; τρέπειν, to turn]. Applied by T. W. Engelmann to a pposed set of fibers in the cardiac nerves, which ffect the excitability of the cardiac muscle. Cf. *Ino- epic, Dromotropic.*

Bathycolpian (*bath-e-kol'-pe-an*) [βαθύς, deep; κόλπος, e bosom]. Deep-bosomed.

Bathyesthesia, Bathyæsthesia (*bath-e-es-the'-ze-ah*) βαθύς, deep; αἴσθησις, sensation]. Oppenheim's rm for the muscle sensations.

Bathymetry (*bath-im'-et-re*) [βαθύς, deep; μέτρον, a easure]. The measurement of the deeps of the sea of any body-cavity, natural or abnormal.

Batrachocephalus (*bat-rak-o-sef'-al-us*) [βάτραχος, a g; κεφαλή, the head]. Having a frog-like head.

Batracin (*bat'-ra-sin*) [βάτραχος, a frog]. A poisonous cretion obtained from the cutaneous pustules of toads. cording to Calmeil, the poison of toads contains ethyl carbylamin and isocyanacetic acid.

Batracosi (*bah-tra-ko'-se*) [It.]. See *Ranula* (Illus. ict.). **B. sottolinguale, B. sublingual,** a form of phtheria supposed to be contracted from fowls and aracterized by swelling of the submaxillary and sub- ngual glands.

Batracosioplasty. See *Batrachoplasty* (Illus. Dict.).

Battery. (See Illus. Dict.) **B., Cautery,** a galvanic battery with high electromotive force, for heating a wire used as a cautery. **B., Galvanic Cautery, B., Galvanocautery.** See *B., Cautery.* **B., Hare's,** a battery of cells marked by low resistance. Two large plates of zinc and copper, separated from each other by cloth or some indifferent substance, are rolled on a wooden cylinder and immersed in acidulated water. See *Deflagrator.*

Bauchan, Bauchee. Names given in India to the seeds of *Psoralea corylifolia,* used as a tonic and in skin-diseases. Syn., *Bawchee; Bawchwan; Bawchan.*

Bauhinia (*bo-hin'-e-ah*) [*Jean Bauhin* (1541–1613) and *Kaspar Bauhin* (1560–1624), physicians of Basel]. A genus of plants of the order *Leguminosæ.* **B. variegata,** L., a tree of India; the bark is astringent and used as a tonic in fevers; the buds are used in diarrhea and as a vermifuge.

Baumann's Coefficient. See *Coefficient.*

Bavarol (*bav'-ar-ol*). A proprietary brown aromatic liquid used in 5% solution as a disinfectant.

Bay (*ba'*) [ME., *baye*]. A recess of land or water. **B., Lacrimal,** the depression at the inner canthus of the eye holding the lacrimal canaliculi.

Baycurin (*bi-koo'-rin*). An alkaloid from baycuru, the root of *Statice braziliensis.*

Bayonet-leg (*ba'-on-et-leg*). A backward displacement of the leg-bones.

Bdallopadous (*dal-op'-ad-us*) [βδάλλειν, to suck; πούς, the foot]. Having feet furnished with suckers.

Bdella. (See Illus. Dict.) 2. A varicose vein.

Bdellepithecium (*del-ep-e-the'-se-um*) [βδέλλα, a leech; ἐπιτιθέναι, to put on]. A tube for applying leeches.

Bdellium. (See Illus. Dict.) **B., Sicilian, B. sicilianum, B. siculum,** that obtained from *Daucus gingidium,* L.

Bead (*bēd*) [ME., *bede,* a prayer]. A small bubble, ball, drop, or globule. **B.s, Lovi's.** See *B.s, Specific-gravity.* **B.-proof,** 1. A method of testing the alcoholic strength of liquors by shaking in a bottle and observing the size, number, and persistence of the bubbles formed. 2. Applied to liquors of such a quality or standard of strength that the mass of bubbles formed on the surface by shaking will remain for a time. 3. Of a certain standard as indicated by beads. **B.s, Specific-gravity,** hollow glass globules for ascertaining the strength of alcoholic spirits. The globules are numbered according to their specific gravities, and the number marked on the heaviest one that remains suspended in the liquor, neither rising to the surface nor sinking to the bottom, indicates its specific gravity. **B.-tree,** *Melia azedarach.*

Beading (*bēd'-ing*). The adulterating of spirits with some substance which under the bead-proof will give it the appearance of greater alcoholicity.

Beak. (See Illus. Dict.) **B., Coracoid,** the beak of the coracoid process of the scapula. **B. of the Encephalon.** See *Beak* (3) (Illus. Dict.). **B. of the Sphenoid Bone.** See *Rostrum sphenoidale.*

Beaked (*bēkd*) [OE., *becke,* a beak]. Ending in a prolonged tip.

Beaker. (See Illus. Dict.) **B.s, Taste-.** See *Taste-buds* (Illus. Dict.).

Beat. (See Illus. Dict.) **B., Apex-,** the stroke of the heart-apex against the chest-wall. **B., Heart-,** a pulsation of the heart. **B., Pulse-,** an arterial pulsation which can be felt.

Bebeerin. (See Illus. Dict.) Syn., *Bebearin; Bebeeria; Bebeerina; Bebeerinum; Beberia; Beberin; Beberina; Bebirin; Buxin.* **B. Hydrochlorate,**

$C_{19}H_{21}NO_3HCl$, reddish-brown scales soluble in alcohol and water, and used as an antipyretic and tonic. Dose, ½–1½ gr. (0.005–0.097 gm.) 3 or 4 times daily. **B. Sulfate,** $(C_{19}H_{21}NO_3)_2H_2SO_4$, reddish-brown scales soluble in water and alcohol; uses and dose as in *B. hydrochlorate.*

Becuibin (*bek-we'-bin*). A crystalline substance obtained from the bark of *Myristica bicuiba.* It is odorless, tasteless, soluble in hot alcohol, in boiling water, and in chloroform.

Bed. (See Illus. Dict.) **B., Arnott's** (Neil), a rubber mattress filled with water, designed to prevent bedsores. **B., Bandeloux's,** an air bed furnished with a vessel for urine and surmounted with a gauze-covered cradle. **B.-day,** the minimum stay of a patient in a hospital is a full 24 hours and is used as a unit of standard hospital ward work. **B., Fracture-,** an especial device for the use of a patient confined with a fracture, composed of sections forming a double or triple inclined plane with an aperture to allow of the ejection of urine and feces. **B.-hoist,** a device for lifting a patient from bed. **B., Hydrostatic.** See *B., Water* (Illus. Dict.). **B., Protection-,** a bed arranged for the confinement of maniacs in a recumbent posture. **B.-swing,** an appliance like a hammock for swinging a patient clear of the bed. **B.-warmer,** a warming-pan.

Beeley's Square and Plumb-line. An instrument to measure degrees of deformity.

Behen, Behmen, Behn, Ben. Arabian names for roots of various plants.

Behenic (*be-hen'-ik*). Derived from behen.

Bel. The *Aegle marmelos.* See under *Bela* (Illus. Dict.).

Bela. (See Illus. Dict.) 2. See *Jasminum sambac.*

Belgaum Walnut. See *Aleurites triloba.*

Beli. See *Bela* (Illus. Dict.).

Belladonna. (See Illus. Dict.) **B., Japanese,** *Scopolia carniolica;* in its physiologic action it is hardly to be distinguished from belladonna, though the dominant alkaloids are not identical.

Bell-crowned (*bel'-krownd*). Applied to a tooth-crown which is largest at the occlusal surface and tapers to the gum.

Bellite (*bel'-it*) [*bellum,* war]. An explosive employed both in war and in blasting. A principal element in its manufacture is nitrobenzole. The most prominent symptoms induced by its inhalation and absorption are headache, mental confusion, dyspnea, pallor, blueness of the lips, general lividity, coma, insensibility.

Bellonia (*bel-o'-ne-ah*) [*Peter Belon* (1499–1564), a French naturalist]. A genus of plants of the order *Gesneraceæ,* **B. aspera,** L., a shrub of the West Indies; the bark is used in intermittent fever and in dysentery.

Bellows. (See Illus. Dict.) **B., Richardson's,** a double balloon with a connecting tube employed for the injection of vapors into the middle ear.

Belly. (See Illus. Dict.) 2. Any belly-like enlargement of a part. **B. of a Muscle,** the fleshy part of a muscle. **B., Pendulous.** See *Abdomen, Pendulous* (Illus. Dict.). **B.-sweetbread,** the pancreas of the calf.

Belonospasis (*bel-on-os'-pa-sis*) [βελόνη, a point; σπάσις, a drawing]. Irritation by means of needles or metallic tractors.

Belted (*belt'-ed*) [AS., *belt,* a band]. Having a stripe or band of color.

Benario's Method (for the fixation of blood-films). It consists in the use of a 1% alcoholic solution of formalin for 1 minute.

Bends (*bendz*) [ME., *bend*]. Term used by miners and caisson laborers for a condition produced by too sudden a reduction of the high air-pressure; it is indicated by swellings or small bubbles under the skin.

Benic (*ben'-ik*). See *Behenic.*

Benincasa (*ben-in-ka'-zah*) [*Benincasa,* an Italian nobleman]. A genus of plants of the order *Cucurbitaceæ.* **B. cerifera,** Savi, a perennial species of the East Indies, with large greenish fruit often more than a foot long, the seeds of which are used in dysuria and colic, the rind in tuberculosis, asthma, and chills, and the plant in fevers, vertigo, etc.

Benomargarate (*ben-o-mar'-gar-āt*). A salt of benomargaric acid, a crystalline fatty acid from oil of ben.

Bensolyptus (*ben-so-lip'-tus*). A proprietary alkaline fluid used as a wash in catarrhal affections of the mucosa and as an intestinal antiseptic. Dose, 1 teaspoonful in a wineglass of water.

Benzacetin (*ben-zas'-et-in*). $C_6H_3(OC_2H_5)(NH.CH_3CO)COOH$. Colorless crystals soluble in alcohol, slightly soluble in water; melt at 205° C. It is used in neuralgia. Dose, 8–15 gr. (0.52–0.97 gm.). Syn. *Acetamidomethyl salicylic acid.*

Benzacetosulfophenamid (*ben-zas-et-o-sul-fo-fen-am'-id*). $C_{15}H_{13}NSO_4$. A derivative of benzamid.

Benzaconin (*ben-zak'-on-in*). An alkaloid from aconite with action similar to aconitin, except that it lacks its antipyretic power and has little effect on the sensory nerves, while it depresses the motor group and also the muscle-fibers.

Benzalcohol (*ben-zal'-ko-hol*). See *Alcohol, Benz* (Illus. Dict.).

Benzaldid (*ben-zal'-did*). See *Benzaldehyd* (Illus. Dict.).

Benzamile (*ben'-zam-il*). $C_{28}H_{10}NO_2$. A distillation product of oil of bitter almonds.

Benzanalgene (*ben-zan'-al-gēn*). See *Analgene* (Illus. Dict.).

Benzaurin (*ben-zaw'-rin*). $C_{19}H_{16}O_3$. Red crystals melting at 100° C. Syn., *Phenyldiphenol carbinol.* **B. Anhydrid,** a colorless substance dissolving in alkaline solutions with a violet color.

Benzene. (See Illus. Dict.) Syn., *Benzol; Phen; Phenyl hydrid.* **B., Collas',** common benzene introduced in 1848 by Collas as a cleansing agent. **B. diazoanilid.** See *Diazoamidobenzene.* **B. Hexabromid,** $C_6H_6Br_6$, an addition compound of benzene and bromin occurring as a solid. **B. Hexachlorid,** $C_6H_6Cl_6$, from benzene by action of chlorin with heat, transparent monoclinic crystals melting at 157° C., boiling at 288° C. **B. Hexahydrate.** See *Pinite* (Illus. Dict.). **B. Hexahydrid,** C_6H_{12}, an additive compound of benzene and hydrogen occurring as a liquid boiling at 69° C. **B., Iodated,** C_6H_5I, from benzene by action of iodin chlorid with aluminic chlorid. It occurs as a colorless transparent liquid which becomes red on exposure to light; sp. gr. 1.8 at 15° C.; soluble in alcohol; boils at 187°–188° C. Syn., *Monoiodobenzol.* **B., Monobromated,** C_6H_5Br, a clear, colorless liquid obtained from benzene by action of bromin with iodin; boils at 154.4°–155.5° C.; sp. gr. 1.5258 at 0° C.; soluble in alcohol: used in albuminuria. Syn., *Monobromobenzol.* **B., Monochlorated,** C_6H_5Cl, a clear, colorless, fragrant liquid obtained from benzene by the action of chlorin; boils at 132° C.; sp. gr. 1.1284 at 0° C.; becomes solid at 40° C. Syn., *Monochlorobenzol.* **B. Sulfamid,** $C_6H_5SO_2NH_2$, the amid of benzene sulfonic acid, forms crystals soluble in alcohol. Syn., *3-Sulfonamid.* **B. Sulfochlorid,** $C_6H_5SO_2Cl$, an oily liquid obtained from an aqueous solution of benzene sulfinic acid by action of chlorin; it is soluble in alcohol and ether, boils at 247° C.; slowly solidifies at 0° C. to la

rhombic prisms. Syn., *Benzolsulfochlorid; Phenylsulfochlorid.* **B.sulfonate,** a salt of benzene sulfonic acid. **B. Sulfonic Chlorid.** See *B. Sulfochlorid.* **B., Tribromated,** $C_6H_3Br_3$ [1:3:4], colorless acicular crystals soluble in hot alcohol; melting at 40°–44° C.; boiling at 275°–276° C. **B., Trichlorated,** $C_6H_3Cl_3$ [1:2:4], transparent rhombic crystals which melt at 16° C., boil at 213° C. **B. Trichlorhydrin, B. Trichlortrihydrate,** $C_6H_6(OH)_3Cl_3$, an addition compound of benzene, chlorin, and hydroxyl; colorless crystals melting at 10° C.

Benzenin (*ben'-zen-in*). See *Benzinin.*

Benzenobacillin (*ben-zen-o-bas'-il-in*). See *Benzinin.*

Benzenyl (*ben'-zen-il*). See *Phenyl.* **B.amidothiophenol,** $C_{13}H_9NS$, acicular crystals with fragrance of roses, obtained from amidophenylmercaptan by benzoic aldehyd and heat; it is soluble in alcohol, ether, carbon disulfid, and dilute hydrochloric acid. Syn., *Benzenylamidophenylmercaptan.* **B. Trichlorid.** See *Benz-trichlorid.*

Benzerythrene (*ben-zer'-ith-rēn*). An orange-colored product of destructive distillation of benzene.

Benzhydramid (*benz-hi'-dram-id*). See *Hydrobenzamid* (Illus. Dict.).

Benzhydrocyanid (*benz-hi-dro-si'-an-id*). See *Benzimid* (Illus. Dict.).

Benzhydrol (*benz-hi'-drol*). $C_6H_5—CH(OH)—C_6H_5$. An alcohol occurring as silky acicular crystals slightly soluble in water, obtained from an alcoholic solution of benzophenone by action of sodium amalgam. Syn., *Diphenylcarbinol.* **B. Acetate,** a thick liquid obtained by heating benzhydrol with acetic acid.

Benzilidene (*ben-zil'-id-ēn*). See *Benzylidene.*

Benzilim (*ben'-zil-im*). See *Benzilimid.*

Benzilimid (*ben-zil'-im-id*). $C_{28}H_{22}N_2O_2$. White silky needles obtained from an alcoholic solution of benzil by action of dry ammoniacal gas.

Benzin. (See Illus. Dict.) **B., Coal-tar,** benzin obtained as a by-product in preparing benzene and toluene from coal-tar oil by action of acids and alkalis. It differs chemically and physically from petroleum benzin, and is used as a cleansing fluid and as a solvent for resin, caoutchouc, etc.

Benzinin (*ben'-zin-in*). **A toxin extracted by Auclair from tubercle bacilli.** Syn., *Benzinobacillin.*

Benzite (*ben'-zīt*). A solution of sulfur in 2 or 3 parts of hot coal-tar.

Benzodiureid (*ben-zo-di-u'-re-id*). $C_9H_{12}N_4O_2$. Tiny needles obtained from benzoic aldehyd by action of urea.

Benzoglycollate (*ben-zo-gli'-kol-āt*). A salt of benzoglycollic acid.

Benzohelicin (*ben-zo-hel'-is-in*). $C_{20}H_{20}O_8$. A combination of benzoyl and helicin. Syn., *Benzoyl helicin.*

Benzoic (*ben-zo'-ik*). Relating to or obtained from benzoin. **B.-acid-benzyl-ester.** See *Peruscabin.* **B. Anhydrid,** $C_{14}H_{10}O_3$, the anhydrid of benzoic acid occurring as white rhombic prisms soluble in alcohol and ether, melting at 42° C., boiling at 360° C. Syn., *Anhydrous benzoic acid; Benzoyl oxid.* **B. Bromid.** See *Benzoyl Bromid.* **B. Chlorid.** See *Benzoyl Chlorid.*

Benzoin. (See Illus. Dict.) 2. $C_{14}H_{12}O_2$, a reaction-product of an alcoholic solution of potassium cyanid on benzoic aldehyd, forming yellowish fragrant prisms soluble in hot alcohol, melting at 135°–137° C. It is used as an external antiseptic, 1 part in 5 of lard. Syn., *Phenylbenzoyl carbinol; Bitter almond oil camphor.* **B., Flowers of,** benzoic acid obtained by the sublimation of benzoin.

Benzoinam (*ben-zo'-in-am*). $C_{28}H_{24}N_2O$. A crystalline powder derived from benzoin (2) by action of alcoholic solution of ammonia with heat.

Benzoinamid (*ben-zo-in'-am-id*). $C_{42}H_{36}N_4$. A white powder, without taste or odor, obtained from benzoin (2) by action of an aqueous solution of ammonia.

Benzoinated (*ben-zo'-in-a-ted*). Combined or prepared with benzoin.

Benzoinol (*ben-zo'-in-ol*). An oily liquid said to consist of albolene with gum benzoin in solution; it is used as an excipient for menthol, camphor, etc., in diseases of the nose and throat.

Benzoiodohydrin (*ben-zo-i-o-do-hi'-drin*). (C_3H_5)-$Cl(C_7H_5O_2)$. A brownish-yellow oily mass, soluble in alcohol, ether, and petroleum ether, insoluble in glycerin. It decomposes at 100° C., iodin being liberated. It is a succedaneum for potassium iodid and is given in the same doses. Syn., *Chloroiodobenzoic-glycerinester; Glycerylchloriodobenzoate.*

Benzolactate (*ben-zo-lak'-tāt*). A salt of benzolactic acid.

Benzole, Benzoleum (*ben'-zōl, ben-zōl-e'-um*). See *Benzene* (Illus. Dict.).

Benzolguaiacol (*ben-zol-gwi'-ak-ol*). See *Benzosol* (Illus. Dict.).

Benzolin (*ben'-zol-in*). 1. See *Ligroin* (Illus. Dict.). 2. C_8H_{10}, a substance named by Graebe. 3. See *Amarin* (Illus. Dict.).

Benzolism (*ben'-zol-izm*). Benzol-poisoning, from inhaling the vapor or swallowing it. It is marked in light cases by dizziness and loss of consciousness and anesthesia; in severer cases by hallucination, epileptic paroxysms, and coma.

Benzolsulfochlorid (*ben-zol-sul-fo-klor'-id*). See *Benzene Sulfochlorid.*

Benzolum (*ben'-zol-um*). See *Benzene.*

Benzonaphthalin (*ben-zo-naf'-thal-in*). See *Naphthalin Benzoate.*

Benzone, Benzonum (*ben'-zōn, ben-zo'-num*). See *Benzophenone* (Illus. Dict.).

Benzoparacresol (*ben-zo-par-ah-kre'-sol*). See *Benzolparacresol.*

Benzophenid (*ben-zo-fen'-id*). Phenyl benzoate.

Benzopinacone, Benzopinakone (*ben-zo-pin'-ak-ōn*). $C_{26}H_{20}O_2$. A crystalline substance obtained from benzophenone by action of nascent hydrogen.

Benzopyrin (*ben-zo-pi'-rin*). Antipyrin benzoate.

Benzosolguaiacol (*ben-zo-sol-gwi'-ak-ol*). See *Benzosol* (Illus. Dict.).

Benzosulfate (*ben-zo-sul'-fāt*). A salt of benzosulfuric acid.

Benzotrichlorid (*ben-zo-tri-klo'-rid*). $C_7H_5Cl_3$. A colorless, transparent, highly refractive liquid with penetrating odor, obtained from boiling toluene by action of chlorin; sp. gr. 1.38 at 14° C.; boils at 213°–214° C. Syn., *Benzenyl trichlorid.*

Benzoyl. (See Illus. Dict.) **B. Acetoacetate,** an acetoacetate in which an atom of hydrogen is replaced by a molecule of benzoyl. **B.-acetylperoxid,** $C_9H_8O_4$, an oxidized product of the mixed anhydrid of acetic and benzoic acids, a crystalline body slightly soluble in water and very unstable. To prevent explosion by sudden heating or grinding, it is diluted with an equal quantity of inert absorbent powder and called *acetozone.* It is used as an intestinal antiseptic. Dose, 4–5 gr. 3 times daily. Syn., *Acetyl benzoylperoxid.* **B.aconin.** See *Aconitin* (the alkaloid). **B.-amid.** See *Benzamid* (Illus. Dict.). **B.-anilid.** See *Benzanilid* (Illus. Dict.). **B.-apoaconin.** See *Apoaconitin* (Illus Dict.). **B.-apopseudaconin,** $C_{24}H_{43}NO_9$, a base formed from pseudoaconin by replacement of hydrogen with benzoyl. **B.-apopseudaconitin,** $C_{36}H_{45}(C_6H_5CO)NO_{11}$, a base obtained from apopseudaconitin by action of benzoic aldehyd. **B.-azotid,** $C_{15}H_{12}N_2$, a white crys-

talline powder devoid of color or taste, obtained from oil of bitter almonds by action of ammonia. **B. Benzoate.** See *Benzoic Anhydrid.* **B. Bromid,** $C_6H_5 . CO . Br$, a colorless, pungent liquid. **B. Carbamid.** See *B.urea.* **B.chinin.** See *B.quinin.* **B.-chinolin.** See *B.-oxyquinolin.* **B. Chlorid,** C_7H_5OCl, a transparent, colorless, pungent oil with a specific gravity of 1.21 at 19° C.; it is soluble in ether and carbon disulfate; boils at 194°–195° C. When acted on by alcoholic ammonia it gives dibenzylamin. It is used as a reagent in organic analysis and synthesis. Syn., *Chlorobenzoyl chlorid.* **B.-ecgonin-ethylic Ester.** See *Cocaethylin.* **B.-eugenol,** $C_{17}H_{16}O_3$, a substance forming large, transparent, colorless prisms or small white crystals, soluble in alcohol, ether, chloroform, and acetone; melts at 69°–70.5° C. It is used in tuberculosis. Dose, 7.5–15 gr. (0.5–1 gm.). **B.-glycocin,** hippuric acid. **B.-guaiacol.** See *Benzosol* (Illus. Dict.). **B.helicin.** See *Benzohelicin.* **B. Hydrate,** benzoic acid; also improperly applied to benzoic aldehyd. **B., Hydrated,** benzoic acid. **B. Hydrid.** See *Benzaldehyd* (Illus. Dict.). **B.-metaoxyquinolin.** See *B.-oxyquinolin.* **B.methid.** See *Acetophenone* (Illus. Dict.). **B.morphin.** See *Peronin.* **B.-β-naphthol.** See *Benzonaphthol* (Illus. Dict.). **B.-nicotin,** $C_{10}H_{13}(C_7H_5 . O)N$, a colorless, slightly viscid, noncrystalline alkaloid, insoluble in water and soluble in dilute hydrochloric acid. **B.-orthoxyquinolin.** See *B.-oxyquinolin.* **B.-oxyquinolin,** a substitution compound of quinolin in which hydrogen is replaced by oxygen and benzoyl. **B.-paracresol,** $C_{14}H_{12}O_2$, a body occurring in prisms with pleasant odor. It is soluble in ether, chloroform, and hot alcohol, and insoluble in water; melts at 70°–71° C. It is an antiseptic and used instead of B.-guaiacol. Dose, 4 gr. (0.25 gm.). Syn., *Benzoparacresol.* **B. Peroxid,** a bactericide and disinfectant substance. **B. Persulfid,** $C_{14}H_{10}O_2S_2$, an oxidation-product of thiobenzoic acid. **B.-phenylhydrazin,** $C_{13}H_{12}N_2O$, an antiseptic. **B.-piperidin,** $C_{12}H_{15}NO$, a substitution-product of piperidin, occurring in colorless crystals. **B.-piperylhydrazin,** $C_{12}H_{16}N_2O$, shining laminas. **B.-pseudotropein.** See *Tropacocain* (Illus. Dict.). **B.quinin,** $C_6H_5CO . O . C_{20}H_{23}N_2O$, a quinin ester; melts at 139° C.; taste not unpleasant. **B.resorcin,** a highly colored oily liquid obtained from benzoyl and resorcin. It is soluble in alcohol, forming a yellow solution with a green fluorescence **B.salicin.** See *Populin* (Illus. Dict.). **B.salicylamid,** $C_{14}H_{11}NO_3$, an amid formed from salicylamid by action of benzoyl chlorid. **B.-salicylol,** $C_{14}H_{10}O_5$, a thick oil obtained from sodium salicylid by action of benzoyl chlorid. **B.-salicylonitril,** $C_{14}H_9NO_2$, a body obtained from salicylamid by action of benzoyl chlorid. **B.sulfonicimid.** See *Saccharin* (Illus. Dict.). **B. Tannate,** a yellow granular powder. **B.tetrahydroquinolin,** $C_{16}H_{15}NO$, large colorless crystals. **B.tropein,** $C_6H_{14}(C_6H_5CO)NO$, silky acicular needles; it is a local anesthetic. **B.-tropin,** a crystalline body formed from tropin by the replacement of hydrogen with benzoyl. **B.urea,** $C_8H_8N_2O_2$, a crystalline body obtained from urea by action of benzoyl chlorid. Syn., *Benzureide; Benzoyl carbamid.* **B.ureid,** $C_{28}H_{28}N_8O_4$, a white powder without taste or odor, obtained from urea by action of benzoic aldehyd. **B. vinyldiacetonalkamin.** See *Eucain-B.*

Benzoylate (*ben-zo′-il-āt*). See *Benzoate.*

Benzoylic (*ben-zo-il′-ik*). See *Benzoic.*

Benzureid (*ben-zu′-re-id*). See *Benzoylurea.*

Benzydrol (*ben-zid′-rol*). See *Benzhydrol.*

Benzyl. (See Illus. Dict.) Syn., *Benzylinum.* **B. Acetate,** $C_6H_5 . CH_2$, a liquid boiling at 210° C. **B.-alcohol.** See under *Alcohol* (Illus. Dict.). **B.amin,** C_7H_9N, obtained from thiobenzamid by reduction with nascent hydrogen; it is a colorless liquid with a strongly alkaline reaction; sp. gr. 0.99 at 14° C.; soluble in water, alcohol, and ether; boils at 184° C. **B.anilin,** $C_{13}H_{13}N$, a crystalline reduction-product of thiobenzanilid soluble in alcohol; melts at 33° C. Syn., *Benzylphenylamin.* **B. Benzoate,** $C_{14}H_{12}O_2$, a crystalline substance occurring in the fluid part of balsam of Peru. **B. Bromid,** $C_6H_5 . CH_2Br$, a liquid giving off very irritating vapors. **B. Carbamate.** See *B.urethane.* **B. Carbamid,** $C_8H_{10}N_2O$, long colorless needles derived from benzyl chlorid by action of potassium cyanate in alcohol; soluble in water and alcohol; melting at 147° C. Syn., *B.urea.* **B.chinolin.** See *B.quinolin.* **B. Chlorid,** C_7H_7Cl, obtained from boiling toluene by action of chlorin; it is an oily liquid with aromatic odor; sp. gr. 1.107 at 14° C.; boils at 178° C. Syn., *ω-Chlorotoluene.* **B. Cinnamate.** See *Cinnamein.* **B. Cyanid,** C_8H_7N, a liquid occurring naturally in cress (*Nasturtium officinale*, R. Br.) and other plants, and obtained synthetically from benzyl chlorid with potassium cyanid; sp. gr. 1.0146 at 18° C.; boils at 232° C.; soluble in alcohol. Syn., *Nitril of phenylacetic acid.* **B. Ester,** a compound ether or a salt formed by the combination of benzyl with an acid. **B.-ethylanilin,** $C_{15}H_{17}N$, a product of ethylanilin and benzyl chlorid. **B. Hydrate.** See *Alcohol, Benzyl* (Illus. Dict.). **B. Hydrid.** See *Toluene* (Illus. Dict.). **B. Hydrosulfid.** See *B. Mercaptan.* **B. Iodid,** C_7H_7I, colorless crystals obtained from benzyl chlorid by action of hydroiodic acid; soluble in ether, slightly soluble in alcohol; melt at 241° C. **B. Mercaptan,** $C_6H_5 . CH_2SH$, a very refractive liquid with odor of garlic. Syn., *B. Hydrosulphid.* **B.-methylacetone.** See *B.methylketone.* **B.-methylbenzene.** See *B.toluene.* **B.-methylether,** $C_6H_5 . CH_2 — O — CH_3$, a liquid isomer of ethyl phenyl ether, boiling at about 168° C. **B.methylketone,** $C_6H_5 . CH_2 — CO — CH_3$, a ketone converted into benzoic and acetic acids on oxidation; it boils between 214° and 216° C. **B. Nitrate,** $C_6H_5 . CH_2 . NO_3$, a combination of benzyl and nitric acid. **B.phenylamin.** See *Benzylanilin.* **B.quinolin,** $C_{16}H_{13}N$, an oily liquid. **B. Sulfid,** $C_{14}H_{14}S$, a body obtained from benzyl chlorid with potassium sulfid; soluble in ether; melts at 49° C. **B.-thioalcohol.** See *B. Mercaptan.* **B.toluene,** $C_{14}H_{14}$, a liquid obtained by heating toluene and benzyl chlorid. **B.urea.** See *B. Carbamid.* **B.urethane,** $C_8H_9NO_2$, a crystalline body obtained from benzyl alcohol by action of solid cyanogen chlorid. Syn., *B. Carbamate.*

Benzylene (*ben′-zil-ēn*). See *Benzylidene* (Illus. Dict.).

Benzylic (*ben-zil′-ik*). Relating to or prepared with benzyl.

Benzylidene. (See Illus. Dict.) **B.acetone,** $C_{10}H_{10}O$, a substance obtained from calcium cinnamate and calcium acetate by heat, forming colorless plates soluble in alcohol, ether, benzene, and chloroform, slightly soluble in petroleum benzin; melts at 42° C. Syn., *Methylstyrylketon; Acetocinnamone.* **B. Chlorid,** C_7H_6Cl, an oil with aromatic odor, obtained from toluene by the action of phosphorus pentachlorid with heat; soluble in alcohol and ether; sp. gr. 1.27 at 0° C.; boils at 204° C. **B. Sulfid,** $C_6H_5 . CHS$, colorless laminas.

Berberia (*bur-be′-re-ah*). See *Beri-beri* (Illus. Dict.).

Berberin. (See Illus. Dict.) **B. Carbonate,** $C_{41}H_{38}NO_{11}$, crystalline powder soluble in hot water; it

ntiperiodic, stomachic, and tonic. Dose, antiperiodic, 15 gr. (0.52–1 gm.); stomachic, and tonic, ½–1 gr. 0.032–0.065 gm.) 3 times daily. **B. Chlorid.** See *B. ydrochlorate.* **B. Citrate,** yellowish, bitter, crystalne powder soluble in water. **B. Hydrochlorate,** Hydrochlorid, $2C_{20}H_{17}NO_4HCl + 5H_2O$, very all yellow needles soluble in water. **B. Phosphate,** $C_{20}H_{17}NO_4 2H_3PO_4$, a yellow crystalline powder luble in water. **B. Sulfate,** $C_{20}H_{17}NO_4H_2SO_4$, llow acicular crystals soluble with difficulty in water, most insoluble in alcohol.

Berberis. (See Illus. Dict.) 2. A genus of plants of e order *Berberideæ.*

Berbin (*bur'-bin*). See *Oxyacanthin* (Illus. Dict.).

Bergaptene (*bur-gap'-tēn*). $C_{12}H_8O_4$. A solid greasy mpound obtained from bergamot oil, being the lacne of burgaptenic acid. It melts at 188° C. Syn., *rgamot camphor; Bergamilene.*

Bergenin (*bur'-jen-in*) [*Bergenia*, a genus of plants]. $H_3O_3H_2O$. A bitter crystalline substance, obtained m various species of saxifrage, melting at 140° C. is said to be a nerve tonic with action intermediate tween salicylic acid and quinin.

Beriberi. (See Illus. Dict.) Syn., *Paraplegia meitica: Myelopathia tropica.* Cf. *Phaseolus radiatus.* **., Dropsical.** See *Uncinariasis.* **B., Pseudo-,** bbs' name for a disease endemic in the Singapore matic Asylum prevailing during the wet season and acking Asiatics only. It is not contagious and is rked by slight anemia, considerable soft anasarca, d a tendency to sudden death from shock. The iness of the edema, the lack of spastic and paralytic nditions and the rapidity of recovery distinguish it m beriberi. The period of incubation is apparently om 1 to 2 days. **B., Web,** that marked by anemia d dropsy without paralysis.

Bernardin (*ber-nard'-in*) [*Bernard*, a French physigist]. See *Glycogen* (Illus. Dict.).

Bernard's Puncture. The puncture of a definite spot the floor of the fourth cerebral ventricle for the proction of artificial diabetes.

Betain. (See Illus. Dict.) Syn., *Trimethylglycoll.* **Hydrochlorate,** $C_5H_{11}NO_2HCl$, colorless tablets luble in water.

Betam (*bet'-tam*). An alkaloid from cotton-seed oil.

Betulase (*bet'-u-lās*) [*Betula*, the birch]. See *Gaultase.*

Betulinar (*bet-u'-lin-ar*). A proprietary antirheumatic lution, said to consist of salicylmentholbetulin, 11 rts; boroglycerin, 19 parts; tincture of birch, 20 rts; aromatic birch-water, 50 parts.

Betulol (*bet'-u-lol*). An application for the treatment rheumatism, said to be more quickly absorbed than of wintergreen. Syn., *Methyl oleosalicylate.*

Biophalia (*boo-fal'-e-ah*). See *Corchorus fascicularis.*

Biacuminate (*bi-ak-u'-min-āt*) [*bis*, twice; *acuminus*, pointed]. Having two diverging pointed ends.

Bialate (*bi-a'-lāt*) [*bis*, twice; *ala*, a wing]. Furnished th two wings or wing-like appendages.

Bialuminate (*bi-al-u'-min-āt*) [*bis*, twice; *aluminium*]. salt of aluminium containing two equivalents of aluinium combined with one of acid.

Biangulate (*bi-ang'-gu-lāt*) [*bis*, twice; *angulus*, an gle]. With two angles.

Biapiculate (*bi-ap-ik'-u-lāt*) [*bis*, twice; *apex*, the mmit]. With two summits.

Biarsenate (*bi-ar'-sen-āt*) [*bis*, twice; *arsenic*]. An id arsenate containing two atoms of hydrogen.

Biarticulate (*bi-ar-tik'-u-lāt*) [*bis*, twice; *articulus*, a int]. Having a double joint.

Biasteriac, Biasterial, Biasteric (*bi-as-ter'-e-ak, bi-as-te'-re-al, bi-as-ter'-ik*) [*bis*, twice; *asterion*, a craniometric point]. Relating to the asterion on each side of the skull; extending between the two asteria.

Biatomic (*bi-at-om'-ik*). See *Diatomic* (Illus. Dict.).

Biaurite (*bi-aw'-rīt*) [*bis*, twice; *auris*, the ear]. Furnished with two ears or ear-like projections.

Biaxial (*bi-aks'-e-al*) [*bis*, twice; *axis*]. Furnished with two axes.

Bib. A portion of a red blood-corpuscle adherent to the crescent bodies observed in the blood of remittent-fever patients.

Bibasic (*bi-ba'-sik*) [*bis*, twice; *basis*, a base]. Having two hydrogen atoms replaceable by bases, as certain acids; dibasic.

Biberin (*bib'-ur-in*). See *Bebeerin.*

Bibirina (*bib-ir-ī'-nah*). See *Bebeerin.*

Biborate (*bi-bo'-rāt*). See *Pyroborate.*

Bibrin (*bib'-rin*). See *Bebeerin.*

Bibromid (*bi-bro'-mid*). A compound of bromin with a radicle or element, containing twice as much bromin as another similar compound.

Bicalcarate (*bi-kal'-kar-āt*) [*bis*, twice; *calcar*, a spur]. Furnished with two spurs or spur-like projections.

Bicalcic (*bi-kal'-sik*). See *Dicalcic.*

Bicallose, Bicallous (*bi-kal'-ōs, -us*) [*bis*, twice; *callosus*, callous]. With two callous prominences.

Bicameral (*bi-kam'-ur-al*) [*bis*, twice; *camera*, a vault]. Having two compartments.

Bicapitate (*bi-kap'-it-āt*) [*bis*, twice; *caput*, a head]. Having two heads; bicephalous; dicephalous.

Bicapsular (*bi-kap'-su-lar*) [*bis*, twice; *capsula*, a capsule]. Having two capsules

Bicavitary (*bi-kav'-it-a-re*) [*bis*, twice; *cavitas*, a cavity]. Having two cavities.

Bicellular (*bi-sel'-u-lar*) [*bis*, twice; *cella*, a cell]. Composed of two cells.

Bicephalic, Bicephalous (*bi-sef'-al-ik, bi-sef'-al-us*). See *Dicephalous* (Illus. Dict.).

Bicephalus. See *Dicephalous* (Illus. Dict.).

Bichat's Fat-ball. See under *Ball.*

Bichlorinated (*bi-klo'-rin-a-ted*). Combined with two atoms of chlorin.

Bicinctus, Bicingulatus (*bi-sink'-tus, bi-sin-gu-la'-tus*) [*bis*, twice; *cingere*, to gird]. Having two zones or belts.

Bicipital, Bicipitous (*bi-sip'-it-al, -us*) [*biceps*, double-headed]. 1. With two heads. 2. Relating to one of the biceps muscles.

Biclavate (*bi-klā'-vāt*) [*bis*, twice; *clava*, a club]. Clubbed at each end. **B.-bihamate,** with the two club-shaped ends bent toward each other. **B.-cylindric,** cylindric and with clubbed ends.

Bicolorin (*bi-kol'-or-in*). Martins' name for esculin.

Biconorial (*bi-ko-ro'-ne-al*) [*bis*, twice; *corona*, a crown]. Relating to the two koronia.

Bicorporal, Bicorporate, Bicorporated (*bi-kor'-por-al, -āt, ā-ted*) [*bis*, twice; *corpus*, a body]. Consisting of two bodies.

Bicrescentic (*bi-kres-en'-tik*) [*bis*, twice; *crescere*, to grow]. Applied to a tooth having two ridges in the form of a double crescent.

Bicrural (*bi-kru'-ral*) [*bis*, twice; *crus*, a leg]. Having two legs or leg-like processes.

Bicuhyba, Bicuiba (*bik-we'-bah*). See *Becuiba* (Illus. Dict.).

Bicuspis (*bi-kus'-pis*) [*bis*, twice; *cuspis*, a point]. A tooth with two cusps.

Bicyanate (*bi-si'-an-āt*) [*bis*, twice; *cyanogen*]. A salt having two equivalents of cyanic acid and one of a base.

Bicyanid (*bi-si'-an-id*) [*bis*, twice; *cyanogen*]. A cyanid containing twice as much cyanogen as the lower member of the cyanid series.

Bicyanuret (*bi-si-an'-u-ret*). See *Bicyanid.*

Bidacryc (*bi-dak'-rik*) [*bis*, twice; *dacryon*]. In craniometry, relating to the two dacryons.

Bidactylate (*bi-dak'-til-āt*) [*bis*, twice; *δάκτυλος*, a finger]. See *Bidigitate.*

Bidental (*bi-den'-tal*) [*bis*, twice; *dens*, a tooth]. Having two teeth or tooth-like prominences.

Bidigital (*bi-dij'-it-al*) [*bis*, twice; *digitus*, a finger]. Referring to the tip of a finger of each hand.

Bidigitate (*bi-dij'-it-āt*) [*bis*, twice; *digitus*, a finger]. Having two fingers; bidactylate.

Biduous (*bid'-u-us*) [L., *biduus*]. Continuing for two days.

Biduum (*bid'-u-um*) [L.]. A period of two days.

Bifacial (*bi-fa'-shal*) [*bis*, twice; *facies*, a face]. Having the opposite surfaces similar.

Bifarious (*bi-fa'-re-us*) [*bifarius*]. Twofold; arranged in two more or less regular series or rows.

Bifemorocalcaneus (*bi-fem-o-ro-kal-ka'-ne-us*) [*bis*, twice; *femur*, the thigh bone; *calcaneum*, the heel]. See under *Muscles.*

Bifissile (*bi-fis'-il*) [*bis*, twice; *findere*, to split]. Parting naturally into halves.

Bifistular, Bifistulous (*bi-fis'-tu-lar, -lus*) [*bis*, twice; *fistula*, a pipe]. With two tubes.

Biflagellate (*bi-flaj'-el-āt*) [*bis*, twice; *flagellum*, a whip]. Furnished with two flagella.

Biform, Biformis (*bi'-form, bi-form'-is*) [*bis*, twice; *forma*, form]. See *Dimorphous* (Illus. Dict.).

Biformity (*bi-form'-it-e*). The condition of being dimorphous.

Biforous (*bi'-for-us*) [*biforus*]. 1. See *Biforate* (Illus. Dict.). 2. Having two valves.

Bigaster (*bi-gas'-tur*). See *Biventer* (Illus. Dict.).

Bigeminal, Bigeminous (*bi-jem'-in-al, -us*) [*bis*, twice; *geminare*, to double]. Occurring in two pairs.

Bigibbose, Bigibbous (*bi-gib'-ōs, -us*) [*bis*, twice; *gibbus*, a hump]. Having two gibbosities.

Biglandular (*bi-gland'-u-lar*) [*bis*, twice; *glandula*, a gland]. Furnished with two glands.

Bihamate (*bi-ham'-āt*) [*bis*, twice; *hamatus*, hooked]. With a hook at both extremities.

Bihastate, Bihastatus (*bi-has'-tāt, -ta'-tus*) [*bis*, twice; *hasta*, a lance]. With two lance-shaped processes.

Bihydrate (*bi-hi'-drāt*). See *Dihydrate.*

Bihydric (*bi-hi'-drik*). See *Dihydric.*

Biischiatic (*bi-is-ki-at'-ik*). See *Bisischiadic* (Illus. Dict.).

Bilamellar, Bilamellate, Bilamellated (*bi-lam-el'-ar, -āt, -a'-ted*) [*bis*, twice; *lamella*, a plate]. Consisting of two thin plates.

Bilaminar, Bilaminate (*bi-lam'-in-ar, -āt*) [*bis*, twice; *lamina*, a sheet]. Composed of two layers.

Bilate (*bil'-āt*). See *Glycocholate.*

Bilaterality (*bi-lat-ur-al'-it-e*) [*bis*, twice; *latus*, the side]. The condition of being bilateral.

Bilberries (*bil-ber'-ēz*). See *Vaccinium myrtillus.*

Bile. (See Illus. Dict.) **B., Aeruginous,** bile having the color of verdigris. **B., Azure, B., Blue.** See *B., Glastine.* **B., Crystallized,** Plattner's name for sodium taurocholate. **B., Cystic,** bile contained in the gall-bladder as distinguished from that which is transmitted directly from the liver to the duodenum. **B., Glastine,** that of a bluish color, so called from *glastum*, or woad (*Isatis tinctoria*), used for dyeing blue. **B., Hepatic,** that which is transmitted directly from the liver to the duodenum without entering the gall-bladder. **B., Inspissated.** See *Fel bovis inspissatum* (Illus. Dict.). **B.-resin.** See *Bilin* (Illus. Dict.). **B.-stone.** See *Gall-stone* (Illus. Dict.).

Bilharziasis (*bil-harz-e-a'-sis*). See *Bilharziosis* (Illus. Dict.).

Bilianic Anhydrid. $C_{50}H_{70}O_{17} + 4H_2O$. The anhydrid of bilianic acid, occurring in small rhombic crystals.

Biliation (*bil-e-a'-shun*) [*bilis*, bile]. The excretion of bile.

Bilification (*bil-if-ik-a'-shun*) [*bilis*, bile; *facere*, to make]. The formation of bile.

Biligulate, Biligulatus (*bi-lig'-u-lat, bi-lig-u-la'-tus*) [*bis*, twice; *ligula*, a little tongue]. Formed like two tongues, or having two tongue-like processes.

Bilinguis (*bi-lin'-gwis*). See *Biligulate.*

Biliousness (*bil'-yus-nes*) [*bilis*, bile]. The condition marked by malaise, constipation, headache, and anorexia, with a furred tongue, attributed to disorders in the secretion and flow of bile.

Bilixanthin (*bil-e-zan'-thin*). See *Choletelin* (Illus. Dict.).

Bill of Health. See under *Health.*

Bilobate (*bi-lo'-bāt*) [*bis*, twice; *λοβός*, a lobe]. With two lobes; divided into two lobes; bilobed; bilobular.

Bilobation (*bi-lo-ba'-shun*). The condition of being divided into two lobes; a division into two lobes.

Bilocular (*bi-lok'-u-lar*) [*bis*, twice; *loculus*, a little place]. Having two cells; divided into two compartments; biloculate.

Bilophodont (*bi-lof'-o-dont*) [*bis*, twice; *λοφος*, crest; *ὀδόντς*, a tooth]. Having the teeth with two transverse ridges on the cutting surface.

Bimaculate (*bi-mak'-u-lāt*) [*bis*, twice; *macula*, spot]. Marked with two spots.

Bimalar (*bi-ma'-lar*). Extending between the two malar bones.

Bimalate (*bi-mal'-āt*). In a series of malates, that which contains twice the amount of malic acid that the first one of the series does.

Bimanous (*bi-ma'-nus*) [*bis*, twice; *manus*, a hand]. Having two hands.

Bimargarate (*bi-mar'-gar-āt*). A salt of margaric acid containing twice as much of the acid as a normal margarate.

Bimarginate (*bi-mar'-jin-āt*) [*bis*, twice; *margin*, bordered]. Having two borders.

Bimaxillary (*bi-maks'-il-a-re*). Extending between the two maxillas.

Bimeconate (*bi-mek'-on-āt*). A meconate containing twice as much meconic acid as is contained in the corresponding normal meconate.

Bimembral (*bi-mem'-bral*) [*bis*, twice; *membrum*, member]. With two limbs.

Bimestral (*bi-mes'-tral*) [*bis*, twice; *mensis*, month]. Two months old; continuing two months.

Bimolybdate (*bi-mol'-ib-dāt*). A molybdate containing twice as much molybdic acid as the corresponding normal molybdate.

Bimucate (*bi-mu'-kāt*). A salt of mucic acid containing twice as much acid in proportion to the base as a normal mucate.

Bimucous (*bi-mu'-kus*) [*bis*, twice; *mucus*, mucus]. Relating to two mucous surfaces.

Bimus (*bi'-mus*) [L.]. Two years of age; continuing two years.

Bimuscular (*bi-mus'-ku-lar*). Having two muscles. Syn., *Dimyarious.*

Binal (*bi'-nal*). See *Binary* (Illus. Dict.).

Binocular. (See Illus. Dict.) **B. Relief.** See under *Relief.*

Binoleate (*bin-o'-le-at*) [*bis*, twice; *oleum*, oil]. A oleate containing twice the amount of the oleic element that is contained in a normal oleate.

Binotic (*bin-ot'-ik*). See *Binaural* (Illus. Dict.).

inoxalate (*bin-oks'-al-āt*). A salt of oxalic acid containing twice as much oxalic acid as a normal oxalate.

ioblastic (*bi-o-blast'-ik*). Relating to bioblasts. **B. Theory, Altmann's,** according to which leukocyte granules are considered as definite biologic entities, which affect through oxygen-transmission both reduction and oxygenation, and in this manner accomplish the disunions and the syntheses of the economy without sacrificing their own individuality. Cf. *Color-analysis.*

ioculate, Bioculatus (*bi-ok'-u-lāt, -us*) [*bis*, twice; *oculus*, an eye]. Marked by two spots of color different from the chief color.

iod (*bi'-od*) [βιος, life]. 1. Animal magnetism. 2. See *Protyl* (Illus. Dict.). 3. Vital force.

iodesmus (*bi-od-ez'-mus*) [βιος, life; δεσμός, a bond]. The vital principle regarded as a bond between organisms.

iogen (*bi'-o-jen*) [βιος, life; γεννᾶν, to produce]. 1. See *Protyl* (Illus. Dict.). 2. See *Bioplasm* (Illus. Dict.). 3. See *Magnesium Dioxid.*

iogenetic (*bi-o-jen-et'-ik*). Relating to biogenesis. **B. Law.** See under *Law.*

iograph (*bi'-o-graf*) [βιος, life; γράφειν, to write]. An apparatus for securing photographs of animals in motion. Syn., *Kinematograph.*

iology. (See Illus. Dict.) Syn., *Somiology; Organonomy: Organology; Zoonomy.* **B., Dynamic.** See *Bionomy* (Illus. Dict.). **B., Static.** See *Biostatics* (Illus. Dict.).

iomagnetic (*bi-o-mag-net'-ik*) [βιος, life; μάγνης, magnet]. Relating to animal magnetism.

iomantia (*bi-o-man'-she-ah*) [βιος, life; μαντεία, divination]. The pretended art of prophesying the length of a person's life, from observation of pulse-rate and other vital phenomena.

iometer. (See Illus. Dict.) 2. An instrument of the nature of a tuning-fork, invented by Dr. Collongues for the reproduction and increase of sounds of the body ordinarily perceived by auscultation.

iometrics (*bi-o-met'-riks*) [βιος, life; μέτρον, measure]. The science of the body-sounds perceived by auscultation.

ion (*bi'-on*) [βιοῦν, to live]. A definite physiologic individual element or organism. Cf. *Morphon* (Illus. Dict.).

ionomics (*bi-o-no'-miks*) [βιος, life; νόμος, law]. That branch of natural history which treats of the relations of organisms among themselves and to their environment.

iontic (*bi-on'-tik*) [βιῶν, to live]. Individual as opposed to phyletic.

ionuclein (*bi-o-nu'-kle-in*) [βιος, life; *nuclein*]. A term suggested by Sacharoff (1902) for the hypothetic substance composed of a combination of iron and nuclein which exists in all enzymes, holding that all vital processes depend upon decomposition of living substance set up by them.

iophagism, Biophagy (*bi-of'-aj-ism, bi-of'-aj-e*) [βιος, life; φαγεῖν, to eat]. The capacity of absorbing living matter.

iophilia (*bi-o-fil'-e-ah*) [βιος, life; φιλεῖν, to love]. The instinct for self-preservation.

iophthorous (*bi-of'-thor-us*) [βιος, life; φθορά, destruction]. Ruinous to life.

iophytum (*bi-of'-it-um*) [βιος, life; φύτον, plant]. A genus of plants of the order *Geraniaceæ.* **B. sensitivum,** D. C., a native of the East Indies, where the root is used in inflammations, in gonorrhea, and in pulmonary affections.

iopsy, Biopsia. (See Illus. Dict.) 2. A name coined by Besnier for the excision during life of an eruptive lesion or fragment of a new-growth to establish the diagnostic histology of a malady.

Bios (*bi'-os*) [βιος, life]. The term applied by the father of natural history, Aristotle, "to the whole world of living" as opposed to the lifeless forms, the *abion.*

Biosophia (*bi-o-so'-fe-ah*). Troxler's name for bionomy.

Biostatistics (*bi-o-stat-is'-tiks*) [βιος, life; *status*, a state]. Vital statistics.

Biotics (*bi-ot'-iks*) [βιοτικός, vital]. The science of vital functions and manifestations.

Bioxalate (*bi-oks'-al-āt*). See *Binoxalate.*

Bipalatinoid (*bi-pal-at'-in-oid*). A gelatin capsule with two compartments.

Bipartition (*bi-part-ish'-on*) [*bis*, twice; *pars*, part]. Separation into two parts.

Biphorous (*bi'-for-us*). See *Biforate* (Illus. Dict.).

Biplumbic (*bi-plum'-bik*) [*bis*, twice; *plumbum*, lead]. Containing two atoms of lead.

Bipocillated (*bi-pok'-il-a-ted*) [*bis*, twice; *pocillum*, a little cup]. Having two cup-like appendages.

Bipolarity (*bi-po-lar'-it-e*) [*bis*, twice; *polus*, a pole]. The condition of having two processes from opposite poles, as a nerve-cell; or of having different electric properties existing at the two poles.

Bipotassic (*bi-po-tas'-ik*). Having two atoms of potassium.

Bipunctate (*bi-punk'-tāt*) [*bis*, twice; *punctum*, a point]. Having two dots or points.

Bipupillate (*bi-pu'-pil-āt*) [*bis*, twice; *pupilla*, pupil of the eye]. Marked with spots which contain two pupil-like dots.

Biramose, Biramous (*bi-ram'-ōz, -us*) [*bis*, twice; *ramus*, a branch]. Having two branches.

Birdpox (*burd'-poks*). A blastomycetic dermatitis of birds. Syn., *Geflügelpocken; Taubenpocken; Pocken der Tauben* (Ger.).

Birefractive (*bi-re-frak'-tiv*) [*bis*, twice; *refrangere*, to break]. Doubly refractive.

Birefringent (*bi-re-frin'-jent*) [*bis*, twice; *refringere*, to break back]. Doubly refractive; anisotropic.

Birimose (*bi-ri'-mōz*) [*bis*, twice; *rima*, a cleft]. Having two clefts or slits.

Birth. (See Illus. Dict.) **B., Cross-.** See *Presentation, Transverse* (Illus. Dict.). **B., Virgin-.** See *Parthenogenesis* (Illus. Dict.).

Bi-salt (*bi'-salt*). See *Salt, Acid* (Illus. Dict.).

Bische (*bish*) [East Indian name]. Endemic dysentery.

Biseptate (*bi-sep'-tāt*) [*bis*, twice; *septum*, a hedge]. Having two septums.

Bisferious (*bis-fe'-re-us*) [*bis*, twice; *ferire*, to strike]. Having two beats; dicrotic.

Bisilicate (*bi-sil'-ik-āt*). A silicate having twice the amount of silicic acid that a normal silicate has.

Bismal (*bis'-mal*). See *Bismuth Methylenedigallate.*

Bismutal, Bismuthol (*bis'-mu-tal, -thol*). See *Bismuth and Sodium Phosphosalicylate.*

Bismuth. (See Illus. Dict.) **B. Acetate,** $Bi(C_2H_3O_2)_3$, a white powder soluble in acetic acid. It loses acetic acid when exposed. **B. Albuminate,** a light gray or white powder containing 9% of bismuth; it is used in stomachic or intestinal cramp. Dose, 5–15 gr. (0.32–0.97 gm.) 3 or 4 times daily. **B. Alginoid,** a compound of bismuth nitrate and sodium alginate; a yellow powder containing 32% of metallic bismuth. **B. Arsenate,** $Bi_4(As_2O_7)_3$, a white substance insoluble in water. **B. Benzoate,** $Bi(C_7H_5O_2)_3$, a white, tasteless powder containing 27% of benzoic acid, soluble in mineral acids and insoluble in water. It is an internal and external antiseptic. Dose, 5–15 gr. (0.32–0.97 gm.). **B. Bilactomonotannate,** an odorless, tasteless, yellow powder, insoluble in water. It is used in diarrhea

of infants. Dose, 2–3 gm. (30–45 gr.). Syn., *Lactanin.* **B. Bismuthate,** $Bi_2O_5 + Bi_2O_3$, a grayish-white, heavy powder which is decomposed by acids. It loses oxygen by heat. **B. Borate,** $BiBo_3$, a white powder, used as an intestinal antiseptic. Dose, 5–40 gr. (0.32–2.6 gm.). **B. Borophenate,** $Bi_2O_3B(C_6H_5)(CO_3) + 3H_2O$. It is recommended as a surgical dressing used as a dusting-powder, or in burns or scalds applied as a paste (25% to 50% in glycerin) on lint. Syn., *Markasol.* **B. Borosalicylate,** an amorphous, grayish-white powder, which is decomposed by water. **B. Bromid,** $BiBr_3$, yellow deliquescent crystals or crystalline masses decomposing by water, soluble in ether. **B., Butter of.** See *B. Chlorid.* **B. Butyrate,** $Bi_2(C_{10}H_{14}O_4)_3$, a white powder. **B. Camphorate,** $Bi_2(C_{10}H_{14}O_4)_3$, a white powder. **B. Carbolate,** $Bi(OH)_2C_6H_5O$ (B. Fischer), a grayish-white powder, nearly odorless and tasteless, containing 80% of bismuth oxid and 18% to 19% of phenol. It is an intestinal antiseptic and is used externally as a substitute for iodoform. Dose, 5–15 gr. (0.32–0.97 gm.). Syn., *B. phenate; B. phenylate; Phenol bismuth.* **B. and Cerium Salicylate,** a white or pink powder used as an antirheumatic and intestinal antiseptic. Dose, 5–15 gr. (0.32–1.0 gm.). **B.-chinolin Rhodanate.** See *Quinolin-bismuth Sulfocyanid.* **B. Chlorid,** $BiCl_3$, very deliquescent white crystals, soluble in small quantities of water; melts at 227° C. Syn., *Butter of Bismuth.* **B. Chromate,** $Bi_2O_32CrO_3$, an orange-yellow amorphous powder. **B. Chrysophanate,** $Bi(C_{15}H_9O_4)_2Bi_2O_3$ (Trojescer), a yellow amorphous powder insoluble in ordinary solvents, but soluble in nitric or sulfuric acid; it is used as a siccative in psoriasis. Application: 5% to 20% ointment. Syn., *Dermol.* **B. Cinnamate,** $Bi(C_9H_7O_2)_3B_2O_3$. Syn., *Hetoform.* **B. Cresolate,** an odorless, tasteless, grayish-white powder insoluble in water and alcohol; it is an internal and external antiseptic. **B. Dithiosalicylate,** a bulky yellow powder without odor, used as a wound antiseptic, and in ophthalmic practice, in diseases of the nose and throat, and in dentistry. Syn., *Thioform.* **B.ethyl,** $Bi(C_2H_5)$, a bivalent radicle. **B., Flowers of,** the product of the sublimation of bismuth with water. **B. Hydrate, B. Hydroxid,** $Bi(OH)_3$, a white amorphous powder soluble in acids. **B. Iodate,** $Bi(IO_3)_3$, a heavy white powder slightly soluble in nitric acid. **B. Iodid,** BiI_3, grayish-black shining crystals soluble in potassium iodid solution. **B. Iodosubgallate,** $C_6H_2(OH)_4COOBiI$, a grayish-green, bulky powder without odor and taste, changing to red when damp; it is soluble in alkali and dilute mineral acids, insoluble in water, alcohol, ether, and chloroform. It is an antiseptic and used as a dusting-powder on wounds. Syn., *Airol; B. oxyiodogallate.* **B. Isovalerate.** See *B. Valerianate.* **B. Lactate,** $BiH(C_3H_4O_3)_2$, a white crystalline powder, slightly soluble in water; used as an internal and external antiseptic. Dose, 5–15 gr. (0.32–0.97 gm.). **B. Lactophosphate,** white microcrystalline powder very slightly soluble in water. **B. Lactotannate.** See *B. Bilactomonotannate.* **B. Loretinate,** a combination of bismuth and loretin, used as a surgical and intestinal antiseptic, and also in ophthalmology. Dose, 7½ gr. (0.5 gm.). **B., Magistery of.** See *B. Subnitrate* (Illus. Dict.). **B. Metacresol,** an intestinal antiseptic consisting of a combination of 75% of bismuth with 17.5% of metacresol. **B. Methylenedigallate,** $4C_{15}H_{12}O_{10} + 3Bi(OH)_3$, a gray-blue bulky powder soluble in alkali and insoluble in water. It is used as an internal astringent. Dose, 0.1–0.3 gm. every three hours. Syn., *Bismal.* **B.-naphthalin Benzoate,** an intestinal antiseptic. Dose, 0.5–1.0 gm. Syn., *Intestin.* **B. Naphthoglycerite,** a remedy for gonorrhea. **B. β-Naphtholate,** $2Bi(C_{10}H_7O)_3 + Bi_2O_3$ (Thomas), a light brown, odorless, insoluble powder containing 80% bismuth trioxid. It is an intestinal antiseptic. Dose, 15–30 gr. (0.97–1.94 gm.). Syn., *Orphol; B. naphtholate; Naphtol bismuth.* **B. Nitrate,** $Bi(NO_3)_3 + 5H_2O$, clear, shining, hygroscopic crystals, without color and with an acid taste, soluble in acids and glycerin; it is used as an astringent and antiseptic. Dose, 5–10 gr. (0.32–0.65 gm.). **B. Oleate,** a mixture of bismuth oxid and oleic acid, forming a yellowish-brown, soft, granular mass soluble in ether. **B. Oleopalmitate,** a compound of oleic and palmitic acids with a bismuth salt. **B. Oxalate,** $Bi_4(C_2O_4)_6 + 15H_2O$, a white granular powder. **B. Oxybromid,** BiOBr, a yellowish-white powder insoluble in ordinary media. It is recommended in the treatment of nervous dyspepsia and hysteria accompanied by gastric pains and vomiting. Dose, 0.3–0.4 gm. several times daily. **B., Oxycarbonate of.** See *B. Subcarbonate* (Illus. Dict.). **B. Oxyiodid.** See *B. Subiodid* (Illus. Dict.). **B. Oxyiodogallate.** See *B. Iodosubgallate.* **B. Oxyiodomethylgallol,** $C_6H_2COOCH_3(OH)_2O$. BiOH. I, a dark gray powder containing 23.6% of iodin and 38.4% of bismuth, used as a surgical antiseptic. Syn., *Iodogallicin.* **B. Oxyiodopyrogallate, B. Oxyiodopyrogallol,** a combination of bismuth oxyiodid with pyrogallol; it is an amorphous yellowish-red powder, permanent in air and light and insoluble in the usual solvents. It is recommended as a surgical antiseptic. **B. Oxyiodotannate,** a fine, odorless, tasteless, greenish-gray powder, used as a wound antiseptic. Syn., *Ibit.* **B., Pancreatinized,** a yellowish-white powder said to contain 10% of bismuth trioxid, used in dyspepsia. Dose, 15–75 gr. (1–5 gm.). **B. Pentoxid,** Bi_2O_5, an unstable brown powder. Syn., *Bismuthic oxid; Bismuthic anhydrid.* **B., Peptonized, B. Peptonate,** a greenish-yellow, soluble bismuth compound, used in dyspepsia and gastralgia. Dose, 1–5 gm. Syn., *Bismuthated peptone.* **B. Permanganate,** $Bi.Mn(O_4)_3$, a black, bulky powder soluble in dilute acids. It is used as a dry dusting-powder for wounds and ulcers. **B. Peroxid.** See *B. Bismuthate.* **B. Phenate, B. Phenylate.** See *B. Carbolate.* **B., Phenol-,** a compound of bismuth, 27.5% with phenol, 22%; it is used as an intestinal antiseptic. **B. Phosphate,** $BiPO_4$, a white powder obtained by fusing together bismuth oxid, sodium hydrate, and phosphoric acid, and pulverizing the resultant mass; it is an intestinal disinfectant. Dose, 3–8 gr. (0.2–0.5 gm.). **B. and Potassium Tartrate,** $BiKC_4H_4O_6$, a white powder soluble in water. **B. Propionate,** $Bi(C_3H_5O_2)_3$ (?), a white amorphous powder. **B. Pyroarsenate.** See *B. Arsenate.* **B. Pyrogallate,** $(C_6H_3[OH_2]O)_3BIOH$, a yellow, tasteless, odorless powder, insoluble in water and alcohol, slightly soluble in very dilute hydrochloric acid. It is an antiseptic, used internally in doses of 5–15 gr. (0.32–0.97 gm.). Applied for skin-diseases in 10% to 20% ointment or dusting powder. Syn., *Helcosol.* **B.-quinolin Sulfocyanid.** See *Quinolin-bismuth.* **B. Resorcinate,** a yellowish-brown powder containing about 4% of bismuth trioxid. It is used in catarrh of the stomach. **B. Salicylate,** $(C_7H_6O_3)_3Bi_2O_3$, a salt obtained by Thibault from bismuth oxid, instead of the hydroxid as is customary. It is a crystalline, grayish-red powder slowly decomposed by cold water, and more rapidly by hot water. It is used as an external and internal antiseptic. Dose, 5–15 gr. (0.32–0.97 gm.). **B. and Sodium Benzoate,** a white powder used as an intestinal antiseptic. **B. and Sodium Iodid,** BiI_3

4NaI, red crystals decomposed by water, soluble in dilute acids. It is alterative and antiseptic. **B. and Sodium Phosphosalicylate,** a white, odorless, crystalline powder used as an external antiseptic and astringent in 1% to 4% solution or in 10% to 30% ointment or dusting-powder. Syn., *Bismutal; Bismuthol.* **B. and Sodium Salicylate,** a white powder used as an intestinal disinfectant and in rheumatism. **B. Subbenzoate,** basic benzoate of bismuth; a white powder used as a wound antiseptic. **B. Subbromid.** See *B. Oxybromid.* **B. Sulfate,** $Bi_2(SO_4)_3$, an amorphous white powder decomposed by water, soluble in nitric acid. **B. Sulfid,** Bi_2S_3, blackish-brown powder, soluble in nitric acid and in boiling, concentrated hydrochloric acid. **B. Sulfite,** a combination of sodium sulfite and bismuth trinitrate. It is an intestinal antiseptic. Dose, 5–40 gr. (0.32–2.6 gm.). **B. Sulfocacodylate.** See *B. Thiocacodylate.* **B. Sulfocarbolate, B. Sulfophenate, B. Sulfophenylate,** a pale reddish powder partly soluble in water, used as a general intestinal disinfectant. Dose, 0.2–0.5 gm. (3½–8 gr.) 3 or 4 times daily. **B. Sulfuret.** See *B. Sulfid.* **B. Tannate,** a yellow powder used as an intestinal antiseptic. Dose, 10–30 gr. (0.65–1.94 gm.). **B. Tartrate,** $Bi_2(C_4H_4O_6)_3 + 6H_2O$, a white powder. **B. Ternitrate, B. Trinitrate.** See *B. Nitrate.* **B. Tetroxid,** an oxidation-product of bismuth trioxid, Bi_2O_4, a heavy yellow-brown powder; sp. gr. 5.6. **B. Thiocacodylate,** $(As[CH_3]_2)_3S_6Bi$, golden-yellow flakes, insoluble in water, slightly soluble in alcohol and ether. **B. Tribromid.** See *B. Bromid.* **B. Tribromocarbolate, B. Tribromophenate,** $Bi_2O_3(C_6H_2Br_3OH)$ (B. Fischer), a yellow, odorless, tasteless, insoluble powder containing about 60% of Bi_2O_3. It is used as an antiseptic in cholera and intestinal disorders. Dose, 8–15 gr. (0.52–0.97 gm.). Maximum dose per day, 90 gr. (5.85 gm.). Syn., *Xeroform.* **B. Trichlorid.** See *B. Chlorid.* **B. Trihydrate, B. Trihydroxid.** Same as *B. Hydrate.* **B. Trinitrate.** See *B. Nitrate.* **B. Trioxid,** Bi_2O_3, a heavy, yellow powder, soluble in acids. It is incompatible with alkalis and water in excess. It is antiseptic and astringent. Dose, 5–40 gr. (0.32–2.6 gm.). Syn., *Bismuthous oxid.* **B. Tungstate, B. Wolframite,** a white powder easily undergoing decomposition. **B. Valerate, B. Valerianate,** a white powder with the odor of valerianic acid, soluble in dilute hydrochloric or nitric acid, insoluble in water or alcohol; it is used as a sedative and antispasmodic in neuralgia, chorea, epilepsy, etc. Dose, 1–3 gr. (0.065–0.149 gm.).

Bismuthal (*biz-mu'-thal*). Containing bismuth.

Bismuthate (*biz-mu'-thāt*). A salt of bismuthic acid.

Bismuthic (*biz-mu'-thik*). Relating to bismuth; containing bismuth in its higher valency.

Bismuthosis (*biz-muth-ō'-sis*). The absorption of bismuth into the system.

Bismuthous (*biz-mu'-thus*). Containing bismuth as a trivalent radicle.

Bismuthyl (*biz-mu'-thil*). BiO. A univalent radicle. **B. Bromid.** See *Bismuth Oxybromid.* **B. Chlorid.** See *Bismuth Oxychlorid* (Illus. Dict.). **B. Iodid.** See *Bismuth Oxyiodid.*

Bismutose (*biz'-mu-tōz*). A bismuth and albumin compound, equivalent in action to bismuth subnitrate. Useful in gastrointestinal affections of infectious character. For children under 6 months the dose is 1–2 gm. (16–30 gr.); for those over 6 months it may be given in 1-dram doses.

Bisol (*bī'-sol*). Soluble bismuth phosphate containing about 20% of bismuth oxid. It is used in gastralgia. Dose, 3–7½ gr.

Bispep (*bis'-pep*). A proprietary preparation containing bismuth, pepsin, ammonium carbonate, and aromatics.

Bissection (*bis-sek'-shun*). See *Bisection* (Illus. Dict.).

Bistearate (*bi-ste'-ar-āt*). A stearate containing twice as much of the stearic-acid constituent as is contained in normal stearate.

Bistratal (*bi-stra'-tal*) (*bis*, twice; *stratum*, layer]. Arranged in two layers.

Bistriate (*bi-stri'-āt*) [*bis*, twice; *stria*, a furrow]. Marked with two lines or streaks.

Bisuccinamid (*bi-suk-sin'-am-id*). $C_8H_5O_4N$. A crystalline substance obtained from succinic acid by action of ammonia.

Bisulfuret (*bi-sul'-fu-ret*). See *Bisulphid* (Illus. Dict.).

Bite (*bīt*) [AS., *bitan*]. 1. The corrosion of a substance with an acid. 2. The more or less perfect coaptation of the upper and lower teeth. *Open bite,* that in which the upper and lower incisors do not close together. *Underhung bite,* that in which the upper incisors overreach the lower.

Bitonal (*bi-tō'-nal*) [*bis*, twice; *tonus*, a tone]. Double-toned.

Bitterin (*bit-ur'-in*). See *Quassin* (Illus. Dict.).

Bituberculate (*bi-tu-ber'-ku-lāt*) [*bis*, twice, *tuberculum*, a tubercle]. Furnished with two tubercles.

Bituminization (*bi-tu-min-iz-ā'-shun*). A conversion into bitumen.

Biurate (*bi-u'-rāt*). An acid urate; a urate containing twice as much of the uric-acid constituent as an ordinary urate.

Bivanadate (*bi-van'-ad-āt*). A vanadate containing twice as much vanadic acid as a normal vanadate.

Biventer. (See Illus. Dict.) 2. A digastric muscle.

Bivittate (*bi-vit'-āt*) [*bis*, twice; *vitta*, a fillet]. Marked by two longitudinal stripes.

Bivoltine (*bi-volt'-in*) [*bis*, twice; *volta*, a turn]. Bringing forth offspring twice in the year.

Bixa (*biks'-ah*) [*bichē*, Brazilian name]. A genus of plants of the order *Bixaceæ.* **B. orellana,** L., the annotto-tree, a native of South America and now dispersed throughout the tropics, furnishing from the pulp surrounding the seeds the annotto of commerce. The pulp is used as a remedy for dysentery and the seeds are said to be astringent and antipyretic.

Bizincic (*bi-zink'-ik*). Containing two atoms of zinc.

Bizirconic (*bi-zir-kon'-ik*). Containing two atoms of zirconium.

Black. (See Illus. Dict.) **B. Assizes,** that held at Oxford, July 6, 1577, when a putrid pestilence broke out. **B.bain** [OE.]. Synonym of *Anthrax.* **B. Precipitate.** See *Mercury Oxid, Black.* **B.water,** 1. Synonym of *Texas fever.* 2. See *Azoturia.*

Bladder. (See Illus. Dict.) 2. The sacculated connective tissue under the eyes, seen in old persons and in cretinoid affections. **B., Bilobed, B., Bilocular,** a sacculated bladder having two pouches. **B., Brain-,** the cerebral vesicle. **B., Columnar, B., Columniform.** See *B., Fasciculated* (Illus. Dict.). **B., Encysted,** a urinary bladder with communicating cysts connected with it. **B., Eye-,** the optic vesicle. **B., Gall-.** See *Gall-bladder* (Illus. Dict.). **B.-gastrula.** See *Perigastrula* (Illus. Dict.). **B.-germ.** See *Blastula* (Illus. Dict.). **B., Multilocular,** a sacculated bladder having many pouches. **B., Stammering,** Sir James Paget's name for that condition observed in young males who are unable to micturate when under observation or surrounded by unusual conditions or objects. It is due to spasm of the compressor urethræ muscle. **B., Stammering, False,** a condition in which there is some mechanical or patho-

logic interference with urination. **B., Sterile,** a hydatid cyst without secondary cysts, heads, or broad capsules. **B., Supplementary,** a diverticulum caused by sacculation of the urinary bladder. Syn., *Paruro-cystis.*

Blanchinin (*blank'-in-in*). See *Aricin* (Illus. Dict.).

Blaps. See *Table of Parasites* (Illus. Dict.). **B. polycresta,** Forskal, an Egyptian species used as an article of food and as a remedy for earache and scorpion-bites.

Blast (*blast*) [AS., *bloest*]. 1. See *Exotospore.* 2. See *Blight.* 3. Inflammation. 4. A disease of sheep.

Blastema. (See Illus. Dict.) 2. An undifferentiated protoplasmic layer in certain eggs or embryos. **B., Ossific, B., Ossifying, B., Subperiosteal.** See *Osteogenetic Layer* (Illus. Dict.). **B. pili,** a hair papilla.

Blasticle (*blast'-tik-l*). The vitelline nucleus.

Blastidium (*blas-tid'-e-um*) [βλαστός, a bud]. An endospore or cell of endogenous origin.

Blastidule (*blast'-tid-ūl*) [βλαστός, a bud]. A conidium or other asexual body. [McNab.]

Blastocelis (*blas-to-se'-lis*) [βλαστός, a germ; κηλίς, a spot]. Wagner's name for the germinal spot.

Blastocystinx (*blas-to-sist'-inks*) [βλαστός, germ; κύστιγξ, a little bladder]. The germinal vesicle; blastocyst.

Blastoderm. (See Illus. Dict.) Syn., *Blastodermic membrane; Germ membrane; Germinal membrane.* **B., Bilaminar,** the blastoderm when it consists only of the ectoderm and the entoderm. **B., Discoid.** See *Discogastrula* (Illus. Dict.). **B., Trilaminar,** the blastoderm after the formation of the mesoblast.

Blastogenesis. (See Illus. Dict.) 2. Reproduction by buds.

Blastoma. (See Illus. Dict.) 2. One of a peculiar group of true tumors which originate from embryonic cell-rests; *e. g., chondromas, gliomas,* etc. Syn., *Enblastoma.*

Blastomyces (*blast-o-mi'-sēz*) [βλαστός, a bud; μύκης, a fungus]. A genus of budding fungi (*Blastomycetes*) usually referred to *Torula* or *Saccharomycetes.* **B. dermatidis** (Gilchrist, 1894), a yeast-like organism producing a scrofuloderma in man. See *Dermatitis, Blastomycetic.*

Blastomycetes (*blas-to-mi-se'-tēz*) [βλαστός, a bud; μύκης, a fungus]. Single-celled thallophytes destitute of chlorophyl, which reproduce by yeast-like buds or by endogenous cell-formation. By some authors used as synonymous with *Saccharomycetes.*

Blastomycetic (*blast-o-mi-se'-tik*). Pertaining to or caused by budding fungi (*Blastomycetes*). **B. Dermatitis.** See under *Dermatitis.*

Blastomycosis (*blas-to-mi-ko'-sis*). An affection due to budding-fungi (*Blastomycetes*). Cf. *Blastomyces; Saccharomyces; Torula.*

Blastoprolepsis (*blast-o-pro-lep'-sis*) [βλαστός, a germ; πρόληψις, an anticipating]. Hastening of development.

Blastostroma (*blast-o-stro'-mah*) [βλαστός, a germ; στρῶμα, anything spread out]. See *Embryonic Area* (Illus. Dict.).

Blastous (*blast'-us*). Relating to a blastema.

Blastzellen [Ger.]. Primitive cells from which are developed all other kinds of cells. They are seen in the embryo before any beginning of differentiation and are characterized by their large size, richness in cytoplasm, and large nuclei.

Blatta. (See Illus. Dict.) 2. A clot of blood. **Tinctura Blattarum Orientalium,** used in whooping-cough. Dose, 1–2 drops in water at intervals of 2 hours.

Bleeders. (See Illus. Dict.) 2. Physicians given to bloodletting; also professional bloodletters.

Blenmetrorrhea (*blen-met-ror-e'-ah*). See *Metroblennorrhea* (Illus. Dict.).

Blennisthmia (*blen-isth'-me-ah*) [βλέννα, mucus; ἰσθμια, a throat]. Pharyngeal catarrh.

Blennocele (*blen'-o-sēl*) [βλέννα, mucus; κήλη, a tumor]. Gonorrheal epididymitis.

Blennochesia, Blennochezia (*blen-o-ke'-se-ah*) [βλέννα, mucus; χέσειν, to want to go to stool]. See *Blennenteria* (Illus. Dict.).

Blennocystitis (*blen-o-sist-i'-tis*) [βλέννα, mucus; κύστις, bladder]. Catarrh of the urinary bladder.

Blennometrorrhea, Blennometrorrhœa (*blen-o-met-ror-e'-ah*). See *Metroblennorrhea* (Illus. Dict.).

Blennophlogisma, Blennophlogosis (*blen-o-flo-j-mah, blen-o-flo-go'-sis*) [βλέννα, mucus; φλόγωσις, inflammation]. Inflammation of a mucosa.

Blennorrhagia. (See Illus. Dict.) **B. analis.** See *Proctorrhea* (Illus. Dict.). **B. arthritica,** a disease similar to gonorrhea, but attributed to gout. **B. balani.** See *Balanitis* (Illus. Dict.). **B. balanopreputial,** gonorrheal balanoposthitis. **B., False. B. notha.** See *Balanitis* (Illus. Dict.). **B. ocularis** See *Ophthalmia, Gonorrheal* (Illus. Dict.). **B. Partial,** gonorrhea affecting only a part of the urethra. **B., Pulmonary, B. pulmonum.** See *Bronchorrhea* (Illus. Dict.). **B. rheumatica,** that attributed to rheumatism. **B. sanguinea,** gonorrhea with blood discharge. **B. scorbutica,** that attributed to scurvy. **B. spuria.** See *Balanitis* (Illus. Dict.). **B. syphilitica,** gonorrhea combined with chancre. **B. urethralis,** gonorrhea confined to the urethra. **B. urethrovaginal,** gonorrhea affecting both the urethra and the vagina.

Blennorrhea, Blennorrhœa. (See Illus. Dict.) **B., Alveolar,** a chronic affection of the alveolodental periosteum resulting in hyperplasia and suppurative degeneration and the loss of the teeth. **B., Chronic.** See *Gleet* (Illus. Dict.). **B. ciliaris,** inflammation of the eyelids and glands opening on the ciliary margin. **B. conjunctivæ,** inflammation of the conjunctiva with formation of pus. **B. infantum.** See *Ophthalmia neonatorum* (Illus. Dict.). **B. intestini recti** See *Proctorrhea* (Illus. Dict.). **B. nasalis.** coryza. **B. neonatorum.** See *Ophthalmia neonatorum* (Illus. Dict.). **B. oculi,** purulent ophthalmia. **B. oculi gonorrhoica,** gonorrheal ophthalmia. **B. oculi neonatorum, B. purulenta infantum.** See *Ophthalmia neonatorum* (Illus. Dict.). **B., Stoerk's,** profuse chronic suppuration and consequent hypertrophy of the mucosa of the nose, pharynx, and larynx. **B. torpida, B. urethralis, B. venerea.** See *Gleet* (Illus. Dict.). **B. urinalis,** vesical catarrh; cystirrhea. **B., Venereal.** See *Gleet* (Illus. Dict.). **B. ventriculi.** See *Blennemesis* (Illus. Dict.). **B. vesicæ,** vesical catarrh.

Blennorrhoic (*blen-or-o'-ik*). See *Blennorrheal* (Illus. Dict.).

Blennostasin (*blen-o-sta'-sin*). The proprietary name for a yellow solid body said to be cinchonidin hydrobromid, $C_{19}H_{22}N_2O(HBr)_2$, a nontoxic vasomotor constrictor and blennostatic. It is used in influenza, colds, night-sweats, etc. Dose, 1–4 gm. (15–60 gr.) hourly.

Blennostatic. (See Illus. Dict.) 2. An agent capable of suppressing mucous discharges.

Blennostrumous (*blen-o-stru'-mus*). Relating to gonorrhea and to scrofula.

Blennurethria (*blen-u-re'-thre-ah*) [βλέννα, mucus; οὐρήθρα, the urethra]. Urethral gonorrhea.

Blennymenerysipelas (*blen-e-men-er-e-sip'-e-*

μύξα, mucus; *ὑμήν*, membrane; *erysipelas*]. Erysipelas attacking a mucosa.

Blepharadenitis. (See Illus. Dict.) **B. tarsalis.** See *Hordeolum* (Illus. Dict.).

Blepharhelosis (*blef-ar-hel-o′-sis*). See *Entropion* (Illus. Dict.).

Blepharides (*blef-ar′-id-ēz*). Plural of *Blepharis* (Illus. Dict.).

Blepharis. (See Illus. Dict.) **2.** A genus of plants of the order *Acanthaceæ*. **B. capensis,** a species of South Africa; used in blood-poisoning from anthrax and in treatment of snake-bites. Dose, 3–4 fld. oz. of 1 : 100 decoction.

Blepharitis. (See Illus. Dict.) **B. angularis.** See *B. intermarginalis.* **B. erysipelatosa,** erysipelas attacking the eyelids. **B. gangrænosa,** carbuncle of the eyelids. **B. glandularis, B. glandulosa,** inflammation of the meibomian glands. **B. intermarginalis,** irritation of the intermarginal part of the lids due to prolonged lacrimation and secretion of conjunctival inflammation. **B. interna,** palpebral conjunctivitis. **B. lymphatica.** See *B. simplex.* **B. pediculosa.** See *Phthiriasis ciliorum.* **B. phlegmonosa,** inflammation of the cellular tissue of the eyelid. **B. scrofulosa.** See *B. simplex.* **B. simplex,** mild inflammation of the borders of the eyelids with formation of moist yellow crusts on the ciliary margins, gluing together the eyelids. **B. squamosa,** that attended with the formation of scabs. **B. variolosa,** inflammation of the skin and subcutaneous tissue of the eyelids accompanying variola.

Blepharoblennorrhea, Blepharoblennorrhœa (*blef-ar-o-blen-or-ē′-ah*). See *Ophthalmia, Purulent* (Illus. Dict.). **B. gonorrhoica, B. maligna,** gonorrheal ophthalmia. **B. neonatorum,** ophthalmia neonatorum. **B. urithritica,** gonorrheal ophthalmia.

Blepharocarcinoma (*blef-ar-o-kar-sin-o′-mah*) [*blepharon; carcinoma*]. Carcinoma affecting the eyelid.

Blepharocatochus (*blef-ar-o-kat-o′-chus*) [*βλέφαρον*, the eyelid; *κάτοχος*, holding fast]. See *Blepharostat* (Illus. Dict.).

Blepharochalasis (*blef-ar-o-kal-a′-sis*) [*βλέφαρον*, the eyelid; *χάλασις*, a slackening]. A method of treating trachoma, consisting in excision of oval slices from the upper and lower palpebral conjunctiva with incision at the outer canthus.

Blepharoclonus (*blef-ar-o-klo′-nus*) [*βλέφαρον*, the eyelid; *κλόνος*, commotion]. Spasm of the orbicularis palpebrarum muscle.

Blepharocoloboma (*blef-ar-o-kol-o-bo′-mah*). See *Coloboma palpebræ.*

Blepharoconjunctivitis (*blef-ar-o-kon-junk-tiv-ī′-tis*). See *Conjunctivitis, Palpebral.*

Blepharoemphysema. See *Blepharemphysema* (Illus. Dict.).

Blepharohematidrosis (*blef-ar-o-hem-at-id-ro′-sis*) [*βλέφαρον*, the eyelid; *αἷμα*, blood; *ἱδρῶν*, to sweat]. The rare occurrence of sweating blood from the skin of the eyelid.

Blepharohyperidrosis (*blef-ar-o-hi-pur-id-ro′-sis*) [*βλέφαρον*, the eyelid; *ὑπέρ*, over; *ἱδρώς*, sweat]. Hyperhidrosis affecting the eyelid.

Blepharomelasma (*blef-ar-o-mel-az′-mah*) [*βλέφαρον*, eyelid; *μέλας*, black]. Seborrhœa nigricans occurring on the eyelid.

Blepharomelena (*blef-ar-o-mel-ē′-nah*). See *Blepharomelasma.*

Blepharoncosis (*blef-ar-ong-ko′-sis*) [*βλέφαρον*, the eyelid; *ὄγκος*, an enlargement]. The formation of a blepharoncus, or the condition of suffering due to such growth.

Blepharonysis (*blef-ar-on-is′-is*) [*βλέφαρον*, the eyelid; *νύσσειν*, to prick]. Operation for entropion by means of Gaillard's suture.

Blepharophlegmasia (*blef-ar-o-fleg-ma′-ze-ah*). See *Blepharitis* (Illus. Dict.).

Blepharophthalmia (*blef-ar-of-thal′-me-ah*) [*βλέφαρον*, eyelid; *ὀφθαλμός*, eye]. Combined palpebral and ocular conjunctivitis.

Blepharophthalmic (*blef-ar-of-thal′-mik*). Relating to the eyelids and the globe of the eye, or to blepharophthalmia.

Blepharophthalmostat (*blef-ar-of-thal′-mo-stat*) [*βλέφαρον*, the eyelid; *ὀφθαλμός*, the eye; *στατικός*, causing to stand]. An appliance for holding the eyeball and the lids immovable.

Blepharoplast (*blef′-ar-o-plast*) [*βλεφαρίς*, a cilium or eyelash; *πλάσσειν*, to form]. An individualized centrosome.

Blepharorrhaphy. (See Illus. Dict.) **B., Median.** See *v. Arlt's Tarsorrhaphy*, in *Operations, Table of.*

Blepharosphincterectomy (*blef-ar-o-sfink-tur-ek′-to-me*) [*βλέφαρον*, the eyelid; *σφιγκτήρ*, sphincter; *ἐκτομή*, incision]. An operation to lessen the pressure of the upper lid upon the cornea; it consists in making an incision the entire length of the lid about 2 mm. above the lid border; by a second incision a small oval flap of skin, 2–4 mm. broad, is removed along with all the underlying muscle-fibers. The wound is closed with two or three sutures. [M. E. Mulder.]

Blepharosymphysis (*blef-ar-o-sim′-fiz-is*). See *Blepharosynechia* (Illus. Dict.).

Blepharosyndesmitis (*blef-ar-o-sin-des-mī′-tis*) [*βλέφαρον*, the eyelid; *σύνδεσμος*, a bond]. See *Conjunctivitis, Palpebral.*

Blepharydatis (*blef-ar-id′-it-is*) [*βλέφαρον*, the eyelid; *ὑδατίς*, a vesicle]. A hydatid affecting the eyelid.

Bletting (*blet′-ing*). A transformation of vegetable tissue and the assumption of a brown color without putrefaction.

Blight. (See Illus. Dict.) **2.** A fungus-disease of plants. The term was first applied by J. Burrill to a disease of apple-trees and pear-trees which he ascribed to a bacterium. **B., Sandy,** a form of ophthalmia attended with photophobia and a sensation of grittiness due to the formation of pus in the openings of the meibomian glands.

Blighted (*blīt′-ted*). Withered, blasted; affected with blight.

Blindness. (See Illus. Dict.) **B., Blue,** acyanopsia; inability to recognize blue, bluish-green, or violet colors. **B., Bright's,** partial or complete loss of sight, which may be temporary, independent of any change in the optic disk or retina; it is seen in uremia. **B., Electric-light,** a condition similar to snow-blindness due to exposure of the eyes to intense and prolonged electric illumination. **B., Gold,** a form of retinal asthenopia at times affecting dentists, owing to which there is inability to distinguish the filling from the tooth. **B., Green,** inability to distinguish green or its complementary color, purplish-red. **B., Hen,** hemeralopia. **B., Intellectual, B., Mental,** inability to interpret visual impressions with correctness though sight is unimpaired. **B., Nervous.** See *Amaurosis* (Illus. Dict.). **B., Nocturnal,** hemeralopia. **B., Red, B., Red-green.** See *Anerythropsia* (Illus. Dict.). **B., Soul.** See *B., Psychic* (Illus. Dict.). **B., Transient,** temporary amblyopia. **B., Violet,** inability to distinguish purple from red and orange colors.

Block. (See Illus. Dict.) **2.** To obstruct the path of all sensory impressions in the nerve-trunks and roots in the spinal cord which connect the area of surgical operation with the sensorium.

Blocking (*blok′-ing*). F. Franck's term for the transi-

tory sensory paralysis of the entire peripheral distribution of a nerve by the infiltration of the sectional area of a nerve-trunk in any part of its course with cocain or a similar analgesic.

Blood. (See Illus. Dict.) 2. In veterinary practice, to bleed. **B., Acid.** See *Uricacidemia* (Illus. Dict.). **B.-boil.** See *Hematoma* (Illus. Dict.). **B.-cell,** a blood-corpuscle. **B., Chylous.** See *Lipemia* (Illus. Dict.). **B.-clot,** a coagulum. **B.-clyster,** an enema prepared from the blood of animals and employed in acute anemia. **B.-coagulation, Hammarsten's Theory of,** that paraglobulin takes no part in the process, there being only two factors, fibrinogen and fibrin-ferment. The action of the ferment splits the fibrinogen into fibrin, which is insoluble, and into fibrin-globulin, which remains in solution. [Raymond.] **B.-coagulation, Lilienfeld's Theory of,** this attributes to the nucleoproteid the power of splitting the fibrinogen into globulin and thrombosin, which latter unites with lime to form fibrin. [Raymond.] **B.-coagulation, Pekelharing's Theory of,** supposes that thrombin (the fibrin-ferment of Schmidt) is composed of nucleoalbumin and calcium and that the calcium leaves the nucleoproteid and unites with fibrinogen, the compound of the two being fibrin. The amount of lime being the same in fibrinogen as in fibrin, this theory cannot be sustained. [Raymond.] **B.-coagulation, Schmidt's Theory of,** the proteid now known as paraglobulin, termed by Schmidt fibrinoplastin; this substance, under the influence of fibrin-ferment, was held to enter into combination with fibrinogen, the result being fibrin. [Raymond.] **B.-count,** the estimation of the number of red corpuscles and leukocytes per cubic centimeter of blood. **B.-crasis,** the mixture of the constituents of the blood. **B.-cyst.** See *Hematoma* and *Hematocele* (Illus. Dict.). **B.-disc.** See *B.-platelet* (Illus. Dict.). **B.-dust.** Synonym of *Hemokoniæ.* **B., Hepatic,** that of the hepatic vein. **B., Inflammatory.** See *Buffy Coat* (Illus. Dict.). **B.-iron.** See *Hemoferrum.* **B., Lake-colored, B., Laky,** that in which the hemoglobin is free in the serum, the red corpuscles being dissolved. **B.-lancet,** a specially devised instrument for obtaining blood for examination. **B.-letter.** See *Bleeder* (2). **B.-motes.** See *Hemokonia.* **B.-murmurs.** See *Murmur, Hemic* (Illus. Dict.). **B.-pigments.** See *Hemoglobin; Hematin;* and *Hematocyanin* (Illus. Dict.). **B.-rain.** See *Bacillus prodigiosus,* in *Bacteria, Table of* (Illus. Dict.). **B.-spaces.** See *Lacunæ, Intervillous* (Illus. Dict.). **B.-stroke,** apoplexy. **B.-tube.** Same as *Blood-vessel.* **B.-vascular,** relating to or containing blood-vessels. **B.-vesicles,** the red blood-corpuscles. **B., White.** See *B.-plasma* (Illus. Dict.).

Bloodcorpuscles. (See Illus. Dict., under *Blood* and under *Corpuscles.*) **B., Colorless, B., Pale, B., White.** See *Leukocyte;* also *Corpuscles, White* (Illus. Dict.). **B., Granular,** bodies described by Erb in blood of mammals and supposed to be transitional blood-corpuscles.

Bloodletting. (See Illus. Dict.) Syn., *Blooding.* **B., Revulsive,** that performed for arresting internal hemorrhage. **B., Spoliative,** bleeding to reduce the number of blood-corpuscles.

Blotch. (See Illus. Dict.) **B., Milk-.** See *Achor* (Illus. Dict.).

Blown. (See Illus. Dict.) 2. Contaminated with a deposit of ova of flies.

Blue. (See Illus. Dict.) **B. Spot** (of the integument). See *Spot.*

Boak [Ar.]. Leprosy.

Board of Health. See under *Health.*

Boas Stool-sieve. See *Stool-sieve.*

Boasi. Surinam name for leprosy.

Boast [Angola name]. An ulceration occurring in e phantiasis.

Bocca-root (*bok'-ah-rūt*). See under *Tabernæm tana.*

Bocconia (*bok-o'-ne-ah*) [*S. Paul Bocconi,* an Itali botanist (1633–1704)]. A genus of plants of the der *Papaveraceæ.* **B. frutescens,** L., a native of West Indies; the juice is purgative and anthelmin

Bocyl (*bo'-sil*). A mouth-wash consisting of an alco solution of boric and cinnamic acids.

Bodik. A Malay liquor made from rice.

Body. (See Illus. Dict.) 3. A mass of matter. **Adenoid.** 1. The prostate. 2. A melanotic tun **B., Adrenal.** See *Capsule, Suprarenal* (Illus. D **B., Alloxur.** See under *Alloxur.* **B.s, Amylaceo B., Amyloid,** a term applied by Virchow (185 bodies found in the central nervous system of ad and young people dying of various diseases not a diseases of the nervous system). They are con trically striated, stain deep brown with Lugol tion, blue with iodin and sulfuric acid, and giv characteristic amyloid color with the anilin sta **B., Anococcygeal,** a mass of fibrous and mus tissues lying between the anus and tip of the co **B., Antiimmune,** a substance held by Ehrlich in lateral chain theory to enter into the composition antihemolysin (*q. v.*). Cf. *Anticomplement.* **Arantius'.** See *Corpora Arantii* (Illus. Dict. **Axile.** See *Corpuscle, Axile.* **B.s, Babes-Ern** bodies found in bacteria, especially those derived animal bodies or secretions; they are supposed condensations of the enchromatic substance bodies of bacteria. **B., Bence Jones',** peculiar consisting of albumose, found in the urine in affections of the bone-marrow, especially neo **B., Bigeminal.** See *Corpora quadrigemina* (Dict.). **B., Bigeminal, Anterior,** the anterior the quadrigeminal bodies. **B., Blackwell,** a form of sensory nerve termination in epidermal **B., Browne's,** a special variety of sensory ner mination in epidermal tissue. **B.s, Buchner's Am minoid,** defensive proteids (*q. v.*). **B., Callous** *Corpus callosum* (Illus. Dict.). **B.s, Catalyti** ferments. **B.-cavities.** See *Spaces, Int* (Illus. Dict.). **B.-cavity.** See *Celoma* (Illus. D **B.s, Central,** peculiar corpuscles, which are p nently present near the nucleus in protoplasm cell-division. **B., Central,** the nucleus. **B.s, matin,** bodies of various forms found in the ret of a cell undergoing mitosis. **B., Ciliary,** the muscle and processes. **B., Colostrum.** See *Corpuscles* (Illus. Dict.). **B., Coming down o** prolapse of the rectum. **B., Concentric.** See *Concentric Corpuscles of* (Illus. Dict.). **B., Cr line.** See *Lens, Crystalline* (Illus. Dict.). **B., ga tate,** the olive. **B.s, Direction or Directiv** minute abortive cells extruded by the egg-cell final phenomenon in the process of maturation bodies. **B., Embryoplastic.** See *Cells, Embry* **B., Falling of the,** prolapse of the rectum. **B.,** plastic. See *Cells, Embryoplastic.* **B., Fimbr** See *Corpus fimbriatum* (Illus. Dict.). **B., For** body which has gained entrance to the organ without and which is likely to be a source of **B.s, Fuchsin, B.s, Fuchsinophil.** See *Fuchsin* (Illus. Dict.). **B., Ganglionic,** nerv **B., Geniculate.** See *Corpora geniculata* and *late Bodies* (Illus. Dict.). **B., Geniculate, Ex** See *Pregeniculum* (Illus. Dict.). **B., Geni Inner.** See *Postgeniculum* (Illus. Dict.). **B., ulate, Internal.** See *Postgeniculum* (Illus.

B., Geniculate, Outer. See *Pregeniculum* (Illus. Dict.). **B.s, Guarnieri's Vaccine.** See *Cytoryctes*. **B.s, Hassall's.** See *Hassall's Corpuscles* (Illus. Dict.). **B., Highmore's.** See *Corpus highmorianum* (Illus. Dict.). **B., Hoggan,** a special variety of sensory nerve termination in epidermal tissues. **B., Hyaloid.** See *Vitreous Humor* (Illus. Dict.). **B., Immune,** a name given by Pfeiffer to one of the two substances of a hemolytic serum. It is thermostabile and has two affinities, a stronger one for the red blood-cell and a weaker one for the complement. Having two uniting processes, it is an amboceptor. **B., Innominate, of Giraldès.** See *Giraldensian Organ* (Illus. Dict.). **B., Intercarotic,** the aggregation of blood-vessels, nerves, and ganglia lying between the internal and external carotid arteries. **B., Intermediary, B., Intermediate.** See *B., Immune;* and *Amboceptor*. **B., Intravertebral,** the centrum of a vertebra. **B.s, Joint.** See *Arthrolith*. **B.s, Lallemand-Trousseau's,** gelatinous masses found in the secretions of the seminal vesicles. **B.s, Landolt's,** small, elongated, clavate bodies lying between the rods and cones and resting upon the outer nuclear layer of the retina. **B.s, Langerhans',** the centroacinous cells of the pancreas. **B., Laveran's.** See *Plasmodium malariæ* (Illus. Dict.). **B. of Luys.** See *Luys' Body* (Illus. Dict.). **B.s, Malpighi's.** See under *Malpighian* (Illus. Dict.). **B.s, Meissner's.** See *Corpuscles, Tactile, of Wagner* (Illus. Dict.). **B., Melon-seed.** See *Artholith*. **B.s, Metachromatic.** See *B.s, Babes-Ernst's*. **B., Muriform.** See *Morula* (Illus. Dict.). **B.s, Nissl's,** chromophil corpuscles. The chromophilic bodies of a nerve-cell; finely granular bodies, of various sizes and shapes, brought out between the cytoreticulum by staining with Nissl's stain (methylene-blue). Syn., *Tigroid masses*. **B., Oken's.** See *Mesonephros* (Illus. Dict.). **B.s, Olivary.** See under *Olive*. **B.s, Olivary, Accessory.** See *Olives, Accessory, External* and *Internal*. **B., Optostriate,** the thalamus and striate body taken as one. **B.s, Organic,** compounds of animal or vegetal origin. **B.s, Organized,** organisms. **B.s, Pacchionian.** See *Pacchionian B.s* (Illus. Dict.). **B.s, Pacinian.** See *Corpuscles, Pacinian* (Illus. Dict.). **B., Papillary,** the papillary layer of the skin. **B.s, Parenchymal,** the lobules of the lacrimal gland. **B., Perforate, Intermediate.** See *Space, Posterior Perforated* (Illus. Dict.). **B.s, Perles' Anemia.** See under *Perles'* (Illus. Dict.). **B., Pineal.** See *Epiphysis* (Illus. Dict.). **B., Pituitary.** See *Hypophysis* (Illus. Dict.). **B.s, Plimmer's,** intracellular bodies observed by Plimmer in cancerous tissue. **B.s, Polar.** See *Polar Globules* (Illus. Dict.). **B., Postpyramidal,** the posterior pyramid. **B., Prepyramidal,** the anterior pyramid. **B., Psalloid.** See *Lyra of the Fornix* (Illus. Dict.). **B., Pyramidal,** an eminence on the interposterior surface of the fibrocellular and adipose plantar cushion in the *Equidæ*. **B., Restiform.** See under *Restiform* (Illus. Dict.). **B., Rhomboid,** the fourth ventricle. **B., Rosenmüller's,** the parovarium. **B.s, Russell's.** See *Fuchsin Bodies* (Illus. Dict.). **B., Sand.** See *Corpora arenacea*. **B.-sarcode,** the protoplasm of the cell-body. **B., Semilunar.** See *Cell, Demilune* (Illus. Dict.). **B., Striated.** See *Corpus striatum* (Illus. Dict.). **B., Suprarenal.** See *Capsules, Suprarenal* (Illus. Dict.). **B., Thyroid,** the thyroid gland. **B.s, Touch-.** See *Corpuscles, Tactile* (Illus. Dict.). **B., Trapezoid.** See *Trapezium* (Illus. Dict.). **B.s, Turbinal, B.s, Turbinated,** the turbinal bones with their covering of vascular mucosa. **B.s, Vaccine.** See *Cytoryctes*. **B.s, Virchow-Hassall's.** See *Hassall's Corpuscles* (Illus. Dict.).

B., Vitreous. See *Vitreous Humor* (Illus. Dict.). **B.s, Winkler's,** spheric bodies observed in lesions of syphilis. **B., Wolffian.** See under *Wolffian* (Illus. Dict.). **B., Yellow.** See *Corpus luteum* (Illus. Dict.).

Boeck's Lotion. For dry, itching, inflammatory diseases. Talc and starch, each 50; glycerol, 20; lead-water, 100. The bottle to be well shaken; the lotion diluted with twice the volume of water and applied with a brush.

Boil. (See Illus. Dict.) **B., Blind,** one of brief continuance and not attended by the formation of a core. **B., Blood-.** See *Hematoma* (Illus. Dict.). **B., Bulam.** See under *Bulam* (Illus. Dict.). **B., Cat-.** See *B., Blind*. **B., Gum.** See *Abscess, Alveolar*. **B., Wasp's-nest.** See *Furunculus vespajus*.

Bolbomelanosis (*bol-bo-mel-an-o'-sis*) [βολβός, a bulb; μελάνωμα, blackness]. The process of formation of a melanoma.

Bole. (See Illus. Dict.) **B., White,** a white clay composed mainly of aluminium silicate.

Boletate (*bo'-let-āt*). A salt of boletic acid.

Boletic (*bo-let'-ik*). Relating to or derived from the genus *Boletus*.

Boletiform (*bo-let'-e-form*). Shaped like a mushroom.

Boletivorous (*bo-let-iv'-or-us*) [*Boletus; vorare*, to devour]. Subsisting on fungi.

Boliformin (*bol-e-form'-in*). A compound of formaldehyd and aluminium silicate occurring as a whitish-gray powder; it is used as a dusting-powder.

Bollingera (*bol-in'-jer-ah*) [*Bollinger*, the discoverer]. A genus of bacteria. See *Bacteria, Table of* (Illus. Dict.).

Bolometer (*bo-lom'-et-ur*) [βολή, a throw; μετρον, measure]. A device for measuring minute differences in radiant heat. Syn., *Thermic balance*.

Bolus. (See Illus. Dict.) 2. A mass of masticated food ready to swallow. **B. alba.** See *Bole, White*. **B. hystericus.** See *Globus hystericus* (Illus. Dict.)

Bombate, Bombiate (*bom'-bāt, bom'-be-āt*). A salt of bombic acid.

Bonducin (*bon'-du-sin*). $C_{14}H_{15}O_5$. A bitter principle from bonduc seeds; a white powder soluble in alcohol, chloroform, fats, and oils, used as a febrifuge. Dose, 0.1–0.2 gm. (1.5–3 gr.).

Bone. (See Illus. Dict.) **B., Acetabular.** See *B., Cotyloid*. **B., Adgustal,** G. St. Hilaire's name for the pterygoid bone of Owen in fishes. **B., Adnasal,** G. St. Hilaire's name for Owen's premaxillary bone of fishes. **B., Adorbital.** 1. See *Lacrymal Bone* (Illus. Dict.). 2. The malar bone in fishes. **B.s, Air-.** See *B.s, Pneumatic*. **B., Alisphenoid,** in comparative anatomy a cartilage lying anterior to the auditory capsule and corresponding to the greater wing of the sphenoid in man. **B., Angular,** in comparative anatomy one that aids in the formation of the lower and back part of the mandible. Syn., *Operculoangular bone*. **B., Ankle-.** See *Astragalus* (Illus. Dict.). **B., Antorbital.** See *B., Suborbital*. **B., Apohyal,** G. St. Hilaire's name for the ceratohyal bone of mammals. **B., Articular.** 1. That element of the mandible or lower jaw which is formed from the condylar portion of the cartilaginous rudiment in Meckel's cartilage. Syn., *Os articulare; Os condyloideum maxillæ inferioris; Os articulaire, submallèal* (in fishes), *subrupial* (in crocodile). 2. That portion of the osseous tissue of a bone which lacks haversian canals and lies immediately beneath the articular cartilage. **B.s, Asymmetric,** bones lying on one side of the median plane of the body and not divided by it into two equal parts. **B., Back-,** the vertebral col-

umn. **B., Bar,** the pubic bone. **B., Basal.** See *B., Basisphenoid;* and *B., Basioccipital.* **B., Basibranchiostegal.** See *B., Urohyal.* **B., Basidigital,** a name for the metacarpal and metatarsal bones because they lie at the base of the phalanges. **B., Basihyal.** See *Basihyal* (Illus. Dict.). **B., Basilar.** 1. The sphenoid and occipital bones regarded as one. 2. The sacrum. 3. The last lumbar vertebra. 4. The basioccipital bone. 5. The basisphenoid bone in birds. **B., Basioccipital,** the basilar part of the occipital bone. **B., Basioccipitosphenoidal.** See *B., Parasphenoid.* **B., Basipresphenoid,** in comparative anatomy a bone resulting from the junction of the basisphenoid and presphenoid bones. **B., Basisphenoid.** 1. In human embryology, that part of the sphenoid bone from which the posterior part of its body and the sella turcica originate. 2. In comparative anatomy, a cartilage bone lying between the basioccipital and presphenoid bones. **B., Basitemporal.** 1. A membrane bone underlying the basisphenoid and a part of the basioccipital bones in birds. 2. The lingula of the sphenoid. **B.s, of Bertin.** See *B.s, Sphenoidal Turbinated* (Illus. Dict.). **B., Blade,** the scapula. **B., Boat-like,** the scaphoid bone. **B., Breast-,** the sternum. **B., Calf-,** the fibula. **B., Canal-,** the clavicle. **B., Cancellated, B., Cancellous,** bone consisting chiefly of spongy tissue. **B., Cannon-.** See *Cannon-bone* (Illus. Dict.). **B.s, Cartilage,** those having intracartilaginous ossification. **B., Cavalry,** a calcification of the tendon of the adductor magnus muscle of riders. **B., Ceratobranchial,** the bone of a branchial arch situated between the hypobranchial and the epibranchial bones. **B., Ceratohyal.** 1. The epihyal bone of mammals. 2. In comparative anatomy, one corresponding to the lesser cornu of the hyoid bone in man. **B., Channel,** the clavicle. **B., Cheek-,** the malar bone. **B.s, Chevron.** See *Chevron-bones* (Illus. Dict.). **B.-chips.** See *Senn's Bone Plates* (Illus. Dict.). **B.s, Chondrogenous.** See *Cartilage Bones* (Illus. Dict.). **B., Cloacal,** one in fishes running from the symphysis ischii to the ventral wall of the cloaca. **B., Cockal,** the astragalus. **B., Coffin,** the ungual phalanx of solipeds. **B., Collar-,** the clavicle. **B., Coracoid,** an independently ossified element of the ventral portion of the shoulder girdle. In reptiles it is usually broad and often fenestrated (lizards), and is connected by a ligament at the cartilaginous end with the precoracoid (turtles). In crocodiles, together with the scapula it makes up the shoulder girdle. In birds it is strong and united to the curved scapula at the glenoid cavity. Among mammals it is complete only among monotremes; in the others its only vestige is the process (coracoid) of the scapula in front of the glenoid process. **B., Coronal,** the frontal bone. **B., Coronary,** in veterinary anatomy the middle phalanx of the manus. **B., Coronoid.** 1. In comparative anatomy a bone on the inner aspect of the mandible, corresponding to the coronoid process of the inferior maxilla of man. 2. The supraangular bone. **B., Cotyloid,** in lower vertebrates a little bone in the acetabulum lying next to the os pubis. **B.s, Covering.** See *Membrane-bones* (Illus. Dict.). **B., Coxal,** the coccyx and ilium. **B., Crazy.** See *Funny Bone* (Illus. Dict.). **B., Cribriform,** the ethmoid bone. **B., Cross,** the sacrum. **B., Crow-beak,** the coracoid bone. **B.-crumb.** See *Granules, Osseous.* **B., Crupper,** the coccyx. **B., Cuneiform, Great, or Large,** the middle cuneiform bone of solipeds. **B., Cuneiform, Small,** in veterinary anatomy a bone located on the inner side of the tarsus and a representative of the union of the internal and middle cuneiform bones of man. **B.s, Cylindrical.** See *B.s, Long.* **B.s, Dermal,** Owen's name for bones belon ing to the cutis and which are ossifications of it. **Dermalethmoid, B., Ectethmoid, B., Ectoet moid.** See *B., Prefrontal.* **B., Ectocuneifor** See *B., Cuneiform, External* (Illus. Dict.). **Ectopterygoid,** in comparative anatomy a bone e tending from the superior maxilla to the pteryg bone. **B., Ell,** the ulna. **B.s, Elongated,** lo bones, like the ribs, devoid of a medullary cavity. **Endochondral,** such true bone as originates fr osteoblastic centers in fetal cartilage, and not fr periosteum. **B., Entocuneiform,** the internal cun form bone. **B., Entoglossal,** the glossohyal bo **B., Entohyal.** See *B., Glossohyal.* **B., Entopte goid,** in comparative anatomy a thin layer of lo lying against the inner borders of the palatine pterygoid bones. **B.s, Epibranchial,** several sm bones lying between the ceratohyal and the supe pharyngeal bones and extending horizontally from margins of the latter. **B., Epiceratohyal.** See *Epihyal.* **B., Epihyal,** in comparative anatom small bone situated between the ceratohyal and st hyal bones. **B., Epiotic.** 1. An embryonic carti bone corresponding to the lower portion of the mast process of the temporal bone. 2. In compara anatomy, a bone forming the posterointernal portio the auditory capsule. **B., Epipterygoid,** in comp tive anatomy a slender bone lying anterior to the o side of the prootic bone and articulating with latter and with the pterygoid bone. **B.s, Epipu** See *B.s, Marsupial.* **B., Episternal.** 1. The u bone. 2. The interclavicle. 3. See *B., Supras* **B., Ethmoid, Lateral.** See *B., Prefrontal.* **Ethmoturbinal,** the lateral masses of the eth bone. **B., Exercise,** an ossification occurring in left arm of soldiers and attributed to constant pre of a musket upon it. **B., Exoccipital,** a carti bone forming in the fetus the side of the foramen num and the occipital condyle of the occipital bone unites with the occipital bone about the sixth year, many of the lower vertebrates it remains distinct thr life. **B., Extrascapular.** See *B., Suprasc* **B., Face,** the malar bone. **B., Falciform,** in the and allied mammals a falcate sesamoid bone situat the radial side of the manus. **B.s, Flat,** bones in w the length and breadth exceed the thickness. **B., F head.** See *B., Frontal.* **B., Fork.** See *B., cular.* **B., Frontal, Anterior.** See *B., Prefr* **B., Frontal, Posterior.** See *B., Postfrontal.* **Frontonasal.** See *B., Nasal* (Illus. Dict.). **Frontoparietal,** one formed by the junction o frontal and parietal bones. **B., Furcular,** the clavicles of a bird; the wish-bone. **B., Hamate** *B., Unciform* (Illus. Dict.). **B., Hammer.** *Malleus* (Illus. Dict.). **B., Haunch.** See *bone.* **B., Heart.** See *Os cordis.* **B., Hee** calcaneum. **B., Hip-.** See *B., Innominate* Dict.). **B., Hook.** See *B., Uncinate* (Illus. **B., Huckle-.** 1. The astragalus. 2. The coccyx **Hyomandibular,** in certain fishes the uppermo in the mandibulatory suspensorium, representi incus of higher vertebrates. **B., Hyosternal.** *B., Ceratohyal.* **B., Hypohyal,** the body of the bone. **B., Hyposternal.** See *B., Epiplas* **Hypotympanic.** See *Quadrate* (2) (Illus. **B., Hypsiloid.** 1. See *B., Hyoid* (Illus. Dict In the plural, the last coccygeal vertebræ, on a of their ∪ shape. **B., Iliac,** the ilium. **B. of t cas,** the interparietal bone when it persists thro as a distinct bone. **B., Incisive, B., Incisor.** *Intermaxillary.* **B., Infraorbital,** in comparat omy one forming an arch on the lower rim of the

B., Ingrassial, the orbitosphenoid bone in fishes. **B., Interclavicular.** See *Interclavicle* (Illus. Dict.). **B., Intercuneiform,** an inconstant bone in the human foot occupying a fossa between the proximal ends of the internal and middle cuneiform bones, where they rest against the scaphoid. **B., Interhyal.** See *B., Stylohyal.* **B., Interischial,** the tuberosity of the ischium when it preserves its distinctness through life. **B., Intermaxillary,** a bone of the middle front part of the upper jaw and becoming fused with it in adult life; in many of the lower vertebrates it remains distinct, or, uniting with its mate of the opposite side, forms one bone bearing the incisor teeth. **B., Interparietal,** in the fetus the tabular part of the occipital bone, sometimes persisting through life as a distinct bone. **B., Intestinal,** the ilium. **B.s, Investing.** See *Membrane-bone* (Illus. Dict.). **B.s, Irregular,** those of such irregular shape that they cannot be classed as long, flat, etc. **B., Jaw-, Upper.** See *Maxilla, Superior* (Illus. Dict.). **B., Jugal.** See *B., Lacrymal* (Illus. Dict.). **B., Jugular, B., Key,** the clavicle. **B., Knuckle,** the coccyx. **B., Lacrimal, Lesser,** the unciform process of the lacrimal bone articulating with the superior maxilla when it persists through life unconnected with the lacrimal bone. **B., Lambdoid.** See *B., Interparietal.* **B., Lenticular.** See *B., Orbicular.* **B., Lepidoid,** the squamous portion of the temporal bone. **B.s, Lid.** See *Membrane-bone* (Illus. Dict.). **B.s, Ligament.** See *B.s, Sesamoid* (Illus. Dict.). **B.s, Long,** those in which the length greatly exceeds the breadth, and which are furnished with a medullary canal. **B., Lower Jaw.** See *B., Maxillary, Inferior* (Illus. Dict.). **B., Lunar, B., Lunate.** See *B., Semilunar* (Illus. Dict.). **B., Mandibile, B., Mandibular, B., Mandibulary.** See *B., Maxillary, Inferior* (Illus. Dict.). **B., Manual Exercise.** See *B., Exercise.* **B.s, Marsupial, B.s, Prepubic,** two slightly curved bones articulating with the anterior margins of the pubic bones and diverging into the layers of the abdominal parietes. They occur in the *Marsupialia.* **B., Mastoid.** 1. The squamosal bone. 2. The epiotic bone. 3. The hyomandibular bone. 4. The opisthotic bone. **B., Mastotympanic.** See *B., Prootic.* **B., Maxillary Turbinated.** See *B., Maxilloturbinal.* **B., Maxillojugal.** See *Maxilla, Superior* (Illus. Dict.). **B., Maxilloturbinal,** in comparative anatomy the homolog of the inferior turbinated bone of man. **B.s, Membrane.** See under *Membrane* (Illus. Dict.). **B., Mentomeckelian,** in some lower vertebrates a bony nodule lying beside the symphysis menti. **B., Mesethmoid.** See *Mesethmoid* (Illus. Dict.). **B., Mesocuneiform,** the middle cuneiform bone. **B., Mesopterygoid.** See *B., Entopterygoid.* **B., Mesotympanic.** See *B., Symplectic.* **B., Metacarpal, Principal,** in veterinary anatomy the larger of the two metacarpal bones. **B.s, Metaplastic.** See *B., Periosteal.* **B., Midfrontal.** See *B., Frontal* (Illus. Dict.). **B., Midjaw.** See *B., Intermaxillary.* **B., Multiform,** the sphenoid bone. **B., Nasoturbinal,** in comparative anatomy the representative of the superior turbinated process of the ethmoid in man. **B., Navicular,** in veterinary anatomy a sesamoid bone in the tendon of the flexor digitorum profundus behind the third phalanx. **B.s, Nonpneumatic,** bones containing no air-sacs. **B., Occipital, External.** 1. The opisthotic bone. 2. The exoccipital bone. **B., Occipital, Inferior.** See *B., Basioccipital.* **B., Occipital, Lateral.** 1. See *B., Exoccipital.* 2. See *B., Epiotic.* **B., Occipital, Pneumatic,** Hyrtl's name for an inconstant ossicle situated at the occipital insertion of the rectus capitis lateralis muscle and communicating with the mastoid portion of the temporal bone. **B., Occipital, Superior.** See *B., Supraoccipital.* **B., Odontoid,** the odontoid process of the axis when it is a distinct bone. **B., Olfactory.** 1. The ethmoid. 2. See *Mesethmoid* (Illus. Dict.). **B., Operculoangular.** See *B., Angular.* **B., Opisthotic,** a bone in some of the lower vertebrates forming the posteroventral part of the auditory capsule and represented in the human subject by the lower part of the petrosa, the fenestra rotunda, and the inferior half of the fenestra ovalis. **B., Orbicular,** the orbicular process of the incus, represented in some of the lower vertebrates by a small bony disc attached to the long crus of the incus. Syn., *B., Lenticular, Lenticulus.* **B., Orbitosphenoid,** in comparative anatomy a bone situated above and anterior to the optic foramen, a homolog of the lesser wing of the sphenoid in man. Syn., *Ingrassial bone* in fishes. **B., Otocranial, Anterior.** See *B., Prootic.* **B., Otocranial, Posterior.** See *B., Opisthotic.* **B., Otocranial, Superior.** See *B., Epiotic.* **B.s, Overlapping.** See *Membrane-bone* (Illus. Dict.). **B., Palatal, B., Palatine.** See *B., Palate* (Illus. Dict.). **B., Palatomaxillary,** in comparative anatomy one formed by the junction of the palate bone and the upper jaw. **B., Palatopterygoid,** in comparative anatomy one formed by the junction of the palate bone with the pterygoid. **B., Papyraceous,** the ethmoid bone. **B., Parasphenoid, B., Parasphenoidal,** a long membrane bone found at the base of the skull in some of the lower vertebrates. In the bulk of the fishes and *Amphibia* forming the chief part of the base of the skull, and apparently replacing in function the basisphenoid and presphenoid bones. In higher vertebrates it is often confused with the basisphenoid bone. **B., Parethmoid.** See *B., Ethmoturbinal.* **B., Paroccipital.** See *B., Epiotic.* **B., Pastern.** See under *Pastern* (Illus. Dict.). **B., Pastern, Small,** in veterinary anatomy the middle phalanx of the manus. **B., Pea-shaped.** See *B., Pisiform* (Illus. Dict.). **B., Pedal,** in veterinary anatomy the third distal phalanx of the manus. **B., Pelvic, Anteroventral,** the os pubis. **B., Penial,** a membrane bone occurring in the septum of the penis of some mammals. **B., Periosteal.** See under *Periosteal* (Illus. Dict.). **B., Periotic,** one formed by the junction of the epiotic, prootic, and opisthotic bones and representing the petrosa and mastoid portion of the temporal bone in man. **B., Peroneal,** the fibula. **B., Petromastoid.** See *B., Periotic.* **B., Petrosal.** See under *Petrosal* (Illus. Dict.). **B., Petrotympanic.** See *B., Tympanoperiotic.* **B., Ploughshare.** 1. Applied to the vomer, from its shape. 2. See *Pygostyle* (Illus. Dict.). **B., Pneumatic,** those containing many air-cells or air-sacs. **B., Postfrontal, B., Postorbital,** in comparative anatomy a membrane bone lying dorsad to the orbit and above the alisphenoid bone. **B., Posttemporal.** See *B., Suprascapular.* **B., Precoracoid.** 1. A bony nodule lying anterior to the ventral end of the coracoid bone. [Gegenbaur.] 2. The coracoid process of the scapula. [Sabatier.] **B., Prefrontal,** in comparative anatomy a bone lying in front of the nasal capsule and bounding the exit of the olfactory nerve externally; the united prefrontal bones of the lower vertebrates are represented in man by the perpendicular plate of the ethmoid. **B., Prefrontonasal,** one formed by the junction of the prefrontal and nasal bones. **B., Premaxillary.** See *B., Intermaxillary.* **B., Prenasal,** one located at the anterior end of the pig's nasal septum and included in the cartilage running around the nostrils. **B., Preorbital.** See *B., Suborbital.* **B., Presphenoid,** in comparative anatomy a bone found at the base of the skull articulating an-

teriorly with the mesethmoid bone and the vomer, and posteriorly with the basisphenoid bone; it is represented in man by that part of the body of the sphenoid lying in front of the lesser sphenoid and the olivary eminence. Syn., *Basiheloides*. **B., Primitive Key.** See *B., Precoracoid.* **B.s, Primordial.** See *Cartilage Bones* (Illus. Dict.). **B., Prootic,** in comparative anatomy one forming the anteroventral part of the auditory capsule and corresponding to the upper part of the petrosa, a part of the mastoid process of the temporal bone, and the greater part of the labyrinth in man. **B., Propellor.** See *B., Innominate* (Illus. Dict.). **B., Pterotic,** in comparative anatomy a small inconstant bone situated between the prootic and epiotic bones on the upper and external side of the auditory capsule. **B., Pterygoid,** in comparative anatomy a bone running from the palatine to the quadrate regions and in man represented by the internal pterygoid plate of the sphenoid. **B., Puboischiadic, B., Puboischiatic,** the os pubis and the ischium taken as one. **B., Pyramidal.** See *B., Cuneiform* (Illus. Dict.). **B., Quadrate.** See *Quadrate* (2) (Illus. Dict.). **B., Quadratojugal,** in comparative anatomy a bone running backward from the malar bone to the quadrate. It is represented in man by the zygomatic process of the temporal bone. **B., Raven.** See *B., Coracoid.* **B.s, Rickety,** those of rachitic subjects, deficient in earthy matter. **B., Rider's.** See *B., Cavalry.* **B.s, Roof,** membrane bones. **B., Rooting-.** See *B., Prenasal.* **B., Rudimentary Metacarpal,** in veterinary anatomy two small bones shaped like an inverted pyramid on the inner and outer sides of the posterior surface of the chief metacarpal bone; they are the rudiments of the metacarpal bones of man. Syn., *Splint bones.* **B., Rump.** 1. The coccyx. 2. The sacrum. **B., Scaphocuboid,** a bone formed by the union of the scaphoid and cuboid bones. **B., Scapholunar,** a bone formed by the union of the scaphoid and semilunar bones. **B.s, Scleral.** See *B.s, Dermal.* **B., Sclerogenous.** See *Membrane-bone* (Illus. Dict.). **B.s, Sclerosteous.** See *B.s, Sesamoid* (Illus. Dict.). **B., Sclerotal, B., Sclerotic,** in some of the lower vertebrates the bony plates found in the sclera of the eye. **B., Scooping.** See *B., Prenasal.* **B., Seat.** See *Ischium* (Illus. Dict.). **B.s, Secondary.** See *Membrane-bone* (Illus. Dict.). **B.-segment,** a sclerotoma. **B., Septal,** in some vertebrates the ossification occurring in the ventricular septum of the heart. **B., Septomaxillary,** in many of the lower vertebrates a bony plate or nodule attached to the side of the nasal septum near its anterior end. **B., Sesamoid, Small,** the navicular bone of the horse. **B., Share.** 1. The ilium. 2. The os pubis. **B.-shave,** femoropopliteal neuralgia. **B., Shin,** the tibia. **B.s, Short,** those in which the length does not exceed the breadth in a marked degree. **B.s, Skin.** See *B.s, Dermal.* **B., Sieve-like,** the ethmoid bone. **B., Sling,** the astragalus. **B., Sphenoid, Posterior.** See *B., Basisphenoid.* **B., Sphenotic.** See *B., Postfrontal.* **B., Splanchnic,** those developed within the visceral tissues. **B., Splenial.** 1. In comparative anatomy one found on the inner surface of the mandible between the angular and dentary bones. **B.s, Splint.** See *B.s, Metacarpal, Rudimentary.* **B., Splinter,** the fibula. **B., Spoke,** the radius. **B.s, Spongy.** See *B.s, Cancellous;* and *B.s, Turbinate* (Illus. Dict.). **B., Spongy, Inferior,** the inferior turbinate bone. **B., Squamomastoid,** one formed by the junction of the squamous and mastoid bones. **B., Squamosal, B., Squamous,** in comparative anatomy a scale-like bone situated above and anterior to the auditory capsule representing the squamous part of the temporal bone and the zygomatic process in man. **B., Squamoso parietal,** one formed by the junction of the squamou and parietal bones. **B., Squamosotympanic,** on formed by the union of the squamosal and tympani bones. **B., Square.** See *Quadrate* (2) (Illus. Dict. **B., Stirrup.** See *Stapes* (Illus. Dict.). **B., Stylo hyal,** in comparative anatomy a slender bone connec ing the hyoid apparatus with the skull and represente in man by the styloid process of the temporal bon **B.s, Subcaudal.** See *B.s, Chevron.* **B.s, Subder mal,** membrane bones. **B., Subjugal.** See *B Supraangular.* **B., Suboccipital.** See *B., I occipital.* **B., Suborbital,** in comparative anaton the largest of the bones composing the infraorbital rin represented in man by the lacrimal bone. **B. Superadded.** See *Membrane-bone* (Illus. Dict. **B., Supercarpal,** the pisiform bone of the horse. **B Superficial Ethmoid.** See *B., Prefrontal.* **B Supermaxillary,** the superior maxilla. **B.s, Supe numerary,** such as arise from independent osteoblas centers and fail to fuse with contiguous masses in t normal way, as the parietal bones at the lambda. **B Superorbital.** See *B., Supraorbital.* **B., Supr angular,** in lower vertebrates a bone lying on the ou side and dorsal margin of the mandible. **B., Supr clavicular,** in some of the lower vertebrates a slen bone articulating with the coracoid bone and with t suprascapular. **B., Supraethmoid,** in comparat anatomy a bone sometimes overlying the upper part the nasal capsule. **B., Supraoccipital, B., Suroc pital,** the squamous part of the occipital bone. **Supraorbital,** in some of the vertebrates a bone for ing the rim of the orbit. **B.s, Supraorbital,** one two rows of bones composing the rim of the orbit. **Suprascapular, B., Surscapular,** a bone connect the scapular arch with the skull. **B.s, Suprasterr** See *Cartilages, Brecht's.* **B., Supratemporal,** comparative anatomy a bone situated above and po rior to the squamosal bone and with which sometimes confluent. **B.s, Sutural,** the worm bones of the skull. **B.s, Symmetric,** those the sternum, which are divided equally by the dian plane of the body. **B., Symplectal. Symplectic,** in comparative anatomy a small articulating with the lower border of the hyomandib bone and with the inner face of the quadrate **B., Syzygy.** See *B., Furcular.* **B.s, Tabu** those having flat tabular surfaces. **B., Tail,** the cyx. **B., Tegumentary.** See *Membran* (Illus. Dict.). **B., Temple,** the temporal bone. **Thyrohyal,** the greater cornua of the hyoid bo They persist as distinct bones throughout the l many of the lower vertebrates. **B., Tongue.** *B., Hyoid;* and *B., Urohyal.* **B., Tricuspid,** sixth cervical vertebra. **B.s, Tubular,** the long bo **B., Turbinal,** the inferior turbinate bone. **B., T binated, Anterior.** See *B., Turbinate, Su* (Illus. Dict.). **B., Turbinated, Posterior.** See *Turbinate, Inferior* (Illus. Dict.). **B., Tympa hyal,** in lower vertebrates a bone connecting the hyal bone with the posterior margin of the tym bone. **B., Tympanomalleal.** 1. The sympl bone. [Agassiz.] 2. The quadratojugal [Dugès.] **B., Tympanoperiotic,** a bone form the junction of the periotic and tympanic bones. **Urohyal,** in comparative anatomy a bone exter backward from the basihyal bone and blending the median elements of the branchial arches. **Vertex, B., Vertical.** See *B., Parietal* (Illus. D **B.s, Vesalius'.** See *B.s, Sesamoid* (Illus. D **B., Vomeropalatine,** one formed by the fusion vomer and palate bones. **B.s, Wedge-shape**

cuneiform bones. **B., Whistle-,** the coccyx. **B., Wish-.** See *B., Furcular.* **B.s, Wrist.** See *B.s, Metacarpal* (Illus. Dict.). **B., Yoke,** the malar bone. **B., Zygomatic,** the malar bone.

boracite (*bo'-ras-īt*). Native magnesium borate.

boral (*bo'-ral*). See *Aluminium borotartrate.*

boralid (*bo'-ral-id*). A proprietary wound-antiseptic said to contain equal parts of boric acid and acetanilid.

borated (*bo'-ra-ted*). Containing boric acid.

borax. (See Illus. Dict.) **B. carmin,** a solution of borax and carmin in water; it is used as a stain.

bordeu's Doctrine of Vitalism. See under *Vitalism.*

border (*bord'-ur*) [ME.]. In anatomy, the boundary of an area or surface. **B., Basal, B.. Cuticular, B., Striated.** See *Layer, Cuticular.* **B., Bright,** the margin of a ciliated cell. **B., Vermilion,** the line of union of the mucosa of the lip with the skin.

bordet's Specific Test for human blood is based upon the fact that the blood-serum of an animal subcutaneously injected with the blood of another animal of a different species rapidly develops the property of agglutinating and dissolving the erythrocytes similar to those injected, but has no effect upon blood derived from any other source. [DaCosta.]

boric (*bo'-rik*). Relating to boron; containing boron. **B. Anhydrid, B. Oxid,** B_2O_3, a transparent, brittle, hard glass obtained from boric acid by expulsion of water by heat.

boricin (*bo'-ris-in*). A proprietary mixture of borax and boric acid used as an antiseptic on mucosas.

borid (*bo'-rid*). A compound of boron with a radicle or element.

borine (*bo' rēn*). 1. A compound of 1 atom of boron and 3 atoms or 3 molecules of a univalent radicle. 2. A proprietary antiseptic said to contain boric acid and aromatic stearoptens.

borism (*bo'-rizm*). Poisoning with boric acid.

borneene (*bor'-ne-ēn*). $C_{10}H_{16}$. A peculiar volatile oil, the chief constituent of oil of camphor. It is isomeric with oil of turpentine and holds in solution borneol and resin.

bornesite (*bor'-ne-sīt*). $C_7H_{14}O_6$. Monomethyl ether of dambose-glycose, a glucosid occurring in caoutchouc from Borneo; it forms rhombic prisms soluble in water, melting at 175° C., subliming at 205° C.

borneyl (*bor'-ne-il*). $C_{10}H_{14}$. The radicle of Borneo camphor.

borobenphene (*bor-o-ben'-fēn*). The proprietary name for an antiseptic solution said to contain glycerin, boric acid, benzoic acid, and phenol. It is nonpoisonous and pleasantly aromatic.

borocalcite (*bo-ro-kal'-sīt*). Native calcium borate.

borocarbid (*bo-ro-kar'-bid*). A compound of borax and carbon.

borocitrate (*bo-ro-sit'-rāt*). A compound of both citric and boric acid with an element or radicle.

borofluorin (*bo-ro-flu'-or-in*). A proprietary antiseptic and germicide said to contain boric acid, sodium fluorid, benzoic acid, and formaldehyd.

boroformalin, Boroformol (*bo-ro-form'-al-in, bo-ro-form'-ol*). A proprietary antiseptic said to consist of borosalicylic glycerol, benzoresorcinol, menthol, thymol, eucalyptol, and formalin.

borogen (*bo'-ro-jen*). Boric acid ethylester. It is used by inhalation in diseases of the air-passages.

boroglycerol (*bo-ro-glis'-er-ol*). Boroglycerid dissolved in glycerin by heating.

borol (*bo'-rol*). Potassium borosulfate.

borolyptol (*bo-ro-lip'-tol*). A proprietary internal and external antiseptic said to contain acetoboroglycerid, formaldehyd, and the antiseptic constituents of *Pinus pumilio*, eucalyptus, myrrh, storax, and benzoin.

Borometz (*bo'-ro-mets*). See *Cibotium barometz.*

Borophenol (*bo-ro-fe'-nol*). A soluble disinfectant compound of borax and phenol.

Borosalicyl, Borsalyl (*bo-ro-sal'-is-il, bor'-sal-il*). Sodium borosalicylate.

Borosilicate (*bo-ro-sil'-ik-āt*). A compound of boric and silicic acids with a base.

Borosol (*bo'-ro-sol*). A proprietary liquid used as a wash for perspiring feet and said to contain aluminium tartrate, boric and salicylic acids, glycerin, and free tartaric acid.

Borotartrate (*bo-ro-tar'-trāt*). A combination of boric and tartaric acids with a base.

Borotartrol (*bo-ro-tar'-trol*). A mixture of neutral sodium tartrate and boric acid.

Borsyl (*bor'-sil*). A proprietary dusting-powder for perspiring feet, said to consist of borax, boric acid, talcum, and spermaceti.

Bosom (*booz'-um*) [AS., *bōsm*]. The breast of a human being.

Boss. (See Illus. Dict.) **B., Parietal.** See *Eminence, Parietal* (Illus. Dict.). **B., Pott's.** See *Curvature, Pott's* (Illus. Dict.). **B., Sanguineous.** 1. A swelling due to a contusion and containing extravasated blood. 2. See *Caput succedaneum* (Illus. Dict.).

Bossed (*bost'*). Having a prominent center on a circular flat surface.

Botanophagous (*bot-an-of'-ag-us*) [*βοτάνη*, a plant; *φαγεῖν*, to eat]. Subsisting wholly on vegetables.

Botanophagy (*bot-an-of'-aj-e*). Vegetarianism.

Botch (*botsh'*). See *Blotch* (Illus. Dict.).

Botelliferous (*bot-el-if'-ur-us*) [*botellus*, a sausage; *ferre*, to bear]. Having sausage-shaped processes or appendages.

Botellus (*bo-tel'-us*) [L.]. 1. A sausage. 2. A bowel.

Bothrenchyma (*both-ren'-ke-mah*) [*βόθρος*, a pit; *ἐγχεῖν*, to pour in]. Pitted tissue.

Bothrioid (*both'-re-oid*) [*βόθρος*, a pit; *εἶδος*, likeness]. Pitted, foveolated; covered with pit-like markings.

Bothryops (*both'-re-ops*) [*βόθρος*, a pit; *ὤψ*, an eye]. A genus of serpents. **B. lanceolatus,** a deadly snake of Martinique causing great mortality.

Botryococcus (*bot-re-o-kok'-us*) [*βότρυς*, a bunch of grapes; *κόκκος*, a berry]. The name given by Poucet and Dor to the supposed specific organism of botryomycosis as seen in that following the castration of horses.

Botryomyces (*bot-re-o-mi'-sēz*) [*βότρυς*, a bunch of grapes; *μύκης*, a fungus]. A general term for those fungi which occur in grape-like clusters.

Botryomycoma (*bot-re-o-mi-ko'-mah*) [*βότρυς*, a bunch of grapes; *μύκης*, a fungus]. A tumor due to botryomycosis.

Botryomycotic (*bot-re-o-mi-kot'-ik*). Relating to or affected with botryomycosis.

Botryophyma (*bot-re-o-fi'-mah*) [*βότρυς*, a bunch of grapes; *φῦμα*, a growth]. A vascular, fungus-like growth from the skin. **B. cæruleum,** a form having a blue coloration. **B. rubrum,** a form having a red color.

Botulin (*bot'-u-lin*). See *Botulismotoxin.*

Botulismotoxin (*bot-u-liz-mo-toks'-in*). A toxic albumose of poisonous meat produced by *Bacillus botulinus*, van Ermengem. Syn., *Botulin; Botulinic acid.*

Bouchard's Coefficient. See *Coefficient.*

Bougie. (See Illus. Dict.) 2. A suppository. **B., Acorn-tipped,** one tipped with an acorn-shaped expansion. **B. à empreinte,** one with a waxy substance adherent to its point, by means of which an impression of the stricture may be taken. **B., Bellied,**

one with an expansion in some part of its shaft. **B., Bulbous,** one with a bulbous tip. **B., Caustic, B., Cauterizant.** See *B., Armed* (Illus. Dict.). **B., Conical,** one tapering uniformly from one end to the other or from some point in the shaft to the end. **B., Corrosive.** See *B., Armed* (Illus. Dict.). **B. de baleine,** a whalebone bougie. **B., Dilatable, B., Dilating,** one which can be expanded in diameter, and is designed for dilation of strictures. **B., Electrolysis,** a metal bougie with an insulated shaft, used in electrolytic treatment of stricture. **B., Emplastic.** 1. See *B. à empreinte.* 2. A flexible bougie coated with a mixture of wax, diachylon, and olive oil. **B., Eustachian,** a piece of catgut for insertion through a catheter into the eustachian tube for dilation or medication. **B., Exploring,** one for use as a probe in diagnosis. **B., Flexible.** See *B., Gum-elastic.* **B., Fusiform,** one with a spindle-shaped shaft. **B., Gum-elastic,** one made of some fabric rolled into a cylinder and coated with India-rubber, linseed oil, or other substance. **B., Medicated.** 1. A bougie charged with some medicament. 2. A medicated suppository. **B., Ointment,** one carrying ointment. **B., Olive-tipped,** a kind of bulbous bougie. **B., Plaster.** See *B., Emplastic* (2). **B., Rigid,** one that does not bend. **B., Rosary,** a beaded bougie used in a strictured urethra. **B., Salve.** See *B., Ointment.* **B., Soluble,** a suppository composed of substances dissolving at body-temperature. **B., Wales' Rectal,** a flexible bougie made of soft rubber. **B., Wax,** one made of fine silk or other material soaked in melted wax and rolled into a cylindric shape. **B., Whip,** one with filiform end gradually increasing in thickness.

Boundou. See *Akazga* (Illus. Dict.).

Boutron. A Hawaiian name for influenza.

Bovillæ (*bo-vil'-e*) [L.]. Measles.

Bowdichia (*bo-dich'-e-ah*) [*Edward Bowdich*, an English naturalist]. A genus of plants of the order *Leguminosæ.* **B. virgiloides,** H. et B., a South American tree, of which the bark (alchornoque or alcornoque bark) is diaphoretic, roborant, and antisyphilitic. It contains alcornin and the glucosid sicopirin.

Bowel. (See Illus. Dict.) **B.-complaint,** diarrhea. **B., Lower,** the rectum.

Bowman's Sarcous Elements. See under *Sarcous* (Illus. Dict.).

Bracelets (*brās'-lets*). Transverse lines across the anterior aspect of the wrist.

Brachiation (*bra-ke-a'-shun*) [*brachium*, arm]. A form of locomotion by means of the arms, as seen in apes.

Brachiform (*bra'-ke-form*) [*brachium*, arm; *forma*, form]. Arm-shaped.

Brachiocrural (*bra-ke-o-kru'-ral*) [*brachium*, the arm; *crus*, the leg]. Pertaining to or affecting the arm and leg.

Brachiofacial (*bra-ke-o-fa'-shal*). Pertaining to both arm and face.

Brachiofascialis (*bra-ke-o-fas-e-a'-lis*) [*brachium*, the arm; *fascia*, a bundle]. See under *Muscles.*

Brachiometrum (*brak-e-o-met'-rum*) [βραχίων, the arm; μέτρον, a measure]. An apparatus for measuring the thickness of the arm.

Brachiorrhachidian (*brak-e-or-ak-id'-e-an*) [βραχίων, the arm; ῥάχις, the spinal column]. Relating to the arm and the spinal cord.

Brachium. (See Illus. Dict.) **B. anterius.** See *Prebrachium* (Illus. Dict.). **B. conjunctivum, B. conjunctorium.** See *Prepeduncle* (Illus. Dict.). **B. conjunctivum anterius.** See *Prebrachium* (Illus. Dict.). **B. conjunctivum posterius.** See *Postbrachium* (Illus. Dict.). **B. copulativum,** the superior peduncle of the cerebellum. **B. corporis bigemini inferioris, B. corporis bigemini superioris, B. inferius.** See *Postbrachium* (Illus. Dict.). **Brachia fornicis,** the pillars of the fornix. **Brachia lateralia,** the prebrachium and postbrachium. **B. movens quartus,** the latissimus dorsi muscle. **B. pontis.** See *Medipeduncle* (Illus. Dict.). **B. posterius. B. quadrigeminum inferius.** See *Postbrachium* (Illus. Dict.). **B. quadrigeminum superius.** See *Prebrachium* (Illus. Dict.).

Brachyauchen (*brak-e-aw'-ken*) [βραχύς, short; αὐχήν, neck]. A short neck; a short-necked individual.

Brachycheirous, Brachychirous (*brak-e-ki'-rus*) [βραχύς, short; χείρ, the hand]. Having short hands.

Brachycnemic, Brachyknemic (*brak-e-ne'-mik*) [βραχύς, short; κνήμη, the leg]. A term applied by Sir W. Turner to a leg proportionately shorter than the thigh.

Brachyfacial (*brak-e-fa'-shal*). See *Chamepros.* (Illus. Dict.).

Brachyglossal (*brak-e-glos'-al*) [βραχύς, short; γλῶσσα, tongue]. Having a short tongue.

Brachygnathous, Brachygnathus (*brak-e-na'-thus*). Having short jaws.

Brachyhieric (*brak-e-hi'-e-rik*) [βραχύς, short; ἱερόν, sacrum]. Having a short sacrum. Cf. *Dolichohieric.*

Brachykerkic (*brak-e-kurk'-ik*) [βραχύς, short; κερκίς, a shuttle]. Having the forearm disproportionately short, as compared with the upper arm.

Brachynin. See *Brachinin* (Illus. Dict.).

Brachynosis, Brachynsis (*brak-in-o'-sis, brak-in'-sis*) [βραχύς, short; νόσος, disease]. The contraction or shortening of an organ or part by disease.

Brachyntic (*brak-in'-tik*). Related to or affected with brachynosis.

Brachyotus (*brak-e-o'-tus*) [βραχύς, short; οὖς, the ear]. Short-eared.

Brachypneuma (*brak-e-nu'-mah*). See *Brachypn.* (Illus. Dict.).

Brachystaphylic (*brak-e-staf'-il-ik*) [βραχύς, short; σταφυλή, the palate]. Having a short alveolar arch. Cf. *Leptostaphylic; Mesostaphylic.*

Brachystelma (*brak-e-stel'-mah*) [βραχύς, short; στέλμα, column]. A genus of plants of the order *Asclepiadaceæ.* **B. fringeri,** a native of the French Soudan, whose edible tubers form an important part of the food; it is called *fikongo.*

Brachystomus (*brak-e-sto'-mus*) [βραχύς, short; στόμα, mouth]. Having a short mouth.

Brachyuranic (*brak-e-u-ran'-ik*) [βραχύς, short; οὐρανός, the palate]. See *Brachystaphylic.* Cf. *Dolichouranic; Mesuranic.*

Bracket (*brak'-et*) [OF., *braquet*]. An apparatus for supporting or rendering a joint immovable.

Bradycausis (*brad-e-kaw'-sis*) [βραδύς, slow; καῦσις, a burning]. A slow burning; the application of a slow caustic.

Bradycinesia. See *Bradykinesia.*

Bradydiastole (*brad-e-di-as'-to-le*) [βραδύς, slow; διαστολή, a drawing apart]. A prolongation of the diastolic pause; it is generally associated with myocardial lesions. Syn., *Bradydiastolia.*

Bradyfibrin (*brad-e-fi'-brin*). See *Pseudofibrin* (Illus. Dict.).

Bradyglossia (*brad-e-glos'-e-ah*) [βραδύς, slow; γλῶσσα, tongue]. Abnormal slowness of speech.

Brain. (See Illus. Dict.) **B., End.** See *Telencephalon* (Illus. Dict.). **B.-energy of Cullen.** See *Force, Animal.* **B., Great,** the cerebrum. **B., Softening of.** See under *Softening* (Illus. Dict.). **B., Twixt.** See *Diencephalon* and *Thalamencepha-*

Illus. Dict.). **B.-wasting, Chronic,** Crichton Browne's term for mental disturbance marked by confusion, loss of memory, and inertia. **B., Water on the.** Synonym of *Hydrocephalus*.

Branchiogenic, Branchiogenous (*brang-ke-o-jen'-ik, brang-ke-oj'-en-us*) [βράγχια, gills; γενναν, to produce]. Formed from a branchial cleft.

Brand [AS., *brinnan*, to burn]. A disease of wheat and other cereals due to the parasitic fungus *Uredo carbo*.

Brasilein (*bra-zil'-e-in*). $C_{16}H_{12}O_5 + H_2O$. The red coloring matter produced by the oxidation of brasilin. Syn., *Brazilein*.

Brassicon (*bras'-ek-on*). A proprietary local application for headache, said to consist of 2 gm. oil of peppermint, 6 gm. camphor, 4 gm. ether, 12 gm. alcohol, 8 drops mustard oil.

Brassy-eye. See *Chalkitis*.

Brayera. (See Illus. Dict.) 2. A genus of plants of the order *Rosaceæ*.

Brayerin (*brā'-yer-in*). See *Koussin*, under *Brayera* (Illus. Dict.).

Brazil Wood. See *Cæsalpinia echinata*.

Brazilein (*bra-zil'-e-in*). See *Brasilein*.

Bread. (See Illus. Dict.) **B., Bleeding,** a bloody appearance in bread due to the presence of *Bacillus prodigiosus*. **B., Famine,** bread made from other and less nutritious substances than flour, as the sawdust of coniferous woods like beech and birch mixed with beans and flour and used in time of famine to eke out the limited supply of flour. **B., Guarana.** See *Guarana* (Illus. Dict.). **B., Indian,** bread-fruit, the fruit of the tree *Artocarpus integrifolia*. **B., Pulled,** fresh bread pulled apart longitudinally and rebaked until brittle. **B., St. John's,** the pods of *Ceratonia siliqua*.

Break. (See Illus. Dict.) 3. To change suddenly and involuntarily from the natural voice to a shrill one or to a whisper, as with boys at puberty, or with adults under strong emotion.

Breast. See Illus. Dict.) **B., Cooper's Irritable,** neuralgia of the breast; mastodynia neuralgica. **B., Funnel,** a depression of the chest-walls at the sternum resembling the bowl of a funnel; it is like shoemaker's breast only it may occur at any point. Syn., *Funnel-chest*. **B., Gathered.** See *B., Broken* (Illus. Dict.). **B., Hysteric,** a form of mastodynia due to hysteria. **B., Shoemaker's,** a depression of the sternum in shoemakers due to the pressure of tools against it and the xiphoid cartilage.

Breastings (*brest'-ingz*). See *Colostrum* (Illus. Dict.).

Breath. See Illus. Dict.) **B., Shortness of,** dyspnœa. **B.-sounds, Veine Fluide Theory of:** "According to which a blowing sound is generated whenever a fluid (whether liquid or gas) passes suddenly and with sufficient momentum (*i. e.*, for the same fluid, velocity) from a narrow space into a much wider one." [Fagge and Pye-Smith.]

Breathing. (See Illus. Dict.) **B. Capacity.** See *Vital Capacity* (Illus. Dict.). **B., Cheyne-Stokes'.** See *Respiration, Cheyne-Stokes'* (Illus. Dict.). **B., Indeterminate.** See *Respiration, Bronchovesicular* (Illus. Dict.). **B., Jerky.** See *B., Interrupted* (Illus. Dict.). **B., Spurious,** sighing. **B., Subtubular, B., Transitional, B., Vesiculotubular.** See *Respiration, Bronchovesicular* (Illus. Dict.). **B. Volume.** See *Air, Tidal* (Illus. Dict.).

Breeze. (See Illus. Dict.) **B., Electric.** See *Static Breeze* (Illus. Dict.).

Bridin (*brē'-id-in*). A constituent of elemi.

Bridonin (*brī'-do-nin*). A glucosid isolated from *Bryonia alba*. It is a powerful stimulant to the arterioles and useful in the treatment of postpartum hemorrhage and other metrorrhagias.

Breisky's Method of measuring the dimensions of the pelvis at its outlet, consisting in measuring externally the distance between the tuberosities of the ischia, and also in taking the distance from the junction of the sacrum and coccyx to the lower border of the arcuate ligament.

Bremer's Color-test for diabetic urine. See under *Test*.

Brenzcain (*brenz'-ka-in*). See *Guaiacol-benzyl Ester*.

Brenzkatechinuria (*brenz-kat-e-kin-u'-re-ah*). See *Alkaptonuria* (Illus. Dict.).

Brephydrocephalus (*bref-id-ro-sef'-al-us*) [βρέφος, an infant; ὑδροκέφαλος, hydrocephalus]. Hydrocephalus in infants.

Bresilein (*bres-il'-e-in*). See *Brasilein*.

Bresilin (*bres'-il-in*). See *Brasilin* (Illus. Dict.).

Breviceps (*brev'-e-seps*) [*brevis*, short; *caput*, head]. Having the head short.

Brevisupinator (*brev-e-su'-pin-a-tor*). See under *Muscles*.

Bridge. (See Illus. Dict.) **B., Intercellular,** slender protoplasmic processes connecting proximate cells. Syn., *Internuclear bundles*. **B., Jugal.** See *Arch, Zygomatic* (Illus. Dict.).

Brightism (*brīt'-izm*) [*Bright*, an English physician]. Chronic nephritis.

Brimstone. (See Illus. Dict.) **B., Cane,** sublimed sulfur molded into the form of solid cylinders about an inch in diameter; called also *roll-sulfur*. **B., Vegetable,** the spores of *Lycopodium clavatum*.

Broca's Cape. The dividing point of the fossa sylvii.

Bromalbacid (*bro-mal'-bas-id*). A compound of bromin and albumin used as a sedative. Dose, 15–30 gr. (1–2 gm.).

Bromalbumin (*bro-mal'-bu-min*). See *Bromoalbumin*.

Bromaldehyd (*bro-mal'-de-hīd*). A compound of bromin and aldehyd.

Bromalin (*brō'-mal-in*). $C_6H_{12}N_4C_2H_3Br$. A substance occurring as a white crystalline powder, soluble in water, melting at 200° C. It is a nerve sedative and antiepileptic, used as a substitute for potassium bromid. Dose, 30–60 gr. several times per day. Syn., *Bromethylformin; Hexamethylenetetraminbromethylate*.

Bromallyl (*brō'-mal-il*). See *Allyl Bromid*.

Bromallylene (*bro-mal'-il-ēn*). C_3H_3Br. A compound of bromin and allylene.

Bromaloin (*bro-mal-o'-in*). $C_{16}H_{15}Br_3O_7$. A derivative of barbaloin by the action of bromin. Syn., *Tribromaloin*.

Bromamyl (*brō'-mam-il*). See *Amyl Bromid*.

Bromanilin (*brom-an'-il-in*). 1. A substitution compound of bromin and anilin. Syn., *Bromamidobenzene*. 2. A proprietary antipyretic and aseptic. Syn., *Serosine*.

Bromanisate (*bro-man'-is-āt*). A salt of bromanisic acid.

Bromanisol (*bro-man'-is-ol*). $C_{20}H_9O_2Br_3$. A crystallizable compound obtained from anise camphor by action of bromin.

Bromantifebrin (*bro-man-te-feb'-rin*). See *Antisepsin* (Illus. Dict.).

Bromargyrite (*bro-mar'-jir-īt*). Native silver bromid.

Bromate (*brō'-māt*). A salt of bromic acid.

Bromateccrisis (*bro-mat-ek'-ris-is*) [βρῶμα, food; ἔκκρισις, excrement]. The passage of undigested food.

Bromated (*brō'-ma-ted*). Impregnated with bromin.

Bromatometer (*bro-mat-om'-et-ur*) [βρῶμα, food; μέτρον, measure]. An instrument used in bromatometry.

Bromatometry (*bro-mat-om'-et-re*). The estimation of the daily amount of food requisite for an individual.

Bromatotoxicon (*bro-mat-o-toks'-ik-on*). A general term for the active agent in food-poisoning.

Bromatotoxin (*bro-mat-o-toks'-in*). A basic poison generated in food by the growth of microorganisms.

Bromatotoxism (*bro-mat-o-toks'-izm*) [βρῶμα, food; τοξικόν, poison]. Poisoning with infected food.

Bromaurate (*bro'-maw-rāt*). 1. A salt of bromauric acid. 2. A double bromid of gold and another radicle or element.

Brombenzoyl (*brom-ben' zo-il*). $C_7H_5O.Br$. A crystalline substance obtained from oil of bitter almonds by action of bromin; it is soluble in alcohol and ether. Syn., *Brombenzoylic acid.*

Bromcaffein (*brom-kaf-e'-in*). $C_8H_9BrN_4O_2$. A compound first obtained by Schultzen by mixing 1 part of caffein with 5 parts of bromin; melts at 206° C.

Bromelin (*bro'-mel-in*) [*Bromelia*, a genus of plants]. A digestive principle, allied to trypsin, found in juice of pineapples. It will digest 1500 times its weight of proteids.

Bromethylformin (*bro-meth-il-form'-in*). See *Bromalin.*

Bromhemol (*brōm'-he-mol*). A compound of hemol and 2.7% of bromin. It is used when continued effect of bromin is desired. Dose, 15–30 gr. (1–2 gm.). Syn., *Bromohemol.*

Bromhydrate (*brōm-hi'-drāt*). See *Hydrobromate* (Illus. Dict.).

Bromhydric (*brōm-hi'-drik*). See *Hydrobromic* (Illus. Dict.). **B., Ether,** hydrobromic ether.

Bromic (*bro'-mik*). Containing or compounded with bromin.

Bromid. (See Illus. Dict.) **B., Arsenous, or Arsenious,** arsenic bromid. **B., Basic,** a compound of a bromid with the oxid of the same base. **B., Bismuthyl,** bismuth oxybromid.

Bromin. (See Illus. Dict.) **B. Acetate,** CH_3CO_2Br, acetohypobromous anhydrid; it is isomeric with monobromacetic acid. **B., Bibron's Mixture.** See *Bibron's Antidote* (Illus. Dict.). **B. Blocks,** porous blocks of diatomaceous earth incinerated with calcium saccharate and impregnated with 3 times their weight of bromin, which is gradually given off by them. They are used as disinfectants. **B. Chlorid,** BrCl (below 10° C.), a reddish-yellow, mobile, very volatile liquid. It is used as an internal and external caustic in cancer. **B. Cyanid,** BrCN, colorless needles or cubes with pungent irritating odor, soluble in water, melting at about 52° C. **B. Disulfid,** S_2Br_2, a red liquid. **B. Hydrate,** $Br.5H_2O$, an unstable crystalline compound obtained by dissolving bromin in water just above the freezing-point. **B. Iodid,** IBr_5, a dark brown liquid, soluble in water; it is used as a gargle in diphtheria, in 0.1% solution. **B. Pentachlorid,** $BrCl_5$, a caustic liquid.

Brominated, Brominized (*bro'-min-a-ted, -īzd*). Combined with bromin.

Brominium, Brominum (*bro-min'-e-um, bro'-min-um*). See *Bromin* (Illus. Dict.).

Bromiodid (*bro-mi'-od-id*). A compound formed from the bromid and the iodid of the same base.

Bromiodoform (*bro-mi-o'-do-form*). $CHBr_2I$. A substitution compound of bromin and iodoform.

Bromipin (*bro'-mi-pin*). A liquid compound of bromin and sesame oil containing 10% of bromin. It is used as a sedative in epilepsy. Dose, 1–3 teaspoonfuls daily.

Bromite (*bro'-mīt*). 1. Native silver bromid. 2. A salt of bromous acid.

Bromium (*bro'-me-um*). Bromin.

Bromoacetate (*bro-mo-as'-et-āt*). See *Acetobromid.*

Bromoalbumin (*bro-mo-al'-bu-min*). A compound of bromin (10%) and albumin; it is used in epilepsy. Syn., *Bromalbumin; Bromosin.*

Bromocamphor (*bro-mo-kam'-for*). See *Camphor, Monobromated* (Illus. Dict.).

Bromocoll (*bro'-mo-kol*). A product of the condensation of bromin, tannin, and gelatin; a light brown, odorless, almost tasteless powder containing 20% of bromin, soluble in alcoholic fluids. It is indicated when other bromids are not well borne. Dose, 15–75 gr. (1–5 gm.) per day; in epilepsy, 8 gm. Syn., *Dibromotannic glue.*

Bromocuminol (*bro-mo-ku'-min-ol*). $C_{10}H_{11}BrO$. A heavy oil obtained from cuminol by action of bromin.

Bromoform. (See Illus. Dict.) Syn., *Formobromi; Formylbromid; Methenyl tribromid; Tribrommethane* **B. Water,** an aqueous solution of bromoform (3 grams to 1 liter of distilled water) which has been allowed to stand for some time with occasional shaking. The fluid contains about 5 cgm. (gr. $\frac{5}{6}$) of dissolved bromoform per tablespoonful. It is used as a sedative. Dose, 50–300 gm. per day.

Bromoformism (*bro-mo-form'-izm*). Poisoning with bromoform.

Bromohematin (*bro-mo-hem'-at-in*). Hematin hydrobromid.

Bromohemol. See *Bromhemol.*

Bromohydrate. See *Hydrobromate* (Illus. Dict.).

Bromohydric. See *Hydrobromic* (Illus. Dict.).

Bromohyperidrosis (*bro-mo-hi-per-id-ro'-sis*) [βρῶμος, a stench; ὑπέρ, over; ἵδρωσις, a perspiring]. A condition marked by excessive and offensive perspiration.

Bromolithia (*bro-mo-lith'-e-ah*). A proprietary remedy for gout.

Bromomania (*bro-mo-ma'-ne-ah*). Insanity from excessive use of bromids.

Bromomenorrhea, Bromomenorrhœa (*bro-mo-men-or-e'-ah*) [βρῶμος, stench; μήν, month; ῥεῖν, to flow]. Disordered menstruation marked by offensiveness of the flow.

Bromomethane (*bro-mo-meth-ān'*). See *Methyl Bromid.*

Bromopan (*bro'-mo-pan*). A patented bread for use in hysteria and epilepsy, each loaf containing 1 gm. of a bromid.

Bromophenol (*bro-mo-fe'-nol*). 1. See *Bromol* (Illus. Dict.). 2. C_6H_4BrOH. A violet-colored liquid obtained from phenol by action of bromin. It is used in a 1% to 2% ointment in treatment of erysipelas. Syn., *Orthobromphenol.*

Bromophtharin (*bro-mo-thar'-in*). A proprietary disinfectant and deodorant said to contain zinc oxid, calcium oxid, calcium carbonate, sodium sulfate, and 5% of sand.

Bromopin. See *Bromipin.*

Bromoplatinate (*bro-mo-plat'-in-āt*). See *Platinibromid.*

Bromopropylene (*bro-mo-pro'-pil-ēn*). See *Allyl Bromid.*

Bromopyrin (*bro-mo-pi'-rin*). 1. $C_{11}H_{11}BrN_2O$, a substance used as antipyrin, occurring in white needles soluble in alcohol, chloroform, and hot water, melting at 114° C. Dose, 5–15 gr. (0.3–01 gm.). Syn., *Monobromoantipyrin.* 2. A proprietary mixture said to consist of antipyrin, caffein, and sodium bromid.

Bromoseltzer (*bro-mo-selt'-zer*). A proprietary headache remedy.

Bromoserum (*bro-mo-se'-rum*). A solution of 6 parts of sodium bromid and 1.5 parts of sodium chlorid in 1000 parts of water. It is used by injection as a substitute for bromids.

Bromosin (*bro'-mo-sin*). See *Bromoalbumin.*

Bromosoda (*bro-mo-so'-da*). A proprietary remedy for dyspepsia.

Bromphenols (*brom'-fe-nolz*). A series of bromat

phenols occurring at times in the precipitates of tested urine.

romum (*bro'-mum*). See *Bromin.*

romurated (*bro'-mu-ra-ted*). Containing bromin or a bromin salt.

roncheopyra (*brong-ke-o-pi'-rah*) [βρόγχια, the end of the windpipe joining the lungs; πῦρ, fire]. A suffocative cough.

ronchiadenoscirrhus (*brong-ke-ad-en-o-skir'-us*) [βρόγχος, the windpipe; ἀδήν, a gland; σκιῤῥός, hard]. Scirrhus of the bronchial glands.

ronchiarctia (*brong-ke-ark'-she-ah*) [*bronchus; artare*, to contract]. See *Bronchostenosis* (Illus. Dict.).

ronchic (*brong'-kik*). Bronchial.

ronchiectasis. (See Illus. Dict.) **B., Cylindric,** dilation involving the whole circumference of the bronchial tube.

ronchiocrisis (*brong-ke-o-kri'-sis*) [*bronchus; crisis*]. Paroxysmal coughing in tabes dorsalis.

ronchiolectasis (*brong-ke-o-lek-ta'-sis*) [*bronchiole*; ἔκτασις, dilation]. Rare form of bronchiectasis diffused to all parts of the lung, making it appear as if riddled with small cavities.

ronchiolitis. (See Illus. Dict.) **B., Asthmatic.** See *B., Exudative* (Illus. Dict.). **B. fibrosa obliterans, B. obliterans, B., Obliterating Fibrous,** bronchiolitis resulting in obliteration of the finest bronchi by connective-tissue plugs.

ronchiospasmus (*brong-ke-o-spas'-mus*) [βρόγχια, bronchial tubes; σπασμός, spasm]. Spasm of the bronchi.

ronchismus (*brong-kiz'-mus*). Marshall Hall's term for suffocative bronchial spasm due to spinal paralysis.

ronchitis. (See Illus. Dict.) Syn., *Pleuritis bronchialis.* **B., Accidental,** catarrh of the bronchial tubes. **B., Acute, B., Asthenic.** See *Peripneumonia notha.* **B., Catarrhal, Chronic.** See *B., Chronic* (Illus. Dict.). **B., Cheesy,** cheesy degeneration sometimes accompanying pulmonary tuberculosis. **B., Convulsive,** whooping-cough. **B., Epidemic,** influenza. **B., Ether,** that due to the irritating effects of ether. **B., Exudative, B., Membranous.** See *B., Plastic* (Illus. Dict.). **B., Phthinoid,** tuberculous bronchitis with copious expectoration of purulent sputum. **B., Polypoid, B., Pseudomembranous.** See *B., Plastic* (Illus. Dict.). **B., Septic.** See *B., Putrid* (Illus. Dict.). **B., Suffocative, B. suffocans.** See *B., Acute Capillary* (Illus. Dict.). **B. synochica,** bronchitis not complicated with other disorders and attended with high fever. **B., Tracheo-,** that attended with tracheal catarrh. **B., Verminous,** an affection of cattle and sheep due to the presence of *Strongylus filaria* in the bronchial tubes. Syn., *Hoose; Sheep cough.*

onchoalveolitis (*brong-ko-al-ve-o-li'-tis*). See *Bronchopneumonia* (Illus. Dict.).

onchocavernous (*brong-ko-kav'-er-nus*). Both bronchial and cavernous; it is applied to respiration.

onchocele, Bronchocœle. (See Illus. Dict.) **B., Aerial.** See *Aerocele.*

onchocephalitis (*brong-ko-sef-al-i'-tis*). Whooping-cough.

onchoconstriction (*brong-ko-kon-strik'-shun*). The narrowing of the caliber of the pulmonary air-passages.

onchoconstrictor (*brong-ko-kon-strik'-tor*). Constricting the caliber of the air-passages of the lungs.

onchodilator (*brong-ko-di-la'-tor*). Dilating the caliber of the air-passages of the lungs.

onchohemorrhagia (*brong-ko-hem-or-aj'-e-ah*). Extravasation of blood from the lining membrane of the bronchial tubes.

oncholite (*brong'-ko-lit*). See *Broncholith* (Illus. Dict.).

Broncholithiasis (*brong-ko-lith-i'-a-sis*) [βρόγχος, the windpipe; λίθος, stone]. The formation of calculi in the bronchial apparatus.

Bronchomotor (*brong-ko-mo'-tor*). Affecting the caliber of the bronchial apparatus.

Bronchophonism (*brong-kof'-on-izm*). See *Bronchophony* (Illus. Dict.).

Bronchophony. (See Illus. Dict.) **B., Accidental,** that due to disease. **B., Pectoriloquous.** See *Pectoriloquy* (Illus. Dict.).

Bronchoplegia (*brong-ko-ple'-je-ah*) [βρόγχος, bronchus; πληγή, a blow]. Paralysis of the bronchial tubes.

Bronchopleurisy (*brong-ko-plu'-ris-e*). Bronchitis existing with pleurisy.

Bronchopleuropneumonia (*brong-ko-plu-ro-nu-mo'-ne-ah*). Coexistent bronchitis, pleurisy, and pneumonia.

Bronchopneumonia. (See Illus. Dict.) Syn., *Bronchiopneumonia; Bronchopneumonitis; Bronchoalveolitis; Catarrhal pneumonia; Microbronchitis.* **B. bovis,** a disease among American cattle due to infection by an ovoid belted organism. Syn., *Infectious bronchopneumonia; Corn-stalk disease.*

Bronchopneumonitis (*brong-ko-nu-mon-i'-tis*). Bronchopneumonia.

Bronchopulmonary (*brong-ko-pul'-mon-a-re*). Relating to the bronchi and lungs.

Bronchorrhea, Bronchorrhœa. (See Illus. Dict.) Syn., *Bronchoblennorrhea; Blennorrhagia pulmonum.* **B., Serous,** a form first described by Laënnec in which the sputum is serous. Syn., *Phlegmorrhagia pulmonalis; Pituitary catarrh; Asthma humida.*

Bronchorrhoncus (*brong-kor-ong'-kus*). A bronchial rale.

Bronchoscope (*brong'-ko-skōp*) [βρόγχια, the bronchial tubes; σκοπεῖν, to look]. An instrument employed in bronchoscopy.

Bronchoscopy (*brong-kos'-ko-pe*). Inspection of the bronchial tubes through a tracheal opening.

Bronchospasm (*brong'-ko-spazm*) [βρόγχος, bronchus; σπάσμος, spasm]. Bronchial spasm.

Bronchus [pl., *bronchi*]. (See Illus. Dict.) **Bronchi, Eparterial,** the bronchi situated above the pulmonary artery. **Bronchi, Hyparterial,** those situated below the pulmonary artery.

Brow. (See Illus. Dict.) **B.-ache, B.-pang,** supraorbital neuralgia. **B.-spot.** See *Glanis, Interocular* (Illus. Dict.).

Brucamarin (*bru-kam'-a-rin*). An alkaloid from the fruit of *Brucea sumatrana*

Brucea (*bru-se'-ah*) [*Bruce*, the Abyssinian explorer (1730–1794)]. A genus of plants of the order *Simarubeæ.* **B. ferruginea,** an Abyssinian species; the bark and root are used in dysentery. **B. sumatrana,** a species of the Asiatic tropics and of Australia; all parts of the plant are bitter, tonic, febrifuge, vermifuge, and antidysenteric. Syn., *Kosam; Aympaidoo.*

Brucin. (See Illus. Dict.) Dose, 0.005–0.03 gm.; max. dose, 0.05 gm. (¾ gr.), single; 0.2 gm. (3 gr.) per day. Antidotes, chloral, chloroform, tannic acid. Syn., *Vomicin; Pseudangustin; Brucinum; Brucium; Brucia.* **B. Acetate,** a crystalline compound of brucin and acetic acid. **B. Bromhydrate, B. Hydrobromate,** $C_{23}H_{26}N_2O_4 . HBr$, a substitute for strychnin in ophthalmic surgery; it is forty times less poisonous. **B. Hydrochlorate,** $C_{23}H_{26}N_2O_4 . HCl$, small white crystals, soluble in water; used as brucin. **B. Nitrate,** $C_{23}H_{26}N_2O_4 . HNO_3 + 3H_2O$, white crystalline powder soluble in water; used as brucin. **B. Phosphate,** $(C_{23}H_{26}N_2O_4)_2H_3PO_4$, white crystalline powder soluble in water; use and dose as brucin. **B. Sulfate,** $(C_{23}H_{26}N_2O_4)_2H_2SO_4 + 3\frac{1}{2}H_2O$, white

microscopic crystals, soluble in water and alcohol; use and dose as brucin.

Brucinum, Brucium (*bru-si'-num, bru'-se-um*). See *Brucin.*

Bruit. (See Illus. Dict.) For kinds,—*Amphoric, Rotatory,* etc.,—see *Murmur.* **B., Leudet's,** a fine cracking sound in the ear, audible to both the observer and the patient, in catarrhal and nervous affections of the ear. It is attributed to spasm of the external peristaphylinus muscle. **B., Verstraetin's,** a bruit heard over the lower border of the liver in some cachectic individuals.

Brun's Airol Paste. For sealing wounds and preventing stitch-abscess; consists of 20 gm. each of airol, bolus albus, and glycerin.

Brunfelsia (*brun-fel'-se-ah*) [*O. Brunfels,* a botanist of Metz (1464–1534)]. A genus of plants of the order *Saponaceæ.* **B. americana,** a West Indian species. A syrup made from the fruit is used as a tonic in recovery from diarrhea. **B. uniflora,** of Brazil, is purgative, emetic, and emmenagog. Syn., *Mercurio vegetal.*

Brunn's Cell-nests. See *Nests, Brunn's Epithelial.*

Brunonian. (See Illus. Dict.) 2. A believer in Brownism or the Brunonian theory.

Brush. (See Illus. Dict.) **B., Terminal.** See *Motor End plate* (Illus. Dict.).

Brushing. See *Interfere* (Illus. Dict.).

Bryogenin (*bri-oj'-en-in*). A yellow amorphous resin obtained from bryonin by boiling in dilute sulfuric acid.

Bryoidin (*bri-oid'-in*). $2(C_{10}H_{16}) + 3H_2O$. A crystallizable, bitter, acrid constituent of elemi.

Bryonidin (*bri-on'-id-in*). A glucosid isolated from *Bryonia alba,* more active than bryonin.

Bryonitin (*bri-on'-it-in*). See *Bryonin* (Illus. Dict.).

Buaycura (*bu-ah-e-ku'-rah*). A South American name for the root of *Statice brasiliensis.*

Bubo. (See Illus. Dict.) Syn., *Sympathetic abscess, Inguinal adenitis; Adin.* **B., Abdominal,** one occurring above the fold of the groin. **B., Absorption.** See *B., Virulent.* **B., Acute.** See *B., Suppurating.* **B., Bullet.** See *Chancre* (Illus. Dict.). **B., Chancroidal.** See *B., Virulent.* **B., Chancrous.** See *B., Syphilitic.* **B., Chronic.** See *B., Indolent.* **B., Common.** See *B., Sympathetic* (Illus. Dict.). **B., Consecutive,** the syphilitic bubo following a chancre. **B., Creeping.** See *B., Serpiginous.* **B., Crural, B., Femoral,** one located below the fold of the groin. **B., Gonorrheal,** a simple bubo caused by gonorrhea. Syn., *Adenitis e blennorrhœa.* **B., Indolent,** one with enlargement and hyperplasia without the formation of pus or any tendency to break down. Syn., *Adenitis e sclerosi; Adenitis e blennorrhœa.* **B., Inflammatory.** See *B., Sympathetic* (Illus. Dict.). **B., Inguinal,** one situated in the groin. **B. insons.** See *B., Sympathetic* (Illus. Dict.). **B., Nonconsecutive.** See *B., Primary* (Illus. Dict.). **B., Nonvenereal, B., Nonvirulent.** See *B., Sympathetic* (Illus. Dict.). **B., Pestilential,** that accompanying plague. **B., Phagedenic,** virulent bubo with phagedena. **B., Primitive.** See *B., Primary* (Illus. Dict.). **B., Pubic,** a bubo occurring near the pubes. **B., Rheumatic,** a hard lump occurring oftenest on the back of the neck as a sequel of acute articular rheumatism. **B., Serpiginous,** an ulcerated bubo which changes its seat or in which the ulceration creeps serpiginously. **B., Simple.** See *B., Sympathetic* (Illus. Dict.). **B., Strumous,** hypertrophied glands forming a large indolent swelling in a scrofulous subject. **B., Suppurating,** one attended with formation of pus. **B., Syphilitic,** that which appears in syphilis, a few days later than the primary lesion. It runs a slow course of 6 months or more. Syn., *Inguen induratum; I. syphiliticum; Primitive syphilitic adenitis.* **B., Syphilostrumous,** a syphilitic bubo marked by scrofulous degeneration. **B., Venereal.** See under *Venereal* (Illus. Dict.). **B., Virulent,** an ulcerated, suppurating bubo due to absorption of the virus of a chancre. Syn., *Inguen virulentum; Chancrous adenitis; Adenitis ex ulcere contagiosa.*

Bubophthalmia (*bu-bof-thal'-me-ah*). See *Keratoglobus* (Illus. Dict.).

Bubrostis (*bu-bros'-tis*) [L.]. Bulimia.

Bubulin (*bu'-bul-in*) [*bubulus,* relating to cattle]. An uncrystallizable substance obtained from cow's dung by action of alcohol.

Buccellation (*buk-sel-a'-shun*) [*buccella,* a morsel]. Hemostasis by a lint-compress.

Buccilingual (*buk-sil-ing'-gwal*) [*bucca,* the cheek; *lingua,* the tongue]. Relating to the cheek and the tongue.

Buccinatolabialis (*buk-sin-at-o-la-bi-a'-lis*). The buccinator and orbicularis oris regarded as one.

Buccobranchial (*buk-o-brang'-ke-al*). Relating to the mouth and the branchial cavity.

Buccolingually (*buk-o-lin'-gwal-e*). From the cheek toward the tongue.

Buccopharyngeus (*buk-o-far-in'-je-us*). See under *Muscles.*

Buchner's Humoral Theory. See under *Immunity.*

Bucinal (*bu'-sin-al*). See *Buccinal* (Illus. Dict.).

Bucnemia indica. See *Bucnemia* (Illus. Dict.). **B. sparganotica.** See *Phlegmasia alba dolens* (Illus. Dict.).

Bud. (See Illus. Dict.) **B., Gustatory, B., Taste.** See *Taste-bud* (Illus. Dict.).

Bufonin (*bu'-fon-in*). $C_{34}H_{54}O_9$. A crystalline substance isolated by Faust (1902) from an alcoholic extract of the dried skins of toads; it is chemically related to cholesterin.

Bufotalin (*bu-fo'-tal-in*). $C_{119}H_{171}O_{35}$. A toxic substance isolated by Phisalix and Bertrand from the parotid gland and skin of the common toad, *Bufo vulgaris;* it is a transparent resin, soluble in chloroform, alcohol, and acetone. It acts on the heart and does not affect the nervous centers.

Bufotenin (*bu-fo'-ten-in*). A toxic body found with bufotalin (*q. v.*); it exerts a powerfully paralyzing action on the nervous centers.

Bugantia (*bu-gan'-she-ah*) [L.]. A chilblain.

Bukardia (*bu-kar'-de-ah*) [*βουκαρδία,* ox heart]. Hypertrophy of the heart.

Bulamize (*bu'-lam-iz*). To infect with Bulam fever.

Bulb. (See Illus. Dict.) **B., Arterial,** the anterior part of the embryonic heart from the division of which the aortic and pulmonary stems have their origin. **B., Brachial, B., Brachiorhachidian,** the expansion of the spinal cord at the place of distribution of the nerves forming the brachial plexus. **B. of the Corpus spongiosum.** See *B. of the Urethra* (Illus. Dict.). **B., Crural,** the dilation of the spinal cord in the lumbar region. **B., Dentinal,** a dentinal papilla. **B., End.** See *End-bulb* (Illus. Dict.). **B. of the Fornix.** See *Splenium* (Illus. Dict.). **B.s, Four,** the corpora quadrigemina. **B., Gustative, B., Gustatory.** See *Taste-buds* (Illus. Dict.). **B.s, Krause's.** See *Corpuscles, Krause's* (Illus. Dict.). **B., Lumborrhachidian.** See *B., Crural.* **B., Nerve.** See *End-bud* and *Motorial End-plate* (Illus. Dict.). **B. of the Ovary.** See *B., Rouget's.* **B., Postcornu.** See *Occipital Eminence* (Illus. Dict.). **B., Rhachidian,** the oblongata. **B., Rouget's,** the bulb of

vary; a plexus of veins lying on the surface of the vary and communicating with the uterine and pampiniform plexuses. **B. of the Spinal Cord or Marrow,** the oblongata. **B., Terminal Nerve.** See *Corpuscles of Krause* (Illus. Dict.). **B.s, Tonsillar,** the lobules of the cerebellum. Syn., *Bulbi tonsillares.* **B., Vestibular, B., Vestibulovaginal.** See *B. of the Vagina* (Illus. Dict.).

Ibocapnin (*bul-bo-kap'-nin*). $C_{34}H_{36}N_2O_7$ (Freund). The principal alkaloid from *Corydalis tuberosa*, D. C., occurring as a white crystalline powder, soluble in alcohol and chloroform and melting at 199° C. **B. Hydrochlorate,** $C_{34}H_{36}N_2O_7$. HCl, white crystalline powder, soluble in hot water.

Ibonuclear (*bul-bo-nu'-kle-ar*). Relating to the oblongata and its nerve-nuclei.

Ibopetal (*bul-bo-pet'-al*) [*bulbus*, bulb; *petere*, to seek]. Moving toward the bulb, said of nerve impulses.

Ibosin (*bul'-bo-sin*). A syrup-like substance of strong alkaline reaction obtained by E. Boudier from the fungus *Amanita phalloides*, Fr.

Ibus [pl., *bulbi*]. (See Illus. Dict.) **B. cinereus.** See *Bulb, Olfactory* (Illus. Dict.). **B. crinis,** a hair-bulb. **B. oculi,** the globe of the eye. **B. pili.** See *Bulb of a Hair* (Illus. Dict.). **Bulbi priorum cruum fornicis.** See *Corpora mammillaria* (Illus. Dict.). **B. venæ jugularis internæ inferior,** an enlargement of the jugular vein immediately above its union with the subclavian vein. **B. venæ jugularis internæ superior,** an enlargement of the internal jugular vein at the point of exit from the jugular foramen. **B. vestibuli,** the bulb of the vagina.

Ilimia, Bulimiasis, Bulimy. (See Illus. Dict.) **B. canina, B. cynorexia, B. emetica,** bulimia with vomiting after eating. **B. cardialgica,** bulimia attended with gastralgia. **B. syncopalis,** that attended with fainting. **B. verminosum,** excessive hunger due to intestinal worms.

Illa. (See Illus. Dict.) **B., Auditory.** See *B., Tympanic.* **B. dolentissima,** a small, very painful cutaneous ulcer, which persists for a long time. **B. a frigore,** a blister from the effect of cold. **Bullæ gangrænosæ,** those occurring in moist gangrene of the skin. **B., Mastoid,** in comparative anatomy a rounded eminence on the posterior portion of the mastoid part of the periotic bone in some of the mammals. **B., Petrotympanic.** See *B., Tympanic.* **B., Supratympanic.** See *B., Mastoid.* **B., Tympanic,** in comparative anatomy a round, hollow projection on the inner and inferior aspect of the tympanic bone of some of the lower mammals.

Illation (*bul-a'-shun*) [*bullare*, to bubble]. 1. Inflation. 2. Division into small compartments.

Indle. (See Illus. Dict.) **B., Aberrant** [v. Bechterew]. See *Tract, Gowers'.* **B., Arnold's,** the fibers which form the inner third of the crusta of the cerebral pedunicles. **B.s, Association,** the association fibers of the cerebrum. **B., Comma-shaped.** See *Tract, Schultze's.* **B., Gierke's Respiratory.** See *B., Krause's Respiratory.* **B., Gowers'.** See *Column, Gowers'* (Illus. Dict.). **B., Gratiolet's.** See *Radiation, Optic* (Illus. Dict.). **B., Ground.** See *Ground-bundle.* **B., v. Gudden's Hemispheric,** one in the optic tract passing over to the most lateral portion of the base of the peduncle and thence to the cerebral hemisphere. **B. of the Gyrus fornicatus.** See *Cingulum.* **B., Helweg's Triangular.** See *Fillet, Olivary* (Illus. Dict.). **B., Hemispheral,** the posterior one of the two bundles composing the anterior commissure. It originates in the pyramidal cells of the temporal lobe and amygdaloid nucleus, passes through the external capsule and lenticula, unites with the mesial part of the commissure at the point of the decussation of its fibers, and radiates to the opposite temporal lobe. **B., Inferior Longitudinal.** See *Fasciculus, Longitudinal Inferior.* **B.s, Internuclear.** See *Bridges, Intercellular.* **B., Krause's Respiratory,** the solitary fascicle of the oblongata. **B., Lenhossék's.** See under *Lenhossék* (Illus. Dict.). **B., Longitudinal,** a bundle of fibers outside of the optic radiation passing from the occipital to the temporal lobe. **B., Meynert's.** See under *Meynert* (Illus. Dict.). **B., Muscle.** See under *Muscle* (Illus. Dict.). **B., Oval.** See *B., Türck's.* **B., Pick's,** an anomalous bundle of nerve-fibers in the oblongata connected with the pyramidal tract. **B., Primitive, B., Schwann's Primitive,** a muscular fiber. **B., Solitary, B., Trineural.** See under *Solitary* (Illus. Dict.). **B., Spitzka's,** a tract of nerve-fibers which passes from the cerebral cortex through the pyramidal region of the pes pedunculi to the oculomotor nuclei of the opposite side. **B., Stilling's,** the solitary fascicle of the oblongata. **B., Türck's,** a tract of nerve-fibers passing from the cortex of the temporosphenoid lobe through the outer portion of the crusta of the cerebral peduncle and the pons into the internal geniculate body.

Bunioid (*bun'-e-oid*) [βουνός, a hill; εἶδος, likeness]. Having a round form; applied to tumors.

Bunogaster (*bun-o-gas'-tur*) [βουνός, a little hill; γαστήρ, stomach]. Having a protruding abdomen.

Buphane (*bu-fan-e'*) [βοῦς, ox; φονή, slaughter]. A genus of plants of the order *Amaryllideæ*. **B. disticha,** a native of the Cape of Good Hope; the juice of the bulb is used as an arrow-poison by the Hottentots.

Bur. (See Illus. Dict.) **B., Dental,** an instrument with a rounded, pointed, cylindric, or oval head and a cutting blade, used in the dental engine for excavating carious dentine, and for other purposes. **B., Surgical,** an instrument similar in form to a dental bur, but larger, designed for surgical operations upon the bones.

Buranham, Buranhem (*bur-ahn'-yahm -yem*) [Port.]. See *Monesia* (Illus. Dict.).

Burkism (*burk'-izm*). See *Burking* (Illus. Dict.).

Burmah Head. A disease of the Burmese territory marked by loss of memory, idiocy, homicidal mania, and inability to walk.

Burn. (See Illus. Dict.) **B., Brush,** a lesion presenting the appearance of a burn, but due to friction.

Bursa. (See Illus. Dict.) **B., Accidental, B., Adventitious,** one resembling a bursa mucosæ, but due to friction or pressure. **B., Acromial, External,** one beneath the acromion, between the coracoid process, the deltoid muscle, and the capsular ligament. **B., Acromial, Internal,** one lying above the acromion, between the tendon of the infraspinatus and the teres major. **B., Anconeal,** one between the olecranon and the tendon of the triceps extensor cubiti. **B., Boyer's,** the subhyoid bursa. **B. calcanea,** one lying between the tendo Achillis and the calcaneum. **B., Capituloradial,** one lying between the head of the radius and the common tendon of the extensor carpi radialis brevis and the extensor communis digitorum. **B., Clavicular,** one lying between the clavicle and the coracoid process of the scapula. **B., Coracobrachial,** one lying between the tendon of the coracobrachialis muscle and the capsular ligament. **B. coracoidea,** one near the root of the coracoid process. **B. epicondyli,** a bursa sometimes found between the skin and the outer condyle of the humerus. **B. epitrochleæ,** one found between the skin and the inner condyle of the humerus. **B., External** (of the teres

major), one lying between the head of the humerus and the teres major. **B., Fleischmann's,** a bursa lying in the sublingual space beneath the frenum linguæ; its existence is disputed. **B., Gluteofascial, B., Gluteotrochanteric,** one lying between the trochanter major and the glutæus maximus. **B., Gruber's,** the synovial cavity of the tarsal sinus. **B., Humerobicipital,** one lying within the bicipital groove of the humerus. **B., Iliac.** 1. One lying between the tendon of the iliacus muscle and the trochantin. 2. One between the pelvic brim and the iliopsoas muscle. **B., Iliopuberal,** one lying between the capsular ligament of the hip-joint and the iliacus internus and psoas magnus muscles. **B., Infragenual.** See *B. patellæ.* **B., Internal** (of the teres major), one found within the teres major at the point of divergence of its fibers. **B., Luschka's,** a crypt, larger and more defined than the neighboring crypts, frequently located in the lower part of the pharyngeal tonsil, and regarded as a vestige of the communication existing during early fetal life between the pharynx and the hypophysis. **B., Obturatory,** one lying between the capsular ligament of the hip-joint and the obturator internus and gemelli muscles. **B., Omental, B. omentalis,** a large cavity formed by the peritoneum back of the stomach and in the great omentum. It is divided into the bursa of the great omentum and the bursa of the lesser omentum. **B. omenti majoris,** the bursa of the greater omentum. **B. omenti minoris,** the bursa of the lesser omentum. **B. patellæ, B. patellaris,** one lying between the patella and the skin. **B. patellaris lateralis externa,** one lying between the patella and the external lateral dilation of the tendon of the quadriceps extensor cruris; it is rarely found. **B. patellaris lateralis interna,** one between the patella and the inner lateral dilation of the quadriceps extensor cruris; it may be either deep or superficial. **B., Pectineal,** one lying between the femur and the pectineus muscle. **B. of the Pectoralis major,** one lying between the head of the humerus and the inner surface of the pectoralis major. **B. pectoralis minoris,** one beneath the tendon of the pectoralis minor. **B., Pharyngeal.** See under *Pharyngeal* (Illus. Dict.). **B., Rider's.** See under *Rider* (Illus. Dict.). **B. sacralis,** one found in the aged over the sacrococcygeal articulation or over the spine of the fourth or fifth sacral vertebra. **B., Sternohyoid,** one lying between the hyoid bone and the insertion of the sternohyoid muscle. **B., Stylohyoid,** one beneath the insertion of the stylohyoid muscle.

Bursalis (*bur-sa'-lis*). The obturator internus muscle.

Bursattee. A disease occurring in India resembling equine mycosis.

Bursera. (See Illus. Dict.) **B. depechiana,** Pois., furnishes oil of Mexican lignaloes. **B. gummifera,** L., a native of South America; the resin, chibou or cachibou, is used in plasters and salves and internally in diseases of the lungs and kidney. The leaves are vulnerary, the bark is anthelmintic and antigonorrheic, and the root is used in diarrhea.

Burserin (*bur'-ser-in*) [*Bursera,* a genus of plants]. A resinous constituent of opobalsam.

Bursin (*bur'-sin*). An alkaloid isolated from *Capsella bursa-pastoris,* Moench. It is a yellow deliquescent powder, used as an astringent, tonic, and styptic, instead of ergot, and hypodermically in aqueous solution.

Bursitis. (See Illus. Dict.) **B., Omental,** inflammation of the omental bursa. **B., Retrocalcaneal.** See *Achillodynia* (Illus. Dict.).

Burst. In veterinary practice, a hernia.

Bush-tea. The leaves and tops of *Cyclopia genistoides,* Vent., and *C. subternata,* Vog., used at Cape Colon as a substitute for tea. They contain a glucosid, cycl pin.

Butane (*bu'-tān*). $C_4.H_{10}$. An anesthetic substan isolated from petroleum. Syn., *Butyl hydrid.*

Butin (*bu'-tin*). C_4H_6. A liquid hydrocarbon four in coal-gas; boils at 20° C. Syn., *Vinylethylene.*

Butter. (See Illus. Dict.) **B., Bambarra, B., Ban bouc, B., Bambuk.** See *Bambouc Butter.* **B. o Canara,** a solid body obtained from the fruit of *Vater indica,* L. **B., Chi, B., Galam.** See *Bambouc Butt* **B.-cyst.** See *Cyst.* **B.-fly.** (See Illus. Dict.) Wing-shaped skin flaps. **B., Kokum,** oil of Garcini **B., Palm.** See *Oil, Palm.* **B., Shea.** See *Ba bouc Butter.* **B.-tree.** See *Butyrospermum parki* **B., Vegetable.** See *B. of Cacao* (Illus. Dict.).

Buttermilk (*but'-ur-milk*). The liquid left after e tracting the butter from cream. **B.-belly,** a distend abdomen; pot-belly.

Button. (See Illus. Dict.) **B., Chlumsky's,** an i testinal button made of pure magnesium after the pa tern of the Murphy button. It remains undissolv for 4 weeks, only the outer part becoming softer.

Buttress (*but'-res*). The inflexion of the hoof-wall the heel in solipeds.

Butyl. (See Illus. Dict.) **B. Acetate,** $C_6H_{12}O_2$, liquid isomer of caproic acid. **B.-carbinol,** an alcohol. **B. Hydrid.** See *Butane.* **B.-hypnal** combination of butyl chloral and antipyrin, formi transparent needles soluble in alcohol, ether, a chloroform, and in 30 parts of water; melts at 70° It is hypnotic and antipyretic. **B. Iodid, Secondar** C_4H_9I, a colorless liquid obtained from erythrite distillation with hydroiodic acid; boils at 118° C., gr. 1.632 at 0° C. **B., Iso-** (compounds). under *Iso.* **B. Nitrite,** $(CH_3)_3C:NO_2$, a liquid; gr. 0.8914; melts at 63° C.

Butylic (*bu-til'-ik*). Containing butyl or related to i

Butylidene (*bu-til'-id-ēn*). C_4H_8. A bivalent radi isomeric with butylene. **B. Oxid,** butyl aldehyd.

Butyphus (*bu-ti'-fus*) [*βοῦς,* an ox; *τῦφος,* stupo The cattle-plague. Syn., *Rinderpest.*

Butyraceous (*but-ir-a'-shus*) [*butyrum,* butter]. I sembling or containing butter.

Butyral (*but'-ir-al*). $C_8H_{14}O_2$. A colorless, mob liquid obtained from the distillation of barium butyr

Butyrate (*but'-ir-āt*) [*butyrum,* butter]. A salt butyric acid.

Butyrchloral Hydrate. See *Chloral butylicum* (Ill Dict.).

Butyric (*but-ir'-ik*). Contained in butter; derived fr butter. **B. Anhydrid,** so-called "anhydrous buty acid," $C_8H_{14}O_3$, obtained by the action of buty chlorid on a dry alkali butyrate. It has a spec gravity of 0.978 at 12.5° C. and boils at 191°–193°

Butyroid (*but'-ir-oid*). Having the consistency of but

Butyrolein (*but-ir-o'-le-in*). A substance found in t ter which differs from olein in not yielding sebacic when distilled.

Butyromel (*but-ir'-o-mel*). The proprietary name f mixture of 2 parts of fresh butter and 1 part of ho rubbed together until a clear yellow mixture is obtai It is used in preparing palatable preparations of liver oil and other nauseous oleaginous substances.

Butyrometer (*but-ir-om'-et-ur*) [*βούτυρον,* butter; *μέτρον,* measure]. An apparatus for determining proportion of fatty matter in milk.

Butyroscope (*but-ir'-o-skōp*) [*βούτυρον,* butter; *σκοπεῖν* to look]. An instrument for estimating the propor of fat in milk.

Butyrospermum (*but-ir-o-spur'-mum*) [*βούτυρον,* ter; *σπέρμα,* seed]. A genus of trees of the o

Sapotaceæ. **B. parkii**, the shea tree, bambuc or butter tree, a species of the African tropics, furnishes bambuc butter (*q. v.*) from its fatty seeds.

butyrous (*but'-ir-us*). See *Butyraceous*.

butyryl (*but'-ir-il*). C_6H_7O. A hypothetic radicle of butyric acid.

buxinidin (*buk-sin'-id-in*). An alkaloid obtained with buxin from the bark of *Buxus sempervirens*.

bychorcho. The Russian name for the poisonous spider *Galeodes araneoides*.

bynedestin (*bin-e-des'-tin*) [*βύνη*, malt; *ἐδεστός*, edible]. A globulin obtained from malt.

bynin (*bin'-in*) [*βύνη*, malt]. 1. A proteid, insoluble in water, found in malt. 2. A proprietary liquid extract of malt made in England. **B., Amara**, a combination of bynin (2) with the phosphates of iron, quinin, and strychnin.

Bynocascada (*bin-o-kas-kad'-ah*). A proprietary preparation consisting of liquid malt, cascara sagrada, and frangula. Dose, as an aperient, ½ fluid ounce; as a laxative, 1 fluid dram.

Bynol (*bin'-ol*). A combination of malt extract and cod-liver oil.

Byrolin (*bir'-ol-in*). A combination of boric acid, glycerin, and lanolin, used in skin diseases.

Byssal (*bis'-al*). Relating to byssus.

Byssoid (*bis'-oid*). Consisting of a filamentous fringe of which the strands are of unequal length.

Byssophthisis (*bis-o-tiz'-is*). See *Byssinosis* (Illus. Dict.).

C

cabal (*ka-bal'*) [Ar., *kabala*, tradition]. A pretended system of medicine, carried out by the agency of supernatural powers; the cabalistic art.

cabalistic Theory. That all the events of life and all the phenomena of nature proceed from influences which gods, devils, or the stars exercised on the "archetype"—that is, on the essential spirit or substance. [Park.]

caballine (*kab'-al-ēn*) [*καβάλλης*, a horse]. Relating to or used for horses; applied to a variety of aloes.

cabanis' Pallet. A shovel-shaped instrument consisting of two plates of perforated silver, jointed and movable on each other; it is used to seize the extremity of the nasal probe in Méjean's operation for lacrimal fistula.

cacabay. The name for lepra in the Antilles.

cacaerometer (*kak-a-er-om'-e-tur*) [*κακός*, bad; *ἀήρ*, air; *μέτρον*, measure]. An apparatus for determining the impurity of the air.

cachexia [pl., *cachexiæ*, *cachexias*]. (See Illus. Dict.) **C., Alcoholic**, the disordered condition of health due to abuse of alcohol. **C., Alkaline**, that due to alkalinity of the blood. **C. aquosa.** (See Illus. Dict.) 2. A form of cachexia observed in cattle and sheep, believed to be caused by a species of *Distoma*. **C., Arsenical**, chronic arsenical poisoning. **C., Cancerous, C. canceratica, C., Carcinomatous**, a condition marked by weakness, emaciation, and a muddy or brownish complexion, due to carcinomatous disease. Syn., *Cancerous diathesis*. **C., Cardiac**, a condition resembling chlorosis with blueness of the mucosa, observed in subjects of chronic heart-disease. **C. cellulosæ hydatigena.** See *Measles* (2) (Illus. Dict.). **C., Chlorotic**, chlorosis. **C., Drunkard's.** See *C., Alcoholic*. **C. exophthalmica**, exophthalmic goiter. **C. intumescentia**, that accompanied by swelling of some part. **C., Lead**, the disordered condition due to chronic plumbism. **C., Lymphaticosplenic.** See *Lymphadenoma* (Illus. Dict.). **C., Malarial, C., Malarious, C., Marsh.** See under *Malarial* (Illus. Dict.). **C. mercurialis**, a cachectic condition caused by continued use of mercury. Syn., *Mercurial diathesis*. **C., Miners'.** See *Uncinariasis*. **C., Osteal**, profound cachexia seen in children and accompanied by painful swelling of one of the long bones, with hematinuria or extravasation of blood into a tissue, and often by rachitic phenomena. **C. ovium hydropica.** See *Rot* (b) (Illus. Dict.). **C., Paludal.** See *Malarial Cachexia* (Illus. Dict.). **C., Periosteal.** See *C., Osteal*. **C., Saturnine.** See *C., Lead*. **C., Splenic, C. splenica et lymphatica, C. splenicolymphatica, C. splenetica.** See *Lymphadenoma* (Illus. Dict.). **C., Strumous**, that due to scrofula or causing its development. **C., Suprarenal**, Addison's disease. **C., Tuberculous**, the disordered condition preceding the development of tuberculosis. **C. uteri, C. uterina**, leukorrhea. **C. venerea**, syphilis. **C. venosa.** See *Venosity* (Illus. Dict.). **C. verminosa, C., Verminous**, that due to intestinal worms. **C. virginum**, chlorosis.

Cachibou. See under *Bursera gummifera*, L.

Cacillana Bark (*kas-il-an'-ah*). See *Coccillana* (Illus. Dict.).

Cacochymic. (See Illus. Dict.) 2. One affected with cacochymia.

Cacodiacol (*kak-o-di'-ak-ol*). Guaiacol cacodylate.

Cacodylate (*kak-od'-il-āt*). A salt of cacodylic acid.

Cacoethes. (See Illus. Dict.) 2. A malignant ulcer.

Cacoethic (*kak-o-eth'-ik*) [*κακός*, bad; *ἔθος*, habit]. Malignant.

Cacopharyngia (*kak-o-far-in'-je-ah*) [*κακός*, bad; *φάρυγξ*, the pharynx]. Gangrene of the pharynx.

Cacoplasia (*kak-o-pla'-se-ah*) [*κακός*, bad; *πλάσσειν*, to form]. The formation of diseased structures.

Cacopneumonia (*kak-o-nu-mo'-ne-ah*) [*κακός*, bad; *pneumonia*]. Gangrene of the lung.

Cacopraxis (*kak-o-praks'-is*). See *Cacopragia* (Illus. Dict.).

Cacosplanchnia (*kak-o-splangk'-ne-ah*) [*κακός*, bad; *σπλάγχνα*, the viscera]. A diseased condition of the digestive tract and consequent emaciation.

Cacothesis (*kak-oth'-es-is*) [*κακός*, bad; *θέσις*, a placing]. A faulty position of a part or of the entire organism.

Cacotrichia (*kak-o-trik'-e-ah*) [*κακός*, bad; *θρίξ*, hair]. A diseased condition of the hair.

Cactin (*kak'-tin*). 1. An acrid resinous glucosid obtained from *Cereus grandiflorus*. 2. A red coloring-matter obtained from the fruit of *Cereus variabilis*, Pfeiff., and other species.

Cacur (*kak'-ur*). A small gourd, the fruit of *Cucumis myriocarpus*, which is used in an unripe state as an emetic by the Kaffirs. Twenty grains of the fresh pulp produces in man nausea and slight purgation.

Cacurgia (*kak-ur'-je-ah*) [κακουργία, hurtfulness]. Functional disorders.

Cadinene (*kad-in-ēn*). $C_{15}H_{24}$. A sesquiterpene boiling at 274° C.

Cadmiferous, Cadmiferus (*kad-mif'-ur-us*). Containing cadmium.

Cadmium. (See Illus. Dict.) **C. Acetate,** $Cd(C_2H_3O_2)_2 + 3H_2O$, colorless crystals soluble in water. **C. Bromid,** $CdBr_2 + 4H_2O$, colorless efflorescent needles soluble in water, alcohol, and ether. **C. Carbonate,** $CdCO_3$, white amorphous powder. **C. Chlorate,** $Cd(ClO_3)_2$, colorless deliquescent crystals, soluble in water. **C. Chlorid,** $CdCl_2$, small white crystals soluble in water and alcohol. **C. Chromate.** See *C. Yellow*, under *Pigment* (Illus. Dict.). **C. Citrate,** $Cd_3(C_6H_5O_7)_2$, white crystalline powder, soluble in water. **C. Ethid, C. Ethyl,** $Cd(C_2H_5)_2$, a colorless liquid. **C. Ferricyanid,** $Cd_3Fe_2(C_3N_3)_4$, a yellow powder. **C. Fluroid,** CdF_2, a white powder soluble in hydrofluoric acid solution; slightly soluble in water. **C. Hydrate, C. Hydroxid,** $Cd(OH)_2$, white amorphous solid or powder, soluble in ammonia. **C. Hydriodate.** See *C. Iodate* (Illus. Dict.). **C. Monoxid.** See *C. Oxid.* **C. Nitrate,** $Cd(NO_3)_2 + 4H_2O$, white mass or deliquescent fibrous needles, soluble in water and alcohol. **C. Oxid,** CdO, an amorphous dark-brown powder, soluble in acids. **C. Paraphenolsulfonate.** See *C. Sulfocarbolate.* **C. Salicylate,** $Cd(C_7H_5O_3)_2$, white needles soluble in water and alcohol. It is used in purulent ophthalmia, etc., and is said to be a more active antiseptic than other cadmium salts. **C. Suboxid,** Cd_2O, a greenish powder. **C. Sulfarsenite,** $Cd_2As_2S_5$, a yellow salt. **C. Sulfocarbolate,** $Cd(C_6H_5SO_4)_2$, white crystals, soluble in water; it is antiseptic and astringent. **C. Sulfophenylate.** See *C. Sulfocarbolate.* **C. Valerianate,** $Cd(C_5H_9O_2)_2$, occurring in small white scales with an odor of valerian; it is antispasmic.

Caduca. (See Illus. Dict.) **C. crassa, C., External, C., External Uterine, C., Parietal.** See *Decidua vera* (Illus. Dict.). **C., Hunter's,** the decidua. **C., Intermediary, C., Interuteroplacentar, C., Secondary, C., Uteroplacentar.** See *Decidua serotina* (Illus. Dict.). **C., Internal.** See *Decidua reflexa* (Illus. Dict.).

Cæsalpinia. (See Illus. Dict.) **C. bonduc,** Roxb., a prickly, trailing shrub of most tropical coasts. The seeds, Molucca beans, and the whole plant are anthelmintic and emmenagog; the oil of the seeds is used in rheumatism. It contains bonducin. **C. brevifolia,** Baill., a native of Chili. The fruit (balsamocarpon) is used as divi-divi and contains 67% of tannin and 11% of resinous substance. **C. coriaria,** Willd., American sumach, divi-divi, a South American shrub cultivated in India, where the dried powdered pods are used as an antiperiodic. Dose, 40–60 gr. A decoction of the pods is used as an injection in the treatment of bleeding piles. **C. echinata,** Lam., a tree of Brazil, furnishes Brazil wood; the bark, rich in tannin, is used as an astringent, roborant, and febrifuge. **C. sappan,** L., a tree of India; the brownish-red wood, sappan wood, contains sappanin and is used as an astringent; it furnishes a red dye and the root a yellow dye.

Cæsar (*se'-zar*). An individual born by Cesarean section.

Cafeone (*kaf'-e-ōn*). See *Caffeone.*

Caferana (*kaf-ur-an'-ah*). See *Tachia guianensis.*

Caffeidin (*caf-e'-id-in*). $C_7H_{12}N_4O$. A decomposition-product of caffein, occurring as an oily liquid soluble in water.

Caffein. (See Illus. Dict.) Dose, 1–3 gr. (0.06–0.2 gm.). Syn., *Thein; Guaranin; Psoralin; Methyltheobromin; Trimethylxanthin.* **C. Acetate,** $C_8H_{10}N_4O_2(C_2H_4O_2)_2$, a true but unstable salt, forming fine white needles, soluble in water with decomposition. It is used as caffein. **C. Arsenate,** a combination of caffein and arsenic acid occurring as a white powder, soluble in hot water. **C. Benzoate,** $C_8H_{10}N_4O_2 . C_7H_6O_2$, a white crystalline powder decomposing in water. Uses and doses as caffein. **C. Borocitrate,** $(C_8H_{10}N_4O_2)_3BO_3$, a white crystalline powder, soluble in water, alcohol, and chloroform; it decomposes in water. It has the effect of caffein combined with the antiseptic action of boric acid. **C. Bromid.** See *C. Hydrobromate.* **C. Carbolate,** $C_8H_{10}N_4O_2 . HOC_6H_5$, a white crystalline mass, soluble in alcohol and water with decomposition. It is an antiseptic, diuretic and stimulant, having the combined action of caffein and carbolic acid, and is used subcutaneously. **C. Chloral,** $C_8H_{10}N_4O_2$–CCl_3COH, a molecular combination of caffein and chloral, occurring in soluble crystals. It is sedative and analgesic. Dose, 3–5 gr. (0.2–0.3 gm.). **C. Cinnamate,** $C_8H_{10}N_4O_2 . C_9H_8O_2$, a true salt occurring in white crystalline masses, soluble in water with decomposition; its uses and dosage as caffein. **C. Citrate,** $(C_8H_{10}N_4O_2)_3C_6H_8O_7$, a true salt, forming a white crystalline powder, used as caffein. It is soluble in water and alcohol with decomposition. **C., Citrated,** this is improperly called caffein citrate and is prepared by dissolving equal weights of caffein and citric acid in double the quantity of hot distilled water. Dose, 3–8 gr. (0.2–0.52 gm.). **C., Citrated Effervescent,** a white granular powder effervescing on the addition of water and containing 1% of caffein. Dose, 60 gr. (3.8 gm.). **C. Citrobenzoate,** $(C_8H_{10}N_4O_2)_3C_6H_8O_7 - (C_8H_{10}N_4O_2 . C_7H_5O_2)_3$, a crystalline powder, decomposing in water; its uses and dosage the same as caffein. **C. Citrosalicylate,** $(C_8H_{10}N_4O_2)_3C_6H_8O_7 - (C_8H_{10}N_4O_2 . C_7H_6O_3)_3$, a true salt occurring as white crystalline powder, decomposing in water. It is antiseptic and is used as caffein. **C. Diiodid.** See *C. Triiodid.* **C., Ethoxy-.** See *Ethoxycaffein* (Illus. Dict.). **C. Hydrobromate,** caffein bromate, a true salt, $C_8H_{10}N_4O_2HBr$, occurring as large crystals, reddish or greenish on exposure, soluble in water on decomposition. It is used as a diuretic in injections of 4–10 ♏ of a solution of 10 parts caffein hydrobromate, 1 part hydrobromic acid, and 3 parts distilled water. **C. Hydrochlorate, C. Hydrochlorid,** $C_8H_{10}N_4O_2 . HCl + {}_2H_2O$, a true salt occurring in large rhombic prismatic crystals, becoming greenish on exposure. It is soluble in water with decomposition. Its uses and dosage as caffein. **C. Hydroiodate,** $C_8H_{10}N_4O_2 . HI$, a true salt occurring as white, easily decomposed crystals, soluble in water with decomposition; uses and dosage as caffein. **C. Hydroxyl,** a compound similar to ethoxycaffein. **C. Lactate,** $C_8H_{10}N_4O_2 . C_3H_6O_3$, white crystalline masses soluble in alcohol with decomposition; its uses and dosage as caffein. **C. Malate,** $(C_8H_{10}N_4O_2)_2C_4H_6O_5$, a true salt occurring in white deliquescent masses, soluble in alcohol with decomposition; uses and dosage as caffein. **Muriate.** See *C. Hydrochlorate.* **C. Nitrate,** $C_8H_{10}N_4O_2 . HNO_3 + H_2O$, a true salt soluble in water with decomposition; its uses and dosage as caffein. **Oxalate,** a true salt forming a white crystalline powder, $C_8H_{10}N_4O_2H_2C_2O_4$. It is soluble in water and alcohol with decomposition. **C. Phenate, C. Phenylate.** See *C. Carbolate.* **C. Phosphate,** $C_8H_{10}N_4O_2 . H_3PO_4$, white crystalline mass, soluble in alcohol with decomposition; its uses and dosage as caffein. **Phthalate,** $(C_{10}H_8N_4O_2)_2 . C_8H_6O_4 + H_2O$, a true salt occurring as white crystalline masses, soluble in

parts of water with decomposition; its uses and dosage as caffein. **C. Platinichlorid,** $(C_8H_{10}N_4O_2.HCl)_2PtCl_4$. Small yellow crystals. **C. Salicylate,** $C_8H_{10}N_4O_2.C_7H_6O_3$, a true salt occurring as white crystalline masses, soluble in water and alcohol with decomposition. It is used instead of caffein with salicylic acid. Dose, as caffein. **C. and Sodium Benzoate,** a white powder containing 45.8% of caffein, soluble in 2 parts of water. It is used instead of caffein by subcutaneous injection. Dose, about double that of caffein. Syn., *Caffeinum natriobenzoicum.* **C. and Sodium Cinnamate,** a white powder containing 62.5% of caffein with 37.5% of sodium cinnamate. It is soluble in 2 parts of water. It is used instead of caffein with sodium cinnamate. Dose, ⅓ more than that of caffein. **C. and Sodium Hydrobromate,** a white powder soluble in water and containing 52% of caffein with 48% of sodium bromid. It is used instead of caffein with bromids. Dose, about double that of caffein. **C. and Sodium Salicylate,** a white powder soluble in 2 parts of water and containing 62.5% of caffein. It is used in rheumatism, etc., instead of caffein by subcutaneous injection. Dose, about double that of caffein. Syn., *Caffeinum natriosalicylicum.* **C. and Sodium Sulfonate,** a diuretic. Dose, 15 gr. (1 gm.). Syn., *Symphorol.* **C. Succinate,** $(C_8H_{10}N_4O_2)_2C_4H_6O_4$, white crystals soluble in alcohol and water with decomposition. **C. Sulfate,** $C_8H_{10}N_4O_2.H_2SO_4$, white crystals soluble in water with decomposition; uses and dosage as caffein. **C. Tannate,** a yellow powder more astringent than caffein; uses and dosage as caffein. **C. Triiodid,** $(C_8H_{10}N_4O_2I_2.HI)_2 + 3H_2O$, dark-green prisms, of a metallic luster, soluble in alcohol. It is a diuretic and alterative, used instead of potassium iodid, and said to be nondepressing. Dose, 2–4 gr. (0.13–0.26 gm.). Syn., *Diiodocaffein hydriodate.* **C. Valerianate,** $C_8H_{10}N_4O_2.C_5H_{10}O_2$, small lustrous needles, soluble in alcohol with decomposition. It is used in nervous headache, whooping-cough, etc. Dose, 2–5 gr. several times a day.

affeiniodol (*kaf-e-in-ī'-o-dol*). See *Iodol, Caffeinated.*

affeism (*kaf'-e-izm*). See *Caffeinism* (Illus. Dict.).

affeol (*kaf'-e-ol*). See *Caffeone.*

affeone (*kaf'-e-ōn*) [*caffea*, coffee]. $C_8H_{10}O_2$. A volatile aromatic oily principle (empyreumatic oil) produced by the torrefaction of coffee. Syn., *Cafeone; Caffeol.*

affolin (*kaf'-o-lin*). $C_5H_9N_3O_2$. A crystalline substance formed when hypocaffein is warmed with baryta water; melts at 194°–196° C.

aincetin. See *Caincetin.*

aincigenin. See *Caincigenin.*

aincin. See *Caincin.*

ailcedrin (*kah-il-sed'-rin*). A very bitter resinous substance isolated by Caventou from the bark of *K'haya senegalensis,* and recommended by him as a substitute for quinin; it is soluble in alcohol and ether.

aincate (*kah-in'-kāt*). A salt of caincic acid.

aincetin (*kah-in'-set-in*). $C_{22}H_{34}O_5$. A derivative of caincin obtained by prolonged boiling with alcoholic hydrochloric acid.

aincigenin (*kah-in-sij'-en-in*). $C_{14}H_{24}O_2$. A product of caincetin formed with butyric acid by the action of caustic potash.

aincin (*kah-in'-sin*) [*Cainca* or *Cahinca*, the South American name for several species of *Chiococca*]. $C_{40}H_{64}O_{20}$. A glucosid from *Chiococca racemosa* and *C. racemosa.* It occurs in white, odorless, crystalline flakes, with a bitter astringent taste, soluble in alcohol and ether and slightly in water. In small doses it is diuretic and cathartic and an emetic in large doses. It is used in dropsy. Dose, diuretic and cathartic, 2–4 gr.; emetic, 8–15 gr. Maximum dose, 15 gr. (1 gm.). Syn., *Caincic acid.*

Cajuputene. (See Illus. Dict.) **C. Hydrate,** cajuputol.

Calabarization (*kal-a-bar-iz-a'-shun*). The act of bringing a person under the effects of calabarin.

Calaguala (*kah-lah-gwah'-lah*) [Peruvian]. The commercial name for several ferns of the order *Polypodiaceæ,* especially *Polypodium calaguala,* a native of Peru, where it is esteemed as an excellent resolvent and diaphoretic remedy. It is used in chronic affections of the respiratory passages and in whooping-cough, in powders, 32–64 gr. per day. A decoction is used externally as a dressing for wounds.

Calamine (*kal'-am-ēn*). An alkaloid from *Acorus calamus.*

Calaya (*kal-a'-yah*). A fluid extract of the fruit of *Anneslea febrifuga* (?), used in malaria. Dose. 30 gr. (2 gm.) every 2 hours.

Calcaneotalar (*kal-ka-ne-o-tal'-ar*). See *Calcaneoastragalar* (Illus. Dict.).

Calcaneotibial (*kal-ka-ne-o-tib'-e-al*) [*calcaneum*, the heel; *tibia*, tibia]. Relating to the calcaneum and tibia.

Calcar. (See Illus. Dict.) 4. The styloid process of the temporal bone. **C. avis,** the hippocampus minor; the calcar. **C. femorale,** a plate of hard tissue around the neck of the femur.

Calcarate (*kal'-kar-āt*) [*calcar*, a spur]. Spurred; furnished with spurs or spur-like processes.

Calcarea (*kal-ka'-re-ah*) [*calx*, limestone]. Lime.

Calcareous. (See Illus. Dict.) 2. Having a chalky appearance or consistency. 3. Growing in chalk.

Calcaria (*kal-ka'-re-ah*). Lime.

Calcariform (*kal-kar'-e-form*) [*calcar*, spur; *forma*, form]. Spur-shaped.

Calceolate (*kal'-se-o-lāt*). See *Calceiform* (Illus. Dict.).

Calciferous (*kal-sif'-ur-us*). Containing lime, chalk, or calcium.

Calcific (*kal-sif'-ik*) [*calx*, lime]. Forming lime.

Calcinol (*kal'-sin-ol*). See *Calcium Iodate.*

Calciomonohydric (*kal-se-o-mon-o-hi'-drik*). Containing calcium and one atom of hydrogen.

Calciotetrahydric (*kal-se-o-tet-ra-hi'-drik*). Containing calcium and 4 atoms of hydrogen.

Calcium. (See Illus. Dict.) **C. Acetate,** $Ca(C_2H_3O_2)_2$, a white amorphous powder soluble in water. It is used in tuberculosis and psoriasis. **C. Acetoglycollate,** $CaH_{10}C_8O_4 + 2H_2O$, small prismatic crystals. **C. Albuminate,** an alterative and nutrient used in rachitis. **C. Arsenate,** $Ca_3(AsO)_4$, fine white prisms or powder. **C. Arsenite,** $Ca_3(AsO_3)_2$, a white granular powder. **C. Bichromate,** $CaCr_2O_7$, coarse, brownish-red, deliquescent, crystalline powder, soluble in water. **C. Bisulfite, Liquid,** a solution of calcium sulfite ($CaSO_3$) in an aqueous solution of sulfurous acid. It is used, when diluted with 4 to 8 times its amount of water, as an antiseptic gargle or wash. **C. Bitartrate,** $Ca(HC_4H_4O_6)_2$, colorless rhombic crystals soluble in water. **C. Borate,** a very light white powder. It is used as an antiseptic and astringent, internally in children's diarrhea and externally in fetid perspiration and weeping eczema. Dose, 1–5 gr. 3 times daily. Application, 10% to 20% ointment or dusting-powder. **C. Boroglycerid,** an antiseptic substance prepared by heating together calcium borate and glycerin. It forms a transparent, hygroscopic mass, soluble in water and alcohol. **C. Bromate,** $Ca(BrO_3)_2$, a crystalline compound of calcium and bromic acid. **C. Bromid,** $CaBr_2$, very deliquescent white granules with a sharp saline taste, soluble in water and alcohol. It is a nerve sedative. Dose, 10–30 gr. 2 times daily. **C.**

Bromoiodid, $CaI_2 + CaBr_2$, a mixture of calcium iodid and bromid in molecular proportions, forming a yellow powder soluble in water. It is alterative and sedative. Dose, 5–10 gr. (0.32–0.65 gm.) 3 times daily. **C. Butyrate**, $Ca(C_4H_7O_2)_2 + H_2O$, transparent scales soluble in water. **C. Carbid**, CaC_2, obtained from lime with carbon, by the electric furnace. It occurs in gray to bluish-black, irregular lumps, decomposing with water, evolving acetylene, and leaving a residue of slaked lime; sp. gr. 2.22. It is used in the palliative treatment of cancer of the vagina and uterus. **C. Carbolate**, $Ca(OC_6H_5)_2$, a reddish antiseptic powder, used as a disinfectant and internal and external antiseptic. Dose, 2–5 gr. (0.13–0.32 gm.). **C. Carbonate**, $Ca(OC_4H_5)_2$, a reddish powder used as an internal and external antiseptic. Dose, 2–5 gr. (0.13–0.32 gm.). **C. Chinovate.** See *C. Quinovate.* **C. Chlorate**, $Ca(ClO_3)_2 + 2H_2O$, deliquescent colorless crystals, soluble in water and alcohol. **C. Chloraurate**, $Ca(AuCl_4)_2 + H_2O$, a compound of gold and calcium chlorid, forming crystals soluble in water. **C. Chromate**, $CaCrO_4$, a fine lemon-yellow powder. **C. Cinnamate**, $Ca(C_9H_7O_2)_2 + 3H_2O$, colorless needles soluble in hot water. **C. Citrate**, $Ca_3(C_6H_5O_7)_2 + 4H_2O$, a crystalline powder, soluble in 1730 parts of water at 90° C.; more soluble in cold water. A solution is recommended for the treatment of burns. **C. Cresylate**, a syrupy fluid obtained by treating calcium hydrate with cresol. It is used as a disinfectant instead of carbolic acid. **C. Cyanid**, $Ca(CN)_2$, crystalline cubes soluble in water. **C. Enanthylate**, $(C_7H_{13}O_2)Ca + H_2O$, a compound of calcium and enanthylic acid, forming crystals. **C. Eosolate**, $Ca_3(C_9H_7S_2O_{12})_2$, a sulfosalt of aliphatic creasote esters containing 25% of creasote and occurring as a gray powder soluble in 10 parts of water. Dose, 4–10 gr. 4 or 5 times daily. **C. Ethylate**, $Ca(C_3H_5)_3$, a reaction-product of calcium carbid and absolute ethyl alcohol. **C. Ethylsulfate**, $Ca(C_3H_5SO_4)_2 + H_2O$, transparent, colorless tablets or crystals soluble in water. **C. Ferrophosphol actate**, is used in the treatment of tuberculosis and rachitis. Dose, 0.2–0.5 gm. (3–7½ gr.). **C. Fluorid**, CaF_2, a white powder, luminous when heated, soluble in an aqueous solution of ammonium salts. **C. Formate**, $Ca(CHO_2)_2$, colorless crystals or white crystalline powder, soluble in water. **C. Gluconate**, $(C_6H_{11}O_7)_2Ca + 2H_2O$, a combination of calcium and gluconic acid forming aggregated needles. **C. Glycerate, C. Glycerolate**, $(C_3H_5O_4)_2Ca + 2H_2O$, a crystalline compound of calcium and glyceric acid, moderately soluble in water. **C. Glycerinophosphate, C. Glycerophosphate**, $CaC_3H_7PO_6$, a white crystalline powder soluble in cold water, almost insoluble in boiling water; it is a nerve tonic. Dose, 2–5 gr. (0.13–0.32 gm.) 3 times daily. In treatment of enuresis, dose, for adults, 8 gr. (0.5 gm.) twice daily. **C. Glyceroarsenate, Calcii glyceroarsenias**, a crumbling white powder insoluble in water and alcohol, freely soluble in mineral and organic acids, especially in dilute citric acid. It is used in treatment of tuberculosis. Daily dose, 0.01 gm. (gr. ⅙). **C. Glyceroborate**, an antiseptic compound of equal parts of calcium borate and glycerin. **C. Glycolate**, $Ca(C_2H_3O_3)_2$, acicular crystals occurring in stellate groups, slightly soluble in water. **C. Glyoxylate**, $(C_2H_3O_4)_2 \cdot Ca$, a compound of calcium and glyoxylic acid. **C. Heptoate.** See *C. Enanthylate.* **C. Hippurate**, $Ca(C_9H_8NO_3)_2$, a white crystalline powder slightly soluble in hot water. It is alterative. Dose, 5–15 gr. (0.32–0.972 gm.). **C. Hydriodate.** See *C. Iodate.* **C. Hydrophosphate**, monohydric calcium phosphate. **C. Hydrosorbate**, $(C_6H_9O_2)_2Ca + H_2O$, a crystalline combination of calcium and hydrosorbic acid. **C. Hydrosulfate.** See *C. Sulfhydrate.* **C. Hydroxid**, calcium hydrate, slaked lime. **C. Hypoantimonate**, a compound of calcium oxid and antimony tetroxid. **C. Hypochlorite**, $Ca(ClO)_2$, white cubes decomposing readily. It is an antiseptic and is used as a disinfectant and strong bleaching agent. **C. Hypophosphate**, $CaPO_3 + H_2O$, a gelatinous precipitate, becoming granular, obtained from sodium hypophosphate by action of calcium chlorid; insoluble in water, soluble in hydrochloric acid. **C. Hypophosphite**, $Ca(PH_2O_2)_2$, hypophosphite of lime; a white crystalline powder, lustrous scales, or transparent crystals, soluble in 7 parts of water, decomposing and giving out inflammable gas above 300° C. It is used in treatment of tuberculosis, chlorosis, etc. Dose, 10–30 gr. (0.65–1.94 gm.). Syn., *C. hypophosphorosum.* **C. Hyposulfite.** See *C. Thiosulfate.* **C. Iodate, Calcii iodas**, $Ca(IO_3)_2 + 6H_2O$, a white crystalline powder soluble in 400 parts of water, insoluble in alcohol. It is used internally to check fermentation (dose, 0.2–0.3 gm.) and also as a succedaneum for iodoform. Syn., *Calcinol.* **C. Iodid**, CaI_2, a white powder or yellowish-white hygroscopic mass, soluble in water and alcohol. It is an alterative used instead of potassium iodid. Dose, 2–5 gr. (0.13–0.32 gm.) 3 times daily in syrup. Maximum dose, daily, 15 gr. (0.97 gm.). **C. Iodobromid**, a compound of iodin and bromin. **C. and Iron Lactophosphate**, a yellowish powder used in treatment of rachitis and tuberculosis. Dose, 3–8 gr. (0.194–0.52 gm.) several times daily. **C. Isosuccinate**, $C_4H_4O_4Ca + H_2O$, a compound of calcium and isosuccinic acid. **C. Kinovate.** See *C. Quinovate.* **C. Lactate**, $Ca(C_3H_5O_3)_2 + 5H_2O$, white, opaque, granular masses soluble in water and hot alcohol. It is used in treatment of rachitis and tuberculosis of children. Dose, 3–10 gr. (0.2–0.65 gm.) in syrup. **C. Lactonate**, $(C_6H_9O_6)_2Ca + 7H_2O$, a crystalline combination of calcium and lactonic acid. **C. Lactophosphate**, a crystalline compound of calcium lactate and calcium phosphate containing 1% of phosphorus; soluble in water. It is stimulant and nutrient. Dose, 3–10 gr. (0.2–0.65 gm.) 3 times daily. **C. Levulinate, C. Lævulinate** $(C_5H_7O_3)_2Ca$, silky needles, soluble in water. **C. Loretinate, Basic**, $Ca(I \cdot O \cdot C_9H_4N \cdot SO_3)$, cream-colored needles, nearly insoluble in water. **C. Loretinate, Normal**, $Ca(I \cdot OH \cdot C_9H_4N \cdot SO_3)_2H_2O$, an orange-red, crystalline powder, slightly soluble in water; it is used as an antiseptic. **C. Meconate**, $CaC_7HO_7 + H_2O$, a yellowish or whitish powder obtained from extract of opium by the action of a solution of calcium salt. **C. Monosulfid.** See *C. Sulfid.* **C. Muriate.** See *C. Chlorid* (Illus. Dict.). **C. Naphtholmonosulfate.** See *Asaprol* (Illus. Dict.). **C. Nitrate**, $Ca(NO_3)_2 + 4H_2O$, a deliquescent crystalline mass, soluble in water and alcohol. **C. Nitrite**, $Ca(NO_2)_2 + H_2O$, prisms or yellowish masses, soluble in water. **C. Œnanthylate.** See *C. Enanthylate.* **C. Oleate**, $Ca(C_{18}H_{33}O_2)_2$, a yellowish granular powder, soluble in alcohol, ether, and turpentine. **C. Oxalate**, CaC_2O_4, white friable masses or powder, soluble in nitric or hydrochloric acid. **C. Oxysulfid**, a compound of calcium, oxygen, and sulfur, forming a yellowish powder used in washing scrofulous ulcers. **C. Paralactate.** See *C. Sarcolactate.* **C. Pentasulfid**, CaS_5, a compound prepared from sulfur by boiling it with milk of lime. **C. Permanganate**, $Ca(MnO_4)_2 + 5H_2O$, deliquescent, brown crystals with violet luster, soluble in water. It is used internally in cholerhea of children and externally as a mouth lotion. Dose, ¾–2 gr. (0.049–0.13 gm.). **C. Peroxi**

Calcii peroxidum, $CaO_2 + 4H_2O$, an antiseptic, used in acid dyspepsia and summer diarrhea. Dose (children), ¾–2 gr. (0.049–0.13 gm.). **C. Phenolsulfonate, C. Phenylsulfate.** See *C. Sulfocarbolate.* **C. Phosphate, Antimoniated,** a mixture of precipitated calcium phosphate (67 parts) and antimony oxid (33 parts), occurring as a dull white, gritty powder without odor or taste, soluble in boiling water. It is alterative, purgative, and emetic, and is used in acute rheumatism and febrile diseases. Dose, 3–8 gr. (0.2–0.52 gm.) 4 to 6 times daily. Syn., *Antimonial powder, U. S. P.; James' febrile powder.* **C. Phosphate, Dibasic,** $Ca(H_2PO_4)_2$ or $CaHPO_4$, a white powder soluble in acids, insoluble in water. It is used in diseases of bone, chlorosis, etc. Dose, 8–20 gr. (0.52–1.3 gm.). Syn., *Bicalcic phosphate: Secondary calcium phosphate.* **C. Phosphate, Monobasic,** $CaH_4(PO_4)_2 + H_2O$, the chief constituent of the so-called "superphosphate of lime," a decomposition product of tricalcic or dicalcic phosphate and sulfuric acid, occurring as white, deliquescent, strongly acid crystals. **C. Phosphate, Precipitated.** See *C. Phosphate, Tribasic.* **C. Phosphate, Primary.** See *C. Phosphate, Monobasic.* **C. Phosphate, Tertiary.** See *C. Phosphate, Tribasic.* **C. Phosphate, Tribasic,** $Ca_3(PO_4)_2$, a light, white amorphous powder without odor or taste, soluble in acids, insoluble in water. It is used as the dibasic. **C. Phosphid,** Ca_2P_2, a gray mass, decomposing in contact with water. **C. Phosphite,** $CaHPO_3 + H_2O$, small white crystals slightly soluble in water. **C. Phosphoglycerate,** $PO_6C_3H_7$, a white crystalline powder, slightly soluble in cold water. The solution is rendered turbid by heat and the salt is almost insoluble in boiling water. **C. Phospholactate.** See *C. Lactophosphate.* **C. Phthalate,** $CaC_8H_4O_4 + H_2O$, dull rhombic prisms soluble in water. **C. Picrate, C. Picronitrate,** $Ca(C_6H_2(NO_2)_3O)_2$, an explosive reddish or yellowish powder. **C. Plumbate,** a flesh-colored powder, soluble in acids. **C. Propionate,** $Ca(C_3H_5O_2)_2$, white powder, soluble in water. **C. Pyroracemate.** See *C. Pyruvate.* **C. Pyrophosphate,** $Ca_2P_2O_7$, a white powder. **C. Pyrothioarsenate,** $Ca_2As_2S_7$, a salt. **C. Pyrothioarsenite,** $Ca_2As_2S_5$, a salt. **C. Pyrovanadate,** $2Ca_2V_2O_7 + 5H_2O$, a white amorphous body. **C. Pyruvate,** $(C_3H_3O_3)Ca$, a crystalline compound of calcium and pyruvic acid converted into a gummy mass by warming. **C. Quinate,** $Ca(C_7H_{11}O_6)_2 + 10H_2O$, white crystals soluble in water. **C. Quinovate,** a compound of calcium and quinovic acid used in malarial fever and dysentery as a tonic. Dose, ⅕–½ gr. (0.013–0.032 gm.). **C. Racemate,** $C_4H_4O_6Ca + 4H_2O$, a crystalline compound isomeric with calcium tartrate, but less soluble. **C. Saccharate,** a compound consisting of a large quantity of calcium hydrate dissolved in a solution of sugar. **C. Salicylate,** $CaC_7H_4O_3 + H_2O$, a white crystalline powder with alkaline reaction, soluble with difficulty in water. It is used in intestinal diseases. Dose, 8–20 gr. (0.52–1.3 gm.). **C. Santonate, C. Santoninate,** $Ca(C_{15}H_{19}O_4)_2$, a white, odorless, insipid powder, insoluble in water or chloroform. It is anthelmintic. Dose, ½–1½ gr. (0.03–0.1 gm.). **C. Sarcolactate,** $2Ca(C_3H_5O_3)_2 + 9H_2O$, a crystalline compound of calcium and sarcolactic acid isomeric with calcium lactate. **C. Selenite,** $CaSeO_3 + 2H_2O$, a white powder. **C. Succinate,** $CaC_4H_4O_4 + H_2O$, fine colorless crystals, soluble in water. **C. Sucrate,** a compound of calcium and saccharose formed by dissolving lime in cane-sugar; it occurs in syrup of lime. **C. Sulfate,** $2CaSO_4 + H_2O$, a fine white, odorless and tasteless powder, used in making plaster bandages for fractures Syn., *Plaster of Paris; Gypsum.* **C. Sulfhydrate,** $CaS.H_2S$, transparent crystals decomposing in the air; it is used as a depilatory. **C. Sulfid,** CaS, a compound of calcium and sulfur, a yellow-white substance with odor of hydrogen sulfid and forming a large percentage of calx sulfurata. It is recommended in treatment of influenza (dose, 1 gr. 4 times hourly) and in treatment of diphtheria (dose, ⅛ gr. every hour under 1 year of age, every ½ hour between the ages of 1 and 3, and every 15 minutes between the ages of 3 and 5). Syn., *C. monosulfid.* **C. Sulfid, Hydrated,** CaS; it is used as a depilatory. **C. Sulfite,** $CaSO_3$, white powder, soluble in sulfurous acid and in 800 parts of water. It is antiseptic and is used in flatulent diarrhea. Dose, ⅒–5 gr. (0.0065–0.32 gm.). **C. Sulfocarbolate,** $Ca(C_6H_5SO_4)_2 + 6H_2O$, a white, odorless, astringent powder or scales, soluble in water. It is an internal antiseptic and astringent. Dose, 5–15 gr. (0.32–0.97 gm.) in 1% solution. **C. Sulfophenate.** See *C. Sulfocarbolate.* **C. Thiosulfate,** CaS_2O_3, white antiseptic crystals soluble in water; it is an internal antiseptic. Dose, 3–10 gr. (0.194–0.65 gm.).

Calcoglobulin (*kal-ko-glob'-u-lin*). A combination of soluble calcium salts with an albuminous base. It has a distinct and definite form and is probably the basis of all the calcic tissues of the body.

Calcospherites, Calcosphærites (*kal-ko-sfe'-rītz*) [*calx*, lime; *sphæra*, a sphere]. Hartig's term for the granules or globules formed in embryologic dental pulp and in tissues like bone and shell by calcium salts brought by the blood into loose proteid combination and modified by the cytoplasm.

Calculus. (See Illus. Dict.) **C., Adherent,** one that has become adherent to the wall of the organ in which it is located. **C., Alternating,** one composed of alternate layers of the substances of which it is made up. **C., Alvine.** See *C., Intestinal.* **C., Articular.** See *C., Arthritic* (Illus. Dict.). **C., Aural,** hardened cerumen in the external auditory canal. **C. biliaris, C. biliarius, C. biliosus,** a gallstone. **C., Blood,** a fibrinous calculus containing remains of blood-corpuscles. **C., Breast.** See *C., Lacteal* (Illus. Dict.). **Calculi Cancrorum.** See *Astacolith* (Illus. Dict.). **C., Cardiac,** a clot in the heart which has become calcified. **C., Chalky,** one made up mainly of calcium carbonate and calcium phosphate with small amounts of magnesium carbonate, water, and organic matter, and frequently having a foreign body as a nucleus. **C., Cystic.** 1. A vesical calculus. 2. A gallstone. 3. One composed of cystin. **C., Cystic-oxid, C., Cystin,** a urinary calculus, rarely found and composed largely of cystin. **C., Encysted,** a vesical calculus which has become invested in a pouch springing from the wall of the bladder. **C. enterolithus.** See *Enterolith* (Illus. Dict.). **C., Essential,** one having its origin within the tissue of an organ and not from a foreign body. **C., Fatty,** a vesical calculus having a nucleus of fat or saponaceous matter. **C. felleus,** a gallstone. **C., Fibrinous,** a vesical calculus made up of dried coagulated albumin. **C., Gastric.** See *C., Stomachic.* **C., Hemic,** a concretion of coagulated blood. **C., Hempseed,** the smooth variety of mulberry calculi. **C., Hepatic, C., Hepaticocystic,** one situated in a bile-duct in the liver. **C., Impacted,** one arrested in its passage through a canal. **C., Incarcerated.** See *C., Encysted.* **C. intestini, C., Intestinal.** See *Enterolith* and *Bezoar* (Illus. Dict.). **C., Joint.** See *C., Arthritic* (Illus. Dict.). **C., Lacrimal.** See *Dacryolith* (Illus. Dict.). **C., Laminated,** one made up of layers of different materials. **C., Meibomian,** the hardened secretion of the meibomian glands that may accumulate

on the inner surface of the eyelids. **C., Nephritic.** See *C., Renal* (Illus. Dict.). **C., Organic,** one with a nucleus formed of epithelium, blood, etc. **C. pancreatis, C., Pancreatic,** one found in the pancreatic duct; it is generally multiple and made up of calcium carbonate or calcium phosphate. **C., Parotid,** one occurring in the parotid gland or its duct. **C., Pineal,** brain-sand. See *Acervulus* (Illus. Dict.). **C., Pisiform,** a pea-shaped calculus, usually multiple. **C., Podagric.** See *C., Arthritic* (Illus. Dict.). **C., Preputial,** a concretion of calcified smegma or deposit from decomposed urine formed between the prepuce and the glans penis. Syn., *Postholith*. **C., Prostaticovesical.** See *C., Vesicoprostatic*. **C., Pulmonary,** a chalky mass formed in the lung or in the bronchial gland. **C., Salivary.** (See Illus. Dict.) 2. The tartar deposited on teeth. **C., Sanguineous.** See *C., Blood*. **C., Saponaceous.** See *C., Fatty*. **C., Scrotal.** 1. A vesical or prostatic calculus which has made its way to the scrotum. 2. One formed in the scrotum from calcareous degeneration. **C., Secondary,** a vesical calculus formed in consequence of a diseased condition of the mucosa of the urinary tract. **C., Seminal.** See *C., Spermatic*. **C., Spermatic,** one occurring in the seminal vesicles. **C., Stercoraceous,** one made up chiefly of hardened fecal matter. **C., Stomachic,** a concretion found in the stomach, usually consisting of hair or other material swallowed. **C., Sublingual,** a salivary calculus occurring in the sublingual gland. **C., Subpreputial.** See *C., Preputial*. **C., Tonsillar,** one formed in a tonsillar follicle. **C., Urinary,** a concretion composed of concentric layers of crystallized substance cemented together by mucus or other organic material, occurring in the bladder. Urinary calculi (sand, gravel, or stones, according to their size) consist of: (1) A mixture of uric acid with urates, with either little or no phosphates; (2) mixed calculi, those containing more phosphates than uric acid; (3) calcium oxalate calculi; (4) phosphatic calculi—composed either of calcium phosphate, triple phosphate, or a combination of calcium and magnesium phosphates; (5) calcium carbonate calculi; (6) cystin calculi; (7) xanthin calculi; (8) fibrinous calculi, consisting of fibrin or inspissated albumin. **C., Venous.** See *Phlebolith* (Illus. Dict.). **C., Vesicoprostatic,** one situated partly in the bladder and partly in the prostate. **C., Xanthic, C., Xanthic Oxid, C., Xanthin,** a gray or brown greasy urinary calculus of rare occurrence, consisting of xanthin and hypoxanthin.

Calcusol (*kal'-ku-sol*). A proprietary remedy for gout, said to consist of piperidin parasulfamin-benzoate and potassium bicarbonate.

Calentura (*kal-en-tu'-rah*). 1. See *Calentur* (Illus. Dict.). 2. Applied to an epidemic disease of horses in the Philippines. It is caused by a species of *Spirillum*. **C. amarilla, C. vomito-negro,** yellow fever.

Cali Nuts. The fruit of a species of *Mucuna* or *Dioclea* growing on the west coast of Africa, in which physostigmin has been found.

Calibrate (*kal'-ib-rāt*) [Fr., *calibre*, the bore of a gun]. 1. To estimate the exact size of an opening, as of intestines to be united by anastomosis. 2. To graduate the tubes of a thermometer so that it will indicate the temperature correctly, or to determine the errors of the gradation when made; also, to determine the indication of the reading after the correction of the errors.

Calibration (*kal-e-bra'-shun*). The act, process, or result of calibrating.

Calibrator (*kal'-e-bra-tor*). An instrument for determining the exact diameter of the lumen of an opening, as of the urethra. It may consist of a truncated cone supplied with a scale or some form of dilating blades.

Caliche (*kah-le'-che*) [S. A., a fleck of lime from a wall]. The South American name for crude sodium nitrate; Chili saltpeter.

Californin (*kal-e-forn'-in*). A bitter, yellow, amorphous, friable substance of neutral reaction obtained from *Cascarilla riedeliana*, Wedd., and other allied plants.

Caliginous (*kal-ij'-in-us*). Relating to or affected with caligo.

Calisayin (*kal-e-sa'-yen*). An amorphous base consisting mostly of quinin obtained from cinchona bark.

Calix (*kal'-iks*) [pl. *calices*]. See *Calyx* (Illus. Dict.).

Calliandra (*kal-e-an'-dra*) [*καλός*, beautiful; *ἀνήρ*, a man—(stamen)]. A genus of leguminous shrubs and herbs natives of tropical America. **C. grandiflora,** Benth., the yerba del angel, tlacoxil, oxochitl, xiloxochitl, or cabellos de angel of Mexico, where it is used as a febrifuge. It contains the glucosid calliandreina.

Calliandreina (*kal-e-an-dre'-in-ah*). A glucosid obtained from *Calliandra grandiflora*. It causes vomiting, purging, prostration, and collapse in doses over 90 centigrams.

Callisection (*kal-e-sek'-shun*) [*callum*, insensibility; *sectio*, a cutting]. Vivisection of anesthetized animals.

Callososerrate (*kal-o-so-ser'-āt*) [*callosus*, hard; *serratus*, saw-shaped]. Having serrated callous projections.

Callus. (See Illus. Dict.) Syn., *Callum*. **C., Definitive, C., Interposed.** See *C., Permanent* (Illus. Dict.). **C., Ensheathing, C., External, C., Temporary.** See *C., Provisional* (Illus. Dict.). **C., Interior, C., Internal,** provisional callus of a fractured bone deposited in its medullary canal.

Calluxanthin (*kal-u-zan'-thin*). $C_{14}H_{10}O_7$. A reddish yellow pigment contained in heather, *Calluna vulgaris*, L.

Calmin (*kal'-min*). A compound of antipyrin and heroin; it is used in asthma, etc.

Calolactose (*cal-o-lak'-tōz*). An intestinal disinfectant said to consist of calomel, 1 part; bismuth subnitrate 1 part; lactose, 8 parts.

Calorescence (*kal-or-es'-enz*). Tyndall's name for the phenomenon produced by focusing the invisible heat rays from some appropriate source upon a piece of charcoal by means of a lens or mirror; the charcoal will be heated to incandescence, thus converting, by its interposition, nonluminous rays into luminous rays.

Calorimeter. (See Illus. Dict.) **C., Respiration** (Atwater's), an apparatus used to determine the calorific values of various foods and their effect on metabolism.

Calorimetry. (See Illus. Dict.) **C., Direct,** method of estimating the amount of heat produced and given off by an animal incased in a ventilated cabinet, and inclosed in another cabinet filled with air or water, by gauging the amount imparted to the air or water in the second cabinet. **C., Indirect** that arrived at by an estimation of the calorific value of a known quantity of food ingested by an animal in a given time.

Calory. (See Illus. Dict.) **C., Small,** the amount of heat required to raise the temperature of one gram of water one degree centigrade. **C., Great,** the amount of heat required to raise the temperature of one kilogram of water one degree centigrade.

Calot's Method. See *Treatment*.

Calvaria. (See Illus. Dict.) **C., Natiform,** Parrot's term for a sign of congenital syphilis consisting of the presence of four eminences on the bones forming the sides of the anterior fontanel. Cf. *Parrot's Nodes*.

Calvarium. (See Illus. Dict.) 2. The entire skull.

Calvities, Calvity. (See Illus. Dict.) **C. adnata,** congenital baldness. **C. febrisequa,** baldness due to an acute fever. **C. juvenilis.** See *Alopecia præsenilis.* **C. palpebrarum,** loss of the eyelashes.

Calvitium (*kal-ve'-she-um*). See *Calvities.*

Calvous (*kal'-vus*) [*calvus*]. Bald.

Calyciform (*kal-is'-e-form*) [*calyx; forma,* shape]. Cup-shaped, resembling a calyx.

Calyculus (*kal-ik'-u-lus*) [pl., *calyculi*]. See *Calycle* (Illus. Dict.). **Calyculi gustatorii.** See Taste-buds (Illus. Dict.).

Calystegia (*kal-is-tej'-e-ah*) [κάλυξ, calyx; στέγη, a roof]. A genus of plants of the order *Convolvulaceæ.* **C. sepium,** L., great bindweed, German scammony, found in Europe, Asia, and America; the root is a purgative. **C. soldanella,** R. Br., a European species; the plant and root are purgative and diuretic. Dose of powdered extract, 3–4 gm.; of resin, 1–5 gm.

Camara (*kam'-ar-ah*). 1. See *Camera* (Illus. Dict.). 2. The fornix of the brain. 3. The hollow of the external ear.

Camera. (See Illus. Dict.) **C. septi lucidi,** the fifth ventricle of the brain.

Camisia (*kam-is'-e-ah*) [L., a night-gown, a shirt]. **C.** fœtus, the chorion.

Campanian Disease. See under *Disease.*

Camphate (*kam'-fāt*). A salt of camphic acid.

Camphenol (*kam'-fe-nol*). A compound of camphor, cresols, and phenols; it is a disinfectant.

Camphimid (*kam'-fim-id*). See *Camphorimid.*

Camphin (*kam' fin*). $C_{10}H_8$. A colorless oil obtained by the distillation of camphor with iodin.

Camphocarbonate (*kam-fo-kar'-bon-āt*). A salt of camphocarbonic acid.

Camphol (*kam'-fol*). See *Borneol* (Illus. Dict.).

Campholactone (*kam-fo-lak'-tōn*). $C_9H_{14}O_2$. A distillation-product of camphanic acid occurring as a solid, melting at 50° C.

Campholate (*kam'-fol-āt*). A salt of campholic acid.

Campholene (*kam'-fol-ēn*). C_9H_{16}. An oily liquid obtained from campholic acid by action of phosphoric anhydrid.

Campholic (*kam-fol'-ik*). Relating to camphol.

Campholyptus (*kam-fo-lip'-tus*). A proprietary external anodyne said to consist of eucalyptol, camphor and hydrous chloral.

Camphone (*kam'-fōn*). See *Cymenè* (Illus. Dict.).

Camphopyrazolon (*kam-fo-pir-az'-o-lon*). $C_{17}H_{20}N_2O$. A crystalline compound of camphocarboxylic acid and phenylhydrazin, soluble in alcohol, insoluble in ether or water, melts at 132° C. It is used as camphor.

Camphor. (See Illus. Dict.) 2. See *Camphors* (Illus. Dict.). **C., Alant.** See *Helenin* (Illus. Dict.). **C., Aldehyd,** an oily liquid produced by shaking camphor in a solution of aldehyd. **C., Alyxia.** See under *Alyxia.* **C., Anemone.** See *Anemonin* (Illus. Dict.). **C., Anise.** See *Anethol* (Illus. Dict.). **C., Artificial,** $C_{10}H_{15}HCl$, a terpenehydrochlorate obtained from oil of turpentine by action of hydrochloric acid; it is a solid very similar to camphor. **C., Asarabacca, C., Asarum.** See *Asarone* (Illus. Dict.). **C., Auricle.** See under *Auricle.* **C., Barosma.** See *Diosphenol.* **C., Barus,** borneol. **C., Benzoated,** an external antiseptic mixture of camphor and benzoic acid; a white powder soluble in alcohol, ether, and chloroform. **C., Bergamot.** See *Bergaptene.* **C., Birch.** See *Betulin* (Illus. Dict.). **C., Bitter Almond Oil.** See *Benzoin* (2). **C., Blumea.** See *Ngai C.* (Illus. Dict.). **C., Bromated, C., Brominated, C., Bromid, C., Brominized, C., Bromized.** See *C., Monobromated* (Illus. Dict.). **C., Cantharides.** See *Cantharidin* (Illus. Dict.). **C., Castoreum.** See *Castorin* (Illus. Dict.). **C., Cedar,** $C_{15}H_{26}O$, obtained from ethereal oil of *Juniperus virginiana;* silky needles melting at 74° C., boiling at 282° C. **C., Champaca.** See *Champacol.* **C., China, C., Chinese.** See *Camphor* (Illus. Dict.). **C., Citrated,** a compound of citric acid and camphor; a white powder, antiseptic, antispasmodic, and stimulant. Dose, 3–10 gr. (0.2–0.65 gm.) several times daily. **C. of Cubebs,** $C_{15}H_{26}O$, large rhombic crystals melting at 67° C., which are sometimes formed from oil of old samples of cubebene. **C. cymene,** cymene derived from camphor. **C., Dextro-,** ordinary camphor. **C., Dibromated, C. Dibromid,** $C_{10}H_{16}OBr_2$, a compound of camphor and bromin; white crystals, soluble in alcohol and ether, melting at 115° C. It is antiseptic. **C. Dichlorid,** $C_{10}H_{16}Cl_2$, a combination of camphor and phosphorus pentachlorid, occurring as fine white needles, soluble in alcohol and ether and melting at 155° C. It is antiseptic. **C. Dihydrochlorid,** $C_{10}H_{14}HCl_2$, a crystalline compound formed from camphor by action of phosphoric chlorid. **C., Dryobalnops,** borneol. **C., Dutch,** ordinary camphor. **C., Elecampane.** See *Helenin* (Illus. Dict.). **C., Factitious.** See *C., Artificial.* **C., Feverfew.** See *C., Matricaria.* **C., Flowers of,** powdered camphor obtained by condensing sublimed camphor. **C., Formosa,** ordinary camphor. **C., Hard,** borneol. **C. Hydrochlorate, C. Hydrochlorid,** $C_{10}H_{16}$. HCl, a compound of camphor and hydrochloric acid. **C., Inactive,** any one of the camphors which has no action on the plane of polarization. **C., Inula.** See *Helenin* (Illus. Dict.). **C., Iodized,** a mixture of 100 parts of camphor and 1 part of iodin, used by inhalation. **C., Japan,** the commercial variety brought from Japan; it is also called *Tub Camphor* from the receptacle in which it comes, or *Dutch Camphor* from its induction into the market by that people. **C., Laevo-, C., Laevogyre.** See *C., Matricaria.* **C., Laurel,** ordinary camphor. **C., Ledum,** $C_{15}H_{26}O$, a stearoptene forming silky needles, obtained from oil of *Ledum palustre,* melting at 104°–105° C. **C., Left, C., Levorotary.** See *C., Matricaria.* **C., Liquid,** oil of camphor. **C., Liquid Artificial,** $C_{10}H_{16}HCl$, a liquid isomer of solid artificial camphor obtained from oil of turpentine by action of gaseous hydrochloric acid at high temperatures. **C., Malayan,** borneol. **C., Matico,** $C_{12}H_{20}O$, a homolog of ordinary camphor occurring in leaves of *Piper angustifolium.* **C., Matricaria,** a camphor made from oil of *Chrysanthemum parthenium,* isomeric with ordinary camphor and in all respects identical with it except that it is levorotary. **C., Mint.** See *Menthol* (Illus. Dict.). **C., Naphthol.** See under *Naphthol* (Illus. Dict.). **C., Neroli.** See *Aurade.* **C., Ngai.** See *Ngai* (Illus. Dict.). **C., Parsley.** See *Apiol, White.* **C., Patchouli.** See *Patchoulin.* **C., Peppermint,** menthol. **C., Phenol, C., Phenylated,** a combination of camphor and carbolic acid in varying proportions, used as an antiseptic. **C., Pichurim,** a body contained in pichurim beans, said to be identical with ordinary camphor. **C., Pulsatilla.** See *Anemonin* (Illus. Dict.). **C.-resin,** $C_{20}H_{30}O_2$, a yellow resinous body obtained from camphor by heating it with an alcoholic solution of caustic potash. **C., Resorcinated,** a compound of equal parts of camphor and resorcin melted together. **C., Right,** ordinary camphor. **C.-salol,** an external antiseptic composed of salol, 3 parts; camphor, 2 parts. **C., Sumatra,** borneol. **C., Tar.** See *Naphthalene* (Illus. Dict.). **C., Thyme,** thymol. **C.-thymol,** an oily insoluble substance composed of equal parts of camphor and thymol. **C., Thymolated,** camphor-thymol. **C.,**

Tub. See under *C., Japan.* **C., Turpentine.** See *Terpin Hydrate* (Illus. Dict.). **C., Valerianated,** a liquid mixture of camphor and valerianic acid, soluble in alcohol; it is sedative and antiseptic.

Camphoraceous (*kam-for-a'-shus*). Resembling or containing camphor. Syn., *Camphoroid; Camphorous.*

Camphorate (*kam'-for-āt*). A basic salt of camphoric acid.

Camphorated (*kam'-for-a-ted*). Impregnated with camphor.

Camphoric (*kam-for'-ik*). Relating to camphor. **C.-acid Phenetidin,** a compound of camphoric acid and paraphenetidin. **C., Anhydrid,** $C_{10}H_{14}O_3$, the anhydrid of camphoric acid, obtained as a sticky mass by heating the crude acid.

Camphorimid (*kam-for'-im-id*). $C_{10}H_{15}NO_2$. A crystalline body obtained from the distillation of camphoamic acid.

Camphorin (*kam'-for-in*). Glyceryl camphorate.

Camphorism (*kam'-for-izm*). Camphor-poisoning; a condition marked by gastritis, coma, and convulsions, due to excessive doses and enemas of camphor and its preparations.

Camphorogenol (*kam-for-oj'-en-ol*). $C_{10}H_{18}O_2$. A constituent of camphor occurring as a tolerably heavy oil with smell somewhat like camphor; boils at 212°–213° C.

Camphoronate (*kam-for'-on-āt*). A salt of camphoronic acid.

Camphoroxol (*kam-for-oks'-ol*). A 3% solution of hydrogen dioxid containing 32% of alcohol and 1% of camphor.

Camphrenate (*kam'-fren-āt*). A salt of camphrenic acid.

Camphrene (*kam'-frēn*). $C_9H_{14}O$. A volatile product of camphor and sulfuric acid.

Camphyl (*kam'-fil*). The hypothetic radicle of borneol, $C_{10}H_{17}$. **C. Alcohol,** borneol.

Canadin (*kan'-ad-in*). $C_{21}H_{21}NO_4$. An alkaloid from the rhizome of *Hydrastis canadensis,* occurring in pure white needles, soluble in alcohol and melting at 132°–135° C.

Canal, Canalis [pl., *canals, canales*]. (See Illus. Dict.) **C., Albuniferous, C., Albuginous.** See *Duct, Vitellarian* (Illus. Dict.). **C., Alimentary,** a musculomembranous canal, about 30 feet in length, extending from the mouth to the anus. Digestion is its chief function, and in this it is aided by certain accessory organs. **C., Annular.** See *C., Circular* (Illus. Dict.). **C. of the Anterior Commissure,** the porta. **C., Arnold's,** a small canal in the petrosa transmitting Arnold's nerve. **C., Arnold's Innominate.** See *C., Innominate.* **C., Bochdalek's,** a minute canal passing obliquely downward and outward through the membrana tympani from the upper edge of the inner surface of the latter to the umbo, where it opens on the outer surface. **C., Canalicular.** See *Duct, Canalicular* (Illus. Dict.). **C. centralis modioli, C. centralis myelonis.** See *Myelocele* (Illus. Dict.). **C. choledochus,** the common bile-duct. **C., Circular.** (See Illus. Dict.) 2. See *C., Semicircular.* **C., Circumpeduncular,** the lateral ventricles of the brain. **C.s, Coiled.** See *Nephridia, Permanent* (Illus. Dict.). **C. communis nervorum auditus,** the internal auditory meatus. **C., Condylar, Anterior,** the anterior condylar foramen. **C.es condyloidei antici,** one or two inconstant canals occurring near the anterior condylar foramen. **C. condyloideus,** the posterior condylar foramen. **C. condyloideus posticus inferior,** an inconstant canal found in the occipital bone between the condyle and the posterior lacerated foramen. **C.s, Convoluted,** the convoluted tubules. See under *Tubuli uriniferi* (Illus. Dict.). **C., Cotugno's.** See *C. of Cotunnius* (Illus. Dict.). **C., Craniopharyngeal,** a fetal canal perforating the posterior part of the sphenoid bone and extending from the pharynx to the hypophysis and the epiphysis; it sometimes persists in infancy. **C., Cuvier's.** See *Ductus venosus* (Illus. Dict.). **C.s, Cuvier's.** See *Cardinal Veins* (Illus. Dict.). **C.s of Derivation,** anastomotic venous branches extending from deep to superficial veins. **C., Excretory.** See *Excretory Duct* (Illus. Dict.). **C. of the Fallopian Tube.** See *Aquæductus fallopii* (Illus. Dict.). **C. ganglionaris,** the spinal canal of the modiolus. **C., Germigene,** in comparative anatomy the true oviduct as distinguished from the vitelligene canals. **C., Hannover's,** the artificial passage produced between the anterior and posterior fibers of the zonules of Zinn by the injection of a viscous fluid. **C., Hemal.** (See Illus. Dict.) 2. That one of the two canals of which, according to R. Owen, the vertebrates are composed, situated ventrad. It contains the heart, etc., while the neural canal incloses the central nervous system. **C., Hensen's,** the short vertical tube (1 mm. long and 0.5 mm. wide) connecting the blind extremity of the cochlear canal with the saccule. Syn., *Canalis reuniens.* **C., His',** the thyroglossal duct of the fetus, of which the cecal foramen of the tongue is the vestige and which may persist during postnatal life. **C. of the Hypoglossis,** the anterior condylar foramen. **C., Innominate** (of Arnold), an inconstant canal in the base of the skull, internal to the foramen rotundum; it transmits the superficial and deep petrosal branches which have become fused into one nerve. **C.s, Interlobular Biliary.** See *Ducts, Interlobular Bile-* (Illus. Dict.). **C.s, Juice.** See *C., Serous* (Illus. Dict.). **C., Landzert's.** See *C., Craniopharyngeal.* **C., Lauth's.** See *C., Schlemm's* (Illus. Dict.). **C.s, Mandibular.** See *C., Dental, Inferior* (Illus. Dict.). **C., Mastoid,** one opening just above the stylomastoid foramen and transmitting the auricular branch of the vagus nerve. **C., Nasopalatine, Membranous.** See *C., Incisor* (Illus. Dict.). **C. nervi petrosi profundi minoris,** one in the petrosa transmitting the deep petrosal nerve. **C. nervi petrosi superficialis majoris,** one opening into the fallopian aqueduct and transmitting the great superficial nerve. **C., Pharyngotympanic,** one in the embryo developing into the eustachian canal and the tympanum. **C., Posteth-moid.** See *C., Ethmoid, Posterior* (Illus. Dict.). **C., Preethmoid.** See *C., Ethmoid, Anterior* (Illus. Dict.). **C., Pulmoaortic.** See *Ductus arteriosus* (Illus. Dict.). **C. of the Quadrigemina,** the sylvian aqueduct. **C. radicis,** one in the root of a tooth. **C., Recurrent, C. recurrens.** See *C., Vidian* (Illus. Dict.). **C., Reichert's.** See *C., Hensen's.* **C. reuniens.** See *C., Hensen's.* **C. rotundus.** See *Foramen rotundum* (Illus. Dict.). **C.s, Saviotti's,** fine artificial passages formed between the secreting cells of the pancreas by the forcible injection of a colored fluid into the ducts of that organ. **C. scalarum communis,** the infundibulum of the cochlea. **C., Sphenopharyngeal.** See *C., Pterygopalatine* (Illus. Dict.). **C. of the Spinal Cord.** See *C., Central* (of spinal cord) (Illus. Dict.). **C. spiralis membranaceus.** See *C., Membranous* (of the cochlea) (Illus. Dict.). **C., Tarsal,** one between and below the heads of the abductor hallucis, transmitting the vessels and nerves to the sole of the foot. **C. tensoris tympani.** See *Receptacle, Tympani Tensor.* **C.es tubæformes,** the semicircular canals. **C. tuberculorum quadrigeminorum,** the aqueduct of Sylvius. **C., Tuboovarian,** the oviduct. **C.**

Tubotympanal, the inner division of the first gill-cleft in the embryo. **C., Uterovaginovulvar.** See *C., Parturient* (Illus. Dict.). **C., Vaginoperitoneal,** the inguinal canal. **C. vasculosus epididymidis,** the canal of the epididymis. **C., Vestibular.** (See Illus. Dict.) 2. See *Sinus, Urogenital* (Illus. Dict.). **C.s, Volkmann's,** small canals found in the circumferential lamellas of long bones and transmitting blood-vessels; they communicate with the haversian canals. **C. vomeris,** one lying between the vomer and the lower surface of the sphenoid and transmitting blood-vessels to the nose. **C.s, Vomerobasilar, C.s, Vomerosphenoid, Lateral,** small lateral canals lying between the vomer and the sphenoid transmitting bloodvessels.

analicula (*kan-al-ik'-u-lah*) [L., pl. *canaliculæ*]. See *Canaliculus* (Illus. Dict.].

analiculus. (See Illus. Dict.) **Canaliculi accessorii,** inconstant canals at the outer edge of the anterior condylar foramen, for the transmission of veins. **C., Bile, C., Biliary, Canaliculi biliferi.** See *Canals, Intralobular, Biliary* (Illus. Dict.). **C. of Communication, C. communicationis,** a canal at the junction of the petrosa and the mastoid portion of the temporal bone, transmitting a vein from the middle fossa of the skull to the transverse sinus. Syn., *Aquæductus communicationis.* **C. laqueiformis.** See *Henle's Loop* (Illus. Dict.). **C. mastoideus.** See *Canal, Mastoid.* **Canaliculi medullares.** See *Canals, Haversian* (Illus. Dict.). **C. pharyngeus** (Arnold). See *Canal, Pterygopalatine* (Illus. Dict.). **Canaliculi, Serous.** See *Canals, Recklinghausen's* (Illus. Dict.). **Canaliculi vasculosi,** haversian canals.

ananga (*kan-ang'-gah*) [African name]. A genus of trees of the order *Anonaceæ.* **C. odorata,** a large tree of southern Asia, furnishing cananga or ylang-ylang oil.

anarium. (See Illus. Dict.) **C. rostratum,** Zipp., native of the Molucca Islands, **C. strictum,** Roxb., native of the East Indies, yield the black dammar of commerce.

anary-seed (*kan-a'-re-sēd'*). The hulled seeds of *Phalaris canariensis;* it is used in emollient poultices.

ancer. (See Illus. Dict.) 2. Any kind of malignant growth. Syn., *Malignant disease.* **C., Acinous, C., Acute,** medullary carcinoma or medullary sarcoma. **C., Adenoid,** a malignant form chiefly composed of tubules lined with epithelium; adenocarcinoma. **C. à deux,** cancer attacking successively a man's first and second wife. **C. albus.** See *Cancrum oris* and *Noma* (Illus. Dict.). **C. anthracinus,** one beginning as a black speck and developing into a mulberry-like growth. **C., Apinoid** [ἀπινής, without dirt; εἶδος, likeness], a hard cancer, so called because of the cleanness of its section. **C., Apioid** [*apion,* a pear], a hard cancer resembling an immature pear in section. **C., Aran's Green,** chloroma; malignant lymphoma of the orbital cavity associated with grave leukemia, and tending to form metastases through the lymphatic system. Syn., *Cancer vert d' Aran.* **C., Areolar.** See *Carcinoma, Colloid* (Illus. Dict.). **C., Atrophic, C., Atrophying.** See *C., Cicatrizing.* **C., Black,** melanotic cancer. **C. of the Blood,** leukocythemia. **C., Bunioid,** a hard tumor having a rounded form. **C., Calcifying,** one containing a deposit of calcareous matter. **C., Cauliflower.** See under *Cauliflower* (Illus. Dict.). **C., Cavernous,** a colloid carcinoma in which the alveoli have become absorbed. **C., Cellular, C., Cerebriform.** See *Carcinoma, Encephaloid;* and *Sarcoma, Encephaloid* (Illus. Dict.). **C., Chimney-sweeps'.** See under *Carcinoma* (Illus. Dict.). **C., Chondroid,** a hard cancer which on section exhibits a shining bluish-white appearance. **C., Chronic,** a scirrhous cancer. **C.s of Cicatrices,** a form of epithelioma growing in or upon scars. **C., Cicatrizing,** a form of hard cancer marked by atrophy and shrinking. **C., Cohnheim's Theory of the Embryonic Origin of,** according to which the fetal life portions of the epithelium become nipped off and included in the connective tissue; these portions in later life, if stimulated to activity, give rise to a cancerous growth. [Roberts.] Syn., *Inclusion theory.* **C., Connective-tissue.** See *C., Scirrhous.* **C., Corset.** See *C., Jacket.* **C., Cylinder-cell, C., Cylindriform Epithelial.** See *Epithelioma, Cylindric.* **C., Cystic,** a cystocarcinoma. **C., Dendritic,** a papilloma. **C., Duct,** a form of columnar epithelioma. **C., Eburneous.** See *Sclerema* (Illus. Dict.). **C., Embolic,** one due to embolic infection. **C., Encephaloid.** See *Carcinoma, Encephaloid* (Illus. Dict.). **C., Encephalomatous.** See *Sarcoma, Encephaloid* (Illus. Dict.). **C., Fasciculated,** a spindle-celled sarcoma. **C., Fungoid, C., Fungous, C., Hematoid.** See *Sarcoma, Encephaloid; Angioma, Cavernous* (Illus. Dict.); and *Anigomyces.* **C., Gelatiniform, C., Gelatinous,** a colloid cancer. **C., Gland, C., Glandular, C., Glandular-cell.** See *Adenocarcinoma* (Illus. Dict.); and *Epithelioma, Cylindric.* **C., Glaucoid, C., Green.** See *C., Aran's.* **C., Gum, C., Gummous.** See *C., Colloid* (Illus. Dict.). **C., Hard.** See *Carcinoma, Scirrhous* (Illus. Dict.). **C., Inclusion Theory of.** See *C., Cohnheim's Theory of.* **C., Jacket,** a continuously spreading cancerous infiltration of the superficial tissues. **C., Lardiform, C., Larinoid,** a variety of hard cancer having the appearance of lard. **C., Lenticular.** See *Carcinoma lenticulare* (Illus. Dict.). **C. leuce.** See *Sarcoma, Encephaloid* (Illus. Dict.). **C., Lipomatous,** one marked by many fat-cells in the stroma. **C., Lobstein's,** retroperitoneal sarcoma. **C., Lupous, C. lupus.** See *Lupia cancrosa* (Illus. Dict.). **C., Mammary.** 1. One affecting a mammary gland. 2. See *C., Mastoid.* **C., Mastoid,** a form of medullary sarcoma presenting on section the appearance of boiled cow's udder. **C., Medullary, C. medullaris.** See *Carcinoma, Encephaloid* (Illus. Dict.). **C. melæneus, C. melanodes, C., Melanoid.** See *Carcinoma melanodes* (Illus. Dict.). **C., Metastatic,** a secondary cancer. **C., Milt-like.** See *Sarcoma, Encephaloid* (Illus. Dict.). **C. mollis,** a soft cancer. **C., Mucous.** See *C., Colloid* (Illus. Dict.). **C., Multicellular,** a medullary carcinoma or sarcoma. **C. mundatorum.** See *C., Soot.* **C. myrmecia.** See *C. verrucosus.* **C., Myxomatous.** See *Carcinoma, Myxomatous.* **C., Napiform.** See *C., Bunioid.* **C., Nephroid,** a form of encephaloid sarcoma having the appearance of a kidney in section. **C.-nest,** a mass of cancer-cells. **C., Obsolescent.** See *C., Cicatrizing.* **C. oris.** See *Cancrum oris* (Illus. Dict.). **C. ossis.** See *Arthritis fungosa* (Illus. Dict.). **C., Osteoid.** 1. One containing a deposition of osseous material. 2. See *Osteosarcoma* (Illus. Dict.). 3. See *Osteochondroma* (Illus. Dict.). **C., Osteolytic,** carcinomatous infiltration of bone without distinct tumor-formation. **C., Pancreatic,** a form of hard cancer resembling the pancreas in structure. **C., Papillary, C., Papillary Epithelial,** a papillary epithelioma; papilloma. **C. phagedæna,** one beginning as a pustule which develops sudden ulceration and rapid progression. **C., Pigment, C., Pigmentary.** See *C., Melanotic* (Illus. Dict.). **C., Placental,** a form of encephaloid sarcoma resembling the placenta in structure. **C., Primary, C., Primitive,** one not due to infection from some preceding cancerous mani-

festation. **C. pullulans,** an ulcerating cancer which forms granulations. **C., Pulpy, C., Pultaceous.** See *C., Colloid* (Illus. Dict.). **C. purgatoris infumiculi.** See *C., Soot.* **C., Ramose,** a form of hard cancer which branches. **C., Rapiform.** See *C., Bunioid.* **C., Retractile,** a mammary cancer with retraction of the nipple. **C., Rodent.** 1. Lupus. 2. Rodent ulcer. **C., Sarcomatous.** See *Carcinoma sarcomatodes.* **C., Scirrho-, C., Scirrhous.** See *Carcinoma, Scirrhous* (Illus. Dict.). **C., Secondary,** one resulting from infection from a preceding malignant growth in another part. **C.-serum.** See *Serum.* **C., Shrinking,** a hard cancer. **C., Simple.** See *Carcinoma, Scirrhous* (Illus. Dict.). **C., Soft,** one composed chiefly of cells, the amount of connective tissue being very small. **C., Solanoid,** one having the appearance of a potato in section. **C., Soot,** epithelioma attributed to the irritant action of soot; most commonly occurring on the scrotum. **C. spongiosus.** See *C., Fungous.* **C., Stone,** scirrhous carcinoma. **C., Tar and Soot.** See *C., Soot.* **C., Teleangiectatic.** See *C., Fungous.* **C. terebrans,** an epithelioma. **C., Tubular Epithelial.** See *Cylindroma* (Illus. Dict.). **C. verrucosus,** epithelioma with wart-like epithelial hypertrophy. **C., Villous.** See *Papilloma* (Illus. Dict.). **C. vulgaris.** See *Carcinoma, Scirrhous* (Illus. Dict.). **C., Wart-like.** See *Epithelioma, Papillary.* **C., Water-.** See *Cancrum oris* (Illus. Dict.). **C., Withering.** See *C., Cicatrizing.* **C. xanthosus.** See *C., Aran's.*

Cancerin (*kan'-sur-in*). $C_8H_5NO_3$. A white crystalline substance said to have been found in the urine in cases of uterine carcinoma.

Cancerism (*kan'-sur-izm*). The tendency to cancerous formation.

Canceroderm (*kan'-sur-o-durm*). A. T. Brand's name for angiomas, conspicuous in size and number, which appear in certain people who are not aged, and which he believes are connected with malignant growths.

Canchalagua (*kan-kal-ag'-wa*) [Latinized Colombian name]. See *Erythræa venusta.*

Cancriamœba macroglossia (*kan-kre-ah-me'-bah mak-ro-glos'-e-ah*). An organism claimed by Eisen to have been found in epithelial carcinoma, and of which the spores are identical with Plimmer's bodies.

Cancrine (*kan'-krēn*). Cancerous.

Cancroid. (See Illus. Dict.) 2. An epithelioma. 3. A variety of keloid. **C., Dermic,** epithelioma attacking all the layers of the skin. **C., Follicular,** epithelioma arising in the hair-follicles or in the glands of the skin. **C., Papillary,** epithelioma affecting the papillary layer and subsequently the other layers of the skin.

Canella. (See Illus. Dict.) 2. A genus of trees of the order *Canellaceæ.*

Cangoura. The fruit of *Bouea oblongifolia,* an evergreen creeper of San Salvador, containing a violent nerve poison.

Canicaceous (*kan-e-ka'-shus*) [*canicæ,* a kind of bran]. Furfuraceous.

Canities. (See Illus. Dict.) **C. præmatura,** that occurring earlier in life than usual.

Canker. (See Illus. Dict.) 2. A general term for diseases of the cortical tissues of higher plants due to the action of fungi, such as *Sphæropsis malorum,* affecting apple- and pear-trees, or the canker fungus, *Nectria ditissima,* which appears oftenest upon the alder, beech, oak, ash, hazel, hornbeam, maple, lime, apple, dogwood, and bird-cherry, producing canker-spots by the spread of the mycelium. The action of frost on cortical tissues also gives rise to spots called frost-canker.

Cannabin (*kan'-ab-in*). A crystalline alkaloid from Indian hemp; it is hypnotic. Dose, 1½–4 gr. (0.097–0.26 gm.). **C. Tannate,** a yellow, astringent powder, soluble in alkaline water or alcohol; it is hypnotic and sedative. Dose, 2–10 gr. (0.13–0.60 gm.).

Cannabindon (*kan-a-bin'-don*). $C_8H_{12}O$. A dark cherry-red syrup obtained from Indian hemp by Kobert; soluble in alcohol, ether, and oils. It is hypnotic and narcotic. Dose, ½–2 gr. (0.03–0.13 gm.).

Cannabinol (*kan-ab'-in-ol*). $C_{18}H_{24}O_2$. A red oil obtained by fractional distillation from Indian hemp and believed by Marshall to be its most active ingredient.

Cannabitetanin (*kan-ab-e-tet'-an-in*). See *Tetanocannabin* (Illus. Dict.).

Cannular, Cannulate (*kan'-u-lar, -lāt*) [*cannula,* a little tube]. Tubular, channeled.

Canor (*ka'-nor*) [L., pl. *cañores*]. A musical sound. **C. stethoscopicus.** See *Metallic Tinkling* (Illus. Dict.).

Cantharate (*kan'-thar-āt*). A salt of cantharic acid.

Cantharene (*kan'-thar-ēn*). $C_{10}N_{12}I_2O_3$. A compound obtained from cantharidin by action of hydriodic acid.

Cantharidate (*kan-thar'-id-āt*). A salt of cantharidic acid.

Cantharidated (*kan-thar'-id-a-ted*). Containing cantharides.

Cantharidic (*kan-thar-id'-ik*). Relating to or obtained from cantharides. **C. Anhydrid.** Synonym of *Cantharidin.* **C. Ether.** See *Ether.*

Cantharidism. (See Illus. Dict.) **C., External** poisoning by absorption from a cantharidal blister.

Cantharin (*kan'-thar-in*). C_8H_{12}. A substance distilled from cantharic acid with lime.

Caoutchin, Caoutchoucin (*koo'-chin, koo'-choo-sin*). See *Dipentene* (Illus. Dict.).

Cap (*kap'*) [AS., *cappe*]. 1. See *Tegmentum* (Illus. Dict.). 2. The tissue covering the conical end of a lymph-follicle. **C., Enamel,** the concave enamel organ covering the top of the growing tooth-papilla. **C., Nuclear,** a collection of chromophilic substance on one side of the nucleus of a cell.

Capacity. (See Illus. Dict.) 2. Cubic extent. **C. Breathing.** See *Vital Capacity* (Illus. Dict.). **C. Calorific.** See *Specific Heat* (Illus. Dict.). **C. Combining.** See *Atomicity* (Illus. Dict.). **C., Extreme Breathing, C., Extreme Differential.** See *Respiratory Capacity* (Illus. Dict.). **C., Lung, C. Pulmonary, C., Pulmonic, C., Respiratory.** See *Respiratory Capacity* (Illus. Dict.). **C., Testamentary,** a legal term signifying a sound mental condition capable of making a will. **C., Thermal.** See *Specific Heat* (Illus. Dict.). **C., Thoracic.** See *Vital Capacity* (Illus. Dict.).

Capillaraneurysm (*kap-il-ar-an'-u-rizm*) [*capillus,* hair; *ανέυρυσμα,* a widening]. Excessive capillary tasia.

Capillarectasia (*kap-il-ar-ek-ta'-ze-ah*) [*capillus,* a ha *ἔκτασις,* a stretching out]. Dilation of the capillar

Capillarimeter (*cap-il-ar-im'-et-ur*) [*capillus,* a ha *μέτρον,* a measure]. A device for estimating diameter of capillary tubes.

Capillarity. (See Illus. Dict.) 2. The condition being capillary.

Capillary. (See Illus. Dict.) **C.s, Biliary, C.s, Gall** See *Canals, Intralobular Biliary* (Illus. Dict.). **Drainage.** See *Drainage.*

Capillitium (*kap-il-it'-e-um*) [L.]. The hair of head, or the portion of the scalp thus covered. **distichia.** See *Distichiasis* (Illus. Dict.). **C. int catum.** See *Plica polonica* (Illus. Dict.).

Capillose (*kap'-il-ōz*) [*capillosus*]. Hairy.

Capillurgy (*kap'-il-ur-je*) [*capillus*, a hair; *ἐργον*, work]. The art of destroying superfluous hair.

Capillus. (See Illus. Dict.) 2. A hair-like filament. 3. A hair's breadth ($\frac{1}{30}$ to $\frac{1}{12}$ of a line).

Capistration (*kap-is-tra'-shun*) [*capistrum*, a halter]. See *Phimosis*; and also *Trismus* (Illus. Dict.).

Capistrum. (See Illus. Dict.) 3. Trismus.

Capitatum (*kap-it-a'-tum*) [*caput*, head]. The large bone of the carpus, the os magnum.

Capitium (*kap-e'-she-um*) [L.]. A bandage for the head; it may be triangular or four-cornered. **C. magnum, C. quadrangulare, C. quadratum,** a four-cornered head bandage. **C. minus, C. triangulare,** a three-cornered head bandage.

Capitones (*kap'-it-ōnz*) [*caput*, head]. Fetuses with heads too large for unassisted delivery.

Capnomor (*kap'-no-mor*) [*καπνός*, smoke; *μοῖρα*, a part]. $C_{20}H_{22}O_2$. A transparent, colorless, oily fluid, a constituent of smoke obtained from the heavy oil of tar. It dissolves caoutchouc.

Capparis. (See Illus. Dict.) **C. aphylla,** Roth, a shrub of India esteemed in the treatment of boils and affections of the joints. **C. coriacea,** Burch., a native of Peru; the fruit is antiepileptic and antihysteric. **C. jamaicensis,** Jacq., of South America; the root-bark is rubefacient, the root diuretic, the leaves and flowers antispasmodic.

Capral (*kap'-ral*). 1. Capric or decatoic aldehyd. 2. Caproic or hexyl aldehyd.

Capraldehyd (*kap-ral'-de-hīd*). Capric aldehyd.

Capramid (*kap'-ram-id*). $C_{10}H_{19}O \cdot NH_2$. A colorless crystalline substance, soluble in alcohol, obtained from capric ether when shaken with concentrated aqueous ammonia.

Caprate (*kap'-rāt*). A salt of capric acid.

Capric (*kap'-rik*) [*capra*, a goat]. Relating or belonging to, or having the odor of a goat.

Caprinate (*kap'-rin-āt*). See *Caprate.*

Caprinic (*kap-rin'-ik*). See *Capric.*

Caprizant (*kap'-ri-zant*) [*caper*, a goat]. Leaping; of irregular motion, applied to the pulse.

Caproate (*kap'-ro-āt*). A salt of normal caproic acid.

Caproic (*kap-ro'-ik*). Relating to a goat. **C. Anhydrid,** $C_{12}H_{22}O_3$, a neutral oily liquid.

Caproin (*kap'-ro-in*). A fat resembling caprin found in goat's butter.

Capronitril (*kap-ro-ni'-tril*). See *Amyl Cyanid.*

Caproyl (*kap'-ro-il*). 1. $C_6H_{11}O$. A hypothetic radicle. Syn., *Hexoyl.* 2. C_6H_{13}. A radicle. Syn., *Hexyl.*

Caprylene (*kap'-ril-ēn*). See *Octylene* (Illus. Dict.).

Caprylic (*kap-ril'-ik*). Obtained from or containing capryl. **C. Anhydrid,** $(C_8H_{15}O)_2O$, a liquid substance at ordinary temperature.

Caprylin (*kap'-ril-in*). See *Tricaprylin* (Illus. Dict.).

Caprylyl (*kap'-ril-il*). $C_8H_{15}O$. The radicle found in caprylic acid. **C. Hydrate,** caprylic acid.

Capsacutin (*kap-sak'-u-tin*). See *Capsaicin.*

Capsaicin (*kap-sa'-is-in*). $C_{18}H_{28}NO_3$. The active principle of capsicum found in the pericarp and placenta of *Capsicum fastigiatum*, and soluble in alcohol, ether, benzene, and fixed oils. Its vapors are intensely acrid. Dose, $\frac{1}{100}$–$\frac{1}{40}$ gr. (0.006–0.016 gm.). Syn., *Capsacutin; Capsicin.*

Capsicin. (See Illus. Dict.) 2. A volatile alkaloid from capsicum occurring as an oily liquid devoid of pungency.

Capsicum. (See Illus. Dict.) 2. A genus of plants of the order *Solanaceæ.*

Capsotomy (*kap-sot'-o-me*). See *Capsulotomy* (Illus. Dict.).

Capsula. (See Illus. Dict.) 2. See *Capsule.*

Capsulation (*kap-su-la'-shun*) [*capsula*, a small box]. The act or process of inclosing in capsules.

Capsule. (See Illus. Dict.) **C., Acoustic.** See *C., Auditory.* **C., Adipose.** See *C. of the Kidney.* **C., Aqueous, C. of the Aqueous Humor,** Descemet's membrane. **C., Articular.** See *Ligament, Capsular* (Illus. Dict.). **C., Atrabiliary.** See *C., Suprarenal* (Illus. Dict.). **C., Auditory,** the primitive auditory organ, formed by the invagination of the nervous stratum of the epiblast. See also *Vesicle, Auditory,* and *V., Otic* (Illus. Dict.). **C., Bowman-Muller's.** See *Bowman's C.* (Illus. Dict.). **C., Brain.** See *Capsula* (Illus. Dict.). **C., Cartilage, C. of a Cartilage-cell,** the lining of cartilage cavities containing the cartilage-cells. **C. of a Cell,** the cell-membrane. **C., Cellular, of the Eye,** the sheath of the eyeball. **C., Crystalline.** See *C. of the Lens* (Illus. Dict.). **C., Dental,** one of connective tissue inclosing a rudimentary tooth of the fetus. **C., Fibrous.** See *Ligament, Capsular* (Illus. Dict.). **C. of a Glomerulus.** See *Bowman's C.* (Illus. Dict.). **C.s, Glutoid,** gelatin capsules treated with formaldehyd. **C., Gum.** See *C., Dental.* **C. of the Heart,** the pericardium. **C., Hemorrhoidal,** a metal capsule-shaped device for applying Vienna paste to a hemorrhoid. **C., Hyaloid.** See *Membrana limitans* (Illus. Dict.). **C. of the Kidney,** the fat-containing connective tissue encircling the kidney. **C., Müller's.** See *Bowman's C.* (Illus. Dict.). **C., Nasal,** the embryonic cartilage which becomes the nose. **C. of a Nerve-cell,** that portion of the neurilemma which covers a ganglion-cell. **C., Notochordal,** the sheath of the notochord. **C., Ocular.** See *C., Tenon's* (Illus. Dict.). **C., Olfactory.** See *C., Nasal.* **C., Optic,** the embryonic structure forming the sclera. **C., Ovic.** See *Ovicapsule* (Illus. Dict.). **C., Periotic,** the structure surrounding the internal ear. **C., Persistent.** See *Cuticula dentis* (Illus. Dict.). **C.s, Rainey's.** See *Rainey's Corpuscles* (Illus. Dict.). **C., Renal.** See *C., Suprarenal.* **C. of Retzius.** See *Cavity, Preperitoneal* (Illus. Dict.). **C.s, Seminal,** expansions of the vasa deferentia near the seminal vesicles; applied by some authorities to the seminal vesicles. Syn., *Capsulares seminales.* **C.s, Sense,** the cartilaginous or bony cavities containing the organs of sense. **C., Suprarenal Accessory,** an additional capsule attaining the size of a pea and sometimes attached to the suprarenal capsule by connective tissue. **C., Synovial.** See *Membrane, Synovial* (Illus. Dict.). **C., Terminal Gland.** See *Corpuscle of Krause* (Illus. Dict.). **C. of a Uriniferous Tubule,** Bowman's capsule.

Capsulotome. (See Illus. Dict.) 2. An instrument used by Buller in capsulotomy to steady the capsule; it consists of two fine needles fixed parallel to each other in a handle.

Captol (*kap'-tol*). A product of the condensation of tannin and chloral; a dark-brown hygroscopic powder, soluble in alcohol and warm water. It is used in 1% to 2% solution as an antiseborrheal agent and lotion for the hair. Syn., *Tannochloral.*

Caput. (See Illus. Dict.) Syn., *C. nuclei caudati.* **C. auriculare musculi styloglossi,** Gruber's name for an accessory head of the styloglossus muscle originating in the auditory canal. **C. breve,** the transversus pedis muscle. **C. cæcum coli,** the cecum. **C. caudati,** Wilder's name for *C. corporis striati.* **C. cordis,** the base of the heart. **C. corporis striati,** the base of the striatum. **Capita corporum cavernosum penis,** the crura of the corpora cavernosa. **C. dorsi cornu.** See *C. gelatinosum* (Illus. Dict.). **C. externum.** See *C. magnum.* **C. galeatum,** a

child's head emerging at birth, covered with the caul. **C. galli.** See *Verrumontanum* (Illus. Dict.). **C. inclavatum, C. incuneatum,** that condition in which the head of the fetus is impacted in the pelvis. **C. lienis,** the upper end of the spleen. **C. longum,** the longest of the three heads of the triceps extensor cubiti. **C. magnum,** the outer head of the triceps extensor cubiti. **C. majus.** See *Globus major* (Illus. Dict.). **C. medullæ, C. medullæ oblongatæ,** Bartholin's name for the cerebrum as distinguished from the oblongata. **Capita medullæ oblongatæ,** the thalami. **C. minus.** See *Globus minor* (Illus. Dict.). **C. penis,** the glans penis. **C. progenæum,** a head in which the lower incisors overreach the upper ones. **C. scapulæ,** the portion of the scapula having the articular surface. **C. secundum.** See *C. magnum.* **C. sternale,** the part of the sternum giving rise to the sternocleidomastoid muscle. **C. tali,** the head of the astragalus. **C. testis,** the epididymis. **C. transversum,** the transversus pedis. **C. zygomaticum,** the levator anguli oris.

Caragana (*kar-ah-gan'-ah*) [Tartar name meaning black ear]. A genus of plants of the order *Leguminosæ.* **C. arborescens,** Lam., the pea-tree of Siberia; the root and bark are expectorant, the leaves contain a blue coloring-matter.

Carageen, Caragheen. See *Carrageen* (Illus. Dict.).

Caraiba Bark. The bark of *Jacaranda procera.*

Caraipa (*kar-a-e'-pah*) [the Guiana name]. A genus of trees of the order *Ternstræmiaceæ.* **C. fasciculata,** of Guiana, yields tamacoari balsam. **C. grandiflora,** Mart., of Brazil, has an astringent bark, and the sap is applied to wounds and in rheumatism.

Carap (*kar'-ap*). Carapa oil. See under *Carapa* (Illus. Dict.).

Carapa. (See Illus. Dict.) **C. moluccensis,** Lam., an East Indian tree; the bitter bark is used in diarrhea and the seeds in colic. **C. procera,** D. C., of the tropics of Asia and Africa; the fruit and bark are antiperiodic, the oil from the seeds is anthelmintic and expectorant.

Carapin (*kar'-ap-in*). An alkaloid from the bark of *Carapa guianensis.*

Carbamate (*kar'-bam-āt*). A salt of carbamic acid.

Carbamic (*kar-bam'-ik*). Obtained from carbamid.

Carbid (*kar'-bid*). A compound formed by the direct union of carbon with some radicle or element.

Carbimids (*kar'-bim-idz*). Bodies isomeric with cyanates, but distinguished from true cyanates in that alkalis decompose them into carbon dioxid and amin. Syn., *Carbonylamins.*

Carbinol (*kar'-bin-ol*). Methyl alcohol or any monatomic alcohol formed from it by replacement of the hydrogen of the methyl group with one or more hydrocarbon radicles.

Carboformal (*kar-bo-form'-al*). A combination of carbon and paraformaldehyd in the form of blocks (Glüh blocks) for purposes of disinfection, the formaldehyd being liberated by the burning of the carbon.

Carbohemia, Carbohæmia (*kar-bo-he'-me-ah*) [*carbo,* a coal; *αἷμα,* blood]. Imperfect oxidation of the blood.

Carbohydric (*kar-bo-hi'-drik*). Containing carbon, hydrogen, and oxygen.

Carbolate (*kar'-bol-āt*). 1. A salt of carbolic acid. 2. To impregnate with carbolic acid.

Carbolfuchsin (*kar-bol-fook'-sin*) [*carbo,* a coal; *fuchsin*]. A staining fluid consisting of 90 parts of a 5% aqueous solution of carbolic acid and 1 part of fuchsin dissolved in 10 parts of alcohol.

Carbolism. (See Illus. Dict.) **C., Cutaneous,** dry gangrene due to the action of liquid carbolic acid or to prolonged application of a solution of it upon the skin.

Carbolmarasmus (*kar-bol-mar-az'-mus*) [*carbo,* a coal; *μαρασμός,* decay]. Chronic carbolism; a condition marked by vomiting, vertigo, headache, salivation, nephritis, and general marasmus.

Carbolxylene (*kar-bol-zi'-len*). A clearing mixture composed of carbolic acid, 1 part, and xylene, 3 parts; used for clearing microscopic sections which are to be mounted in Canada balsam or other resinous medium.

Carbometer. See *Carbonometer.*

Carbomethylic (*kar-bo-meth-il'-ik*). Containing both carbon and methyl.

Carbon. (See Illus. Dict.) **C. Dichlorid,** C_2Cl_4, a colorless liquid; sp. gr. 1.619 at 20° C.; boils at 121°–122° C. **C. Oxychlorid.** See *Phosgene Gas* (Illus. Dict.). **C. Trichlorid,** C_2Cl_6, obtained from chlorin with ethyl and ethylene chlorids in the sunshine; colorless crystals with odor of camphor, soluble in alcohol and ether, melting at 184° C. Syn., *Hexachlorethane; Perchlorethane; Carbon hexachlorid.*

Carbonate (*kar'-bo-nāt*). A salt of carbonic acid. **C., Acid,** a substitution-compound of carbonic acid in which there is replacement of but one of its hydrogen atoms with a base. **C., Basic,** a compound of a carbonate with the oxid of the same base. **C., Hydric.** See *C., Acid.* **C., Hydrogen.** 1. Carbonic acid. 2. Acid carbonate. **C., Neutral, C., Normal,** a substitution-compound of carbonic acid in which a base replaces all its hydrogen.

Carbonated (*kar'-bo-na-ted*). 1. Containing carbonic acid. 2. Changed into a carbonate.

Carbone (*kar'-bōn*). A carbuncle.

Carboneous (*kar-bon'-e-us*). Containing carbon; carbonous.

Carboneum (*kar-bon'-e-um*). Carbon.

Carbonic (*kar-bon'-ik*). Relating to, obtained from, or containing carbon. **C. Snow,** carbonic-acid gas in a solid state. **C. Anhydrid,** carbon dioxid.

Carbonid (*kar'-bon-id*). 1. See *Carbid.* 2. A mineral which contains carbon. 3. Dulong's name for an oxalate freed from its hydrogen by heat.

Carbonite (*kar'-bon-īt*). An oxalate.

Carbonium (*kar-bon'-e-um*). Carbon.

Carbonometer (*kar-bon-om'-et-ur*) [*carbon; μέτρον,* a measure]. An apparatus for indicating the degree to which the air of a room is vitiated by carbonic-acid gas.

Carbonometry (*kar-bon-om'-et-re*). The determination of the amount of carbon dioxid exhaled in the breath.

Carbonous (*kar'-bon-us*). Containing carbon.

Carbonyl. (See Illus. Dict.) **C. Chlorid.** See *Phosgene Gas* (Illus. Dict.).

Carbonylamins (*kar-bon-il-am'-ins*). See *Carbimids.*

Carbosapol (*kar-bo-sap'-ol*) [*carbo,* a coal; *sapo,* soap]. A clear disinfectant solution obtained by warming together carbolic acid 50 parts, yellow soda soap 25 parts, and soft potash soap 25 parts.

Carbosulfid, Carbosulfuret (*kar-bo-sul'-fid, -fur-et*). A compound of carbon and sulfur with a radicle.

Carbothialdin (*kar-bo-thi-al'-din*). $C_5H_{10}N_2S_2$. White crystals obtained on evaporating carbon sulfid with an alcoholic solution of aldehyd ammonia. It is soluble in acids.

Carbovinate (*kar-bo-vi'-nāt*). An ethylcarbonate.

Carboxyhemoglobin (*kar-box-e-hem-o-glo'-bin*). A compound of carbon monoxid and hemoglobin formed in coal-gas poisoning.

Carboxyl. (See Illus. Dict.) 2. Same as *Carbonyl.*

Carboxylate (*kar-boks'-il-āt*). A salt of carboxylic acid.

Carboy (*kar'-boi*) [Turk., *karaboya*]. A large bottle protected by wicker-work and a wooden box used in the transportation of corrosive and other liquids.

Carceag. A disease of sheep described by Babes in Roumania; it is probably a form of trypanosomiasis.

Carcinelcosis (*kar-sin-el-ko'-sis*) [*καρκίνος*, a crab; *ἕλκωσις*, ulceration]. A cancerous ulcer. **C. fungosa.** See *Cancer verrucosus.*

Carcinoma. (See Illus. Dict.) See *Sign; Boas', de Morgan's, Spiegelberg's, Semon's.* **C., Acinous.** See *Sarcoma, Encephaloid* (Illus. Dict.). **C., Adenoid, C. adenodes,** an adenocarcinoma. **C. asbolicum.** See *Cancer, Soot.* **C., Atrophic.** See *Cancer, Cicatrizing.* **C. caminariorum, C. caminos purgantium.** See *Cancer, Soot.* **C. cicatricans, C. cicatricialis.** See *Cancer, Cicatrizing.* **C., Columnar-celled, C., Cylindric-celled, C., Cylindric Epithelial,** cylindric epithelioma. **C. cutaneum,** a cancer of the skin. **C., Cystic, C., Cystoid,** one containing cysts. **C. cysticum papillare psammosum,** a cystic carcinoma in which there are present papillomatous growths, of which some of the cellular structure has been replaced by calcareous concretions. **C. durum.** See *C., Scirrhous* (Illus. Dict.). **C. epitheliodes, C. epitheliosum, C., Epithelial,** an epithelioma. **C. fasciculatum,** a spindle-celled sarcoma. **C., Fibrosomedullary,** one containing about an equal portion of cells and stroma. **C. fibrosum, C., Fibrous.** See *C., Scirrhous* (Illus. Dict.). **C., Glandular** (of the kidney). See *Strumæ lipomatodes aberratæ renis* (Illus. Dict.). **C. hæmatodes.** See *Cancer, Fungous.* **C., Hyaline.** See *C., Colloid* (Illus. Dict.). **C. molle.** See *C., Encephaloid* (Illus. Dict.). **C. muciparum, C. mucosum.** See *C., Colloid* (Illus. Dict.). **C., Multicellular.** See *C., Encephaloid* (Illus. Dict.). **C. myxomatodes, C., Myxomatous,** one in which myxoid transformation has taken place in its stroma. **C. nigrum,** a melanotic carcinoma. **C., Obsolescent.** See *Cancer, Cicatrizing.* **C. osteodes, C. osteoides, C., Osteoid, C., Osteo-.** See *Osteosarcoma* (Illus. Dict.). **C., Pigmented.** See *C., Melanotic* (Illus. Dict.). **C. psammosum,** one in which stratified calcareous concretions differing from those found in psammomata have replaced the epithelial elements. **C., Reticulated,** one which has undergone fatty metamorphosis and exhibits its stroma more distinctly. **C., Retracting.** See *Cancer, Retractile.* **C. sarcomatodes, C., Sarcomatous,** an adenocarcinoma which has undergone sarcomatous degeneration of the connective tissue. **C. scroti, C. scroti asbolicum.** See *Cancer, Soot.* **C. simplex.** See *C., Scirrhous* (Illus. Dict.). **C., Spheroidal-celled.** See *Adenocarcinoma* (Illus. Dict.). **C. spongiosum,** encephaloid sarcoma. **C., Tubular.** See *Cylindroma* (Illus. Dict.). **C. ventriculi,** carcinoma of the stomach. **C., Villous.** See *Papilloma* (Illus. Dict.). **C., Withering.** See *Cancer, Cicatrizing.*

Carcinomatosis (*kar-sin-o-mat-o'-sis*). The pathologic condition giving rise to carcinomas.

Carcinomelcosis (*kar-sin-om-el-ko'-sis*). See *Carcinelcosis.*

Carcinomium (*kar-sin-o'-me-um*). Cancerous pus.

Carcinopolypus (*kar-sin-o-pol'-e-pus*). A cancerous polypus.

Carcinosis. (See Illus. Dict.) **C., Acute Miliary,** the rapid formation of minute cancerous nodules, either primary or secondary, within an internal organ or upon its surface.

Carcinous (*kar'-sin-us*). Cancerous.

Carcinus, Carcinos. (See Illus. Dict.) **C. eburneus.** See *Scleroderma* (Illus. Dict.). **C. globulosus.** See *Carcinoma tuberosum* (Illus. Dict.). **C. tuberculosus.** See *Carcinoma lenticulare* (Illus. Dict.).

Cardamom. (See Illus. Dict.) **C., Large, C., Larger, C., Long,** the capsule of *Amomum maximum,* Roxb., a native of Malaya; called also *Greater C., Greater Java C.* **C., Lesser.** See *Cardamomum* (Illus. Dict.).

Cardia. (See Illus. Dict.) 2. See *C. of the Stomach* (Illus. Dict.).

Cardiac. (See Illus. Dict.) 2. A drug acting specially on the heart.

Cardiagraphy (*kar-de-ag'-raf-e*). See *Cardiography* (Illus. Dict.).

Cardialgia. (See Illus. Dict.) Syn., *Morbus cardiacus; Morsus stomachi; Morsus ventriculi.* **C. icterica,** heartburn with jaundice. **C. inflammatoria,** gastritis. **C. sputatoria,** pyrosis.

Cardialogy (*kar-di-al'-o-je*). See *Cardiology* (Illus. Dict.).

Cardianesthesia (*kar-de-an-es-the'-ze-ah*) [*καρδία*, heart; *ἀναισθησία*, want of feeling]. A condition of the heart marked by lack of sensation.

Cardianeurysma (*kar-de-an-u-riz'-mah*) [*καρδία*, heart; *ἀνεύρυσμα*, a widening]. Aneurysm of the heart.

Cardiaortic (*kar-de-ah-or'-tik*). Relating to the heart and the aorta.

Cardiaplegia. See *Cardioplegia* (Illus. Dict.).

Cardiasthenia (*kar-de-as-the'-ne-ah*) [*καρδία*, heart; *ἀσθένεια*, weakness]. A peculiar weakness of the heart due to neurasthenic conditions.

Cardiatomy. See *Cardiotomy* (Illus. Dict.).

Cardiethmoliposis (*kar-de-eth-mo-lip-o'-sis*) [*καρδία*, the heart; *ἠθμός*, a sieve; *λίπος*, fat]. A deposit of fat in the connective tissue of the heart.

Cardihelcosis. See *Cardielcosis* (Illus. Dict.).

Cardinal, Cardinalis. (See Illus. Dict.) 2. Serving as a joint or hinge. **C.-Powder.** Synonym of *Cinchona bark.*

Cardine (*kar'-den*). A fluid preparation of sheep-hearts digested in glycerin and boric acid, used subcutaneously as a heart tonic and diuretic. Dose, 3–5 cc.

Cardioaccelerator (*kar-de-o-ak-sel-ur-a'-tor*). Hastening the action of the heart. **C. Center.** See under *Center.*

Cardioarterial (*kar-de-o-ar-te'-re-al*). Pertaining to the heart and the arteries.

Cardiocele. (See Illus. Dict.) **C. abdominalis,** hernia of the heart into the abdomen.

Cardiodysesthesia, Cardiodysesthesis (*kar-de-o-dis-es-the'-se-ah, -sis*) [*καρδία*, heart; *δυς*, bad; *αἰσθησις*, perception]. Defective innervation of the heart.

Cardiodysneuria (*kar-de-o-dis-nu'-re-ah*). See *Cardiodysesthesia.*

Cardiographer (*kar-de-og'-ra-fer*) [*καρδία*, the heart; *γράφειν*, to write]. An authority upon diseases of the heart.

Cardioid (*kar'-de-oid*) [*καρδία*, heart; *εἶδος*, likeness]. Like a heart.

Cardiokinetic (*kar-de-o-kin-et'-ik*) [*καρδία*, heart; *κινεῖν*, to move]. 1. Exciting the heart action. 2. An agent which excites the action of the heart.

Cardiomelanosis (*kar-de-o-mel-an-o'-sis*) [*καρδία*, heart; *melanosis*]. Melanosis of the heart.

Cardiomyoliposis (*kar-de-o-mi-o-lip-o'-sis*) [*καρδία*, heart; *μῦς*, muscle; *λίπος*, fat]. Fatty degeneration of the muscles of the heart.

Cardiomyomalacia (*kar-de-o-mi-o-mal-a'-se-ah*). See *Cardiomalacia* (Illus. Dict.).

Cardioncus (*kar-de-ong'-kus*) [*καρδία*, heart; *ὄγκος*, a tumor]. An aneurysm in the heart or one in the aorta close to the heart.

Cardionecrosis (*kar-de-o-nek-ro'-sis*) [*καρδία*, heart; *νέκρωσις*, a killing]. Gangrene affecting the heart.

Cardionosos, Cardionosus (*kar-de-on-o'-sos, -sus*) [*καρδία*, heart; *νόσος*, disease]. Any pathologic affection of the heart.

Cardioparaplasis, Cardioparaplasmus (*kar-de-o-par-a-pla'-sis, -plaz'-mus*) [*καρδία*, heart; *παραπλάζειν*, to wander from the right way]. Cardiac malformation.

Cardiophtharsis (*kar-de-of-thar'-sis*) [*καρδία*, heart; *φθείρειν*, to corrupt]. Any affection of the heart causing destruction of its substance.

Cardioptosis (*kar-de-o-to'-sis*) [*καρδία*, heart, *πτῶσις*, falling]. Prolapse of the heart. Syn., *Rummo's disease.*

Cardiopulmonary (*kar-de-o-pul'-mo-na-re*). Relating to the heart and lungs; cardiopulmonic.

Cardiorrheuma (*kar-de-or-u'-mah*) [*καρδία*, heart; *rheumatism*]. Rheumatism of the heart.

Cardiospasm (*kar'-de-o-spazm*) [*καρδία*, heart; *σπασμός*, a drawing]. A spasm of the heart.

Cardiospermum (*kar-de-o-spur'-mum*) [*καρδία*, heart; *σπέρμα*, seed]. A genus of plants of the order *Sapindaceæ.* **C. halicacabum,** L., a climbing tropical annual; the leaves and mucilaginous root are diuretic and diaphoretic.

Cardiosphygmograph (*kar-de-o-sfig'-mo-graf*). See *Cardiograph* (Illus. Dict.).

Cardiotrausis (*kar-de-o-traw'-sis*). See *Cardiotrauma* (Illus. Dict.).

Cardiotrophe, Cardiotrophia (*kar-de-ot'-ro-fe, kar-de-ot-ro'-fe-ah*) [*καρδία*, heart; *τροφή*, nourishment]. 1. Heart-nutrition. 2. The volume of the heart.

Cardipericarditis. See *Cardiopericarditis* (Illus. Dict.).

Cardivalvulitis (*kar-de-val-vu-li'-tis*). Endocarditis confined to the valves.

Cardiypertrophe, Cardiypertrophia (*kar-de-i-pur'-tro-fe, -fe'-ah*) [*cardia; hypertrophy*]. Hypertrophy of the heart.

Cargile-membrane [*Cargile*, the inventor]. An animal membrane resembling gold-beaters' foil, made from the peritoneum of the ox and used in surgery for packing and to prevent adhesions; when applied to the raw surface of the bowel it adheres without supporting stitches and forms an artificial peritoneum. Syn., *Animal velum.*

Cariacon. An alcoholic drink made in French Guiana from sugar-cane, sweet potatoes and cassava.

Cariated (*ka'-ri-a-ted*). Carious

Carica (*kar'-ik-ah*) [*carica*, a dry fig, so called from Caria in Asia Minor]. A genus of plants of the order *Passifloreæ.* **C. papaya,** L., the papaw tree of tropic America; it contains in its leaves and fruit the alkaloid carpain besides the ferment papain or papayotin; the leaves also contain the glucosid carposid. The milky juice and the seeds are anthelmintic.

Carica-cocoa (*kar'-ik-ah-ko'-ko*). A preparation of cocoa containing papayin.

Caricology (*kar-ik-ol'-o-je*) [*carex*, sedge; *λόγος*, science]. The branch of botany treating of sedges.

Caries. (See Illus. Dict.) See *Sign, Rust's.* **C. articulorum.** See *C. fungosa* (Illus. Dict.). **C., Atonic,** a form described by Billroth attended with but little swelling and a thin, fetid discharge. **C. callosa,** syphilitic chancre. **C. carnosa,** fungous caries, marked by large granulation-masses. **C. centralis,** circumscribed chronic osteomyelitis, which, working from within, causes disease of the cortical substances. Syn., *Osteititis interna.* **C. dentis, C. dentium.** See *C. of Teeth* and *Odontonecrosis* (Illus. Dict.). **C. gallica,** syphilitic chancre. **C. granulosa.** See *C. fungosa* (Illus. Dict.). **C. interna.** See *C. centralis.* **C., Lacunar,** that in which the undermined bone is full of lacunas. **C. mollis.** See *C. fungosa* (Illus. Dict.). **C. nongallica,** simple chancre. **C. profunda.** See *C. centralis.*

Cariesin (*ka-ri-es'-in*). A medical preparation of carious bone.

Carina. (See Illus. Dict.) 2. A mesial ridge on the lower surface of the fornix cerebri. 3. The spinal column. **C. aquæductus sylvii,** the carinate inferior margin of the sylvian aqueduct. **C. vaginæ,** the anterior column of the vagina.

Carinal (*kar'-in-al*). Carinate.

Cariosity (*kar-e-os'-it-e*). See *Caries.*

Carious. (See Illus. Dict.) 2. Marked by irregular pits or perforations so as to present the appearance of carious bone.

Carissa. (See Illus. Dict.) **C. carandas,** L., a native of India and Malaya; the fruit is stomachic. **C. ovata,** a native of Australia, contains carissin. **C. xylopicron,** Thou., of Madagascar; the wood is stomachic, digestive, and anthelmintic.

Carissin (*kar-is'-in*). According to Bancroft, a glucosid from the bark of *Carissa ovata,* R. Br., resembling ouabin in action.

Carlate (*kar'-lāt*). A salt of atractylic (carlic) acid.

Carmalum (*kar'-mal-um*). A histologic stain consisting of carmin, 1 part; alum, 10 parts; water, 100 parts.

Carminate (*kar'-min-āt*). A salt of carmic acid.

Carnallite (*kar'-nal-īt*) [*v. Carnall*, a Prussian mineralogist (1804–1874)]. Potassium-magnesium chlorid.

Carnassial (*kar-nas' e-al*) [Fr., *carnassier*, carnivorous]. 1. Fitted for eating flesh; sectorial; applied to teeth which come together like scissor-blades. 2. In the *Carnivora*, a molar or premolar, larger and more prominent than the others. Syn., *Sectorial tooth.*

Carnation (*kar-na'-shun*) [*carnatio*]. The natural color of flesh.

Carneoaponeurotic (*kar-ne-o-ap-o-nu-rot'-ik*). Fleshy and pertaining to an aponeurosis.

Carneopapillosus (*kar-ne-o-pap-il-o'-sus*). Composed of fleshy papillas, as the columns of the vagina.

Carneotendinous (*kar-ne-o-ten'-din-us*). Both muscular and tendinous.

Carniferrin (*kar-ne-fer'-in*). A tasteless meat preparation containing phosphocarnic acid and 30% of iron. Dose, for adults, 8 gr. Syn., *Iron phosphosarcolactate.*

Carniferrol. A preparation of meat-peptone with iron; it is used as a stimulant dietetic. Syn., *Liquor carnis ferro-peptonatus.*

Carnification. (See Illus. Dict.) **C. of Bone.** See *Osteosarcosis* (Illus. Dict.). **C. of the Lung, Congestive,** brown induration of the lung. **C. of the Lungs, C., Pulmonary.** 1. The change of the parenchyma of the lungs into a red material resembling muscle. 2. A consolidation of the lung from action of inflammation.

Carniformis (*kar-ne-form'-is*) [*caro*, flesh; *forma*, form]. Having a flesh-like appearance; *e. g.*, *Abscessus carniformis.*

Carnigen (*kar'-ne-jen*). A dietetic albumose.

Carnogen (*kar'-no-jen*) [*caro*, flesh; *generare*, to produce]. Glycerite of bone-marrow, containing 60% of red marrow and 25% of unaltered fibrin of ox-blood, with albumin, suspended in glycerin. It is a hematinic and used chiefly in pernicious anemia. Dose, 1–2 tablespoonfuls 3 times daily.

Carnolin (*kar'-nol-in*). A solution of 1.5% of formaldehyd; it is a food preservative and disinfectant.

Carnosin (*kar'-no-sin*). $C_9H_{14}N_4O_3$. A base soluble in water, isolated (1900) by Gulewitsch and Amiradzibi from Liebig's meat extract; melts with decomposition at 239° C.

Carnotin (*kar'-no-tin*). See *Aureolin.*

Caro. (See Illus. Dict.) 2. *Strychnos nux vomica.* **C. luxurians,** exuberant granulation. **C. strigis,** the flesh of the owl (*Strix aluco*); it was once official. **C. testudinis,** the flesh of the common tortoise.

Caroba. (See Illus. Dict.) 2. The carob; the fruit

of *Ceratonia siliqua*, L. **C.** or **Carobe di Guidea,** resinous galls resembling carob pods in appearance, formed on *Pistacia terebinthus*, L., and other species. They are coarsely pulverized, burnt in a dish, and the smoke inhaled for the relief of asthma. They appear to act by exciting free secretion.

Carobin (*kar'-o-bin*). A crystalline body obtained from *Jacaranda procera.*

Caroid (*kar'-oid*). A digestive ferment obtained from *Carica papaya;* a pale yellow powder. Dose, 1–3 gr.

Carolinium (*kar-o-lin'-e-um*). The provisional name given by Baskerville to a supposed new element obtained by the fractionation of thorium oxid.

Carone (*kar'-ōn*). A substance obtained from dihydrocarvone by action of hydrobromic acid.

Carony Bark (*kar-o'-ne*) [*Caroni*, a river in Venezuela]. Angustura bark.

Carotidaneurysma (*kar-o-tid-an-u-riz'-mah*). Aneurysm of the carotid artery.

Carotis (*kar-ot'-is*) [L.]. The carotid artery. **C. cephalica, C. cerebralis,** the internal carotid artery. **C. communis,** the common carotid artery. **C. externa, C. facialis,** the external carotid artery. **C. interna,** the internal carotid artery. **C. primitiva,** the common carotid artery.

Carotting (*kar-ot'-ing*). The dressing of skins with mercuric nitrate in connection with felt manufacturing.

Carp's-tongue (*karps'-tung*). An elevator used in the extraction of roots of teeth. Syn., *Fish-tongue.*

Carpain. (See Illus. Dict.) **C. Hydrochlorate,** $C_{14}H_{25}NO_2HCl$, bitter white crystals, soluble in water. It is used in mitral insufficiency and aortic stenosis. Dose, $\frac{1}{3}$–$\frac{1}{2}$ gr. (0.013–0.022 gm.) daily. Injection, $\frac{1}{10}$–$\frac{1}{6}$ gr. (0.0065–0.011 gm.) daily.

Carpipes (*kar'-pe-pes*) [*carpus*, wrist; *pes*, foot]. C. French's term for a condition of the anterior leg in four-footed animals similar to club-foot.

Carpocarpal (*kar-po-kar'-pal*). Applied to the articulation between the two rows of carpal bones; also to different parts of the carpus in relation to each other.

Carpocervical (*kar-po-sur'-vik-al*). Relating to the wrist and the neck.

Carpogenous (*kar-poj'-en-us*) [καρπός, a fruit; γενᾶν, to produce]. Fertile; fruit-producing.

Carpometacarpeus (*kar-po-met-a-kar'-pe-us*). 1. See *Carpometacarpal* (Illus. Dict.). 2. See under *Muscles.*

Carpoolecranal (*kar-po-o-le-kra'-nal*) [*carpus; olecranon*]. Relating to the wrist and the lower portion of the upper arm.

Carpophalangeus, Carpophalanginus (*kar-po-fa-lan'-je-us, -ji'-nus*). 1. Relating to the wrist and to a phalanx. 2. See under *Muscles.*

Carpophilous (*kar-pof'-il-us*) (καρπός, fruit; φιλεῖν, to love]. Parasitic upon fruit.

Carposid (*kar'-po-sid*). A crystalline glucosid from *Carica papaya.*

Carrotin (*kar'-o-tin*) [*carota*, carrot]. $C_{18}H_{24}O$. A lipochrome, the coloring-matter of carrots and tomatoes.

Carthagena Bark. Cinchona from Carthagena.

Cartilage. (See Illus. Dict.) **C., Accessory.** See *C., Sesamoid.* **C.s, Alar,** the cartilages, one on each side, forming the anterior framework of the nostril. **C.s, Aliethmoidal,** two embryonic cartilaginous processes one on each side of the ethmoid; they aid in forming the roof of the nasal cavities. **C.s, Alinasal,** those forming the framework of the outside wall of the nostril. **C.s, Aliseptal,** two cartilages, one on each side of the septum, lying anterior to and below the nasal bones. **C., Annular.** 1. Any ring-shaped cartilage. 2. The cricoid cartilage. **C., Anonymous,** the cricoid cartilage. **C., Aortic,** the second costal cartilage on the right side. **C., Arthrodic, C., Arthrodial.** See *C., Articular* (Illus. Dict.). **C.s, Arytenoid.** See under *Arytenoid* (Illus. Dict.). **C., Asternal,** the costal cartilages which are detached from the sternum. **C., Auditory,** in the embryo, the auditory capsule. **C., Auricular,** that of the outer ear. **C., Basitrabecular.** See *C., Prenasal.* **C.-bone.** 1. See *Ossein* (Illus. Dict.). 2. See *C., Calcified.* **C.s, Brecht's,** the ossa supraternalia, two small cartilaginous or bony nodules near each sternoclavicular joint, above the sternum. They are regarded as the rudiments of the episternal bone that is well developed in some animals. **C., Bronchial,** plates of cartilage, in some instances very minute, found in the bronchial tubes. **C., Calcified,** that in which a calcareous deposit is contained in the matrix. Syn., *C., Crusted; C.-bone; Primary bone.* **C., Cariniform,** in comparative anatomy the cervical cartilaginous prolongation of the sternum. **C., Cellular.** See *C., Parenchymatous.* **C., Ciliary.** See *C., Palpebral.* **C., Circumferential,** one surrounding the border of an articular cavity. **C.s, Connecting,** those lying between the bones of joints in which there is little motility. **C., Connective-tissue.** See *C., White Fibro-.* **C.s, Corniculate.** See *C. of Santorini* (Illus. Dict.). **C., Cricoid.** See *C.s of the Larynx* (Illus. Dict.). **C., Crusted.** See *C., Calcified.* **C., Cuneiform.** See *C., Wrisberg's* (Illus. Dict.). **C., Dental.** See *Ridge, Maxillary* (Illus. Dict.). **C., Dentinal.** See *Ossein* (Illus. Dict.). **C., Diarthrodial.** See *C., Articular* (Illus. Dict.). **C., Ear.** 1. That forming the framework of the outer ear and of the outer part of the external auditory canal. 2. See *Vesicle, Otic* (Illus. Dict.). **C., Elastic.** See *C., Reticular* (Illus. Dict.). **C., Embryonal.** See *C., Parenchymatous.* **C., Epiphyseal.** See *C., Intermediary* (2). **C., Ethmovomerine,** the anterior prolongation of the united trabeculas in the embryo. **C., Eustachian.** See *C., Tubal.* **C., Extrastapedial,** that connected with the tympanic membrane and forming the anterior part of the columella auris. **C., Fetal.** See *C., Temporary.* **C., Fibroelastic.** See *C., Reticular* (Illus. Dict.). **C., Fibrous.** See *C., White Fibro-.* **C., Floating.** See *Arthrolith.* **C., Huschke's.** See *Jacobson's C.* (Illus. Dict.). **C., Hyaloid.** See *C., Hyaline* (Illus. Dict.). **C., Hypohyal,** that representing the basihyal bone or the cartilaginous rudiment of it. **C., Incrusting.** See *C., Articular* (Illus. Dict.). **C., Infrastapedial,** an element of the columella auris extending downward from the rest of the columella. **C., Innominate,** the cricoid cartilage. **C., Insulated.** See *Arthrolith.* **C.s, Interarticular, C.s, Interarticular Fibro-,** flat fibrocartilages situated between the articulating surfaces of some of the joints. **C., Interarytenoid,** an inconstant cartilage found between the arytenoid cartilages. **C.s, Interhemal,** nodules of cartilage which aid in the formation of the hemal arch of a vertebra. **C., Intermediary.** 1. Cartilage-bone in process of transformation into true bone. 2. That interposed between the epiphysis and diaphysis of a bone. **C., Interneural,** nodules of cartilage which aid in the formation of the neural arch of a vertebra. **C., Intervertebral.** See *Intervertebral Discs* (Illus. Dict.). **C., Investing.** See *C., Articular* (Illus. Dict.). **C., Laryngotracheal,** in comparative anatomy the ring-shaped cartilage forming the framework of the larynx and trachea. **C., Lateral, Inferior,** the alar cartilages. **C., Lateral, Superior.** See *C.s, Upper Lateral.* **C., Loose.** See *Arthrolith.* **C., Lower Lateral** (of the nose), the alar cartilages. **C., Luschka's.** See *Luschka's C.* (Illus. Dict.).

C., Luschka's Subpharyngeal, a small body of hyaline cartilage situated in the areolar tissue of the lower part of the faucial tonsil. It represents a vestige of the third postoral arch of the embryo and is occasionally the seat of morbid growths. **C., Malleal.** See *C., Extrastapedial.* **C., Mandibular.** See *C., Meckel's.* **C., Meatal.** See *C., Auricular* (Illus. Dict.). **C., Meckel's,** the axis of the first branchial arch (mandibular arch) of the fetus. It disappears during the fifth or sixth month with the exception of its posterior (tympanic) portion, which becomes the incus, malleus, and Folian process. A vestige of this cartilage (pinnal cartilage) is occasionally found in tumors of the parotid gland. **C., Mediostapedial,** an element of the columella auris uniting the stapes and the infrastapedial cartilage; it ossifies eventually. **C., Mento-Meckelian,** a nodule located at the side of the symphysis menti. **C.s, Morgagni's.** See *C., Wrisberg's* (Illus. Dict.). **C., Obducent.** See *C., Articular* (Illus. Dict.). **C. of Ossification,** temporary cartilage. **C., Ossifying.** See *C., Calcified.* **C., Otic.** See *Capsule, Auditory.* **C., Palpebral,** the connective tissue forming the framework of the eyelids. **C., Parachordal.** See under *Parachordal* (Illus. Dict.). **C., Parenchymatous,** that in which cells form the main part of the tissue. **C., Periotic,** the rudiment of the petromastoid part of the temporal bone. **C., Permanent,** that which retains its cartilaginous character to adult life. **C., Perrhinal.** See *C.s, Alar.* **C., Plexiform.** See *C., Retinal* (Illus. Dict.). **C., Ploughshare.** See *Jacobson's Cartilage* (Illus. Dict.). **C., Precursory, C., Primordial,** temporary cartilage. **C., Prenasal,** in comparative embryology that forming the anterior portion of the nose or beak. **C., Pulmonary,** the second costal cartilage on the left side. **C.s, Pyramidal,** the arytenoid cartilages. **C.s, Quadrate,** several small cartilages passing out from the alar cartilages in the external part of the nostril. **C., Retiform.** See *C., Reticular* (Illus. Dict.). **C.s, Rib.** See *C., Costal* and *Hemapophysis* (Illus. Dict.). **C., Scutiform.** 1. The thyroid cartilage. 2. In solipeds, a small triangular plate attached by muscular fibers to the conchal cartilage and located on the surface of the temporal muscle and anterior to the base of the concha. **C., Seiler's,** a small cartilaginous rod attached to the vocal process of the arytenoid cartilage. It is more developed in the female than in the male. **C.s, Semilunar.** See under *Semilunar* (Illus. Dict.). **C., Septal,** that of the nasal septum. **C., Sesamoid, C., Sesamoid Fibro-.** See *Sesamoid Bones* (Illus. Dict.). **C., Sesamoid** (of the larynx), Luschka's cartilage. **C., Sesamoid** (of the nose). See *C., Epactal* (Illus. Dict.). **C.s, Sigmoid.** See *Semilunar Cartilages* (Illus. Dict.). **C., Spiracular,** in comparative anatomy a semilunar cartilage partially surrounding the spiracle and lying between the auditory capsule and the hyomandibular cartilage. **C., Spongy.** See *C., Reticular* (Illus. Dict.). **C., Sternal,** the costal cartilages. **C., Stratiform, C., Striated.** See *C., White Fibro-.* **C., Suborbital,** in comparative anatomy the cartilage representing the palate bone. **C., Suprastapedial,** a part of the columella auris, extending upward from the extremity of the extrastapedial cartilage and adherent to the side of the auditory capsule. **C., Synarthrodial,** that of any fixed or slightly movable articulations. **C., Tarsal.** See *C., Palpebral.* **C., Temporary,** that which is ultimately replaced by bone. **C., Thyrocricoid,** in comparative anatomy one formed by the conjunction of the cricoid and thyroid cartilages. **C., Thyroid.** See under *Thyreoid* (Illus. Dict.). **C., Trabecular,** the embryonal trabeculas. **C., Tracheal,** the cartilaginous rings of the trachea. **C., Transitory.** See *C., Temporary.* **C.s, Triangular** (of the nose), the upper lateral cartilages of the nose. **C., Tubal,** a rolled triangular cartilage running from the osseous part of the eustachian tube to the pharynx. **C.s, Uniting.** See *C.s, Connecting.* **C.s, Upper Lateral** (of the nose), two triangular cartilages immediately below the nasal bones, composing the upper part of the framework of the nose. **C., White Fibro-,** a tissue composed of cartilage and of white fibrous connective tissue. **C., Xiphoid.** See *C., Ensiform* (Illus. Dict.). **C., Y.** See under *Y* (Illus. Dict.).

Cartilago [pl., *cartilagines*]. (See Illus. Dict.) **C. alba,** hyaline cartilage. **C. clypealis,** the thyroid cartilage. **C.s cruciformes,** Wrisberg's cartilage. **C.s falcatæ, C.s falciformes,** the semilunar cartilages. **C. figurata,** a form of hyaline cartilage with the surface marked with pits or depressions. **C. flava,** reticular cartilage. **C. formativa,** temporary cartilage. **C. frontalis,** in the embryo the cartilaginous representative of the frontal bone. **C. genuina,** hyaline cartilage. **C. gingivalis,** the gingival crest. **C. glandis,** the fibrous septum in the mesial line of the glans penis. **C. glottidis superior,** C. Mayer's name for a small inconstant cartilage in the superior thyroarytenoid fold of the larynx. **C.s gutturales,** the arytenoid cartilages. **C. intermedia radii, C. intermedia triangularis,** one situated between the radius and ulna and the os triquetrum. **C. lingualis,** one sometimes found in the mesial line of the posterior part of the tongue. Syn., *Nucleus fibrosus linguæ.* **C.s lunatæ,** the semilunar cartilages. **C. mastoidea,** the embryonic cartilage developing into the mastoid process of the temporal bone. **C. meniscoidea,** the interarticular cartilage. **C.s minores inferiores,** the alar cartilages. **C.s nasi accessoriæ.** See *Cartilage, Epactal* (Illus. Dict.). **C.s nasi inferiores,** the alar cartilages. **C.s nasi laterales,** the upper lateral cartilages of the nose. **C. nasi mediana,** the cartilage of the septum of the nose. **C.s nasi sesamoideæ,** the epactal cartilages. **C.s nasi superiores, C.s nasi triangulares,** the upper lateral cartilages of the nose. **C. ossescens,** temporary cartilage. **C. parietalis,** in the embryo the cartilage which develops into the parietal bone. **C. peltalis, C. peltatus,** the thyroid cartilage. **C. perennis, C. permanens,** permanent cartilage. **C. petrosa,** in the embryo the cartilaginous representative of the petrosa. **C.s pinnales,** the alar cartilages. **C. quadrangularis nasi,** the cartilage of the nasal septum. **C.s suturarum,** synarthrodial cartilages. **C.s teretes.** See *Cartilages of Santorini* (Illus. Dict.). **C.s triquetræ,** the upper lateral cartilages of the nose. **C. triquetra carpi,** a triangular fibrocartilage separating the inferior radioulnar articulation from the carpus.

Cartridge, Peppermint. See *Drain-tester, Hudson's.*

Caruba. See *Caroba.*

Carum. (See Illus. Dict.) 2. A genus of umbelliferous plants including *C. carvi,* caraway. **C. petroselinum,** Benth., parsley, is diuretic and sedative.

Caruncula. (See Illus. Dict.) **Carunculæ cuticulares,** the nymphæ. **Carunculæ hymenales.** See *C.æ myrtiformes* (Illus. Dict.). **C. innominata,** the lacrimal gland. **C. major,** a caruncle marking the common orifice of the common bile duct and the pancreatic duct. **C. mammillaris.** (See Illus. Dict.) 2. The enlarged ends of the galactophorous ducts in the nipple. **C. minor,** one in the duodenum in the center of which a supplementary pancreatic duct occasionally opens. **C. morgagnii,** the middle lobe of the prostate. **C. nervi olfactorii.** See *Bulb, Olfac-*

tory (Illus. Dict.). **Caruncuiæ papillares.** See *Papilla, Renal* (Illus. Dict.). **C. salivalis.** See *C. sublingualis.* **C. seminalis.** See *Verrumontanum* (Illus. Dict.). **C. sublingualis,** one marking the orifice of Wharton's duct. Syn., *Papilla salivalis inferior.* **C. urethræ virilis.** See *Verrumontanum* (Illus. Dict.). **Caruncuiæ vaginales.** See *Caruncuiæ myrtiformes* (Illus. Dict.).

Caruncuiate, Caruncuiated (*kar-ung'-ku-lāt, -ed'*). Furnished with a caruncle.

Carvacrol. (See Illus. Dict.) Syn., *Cymophenol; Oxyzymol; Metaisocymophenol; Cymic phenol.* **C. Iodid,** $C_{10}H_{13}OI$, a brown powder slightly soluble in alcohol, readily soluble in olive oil, ether, and chloroform, melting at 90° C.; it is used as a substitute for iodoform. Syn., *Iodocrol.*

Carya (*kar'-e-ah*) [*καρύα*, the walnut-tree]. Hickory; a genus of trees of the order *Juglandaceæ*, indigenous to North America. **C. tomentosa** yields a crystalline principle, caryin, believed to be identical with quercitrin. The leaves of most of the species are aromatic and astringent and the bark bitter and astringent. The inner bark is used in dyspepsia and intermittent fever.

Caryin (*kar'-e-in*). See under *Carya.*

Caryinum (*kar-e-in'-um*). Nut oil.

Caryochrome (*kar'-e-o-krōm*) [*κάρυον*, a nut; *χρῶμα*, color]. Applied by Nissl to a kind of nerve-cell in which the cell-body is only indicated, but having a nucleus of the size of an ordinary nerve-cell.

Caryocinetic. (See Illus. Dict.) 2. Ameboid.

Caryolyma (*kar-e-o-lim'-ah*). See *Amphiaster* (Illus. Dict.).

Caryomitome (*kar-e-om'-it-ōm*). See *Chromatin* (Illus. Dict.).

Caryorrhexis. See *Karyorrhexis.*

Casanthrol (*kas-an'-throl*). A mixture of casein ointment with a coal-tar product; it is used as a varnish in skin-diseases.

Cascador (*kas'-ka-dor*) [*casca*, bark]. A gatherer of cinchona bark.

Cascanata (*kas-kan-at'-ah*). A proprietary laxative and alterative said to consist of the active principles of cascara sagrada, gentian, rhubarb, and other herbs, holding in solution phosphate of soda and magnesia.

Cascarin (*kas'-kar-in*). $C_{24}H_{10}O_{10}$. A substance isolated by Leprince from the bark of *Rhamnus purshiana* (cascara sagrada) and believed by him to contain the active tonic and laxative principles of that bark; it occurs in granular masses or prisms. Dose, 1½–3 gr. (0.099–0.198 gm.). According to Phipson, this is identical with rhamnotoxin.

Casearia (*kas-e-a'-re-ah*) [J. *Casearius*, Dutch botanist]. A genus of tropical trees of the order *Samydaceæ.* **C. esculenta,** Roxb., a native of the Asian tropics and Australia; its bitter roots are said to be a valuable remedy in hepatic torpor. **C. ovata,** Willd., the *anavingah* of the Malays; a large tree, bitter in all its parts. The fruit is diuretic. **C. tomentosa,** Roxb., a tree of India; the bitter leaves are used by the natives in medicated baths and the fruit is diuretic.

Casease (*ka'-se-āz*). An enzyme which digests casein, found by Duclaux and produced by bacteria, notably *Tyrothrix tenuis.*

Caseate (*ka'-ze-āt*). 1. A lactate. 2. To undergo cheesy degeneration.

Caseiform (*ka-ze'-e-form*). Resembling cheese or casein.

Casein. (See Illus. Dict.) Syn., *Caseum; Lacterine.* **C. Dyspepton,** an insoluble semigelatinous substance separated in the first stages of gastric digestion. **C., Gluten.** See *C., Vegetable* (Illus. Dict.). **C.-mercury,** a compound of casein and mercuric chlorid, soluble in water with a trace of ammonia added; it is antiseptic. **C. Ointment,** an ointment base consisting of casein, 14 parts; potassium hydrate and sodium hydrate, each, 0.43 part; glycerin, 7 parts; vaselin, 21 parts; borax, 1 part; water, 56–57 parts. **C. Peptone,** a light-brown soluble powder used as a nutrient. **C. of the Saliva,** ptyalin. **C. Sodium,** a compound of casein and sodium hydrate, used as a nutrient.

Caseoiodin (*ka-ze-o-i'-o-din*). A compound of casein and iodin (8% or 9%) forming a white powder soluble in dilute hot alcohol and in hot alkalis. It is used in myxedema.

Casimiroa (*kas-im-ir-o'-ah*) [after *Casimiro Gomez*]. A genus of plants belonging to the order *Rutaceæ.* **C. edulis,** La L., the *zapote blanco* of Mexico; the edible fruit is anthelmintic; the bitter bark with the leaves and seeds are incinerated and used medicinally.

Cassareep, Cassaripe (*kas'-a-rēp*) [South American name]. The concentrated juice of the roots of *Manihot aipi* and *M. utilissima* made innocuous by boiling; it is a condiment, and as an ointment (10%) is recommended in treatment of purulent conjunctivitis, corneal ulcers, and other diseases of the eye.

Casserian (*kas-e'-re-an*). Named after Casserio (1545–1616), an Italian anatomist. See *Gasserian.*

Cassia. (See Illus. Dict.) **C. alata,** L., ringworm shrub; a widely diffused tropical shrub. The juice of the leaves mixed with lime-juice is used in the treatment of ringworm, and the wood and bark are alterant. **C. beareana,** Holmes [Dr. O'Sullivan-Beare], a new species of East Africa. A decoction of the root is highly recommended in blackwater fever and the powdered bark is applied as a dressing to ulcers.

Cassideous (*kas-id'-e-us*) [*cassida*, a helmet]. Helmet-shaped, galeate.

Cassiry. A South American fermented drink prepared from maize.

Cast. (See Illus. Dict.) **C.s, Külz's,** very short, generally hyaline, but sometimes granular casts occurring at the beginning and during the course of diabetic coma, disappearing with the disappearance of the coma, and considered by Külz as diagnostic of impending coma. **C.s, Tubular Exudation** (of the intestines) [Hutchinson]. Synonym of *Mucous colitis.*

Castor-xylene (*kas-tor-zī'-lēn*). A mixture composed of castor oil, 1 part, and xylene, 3 parts, used for clearing or clarifying the collodion or celloidin of objects embedded in collodion.

Castrensis (*kas-tren'-sis*) [*castra*, a camp]. 1. Relating to camps. 2. Camp-fever or dysentery due to unsanitary living in camps.

Casual. (See Illus. Dict.) 2. An occupant of a casual ward in a hospital.

Casuarina (*kas-u-ar-e'-nah*) [*casuar*, the cassowary, from the resemblance of the stems to the heavy feathers of this bird]. A genus of plants of the order *Casuarineæ.* **C. equisetifolia** of Malaya; the tonic and styptic bark is used in the treatment of beriberi. **C. montana,** Lescher, a native of Malaya; the bark is used in beriberi; the leaves in colic, the seeds in a salve in the treatment of headache.

Casuistics (*kaz-u-is'-tiks*) [*casus*, a case]. The study of individual pathologic cases as a means of arriving at the general history of a disease.

Casumen (*kas'-u-men*). A proprietary dietetic said to contain 93% of proteid.

Catabasial (*kat-ah-ba'-se-al*) [*κατά*, down; *basion*]. Applied to skulls having the basion lower than the opisthion.

Catabiotic (*kat-ah-bi-ot'-ik*) [*κατά*, intensive; *βιός*, life]. Applied to the power of growing structures

which causes the development of approximate cells to be harmonious with the primary structure.

Catabolin, Catabolite (*kat-ab'-o-lin, -lite*) [*κατά*, down; *βάλλειν*, to throw]. Any product of catabolism.

Cataclasis. (See Illus. Dict.) 2. See *Catacleisis* (Illus. Dict.).

Cataclysm (*kat'-ak-lizm*) [*κατακλυσμός*, a deluge]. 1. An effusion. 2. A sudden shock.

Catacoustics (*kat-ah-koos'-tiks*) [*κατά*, after; *ἀκούειν*, to hear]. The science of reflected sound.

Catadicrotic (*kat-ah-di-krot'-ik*). Having one or more secondary expansions, as a pulse.

Catadioptric (*kat-ah-di-op'-trik*) [*κατά*, over against; *διοπτήρ*, a watchman]. Applied to optical instruments which have the power of reflecting and refracting light at the same time.

Catadrome (*kat-ad'-ro-me*) [*κατατρέχειν*, to run at or over]. 1. The onset of a disease. 2. The decline of a disease.

Catalase (*kat'-al-āz*). See *Milk-catalase.*

Cataleptic. (See Illus. Dict.) 2. A person affected with catalepsy.

Cataleptize (*kat-ah-lep'-tīz*). To reduce to a state of catalepsy.

Cataleptoid (*kat-ah-lep'-toid*) [*catalepsy; εἶδος*, likeness]. Like catalepsy. **C. State,** a condition due to neuromuscular excitability and differing from true catalepsy in that the limbs must be held in fixed attitudes for a few seconds before they maintain themselves and friction causes them to become limp.

Cataleptolethargic (*kat-ah-lep-to-leth-ar'-jik*). Having the nature of catalepsy and lethargy.

Catalyst (*kat'-al-ist*). A substance having the power to produce catalysis.

Catalytic. (See Illus. Dict.) 3. A retrogressive change.

Catalyzer (*kat-a-li'-zur*). Any substance that accelerates chemical or physical processes which would occur without them. [Ostwald.]

Cataphonica (*kat-ah-fon'-ik-ah*) [*κατά*, after; *φώνη*, sound]. Reflection of sound.

Cataphonics (*kat-ah-fon'-iks*) [*κατά*, after; *φώνη*, sound]. That branch of physics treating of reflected sounds.

Cataphoresis. (See Illus. Dict.) **C., Anemic,** the application of cataphoresis upon a part from which the blood-supply has previously been cut off by an Esmarch bandage or a rubber ring. [Jacoby.] **C., Static,** a method of introducing into the body gaseous medicaments that have been inclosed within a bell-jar or tube into which enters a brush electrode connected with the positive pole of an influence machine.

Cataphoria (*kat-ah-fo'-re-ah*). See *Kataphoria.*

Cataphoric. (See Illus. Dict.) 2. Relating to lethargy or to apoplexy.

Cataplasis. (See Illus. Dict.) 2. The application of a plaster or coating.

Cataract. (See Illus. Dict.) **C., Adherent,** opacity of the lens, due to disturbed nutrition, in which it is attached by exudates to the adjacent parts as in cyclitis. **C., Anterior Central, C., Anterior Polar.** See *C., Polar* (Illus. Dict.). **C., Arborescent.** See *C., Pigmented.* **C., Aridosiliquose,** an overripe cataract with a dry, wrinkled capsule. **C., Axial.** See *C., Nuclear.* **C., Calcareous,** one marked by a deposit of calcium carbonate and a little calcium phosphate. **C., Capsulolenticular,** one involving both the capsule and the substance of the lens. **C., Caseous,** an overripe cataract in which the lens matter has undergone cheesy degeneration. **C., Central.** See *C., Nuclear.* **C., Chalky.** See *C., Aridosiliquose.* **C., Cheesy.** See *C., Caseous.* **C., Cholesterin,** a form of capsulolenticular cataract containing what are supposed to be crystals of cholesterin embedded in the lens. **C., Complicated,** one attended by some other intraocular lesion. **C., Concussion,** a soft cataract due to an explosion or some other concussion. **C., Crystalline.** See *C., Lenticular.* **C., Cystic.** See *C., Morgagnian* (Illus. Dict.). **C., Fibrinous,** a false cataract consisting of an effusion of plastic lymph on the capsule and into the field of vision. **C., Fibroid,** a false cataract consisting of an opacity in the axis of the visual rays though not in the lens. **C., Glycosuric.** See *C., Diabetic* (Illus. Dict.). **C., Grumous,** a spurious cataract from hemorrhage into the cornea or into the vitreous. **C., Gypseous,** an overripe cataract presenting a white appearance from having undergone degeneration. **C., Hard,** a hard grayish opacity of the whole lens. **C., Hyaloid,** a spurious cataract attributed to opacity of the anterior part of the vitreous. **C., Hypermature,** an overripe cataract. **C., Incipient,** forked linear opacities in the equatorial region of the lens seen in middle-aged persons and sometimes remaining unchanged for years. Syn., *Arcus senilis lentis; Gerontoxon lentis.* **C., Inflammatory,** one due to intraocular inflammation. **C., Interstitial.** See *C., Lenticular.* **C., Laminar, C., Laminated.** See *C., Lamellar* (Illus. Dict.). **C., Lenticular,** one occurring in the lens proper. **C., Lymph, C., Lymphatic.** See *C., Morgagnian* (Illus. Dict.). **C., Membranous,** a fibrinous deposit from the iris upon the capsule which becomes opaque. **C., Milky,** a soft cataract with very white opacity. **C., Mixed,** one which ultimately affects the whole lens, but begins as a cortical opacity in sharply demarcated streaks or triangular patches. **C., Myeline,** one containing a semitransparent, yellowish, friable substance. **C., Nuclear,** one of moderate extent beginning in the nucleus. **C., Overripe,** one which has undergone degenerative changes. **C., Perinuclear.** See *C., Lamellar* (Illus. Dict.). **C., Pigmented, C., Pigmentous,** a spurious cataract due to an injury by which the pigment from the posterior surface of the iris has been detached, resulting in a tree-like appearance. **C., Primary, C., Primitive,** one independent of any other lesion of the eye. **C., Pseudomembranous,** a condition marked by white spots on the lens due to iritis. **C., Punctated,** a form of cortical cataract marked by a great number of small dots. **C., Pupillary,** congenital synizesis. **C., Regressive,** one that tends to disappear. **C., Shaking.** See *C., Tremulous.* **C., Siliculose-, C., Siliquose.** See *C., Aridosiliquose.* **C., Solid.** See *C., Hard.* **C., Spontaneous,** one not dependent upon some other lesion or disease. **C., Stellate,** an immature cataract so called because of the radiate character of the opacity. **C., Stony,** one that has undergone degeneration and become of stony hardness. **C., Tremulous, C., Vacillating,** one associated with laceration of the zonule of Zinn, causing trembling of the iris and of the cataract on movement of the eyeball. **C., True,** lenticular cataract.

Cataracta. (See Illus. Dict.) **C. accreta,** an adherent cataract. **C. acquisita, C. adventitia,** one not congenital. **C. adnata,** a congenital cataract. **C. argentea.** See *Cataract, Cholesterin.* **C. brunescens.** See *Cataract, Black* (Illus. Dict.). **C. dendritica,** a pigmented cataract. **C. lentis,** a lenticular cataract. **C. lentis centralis,** a nuclear cataract. **C. natans, C. natatilis.** See *Cataract, Tremulous.*

Cataractopiesis (*kat-a-rak-to-pi-e'-sis*). See *Couching* (Illus. Dict.).

Catarrh, Catarrhus. (See Illus. Dict.) **C. æstivus,** hay-fever. **C., Alcoholic,** a chronic gastric catarrh due to undue use of alcohol. **C., Alveolar,** a condition occurring in bronchopneumonia in which the alveoli of the lungs contain a granular liquid exudate holding modified epithelial cells and blood-corpuscles. **C., Apex,** that affecting the bronchial tubes at the apex of the lungs. **C., Atrophic Nasal,** chronic nasal catarrh resulting in dryness and atrophy of the membrane. **C., Bostock's,** hay-fever. **C., Bronchial,** bronchitis. **C., Choleriform Gastrointestinal,** cholera infantum. **C., Chronic Gastrointestinal.** See *Marasmus* (Illus. Dict.). **C., Dry,** a form of chronic bronchitis associated with emphysema attended with violent and exhausting paroxysms of coughing with scanty or no sputum. **C., Epithelial,** that attended with copious discharge of epithelial cells. **C., Follicular,** that accompanied by follicular enlargement. **C., Hemorrhagic,** bronchial catarrh attended with a superficial extravasation of blood into the mucous tissue. **C., Hyperplastic Nasopharyngeal, C., Hypertrophic Nasal,** chronic catarrh with hypertrophy of the mucosa and of the glands at the vault of the pharynx. **C., Infectious,** that caused by pathogenic microorganisms either by direct invasion or by the effect of toxins generated by them. [Hemmeter.] **C., Intoxication,** that caused by chemic poison (*a*) introduced with the ingesta; (*b*) developed from the ingesta through putrefaction; (*c*) that developed from the blood. [Hemmeter.] **C., Laënnec's.** 1. See *C., Dry.* 2. See *C., Pituitous.* **C., Membranous Nasal,** a form of nasal catarrh marked by the formation of a thick pseudomembrane. **C., Mycotic,** that caused by a fungus. **C., Papillary,** Rasmussen's term for catarrh of the renal papillas. **C., Pituitous** (of Laënnec), chronic serous bronchorrhea attended with copious secretion discharged by severe paroxysms of coughing. **C., Purulent,** one marked by purulent secretion. **C., Rarefying Dry** (of the nasopharynx), a state of malnutrition marked by pale, dry mucosa and at times the occurrence of varicose veins in the pharyngeal wall and about the orifices of the eustachian tubes. **C., Rose,** hay-fever. **C., Russian,** influenza. **C., Serous,** that marked by secretion consisting chiefly of a serous fluid. **C., Silver,** a name given to the injurious effects sometimes following the use of too strong or too often repeated solutions of silver nitrate in conjunctivitis neonatorum. **C., Summer,** hay-fever. **C., Vernal.** See *Vernal Conjunctivitis* (Illus. Dict.) **C., Vasomotor,** hay-fever.

Catarrhectic (*kat-ar-ek'-tik*) [καταῤῥηκτικός]. Purgative.

Catastaltic. (See Illus. Dict.) 3. An inhibitory or sedative agent.

Catatricrotism (*kat ah-tri-krot'-izm*) [κατά, down; τρείς, three; κροτός, a striking]. The occurrence of a third pulsation in the downward stroke of the sphygmograph.

Catatropia (*kat-ah-tro'-pe-ah*). See *Katatropia.*

Catavertebral (*kat-ah-vur'-te-bral*) [κατά, down; *vertebral*]. Located on the side of a centrum of a vertebra next to the bloodvessels.

Catching (*katsh'-ing*). Contagious, in the popular sense, *i. e.*, directly from one person to another, as scabies, ringworm, syphilis, gonorrhea, typhus, variola, diphtheria, and scarlatina.

Catechin-red. See under *Pigment.*

Catechol. (See Illus. Dict.) **C. Dimethylate, C. Dimethyl-ether.** See *Veratrol.* **C. Monomethylate, C. Monomethyl-ether.** See *Guaiacol* (Illus. Dict.).

Catechuic (*kat-ek-u'-ik*). Relating to or obtained from catechu. **C. Anhydrid.** See *Acid, Catechutannic.*

Catechuin (*kat-ek-u'-in*). See *Catechin* (Illus. Dict.).

Catechuretin, Catechurrhetin (*kat-ek-u-ret'-in*). $C_{28}H_{28}O_{12}$. A body obtained from catechu by continued action of sulfuric acid.

Cateiadion (*kat-i-ad'-e-on*) [L.]. An instrument used to excite hemorrhage by being thrust into the nostrils.

Catelectrode (*kat-el-ek'-trōd*). See *Cathode* (Illus. Dict.).

Catenating (*kat-en-a'-ting*) [*catenare,* to chain together]. Connecting; linking; *e.g., C. ague.*

Cathartate (*kath-a'-tāt*). A salt of cathartic acid.

Cathartogenin (*kath-ar-toj'-en-in*). A yellow-brown substance obtained from cathartic acid by decomposition with hydrochloric acid. Syn., *Cathartogenic acid.*

Cathartomannite (*kath-ar-to-man'-īt*). See *Sennit.*

Cat-head (*kat'-hed*). A term applied by Rosch to certain skulls the bones of which are too thin, the form rotund, with the occiput markedly projecting, while all prominences and muscular impressions are inconspicuous. Cf. *Apple-head.*

Catheter. (See Illus. Dict.) **C.-life,** dependence upon the catheter for evacuation of the bladder.

Cathypnosis (*kath-ip'-no-sis*) [καθίπνωσις, a falling asleep]. Synonym of *Sleeping-sickness.*

Cativi, Cativia [Carib for manihot root]. A skin-disease of Central America said to be caused by an animal parasite, and resembling in its lesions grated manihot root.

Catoptroscope (*kat-op'-tro-skōp*) [κάτοπτρον, a mirror; σκοπεῖν, to examine]. An instrument for examining objects by reflected light.

Catoretic (*kat-o-ret'-ik*). See *Catoteric* (Illus. Dict.).

Catramin (*kat'-ram-in*). A turpentine obtained from *Tsuga canadensis* and other conifers. It is recommended as a stimulant, diuretic, and expectorant in chronic respiratory troubles and is used in tuberculosis and lupus subcutaneously and as an embrocation.

Cat's-purr. A peculiar purring bruit heard on auscultation, due to a defect of the mitral valve. Syn., *Frèmissement cataire.*

Catulotic (*kat-ul-ot'-ik*) [κατουλοῦν, to cause to cicatrize]. Promoting cicatrization.

Cauda. (See Illus. Dict.) 3. The part of a muscle forming its insertion. **C. caudati.** See *Cauda* (2) (Illus. Dict.). **C. cornu Ammonis,** an inconstant narrow strip not connected with the hippocampus lying between the fascia dentata and the fimbria. **C. cornu posterioris,** an appendage of the postcornu, made up of vascular neuroglia, extending backward toward the occipital lobe. **C. corporis striata.** See *Cauda* (2) (Illus. Dict.). **C. fasciæ dentatæ,** the prolongation of the fascia dentata upon the uncus. **C. helicis,** an appendage of the cartilage of the ear at the union of the helix and anthelix. **C. lienis,** the lower extremity of the spleen. **C. medullæ** of Bartholin, a collective term for the oblongata and spinal cord. **C. muliebris,** the clitoris. **C. musculi.** See *Cauda* (3). **C. nuclei caudati.** See *Cauda* (2) (Illus. Dict.). **C. pedunculus mallei.** See *Manubrium of Malleus* (Illus. Dict.). **C. striata.** See *Cauda* (2) (Illus. Dict.).

Caudation (*kaw-da'-shun*) [*cauda,* a tail]. The condition of being furnished with a tail. 2. Elongation of the clitoris.

Caudatolenticular, Caudolenticular (*kaw-dat-o-lentik'-u-lar, kaw-do-len-tik'-u-lar*). Pertaining to both the caudate and the lenticular nuclei.

Caudex. (See Illus. Dict.) 2. The main stem of the

brain-stem, the fibers running from the spinal cord to the hemispheres of the brain. **C. dorsalis.** 1. The spinal cord. 2. The oblongata. **C. encephali,** the cerebral peduncle. **C. encephali communis,** the oblongata and crus cerebri. **C. encephali pontilis,** the pons. **C. medullaris,** the cerebral peduncle.

Caudiferous (*kaw-dif'-ur-us*) [*cauda*, a tail; *ferre*, to bear]. Having a tail or tail-like appendage.

Caulin (*kaw'-lin*) [*caulis*, a stem, a cabbage]. The pigmentary substance of red cabbage; it is used in coloring wine.

Caulophyllin. (See Illus. Dict.) 2. An alkaloid from *Caulophyllum thalictroides*, occurring as a transparent film, colorless, odorless, and tasteless. It is soluble in water, alcohol, ether, and chloroform.

Cauloplegia (*kaw-lo-ple'-je-ah*) [κανλός, a stalk; πληγή, a stroke]. Paralysis affecting the penis.

Caulosterin (*kaw-los'-ter-in*) [κανλός, a stalk; στερέος, solid]. $C_{26}H_{44}O$. An aromatic compound occurring in the root and stem of seedlings of the yellow lupine which have grown in the dark. It is levorotary, forming lustrous plates which melt at 158°–159° C.

Causa. (See Illus. Dict.) **C. conjuncta,** an immediate cause. **C. continens,** one that does not discontinue its action after its effects are begun. **C. disponens.** See *Cause, Predisposing* (Illus. Dict.).

Causality (*kaws-al'-it-e*). The power of seeing the relation between cause and effect.

Cause. (See Illus. Dict.) **C., Antecedent.** See *C., Predisposing* (Illus. Dict.). **C., Determining,** a cause that precipitates the action of another or other causes. **C., Efficient, C., Essential,** one that secures the effect independent of the action of other causes. **C., Endopathic.** See *C., Internal.* **C., Exopathic, C., External,** one that acts external to the organism. **C., Immediate.** See *C., Proximate.* **C., Internal,** a cause acting within the organism. **C., Negative,** one consisting in the absence of some prophylactic condition. **C., Predisponent, C., Procatarctic.** See *C., Predisposing* (Illus. Dict.). **C., Primary, C., Proximate,** that one of several causes which takes effect last and acts with rapidity. **C., Remote, C., Secondary,** an ultimate cause. **C., Ultimate,** one that eventually comes into play aided by a proximate cause. **C., Vital,** a specific pathogenic microorganism.

Caustic. (See Illus. Dict.) **C. Arrows,** conic sticks charged with caustic material. **C., Metallic,** one containing a metal or a metallic salt. **C., Perpetual,** fused silver nitrate.

Cauterization. (See Illus. Dict.) **C., Distant,** that performed by holding the cautery at some distance from the surface to be cauterized. **C., Galvanochemical** (Apostoli's), the destruction of the mucosa by means of electrolytic action. **C., Inherent,** deep cauterization by means of the actual cautery. **C., Linear,** that performed in a line by a knife-shaped cautery, wire, etc. **C., Neapolitan,** deep cauterization through an incision. **C., Objective.** See *C., Distant.* **C. by Points, C., Punctate,** deep cauterization with a pointed cautery. **C., Slow,** that performed with moxa. **C., Subcutaneous,** deep cauterization by injection of caustics, or by inclosing the cautery in a tube so as not to affect the superficial parts. **C., Transcurrent,** transverse lines drawn rapidly across the skin with a white-hot iron. **C., Tubular,** Tripier's operation of charring the walls of an opening made into a cyst by means of an instrument connected with the negative pole of a battery.

Cautery. (See Illus. Dict.) Syn., *Inustorium.* **C., Nummular,** a cautery iron fitted with a coin-shaped disk. **C., Solar,** a lens for concentrating the rays of the sun upon a part to be cauterized. **C., Steam.** See *Atmocausis.*

Cava. (See Illus. Dict.) 2. Any external cavity or hollow of the body.

Cavascope (*kav'-a-skōp*) [*cava*, a hollow; σκοπεῖν, to view]. An apparatus for illuminating a cavity.

Cavern (*kav'-urn*) [*caverna*, a hollow]. A cavity in the lung due to necrosis of the parenchyma; also the cavity of a dilated bronchus. **C., Brand,** one due to gangrenous destruction of a circumscribed segment of the lung parenchyma.

Cavernitis (*kav-ur-ni'-tis*). Inflammation of the corpora cavernosa.

Cavernosum (*kav-ur-no'-sum*). The corpus cavernosum.

Cavite Fever. See under *Fever.*

Cavity. (See Illus. Dict.) **C., Alimentary,** in comparative anatomy a cavity for the assimilation and digestion of food. **C., Amygdaloid,** in veterinary anatomy a triangular area between the soft palate and the base of the tongue; glands representing a tonsil open into it. **C., Ancyroid, C., Ankyroid,** the postcornu. **C., Arachnoid.** See *Subdural Space* (Illus. Dict.). **C., Archenteric.** See *Archenteron* (Illus. Dict.). **C., Articular,** a hollow on a bone for the reception of the head of another bone. **C., v. Baer's.** See *Segmentation Cavity* (Illus. Dict.). **C.s, Body.** See *Spaces, Intermesoblastic* (Illus. Dict.). **C., Cartilage,** one of the lacunas of the matrix of cartilage holding the cells. **C.s, Cerebral,** the ventricles of the brain. **C., Cleavage,** the blastocele. **C., Cotyloid,** the acetabulum or any cup-shaped articular cavity. **C., Cranial,** the hollow of the skull. **C., Cranievertebral,** in embryology the tubular cavity lying above the notochord and inclosing the great nervous center. **C., Cutigeral,** in veterinary anatomy the hollow of the hoof receiving the plantar cushion. **C., Decidual,** the space between the decidua vera and the decidua reflexa before their coalescence. **C., Digital.** See *Postcornu* (Illus. Dict.). **C., Drum,** the tympanic cavity. **C., Epiploic,** the omentum. **C.s, Frontal.** See *Frontal Sinuses* (Illus. Dict.). **C., Mastoid.** See *Mastoid Antrum* (Illus. Dict.). **C., Meckel's.** See *Meckel's Cave* (Illus. Dict.). **C.s, Nasal.** See *Nasal Fossæ* (Illus. Dict.). **C., Neural.** See *Canal, Vertebral* (Illus. Dict.). **C., Oral,** that of the mouth. Syn., *Cavum oris; Spatium oris.* **C., Pelvic Intestinal,** in the embryo the posterior blind end of the alimentary canal. **C., Pericardiopleural,** that portion of the body-cavity of the embryo containing the developing pleuras and pericardium. **C., Perienteric.** See *Celoma* (Illus. Dict.). **C., Perivisceral,** in the embryo the general body-cavity. **C., Pleural,** the closed space of the pleura included between its parietal and visceral layers. **C., Pleuroperitoneal.** 1. The body-cavity. 2. See *Space, Intermesoblastic* (Illus. Dict.). **C., Primitive Digestive.** See *Protogaster* (Illus. Dict.). **C., Primitive Vertebral, C., Protovertebral,** the space between the layers of the muscle-plates in the embryo. **C., Rosenmüller's.** See *Fossa, Rosenmüller's* (Illus. Dict.). **C., Rusconi's Nutritive,** the protogaster. **C., Segmentation.** See *Segmentation Cavity* (Illus. Dict.). **C., Semilunar** (of the radius). See *Sigmoid Cavity, Lesser* (Illus. Dict.). **C., Serous,** a large lymph-space. **C.s, Sigmoid** (of the ulna). See *Sigmoid Cavity, Greater* (Illus. Dict.). **C., Somatovisceral.** See *Celoma* (Illus. Dict.). **C., Splanchnic.** See *Space, Intermesoblastic* (Illus. Dict.). **C.s, Splanchnic,** the cranial, thoracic, and abdominal cavities. **C., Subdural.** See *Subdural Space* (Illus. Dict.). **C., Subgerminal.** See *Segmentation Cavity*

(Illus. Dict.). **C., Visceral.** See *Space, Intermesoblastic* (Illus. Dict.). **C., Vitelline, C., Yolk.** See *Latebra* (Illus. Dict.).

Cavum [pl., *cava*]. (See Illus. Dict.) **C. Douglasii.** See *Pouch, Douglas's* (Illus. Dict.). **C. Douglasii laterale.** See *Pararectal Pouch* (Illus. Dict.). **C. faucium,** the cavity of the pharynx. **C. ischiorectale.** See *Ischiorectal Fossa* (Illus. Dict.). **C. mediastini antici,** the anterior mediastinal space. See under *Mediastinum* (Illus. Dict.). **C. mediastini postici,** the posterior mediastinal space. **C. mediastinum.** See under *Mediastinum* (Illus. Dict.). **Cava narium, Cava nasi,** the nasal cavities. **C. nasopharyngeum, C. pharyngonasale,** the part of the pharynx above the soft palate. **C. oris,** the cavity of the mouth. **C. oris externum,** the vestibule, the portion of the mouth between the lips and teeth. **C. perilymphaticum,** the space existing between the osseous and membranous labyrinths. **C. pharyngo-orale,** the common cavity of the pharynx and mouth. **C. Retzii.** See *Cavity, Preperitoneal* (Illus. Dict.). **C. rectoischiadicum.** See *Ischiorectal Fossa* (Illus. Dict.). **C. subdurale.** See *Subdural Space* (Illus. Dict.). **C. tympani,** the cavity of the tympanum. **C. tympanicum superius.** See *Mastoid Antrum* (Illus. Dict.).

Cayaponin (*ka-ap'-o-nin*) [*Cayaponia*, Brazilian name]. An alkaloid extracted from *Cayaponia globosa*, a cucurbitaceous plant of Brazil. It is said to purge without griping. Dose, 1 gr. (0.06 gm.).

Ceanothin (*se-an-o'-thin*). 1. A brown powder obtained from *Ceanothus americanus*. It is purgative and alterative and is used in syphilis, dysentery, and sore throat. Dose, 1–2 gr. (0.065–0.13 gm.). 2. An alkaloid isolated from *Ceanothus americanus;* slightly soluble in alcohol and ether.

Ceanothus. (See Illus. Dict.) **C. reclinatus,** L'. Hér., of the West Indies, furnishes mabee bark; it is stomachic.

Cearin (*se'-ar-in*). An ointment base consisting of carnauba wax, 1 part; paraffin, 3 parts, melted together and mixed with 4 times its weight of liquid petrolatum.

Cebur (*se'-bur*). See *Balsam, Tagulaway.*

Cecectomy (*se-sek'-tom-e*) [*cecum;* τομή, a cutting]. Excision of part of the cecum.

Cecocele, Cœcocele (*se'-ko-sēl*) [*cecum;* κήλη, a tumor]. A hernia into the cecum. Syn., *Typhlocele.*

Cecostomy (*se-kos'-to-me*) [*cecum;* στόμα, a mouth]. The formation of an artificial anus in the cecum.

Cedar Gum. (See Illus. Dict.) 2. A pale yellow gum obtained from *Cedrela toona*, Roxb., or red cedar of Queensland. It contains arabin and metarabin, but no resin, and is almost soluble in water.

Celarium, Cœlarium (*se-la'-re-um*) [κοιλία, cavity]. The epithelium of the celom.

Celastrin (*se-las'-trin*). Mosso's name for a poisonous alkaloid obtained from the leaves of *Catha edulis;* it resembles cocain physiologically, though more energetic and differing essentially from it. Syn., *Kathin.* 2. A bitter principle found by Dragendorff in add-add, the leaves of *Celastrus serratus.* 3. A substance forming minute white crystals found by Wayne in *Celastrus scandens.*

Celastrus. (See Illus. Dict.) **C. paniculatus,** Willd., a climbing shrub of India: the oil from the seeds (oleum nigrum) is a powerful stimulant and diaphoretic in gout and fever. **C. serratus,** a native of Abyssinia; the leaves, add-add, are used in malaria; they contain tannin, a bitter principle, celastrin, and a volatile oil.

Celiacomesenteric (*se-le-ak-o-mez-en-ter'-ik*). Relating to the celiac and mesenteric regions.

Celianeurysm (*se-le-an'-u-rizm*) [κοιλία, the belly; ἀνεύρυσμα, a widening]. An abdominal aneurysm.

Celiectasia (*se-le-ek-ta'-se-ah*) [κοιλία, belly; ἔκτασις, a stretching out]. Abnormal distention of the abdominal cavity.

Celiectomy (*se-le-ek'-to-me*) [κοιλία, belly; ἐκτομή, a cutting]. Excision of an abdominal organ.

Celiemia (*se-le-e'-me-ah*) [κοιλία, the belly; αἷμα, blood]. Hyperemia of the abdominal viscera.

Celiocele, Cœliocele (*se'-le-o-sēl*) [κοιλία, the belly; κήλη, a tumor]. Abdominal hernia.

Celiodynia, Cœliodynia (*se-le-o-din'-e-ah*) [κοιλία, the belly; ὀδύνη, pain]. Pain in the abdomen.

Celiogastrotomy (*se-le-o-gas-trot'-o-me*) [κοιλία, belly; γαστήρ, stomach; τομή, cutting]. The opening of the stomach through abdominal incision.

Celiohemia, Cœliohæmia. See *Celiemia.*

Celiohysterectomy (*se-le-o-his-ter-ek'-to-me*) [κοιλία, belly; ὑστέρα, womb; ἐκτομή, a cutting out]. 1. Excision of the uterus through an abdominal cut. 2. Porrocesarean section.

Celiomyitis, Cœliomyitis (*se-le-o-mi-i'-tis*) [κοιλία, the belly; μῦς, muscle]. Inflammation of the muscles of the abdomen.

Celiomyodynia, Cœliomyodynia (*se-le-o-mi-o-din'-e-ah*). See *Celiomyalgia* (Illus. Dict.).

Celioscope (*se'-le-o-skōp*) [κοῖλος, a hollow; σκοπεῖν, to examine]. An apparatus for illuminating and inspecting body-cavities.

Celioscopy, Cœlioscopy (*se-le-os'-ko-pe*). Kelling's method of examining the peritoneal cavity by filling it with sterile filtered air through a hollow needle, plunging a trocar through the distended abdominal wall, and passing through the trocar a cystoscope by means of which the adjacent peritoneal surface may be inspected.

Cell. (See Illus. Dict.) **C., Acid,** one which secretes acid; a delomorphous cell. **C., Acidophil,** one which attracts acid dyes. Syn., *C., Oxyphil.* **C.-action,** the individual function of a cell as distinct from the function of an entire organism. **C.s, Adelomorphous,** epithelial cells composing the chief part of the lining of the glands of the stomach, particularly the pyloric region. They are supposed to secrete pepsinogen. Syn., *C., Central, C., Peptic.* **C., Adipose,** a fat-cell. **C., Adventitial.** 1. A branched cell peculiar to the perithelium. 2. A stellate cell of the membrana propria of glands. **C., Alveolar,** one of those lining the acini of glands. **C.s, Amacrine,** spongioblasts of the inner nuclear layer of the retina; they lack long processes, though sometimes axis-cylinder processes are given off which may extend into the nerve-fiber layer. The bodies of these cells are often partly in the inner molecular layer. **C., Ancestral.** Haeckel's name for an unfertilized ovum. **C., Animal,** one from animal tissue. **C., Antipodal.** See *Antipodal* (Illus. Dict.). **C., Apical.** 1. The single cell tipping the growing point of most cryptogams. 2. See *C., Tapetal.* **C., Apolar Nerve-,** a nerve-cell without processes. **C., Archesporial,** a cell of the archesporium. **C., Asexual Reproductive,** one which reproduces by fission or by formation of spores. **C., Basket,** one peculiar to the cerebellar cortex, the axon of which takes a horizontal course, continually giving off descending collaterals which terminate in brushes of fibrils about the bodies of the Purkinje cells, making them appear as if held within a basket. **C.s, Beale's** (Lionel Smith). See *C., Spiral Fiber.* **C.s, Betz's Giant.** See *Pyramids, Giant* (Illus. Dict.). **C., Binary Nerve-,** two pyriform nerve-cells contained in a single sheath and each provided at its pointed end with a single nerve-

fiber; these radiate in opposite directions. **C., Bipolar.** See *Bipolar Nerve-cells* (Illus. Dict.). **C.s, Boettcher's,** dark-colored cells, with a basally situated nucleus, found between Claudius' cells. **C., Bone.** See *Osteoblast* (Illus Dict.). **C., Border-.** See *C., Marginal* and *C., Delomorphous.* **C., Bristle-,** a prickle-cell. **C., Brush-.** See *C.s of Deiters* (Illus. Dict.). **C., Bud-,** one developed from the mother-cell by budding. **C.-budding,** germination. **C.s, Cajal's,** fusiform or triangular ganglion-cells lying near the surface of the cerebral cortex and giving off branched processes parallel to it. **C., Calcareous, C., Calciferous,** that having as its function the secretion or excretion of calcareous material. **C.s, Calcigerous.** 1. Cells containing earthy salts found in dentine. 2. Müller and Henle's name for the lacunas of bone and their canaliculi. **C., Caliciform,** a goblet-cell. **C., Cancer-.** See *Macrocyte* (Illus. Dict.). **C., Cannulated,** one perforated with a duct. **C., Cardiac Muscular-fiber,** one of the peculiar cells making up the cardiac muscular fibers. **C., Carrier,** a leukocyte. **C., Cartilage,** one of the nucleated cells occurring in cartilage. **C., Central.** Same as *C., Adelomorphous.* **C., Centroacinar, C., Centroacinous,** little cellular masses found by Robert Langerhans in the interstitial connective tissue of the pancreas. Syn., *Langerhans' islets, Renaut's follicular points.* **C., Cerebrospinal Nerve-,** one belonging to the central nervous system. **C.s, Chalice,** goblet-cells. **C., Chief,** an adelomorphous cell. **C., Chlorogogen.** See *Chlorogogen.* **C., Chromatophore,** a cavity directly beneath the epidermis containing pigment and changing its shape and color by means of attached radiating muscular bands. **C., Chromophilic,** a cell that stains readily. **C., Circumvascular,** the plasma-cells in the tissues near the bloodvessels. **C.s, Claudius'.** See *Claudius* (Illus. Dict.). **C., Cleavage,** a segmentation-cell. **C., Coarsely Granular.** See *C., Acidophil.* **C., Colostrum,** colostrum corpuscles. **C., Columnar,** one of the elongated cells forming columnar epithelium. **C.s, Commissural.** Same as *C., Heteromeric.* **C.s, Conjugate,** two cells united by tooth-like processes projecting from one into the other. **C., Constant,** the galvanic element of a constant battery. **C., Contractile,** a comprehensive name for cells forming contractile tissue. **C., Contractile-fiber,** a muscular-fiber cell. **C., Corneous,** a horn-cell. **C., Cortical,** one belonging to the cortex of an organ. **C.-cover,** the cuticular layer. **C., Cover-.** See *C., Tegmental.* **C., Crescent,** marginal cells forming a demilune. **C., Cruickshank's,** the element of a Cruickshank's battery. **C., Cystogenous,** a cell the secretion of which forms a cyst. **C., Cytochrome,** a nerve-cell having a cell-body very small in proportion to its nucleus. **C., Dead,** one which no longer contains protoplasm and is not concerned in the vital functions; *e. g.*, cork-cells, horn-cells. **C., Decidual,** a proliferation of young connective-tissue cells above the uterine glands taking place after the ovum is impregnated. **C.s, Delomorphous,** Rollet's name for granular cells which stain deeply, occurring next the basement membrane in the glands of the stomach in the cardiac region. They are supposed to secrete acid. **C., Denticulate,** a prickle-cell. **C., Dentinal, C., Dentine.** 1. An odontoblast. 2. The lacunas in dentine similar to those in bone. 3. One of the bodies forming the matrix in dentine. **C.-derivative,** a substance secreted by a cell. **C., Devouring,** a phagocyte. **C., Digestive,** one secreting a digestive ferment. **C.-district.** See *C.-territory.* **C.-division.** See *Karyokinesis* (Illus. Dict.). **C.-d., Akinetic, C.-d., Amitotic, C.-d., Direct, C.-d., Remakian.** See *Amitosis* (Illus. Dict.). **C.-d., Differential.** See *Heterokinesis* (Illus. Dict.). **C.-d., Indirect, C.-d., Mitotic, C.-d., Nuclear,** karyokinesis. **C.-d., Integral.** See *Homeokinesis* (Illus. Dict.). **C.-d., Qualitative.** See *Heterokinesis* (Illus. Dict.). **C.-d., Quantitative.** See *Homeokinesis* (Illus. Dict.). **C., Drain-pipe.** See *C., Cannulated.* **C., Dry,** a galvanic cell containing no liquid. **C., Drysdale's.** See *Drysdale* (Illus. Dict.). **C., Ectodermal,** one from the ectoderm of the embryo. **C.s, Ehrlich's Mast-.** Some as *Waldeyer's Plasma-cells.* **C., Elementary,** an embryonic cell; also a leukocyte. **C., Embryo, C., Embryonic,** one arising from the division of the ovum. Syn., *C., Formative; C., Elementary; C., Primitive; C., Primordial; C., Primary.* **C.s, Embryoplastic,** cells originating from the mesoblast and becoming stellate or fusiform; they comprise the fixed connective-tissue corpuscles in developing connective tissue. Syn., *Fibroplastic bodies or cell.* **C., Enamel.** See *Ameloblast* (Illus. Dict.). **C., Encasing.** See *C., Tegmental.* **C., Enchyma, C., Enchymatous,** a gland-cell. **C., Enclosed.** See *Lepocyte* (Illus. Dict.). **C., Entodermal,** one originating from the entoderm of the embryo. **C., Epidermomuscular, C., Epithelial Muscular, C., Epitheliomuscular.** See *C., Neuromuscular,* and *Myoblast epitheliales* (Illus. Dict.). **C., Epithelioid,** one of the flattened cells forming an epithelial or endothelial covering in forms of membranous connective tissue. **C.-excrement,** during cell-conjugation the fragments of nuclei cast out by the cells. **C., Excretory,** one having the function of excretion. **C.s, External Ciliated.** See *C.s of Corti* (Illus. Dict.). **C., Ferment-,** one secreting a ferment. **C., Fiber-,** a cell elongated into a fiber. **C., Fibrillated.** 1. See *Rods of Heidenhain* (Illus. Dict.). 2. One of the fibrillated cells lining the interlobular ducts of the salivary glands. **C.s, Fibroplastic.** See *C.s, Embryoplastic.* **C.-fission,** cell-division. **C.s, Fixed Connective-tissue,** the protoplasmic bodies found in connective tissue. Syn., *Connective-tissue plastids; Connective-tissue corpuscles.* **C., Floor,** one of the auditory cells in the organ of Corti which occur at the angle formed by the base of each rod and the basilar membrane. **C.s, Follicular.** 1. Those of which the membrana granulosa is composed. 2. See *Sertoli's Columns* (Illus. Dict.). **C., Formative.** See *C., Embryonic.* **C.s, Foule's,** large cells containing one or more nuclei as large as or larger than a red blood-corpuscle, with regular or irregular outline; they have been supposed to be diagnostic of malignant ovarian cysts. **C.s, Friedländer's Decidual.** See *Decidual Cells* (Illus. Dict.). **C., Furrowed,** a prickle-cell. **C., Fusiform,** a spindle-cell. **C., Generative.** See *Germ-cell* (Illus. Dict.). **C., Germinative.** See *Sertoli's Cells* (Illus. Dict.). **C.s, Gland-, C.s, Glandular,** cells having the function of producing certain secretions by elaborating certain constituents separated by them from the blood. **C.s, Glia-,** neuroglia. **C.s, Golgi's,** nerve-cells with very short processes found in the gray matter of the brain and spinal cord. **C., Granular, C., Granulated, C., Granule-.** See *Granule-cell* (Illus. Dict.). **C., Granulation,** one of the cells making up granulation-tissue. **C., Granule-** (of the blood), a leukocyte. **C., Guard-, C., Guardian.** See *Guard-cell* (Illus. Dict.). **C., Gustatory,** a spindle-cell from the interior of a taste-bud. **C.s, Hair-.** 1. Epithelial or ganglionic auditory cells furnished with hair-like processes. **C., Hare's,** the element of a Hare's battery. **C., Hecateromeric, C., Hecatomeral,** a nerve-cell of the

cinerea of the spinal cord whose processes divide into two, one going to each side of the cord. **C., Heckle,** a prickle-cell. **C.s, Heidenhain's** (Rudolf). 1. See *C.s, Delomorphous.* 2. See *C.s, Adelomorphous.* **C., Hemapoietic, C., Hematopoietic.** See *C., Vasofactive* (Illus. Dict.). **C., Hematogenetic Wandering,** a leukocyte. **C., Hemic-mast,** a term suggested by DaCosta to distinguish the mast-cell found in the blood from that of the tissues. **C.s, Henle's.** See *Spermatocyte* (Illus. Dict.). **C.s, Hensen's.** See *Hensen's Supporting Cells* (Illus. Dict.). **C., Heteromeral, C., Heteromeric,** a nerve-cell in the cinerea of the spinal cord, the axons of which pass through one of the commissures and enter the white matter of the other side of the cord. Syn., *Commissural cell.* **C., Histogenetic.** See *Somatic Cell* (Illus. Dict.). **C., Histogenetic Wandering,** a migratory connective-tissue cell or glandular cell; a wandering cell that is not a leukocyte. **C., Homogeneous.** See *C., Simple.* **C.s, Horizontal, of Cajal.** See *C.s, Amacrine.* **C.s, Horn-, C.s, Horny,** those comprising the stratum corneum of the epidermis; they are homogeneous cells containing keratin and are modified to form nails, hoofs, hair, etc. **C.s, Imbricated,** those overlapping like roof-tiles. **C., Indifferent,** one contained in a tissue, but having no essential part in its structure and no common function with it. **C., Intercalary.** See *C., Langerhans'.* **C., Jagged,** a prickle-cell. **C., Keratogenous,** one containing keratin. See *C., Horn-.* **C., Kidney,** one of those composing the tubules of the kidney. **C.s, v. Kölliker's.** 1. Little cells of the seminiferous tubules which are transformed into spermatozoa. 2. See *Myeloplax* (Illus. Dict.). **C.s, v. Kölliker's Tract-,** ganglion-cells, the axons of which pass as longitudinal fibers into the white columns of the spinal cord. **C.s, Kollmann's Ameboid.** See *Poreutes* (Illus. Dict.). **C.s, Kupffer's.** See *Kupffer* (Illus. Dict.). **C.s, Langerhans'.** 1. See under *Langerhans* (Illus. Dict.). 2. See *C., Centroacinar.* **C.'s, Langhans',** the polygonal epithelial cells, with distinct nuclei and cell-walls, constituting Langhans' layer. **C., Langhans' Giant-,** the giant-cell of a tubercular granuloma. **C., Latex.** See *Latex* (Illus. Dict.). **C.s, Leyden's,** large mononuclear epithelioid cells found in the anterior horns of the spinal cord in cases of anterior poliomyelitis. They are also met with in other inflammatory affections of the cord. **C.s, Leydig's.** See *Leydig's Cells* (Illus. Dict.). **C., Liver-,** nucleated polyhedral or spheroid cells containing granules of glycogen and pigment and more or less fat forming the glandular substance of the liver. **C., Locomotive,** one endowed with power of movement, especially a ciliated cell. **C., Lymph-.** See under *Lymph* (Illus. Dict.). **C.s, Malpighi's,** the pulmonary alveoli. **C., Marginal,** one of the small granular cells lying next to the basement membrane of mucous glands. **C., Marié-Davy's,** the element of a Marié-Davy battery. **C.s, Marrow-.** See under *Marrow;* also *Myeloplax* (Illus. Dict.). **C.s, Martinotti's,** ganglion-cells of the cerebral cortex, giving off a short axis-cylinder process at right angles to the surface. **C., Mast-,** leukocytes containing coarse basophile granules. They are occasionally present in the peripheral circulation as the result of certain pathologic influences, but are totally foreign to the normal blood of man. They are commonly found in the splenomedullary type of leukemia. The granules of the mast-cell show an intense affinity for basic anilin dyes, toward which they react metachromatically. In view of their distinctive behavior toward selective stains for mucin, Harris suggests for the mast-cell the term *mucinoblast.* [DaCosta.] **C.s, Mastoid.** See under *Mastoid* (Illus. Dict.). **C.s, Medullary.** 1. Marrow-cells. 2. The ameboid cells of cartilage-bone. **C.-membrane.** See under *Membrane* (Illus. Dict.). **C., Migrating, C., Migrating Connective-tissue, C., Migratory.** See *Wandering Cell* (Illus. Dict.). **C., Mikulicz's,** vesicular cells found in the diseased tissue in cases of rhinoscleroma and containing *Bacillus rhinoscleromatis.* **C., Milk-.** See *Corpuscles, Milk-.* **C., Mind-,** a large ramified cell of the cinerea of the brain. **C., Motor-,** a nerve-cell generating impulses. **C., Mucin-, C., Mucous, C., Mucus-,** a cell which secretes mucus, particularly a kind of salivary cell secreting mucus, but no albumin. **C., Multipolar,** irregular cells of various forms giving off from different angles of the cell-body numerous fine dendrites. **C., Muscle-,** a general term for cells the substance of which is contractile. **C., Muscular-fiber.** See under *Muscle, Unstriped or Involuntary* (Illus. Dict.). **C., Myeloid.** 1. See *Myeloplax* (Illus. Dict.). 2. Applied, from its resemblance to a cell of the red marrow of bone, to one of the oval multinuclear cells of myeloid tumors. **C., Myoepithelial.** See *C., Neuromuscular,* and *Myoblast epitheliales* (Illus. Dict.). **C., Naked,** one unprovided with a cell-wall. **C., Nerve-epithelial, C., Neuroepithelial,** a sensory cell. **C., Neutrophil.** See *C., Acidophil.* **C., Nuclear,** a nucleated dendritic nerve-cell. **C., Nucleated,** a cell containing one or more nuclei. Syn., *Karyota.* **C., Nussbaum's,** one of the four kinds of epithelial cells forming the peptic glands; its function is unknown. **C., Odontoblastic.** See *Odontoblast* (Illus. Dict.). **C., Ovic,** Minot's term for a young ovarian ovum. **C., Ovoid** (of the peptic glands), **C., Ovoidal,** the delomorphous cells. **C., Oxyntic.** See *C., Delomorphous.* **C., Oxyphil.** See *C., Acidophil.* **C., Palatine,** the cells formed by the junction of the palatine and ethmoid bones. **C.s, Parenchyma, C.s, Parenchymatous,** those forming parenchyma. **C., Parietal.** See *C., Delomorphous.* **C., Pavement,** one of the flat cells of which pavement epithelium consists. **C., Pepsin, C., Peptic.** See *C., Adelomorphous.* **C., Perivascular.** See *C., Circumvascular.* **C., Physaliphorous.** See *Physaliphore* and *Physalis* (Illus. Dict.). **C., Pigment-, C., Pigmented,** one in which the cell-body contains coloring-matter. **C.s, Plasma-** (of Unna), cubic or rhombic cells, the protoplasm of which stains deeply with methylene-blue, while the nucleus, which has usually an eccentric situation, is readily decolorized (by creasote or styrone). They are probably derived from lymphocytes, and play an important part in inflammatory reactions, especially in granulomatous processes. **C.s, Plasma-** (of Waldeyer). See under *Plasma* (Illus. Dict.). **C.-plate,** the equatorial plate in which division of the nucleus occurs during karyokinesis. **C.-plate** (of Strasburger), the equatorial thickening of the spindle-fibers from which the septum arises during the mitosis of plant-cells. **C.-plate, Subendothelial,** a small granular cell of unknown function occurring in the intima of bloodvessels. **C.s, Pleuricordonal,** a few scattered stellate cells in the posterior cornu, giving off two or three axis-cylinder processes. **C., Polar.** 1. See *Polar Globules* (Illus. Dict.). 2. A nerve-cell furnished with an axon. Cf. *C., Apolar; Bipolar C.* (Illus. Dict.); and *C., Multipolar.* **C., Pole-.** See *Teloblast* (Illus. Dict.). **C., Porous.** 1. One containing an opening in the side. 2. A porous jar containing one of the liquids of a galvanic battery. **C., Prickle-.** See under *Prickle* (Illus. Dict.). **C., Primary.** 1. An embryonic cell. 2. Any undifferentiated cell. **C., Primitive, C., Primordial,** an

embryonic cell. **C., Principal,** an adelomorphous cell. **C., Prop** (of Hensen). See *Hensen's Supporting Cell* (Illus. Dict.). **C., Prosenchyma.** See *Prosenchyma* (Illus. Dict.). **C., Protective.** See *C., Tegmental.* **C.s, Pseudoplasma,** found by Hodara in normal human spleen and differing from plasma-cells in that they are larger, and possess twisted nuclei which do not present the characteristic chromatin arrangement. They appear to be a variety of large mononuclear leukocyte, the protoplasm of which has become basophilic. **C., Pseudostomatous,** the cells of which the exposed ends form pseudostoma (*q. v.*) (Illus. Dict.). **C.s, Psychic,** the nerve-cells of the external layer of the gray matter of the brain. **C., Pulmonary,** an air-vesicle of the tissue of the lung. **C.s-Purkinje's.** See *Purkinje* (Illus. Dict.). **C., Pus-.** See *Pus-corpuscles* (Illus. Dict.). **C., Pyramid, C., Pyramidal Ganglion-, C., Pyramidal Nerve-.** See *Pyramids, Giant* (Illus. Dict.). **C., Ramified, C., Ramose,** one furnished with many processes, particularly those with secondary ramifications. **C.s, Ranvier's,** connective-tissue corpuscles occurring in tendon. **C.s, Rauber's (August).** See *Layer, Rauber's.* **C., Renal.** See *C., Liver.* **C., Rennet.** See *C., Adelomorphous.* **C., Resting.** See *Resting-spore* (Illus. Dict.). **C.s, Rete,** those forming the rete mucosum of the skin. **C., Ribbed, C., Riff.** See *Prickle-cell* (Illus. Dict.). **C., Rod, C., Rodded.** See *C., Fibrillated.* **C.s, Rolando's,** the ganglion-cells found in Rolando's gelatinous substance. **C., Roof.** 1. See *C., Tegmental.* 2. One found on the convexity formed by the junction of the two rows of arches in the organ of Corti. **C.s, Sala's,** stellate connective-tissue cells found in the network of fibers forming the sensory nerve-endings in the pericardium. **C., Salivary,** one of those forming the lining of the alveoli of the salivary glands. **C., Sarcogenic,** an embryonic cell which develops into a muscular fiber. **C., Scale.** See *C., Endothelial* (Illus. Dict.). **C.s, Scavenger.** See *Scavenger Cells* (Illus. Dict.). **C., Sclerenchymatous.** See *Sclerenchyma* (Illus. Dict.). **C., Sebaceous,** one of the cells of a sebaceous gland. **C., Secreting, C., Secretory,** one which secretes and throws off secretions. **C., Secretion,** one thrown off with secretions. **C., Segmentation.** See *Blastomere* (Illus. Dict.). **C.s, Sense, C., Sensory,** those adapted for the reception and transmission of sensory impressions. **C., Sensory Epithelial,** modified epithelial cells in an organ of sense connected with the fibrils of the nerves of that organ. **C., Sensory Nerve-,** a nerve-cell the axis-cylinder process of which is supposed to be continued as a sensory nerve. **C., Septate,** one with a septum across its lumen. **C., Serous Fat-,** a fat-cell occurring in emaciated individuals, in which the fat is reduced to a few small globules and in its place there is a pale protoplasm mixed with a mucoid fluid ; the cell is no longer spherical. **C.s, Sertoli's.** See *Sertoli's Cells* and *Sertoli's Column* (Illus. Dict.). **C., Sex, C., Sexual, C., Sexual Reproductive.** See *Germ-cell* (Illus. Dict.). **C., Signet-ring.** Same as *C., Fat-.* **C., Simple,** one which has not undergone differentiation. **C., Sister-,** one formed simultaneously with another in the division of a mother-cell. **C., Skeletotrophic,** one of those forming the skeletotrophic tissue of the cat. **C., Smooth-muscle.** See *C., Muscular-fiber.* **C., Solitary,** one not forming a part of a cell group. **C., Sorby Tubercular,** for spectroscopic examination of blood. It is a narrow-lumened glass receptacle made of barometer tubing, both ends of which are accurately ground to parallel surfaces, one end being cemented to a small polished glass plate. **C.-spaces.** See *Canal, Recklinghausen's* (Illus. Dict.). **C., Sperm-.** 1. A spermatocyte. 2. A spermatozoon. **C., Spider-.** See *Deiters' Cell* (Illus. Dict.). **C., Spindle-,** a cell having a fusiform shape. **C., Spinous,** a prickle-cell. **C., Spiral Fiber-,** a motor-cell of the heart, first described by Lionel S. Beale (1863), having a spiral fiber coiled around a larger straight one. These separate, after a short distance, proceeding in different directions. The cell constantly disengages the excitation which the spiral fiber transmits to the heart-muscle. Syn., *C., Beale's; C., Spiral fiber ganglion.* **C.s, Splanchnic,** those of the splanchnic layer of the mesoderm. **C., Staff,** one shaped like a rod or staff. **C., Starch,** one containing starch. **C.-stations,** cells in the sympathetic ganglia around which the nerve-fibers arborize. **C., Sterile,** one occurring in a reproductive organ, but not participating in reproductive processes. **C.s, Stilling's,** groups of multipolar cells near the gray commissure in the posterior cornua of the cervical and lumbar spinal cord. They correspond to Clarke's vesicular column. **C., Stilling-Clarke's.** See *Column, Clarke's Vesicular* (Illus. Dict.). **C., Stomach.** See *Pit of the Stomach* (2) (Illus. Dict.). **C., Stomatic.** See *Guard-cell* (Illus. Dict.). **C., Striated Epithelial.** See *C., Fibrillated.* **C.s, Stroma,** those forming the mass of an organ. **C., Suberogenous,** a vegetable cell producing cork. **C., Suberous,** a cork cell. **C., Sulfate of Copper,** the element of a sulfate-of-copper battery. **C., Superadded,** a delomorphous cell. **C., Supporting, C., Sustenacular,** one which supports or isolates another cell which has a particular function. **C., Swarm,** a naked ciliated cell. **C., Sympathetic,** a nerve-cell of the sympathetic nervous system as distinguished from one of the cerebrospinal system. **C.s, Tactile.** See under *Tactile* (Illus. Dict.). **C., Tapetal, C., Tapetum,** one which forms or aids others in forming an investment over an organ. **C., Taste.** Same as *C., Gustatory.* **C., Tautomeric,** a nerve-cell of the gray matter of the spinal cord, the processes of which enter the white matter on the same side of the cord. **C., Tegmental,** one covering and protecting another cell of special function, as, *e. g.*, those forming the outer layer of the taste-buds. Syn., *C., Cover-.* **C., Tendon,** a connective-tissue corpuscle occurring in tendon. **C.-territory** (Virchow), that extent of intercellular substance which is dominated by any given cell. **C.-theory,** the doctrine that cell-formation is the essential biogenetic element. **C., Thread.** See *Nematocyst* (Illus. Dict.). **C., Tissue.** 1. One which is combined with other similar cells in the formation of a tissue. 2. See *C., Somatic.* **C.-tissue,** a tissue formed of cells. **C., Touch-.** See *Tactile Cells* (Illus. Dict.). **C., Transition,** one in a state of transition from one well-marked type to another into which it is about to be transformed. **C., Twin,** a single cell resulting from the fusion of two cells. **C., Two-fluid,** a galvanic element in which two fluids are used. **C., Typical,** one retaining its original character more or less closely. **C.-union,** the union of two cells to form one new one. **C., Unipolar,** a nerve-cell furnished with a single pole or process. **C.s, Unna's.** See *C., Plasma-.* **C., Unstriped Muscle-.** See *C., Muscular-fiber.* **C., Vessel-forming.** See *C., Vasofactive* (Illus. Dict.). **C.s, Vignal's,** embryonic connective-tissue (mesenchymatous) cells lying upon the axis-cylinders of which the fetal nerve-fibers are made up. At first globular, these cells elongate and gradually fuse until they form a complete sheath around the axis-cylinder. **C.s, Virchow's-bone,** the cells found in lacunas of bone. **C., Vortex,** Meyer's term for cortex-cells

which show a peculiar whorl-like and very regular arrangement of the chromophilic material. **C., Waldeyer's.** See *Plasma-cell* (Illus. Dict.). **C., Walker's**, the element of a Walker's battery. **C.-wall**, the membrane surrounding a cell. **C., Wander.** See *Wandering Cell* (Illus. Dict.). **C.s, Wedl's Vesicular**, large vesicular cells commonly found in the crystalline lens in cases of cataract, especially the senile and diabetic varieties. **C., Whip**, a cell furnished with flagellas. **C., Zinc-carbon**, a galvanic cell in which zinc and carbon are the two elements employed. **C., Zinc-copper**, a galvanic cell in which zinc and copper are the elements employed.

Cella. (See Illus. Dict.) **C., turcica.** See *Sella turcica* (Illus. Dict.). **C. of Wilder**, the central portion of the paracele (lateral ventricle) into which opens the porta (foramen of Monro) and from which the three cornua extend, in as many directions. Syn., *C. media.*

Cellulic (*sel'-u-lik*). Relating to cells; derived from cell-walls by action of acids or alkalis.

Cellulicidal (*sel-u-lis'-id-al*) [*cellula*, a little cell; *cædere*, to kill]. Destructive to cells.

Cellulifugal (*sel-u-lif'-u-gal*) [*cellula*, a little cell; *fugere*, to flee]. 1. Pertaining to the transmission of impulses from a nerve-cell. 2. The conducting path of the nerve-process of a neuron.

Cellulifugally (*sel-u-lif'-u-gal-e*). Tending away from the cell.

Cellulipetal (*sel-u-lip'-e-tal*) [*cellula*, a little cell; *petere*, to seek]. 1. Relating to the transmission of impulses toward a nerve-cell. 2. The conducting path of the dendrites of a neuron.

Cellulipetally (*sel-u-lip'-e-tal-e*). Tending toward the cell.

Cellulitis. (See Illus. Dict.) Syn., *Ethmyphytis.* **C., Ischiorectal**, inflammation of the cellular tissue lying below the anal levator muscle or anal fascia. **C., Pneumococcous**, that due to the invasion of pneumococci.

Celluloadipose (*sel-u-lo-ad'-e-pōz*). Relating to loose connective tissue containing fat-cells.

Cellulocutaneous (*sel-u-lo-ku-ta'-ne-us*) [*cellula*, a little cell; *cutis*, skin]. Relating to cellular tissue and the skin.

Cellulofibrinous (*sel-u-lo-fi'-brin-us*). Both cellular and fibrinous.

Cellulosa (*sel-u-lo'-sah*) [L.]. A cellular coat. **C. chorioideæ**, the external layer of the choroid coat of the eye.

Cellulosity (*sel-u-los'-e-te*). The condition of being cellular.

Celomate, Cœlomate (*se'-lo-māt'*). Furnished with a celoma; having a body-cavity distinct from the digestive canal.

Celosis, Cœlosis. (See Illus. Dict.) **C., Endocytic**, the formation of a cavity within a cell. **C., Paracytic**, the formation of a cavity between cells.

Celosomus (*se-lo-so'-mus*) [κήλη, a hernia; σῶμα, the body]. A monster with fissure or absence of the sternum and hernia of the thoracic or abdominal organ.

Cementation (*se-men-ta'-shun*) [*cementum*, cement]. 1. A process of causing a chemic change in a substance by surrounding it with the powder of other substances and exposing the whole to red heat in a closed vessel for a length of time. 2. In biology, the concrescence of hyphæ.

Cementinification (*se-men-tin-e-fik-a'-shun*). The formation of cementum about the dental root.

Cementum (*se-ment'-um*). A layer of bone developed by ossification of the dental follicle over the root of the tooth. It differs from ordinary bone by the greater number of Sharpey's fibers in it. Its development begins on the milk-teeth during the fifth month. [Minot.]

Cenadelphus, Cœnadelphus (*sen-a-del'-fus*) [κοινός, common; ἀδελφός, a brother]. A double monster with the halves equally developed or having one or more vital organs in common.

Cenencephalocele (*sen-en-sef-al'-o-sēl*) [κενός, empty; ἐγκέφαλος, brain; κήλη, tumor]. A protrusion of pure brain substance through a cranial fissure.

Cenesthesia, Cenæsthesia (*sen-es-the'-ze-ah*) [κενός, destitute; αἴσθησια, perception]. Hysteric loss of consciousness of identity.

Cenesthetic, Cœnesthetic (*sen-es-thet'-ik*) [κοινός, common; αἴσθησις, feeling]. Relating to cenesthesis.

Cenogenesis, Cenogeny (Haeckel). See *Kenogenesis* (Illus. Dict.).

Cenophobia. See *Kenophobia* (Illus. Dict.).

Cenotic. (See Illus. Dict.) 2. A drastic drug or agent. 3. **Cœnotic** [κοινότης, community]. Applied to fungi having many fruiting filaments arising from the same point on the rhizopod and connected above.

Center. (See Illus. Dict.) **C., Abdominal.** See *C., Epigastric.* **C., Acoustic.** 1. See *C., Auditory* (Illus. Dict.). 2. The centers of origin of the acoustic nerve. **C., Anovesical**, one in the spinal cord near the point of origin of the third and fourth sacral nerves. Incontinence of urine and feces is due to paralysis of this center. **C., Arm**, the cortical center controlling the movement of the arm, supposed to be in the cortex occupying the middle third of the anterior and posterior central gyri as well as the base of the superior and middle frontal gyri. **C.s of Arrest.** See *C.s of Moderation.* **C., Arrest** (of the heart). See *C., Cardioinhibitory* (Illus. Dict.). **C., Articulate Language**, the speech-coordinating center, which is supposed to include Broca's gyrus, the anterior gyri of the insula, the intervening cortical area, the supramarginal gyrus, the first temporal gyrus, and the angular gyrus. **C., Association**, the center controlling associated movements. **C., Bernard's.** See *C., Diabetic* (Illus. Dict.). **C., Budge's.** 1. The ciliospinal center in the cervical spinal cord. 2. See *Centrum anospinale* (Illus. Dict.). **C., Cardiac.** 1. One in the lower cervical and upper dorsal portions of the spinal cord which controls the movements of the heart. 2. That portion of the oblongata embracing the cardioaccelerating and cardioinhibitory centers. **C., Cardioaccelerator**, that of the spinal cord which through the cardiac nerves and plexus sends impulses to the heart, causing it to beat more rapidly. These impulses are not constantly emitted, as are the inhibitory impulses which travel by the pneumogastric. [Raymond.] **C., Cerebral Inspiratory**, one said to exist in the thalamus, which by direct stimulation causes deeper and more rapid inspirations. **C., Cerebrospinal**, the cerebrospinal axis. **C., Color**, a center for perception of colors, said to be situated in the occipital cortex anterior to the apical region. **C., Coordinating**, the cerebellum, the ganglions at the base of the brain, and in some degree the cinerea of the spinal cord, are regarded as controlling coordination. **C., Cortical**, the parts of the cerebral cortex concerned in motor, sensory, and psychic functions. **C., Defecation.** See *C., Anospinal* (Illus Dict.). **C., Deglutition.** See *C., Swallowing* (Illus. Dict.). **C., Deputy**, a secondary ganglion-cell in the spinal cord; also a nucleus of one of the cranial nerves. **C., Dilation.** See *C., Ciliospinal* (Illus. Dict). **C., Dominating Sweat**, one in the medulla, stimulation of which in the cat was found by Adamkiewicz to produce copious perspiration in the extremities. **C.,**

Epigastric, the solar plexus. **C., Epiotic,** the ossification center of the mastoid portion of the temporal bone. **C., Excitomotor,** the sensitive centers of the brain considered as one; these are the crura, the pons, the oblongata, the deeper parts of the cerebellum, and the corpora quadrigemina. **C.s, Facial Movement,** one in the ascending frontal gyrus and one in the angular gyrus controlling facial movements. **C., Genitospinal.** See *C., Ejaculation* (Illus. Dict.). **C., Genitourinary,** one in the lumbar portion of the spinal cord controlling erection of the penis and emission of semen. **C.s, Glandular.** See *C., Secretory.* **C., Glycogenic,** the diabetic center. **C., Great Nervous or Neural.** See *C., Neural.* **C., Half-vision,** one in the apex of the occipital lobe receiving impressions from corresponding halves of the two retinas. **C., Head and Neck Movement,** one in the posterior end of the second frontal gyrus and in the corresponding part of the first frontal gyrus controlling the movements of the head and neck. **C., Higher Visual,** one regarded as lying in the angular gyrus in which there is effected a combination of the impressions received from the half-vision centers, making a complete image. **C., Hitzig's,** a center in the supramarginal gyrus which is supposed to govern the voluntary movements of the eyeballs. **C.s of Inhibition, C.s, Inhibitory.** See *C.s of Moderation.* **C., Insensitive,** the less sensitive parts of the brain (certain portions of the cortex, the thalamus and striatum) which respond less readily to stimulation. **C., Inspiratory.** 1. A reflex center in the oblongata forming part of the respiratory center. 2. See *C., Cerebral Inspiratory.* 3. A reflex center in the postgeminum. **C., Intracardiac,** three small nerve-ganglions connected with the cardiac plexus, to which is due the automatic beating of the heart after separation from the body. **C., Kinesthetic,** one in the third left frontal convolution presiding over the motor element in speech. **C., Laryngeal Cortical,** one in the posterior end of the inferior frontal gyrus. **C., Luys' Median.** See *Nucleus of Luys* (Illus. Dict.). **C., Masius'.** See *C., Anospinal* (Illus. Dict.). **C., Median** (of Luys). See *Nucleus of Luys* (Illus. Dict.). **C., Medullary.** 1. The interior white matter of the cerebral hemispheres. 2. See *C., Neural.* **C.s of Moderation, C.s, Moderator,** nervous centers in the spinal cord and the cerebral peduncle which restrain, generally by reflex action, various functions of the body. **C., Motor,** a nervous center controlling motion. **C., Musculotonic,** that which is continually discharging impulses which keep the muscular system in a condition of slight contraction. It is regarded by some as a special center of the cord, but it is questionable whether this condition is attributable to any special center rather than to the action of all those cells whose function it is to send out motor impulses. [Raymond.] **C., Naming,** one located in the dorsal part of the third and fourth temporal gyri. **C., Nerve, C., Nervous,** any group of nerve-cells acting in unison for the performance of some function. **C., Neural,** in the embryo that part of the epiblast ultimately developing into the brain and spinal cord. **C., Nutrition.** See *C., Trophic.* **C., Opisthotic,** the center of ossification of petrous bone. Huxley's name for the part of the periotic cartilage surrounding the fenestra rotunda and the cochlea. **C., Oral,** one in the cortex, stimulation of which in the dog causes opening of the mouth and projection of the tongue. **C., Parenchymatous Nerve-,** Körner's name for a nerve-cell existing in the substance of an organ and controlling its action. **C., Peristaltic,** one in the oblongata controlling peristalsis. **C., Phonation.** See *C., Laryngeal Cortical.* **C., Phonetic, C., Phonic,** the point of origin of sound produced by any vibrating body. **C., Phonocamptic,** the part of the auditory apparatus concerned in the reception of reflected sounds. **C., Phrenic,** the tendinous central part of the diaphragm. **C., Polypneic,** a cerebral center between the striatum and the thalamus, stimulation of which is said to quicken the respiratory movements. **C., Prootic,** Huxley's name for the part of the periotic cartilage that invests the superior semicircular canal. **C., Psychoacoustic.** See *C., Auditory* (Illus. Dict.). **C., Psychocortical,** any one in the cortex regulating mental operations. **C., Psychogeusic.** See *Taste-center* (Illus. Dict.). **C., Psychomotor,** that portion of the cortex from which motor impulses originate. **C., Psychooptic.** See *C., Visual* (Illus. Dict.). **C., Psychosensorial.** See *C., Sensory* (Illus. Dict.). **C., Psychosexual,** the hypothetic cortical area concerned in sexual desires. **C., Psychosmic,** the olfactory center. **C., Psychovisive.** See *C., Visual* (Illus. Dict.). **C., Pupil-dilating.** 1. See *C., Ciliospinal.* 2. An area in the posterior end of the first and second gyri. **C.s, Receptive.** See under *Receptive* (Illus. Dict.). **C., Red** (of the tegmentum). See *Nucleus tegmenti* (Illus. Dict.). **C., Reflex,** any nerve-cell or group of cells in the brain, cord, or ganglionic system which receives an impression through centripetal nerve-fibers and transforms it into an impulse which is transmitted through centrifugal nerve-fibers. **C.s, Secretory.** See *C., Diabetic; C., Sweat; C. for Secretion of Saliva* (Illus. Dict.). **C., Sensitive,** a general term for any cerebral area which responds quickly to a stimulus. **C., Sensory Cortical,** a hypothetic area of the cerebral cortex which is concerned in sensory perception. **C., Setschenow's,** a hypothetic reflex-inhibitory center in the brain; in the frog it is located in the optic lobes. **C., Smell,** the olfactory center. **C., Sudoral.** See *C., Sweat* (Illus. Dict.). **C., Supreme,** Spitzka's name for the cortical centers of the brain as a whole. **C., Tactile,** one for the sense of touch, located by Ferrier in the hippocamp and the gyrus hippocampus. **C., Taste.** See *Taste-center* (Illus. Dict.). **C., Temperature-regulating.** See *C., Thermotaxic.* **C., Thermal Cortical,** one discovered in the cerebral cortex of the dog, stimulation of which caused a change in the temperature of the opposite limbs. **C., Thermoexcito-, C., Thermogenic.** 1. A hypothetic center of the cord concerned in the changes in bodily temperature. 2. The mesial portion of the striatum and the parts directly beneath it. **C., Thermopolypneic,** one in the cinerea about the third ventricle, transmitting sensory impulses to the polypneic center, which in turn excites the respiratory center to throw off heat. **C., Thermotaxic,** six heat-regulating cerebral centers; of the four principal centers, one is located in the caudatum, one in the subjacent cinerea, one in the cinerea surrounding the most anterior portion of the third ventricle, and one at the anterior inner extremity of the thalamus. **C., Trophic,** a nerve-center regulating nutrition. **C.s, Vascular, C., Vasoconstrictor,** centers in the cord controlling the contractility of the smaller bloodvessels. **C., Vital.** See *C., Respiratory,* and *Point, Vital* (Illus. Dict.). **C., Vomiting,** an area in the oblongata concerned in the reflex act of vomiting; stimulation of the terminal filaments of the vagi excites its action. **C., Winking,** the reflex center concerned in winking, situated in the oblongata. **C.s, Word.** 1. One in the left superior temporosphenoidal gyrus controlling the perception of words heard. 2. A center in the posterior part of the left parietal lobe and one in the second left frontal gyrus

governing the perception of printed or written words.

Centesis (*sen-tē′-sis*) [κέντησις, a pricking]. Puncture; perforation.

Centifidous (*sen-tif′-id-us*) [*centum*, a hundred; *findere*, to split]. Cleft into many or 100 parts.

Central. (See Illus. Dict.) **C.-horn.** See *Centriole*. **C.-spindle**, the primary spindle of the mitotic figure, as distinguished from the surrounding contractile mantle-fibers. **C.-symmetric.** See *Plane-symmetric* (Illus. Dict.).

Centrality (*sen-tral′-e-te*). Applied to the condition of nervous phenomena originating in the central nervous system and not in the peripheral nerves.

Centrifugalization (*sen-trif-u-gal-e-za′-shun*) [*centrum*, the center; *fugere*, to flee]. The use of a centrifuge.

Centrifuge (*sen′-trif-uj*) [*centrum*, the center; *fugere*, to flee]. A centrifugal machine; an apparatus for separating substances by centrifugal force.

Centriole (*sen′-tre-ōl*) [*centrum*, a center]. Boveri's term for a minute body, central-horn, contained within the centrosome; in some cases it is not distinguishable from the latter.

Centrodesmus (*sen-tro-des′-mus*) [κέντρον, center; δεσμός, a band]. Heidenhain's term for the band primarily connecting the centrosomes and giving rise to the central-spindle.

Centrodontous (*sen-tro-don′-tus*) [κέντρον, a sharp point; ὀδούς, a tooth]. Furnished with sharp-pointed teeth.

Centrodorsal (*sen-tro-dor′-sal*). Pertaining to the central dorsal region.

Centrophose (*sen′-tro-fōz*) [κέντρον, center; φῶς, light]. See under *Phose*.

Centrosclerosis, Centroosteosclerosis (*sen-tro-skler-o′-sis, sen-tro-os-te-o-skler-o′-sis*) [κέντρον, center; σκληρός, hard]. Osteosclerosis of the central cavities of bones.

Centrosome. (See Illus. Dict.) 2. An organ of the cell, usually diminutive, lying within the nucleus or near by in the cytoreticulum. It is regarded as the especial organ of cell-division and in this sense as the dynamic center of the cell. Syn., *Daughter-periplast; Attraction-particle; Polar corpuscle*. **C.s, Quadrille of**, the conjugation of paternal with maternal centrosomes, based upon the view that each germ-cell contributes a centrosome that divides into two daughter-centrosomes; also called *quadrille of centers*.

Centrosphere (*sen′-tro-sfēr*). See *Sphere of Attraction* (Illus. Dict.).

Centrostaltic (*sen-tro-stal′-tik*) [κέντρον, the center; στέλλειν, to compress]. Relating to the action of nervous force in a spinal center. **C. Motion**, the motion of nervous force in the spinal center.

Centrosteosclerosis (*sen-tro-ste-o-skler-o′-sis*). See *Centrosclerosis*.

Centrum [pl., *centra*]. (See Illus. Dict.) 2. A spine; a pointed projection. **C. cinereum**, the gray commissure of the spinal cord. **C. commune**, the solar plexus. **C. geminum**, the capsula. **C. medullare vermis.** See *Center, Medullary*. **C. ovale** (of Flechsig). See *Triangle, Median* (of Gombault and Philippe). **C. ovale laterale.** See *C. ovale minus* (Illus. Dict.). **C. ovale Vieussenii**, the central white matter seen on making a section of the brain at the level of the upper surface of the callosum. Syn., *C. semiovale Vieussenii; C. ovale majus et minus; C. medullare; Medulla; Centra ovalia of Vicq d' Azyr; Tegmentum ventriculorum*. **Centra ovalia** (of Vicq d'Azyr). See *Centrum ovale Vieussenii*. **C. rubrum.** See *Nucleus tegmentii* (Illus. Dict.).

Cepa (*sē′-pah*). See *Allium cepa* (Illus. Dict.).

Cephaelin (*sef-a′-el-in*). $C_{14}H_{19}NO_3$. An alkaloid found in ipecac; fine, white needles soluble in ether and caustic alkalis; a powerful emetic. Dose, $\frac{1}{16}$–$\frac{1}{4}$ gr. (0.004–0.016 gm.).

Cephalanthin (*sef-al-an′-thin*). See under *Cephalanthus*.

Cephalanthus (*sef-al-an′-thus*) [κεφαλή, head; ἄνθος, a flower]. A genus of rubiaceous plants. **C. occidentalis**, button-bush, crane-willow of North America; its bitter bark is laxative and tonic and is used in periodic fevers and paralysis. The bark contains cephalin, cephaletin, and a toxic principle cephalanthin, which according to Mohrberg causes destruction of the red blood-corpuscles, vomiting, convulsions, and paralysis.

Cephalartic (*sef-al-art′-ik*). See *Cephalocathartic* (Illus. Dict.).

Cephaledema, Cephalœdema (*sef-al-e-de′-mah*) [κεφαλή, the head; οἰδεῖν, to swell]. Edema of the head; cerebral edema.

Cephaletin (*sef-al′-et-in*). See under *Cephalanthus*.

Cephalhematocele, Cephalhæmatocele. (See Illus. Dict.) **C., Stromeyer's**, subperiosteal cephalhematoma communicating with veins and becoming tensely filled during strong expiratory efforts.

Cephalhematoma, Cephalhæmatoma. (See Illus. Dict.) 2. Caput succedaneum. **C., External**, an effusion between the pericranium and the skull. **C., Internal**, an effusion between the dura and the skull.

Cephalhematometer (*sef-al-hem-at-om′-et-ur*) [κεφαλή, the head; αἷμα, blood; μέτρον, a measure]. An apparatus for the estimation of the increase or diminishment of the amount of blood within an animal's head.

Cephalic. (See Illus. Dict.) 2. Any remedy for the headache. **C.-fold.** See *Head-fold* (Illus. Dict.). **C. Neck.** See under *Neck*.

Cephalin. (See Illus. Dict.) 2. See under *Cephalanthus*.

Cephaline (*sef′-al-ēn*). A proprietary headache remedy said to consist of antipyrin and pulverized coffee, each 5 parts, and caffein and sodium salicylate, each 2 parts. Dose, 4 gr.

Cephalitis. (See Illus. Dict.) **C. ægyptiaca**, an epidemic form of encephalitis occurring in Egypt during the hot winds of early summer. **C. littriana**, inflammation of the epiphysis. **C. meningica**, meningitis. **C. nervosa**, pertussis.

Cephality (*sef-al′-e-te*) [κεφαλή, the head]. Agassiz's term for the preponderance of the head over the remainder of the organism.

Cephaloclasia (*sef-al-o-kla′-ze-ah*). See *Cephalotripsy* (Illus. Dict.).

Cephalofacial (*sef-al-o-fa′-shal*). Relating to the skull and to the face.

Cephalogaster (*sef-al-o-gas′-tur*) [κεφαλή, head; γαστήρ, stomach]. The anterior division of the enteric canal, as in certain parasitic worms, where it is continued into a second division, the typhlosole.

Cephalohemometer (*sef-al-o-hem-om′-et-ur*) [κεφαλή, head; αἷμα, blood; μέτρον, measure]. An instrument for noting changes in the intracranial blood-pressure.

Cephalomenia (*sef-al-o-me′-ne-ah*) [κεφαλή, head; μήν, a month]. Vicarious menstruation through the nose.

Cephalomyitis (*sef-al-o-mi-ī′-tis*) [κεφαλή, head; μῦς, a muscle]. Inflammation of the muscles of the head.

Cephalonasal (*sef-al-o-na′-sal*). Relating to the skull and the nose.

Cephalonia (*sef-al-o′-ne-ah*) [κεφαλή, head]. Macrocephaly with hypertrophy of the brain.

Cephalopagy (*sef-al-op′-aj-e*) [κεφαλή, the head; πηγνύναι, to join]. That form of monstrosity marked

by the development of two individuals having heads united at the top.

Cephalopharyngeus (*sef-al-o-far-in'-je-us*). 1. Relating to the head and pharynx. 2. See under *Muscles* (Illus. Dict.).

Cephaloplegia (*sef-al-o-ple'-je-ah*) [κεφαλή, head; πληγή, a stroke]. Paralysis of the muscles about the head and face.

Cephaloscopy (*sef-al-os'-ko-pe*) [κεφαλή, head; σκοπεῖν, to examine]. 1. Auscultation of the head. 2. Examination of the head with a view to ascertain the condition of the mental faculties.

Cephalothoracopagus (*sef-al-o-tho-rak-op'-ag-us*) [κεφαλή, head; θώραξ, thorax; πηγνύναι, to join]. A double-headed monster with united thoraxes and necks. These monsters are divided by Veit into *prosopothoracopagus* and *syncephalus*.

Cephalothrypsis (*sef-al-o-thrip'-sis*). See *Cephalotripsy* (Illus. Dict.).

Cephalotridymus (*sef-al-o-trid'-im-us*) [κεφαλή, the head; τρίδυμος, triple]. A three-headed monster.

Cephalotrypesis (*sef-al-o-tri-pe'-sis*) [κεφαλή, head; τρύπησις, a boring]. A trephining of the skull.

Ceptor (*sep'-tor*) [*capere*, to take]. A term suggested by Ehrlich in place of intermediary body. According to the manner of action he distinguishes *uniceptors* and *amboceptors*.

Ceral (*se'-ral*). Pasta cerata, a proprietary vehicle for application of medicaments, said to consist of wax, potash, and water.

Ceramuria (*ser-am-u'-re-ah*) [κέραμος, potter's earth; οὖρον, urine]. See *Phosphaturia* (Illus. Dict.).

Cerate. (See Illus. Dict.) **C., Camphorated.** See *Camphor ceratum* (Illus. Dict.). **C., Simple,** one consisting of 3 parts of white wax and 7 parts of lard melted together. **C., Touch,** a lubricant used in vaginal inspection consisting of spermaceti, white wax, and caustic soda, each one part; olive oil, 16 parts. Syn., *Ceratum pro tactu*.

Cerated (*se'-ra-ted*) [*cera*, wax]. 1. Coated with wax. 2. Relating to cerate.

Cerato (*ker-at'-o*). For words beginning thus see *Kerato-*.

Ceratonia (*ser-at-o'-ne-ah*) [κερατωνία]. 1. A genus of leguminous trees. 2. The fruit of *C. siliqua*. **C. siliqua,** L., the carob-tree, a native of the regions about the Mediterranean. The falcate, fleshy pods called carob-pods, sugar-pods, and St. John's bread are demulcent and pectoral and contain carobin, carobone, and carobic acid. They are used as food and form the chief constituents of much of the patented food for cattle. The seeds are substituted for coffee.

Ceraunics (*sĕr-aw'-niks*). See *Keraunics*.

Cerberetin (*sur-ber-et'-in*). $C_{19}H_{26}O_4$. A yellow amorphous powder obtained from decomposition of cerberin; melts at 85.5° C.

Cercocoma (*sur-ko-ko'-ma*) [κέρκος, a tail; κόμη, hair]. A genus of vesicant *Coleoptera* established by Geoffroy St. Hilaire. **C. schäfferi,** native of Europe, is frequent on chamomile flowers.

Cercomonad (*sur-ko-mo'-nad*). A member of the genus *Cercomonas* (*q. v.*).

Cerea flexibilitas (*se'-re-ah fleks-e-bil'-e-tas*). That condition of muscular tension in the insane in which the limbs may be molded into any position.

Cerealin (*se-re'-al-in*). An enzym capable of converting starch into glucose, isolated from brain-extract by J. T. Wood.

Cerebellifugal (*ser-e-bel-if'-u-gal*) [*cerebrum; fugere*, to flee]. Tending from the cerebrum.

Cerebellipetal (*ser-e-bel-ip'-e-tal*) [*cerebrum; petere*, to seek]. Tending toward the cerebrum.

Cerebriform (*ser-e'-bre-form*) [*cerebrum; forma*, form]. Encephaloid.

Cerebrin. (See Illus. Dict.) 2. A preparation from the gray matter of the brain of sheep and calves, made with equal parts of glycerin and 0.5% of carbolic acid solution. It has been used in chorea. Dose, gtt. 5–10. Syn., *C. alpha; Cerebrinin*. 3. A proprietary antineuralgic elixir, said to contain analgesin, ether, caffein, and cocain. Dose, 2–4 teaspoonfuls.

Cerebritis. (See Illus. Dict.) **C., Local,** softening of the brain.

Cerebrocardiac (*ser-e-bro-kar'-de-ak*) [*cerebrum; καρδία*, the heart]. Applied to diseases characterized by both cerebral and cardiac symptoms.

Cerebroid (*ser'-e-broid*) [*cerebrum*, the brain; εἶδος, likeness]. Resembling brain-substance.

Cerebrology (*ser-e-brol'-o-je*) [*cerebrum*, the brain; λόγος, science]. The science of the brain; encephalology.

Cerebrometer (*ser-e-brom'-et-ur*) [*cerebrum*, the brain; μέτρον, measure]. An instrument for recording cerebral impulses.

Cerebroolein (*ser-e-bro-o'-le-in*). A compound of olein and lecithin forming a yellow oil; it is obtained from brain-tissue.

Cerebropathy. (See Illus. Dict.) **C., Psychic,** mental disease resulting from primary lesion of the brain or spinal cord, but presenting distinct symptoms of its own. **C., Syphilitic,** psychic cerebropathy due to syphilis. **C., Tabetic,** psychic cerebropathy due to tabes.

Cerebrophysiology (*ser-e-bro-fiz-e-ol'-o-je*). The physiology of the brain.

Cerebropontile (*ser-e-bro-pon'-til*). Relating to the cerebrum and pons.

Cerebroscopy (*ser-e-bros'-ko-pe*). 1. Bouchut's term for ophthalmoscopy employed by neurologists. 2. Encephaloscopy. 3. The postmortem examination of the brain.

Cerebrosuria (*ser-e-bro-su'-re-ah*). The presence of cerebrose in the urine; cerebral diabetes.

Cerebrum. (See Illus. Dict.) **C. abdominale,** the solar plexus. **C. exsiccatum,** the dried and powdered gray substance of the brain of calves. One part represents 5 parts of the fresh organ. Dose, 2–4 gm. per day. **C. posterius,** the cerebellum.

Cerecloth (*sēr'-kloth*) [*cera*, wax]. Cloth impregnated with wax and rendered antiseptic; used as a dressing for wounds.

Cereiform (*se-re'-e-form*) [*cereus*, a wax taper; *forma*, form]. Shaped like a wax taper.

Cereometer (*se-re-om'-et-ur*) [κηρός, wax; μέτρον, a measure]. An apparatus for the estimation of the quantity of wax in a given mixture by determining the specific gravity.

Cereous (*se'-re-us*) [*cereus*]. Made of wax.

Cerevisine (*ser-e-vis'-ēn*). Dried yeast used internally in furunculosis (dose, 1 teaspoonful before each meal) and for application in leukorrhea and gonorrheal vaginitis, 15–30 gr. in suppository of cacao-butter.

Ceric (*se'-rik*) [*cera*, wax]. 1. Relating to wax. 2. Containing cerium as a quadrivalent radicle.

Cerin. (See Illus. Dict.) 2. Of Chevreul, a crystalline precipitate from an aqueous extract of cork by action of hot alcohol.

Cerite (*se'-rit*). A Swedish mineral formerly called the heavy stone of Bastnas, from which cerium is obtained.

Cerium. (See Illus. Dict.) It forms two series of salts (*cerous* and *ceric* salts) corresponding to the two oxids. **C.-bismuth Salicylate.** See *Bismuth* and *Cerium Salicylate*. **C., Nitrate.** 1. $Ce_2(NO_3)_6 . 12H_2O$, white crystals soluble in water; an antiseptic

used in solutions of 1: 1000. Syn., *Cerous nitrate.* 2. $Ce(NO_3)4$, a reddish-yellow mass of crystals soluble in water and alcohol. It is used as a nerve tonic in irritable dyspepsia and chronic vomiting. Dose, 1–3 gr. (0.065–0.20 gm.). Syn., *Ceric nitrate.*

Ceroceric (*se-ro-se'-rik*). Containing cerium both as a trivalent and a quadrivalent radicle.

Cerolein (*se-ro'-le-in*) [*cera*, wax]. A substance found in beeswax, soluble in alcohol; probably a mixture of fatty acids.

Ceroma (*se-ro'-mah*) [κήρωμα, a wax tablet]. A cystic tumor the tissue of which has undergone fatty degeneration.

Cerosate [*ser-o'-sāt*). A salt of cerosic acid.

Cerosic (*ser-o'-sik*). Relating to cerosin.

Cerosoceric (*ser-o-so-se'-rik*). See *Ceroceric.*

Cerosopotassic (*ser-o-so-po-tas'-ik*). Containing a cerous compound and potassium.

Cerostroma, Cerostrosis (*ser-o-stro'-mah, -sis*). See *Ichthyosis hystrix* (Illus. Dict.).

Cerotate (*se'-ro-tāt*). A salt of cerotic acid.

Cerotic (*se-ro'-tik*). Derived from wax.

Cerotin (*se'-ro-tin*). See *Alcohol, Ceryl* (Illus. Dict.).

Cerotinate (*se-ro'-tin-āt*). See *Cerotate.*

Cerous (*se'-rus*). Containing cerium as a trivalent radicle.

Cerulosis, Cærulosis (*ser-u-lo'-sis*). See *Cyanosis* (Illus. Dict.).

Ceruminosis (*ser-u-min-o'-sis*). An excessive secretion of cerumen.

Cerussa (*se-rus'-ah*) [L.]. White lead.

Cervicalis (*sur-vik-a'-lis*) [*cervix*, the neck]. 1. Cervical. 2. An artery, muscle, nerve, or vein of the neck. See *Tables* (Illus. Dict.).

Cervicispinal (*sur-vis-e-spi'-nal*). Relating to the neck and spinal cord.

Cervicoauricular (*sur-vik-o-aw-rik'-u-lar*). Relating to the back of the neck and the outer ear.

Cervicobasilar (*sur-vik-o-bas'-il-ar*). Pertaining to the neck and the basilar region.

Cervicobumeral (*sur-vik-o-hu'-mer-al*). See *Cleidooccipital.*

Cervicomuscular (*sur-vik-o-mus'-ku-lar*). 1. Relating to the muscles of the neck.

Cerviconasal (*sur-vik-o-na'-zal*). Running from the back of the neck to the nose.

Cervicoscapular (*sur-vik-o-skap'-u-lar*). 1. Relating to the back of the neck and the scapula. 2. The transverse artery or vein of the neck.

Cervicovesical (*sur-vik-o-ves'-ik-al*). Pertaining to the bladder and the cervix uteri.

Cervimeter (*sur-vim'-et-ur*) [*cervix*, the neck; μέτρον, a measure]. An instrument for measuring the cervix uteri.

Cervix. (See Illus. Dict.) **C., Conical, C., Conoid, C., Conoidal,** malformation of the cervix uteri marked by a conical shape and elongation, with constriction of the os externum. **C. cornu,** the constricted portion of the cornu dorsale. **C. obstipa, C. rigida,** wryneck. **C., Tapiroid,** a cervix uteri with a very elongated anterior lip.

Ceryl. (See Illus. Dict.) **C.-ester,** a compound of ceryl and an acid radicle. **C. Hydrate, C. Hydroxid,** ceryl alcohol.

Cesium, Cæsium. (See Illus. Dict.) **C. and Ammonium Bromid,** $CsBr.\ 3NH_4Cl$, a white crystalline powder, soluble in water; a sedative used in epilepsy. Dose, 15–45 gr. Max. dose, 90 gr. **C. Bitartrate,** $CsHC_4H_4O_6$, rhombic crystals soluble in water; used in nervous heart palpitation. Dose, 0.18–0.3 gm. **C. Carbonate,** Cs_2CO_3, hygroscopic white crystals or sand-like powder, melting at white heat, soluble in water and alcohol. It is used in epilepsy. **C. Hydrate, C. Hydroxid,** CsOH, a grayish-white mass melting below red heat, and having a strongly alkaline reaction. It is soluble in water, generating much heat. It is used in epilepsy. **C. and Rubidium and Ammonium Bromid,** $CsBr.\ RbBr.\ 6(NH_4Br)$, a nervine. Dose, 15–45 gr. 1 or 2 times daily. Max. dose, 90 gr. **C. Sulfate,** Cs_2SO_4, hard, colorless, stable crystals, soluble in water; used as antiepileptic.

Cestus (*ses'-tus*) [L., a girdle]. The fold of the metatela encircling the dorsal part of the brain-tube.

Cetene (*se'-tēn*). See *Hydrocarbons, Table of* (Illus. Dict.).

Cetenylene (*se-ten'-il-ēn*). $C_{16}H_{30}$. A hydrocarbon.

Cetic, Cetinic (*se'-tik, se-tin'-ik*). Pertaining to cetin or to the whale.

Cetin (*se'-tin*) [*cetus*, a whale]. $C_{32}H_{64}O_2$. The chief constituent of commercial purified spermaceti. It is a fatty crystalline substance, soluble in alcohol and ether, insoluble in water, melting at 49° C., and volatilizing at 360° C. Syn., *Cetinum.*

Cetol (*se'-tol*). See *Ethal* (Illus. Dict.).

Cetrarin. (See Illus. Dict.) $C_{18}H_{16}O_8$. It is stomachic. Dose, 3–6 gr. (0.2–0.4 gm.).

Cetylate (*se'-til-āt*). A salt of cetylic (palmitic) acid.

Cetylene (*se'-til-ēn*). See *Cetene.*

Cevin (*se'-vin*). $C_{21}H_{43}NO_8(C_{27}H_{45}NO_9)$ (Flückiger). A product of the decomposition of cevadin with hot alcoholic potash.

Ceylon Sickness. Beriberi.

Ceyssatite (*ses'-a-tīt*) [*Ceyssat*, a village of Puy-de-Dôme]. A fossil earth from the village of Ceyssat, composed almost entirely of pure silica. It is white, very light and absorbent, unctuous to the touch, adhering well to the skin, and easily pulverized, and may be heated to nearly 572° F. without destruction. It is used as an absorbent dusting-powder.

Chailletia (*shawl-yet'-e-ah*) [*J. F. Chaillet*, the discoverer (1839)]. A genus of plants of the order *Chailletiaceæ.* **C. toxicaria,** Don., a species found in Sierra Leone; the seeds, called ratsbane, are used as a rat-poison.

Chairamidin (*ki-ram'-id-in*). $C_{22}H_{26}N_2O_4$. An alkaloid obtained from *Remijia purdieana*, Wedd.

Chairamin (*ki'-ram-in*) [καιρός, the right time]. $C_{22}H_{26}N_2O_4$. An alkaloid from cuprea cinchona obtained from *Remijia purdieana*, Wedd. Syn., *Concusconin.*

Chairomania (*ki-ro-ma'-ne-ah*). See *Cheiromania* (Illus. Dict.).

Chalazia (*kal-a'-ze-ah*) [χαλάζιον, a small hailstone]. 1. The so-called hailstone sputa. 2. A chalazion.

Chalazion. (See Illus. Dict.) Syn., *Porosis palpebræ.* **C. terreum,** one in which there is degeneration of the contents and change to calcium carbonate and cholesterin. Syn., *Lithiasis palpebralis.*

Chalazogamy (*kal-az-og'-am-e*) [*chalaza*; γάμος, marriage]. A term applied by Treub (1891) to the process of pollination in *Casuarina, Corylus, Carpinus, Betula, Alnus,* and *Juglans,* in which the pollen-tube enters by way of the chalaza. Cf. *Mesogamy, Porogamy.*

Chalba. Gruel prepared from white sesame; it is the lenten food of Oriental nations.

Chalcitis (*kal-si'-tis*). See *Chalkitis.*

Chalcosis (*kal-kō'-sis*) [χαλκός, copper]. A deposit of copper particles in the tissues.

Chalinoplasty (*kal-in-o-plas'-te*) [χαλινός, a bridle or rein; πλάσσειν, to form]. An operation to form a new frenum of the tongue.

Chalkitis (*kal-ki'-tis*) [χαλκός, anything made of metal]. A severe inflammation of the eyes marked at

first by excessive lacrimation and sensitiveness to light, resulting in blurred vision and continued flow of mucus. It is due to rubbing the eyes after the hands have been used on brass, as in trolley-car conductors, and workmen. Syn., *Chalcitis; Brassy eye.*

Chalodermia (*kal-o-dur'-me-ah*) [χάλασις, a slackening; δέρμα, the skin]. Ladislaus v. Kétly's term for dermatolysis.

Chalybeate. (See Illus. Dict.) 2. Having the color or taste of iron. 3. A substance or medicine containing iron.

Chalybs. (See Illus. Dict.) **C. præparatus,** iron filings.

Chamælirium (*kam-e-lir'-e-um*) [χαμαί, on the earth; λείριον, a lily]. A genus of plants of the order *Liliaceæ.* **C. carolinianum,** Willd., devil's-bit, of the United States and Canada; the rhizome is a uterine tonic, anthelmintic, diuretic, and febrifuge. Dose, of aqueous infusion (1 oz. to 1 pint), a wineglassful.

Chamber. (See Illus. Dict.) **C., Aqueous** (of the eye), the space between the cornea and lens. **C., Resonance,** a resonant chamber attached to a tuning-fork for acoustic investigation.

Chameleon-phenomenon (*kam-e-le-on-fen-om'-e-non*). A peculiar reaction shown by *Bacillus pyocyaneus.* When grown on agar, a light green color is imparted to the medium, which after 48 hours turns very dark green. On potato a yellowish-brown growth is formed which turns green when the superficial portion is removed by scraping, but it soon resumes its brown color.

Chameliretin, Chamelirrhetin, Chamælirrhetin (*kam-el-ir-et'-in*). A friable, odorless, tasteless, resin-like substance obtained from chamelirin by action of dilute acids.

Chamemesocephalic, Chamæmesocephalic (*kam-e-mez-o-sef-al'-ik*) [χαμαί, low; μέσος, median; κεφαλή, the head]. Both chamecephalic and mesocephalic.

Chamomile. (See Illus. Dict.) **C., German,** *Matricaria chamomilla,* L. **C., Roman,** *Anthemis nobilis.*

Champacol (*sham'-pa-kol*) [*Champuka,* Bengalese name]. A camphor, $C_{17}H_{30}O$, from champaca wood, *Michelia champaca,* L. It occurs in white crystalline needles, soluble in ether and melting at 86°–88° C. Syn., *Champaca camphor.*

Champagne. (See Illus. Dict.) **C. Milk,** milk sweetened and charged with carbonic acid gas.

Chancre. (See Illus. Dict.) **C., Arsenical,** ulceration resembling a syphilitic chancre, but due to arsenic. **C., Celsus',** **C., Galen's,** the soft chancre or chancroid. **C., Nisbeth's.** See *Nisbeth's C.* (Illus. Dict.). **C., Ricord's,** the parchment-like initial lesion of syphilis. Syn., *C. parcheminé.* **C., Rollet's,** mixed chancre, partaking of the characteristics of both simple and true chancre. **C., Sahara,** the Aleppo boil.

Chancrous (*shang'-krus*). Of the nature of a chancre.

Channel (*chan'-el*) [M E., *chanel*]. See *Canal.* **C.s, Intercellular.** 1. Irregular canals of communication between the intercellular spaces interposed between prickle-cells, and thought to be connected with the lymph-capillaries. 2. Tiny canals between gland-cells. **C.s, Intracellular.** See *Intracellular Passages,* under *Kupffer's Cells* (Illus. Dict.). **C., Jugular,** in comparative anatomy the space for the jugular vein between the levator humeri and the sternomaxillary muscles. **C., Lymph.** See *Sinus, Lymph* (Illus. Dict.). **C., Lymph, Perineurial.** See under *Perineurial* (Illus. Dict.). **C., Lymphatic, C., Plasmatic.** See *Canals, Recklinghausen's,* and *C., Serous* (Illus. Dict.).

Chappa (*chap'-ah*). The name among the Popo people in the colony of Lagos, for a disease believed to be neither tuberculous nor syphilitic, marked by severe initial pains in muscles and joints, followed by swelling and the formation of round multiple nodules the size of a pigeon's egg; without abscessing, these are exposed by ulceration of the skin. The disease finally attacks the bones.

Charas, Charasa [Hind.]. See *Churrus* (Illus. Dict.).

Charcot's Sensory Crossway. See *Crossway.*

Chariot (*char'-e-ot*). The movable coil of an induction apparatus.

Charlatanism, Charlatanry (*shar'-lat-an-izm, -re*). 1. The state of being a quack. 2. The practices of a quack.

Charley-horse (*char'-le-hors*). Stiffness of the right arm and leg in baseball players.

Chauveau's Retention Theory. See under *Immunity.*

Chaya, C.-root (*chi'-ah*). 1. See *Aerva lanata,* Juss. 2. The root of *Oldenlandia umbellata.* Syn., *Chayavar, Ghé.*

Chayavar (*chi'-a-var*). See *Chaya.*

Chebule (*che-būl'*). The dried fruit of *Terminalia chebula,* Retz.

Cheil-. For words beginning thus see *Chil-.*

Cheiracanthium (*ki-ra-kan'-the-um*) [χείρ, hand; ἄκανθος, a spine]. A genus of spiders of the family *Drassidæ.* **C. nutrix,** Walckenaer, a European species regarded by Kobert and others as poisonous.

Cheiramidin. See *Chairamidin.*

Cheiranthin (*ki-ran'-thin*). A glucosid from the leaves and seeds of *Cheiranthus cheiri,* L., with action similar to that of digitalis.

Chekenetin (*chek-en'-et-in*). $C_{11}H_7O_6$. Olive-colored crystals found in chekan.

Chekenin (*chek'-en-in*). $C_{12}H_{11}O_3$. Yellowish, rhombic tablets found in chekan.

Chekenon (*chek'-en-on*). $C_{40}H_{44}O_8$. A crystalline body found in chekan.

Chelate (*ke'-lāt*) [χηλή, a claw]. 1. Claw-shaped. 2. Having claw-shaped appendages or processes.

Chelene (*ke-lēn'*). Ethyl chlorid.

Chelerythrin (*kel-er'-ith-rin*). See *Sanguinarin* (Illus. Dict.).

Chelidonin. (See Illus. Dict.) **C., Phosphate,** a white crystalline powder, soluble in water; it is used as an analgesic. **C. Sulfate,** $(C_{20}H_{19}NO_5)_2H_2SO_4$, white crystalline substance soluble in water; it is a narcotic like morphin, but less toxic. Dose, 0.05–0.2 gm.

Chelidonism (*kel-id'-on-izm*). Poisoning by *Chelidonium majus;* marked by inflammation of the mouth and gastrointestinal tract and hematuria. It is due to the action of chelerythrin.

Cheline (*kel'-ēn*). See *Chelerythrin.*

Chemicity (*kem-is'-it-e*). The state of having chemic properties.

Chemicoanalytic (*kem-ik-o-an-il-it'-ik*). Relating to chemic analysis.

Chemicocautery (*kem-ik-o-kaw'-tur-e*). Cauterization by means of chemic agents.

Chemiotaxis (*kem-e-o-taks'-is*). See *Chemotaxis* (Illus. Dict.).

Chemism. (See Illus. Dict.) 2. Iatrochemistry or chemiatry. See *Spagirism* (Illus. Dict.). 3. The theory that assumes the development of the universe to be due to chemic processes.

Chemist (*kem'-ist*). One skilled in chemistry.

Chemistry. (See Illus. Dict.) **C., Actinic, C., Actino-,** that treating of decomposition of light. **C., Analytic,** that concerned in the determination of the constituents and decomposition-products of substances;

also in the estimation of the relative proportion of their elements and the number and interrelation of the atoms contained in a molecule. **C., Animal,** that dealing with animal substances. **C., Atomic,** that concerned in the structure of molecules, the relations of their contained atoms, and the laws governing their combination. **C., Electro-,** that treating of the decomposition of matter by electricity. **C., Empiric, C., Experimental.** 1. The sum of chemic knowledge established by experiments. 2. The carrying on of experiments for determining chemic laws and knowledge. **C., Forensic,** that concerned in legal investigations. **C., Galvano-.** See *C., Electro-*. **C., Pneumatic,** the chemistry of vapors and gases. **C., Stœchiometric.** See *C., Atomic*. **C., Synthetic,** that which deals with the building up of compounds from their elements.

Chemolysis (*kem-ol′-is-is*). See *Analysis* (Illus. Dict.).

Chemosmosis (*kem-os-mo′-sis*) [χημεία, chemistry; ὠσμός, an impulse]. Chemic action resulting from osmosis.

Chemosmotic (*kem-os-mot′-ik*). Relating to or due to chemosmosis.

Cheromania, Chæromania (*ker-o-ma′-ne-ah*). See *Amenomania* (Illus. Dict.).

Chervil (*shur′-vil*) [AS., *cerfille*]. The European potherb *Anthriscus cerefolium*, Hoffm. It is said to be deobstruent, diuretic, and emmenagog.

Chest. (See Illus. Dict.) **C., Alar, C., Paralytic, C., Phthisical, C., Pterygoid,** a narrow thorax having a winged appearance from abnormal projection of the wings of the scapula. **C., Emphysematous.** See *C., Barrel* (Illus. Dict.).

Chestnut. (See Illus. Dict.) 2. Small round or oval plates of horny epidermis, growing like the hoofs from enlarged papillas of the skin, on the inner face of the forelimbs above the carpal joint, in all species of *Equidæ*. In the horse (*E. caballus*) alone these formations occur also near the upper extremity of the inner face of the metatarsus. Their use is unknown. [Flower and Lydekker.]

Chiaie Teeth. See under *Teeth*.

Chiasm. (See Illus. Dict.) 2. A crossing. **C., Camper's,** the crossing of the inner fibers of the tendons of the flexor sublimis digitorum after they have separated to give passage to the tendons of the deep flexor.

Chiasmal (*ki-az′-mal*). Pertaining to the optic chiasm.

Chickrassia (*chik-ras′-e-ah*) [*Chukrasia*, the Indian name]. A genus of trees of the order *Meliaceæ*. **C. tabularis,** A. Juss., a large tree of India and Malaya; furnishes the close-grained chittagong-wood and has a powerfully astringent bark (*cortex chickrassiæ*), used in medicine.

Chicle (*cheek′-la*). See *Balata* (Illus. Dict.).

Chielin (*ki′-el-in*). A thick, nontoxic, brown, viscous substance isolated from the bulb of the tulip. It is recommended in eczema and in skin-diseases in veterinary practice.

Chilalgia, Cheilalgia (*kil-al′-je-ah*) [χεῖλος, lip; ἄλγος, pain]. Neuralgia affecting the lips.

Chilbinj, Chilbinge. See *Strychnos potatorum*.

Chilbladder (*chil-blad′-ur*). See *Chilblain* (Illus. Dict.).

Childering (*child′-ur-ing*). Child-bearing.

Chiloangioscopy (*ki-lo-an-je-os′-ko-pe*) [χεῖλος, lip; ἀγγεῖον, vessel; σκοπεῖν, to look]. The use of the chiloangioscope.

Chilognathopalatoschisis, Cheilognathopalatoschisis (*ki-lo-nath-o-pal-at-os′-ki-sis*) [χεῖλος, lip; γνάθος, jaw; *palatum*, the palate; σχίσις, a splitting]. Marchand's term for a malformation marked by fissure of the lip, alveolar process, and palate.

Chiloschisis, Cheiloschisis. (See Illus. Dict.) **C. complicate,** harelip attended with fissure of the palate or of the alveolar arch.

Chilostomatoplasty, Cheilostomatoplasty (*ki-lo-stomat-o-plas′-te*) [χεῖλος, lip; στόμα, mouth; πλάσσειν, to form]. Chiloplasty including restoration of the mouth.

Chimogene (*kim′-o-jēn*) [χειμών, cold winter weather; γεννᾶν, to produce]. A highly volatile liquid proposed by Vanderweyde as a substitute for rhigolene, ether, etc., producing cold in local anesthesia.

Chinaldin (*kin-al′-din*). See *Quinaldin* (Illus. Dict.).

Chinaphthol (*kin-af′-thol*). A yellow, bitter, insoluble powder used as intestinal antiseptic. Dose, 7½–75 gr. (0.5–5 gm.) daily. Syn., *Quinin B-naphthol-a-monosulfate*.

Chinaseptol (*kin-a-sep′-tol*). See *Diaphtol*.

Chinetum. See *Quinetum* (Illus. Dict.).

Chinidin, Chinidinum (*kin′-id-in, kin-id-e′-num*). See *Quinidina* (Illus. Dict.).

Chinin, Chininum (*kin′-in, kin-in′-um*). See *Quinin* (Illus. Dict.).

Chink-cough [*kink* or *chink*, a catch in the breath (Skeat)]. Whooping-cough. Cf., *Chin-cough, Kink-cough, Kinkhost*.

Chinochromin (*kin-o-kro′-min*). See *Quinochromin*.

Chinoform (*kin′-o-form*). A compound of formaldehyd with cinchotannic acid. Syn., *Quinoform*.

Chinoidin. (See Illus. Dict.) **C., Animal,** a substance giving, like quinin, a blue fluorescence in solutions of dilute acids, first obtained by Bence-Jones from the liver, but found in all the organs and tissues of the body, especially in the nerves.

Chinol (*kin′-ol*). Quinolin monohypochlorite, C_9H_6N . ClO, a white, crystalline, odorless powder with a pungent taste; soluble in alcohol, almost insoluble in cold or hot water. It is antipyretic and analgesic. Dose, 3–5 gr. (0.19–0.32 gm.).

Chinolin and Bismuth Rhodanate, C.-bismuth Sulfocyanate. See *Quinolin and Bismuth Sulfocyanate*.

Chinon (*kin′-on*). See *Quinone* (Illus. Dict.).

Chinopyrin. See *Quinopyrin*.

Chinoral (*kin′-or-al*). An oily, bitter liquid containing quinin and chloral; antiseptic and hypnotic. Dose, ⅞–15 gr. (0.05–1.0 gm.). Syn., *Quinochloral*.

Chinosol (*kin′-o-sol*). C_9H_6NO . SO_3K. Potassium oxyquinolin sulfonate, a yellow powder, soluble in water; antipyretic, antiseptic, styptic, and deodorant. Application, 0.2% to 1% solution. Syn., *Quinosol*.

Chinoterpene (*kin-o-tur′-pēn*). See *Quinoterpene*.

Chinotoxin (*kin-o-toks′-in*). A synthetic compound said to possess properties similar to those of curare. Syn., *Diquinolin dimethyl sulfate*.

Chinotropin (*kin-o-tro′-pin*). See *Urotropin Quinate*.

Chinovit (*kin′-o-vit*). See *Quinovit*.

Chiolin (*ki′-ol-in*). A proprietary remedy for diseases of the skin.

Chionablepsia, Chionablepsy (*ki-on-ah-blep′-se-ah, -se*) [χιών, snow; ἀβλεψία, blindness]. Snow-blindness.

Chionyphe (*ki-on′-if-e*). See *Mycetoma* (Illus. Dict.).

Chiralgia (*ki-ral′-je-ah*). See *Chiragra* (Illus. Dict.).

Chiratogenin (*ki-rat-oj′-en-in*) [Hind. *Chiraeta*, a kind of gentian; γεννᾶν, to produce]. $C_{13}H_{21}O_3$. A yellowish-brown, amorphous, bitter substance obtained from chiratin by the action of acids.

Chirokinesthetic, Cheirokinesthetic (*ki-ro-kin-es-thet′-ik*) [χείρ, hand; *kinesthetic*]. Relating to the

subjective perception of the motions of the hand, particularly in writing.

Chirol (*ki'-rol*). A solution of resins and fatty oils in a mixture of ethers and alcohols, used as a protective varnish for the hands in surgery.

Chirology, Cheirology (*ki-rol'-o-je*) [χείρ, hand; λόγος, science]. A method of communicating with deaf-mutes by means of the hands; it is distinct from dactylology.

Chiromegaly (*ki-ro-meg'-al-e*) [χείρ, hand; μεγάλη, large]. Enlargement of one, two, or three extremities, in whole or in part, but not of akromegalic nature. Syn., *Pseudoakromegaly.*

Chirometer, Cheirometer (*ki-rom'-et-ur*) [χείρ, hand; μέτρον, measure]. Osiander's instrument for measuring a distance on the finger in manual pelvimetry.

Chiropelvimeter, Cheiropelvimeter (*ki-ro-pel-vim'-et-ur*) [χείρ, hand; *pelvis;* μέτρον, measure]. In manual pelvimetry, an instrument for measuring the hand.

Chiropodalgia, Cheiropodalgia (*ki-ro-pod-al'-je-ah*). See *Acrodynia* (Illus. Dict.).

Chiropody, Cheiropody (*ki-rop'-od-e*) [χείρ, hand; ποίς, foot]. The business of a chiropodist.

Chirospasm, Cheirospasm (*ki'-ro-spazm*) [χείρ, the hand; σπασμός, a drawing]. Writers' cramp.

Chirotheca, Cheirotheca (*ki-ro-the'-ka*) [χείρ, hand; θήκη, case]. A long, small roller bandage for wrapping the fingers. **C. completa,** one for all the fingers of a hand. **C. incompleta,** one for a single finger only.

Chirurgicogynecologic (*ki-rur-je-ko-jin-e-kol-oj'-ik*). Pertaining to surgical operations for gynecologic conditions.

Chita [N. A. Indian name]. The plant *Lewisia rediviva,* of the order *Portulaceæ,* extensively used by the Indians in the northwestern United States as an article of food. Syn., *Spathum; Bitter-root.*

Chitenidin (*kit-en'-id-en*). $C_{19}H_{22}N_2O + 2H_2O$. An alkaloid obtained from quinidin by oxidation.

Chitinization (*kit-in-iz-a'-shun*). Transformation into chitin.

Chitonitis (*ki-ton-i'-tis*) [χιτών, a tunic]. Inflammation of any investing membrane.

Chitosan (*kit'-o-san*). $C_{14}H_{26}N_2O_{10}$. A cleavage-product of chitin heated to 180° C. with alkali and a little water; it is soluble in dilute acids.

Chloracetization (*klo-ras-et-iz-a'-shun*). The production of local anesthesia by chloroform and glacial acetic acid.

Chloracetyl (*klor-as-et'-il*). 1. C_2Cl_2. A radicle formed from acetyl by the replacement of hydrogen with chlorin. 2. Acetyl chlorid.

Chloral, Chloralum. (See Illus. Dict.) Syn., *Trichlorated* or *Trichloracetic aldehyd; Aceto-chloral.* **C.acetone,** $C_5H_7O_2Cl_3$, a crystalline mass obtained by melting acetone with chloral. It is soluble in alcohol, ether, and hot water, and melts at 75°–76° C. **C.-ammonia,** $C_2H_4Cl_3NO$, a combination of chloral hydrate and ammonia, forming white crystals soluble in alcohol; melts at 64° C. It is analgesic and hypnotic. Dose, 15–30 gr. (1–2 gm.). Syn., *Trichloramidoethylic alcohol; Trichlorethidene hydroxyamin.* **C.-amyl.** See *Chloramyl* under *Anesthetic* (Illus. Dict.). **C. Anhydrogluco-,** chloralose. **C., Anhydrous,** chloral as distinguished from chloral hydrate. **C.antipyrin.** See *Hypnal* (Illus. Dict.). **C.caffein,** $C_8H_{10}N_4O_2 . C_2Cl_3H_2O$, small, glittering, colorless rods, soluble in water. It is hypnotic, sedative, and analgesic. Injection, 3–6 gr. 2 or 3 times daily. **C., Camphorated, C. Camphor,** a trituration-product of equal parts of camphor and chloral hydrate. It is a transparent, syrupy liquor, soluble in alcohol, ether, oils, and fats, insoluble in water. It is analgesic and is used in neuralgia and toothache. **C.carbamid,** a mixture of the carbamid and hydrate of trichloraldehyd; it occurs as a liquid with feebly hypnotic properties. **C., Carbolated,** a trituration-product of chloral hydrate, 1 part, and phenol, 3 parts; an oily liquid used in toothache and neuralgia. Syn., *Chloral carbol, Chloral phenol.* **C. Hydrocyanate, C. Hydrocyanin,** $C_3Cl_3H_2N$, a white crystalline powder containing 15.33% of prussic acid. It is soluble in alcohol, ether, and water, melts at 58°–61° C., and boils at 218° C. It is used in solution instead of cherry laurel or bitter almond water. Six and one-half parts by weight of chloral hydrocyanate correspond to 1 part of anhydrous hydrocyanic acid. Syn., *C. cyanhydrate; C. cyanhydrin.* **C. Hydrosulfate, C. Hydrosulfid,** $C_2H_3Cl_3SO$, a substance forming colorless prisms or leaflets. **C., Mentholated,** 2 equal parts of chloral hydrate and menthol melted together. It is used in neuralgia. **C.orthoform,** a hypnotic. **C.-phenol.** See *C., Carbolated.*

Chloralacetaldoxim (*klo-ral-as-et-al-doks'-im*). $C_4H_6NO_2Cl_3$. A white crystalline powder soluble in alcohol and ether, melting at 74° C. It is hypnotic.

Chloralacetophenonoxim (*klo-ral-as-et-o-fe-non-oks'-im*). $C_6H_5 . CH_3C$. A substance forming colorless prisms, soluble in alcohol and ether, melting at 81° C. It is used in tetanus and epilepsy.

Chloralacetoxim (*klo-ral-as-et-oks'-im*). $C_4H_8NO_2Cl_3$. A white crystalline powder soluble in alcohol and ether and melting at 72° C. It is hypnotic.

Chloralbacid (*klo ral-bas'-id*). A compound of chlorin and albumin. It is used as a tonic in gastric disorders. Dose, 7½–15 gr. (0.5–1.0 gm.). **C. Sodium,** a compound of chloralbacid and sodium; it is used in gastric and intestinal affections. Dose, 1–2 gm. (15–30 gr.) before meals.

Chloralbenzaldoxim (*klo-ral-ben-zal-doks'-im*). $C_9H_8NO_2Cl_3$. A white crystalline powder, soluble in alcohol and ether, melting at 62° C. It is hypnotic and antiseptic.

Chloralcamphoroxim (*klo-ral-kam-for-oks'-im*). $C_{12}H_{18}NO_2Cl_3$. A white crystalline powder, soluble in alcohol and ether, melting at 98°C. It is hypnotic, stimulant, and antiseptic.

Chloralformamid (*klo-ral-form'-am-id*). See *Chloralamid* (Illus. Dict.).

Chloralic (*klo-ral'-ik*). Relating to chloral.

Chloralin (*klo'-ral-in*). An antiseptic fluid containing monochlorphenol and bichlorphenol. It is used in 2% to 3% solution; as a gargle, in 0.5% to 1% solution.

Chloralization (*klo-ral-iz-a'-shun*). 1. See *Chloralism* (Illus. Dict.). 2. Anesthesia by means of chloral.

Chloralnitrosobetanaphthol (*klo-ral-ni-tro-so-ba-ta-naf'-thol*). $C_{12}H_8Cl_3NO_3C_{10}H_5(OH):N.OCH(OH)-CCl_3$. A white crystalline powder soluble in alcohol and ether, melting at 100° C. It is hypnotic and antiseptic.

Chloralose. (See Illus. Dict.) $C_8H_{11}Cl_3O_6$. A hypnotic. Dose, 3–12 gr. (0.194–0.78 gm.).

Chloraloxims (*klo-ral-oks'-ims*). A series of chemic compounds the physiologic activities of which are claimed to be due to their splitting up in the system into chloral hydrate and their respective oxims. See *Chloral acetoxim, Chloralbenzedoxim,* etc.

Chloraloxylose (*klo-ral-o-zil'-loz*) [*chloral; xylose*]. A combination of chloral and xylose. A convulsivant.

Chloralum (*klo'-ral-um*). Crude aluminium chlorid mixed with various sodium and calcium salts; a disinfectant.

Chloramid (*klo'-ram-id*). Same as *Chloralamid* (Illus. Dict.).

Chloranilate (*klo-ran'-il-āt*). A salt of chloranilic acid.
Chloranilic (*klo-ran-il'-ik*). Derived from chloranil.
Chlorargentate (*klor-ar'-jen-tāt*). A combination of silver chlorid with the chlorid of some other radicle or element.
Chlorarsenious (*klor-ar-sen'-e-us*). Arsenious and also containing chlorin.
Chlorated (*klo'-ra-ted*). Containing, combined with, or charged with chlorin.
Chloraurate (*klo-raw'-rāt*). A salt of chlorauric acid, also a combination of gold trichlorid with the chlorid of some other radicle or element.
Chlorauric (*klo-raw'-rik*). Containing chlorin and also gold as a trivalent radicle.
Chlorazol (*klo'-raz-ol*). A highly toxic, oily liquid obtained from albumin, glutin, or dried muscle by action of strong nitric and hydrochloric acids.
Chlorbenzoyl (*klor-ben'-zo-il*). See *Benzoyl Chlorid.*
Chlorbromid (*klor-bro'-mid*). A combination of a radicle with chlorin and bromin.
Chlorcamphor (*klor-kam'-for*). A name for several compounds of chlorin and camphor.
Chlorcarvene (*klor-kar'-vēn*). $C_{10}H_{15}Cl$. A yellow liquid obtained from carvene by action of chlorin.
Chlorchromate (*klor-kro'-māt*). A salt of chlorochromic acid.
Chlorepatitis (*klor-ep-at-i'-tis*) [χλωρός, green; ἧπαρ, liver]. Chronic hepatitis combined with chlorosis.
Chlorephidrosis (*klor-ef-id-ro'-sis*) [χλωρός, green; ἱδρωσις, perspiration]. A condition characterized by greenish perspiration.
Chlorethylene (*klor-eth'-il-ēn*). A substance formed from ethylene by replacement of one or more atoms of hydrogen with chlorin. **C. Chlorid, C. Dichlorid,** $C_2H_2Cl_2$, an oil with odor of Dutch liquid, boiling at 115° C.; employed as an anesthetic.
Chlorethylidene (*klor-eth'-il-id-ēn*). A chlorin substitution-compound of ethylidene. **C. Chlorid, C. Dichlorid,** $C_2H_4Cl_2$, a liquid used as an anesthetic. Syn., *Monochlorethylidene dichlorid; Chlorinated ethyl chlorid.*
Chloretone (*klor'-et-ōn*). See *Acetonechloroform.*
Chlorhematin (*klor-hem'-a-tin*). See *Hemin* (Illus. Dict.).
Chlorhydria (*klor-hi'-dre-ah*). An excess of hydrochloric acid in the stomach.
Chlorhydric (*klor-hi'-drik*). Composed of chlorin and hydrogen; hydrochloric.
Chlorhydrophosphate (*klor-hi-dro-fos'-fāt*). The product of the action of hydrochloric acid upon a phosphate.
Chlorimetry (*klor-im'-et-re*) [*chlorin*; μέτρον, a measure]. The estimation of the amount of available chlorin (that evolved by the addition of hydrochloric or sulfuric acid) in a compound.
Chlorin. (See Illus. Dict.) **C. Acetate,** $C_2H_3ClO_2$, a colorless liquid isomeric with monochloracetic acid. It explodes when heated to 100° C. Syn., *Acetohypochlorous anhydrid; A. oxid.* **C. Bromid.** See *Bromin Chlorid.* **C. Peroxid,** a heavy, unstable, yellowish gas condensing at low temperatures to a dark red liquid.
Chlorinated (*klo'-rin-a-ted*). Containing chlorin or combined with it.
Chloriodoform (*klo-ri-o'-do-form*). $CHCl_2I$. A yellow oil obtained from chloroform by replacement of one atom of chlorin by an atom of iodin; it boils at 131° C. and does not solidify.
Chloriodolipol (*klo-ri-o-do-lip'-ol*). A combination of creasote and chlorinated phenols; a disinfectant and antiseptic; in surgery, 2% to 3% solution is employed; for inhalation in diseases of the air-passages, 5% solution.
Chlorite (*klo'-rīt*). Any one of the salts of chlorous acid; they are used as bleaching and oxidizing agents.
Chloroalbumin (*klo-ro-al'-bu-min*). A derivative of peptone, protogen, or albumoses by action of chlorin.
Chlorobromhydrin (*klor-o-brom-hi'-drin*). A substance formed from glycerin by replacement of two molecules of hydroxyl with one atom of chlorin and one of bromin. Syn., *Allyl chlorobromhydrin.*
Chlorobromid. See *Chlorbromid.*
Chlorobromohydrin. See *Chlorobromhydrin.*
Chloroform. (See Illus. Dict.) Syn., *Chloroformium; Chloroformum; Chloroformyl.* **C., Acetone.** See under *Acetone.* **C., Anschütz's,** $(C_6H_4{<}^{CO}_{O})_4{\cdot}2CHCl_3$, a crystalline substance which liberates pure chloroform on application of gentle heat. Syn., *Salicylid chloroform.* **C., Camphorated,** a solution of camphor, 4 parts, in chloroform, 2 parts. **C.-creasote,** a mixture of creasote, 1 part, and alcohol and chloroform, each 2 parts. **C., Gelatinized,** equal parts of chloroform and white of egg shaken together. **C., Pictet's,** chloroform obtained in a pure state by crystallizing at a low temperature.
Chloroformin (*klo-ro-form'-in*). A poison extracted by Auclair from tubercle bacilli. Syn., *Chloroformobacillin.*
Chloroformization (*klo-ro-form-i-za'-shun*). 1. The act of administering chloroform as an anesthetic. 2. The anesthetic results from the inhalation of chloroform.
Chlorogenate (*klo-roj'-en-āt*). A salt of chlorogenic acid.
Chlorogenin (*klo-roj'-en-in*). See *Alstonin* (2) (Illus. Dict.).
Chlorogogen (*klo-ro'-go-jen*) [χλωρός, greenish; ἀγωγή, a carrying off]. Applied to peculiar peritoneal cells with definite excretory functions; they are especially strongly developed in the *Oligochæta*, but occur also in the *Polychæta.* They are attached to the dorsal vessel and its branches, and contain brown granules taken from the blood.
Chloroiodobenzoic-glycerinester (*klo-ro-i-o-do-benzo-ik-glis-ur-in-es'-tur*). See *Benzoiodohydrin.*
Chloroiodoform. See *Chloriodoform.*
Chlorol (*klo'-rol*). A solution of sodium chlorid, mercuric bichlorid, and hydrochloric acid, each 1 part, and 3% of copper sulfate in 100 parts of water; it is a disinfectant and antiseptic.
Chlorolin (*klo'-ro-lin*). A solution said to consist mainly of the chlorphenols; recommended as a disinfectant and as an antiseptic wash in 2% to 3% solution.
Chlorometer (*klo-rom'-et-ur*) [χλωρός, green; μέτρον, a measure]. An apparatus for the estimation of the amount of chlorin in a compound.
Chlorometry (*klo-rom'-et-re*). See *Chlorimetry.*
Chloronaphthol (*klo-ro-naf'-thol*). A disinfectant, nonpoisonous substitute for carbolic acid; said to be a combination of creasote with an alkali. It is used as a dip for cattle to destroy ticks.
Chloropercha (*klo-ro-purch'-ah*). A solution of guttapercha in chloroform. It is used in dentistry as nonconducting cavity linings, pulp-cappings, and for filling the roots of pulpless teeth.
Chlorophénique (*klo-ro-fa-nēk'*). $C_6H_4(OH)Cl$. A colorless aromatic fluid consisting of chlorophenic acid (5%) combined with antiseptic essential oils in aqueous solution.
Chlorophenol (*klo-ro-fe'-nol*). See *Chlorphenol* (Illus. Dict.).
Chlorophthisis (*klo-ro-tiz'-is*). Pulmonary tuberculosis associated with chlorosis.
Chloropia, Chloropsia (*klo-ro'-pe-ah, klo-rop'-se-ah*)

[*χλωρός*, green; *ὄψις*, vision]. Disordered or defective vision in which all objects appear green.

Chloropicrin (*klo-ro-pik'-rin*). CCl_3NO_2. A liquid obtained by distillation of picric acid and calcium chlorid; soluble in alcohol and ether, slightly in water; sp. gr. 1.692 at 0° C.; boils at 112° C. Its odor produces a peculiar form of frontal headache. Syn., *Trichloronitromethane; Nitrochloroform.*

Chloroplastin (*kol-ro-plas'-tin*) [*χλωρός*, green; *πλαστός*, formed]. Schwartz's name for the protoplasm in chlorophyl grains.

Chloroquinone (*klo-ro-kwin'-ōn*). Any chlorin substitution-compound of quinone.

Chlorosalol (*klo-ro-sal'-ol*). See *Chlorphenyl Salicylate.*

Chlorosin (*klo'-ro-sin*). A compound of albumin and chlorin, used in gastric catarrh.

Chlorosis. (See Illus. Dict.) Syn., *Chloranemia; Chloremia; Parthenosis; Pallor luteus; Pallor virginum; Morbus virgineus; Green sickness.* **C. adultarum,** that occurring between thirty and forty years of age. Syn., *Acmæochlorosis; Chlorosis tarda.* **C. ægyptiaca, C. æthiopum, C., Egyptian,** uncinariasis. **C. florida,** a rare form of chlorosis in which the color is high. **C. pituitosa.** Synonym of *Mucous colitis.* **C. tarda.** See *C. adultarum.* **C., Tropical, C. tropica,** uncinariasis.

Chlorosonin (*klo-ro'-son-in*). A compound of chloral and hydroxylamin; it is hypnotic.

Chlorostigma (*klo-ro-stig'-mah*) [*χλωρός*, green; *στίγμα*, stigma]. A genus of plants of the order *Asclepiadaceæ.* **C. stuckertianum,** of South America; the root, stem, and leaves are said to possess powerful galactagogic properties. An alkaloid, chlorostigmin, has been extracted.

Chlorostigmin. See under *Chlorostigma.*

Chlorotritylene (*klo-ro-trit'-il-ēn*). See *Allyl Chlorid.*

Chlorphenyl (*klor-fen'-il*). A substance forming yellow scales obtained from trichlorphenic acid by action of nitric acid; soluble in alcohol and ether. **C. Salicylate,** $C_6H_4(OH)CO \cdot OC_6H_4Cl$, a crystalline substance obtained from a mixture of ortho-chlorphenol and parachlorphenol by action of phosphorus pentachlorid. The ortho-compound, *chlorsalol,* is used as a surgical antiseptic; the para-compound, as a substitute for salol. Dose, 60–90 gr. daily. Syn., *Salicylic chlorophenol ester.*

Chlorpicrin. See *Chloropicrin.*

Chlorsalol (*klor'-sal-ol*). See *Chlorphenyl Salicylate.*

Chloryl (*klo'-ril*). A mixture of ethyl and methyl chlorids; an anesthetic. Syn., *Coryl.*

Choanoid (*ko'-an-oid*) [*χοάνη*, a funnel; *εἶδος*, likeness]. Funnel-shaped.

Chocolate. (See Illus. Dict.) **C., Acorn-.** A mixture of ground acorns with pure chocolate, prepared according to the formula of Liebreich by Stollwerk, of Cologne. It contains nearly 2% of tannic acid and is used in the dietetic management of diarrhea in enteritis. [Hemmeter.]

Chœradology (*ker-ad-ol'-o-je*) [*χοιράς*, scrofula; *λόγος*, science]. The science of scrofula.

Cholangiostomy (*kol-an-je-os'-to-me*) [*χολή*, bile; *ἀγγεῖον*, vessel; *στόμα*, mouth]. The formation of a fistula into the gallbladder.

Cholangiotomy (*kol-an-je-ot'-o-me*) [*χολή*, bile; *ἀγγεῖον*, vessel; *τομή*, a cutting]. The incision of an intrahepatic bile-duct for the removal of a calculus.

Cholangitis. (See Illus. Dict.) **C., Obliterative,** congenital obliteration of the bile-ducts.

Cholecystendesis. See *Cholecystendysis* (Illus. Dict.).

Cholecystenterorrhaphy (*kol-e-sist-en-tur-or'-af-e*) [*cholecyst; enterorrhaphy*]. The operation of suturing the gallbladder to the small intestine.

Cholecysteurysma (*kol-e-sist-u-ris'-mah*). See *Cholecystectasia* (Illus. Dict.).

Cholecystitis. (See Illus. Dict.) **C., Eberth's,** that due to *Bacillus typhi abdominalis.*

Cholecystocolotomy (*kol-e-sis-to-ko-lot'-o-me*) [*cholecyst; colotomy*]. Incision into the gallbladder and colon.

Cholecystoduodenostomy (*kol'-e-sist-o-du-o-den-os'-to-me*) [*cholecyst; duodenostomy*]. The establishment of an artificial communication between the gallbladder and the duodenum.

Cholecystogastrostomy (*kol-e-sist-o-gas-tros'-to-me*) [*cholecyst; gastrostomy*]. The formation of an opening between the gallbladder and the stomach.

Cholecystoileostomy (*kol-e-sist-o-il-e-os'-to-me*) [*cholecyst; ileostomy*]. The formation of an opening between the gallbladder and the ileum.

Cholecystojejunostomy (*kol-e-sist-o-je-jun-os'-to-me*) [*cholecyst; jejuneostomy*]. The establishment of a communication between the gallbladder and the jejunum.

Choledochendysis (*kol-e-dok-en'-dis-is*) [*choledoch; ἔνδυσις*, an entry]. See *Choledochotomy* (Illus. Dict.).

Choledocholithiasis (*kol-e-dok-o-lith-i'-as-is*) [*χολή*, bile; *δέχεσθαι*, to receive; *λίθος*, a stone]. The formation of a calculus in the common bile-duct.

Choledocholithotomy (*kol-e-dok-o-lith-ot'-o-me*) [*choledoch; lithotomy*]. The incision of the common bile-duct for the removal of gallstones.

Choleglobin (*kol-e-glo'-bin*) [*χολή*, bile; *globin*]. Latschenberger's name for the antecedent of bile-pigment, resulting (in his estimation) from the decomposition of the coloring-matter of blood.

Cholehemia, Cholehæmia (*kol-e-hem'-e-ah, -he'-me-ah*). See *Cholemia* (Illus. Dict.).

Cholelithotomy (*kol-e-lith-ot'-o-me*) [*χολή*, bile; *λίθος*, a stone; *τέμνειν*, to cut]. An incision into the bile-duct for the removal of gallstones.

Cholelithotripsy (*kol-e-lith-ot-rip'-se*) [*χολή*, bile; *λίθος*, a stone; *τρῖψις*, a rubbing]. The operation of crushing a gallstone.

Cholelithotrity (*kol-e-lith-ot'-re-te*) [*χολή*, bile; *λίθος*, a stone; *terere*, to rub]. See *Cholelithotripsy.*

Cholelogy (*kol-el'-o-je*). See *Choledology* (Illus. Dict.).

Cholemia, Cholæmia. (See Illus. Dict.) **C., Hematogenous.** See *Jaundice, Hematogenous.* **C., Hepatogenous.** See *Jaundice, Hepatogenous.*

Choleplania (*kol-e-pla'-ne-ah*) [*χολή*, bile; *πλάνη*, a wandering]. Jaundice.

Cholepyrrhin. (See Illus. Dict.) 2. Bilirubin.

Cholera. (See Illus. Dict.) **C., Algid,** Asiatic cholera. **C. asphyctica,** Asiatic cholera marked by early collapse and speedy death. **C. auriginosa a fungis venenatis,** the violent purging and coma caused by eating poisonous mushrooms. **C., Barbel.** See under *Barbel.* **C., Black, C., Blue,** Asiatic cholera. **C.-blue, C.-red.** See under *Pigment.* **C., British,** cholera morbus. **C.-cell, C.-corpuscle,** fungi found in dejecta of cholera patients. **C., Epidemic, C., Epidemic Spasmodic,** Asiatic cholera. **C. erethistica,** Asiatic cholera attended with excessive irritability. **C.-fever.** 1. Cholera typhoid. 2. Intermittent cholera. **C., Indian, C. indica,** Asiatic cholera. **C. indigena, C., Indigenous.** See *C., Simple* (Illus. Dict.). **C. intermittens,** a form of simple cholera sometimes accompanying the onset of tertian fevers. **C., Malarious,** simple cholera. **C., Malignant,** Asiatic cholera. **C. orientalis,** Asiatic cholera. **C. paralytica,** cholera with marked muscular weakness. **C. passio,** simple cholera. **C. pestifera,** Asiatic cholera. **C.-red.** See under *Pigment.* **C., Serous,** Asiatic cholera. **C. sicca auriginosa a fungis**

venenatis, crapulent colic. **C., Spasmodic, C. spastica,** Asiatic cholera. **C. spontanea, C., Sporadic, C. spuria.** See *C., Simple* (Illus. Dict.). **C. suppressa.** See *C. sicca* (Illus. Dict.). **C.-typhoid,** a soporific condition resembling typhus, lasting from two to seven days and attributed to uremia resulting from acute nephritis. It frequently follows Asiatic cholera. **C. vulgaris,** simple cholera. **C., Waterborne,** cholera disseminated by drinking-water.

Cholerase (*kol'-ur-āz*). The special bacteriolytic enzyme of the cholera vibrio. Cf. *Pyocyanase* and *Typhase*.

Choleric (*kol'-er-ik*). 1. Having abundant bile. 2. Applied to a temperament easily excited to anger. 3. Choleriac.

Choleromania (*kol-er-o-ma'-ne-ah*). See *Cholerophobia* (Illus. Dict.).

Cholerotyphus (*kol-er-o-ti'-fus*). 1. See *Cholera-typhus*. 2. The most malignant type of Asiatic cholera.

Cholerythrin (*kol-er-ith'-rin*). See *Bilirubin* (Illus. Dict.).

Cholestearin (*kol-es-te'-ar-in*). See *Cholesterin* (Illus. Dict.).

Cholestegnosis (*kol-e-steg-no'-sis*) [*χολή*, bile; *στέγνωσις*, a making close]. Thickening of the bile.

Cholesterilins (*kol-es-ter'-il-ins*). Hydrocarbons formed from cholesterin by action of concentrated sulfuric acid and supposed to stand in close relationship to the terpene group.

Cholesterin. (See Illus. Dict.) The power of immunizing against and neutralizing snake venom is attributed to it.

Cholesteryl (*kol-es'-ter-il*). $C_{26}H_{43}$. The radicle of cholesterin.

Choletherapy (*kol-e-ther'-ap-e*) [*κολή*, bile; *θεραπεία*, therapy]. The remedial use of bile.

Cholicele (*kol'-is-ēl*) [*κολή*, bile; *κήλη*, a tumor]. A tumor of the gallbladder, due to accumulation of bile.

Cholo (*kol'-o*). For words beginning thus see *Chole-*.

Cholocyanin (*kol-o-si-an'-in*). Synonym of *Bilicyanin* (Illus. Dict.).

Chole logy (*kol-ol'-o-je*). See *Choledology* (Illus. Dict.).

Choloplania. See *Choleplania*.

Cholosis. (See Illus. Dict.) 2. Lameness. **C. Americana,** yellow fever.

Cholostegnosis. See *Cholestegnosis*.

Chondric (*kon'-drik*). See *Chondral* (Illus. Dict.).

Chondrin. (See Illus. Dict.) **C. Balls,** a substance found in cartilage and composed of chondromucoid and chondroitic acid.

Chondrocele (*kon'-dro-sēl*) [*χόνδρος*, a cartilage; *χήλη*, a tumor]. A sarcocele containing masses resembling cartilage.

Chondrocoracoid (*kon-dro-kor'-ak-oid*). 1. Relating to a costal cartilage and to the coracoid process of the scapula. 2. See under *Muscles*.

Chondrocranium (*kon-dro-kra'-ne-um*) [*χόνδρος*, cartilage; *κρανίον*, a skull]. The cartilaginous cranium, as of the embryo.

Chondrocrasis (*kon-dro-kra'-sis*) [*χόνδρος*, a cartilage; *κρᾶσις*, a mixing]. The diseased state of the cartilages accompanying leprosy.

Chondrodialysis (*kon-dro-di-al'-is-is*) [*χόνδρος*, cartilage; *διά*, through; *λύειν*, to loose]. The decomposition of cartilage.

Chondrodystrophia. (See Illus. Dict.) **C. fœtalis.** See *Achondroplasia* and *Achondroplasy* (Illus. Dict.).

Chondroepiphysis (*kon-dro-ep-if'-is-is*) [*χόνδρος*, cartilage; *epiphysis*]. A cartilage which later develops into a bony epiphysis.

Chondrofetal (*kon-dro-fe'-tal*). Relating to fetal cartilage.

Chondroglycose (*kon-dro-gli'-kōz*). See *Acid, Chondroitinsulfuric*.

Chondroma [pl., *chondromas; chondromata*]. (See Illus. Dict.) **C., Cystoid.** See *Cystochondroma* (Illus. Dict.). **C., Endothelial,** a mixed tumor of endothelial origin. Syn., *Myxochondroma endotheliale*. **C. hyalinum,** one occurring in hyaline cartilage. **C. mucosum, C. myxomatosum,** an enchondroma in which cartilage predominates over the mucoid tissue. Syn., *Enchondroma mucosum*. **C., Osteoid.** See *Osteochondroma* (Illus. Dict.). **C. teleangeiectodes,** one in which there is dilation of the blood-vessels.

Chondromucoid (*kon-dro-mu'-koid*). $C_{47\cdot20}H_{6\cdot42}N_{12\cdot58}S_{2\cdot42}O_{31\cdot28}$. A mucin found in cartilage. Cf. *Osseomucoid; Tendomucoid*.

Chondromyoma (*kon-dro-mi-o'-mah*) [*χόνδρος*, cartilage; *myoma*]. A neoplasm presenting the characteristics of both chondroma and myoma.

Chondrophyma (*kon-dro-fi'-mah*) [*χόνδρος*, cartilage; *φύμα*, a growth]. 1. A tumor of a cartilage. 2. A neoplasm with cartilaginous elements. 3. See *Chondrophyte*.

Chondrophyte (*kon'-dro-fīt*) [*χόνδρος*, cartilage; *φυτόν*, a plant]. A fungous neoplasm springing from a cartilage.

Chondroplast (*kon'-dro-plast*) [*χόνδρος*, cartilage; *πλάσσειν*, to form]. 1. A cartilage-cell. 2. See *Cavity, Cartilage*.

Chondroporosis (*kon-dro-por-o'-sis*) [*χόνδρος*, cartilage; *πόρος*, a passage]. The thinning of cartilage by the formation of spaces, occurring during the process of ossification.

Chondrose (*kon'-drōz*). See *Acid, Chondroitinsulfuric*.

Chondrosidin (*kon-dros'-id-in*). The hyalin obtained from chondrosin.

Chondrosin (*kon'-dro-sin*) [*Chondrosia*, a genus of sponges]. A hyalogen obtained from the sponge *Chondrosia reniformis*.

Chondrosis. (See Illus. Dict.) 2. A cartilaginous tumor.

Chondrosternal (*kon-dro-stur'-nal*). Pertaining to the sternum and costal cartilages.

Chondrosteus. (See Illus. Dict.) 2. Both cartilaginous and bony.

Chondrosyndesmus (*kon-dro-sin-dez'-mus*). See *Synchondrosis* (Illus. Dict.).

Chondroxiphoid (*kon-dro-zif'-foid*). Pertaining to the costal cartilages and the ensiform cartilage.

Chord. See *Cord*.

Chorda. (See Illus. Dict.) **C. achillis,** the Achilles-tendon. **C. acustica, Chordæ acusticæ.** See *Stria acustica* (Illus. Dict.). **Chordæ arteriarum umbilicalium,** the lateral ligaments of the bladder. **C. ductus arteriosi.** See *Ligament, Arterial* (Illus. Dict.). **C. ductus venosi,** the slender remains of the fetal ductus venosus found in the fissure of the ductus venosus in the liver. **Chordæ ferreinii,** the vocal cords. **C. gonorrhoica.** See *Chordee* (Illus. Dict.). **C. hippocratis,** the Achilles-tendon. **C. inflammatoria,** chordee. **C. lancisii.** See *Lancisi, Nerves of* (Illus. Dict.). **Chordæ ligamentosæ winslowii,** the vocal cords. **C. longitudinalis, Chordæ longitudinalis lancisii.** See *Lancisi, Nerves of* (Illus. Dict.). **C. magna, C. magna hippocratis,** the Achilles-tendon. **Chordæ serpentinæ,** small lines on the floor of the fourth ventricle in front of the anterior fovea. **C. spasmodica.** See *Chordee* (Illus. Dict.). **C. spermatica,** the spermatic cord. **C.**

transversa, C. transversalis, C. transversa cubiti, C. transversalis cubiti. See *Ligament, Round* (of the forearm) (Illus. Dict.). **C. venæ umbilicalis,** the round ligament of the liver. **C. venerea, C. veneris,** chordee. **Chordæ verticillatæ,** inconstant markings on the anterior part of the floor of the fourth ventricle described by Bergmann. **Chordæ volubililes.** See *Chordæ serpentinæ.*

Chorditis. (See Illus. Dict.) **C. nodosa,** inflammatory growths occurring on the free edge of the vocal cord at the junction of the anterior and middle third. Syn., *Singers' nodes.*

Chordoma (*kor-do'-mah*) [*chorda*, a cord]. Virchow's name for the upper part of a persistent notochord.

Chordoskeleton (*kor-do-skel'-et-on*). The portion of the skeleton surrounding the notochord.

Chordurethritis (*kor-du-re-thri'-tis*). See *Chordee* (Illus. Dict.).

Chorea. (See Illus. Dict.) Syn., *C. anglorum; C. Sancti Viti; C. Sancti Viti minor; Mal de Saint-Jean; St. John's dance.* **C., Antihemiplegic.** See *C., Prehemiplegic.* **C., Bergeron-Henoch's.** Same as *Bergeron's disease.* **C., Bilateral,** that due to cerebral lesions causing development of choreic symptoms on both sides of the body. **C., Cardiac,** a form marked by palpitation and other cardiac disorders. **C., Chronic Progressive,** Hoffmann's name for *C., Huntington's* (Illus. Dict.). **C. circumrotatoria.** See *C., Rotatory* (Illus. Dict.). **C. Clonus.** See *Chorea* (Illus. Dict.). **C., Congenital.** Synonym of *Birth-palsy.* **C. cordis.** See *C., Cardiac.* **C.-corpuscles** (Elischer), peculiar cells found in the brain in cases of chorea and regarded as pathognomonic; they have, however, been found in the brain of those who have never had the disease. **C., Dancing,** hysteric chorea marked by rhythmic dancing movements. **C.-demonomania,** epidemic chorea. **C., Diaphragmatic,** spasm of the diaphragm. **C. dimidiata,** hemichorea. **C., English,** simple chorea. **C., Essential,** that occurring independently and not as a symptom of some other disease. **C., Facial,** convulsive tic. **C., False.** See *C., Symptomatic.* **C., General,** a form of chorea in which all or almost all of the voluntary muscles are subject to irregular contractions. **C., German.** See *C. major* (Illus. Dict.). **C. gravidarum,** intractable chorea occurring during pregnancy; toward its close sometimes aggravated and attended with fever. **C. gravis,** severe and dangerous cases of chorea. **C., Habit.** See *Habit Spasm* (Illus. Dict.). **C., Hammering,** a form marked by coordinated rhythmic spasm in consequence of which persistent hammering with the fist upon some object will be indulged in. **C. of the Heart.** See *C., Cardiac.* **C., Imaginative,** choromania. **C., Imitative,** choreic movements developed in children from association with choreic subjects. **C., Infantile.** See *C. minor* (Illus. Dict.). **C. laryngea, C., Laryngeal, C. laryngis.** 1. A condition attended with clonic spasm of the laryngeal muscles and marked by inability to sustain coordinate action. 2. A condition marked by spasmodic motions of some of the muscles of expiration, causing a cry. **C., Limp,** West's name for a sequel of motor paralysis in children marked by very slight choreic movements. **C. magna, C. magna Germanorum.** See *C. major* (Illus. Dict.). **C., Metaparalytic, C., Methemiplegic.** See *C., Postparalytic* (Illus. Dict.). **C., Methodic.** See *C. major* (Illus. Dict.). **C. mollis** (West). See *Hemiplegia, Choreic.* **C., Morvan's,** chorée fibrillaire de Morvan. Fibrillary contractions of the muscles of the calves and posterior portion of the thighs, often extending to the trunk and upper extremities, but leaving the face and neck intact. **C. neuralgica,** convulsive tic. **C. nutans,** that attended with nodding motions. **C. oculi,** choreic movements of the eyes due to cerebral lesions. **C. pandemica.** See *Disease, Dubini's* (Illus. Dict.). **C., Paralytic** (Gowers). See *Hemiplegia, Choreic.* **C., Partial,** imperfect choreic movements associated with contractures due to cerebral lesion. **C., Pounding.** See *C., Hammering.* **C., Prehemiplegic, C., Prohemiplegic,** choreic spasms of the hands or feet forerunning hemiplegia. **C. procursiva.** Synonym of *Paralysis agitans.* **C., Reflex,** that due to reflex irritation of the motor centers from a peripheral or visceral lesion or from some disordered condition. **C. saltatoria, C., Saltatory.** See *C., Dancing.* **C., Salutatory.** See *C. nutans.* **C. Sancti Johannis, C. Sancti Modesti, C. Sancti Valentini, C. Sancti Viti, C. S. V. minor.** See *Chorea* (Illus. Dict.). **C. Sancti Viti major.** Synonym of *Choromania.* **C. scelotyrbe.** See *Paralysis agitans* (Illus. Dict.). **C., Secondary.** See *C., Symptomatic.* **C. semilateralis,** hemichorea. **C. senilis.** 1. Paralysis agitans. 2. The trembling incident to age. **C., Symptomatic,** that dependent upon some organic disease. **C., Systematic,** that marked by systematic movements. **C., Unilateral.** See *Hemichorea* (Illus. Dict.). **C., Vibratory,** chorea with vibratory movements.

Choreal (*ko'-re-al*). Pertaining to chorea; choreic.

Chorioepithelioma (*ko-re-o-ep-e-the-le-o'-mah*). See *Deciduoma* (Illus. Dict.). **C. benignum,** degenerated relics of fetal epithelium or epiblast in its maternal tissues. **C. malignum,** Marchand's (1895) name for an epithelioma due to malignant degeneration of fetal epiblast left in the maternal tissues. Syn., *Deciduoma malignum,* Sänger (1888); *Syncytioma malignum; Sarcoma deciduo-cellulare.*

Chorioidealtubercle (*ko-re-oid-e-al-tu'-ber-kl*) [*χόριον*, the chorion; *εἶδος*, likeness; *tuberculum*, a tubercle]. A diagnostic sign of tuberculous meningitis found by ophthalmoscopic investigation.

Chorioma (*ko-re-o'-mah*) [*χόριον*, fetal membrane] [pl., *choriomas, choriomata*]. A neoplasm developed from the chorion.

Chorionin (*ko-re-on'-in*). A name given by Broncha-court (1902) to a preparation made from sheep's placenta by submitting it to pressure without heat. The juice thus expressed is made palatable with syrup after being sterilized with ammonium fluorid; employed as a galactagog.

Chorioretinitis (*ko-re-o-ret-in-i'-tis*). See *Choroidoretinitis* (Illus. Dict.). **C. centralis.** See *Choroiditis, Central* (Illus. Dict.). **C. disseminata circumscripta.** See *Choroiditis, Areolar.*

Choroid. (See Illus. Dict.) 2. Pertaining to the choroid; choroidal.

Choroiditis, Chorioiditis. (See Illus. Dict.) **C., Areolar, C.-areolaris,** that in which the first foci occur near the fovea and extend toward the periphery in constantly increasing distances. **C. disseminata circumscripta.** See *C., Areolar.* **C., Embolic.** See *C., Metastatic* (Illus. Dict). **C. guttata senilis.** See *Tay's Choroiditis* (Illus. Dict.).

Choroidocyclitis (*ko-roid-o-si-kli'-tis*) [*χόριον*, the chorion; *κύκλος*, a circle]. Inflammation of the choroid and of the ciliary body.

Chorology (*ko-rol'-o-je*) [*χώρος*, a place; *λόγος*, science]. The science of the geographic distribution of animals and plants. Cf. *Ecology, Zoogeography; Phytogeography* (Illus. Dict.).

Choronosologia, Choronosology (*ko-ro-no-sol-o'-je-ah, ko-ro-no-sol'-o-je*) [*χώρα*, a region; *νόσος*, a disease; *λόγος*, science]. The science of the geographic

distribution of diseases or of endemic diseases of some region.

Chorosynclonus (*ko-ro-sin'-klo-nus*). See *Chorea* (Illus. Dict.).

Christopathy (*krist-op'-ath-e*). See *Christian Science* (Illus. Dict.).

Chroatol (*kro'-at-ol*). $C_{10}H_{16} \cdot 2HI$. A greenish-yellow crystalline substance obtained by action of turpentine on iodin; used in powder or ointment in treatment of skin diseases. Syn., *Terpiniodohydrate.*

Chromascope. See *Chromatoscope* (Illus. Dict.).

Chromatelopsia, Chromatelopsis (*kro-mat-e-lop'-se-ah, -sis*) [χρῶμα, color; ἀτελής, imperfect; ὄψις, vision]. Color blindness.

Chromatics (*kro-mat'-iks*) [χρῶμα, color]. The branch of physics treating of color.

Chromatidrosis. See *Chromidrosis* (Illus. Dict.).

Chromatodermatosis. See *Chromodermatosis* (Illus. Dict.).

Chromatolysis (*kro-mat-ol'-is-is*) [χρῶμα, color; λύσις, a loosing]. Flemming's term for the breaking down of the nucleus at the death of the cell. Syn., *Karyolysis.*

Chromatometer (*kro-mat-om'-et-ur*) [χρῶμα, color; μέτρον, a measure]. 1. See *Chromatoptometer* (Illus. Dict.). 2. An instrument for measuring the intensity of colors.

Chromatometry (*kro-mat-om'-et-re*). 1. See *Chromatoptometry* (Illus. Dict.). 2. The estimation of the coloring power of a substance.

Chromatoplasm (*kro-mat'-o-plazm*) [χρῶμα, color; πλάσμα, anything formed]. The substance of the chromatoplasts as distinguished from the other cell-substances, karyoplasm, cytoplasm, metaplasm, paraplasm, etc.

Chromatoplast (*kro-mat'-o-plast*). See *Chromatophore* (3) (Illus. Dict.).

Chromatoskiameter (*kro-mat-o-ski-am'-et-ur*) [χρῶμα, color; σκία, a shadow; μέτρον, a measure]. Holmgren's apparatus for testing color-sense, consisting of a lamp and a white screen, on which is cast the shadow of a pencil placed in front of different colored glasses. A scale indicates when the shadows are of equal brightness.

Chromhydrosis. See *Chromidrosis* (Illus. Dict.).

Chromic. (See Illus. Dict.) **C. Anhydrid,** chromium trioxid.

Chromism (*kro'-mizm*). Excessive or abnormal coloration.

Chromite (*kro'-mīt*). 1. A combination of chromium sesquioxid with the oxid of some other metal. 2. Any organic pigment.

Chromium. (See Illus. Dict.) **C. and Potassium Sulfate.** See *Chrome-alum,* in *Table of Pigments* (Illus. Dict.). **C. Trioxid,** chromic acid.

Chromoaromatic (*kro-mo-ar-o-mat'-ik*). Applied to microorganisms that are colored and aromatic.

Chromoblast (*kro'-mo-blast*). See *Cromatophore* (Illus. Dict.).

Chromocyte (*kro'-mo-sīt*) [χρῶμα, color; κύτος, a cell]. Any colored cell.

Chromodiagnosis (*kro-mo-di-ag-no'-sis*) [χρῶμα, color; *diagnosis*]. Sicard's term (1901) to designate the diagnosis of hemorrhages of the neuraxis by yellow discoloration of the cephalorachidian fluid (xanthochromea) due, according to Tuffier, to the normal lutein of the serum.

Chromogenic (*kro-mo-jen'-ik*) [χρῶμα, color; γεννᾶν, to produce]. Applied to pigment-producing bacteria.

Chromolume (*kro'-mo-lūm*) [χρῶμα, color; *lumen,* light]. An apparatus for the production of colored rays for therapeutic purposes. **C. Electro-arc,** a special device for solarization by means of the arc light.

Chromomere (*kro'-mo-mēr*) [χρῶμα, color; μέρος, a part]. One of the minute granules composing the chromosomes. Syn., *Id.*

Chromometer (*kro-mom'-et-ur*). See *Chromatometer* (2).

Chromometry (*kro-mom'-et-re*). See *Chromatometry* (2).

Chromoparic, Chromoparous (*kro-mop'-ar-ik, -us*) [χρῶμα, color; *parare,* to furnish]. Excreting a colored transformation-product which is diffused out upon and into the surrounding medium. It is said of certain bacteria.

Chromophobic (*kro-mo-fo'-bik*) [χρῶμα, color; φόβος, fear]. Not stainable; not readily absorbing color. Cf. *Chromophilous.*

Chromophoric, Chromophorous (*kro-mof'-or-ik, kro-mof'-or-us*). Applied to chromogenic bacteria in which the pigment is stored in the cell-protoplasm of the organism.

Chromophose (*kro'-mo-fōz*) [χρῶμα, color; φῶς, light]. A subjective sensation of color. See *Phose.*

Chromophyl (*kro'-mo-fil*) [χρῶμα, color; φύλλον, a leaf]. A comprehensive term for the coloring-matter of plant cells, including chlorophyl, xanthophyl, erythrophyl, cyanophyl, pheophyl, the various phycochromes, etc. See *Pigments, Table of.* It may exist in solution, in crystalline or amorphous form. See *Phytochrome* (Illus. Dict.).

Chromoplasm (*kro'-mo-plazm*) [χρῶμα, color; πλάσμα, anything formed]. The network of a nucleus, so called because it stains readily.

Chromoproteid (*kro-mo-pro'-te-id*) [χρῶμα, color; *proteid*]. Any proteid capable of being broken up into albumin and a coloring-matter.

Chromoscope. See *Chromatoscope* (Illus. Dict.).

Chromosochromic (*kro-mo-so-kro'-mik*). Containing chromium both as a trivalent and a bivalent radicle.

Chromosome. (See Illus. Dict.) Syn., *Karyomita.* **C., Bivalent,** one representing two chromosomes joined end to end. Cf., *C.s, Pseudoreduction of.* **C., Plurivalent,** one having the value of two or more chromosomes. Cf., *C.s, Pseudoreduction of.* **C.s, Pseudoreduction of,** apparent reduction of the number of chromosomes through increase of bivalent or plurivalent chromosomes. **C.s, Reduction of,** the halving of the number of chromosomes in the germ-nuclei during maturation.

Chromosot (*kro'-mo-sōt*). A disinfectant said to consist mainly of sodium sulfate and sodium sulfite.

Chromospermism (*kro-mo-spurm'-izm*) [χρῶμα, color; σπέρμα, seed]. A condition in which the semen is colored. Cf., *Cyanospermia.*

Chrotopsia, Chrupsia (*kro-top'-se-ah, krup'-se-ah*). See *Chromatopsia* (Illus. Dict.).

Chrysammate (*kris'-am-āt*). A salt of chrysammic acid.

Chrysarobin. (See Illus. Dict.) **C. Oxid,** a brownish-black powder obtained from chrysarobin in boiling water by the action of sodium peroxid. It is recommended in treatment of eczema and rosacea in 5% to 10% ointment.

Chrysolein (*kris-o'-le-in*). Sodium fluorid.

Chrysoretin, Chrysorrhetin (*kris-o-ret'-in*). A yellow pigment found in senna and identical with chrysophan.

Chrysotoxin (*kris-o-toks'-in*). See *Sphacelotoxin.*

Chuchuarin [*Chuchuara,* Indian name]. $C_{20}H_{18}N_2O_2$. An alkaloid obtained by Moreau from the seeds and wood of *Semecarpus anacardium,* L., an anacardiaceous aphrodisiac plant of the East Indies. The alkaloid is extremely poisonous, acting somewhat like strychnin.

Chyle. (See Illus. Dict.) **C., Granular,** or **Molecular**

Base of, the minute particles of fat which give the milky appearance to chyle.

Chylemia (*ki-le'-me-ah*) [*χυλός*, chyle; *αἷμα*, blood]. The presence of chyle in the blood.

Chylivorous (*ki-liv'-or-us*) [*chyle; vorare*, to devour]. Applied to parasitic organisms subsisting on chyle.

Chyloperitoneum (*ki-lo-per-it-on-e'-um*). A condition marked by an effusion of chyle in the peritoneum.

Chylorrhea. (See Illus. Dict.) **C. pectoris, C. thoracica.** See *Chylothorax* (Illus. Dict.).

Chymosin (*ki'-mo-sin*) [*χυμός*, juice]. Rennin, the rennet ferment.

Chymosinogen. See *Prorennin* (Illus. Dict.).

Cibarian (*sib-a'-re-an*) [*cibus*, food]. Relating to food and the organs concerned in mastication and deglutition.

Cibation (*si-ba'-shun*) [*cibus*, food]. 1. The act of receiving nourishment. 2. The process of condensing a liquid.

Cibophobia (*si-bo-fo'-be-ah*) [*cibus*, food; *φόβια*, fear]. Morbid aversion to food.

Cibotium (*sib-ot'-e-um*) [*κιβωτός*, a chest]. A genus of ferns of the East Indies; the long, soft hairs of the rhizome are an efficient hemostat. See *Pengawhar djambi.* **C. barometz,** Kuntze, under the name of *Agnus scythicus* the astringent rhizome with attached petioles and scales, cut into shapes of different animals, was held in high repute as a drug in the Middle Ages. See *Pengawahr djambi.*

Cicatrisate (*sik-at'-riz-āt*). Marked with cicatrices; cicatricose; cicatrose.

Cicatrix. (See Illus. Dict.) **C., Exuberant, C., Hypertrophic, C., Keloid,** one that hypertrophies after the healing of a wound and becomes red and prominent. **C., Vicious,** one that impairs the function of a part.

Cicatrization. (See Illus. Dict.) 2. The production of raised scars or wheals by savages for ornamental purposes.

Cichorium (*sik-ō'-re-um*) [*κιχώριον*]. A genus of plants of the order *Compositæ.* **C.-glucosid,** $C_{32}H_{34}O_{19} + 4\frac{1}{2}H_2O$ (?), a bitter glucosid obtained from the flowers of *C. intybus;* colorless needles melting at 215°–220° C. **C. intybus,** L., chicory, succory, bunk, a hardy perennial of Europe; the root of the wild plant is said to be a powerful alterative.

Cicutism (*sik'-u-tizm*) [*cicuta*, hemlock]. Poisoning with water-hemlock, *Cicuta virosa.* It is marked by epileptiform convulsions, dilation of the pupils, cyanosis of the face, and coma.

Cimicic (*sim-is'-ik*) [*cimex*, a bug]. Derived from or pertaining to a beetle; *e. g., C. acid.*

Cimicine, Cimicinous (*sim'-is-ēn, sim-is'-in-us*) [*cimex*, a bug]. Having the odor of bugs.

Cimmol (*sim'-ol*). See *Aldehyd, Cinnamic* (Illus. Dict.).

Cincholepidin (*sin-ko-lep'-id-in*). See *Lepidin* (1) (Illus. Dict.).

Cincholin (*sin'-ko-lin*) [*cinchona*]. A pale yellow liquid alkaloid isolated from the mother-liquors of quinin.

Cinchonaceous, Cinchonal (*sin-kon-a'-shus, sin'-kon-al*). Relating to the cinchonas.

Cinchonamin. (See Illus. Dict.) **C. Hydrochlorate,** $C_{19}H_{24}N_2O.HCl + H_2O$, a yellowish powder soluble in alcohol. **C. Nitrate,** $C_{19}H_{24}N_2O.HNO_3$, short, transparent prisms, the least soluble nitrate known. **C. Sulfate,** $C_{19}H_{24}N_2O.H_2SO_4$, transparent prisms soluble in water. Syn., *C. bisulfate.*

Cinchonate (*sin'-ko-nāt*). A salt of cinchonic acid.

Cinchonetin (*sin-kon'-et-in*). A substance obtained from cinchonin sulfate by action of iron peroxid.

Cinchonidin. (See Illus. Dict.) **C. Bisulfate, C. Disulfate,** $C_{19}H_{22}N_2O.H_2SO_4 + 5H_2O$, prisms soluble in water and alcohol; antiperiodic. Dose, 15–30 gr. (0.97–1.94 gm.). Syn., *Acid cinchonidin sulfate.* **C. Tannate,** a tasteless, yellow, amorphous powder, soluble in alcohol; it is used in intermittent fevers. Dose, 8–16 gr. (0.52–1.04 gm.).

Cinchonin. (See Illus. Dict.) **C. Bisulfate,** $C_{19}H_{22}N_2O.H_2SO_4$, minute prisms soluble in water and alcohol; used as cinchonin. **C. Dihydrochlorate,** forms clusters of prismatic needles soluble in water and alcohol. It is said to contain 60% of cinchonin; antipyretic and antiseptic. **C. Herapathit, C. Iodosulfate.** See *Antiseptol* (Illus. Dict.). **C. Hydrochlorate, C. Hydrochlorid,** fine white crystals soluble in alcohol, in 22 parts of water, and 550 parts of ether; used as cinchonin. **C. Nitrate,** $C_{19}H_{22}N_2O.HNO_3 + H_2O$, colorless prisms soluble in water; used as cinchonin. **C. Salicylate,** $C_{19}H_{22}N_2.C_7H_6O_3$, white crystals soluble in alcohol; it is used in rheumatism in malarial regions. Dose, 5–20 gr. (0.32–1.3 gm.). **C. Sulfate, Acid.** See *C. Bisulfate.* **C. Sulfocreosotate,** greenish-yellow bitter crystals soluble in 10 parts of water; it contains 38% of the alkaloid. **C. Sulfophenolate,** white scales with red tint, soluble in water; it contains 40% of the alkaloid. **C. Tannate,** yellow powder, soluble in alcohol; used as cinchonin.

Cinchonology (*sin-ko-nol'-o-je*) [*cinchona; λόγος*, science]. The science of the derivatives of cinchona.

Cinchonometery (*sin-ko-nom'-et-re*) [*cinchona; μέτρον*, a measure]. The quantitative estimation of alkaloids in the cinchonas.

Cinchotannin (*sin-ko-tan'-in*). $C_{14}H_{16}O_9$. A glucosid existing in cinchona barks in the proportion of 3% to 4%; a brownish-red substance with austere taste, soluble in water and alcohol, and forming white precipitates with tartar emetic and gelatin. Syn., *Cinchotannic acid.*

Cinchotenin (*sin-kot'-en-in*). $C_{18}H_{20}N_2O_3 + 3H_2O$. A decomposition-product of cinchonin by action of potassium permanganate.

Cinchovatin (*sin-ko'-vat-in*). An alkaloid from cinchona now considered identical with cinchonidin.

Cinclisis (*sin'-klis-is*) [*κίγκλισις*, any quick, repeated motion]. Quick, spasmodic movement of any part of the body, but particularly applied to rapid winking. Hippocrates' term for quick motion of the chest as in dyspnea. Syn., *Cinclesmus.*

Cinefaction (*sin-e fak'-shun*). See *Incineration* (Illus. Dict.).

Cinematics (*sin-e-mat'-iks*). See *Kinetics.*

Cinematograph. See *Kinematograph.*

Cineraceous (*sin-ur-a'-shus*) [*cinereus*, ash-colored]. Ash-gray in color.

Cinereal (*sin-ē'-re-al*). Ashy.

Cingula (*sin'-gu-lah*) [L., pl. *cingulæ*]. 1. A band, girdle, or zone. 2. Burdach's name for the upper part of the fornicate gyrus.

Cingule (*sin'-gūl*) [*cingere*, to gird]. The groove separating the primitive cusp or tubercle frequently found on the lingual face of the upper incisor teeth. Syn., *Cingulum; Cingulus.*

Cinguliferus (*sin-gu-lif'-ur-us*) [*cingula; ferre*, to bear]. Encircled by a colored band.

Cingulum. (See Illus. Dict.) 3. See *Cingule.* 4. A fibrous bundle in the fornicate gyre of the brain. Syn., *Bundle of the gyrus fornicatus; Fasciculus arcuatus.* **C. halleri,** the abdominal muscles. **C. veneris.** See *Corona veneris* (Illus. Dict.).

Cinnamaldehyd (*sin-am-al'-de-hid*). See *Aldehyd, Cinnamic* (Illus. Dict.).

Cinnamein (*sin-am-ē'-in*). $C_9H_7O_2(C_7H_7)$. A constituent of balsams of Peru and Tolu, and is obtained from sodium cinnamate by heating with benzyl chlorid; it forms prisms melting at 39° C. Syn., *Benzyl cinnamate*.

Cinnamic. (See Illus. Dict.) **C. Anhydrid,** $(C_6H_5C_2H_2 . CO)_2O$, a crystalline compound melting at 127° C.

Cinnamol (*sin'-am-ol*). 1. See *Styrol* (Illus. Dict.). 2. See *Aldehyd, Cinnamic* (Illus. Dict.).

Cinnamon. (See Illus. Dict.) **C., Artificial,** the bark of a species of guava (jungle bark) used in Ceylon as a fraudulent substitute for true cinnamon, after having immersed it in the by-products obtained in the distillation of cinnamon oil.

Cinnamyl. (See Illus. Dict.) **C. Acetate,** $C_9H_9O . C_9H_7O$, a heavy oil obtained from sodium cinnamate by action of acetyl chlorid. **C. Alcohol.** See *Alchohol, Cinnamic.* **C.chinin,** $C_6H_5CH=CH . CO . O . C_{20}H_{23}N_2O$, a quinin ester, soluble with difficulty in water, but readily in alcohol and ether; forms acicular crystals; melts at 111° C. **C. Cinnamate.** See *Styracin* (Illus. Dict.). **C.cocain,** an alkaloid found in combination with cocain. It is a form of cocain the benzoyl group of which is replaced by the radicle of cinnamic acid. The toxic symptoms following the use of impure cocain are probably due to its presence. **C.-eugenol,** $C_{19}H_{18}O_3$, a substance forming colorless lustrous needles, without taste or odor, soluble in chloroform, ether, acetone, and hot alcohol, melting at 90°–91° C. It is antiseptic and is used hypodermically instead of eugenol in tuberculosis. Injection, 2–8 m of olive oil solution. **C.guaiacol.** See *Styracol* (Illus. Dict.). **C. Hydrate,** cinnamic acid. **C. Hydrid,** cinnamic aldehyd. **C.-metacresol,** the metacresol ester of cinnamic acid; a nontoxic, nonirritating antiseptic substance recommended in treatment of tuberculosis. Syn., *Hetocresol.*

Cinnyl (*sin'-il*). C_9H_9. The univalent radicle of cinnamic alcohol. **C. Chlorid,** $C_2H_5 . C_3H_4Cl$, a yellowish oil with odor of oil of anise and oil of cinnamon. **C. Cinnamate.** See *Styracin* (Illus. Dict.). **C. Iodid,** $C_6H_5 . C_3H_4I$, a heavy aromatic liquid with burning taste; it decomposes on distillation.

Cinnylamin (*sin-il'-am-in*). $C_6H_5 . C_3H_4NH_2$. Bitter, colorless crystals which readily fuse to an oil which volatilizes at 100° C.

Cinnylic (*sin-il'-ik*). Containing cinnyl; pertaining to or resembling cinnamic acid.

Circellus (*sur-sel'-us*) [L., pl. *circelli*]. A small circle. **Circelli cerebelli,** the laminas of the cerebellum. **C. venosus hypoglossi,** a venous plexus encircling the hypoglossal nerve in the anterior condylar foramen; it communicates with the occipital sinus and with the jugular vein.

Circle. (See Illus. Dict.) **C., Carus'.** See *Curve of Carus* (Illus. Dict.). **C., Ciliary,** the ciliary ligament. **C. of Dispersion.** See under *Diffusion* (Illus. Dict.). **C., Galvanic,** a galvanic circuit. **C., Hovius' Vascular.** See *Plexus, Hovius'* (Illus Dict.). **C., Huguier's,** the inconstant anastomosis formed by the branches of the uterine arteries around the uterus, at the junction of the body with the cervix. **C., Tympanal.** See *Ring, Tympanic* (Illus. Dict.). **C., Voltaic,** a galvanic circuit. **C., Zinn's.** See *C. of Haller* (Illus. Dict.).

Circocele (*sur'-ko-sēl*). See *Cirsocele* (Illus. Dict.).

Circular (*sur'-ku-lar*). 1. Ring-shaped. 2. Marked by alternations of despondency and excitation, as in circular insanity.

Circulares (*sur-ku-la'-rēz*) [κίρκος, a circle]. See *Insanity, Circular* (Illus. Dict.).

Circulus. (See Illus. Dict.) 2. See *Circle of Willis* (Illus. Dict.). **C. arteriosus iridis, C. arteriosus iridis major, C. iridis major.** See *C. arteriosus* (Illus. Dict.). **C. articuli vasculosis,** that formed by the bloodvessels in the synovial membrane, about the cartilages of a joint. **C. choroidæ, C. ciliaris,** the ciliary ligament. **C. gangliosis ciliaris,** a circular nerve-plexus in the ciliary muscle. Syn., *Orbiculus gangliosis.* **C. mascagnii.** See *Ring, Mascagni's.* **C. nervosus foraminis cæci,** a plexus formed around the outer border of the foramen cæcum, by the branches of the glossopharyngeal nerve. **C. osseus,** the tympanic ring. **C. tonsillaris.** See *Plexus, Tonsillar* (Illus. Dict.). **C. venosus ciliaris, C. venosus corneæ,** the canal of Schlemm. **C. venosus orbiculi ciliaris.** See *Canal of Fontana* (Illus. Dict.). **C. venosus ridleyi.** See *Sinus, Circular* (Illus. Dict.).

Circumaxile (*sur-kum-aks'-il*) [*circum,* around; *axis*]. Encircling an axis.

Circumbuccal (*sur-kum-buk'-al*) [*circum,* around; *bucca,* the cheek]. Surrounding the mouth.

Circumference. (See Illus. Dict.) 2. The periphery of a circle. **C., Anteroposterior** (of the skull), that of a plane touching the opisthion and the nasal point. **C., Frontal,** the distance on the surface of the skull between the coronal and nasal sutures. **C., Larger** (of the fetal head), that touching the two extremities of the longest anteroposterior diameter. **C., Lesser or Obstetric** (of the fetal head), that touching the two extremities of the suboccipitobregmatic diameter. **C., Median, C., Sagittal, C., Vertical.** See *C., Anteroposterior.*

Circumferential (*sur-kum-fer-en'-shal*). Pertaining to a circumference; peripheral.

Cirrhosis. (See Illus. Dict.) **C., Alcoholic,** that due to excess in the use of alcohol. **C., Annular.** See *C., Multilobular.* **C., Atrophic,** atrophy and contraction of the liver due to interstitial hepatitis. **C., Budd's,** hepatic cirrhosis due to autointoxication from the gastrointestinal tract. **C., Cancerous,** a diffuse formation of cancer throughout the liver, accompanied by hyperplasia of the connective tissue. The cancer may be primary or secondary. **C., Cardiac, C. cordis,** hypertrophy of the connective tissue between the muscular fibers of the heart. **C., Cardiotuberculous,** that accompanied by tuberculosis and symptoms of cardiac disease. **C., Charcot's.** See *Disease, Hanot's* (Illus. Dict.). **C. Glissonian,** perihepatitis. **C., Hanot's.** See *Disease, Hanot's* (Illus. Dict.). **C. hepatis,** interstitial hepatitis. **C., Hypertrophic, C., Hypertrophous,** interstitial hepatitis without atrophy of the new connective tissues. **C. hypertrophica adiposa,** interstitial hepatitis with fatty degeneration of the liver-cells. **C., Insular.** See *C., Unilobular.* **C., Irritative,** interstitial hepatitis due to irritation of some toxic substance which has been carried to the liver by the hepatic or portal veins. **C. jecinoris, C. jecoris, C. of the Kidney,** interstitial hepatitis. **C., Laënnec's.** See under *Laënnec* (Illus. Dict.). **C. of the Lung,** interstitial pneumonia. **C., Lupinous,** a form of cirrhosis of the liver, occurring in horses, and supposed to be caused by chronic poisoning with lupines. Although the disease is usually chronic, the liver eventually becoming hobnailed, it may occur acutely, and give rise to lesions resembling those of phosphorus-poisoning. **C., Mixed,** that presenting features of both the atrophic and hypertrophic forms **C., Monolobular.** See *C., Unilobular.* **C. Multilobular,** a form of interstitial hepatitis in which many lobules are surrounded by a fibrous ring. **C., Muscular,** the induration of connective tissue, fatty degeneration, and atrophy of the

muscular fibers which take place in muscular contracture. **C., Obstructive,** cirrhosis of the liver due to the obstruction of the passage of blood or bile from the liver. **C., Paludal,** cirrhosis of the liver due to malaria. The organ is greatly enlarged. **C. parasitaria,** interstitial hepatitis due to *Distomum truncatum;* observed in the dog. **C., Pericardiotuberculous.** See *C., Cardiotuberculous.* **C. peritonæi, C., Peritoneal.** See *Peritonitis deformans* (Illus. Dict.). **C., Pigmentary Diabetic,** cirrhosis with pigmentation of the skin. Cf. *Hemochromatosis.* **C., Pulmonary, C. pulmonum,** interstitial pneumonia. **C., Renal, C. renum,** interstitial nephritis. **C. of the Spleen,** chronic hypertrophy and induration of the spleen, with thickening of the capsule. **C. of the Stomach,** chronic interstitial gastritis. **C., Todd's,** hypertrophic cirrhosis of the liver. **C., Tuberculous,** cirrhosis of the liver due to tuberculosis. It is rare; the majority of cases have occurred in children. **C., Turbinated,** defective turbinated bodies due to disappearance or diminishment of the erectile structure in cases of atrophic rhinitis. **C., Unilobular,** a form of cirrhosis of the liver in which the proliferation of the connective tissue occurs between the individual lobules. **C. ventriculi,** chronic interstitial gastritis.

Cirrus (*sir'-us*) [L.]. 1. A lock or tuft of hair. 2. The male genital organ of *Cestodes,* usually adherent to the anterior end of the cirrus-pouch. **C.-pouch,** a structure made up of muscle and connective tissue attached to the male genital aperture of the *Cestodes* and serving to protrude the cirrus.

Cirsaneurysma (*surs-an-u-riz'-mah*). A cirsoid aneurysm.

Cis-. A prefix proposed by Baeyer to designate relative asymmetry in unsaturated carbon compounds.

Cissa (*sis-ah*) [L.]. See *Pica* (Illus. Dict.).

Cissampelin (*sis-am'-pel-in*). An alkaloid from pareira root, identical with beberin.

Cistern. (See Illus. Dict.) **C., Seminal,** the posterior culdesac of the vagina. Syn., *Receptaculum seminis.*

Cisterna. (See Illus. Dict.) In the plural, *Cisternæ,* the subarachnoid spaces. **C. ambiens.** See *Canal, Arachnoid* (Illus. Dict.). **C. basilis,** that part of the anterior subarachnoid space holding the circle of Willis; it is divided by the chiasm into two parts, the *Cisterna anterior* and the *Cisterna inferior.* **C. cerebellaris, C. cerebellomedullaris.** See *Postcisterna* (Illus. Dict.). **C. chiasmatis,** the interpeduncular space. **C. chyli.** See *Receptaculum chylii* (Illus. Dict.). **C. corporis callosi,** the third ventricle. **C. fossæ lateralis cerebri, C. fossæ sylvii.** See *C. sylviana.* **C. intercruralis, C. interpeduncularis,** the anterior subarachnoid space at the base of the brain. **C. intercruralis profunda,** that part of the subarachnoid space lying directly above the space included between the crura cerebri. **C. intercruralis superficialis,** that part of the subarachnoid space included between the pons and the chiasm. **C. lateralis pontis,** a small space extending along the outer edge of the pons. **C. lumbaris.** See *Receptaculum chyli* (Illus. Dict.). **C. magna.** (See Illus. Dict.) 2. The fourth ventricle. **C. pontis,** the anterior subarachnoid space. **Cisternæ subarachnoidealæ,** the subarachnoid spaces. **C., Superior,** that included in the angle between the splenium, the superior surface of the cerebellum, and the posterior aspect of the quadrigeminum. **C. sylviana,** the part of the subarachnoid space lying immediately above the sylvian fissure. Syn., *C. fossæ lateralis cerebri.* **C. venæ magnæ cerebri.** See *Canal, Arachnoid* (Illus. Dict.).

Citraconic (*sit-ra-kon'-ik*). Compounded of citric and aconic acids. **C. Anhydrid,** $C_5H_4O_3$, an oily liquid boiling at 212° C.

Citral (*sit'-ral*) [*citrus,* a lemon]. $C_{10}H_{16}O$. An aldehyd found in oil of lemon and many of the essential oils; a golden-yellow liquid giving aroma and value to oil of lemon. Sp. gr. 0.899. It boils at 228°–229° C.

Citramalic (*sit-ra-mal'-ik*). Relating to or composed of citric and malic acids.

Citrol (*sit'-rol*). Itrol citrate, a silver preparation used in gonorrhea.

Citronellol (*sit-ron-el'-ol*). $C_{10} \cdot H_{18}O$. A body isomeric with borneol, obtained from oil of citronella.

Citrophen (*sit'-ro-fen*). $C_3H_4OH — CONH — OC_2H_5C_6H_4$. Paraphenetidin citrate; a white powder or crystalline substance, with faint, sour taste, soluble in water, melts at 181° C. It is antipyretic and antineuralgic. Dose, 3–15 gr.

Citrullin (*sit-rul'-in*). A resinoid from *Citrullus colocynthis,* Schrad.; a yellow amorphous powder soluble in alcohol and ether. It is a cathartic extensively used in veterinary practice. Syn., *Colocynthidin; Amorphous colocynthidin.*

Citrullus (*sit-rul'-us*) [dim. of *citrus*]. A genus of cucurbitaceous plants indigenous to Africa. **C. colocynthis,** Schrad., the ripe, yellow fruit affords colocynth. **C. vulgaris,** Schrad., the common watermelon.

Citrurea (*sit-ru'-re-ah*). A combination of citric acid, urea, and lithium.

Cladothrix dichotoma. See *Bacteria, Table of* (Illus. Dict.). It causes lesions of the skin in butchers, tanners, cooks, etc.; called by Rosenbach *erysipeloid.*

Clasmatosis (*klas-mat-o'-sis*). See *Clasmatocytosis* (Illus. Dict.).

Clastic (*klas'-tik*) [κλαστός, broken]. Breaking up into fragments; causing division.

Claudication. (See Illus. Dict.) 2. An obstruction. **C., Charcot's Intermittent, C., Intermittent,** intermittent paresthesia of the legs attended with pain, tremor, and excessive perspiration due to arteriosclerosis; a condition first noted by French writers in apparently healthy horses and afterward observed in man. Syn., *Angiosclerotic paroxysmal myasthenia; Intermittent lameness; Intermittent limping; Angina cruris.* **C., Spontaneous,** the lameness that occurs as an early symptom of coxarthrocace in children.

Claustrophilia (*klaws-tro-fil'-e-ah*) [*claustra,* a bolt; φιλεῖν, to love]. A morbid dread of an open door; it is a neurasthenic condition.

Claustrum. (See Illus. Dict.) **C. gutturis,** the opening of the pharynx. **C. oris.** See *Velum palati* (Illus. Dict.). **C. virginale, C. virginitatis,** the hymen.

Clavicle. (See Illus. Dict.) 2. See *Bone, Coracoid.* **C.-crutch,** Cole's device for supporting a broken clavicle; it is so furnished with pads and adjustments as to dispense with bandaging.

Clavicotomy (*klav-ik-ot'-o-me*) [*clavicle;* τομή, a cutting]. Surgical section of the clavicle.

Clavicula (*klav-ik'-u-lah*). The clavicle. **C. capitis,** the projection formed by the pterygoid and entopterygoid bones on the pleurapophysis of the hemal arch of the nasal vertebras.

Claviculate (*klav-ik'-u-lāt*). 1. Having a clavicle. 2. Wrinkled; corrugated.

Claviform (*klav'-e-form*) [*clava,* a club]. Club-shaped; clavate.

Clavipes (*klav'-e-pēz*) [*clava,* a club; *pes,* a foot]. Having club-shaped feet.

Clavis uteri (*kla'-vis u'-tur-e*). Womb key; an electrotherapeutic intrauterine device designed for the application of electricity in certain pathologic conditions of the uterus and adnexa.

Clavus. (See Illus. Dict.) **C.-oculorum.** Synonym of *Staphyloma*.

Claw-foot. A deformity and atrophy of the foot.

Clayton Furnace. An apparatus for the disinfection of ships by means of sulfurous acid gas. It consists of a cylinder in which sulfur is burned while being fed with air by means of a fan or blower; from this the sulfurous gas is conducted by means of shafts to the apartment to be disinfected.

Clean (*klēn*). In veterinary practice, to expel the secundines without aid.

Clearing. (See Illus. Dict.) **C. Nut,** the seeds of *Strychnos potatorum* (*q. v.*).

Cleavage. (See Illus Dict.) **C., Egg.** See *Segmentation* (Illus. Dict.). **C.-nucleus,** the nucleus which in the fertilized egg results from the union of the male and female nuclei.

Cleft-hand (*kleft′-hand*). A congenital deformity in which some finger or fingers are widely separated from the others.

Cleidarthritis (*kli-dar-thrī′-tis*) [κλείς, clavicle; *arthritis*]. Inflammation of the sternoclavicular articulation.

Cleidocostal (*kli-do-kos′-tal*). Pertaining to the ribs and the clavicle.

Cleidooccipital (*kli-do-ok-sip′-e-tal*). 1. Relating to the clavicle and the occiput. 2. See *Muscles, Table of* (Illus. Dict.).

Cleidoscapular (*kli-do-skap′-u-lar*). Relating to the clavicle and the scapula.

Cleidosternal (*kli-do-stur′-nal*). Sternoclavicular.

Cleidotomy (*kli-dot′-o-me*) [κλείς, clavicle; τέμνειν, to cut]. The operation of dividing the clavicles in cases of difficult labor due to the broad shoulders of the child.

Clerodendron (*kler-o-den′-dron*) [κλῆρος, a lot; δένδρον, tree]. A genus of tropic shrubs and trees of the order *Verbenaceæ*. **C. infortunatum,** Gärt., a species indigenous to India and Malaya; is used as a substitute for chiretta; the juice of the leaves as a tonic, febrifuge, and vermifuge. **C. nereifolium,** Wall., a species found in Malaya; the root and leaves are antisyphilitic, tonic, and vulnerary; the root and fruit are used to stupefy fish; the leaves contain chiretten and ophelic acid. **C. serratum,** Spr., indigenous to India; the root is tonic and stomachic, the fruit purgative and diuretic. **C. trichotomum,** Thunb., the leaves and an insect larva found on the branches are used as an ascaricide. **C. villosum,** Blume, a species indigenous to Malaya; the root is stomachic, the sap vermifugal.

Climacter (*kli-mak′-tur*). See *Climacteric* (Illus. Dict.).

Cling (*kling′*). A diarrhea of sheep. **C. Symptom.** See *Signs*.

Clinicopathology (*klin-ik-o-path-ol′-o-je*) [κλίνη, a bed; πάθος, disease; λόγος, science]. Pathologic conditions as open to clinical observation.

Clinocephalus (*klin-o-sef′-al-us*) [κλίνειν, to incline; κεφαλή, the head]. A variety of dolichocephalus occurring through synostosis of the sphenoparietal suture and resulting in a saddle-formed depression of the skull. Syn., *Saddle-head*.

Clinodiagonal (*klin-o-di-ag′-on-al*) [κλίνειν, to incline; διαγώνιος, diagonal]. Inclined and diagonal; obliquely transverse.

Clinology (*klin-ol′-o-je*) [κλίνη, a bed; λόγος, science]. 1. The science of the decline of animal life after it has reached the meridian. 2. The study of beds for the sick.

Clinometer (*klin-om′-et-er*) [κλίνειν, to incline; μέτρον, measure]. An apparatus to estimate the rotational capacity of the ocular muscles. **C., Duane's,** a device for estimating torsional deviations of the eye, and also used in the study of metamorphopsia.

Clinoscope (*klin′-o-skōp*) [κλίνειν, to incline; σκοπός, a watcher]. An instrument for measuring the torsion of the eyes when gazing at a fixed object with the axes of vision presumably parallel.

Clinotechny (*klin-o-tek′-ne*) [κλίνη, a bed; τέχνη, an art]. The art of making and preparing beds for the sick.

Clisiometer. See *Cliseometer* (Illus. Dict.).

Clition (*klit′-e-on*) [κλιτύς, a slope]. A craniometrical point located in the middle of the anterior border of the clivus.

Clitoria (*kli-tō′-re-ah*) [κλειτορίς, the clitoris]. A genus of leguminous plants. **C. ternatea,** L., indigenous to India; the root and seeds are purgative and emetic.

Cloaca. (See Illus. Dict.) **C., Congenital,** a malformation in which the rectum opens into the genitourinary tract. **C., Urogenital,** an abnormal common opening of the urethra and vagina due to defective urethrovaginal septum. **C., Vesicorectovaginal,** a common aperture of the bladder, vagina, and rectum due to deformity or trauma.

Clonograph (*klon′-o-graf*) [κλόνος, a commotion; γράφειν, to write]. An apparatus for recording the spasmodic movements of the head, extremities, lower jaw, and trunk, as well as the tendon reflexes.

Closure Time (*klōz′-ur-tīm*). The period at the beginning of systole of the heart, when all the valvular orifices of the heart are closed.

Cloud-ring (*klowd′-ring*). An atmospheric phenomenon supposed to have some connection with malarial fevers of hot countries.

Clove-bark (*klōv′-bark*). The bark of a large Brazilian tree, *Dicypellium caryophyllatum*, Nees, of the order *Laurineæ*. It has the nature and flavor of cinnamon.

Clover (*klō′-vur*). See *Trifolium*. **C., Sweet,** *Melilotus officinalis*.

Clovorubrin (*klo-vo-rū′-brin*). A red resinous body formed from oil of cloves by action of sulfuric acid.

Club-foot. (See Illus. Dict.) Syn., *Polt-foot; Pommel-foot*. **C., Heel,** pes calcaneus. **C., Inward,** pes varus. **C., Outward,** pes valgus.

Clubione (*klub-e-ō′-ne*) [γλύφειν, to hollow out]. A genus of spiders of the family *Drassidæ*. **C. medicinalis,** Walckenaer, a poisonous species of North America, said to have been used as a vesicant after the manner of cantharides.

Club-moss (*klub′-mos*). See *Lycopodium* (Illus. Dict.).

Clumping (*klump′-ing*). See *Agglutination* (2). **C. Serum.** See under *Serum*.

Clupein (*klu′-pe-in*) [*clupea*, a kind of small river fish]. $C_{30}H_{57}N_{17}O_6 + 4H_2O$. A protamin from the herring. Syn., *Sozin*.

Clusia (*klu′-se-ah*) [*Charles de l'Ecluse* (1526–1609)]. A genus of plants of the order *Guttiferæ*, many species of which yield a gum-resin called West Indian balsam. **C. ducu,** Benth., of Peru, yields a resin called duca, which has a pleasant odor when burned. **C. flava,** Jacq., of the West Indies; the milky sap is used as a substitute for copaiba. **C. insignis,** Mart., of Brazil; the milky sap is used as a salve. **C. hilariana,** Schl., of the West Indies and South America, yields a gum used as a drastic and vulnerary; the fruit is edible and the astringent bark is employed in diarrhea.

Clysis (*klī′-sis*) [κλύζειν, to cleanse]. The administration of an enema; the cleansing by means of an enema.

Clysma (*klīs′-mah*) [κλύσμα]. An enema.

Clysmic (*klīs′-mik*). Relating to an enema; suitable for cleansing or washing.

Clyster. (See Illus. Dict.) **C., Meat Bouillon wine-** (Fleiner); take 80 gm. of beef-tea and 40 gm.

of mild white wine. To be injected 2 or 3 times a day at body-heat. **C. Meat Pancreas-** (Leube's); 150 gm. good beef scraped and chopped fine; 80 gm. fresh pancreas (cow or hog) free from fat; mix with 150 gm. lukewarm water, inject from 50 gm. to 100 gm. at a time, by means of a simple funnel, and at blood-heat. **C., Nutritive** (Boas); warm 250 gm. of milk, stir in 2 yolks of eggs and 1 teaspoonful of common salt and 1 tablespoonful of wheat starch, and afterward add one tablespoonful of red wine. If the mucous membrane is easily irritated, one may add 4 or 5 drops of tincture of opium. **C., Nutritive** (Ewald); 2 or 3 eggs beaten smooth with 1 teaspoonful of cold water and a little salt. Wheaten starch, ½ teaspoonful, is boiled with a cup (100 gm.) of a 20% solution of grape-sugar and one wineglass (150 gm.) of red wine added. Then the solution is cooled to 35° C. and the eggs stirred in slowly. Inject at blood-heat. **C., Nutritive** (Jaccoud); bouillon, 250 gm.; wine, 120 gm.; yolks of 2 eggs; and peptone, 5 to 20 gm. **C., Nutritive** (Rosenheim); peptone, 4 to 8 gm.; 2 eggs; glucose, 15 gm., and sometimes, if desired, emulsions of cod-liver oil.

Cnemial (*ne'-me-al*) [κνήμη, the shin]. Relating to the tibia or leg; crural.

Cnemoscoliosis (*ne-mo-sko-le-o'-sis*) [κνήμη, the leg; σκολιός, curved]. Lateral curvature of the legs.

Coagulation. (See Illus. Dict.) **C.-necrosis,** a peculiar metamorphosis by which cells lose their nuclei and change their chemic composition.

Coagulin (*ko-ag'-u-lin*) [*coagulare*, to curdle]. A substance endowed with capacity to precipitate certain albuminous bodies contained in the culture-fluid injected into an inoculated animal.

Coagulometer (*ko-ag-u-lom'-et-ur*) [*coagulare*, to curdle; μέτρον, a measure]. An apparatus for the determination of the rapidity of coagulation of the blood. **C., Wright's,** a cylinder surrounded by pockets for thermometer and coagulation-tubes.

Coalitus (*ko-al-i'-tus*) [L.]. Coalescent; coalescence. **C. artuum,** adhesion of limbs to each other. See *Ankylomele*.

Coast-cough (*kost'-kof*). The name given in New South Wales to tuberculosis of cattle.

Coat. (See Illus. Dict.) **C., Adventitial.** See *Adventitia* (Illus. Dict.). **C., Areolar,** one consisting of areolar tissue. **C., Cellular, C., Epithelial.** See *Layer, Cellular*. **C., External.** See *Adventitia* (Illus. Dict.). **C., External Elastic.** See *Lamina, External Elastic*. **C., External Vascular.** See *Membrane, Investing*. **C., Internal.** See *Intima* (Illus. Dict.). **C., Internal Elastic.** See *Henle's Fenestrated Membrane* (Illus. Dict.). **C., Internal Fibrous.** See *C., Subepithelial*. **C., Middle,** the tunica media. See under *Artery* (Illus. Dict.). **C., Subepithelial,** the middle layer of the intima, composed of fusiform and stellate cells and finely granular substances with longitudinal and transverse fibrils. Syn., *C., Internal fibrous; C., Innermost longitudinal fibrous* [Remak]; *Striated layer of the internal coat* [Kölliker]; *Intermediary layer* [Eberth]. **C., Uveal,** the uvea. **C., Vaginal.** 1. The fibrous capsule of the eyeball. 2. See *Tunica vaginalis* (Illus. Dict.).

Cobalt. (See Illus. Dict.) **C.-nitrate,** $CO(NO_3)_2 + 6H_2O$, red, prismatic deliquescent crystals. It is said to be a successful antidote in poisoning by hydrocyanic acid and potassium cyanid. **C. and Potassium Nitrite,** $COK_3(NO_2)_6$, cobalt yellow, a powder slightly soluble in water; antispasmodic and antidyspneic. Dose, ¼–½ gr. (0.016–0.032 gm.). Syn., *Potassium cobaltonitrite*. **C. Salipyrin,** a salicylate of cobalt and antipyrin occurring as a reddish powder.

Cobra (*ko'-brah*) [Port.]. A venomous snake of India, *Naja tripudians*. **C.lysin,** Myers' (1900) term for the hemolytic poison of cobra venom. It is destroyed by heat and neutralized by antivenene. Cf., *Cobranervine; Echidnase; Echidnotoxin*. **C.nervine,** one of the principles isolated by Myers from cobra venom. It is not decomposed by heat nor neutralized by antivenene.

Cocaethylin (*ko-kah-eth'-il-in*). $C_{18}H_{23}NO_4$. A white powder obtained from benzoylecgonin by action of ethyl iodid. It is soluble in alcohol and ether and almost insoluble in water; it is a local anesthetic, milder than cocain. Syn., *Benzoylecgoninethylic ester; Homococain; Ethylbenzoylecgonin*.

Cocain, Cocainum. (See Illus. Dict.) Syn., *Methylbenzoylecgonin*. **C.-aluminium Citrate,** a double salt consisting of 3 molecules of aluminium citrate and 1 of cocain, occurring in crystals easily soluble in hot water, insoluble in alcohol. It is used as an astringent and as a local anesthetic. **C.-aluminium Sulfate,** a compound of aluminium sulfate and cocain. It is used as cocain-aluminium citrate. **C. Benzoate,** $C_{17}H_{21}NO_4 . C_7H_6O_2$, an almost colorless, crystalline, gummy mass, soluble in water and alcohol; it is anodyne and anesthetic. **C. Borate,** a white crystalline powder containing 68.7% of cocain. It is used in eye-douches and subcutaneous injections. **C. Cantharidate,** $(C_{17}H_{21}NO_4)_2C_{10}H_{12}O_4$, an odorless, white powder with a saline taste; soluble in hot water, insoluble in cold water. It is used hypodermically in tuberculosis; injection, $\frac{1}{50}$–$\frac{1}{20}$ gr. in 500 pints of chloroform-water. **C. Carbolate,** a crystalline mass containing 75% of cocain; soluble in alcohol and insoluble in water. It is analgesic, anticatarrhal, and a local anesthetic. Dose, 0.005–0.011 gm. once or twice daily in capsules. Injection, 1 c.c. of 1 : 1250 solution in dilute alcohol. Application, 1% to 3% solution with 30 % alcohol, 5% powder, or pure. **C. Chlorid.** See *C. Hydrochloras* (Illus. Dict.). **C. Hydrobromate,** $C_{17}H_{21}NO_4HBr$, small white crystals soluble in water. It is used instead of *C. Hydrochlorate* and the dosage is the same. **C. Hydrochlorid, C. Muriate.** See *C. Hydrochloras* (Illus. Dict.). **C. Hydroiodate,** $C_{17}H_{21}NO_4 . HI$, colorless crystals sparingly soluble in water; it is a suggested substitute for cocain hydrochlorate in producing electroanesthesia. **C. Lactate,** $C_{17}H_{21}NO_4C_3H_6O_3$, a thick, white liquid of the consistency of honey; it is used particularly in tuberculous cysts of the bladder. Injection (into the bladder), 1½ gr. dissolved in 5 parts each of lactic acid and distilled water. **C. Nitrate,** $C_{17}H_{21}NO_4 . HNO_3$, large, colored crystals soluble in water. Dose as the hydrochlorate. It is used in combination with silver nitrate in treatment of the genitourinary tract. Maximum dose, gr. ¾ (0.049 gm.), single; 2¼ gr. (0.146 gm.) per day. **C. Phthalate,** a syrupy liquid soluble in water; it contains 64.6% of the alkaloid. It is used hypodermically instead of cocain hydrochlorate. **C. Saccharate,** moist crystalline plates used in diseases of the throat; a 5% solution corresponds to a 4% solution of cocain hydrochlorid. **C. Salicylate,** $C_{17}H_{21}NO_4 . C_7H_6O_3$, white crystals soluble in water; used in spasmodic asthma as cocain hydrochlorate. **C. Stearate,** $C_{17}H_{21}NO_4C_{17}H_{35}COOH$, brilliant aggregated needles, melting at about 90° C; soluble in alcohol and ether, and slightly so in chloroform, petroleum, benzin, and oil of turpentine. **C. Tartrate,** $(C_{17}H_{21}NO_4)_2C_4H_6O_6$, white powder, soluble in water; uses and dose as cocain hydrochlorate.

Cocainist (*ko-ka'-in-ist*). One addicted to habitual use of cocain.

Cocainization. (See Illus. Dict.) **C., Endomeningeal, C., Intraspinal, C., Spinal-canal, C., Spinal Subarachnoid, C., Subarachnoid.** See under *Anesthetic, Corning-Bier Method.*

Cocainize (*ko-ka'-in-iz*). To bring under the influence of cocain.

Cocapyrin (*ko-ka-pi'-rin*). A mixture of cocain, 1 part; antipyrin, 100 parts; used as an analgesic and antipyretic. Dose, 3½ gr. (0.22 gm.).

Coccerin (*kok'-ser-in*) [*cochineal; cera*, wax]. $C_{30}H_{60}(C_{31}H_{61}O_2)_2$. A peculiar wax forming the coating of the silver cochineal; it is soluble in benzin, nearly insoluble in ether.

Coccidioides immitis pyogenes. A pathogenic microorganism discovered by Ophüls and Moffitt (1900). It produces in human beings chronic suppurative processes or caseation.

Coccineous (*kok-sin'-e-us*) [*coccinus*, scarlet]. In color, pure carmin tinged with yellow.

Coccobacillus (*kok-o-ba-sil'-us*). See *Bacteria, Table of* (Illus. Dict.).

Coccogenous (*kok-oj'-en-us*) [*coccus*, a berry; *γεννᾶν*, to produce]. Caused by the presence of pus cocci.

Cocculin (*kok'-u-lin*). See *Picrotoxin* (Illus. Dict.).

Coccycephalus (*kok-se-sef'-al-us*) [*κόκκυξ*, a cuckoo; *κεφαλή*, the head]. 1. Having a beaked process for a head. 2. A monstrosity with such a head.

Coccygeomesenteric (*kok-sij-e-o-mez-en-ter'-ik*). Relating to the caudal and mesenteric areas; applied to an embryonic vein.

Cochinilin (*koch-in-il'-in*). The same as *Carminic Acid.*

Cochleariform (*kok-le-ar'-e-form*) [*cochleare*, a spoon; *forma*, shape]. 1. Spoon-shaped. 2. Having the shape of a snail-shell.

Cochleitis (*kok-le-i'-tis*). See *Cochlitis* (Illus. Dict.).

Cocillana Bark. See *Coccillana* (Illus. Dict.).

Cocin (*ko'-sin*). See *Cocinin.*

Cocinin (*ko'-sin-in*). A peculiar fatty principle, the chief constituent of coco-nut oil. Syn., *Cocin; Cocyl; Cocostearin; Cocostearyl.*

Cockeye (*kok'-i*). Strabismus.

Cocostearin, Cocostearyl (*ko-ko-ste'-ar-in, -il*). See *Cocinin.*

Coction. (See Illus. Dict.) **C, Doctrine of,** that which regarded the elaboration of excrementitious matter from the humors of the body as necessary to elimination, and as brought about by the vital principles; *i. e.*, Nature (*Physis*), Spirit (*Psyche*), Breath (*Pneuma*), or Heat (*Thermon*). The theory prevailed throughout the works of Hippocrates.

Cocum-butter (*ko'-kum-but'-ur*). A fatty substance obtained from the seeds of *Garcinia indica*, Choisy.

Cocyl (*ko'-sil*). See *Cocinin.*

Codeate (*ko'-de-āt*). A salt of codeic acid.

Codeia (*ko-di'-ah*). See *Codein* (Illus. Dict.).

Codeic (*ko'-de-ik*). Relating to codein.

Codein. (See Illus. Dict.) Syn., *Methylmorphin.* **C. Acetate,** $C_{18}H_{21}NO_3 . C_2H_4O_2$, a bitter white powder soluble in water; use and dose as codein. **C. Citrate,** a white powder soluble in water; used as codein. **C. Hydrobromate,** $C_{18}H_{21}NO_3 . HBr + 2H_2O$, acicular crystals soluble in water; used as codein. **C. Hydrochlorate,** $C_{18}H_{21}NO_3 . HCl + 2H_2O$, fine white needles soluble in water; use and dose as codein. **C. Hydroiodate,** $C_{18}H_{21}NO_3 . HI + H_2O$, fine needles, soluble in 60 parts of water; use and dose as codein. **C. Nitrate,** $C_{18}H_{21}NO_3 . HNO_3$, small white crystals soluble in water; use and dose as codein. **C., Pseudo-,** $C_{18}H_{21}NO_3$, colorless needles soluble in alcohol, melting at 182° C.; obtained as a by-product in the preparation of apocodein. **C. Salicylate,** white powder soluble in water; used in rheumatism.

Codethylin (*kod-eth'-il-in*). Morphin ethylate.

Codia (*ko'-de-ah*). The unripe capsules of the poppy, *Papaver somniferum*, L.

Codol (*ko'-dol*). See *Retinol.*

Coefficient (*ko-ef-ish'-ent*) [*con*, together; *efficere*, to produce]. A figure indicating the degree of physical or chemic alteration characteristic of a given substance under stated conditions. **C., Baumann's,** the ratio of the ethereal to the total sulfates in the urine. It is normally 10 : 100. **C., Bouchard's,** the ratio existing between the amount of urea and the sum total of the solids in the urine—approximately 50. **C., Haeser's, C., Trapp's.** See under *Trapp's* (Illus. Dict.). **C., Yvon's,** the ratio existing between the amount of urea and the phosphates in the urine, represented by ⅓.

Cœlarium. See *Celarium.*

Coelectron (*ko-e-lek'-tron*) [*con*, together; *electron*]. The matrix which, associated with the electron, forms the atom of ponderable matter. Syn., *Atomic core.*

Cœlomepithelium (*se-lōm-ep-ith-e'-li-um*). See *Celarium.*

Coelongate (*ko-e-lon'-gāt*) [*con*, together; *elongatus*, elongated]. Of equal length.

Coercible (*ko-urs'-e-bul*) [*coercere*, to curb]. Applied to gases which are capable of being liquefied.

Coercive (*ko-urs'-iv*). Capable of being rendered magnetic and continuing so.

Coetaneous (*ko-et-ā'-ne-us*) [*con*, together; *ætas*, age]. Reaching maturity simultaneously.

Coffeina, Coffeinum (*kof-e-e'-nah, kof'-e-e-num*). See *Caffein* (Illus. Dict.).

Coffeol (*kof'-e-ol*). See *Caffeol.*

Coffeon (*kof'-e-on*). A product obtained by condensing the material volatilized when coffee is roasted. The pleasant flavor of coffee is due to it.

Coffinite (*kof'-in-īt*). An adherent of coffinism.

Cognac (*kōn-yak*) [A district in France]. French brandy distilled from wines produced in the district of Cognac.

Cognominal (*kog-nom'-in-al*) [*cognomen*, a surname]. A word formed from an individual's surname; *e. g.*, *mackintosh, ampère.*

Cohesion. (See Illus. Dict.) **C.-figure,** the form assumed by a drop of oil or a resinous liquid when it falls upon the surface of water or other liquid. It is used in testing the identity and purity of oils.

Cohibition (*ko-hib ish'-on*). See *Inhibition* (Illus. Dict.).

Cohnheim's Theory of the Embryonic Origin of Cancer. See under *Cancer.*

Cohosh. (See Illus. Dict.) **C., Red.** See *Actæa rubra* (Illus. Dict.). **C., White.** See *Actæa alba* (Illus. Dict.).

Coil. (See Illus. Dict.) **C., Primary,** the inner coil of an induction apparatus. **C., Resistance,** a coil of wire of known electric resistance, used for estimating resistance. **C., Secondary,** the outer coil of an induction apparatus.

Coinosite (*ko-in'-o-sīt*) [*κοινός*, common; *σιτεῖν*, to feed]. An animal parasite capable of separating itself from its host at will; a free commensal organism.

Coin-sign (*koin'-sin*). See *Bell-sound* (Illus. Dict.).

Coitophobia (*ko-it o-fo'-be-ah*) [*coire*, to come together; *φόβος*, fear]. Morbid dread of coitus.

Coitus. (See Illus. Dict.) **C. interruptus.** See *C. reservatus* (Illus. Dict.).

Colature. (See Illus. Dict.) 2. See *Colation* (Illus. Dict.).

Colauxe (*kol-awks'-e*) [*κόλον*, colon; *αὐξη*, increase]. Distention of the colon.

Colchicein. (See Illus. Dict.) It is used subcutane-

ously in treatment of gout. Dose, $\frac{1}{60}$—$\frac{1}{30}$ gr. (0.001–0.002 gm.).

Colchicoresin (*kol-chik-o-res'-in*). $C_{51}H_{60}N_2O_{15}$. A brown substance obtained by Hertel from *Colchicum autumnale*, L.

Colchiflor (*kol'-chi-flor*). A remedy for gout prepared from a tincture made from the fresh flowers of *Colchicum autumnale*, L., and powdered kola. It is said to be free from the drastic properties contained in preparations from the bulb and seeds of colchicum.

Colchisal (*kol'-chis-al*). Colchicin salicylate. A yellow amorphous powder soluble in alcohol, ether, and water. It is used in gout and arthritis. Dose, 0.00075 gm. ($\frac{1}{100}$ gr.).

Cold. (See Illus. Dict.) **C., Rose,** hay-fever. **C., St. Kilda's, C., Strangers',** in the Hebrides a form of influenza ascribed by the natives to the arrival of a ship and the presence of outsiders.

Coley's Fluid or Mixture. A combination of the toxins of *Streptococcus erysipelatis* and *Bacillus prodigiosus;* it has been used as a remedy for cancer, in the early stage.

Colibacillosis (*ko-le-bas-il-o'-sis*). The morbid condition due to infection with *Bacterium coli.*

Colibacteriuria (*ko-le-bak-te-re-u'-re-ah*). The presence in the urine of *Bacterium coli.*

Colic. (See Illus. Dict.) **C., Catarrhal.** See *Colitis, Mucous.* **C., Copper,** that due to chronic poisoning with copper; it is said to be of frequent occurrence in workers in copper. **C., Crapulent, C., Crapulous,** that due to excess in eating and drinking. **C., Cystic,** paroxysmal pain in the urinary bladder. **C., Deuteropathic.** See *C., Symptomatic.* **C., Flatulent,** that due to distention with wind or gas. Syn., *C., Wind; Inflatio; Physocolica; Physospasmus.* **C., Hemorrhoidal,** intense pain near the anus and sacrum preceding a discharge from the hemorrhoidal vessels. **C., Hepatic,** biliary colic. **C., Herniary,** the pain attending hernia. **C., Hill.** See *Hill Diarrhea* (Illus. Dict.). **C., Hypochondriacal,** that dependent on a disordered condition of the nervous system. **C., Hypogastric,** paroxysmal pain in the hypogastric region. **C., Inflammatory,** the intense pain attending colitis. **C., Malarial,** the bilious colic of malarial regions. See *C., Endemic* (Illus. Dict.). **C., Metallic,** that due to poisoning with metals. Syn., *Morbus metallicus.* **C., Metastatic,** that due to metastasis of gout or to suppression of the menses or the hemorrhoidal flow. **C., Mucous.** (See Illus. Dict.) 2. A functional disturbance marked by spasm of the muscularis of the large gut and hypersecretion of the mucous glands without intestinal inflammation. **C., Nephritic,** biliary colic. **C., Neuralgic,** enteralgia. **C., Ovarian,** spasmodic pain in the ovary; colic due to reflected ovarian disturbance. **C., Painters'.** See *C., Lead* (Illus. Dict.). **C., Pancreatic,** spasmodic pain about the pancreas. **C., Plumbers',** lead colic. **C. of Prostitutes.** See *Colica scortorum* (Illus. Dict.). **C., Renal,** that due to a renal calculus or its passage along the ureter. **C., Rheumatic.** 1. Rheumatism of the abdomen. 2. That which is produced by exposure of the abdomen to cold externally. **C., Saburral,** that resulting from overeating. **C., Senegal,** lead colic. **C., Spasmodic.** See *Cramp Colic* (Illus. Dict.). **C., Spermatic,** intense pain in the spermatic cord. **C., Stercoraceous, C., Stercoral,** that due to obturating fecal matter. **C., Sympathetic,** reflex pain due to irritation in other organs. **C., Symptomatic,** that occurring as a symptom of other diseases. **C., Tubal,** spasmodic, painful contraction of the fallopian tube. **C., Vermicular.** 1. Pain in the vermiform appendix due to catarrhal inflammation resulting from stoppage of its outlet. 2. That due to intestinal worms. Syn., *C., Verminous; C., Worm.*

Colica. (See Illus. Dict.) **C. æruginis,** copper colic. **C. damnoniensis, C. damnoniorum, C. figulorum, C. hispaniensis,** lead colic. **C. intertropica,** lead colic formerly supposed to be an endemic disease of the tropics. **C. japonica.** See *Colic, Crapulent.* **C. mucosa** (Nothnägel). Synonym of *Mucous Colitis.* **C. pituitosa.** See *Colitis, Mucous.* **C. pulsatilis.** See *Colic, Inflammatory.* **C. rhachialgia,** lead colic.

Colicolitis (*ko-le-kol-il'-tis*). See *Dysentery* (Illus. Dict.).

Colicystitis (*ko-le-sist-il'-tis*) [κόλον, colon; κύστις, bladder]. Cystitis dependent upon the pathogenic activity of the colon bacillus.

Colicystopyelitis (*ko-le-sist-o-pi-e-li'-tis*). Combined cystitis and pyelitis due to *Bacillus coli communis.*

Coliform (*kol'-e-form*) [*colum,* a sieve; *forma,* form]. Ethmoid.

Colipuncture (*ko-le-punk'-chur*). See *Colocentesis* (Illus. Dict.).

Colitis. (See Illus. Dict.) **C. contagiosa,** dysentery. **C., Croupous, C., Desquamative, C., Diphtheric, C., Follicular, C., Membranous, C., Mucomembranous, C., Plastic.** See *C., Mucous.* **C., Idiopathic Ulcerative,** a specific affection due to microorganisms, beginning in and throughout its course invariably limited to the colon. [Gemmel.] **C., Mucous,** a clinical combination of symptoms characterized by periodic abdominal pains associated generally with abnormalities of the secretory and absorptive functions, and with the discharge of peculiarly formed mucous masses, sometimes resembling exact casts of the intestine, first described by Mason Good (1825). Syn., *Diarrhea tubularis; Tubular looseness; Infarctus* (Kaempf); *Follicular-colonic dyspepsia; Follicular-duodenal dyspepsia* (Todd); *Pellicular enteritis* (Simpson); *Pseudomembranous enteritis* (Cruveilhier, Laboulbène); *Painful affection of the intestinal canal* (Powell); *Mucous disease* (Whitehead); *Hypochondriasis pituitosa* (Fracassini); *Fibrinous diarrhea* (Grantham); *Mucous disease of the colon* (Clark); *Chronic catarrhal mucous diarrhea; Colique glaireuse* (Fr.); *Chronic exudative enteritis* (Hutchinson); *Diarrhœa febrilis* (Van Swieten); *Paraplexia rheumatica; Chlorosis pituitosis; Diarrhœa pituitosa* (Sauvages); *Arthritis chlorotica* (Musgrave); *Colica pituitosa* (Sennertus); *Scelotyrbe pituitosa* (Perywinger); *Mucositas intestinalis colloides; Concretiones gelatiniformes intestinales* (Laboulbène); *Tubular exudation casts of the intestines* (Hutchinson); *Gelatinous diarrhea; Glutinous diarrhea; Entérite glaireuse* (Nonat); *Glairy enteritis; Intestinal croup; Herpétide exfoliatrice* (Gigot-Suard); *Colica mucosa* (Nothnägel); *Côlite sèche* (Potain); *Dysentery of the transverse colon* (Lasègue); *Chronic pseudomembranous gastroenteritis; Chronic pellicular inflammation of the intestinal mucous membrane; Mucous disease of the colon; Chronic mucocolitis* (Habershon). **C., Secondary Ulcerative,** that occurring in the course of specific diseases, as a more extensive manifestation of the disease of which it forms a part, not as a specific disease originating in or confined to the colon. [Gemmel.] **C., Ulcerative.** Synonym of *Dysentery.* **C., Ulceromembranous.** See *C., Mucous.*

Collabent (*kol'-ab-ent*) [*collabi,* to collapse]. Collapsing.

Collacin, Collastin (*kol'-as-in, -tin*). A substance found abundantly by Unna in colloid degeneration of the skin.

Collætina (*kol-e'-tin-ah*). A proprietary adhesive plaster said to consist of lanolin and caoutchouc.

Collaform (*kol'-a-form*). A formaldehyd-gelatin preparation intended as a vulnerary.

Collapse. (See Illus. Dict.) **C., Pulmonary.** See *Atelectasis* (Illus. Dict.).

Collar. (See Illus. Dict.) **C., Biett's,** a zone of lenticulopapular syphilids on the neck.

Collargol, Collargolum (*kol-ar'-gol, kol-ar'-gol-um*). See *Silver, Colloidal.*

Collateral. (See Illus. Dict.) 2. One of the first branches of an axis-cylinder of a nerve-cell passing at a right angle.

Collemia, Collæmia (*kol-e'-me-ah*) [κόλλα, glue; αἷμα, blood]. Haig's term for a condition of capillary obstruction which he attributes to a clogging of the capillaries by urates or colloid deposits.

Colletiin, Colletin (*kol-et'-e-in, kol'-et-in*) [*Colletia*, a genus of tropic American shrubs]. A crystalline bitter principle contained in *Colletia spinosa*, Lam., a Brazilian shrub, the wood of which is purgative and is used in tincture as a febrifuge.

Colliculus. (See Illus. Dict.) **Colliculi anteriores.** See *Pregeminum* (Illus. Dict.). **C. bulbi, C. bulbi intermedius,** the layer of erectile tissue surrounding the male urethra on its entrance into the bulb. **C. cervicalis,** a fold of mucosa extending dorsad from the apex of the trigonum vesicæ. **C. facialis,** the eminentia facialis. See under *Eminence* (Illus. Dict.). **C. glandis,** two eminences on the inferior surface of the corona of the glans penis, between which the frenum is attached. **C. inferior.** See *Postgeminum* (Illus. Dict.). **Colliculi nervi ethmoidalis,** the striatum. **Colliculi nervorum opticorum,** the thalamus. **Colliculi posteriores.** See *Postgeniculum* (Illus. Dict.). **C. rotundus.** See *Eminence, Terete.* **C. rotundus anterior,** the anterior division of the terete eminence. **C. rotundus posterior,** the posterior division of the terete eminence. **C. seminalis.** See *Verrumontanum* (Illus. Dict.). **C. superior.** See *Pregeminum* (Illus. Dict.).

Colligamen (*kol-ig'-a-men*) [*colligare*, to bind]. 1. A ligament. 2. A name given to a variety of bandages, prepared with glycerin and a glycerin-zinc paste.

Collinic (*kol-in'-ik*) [κόλλα, glue]. Relating to or obtained from gelatin.

Collocated (*kol-o-ka'-ted*) [*collocare*, to place]. Corresponding with in respect to location; applied especially to parts of the brain that are adjacent, one ectal and the other ental; *e.g.*, the calcarine fissure and the calcar.

Collodion. (See Illus. Dict.) **C., Acetone,** one prepared from guncotton, 5 parts; ether, 10 parts; alcohol, 10 parts; acetone, 20 parts; castor oil, 6 parts. It is more elastic than ordinary flexible collodion. **C., Cantharidal,** a blistering solution of collodion and cantharides. **C., Flexible,** collodion with the addition of castor-oil and Canada balsam. **C., Iodized,** flexible collodion with the addition of 5% of iodin. It is used in chilblains. **C., Iodoform,** flexible collodion with 5% of iodoform. **C., Styptic,** a mixture of collodion with tannic acid, ether, and alcohol.

Colloidal (*kol-oid'-al*). See *Colloid* (3 and 4) (Illus. Dict.).

Colloidin (*kol-oid'-in*) [κόλλα, glue; εἶδος, likeness]. $C_9H_{15}NO_6$. A jelly-like substance obtained from colloid tissue.

Collosin (*kol'-o-sin*) [κόλλα, glue]. A skin-varnish made by the addition of camphor to a solution of nitrocellulose in acetone.

Colloturine (*kol-o'-tur-in*). An alkaloid isolated by Hesse from the bark of *Symplocos racemosa*, Roxb.

Colloxylin (*kol-oks'-il-in*). See *Pyroxylin* (Illus. Dict.).

Coloboma. (See Illus. Dict.) **C., Fuchs',** a small crescentic defect of the choroid at the lower border of the optic disk. **C. palpebræ, C. palpebrarum,** a form of partial ablepharia consisting in a fissure of the eyelid—mostly the upper lid. Syn., *Blepharocoloboma.*

Colocasia (*kol-o-ka'-ze-ah*) [κολοκασία, the water-lily]. A genus of plants of the order *Araceæ*, several species and many varieties of which are cultivated throughout the tropics for food. The corms of **C. antiquorum,** Schott, are the well-known taro of the Pacific Islands. The freshly expressed juice of its petioles is highly styptic and is said to even arrest arterial hemorrhage.

Colocholecystostomy (*ko-lo-kol-e-sis-tos'-to-me*). See *Choledochostomy.*

Coloclyster (*ko-lo-klis'-ter*) [κῶλον, colon; κλυστήρ, an injection]. An enema in the colon.

Colocolostomy (*ko-lo-kol-os'-to-me*). The operation of forming a connection between two portions of the colon.

Colocynthidin (*kol-o-sinth'-id-in*). Same as *Citrullin.* **C., Amorphous,** citrullin.

Colocynthidism (*kol-o-sinth'-id-izm*) [κολοκυνθίς, colocynth]. Poisoning from undue use of colocynth. A condition marked by violent inflammation of the digestive tract, watery and bloody stools, bilious vomiting, cramps in the calves of the legs, and collapse.

Colocynthin. (See Illus. Dict.) 2. A chocolate-colored resinoid powder obtained by evaporation from an alcoholic tincture of colocynth. It is used as a cathartic. Dose, ¼–1 gr.

Colon, Dysentery of the Transverse (Lasègue). Synonym of *Mucous Colitis.*

Colonometer (*kol-o-nom'-et-ur*) [*colonia*, colony; μέτρον, a measure]. An apparatus for estimating the number of colonies of bacteria on a culture-plate.

Colonoscope (*ko-lon'-o-skōp*) [κῶλον, colon; σκοπεῖν, to view]. An instrument for examining the colon.

Colonoscopy (*ko-lon-os'-ko-pe*). Examination by means of a colonoscope.

Colopexia, Colopexy (*ko-lo-peks'-e-ah, ko-lo-peks'-e*) [κῶλον, the colon; πῆξις, a fixing]. Suturing of the sigmoid flexure to the abdominal wall.

Colopexotomy (*ko-lo-peks-ot'-o-me*) [κῶλον, the colon; πῆξις, fixation; τέμνειν, to cut]. An incision into and a fixation of the colon.

Colophane, Colophone (*kol'-o-fān, -fōn*) [Κολοφών, a city of Ionia]. 1. Colophony. 2. The tree *Canarium mauritianum*, Blume, yielding a resinous juice used in Mauritius as colophony.

Colophene (*kol'-o-fēn*) [Κολοφών, a city of Ionia]. $C_{20}H_{32}$. A viscid empyreumatic oil obtained by the distillation of rosin or from distilling oil of turpentine with sulfuric acid.

Colophonon (*kol-of'-on-on*). $C_{22}H_{18}O_2$. A distillation-product of pine resin.

Coloptosis (*ko-lo-to'-sis*) [κῶλον, the colon; πτωσις, a falling]. Descent or displacement of the colon. Cf. *Enteroptosis; Splanchnoptosis.*

Color. (See Illus. Dict.) **C.s, Accidental.** See *C.s, Complementary* (Illus. Dict.). **C.-analysis,** Ehrlich's method of identifying the various forms of leukocytes. It depends upon the distinctive manner in which the protoplasmic granules react toward the acid, basic, and so-called neutral solutions of the anilin dyes. Five varieties of granules are recognized and designated by the Greek letters, *α, β, γ, δ, ε*: (1) *α-granules* (eosinophil, oxyphil, or coarse oxyphil granules); (2) *β-granules* (amphophil granules); (3) *γ-granules* (mast-cell or coarse basophil granules); (4) *δ-granules* (fine basophil granules); (5) *ε-granules* (neutrophil or fine oxyphil granules). **C., Cold,** those

of the violet end of the spectrum. **C., Franklin Theory of**, supposes that the eye, in the early periods of development, possesses only the white, black, or gray visual substance and is therefore sensitive to luminosity only and not to color. Later this substance becomes modified into the blue and yellow substance, and then into the red and green. [Raymond.] **C.-gustation.** See *Pseudogeusesthesia.* **C.-screen,** a solid or liquid body which serves to cut out or reduce the light-waves at one or both ends of the spectrum. The screen is placed between the object and the objective so that all rays finally reaching the objective must pass through the screen. Color-screens are much used in photography in all its branches. The most generally used screen is a solution of dichromate of potash, which cuts off the violet, the blue, and the bluish-green rays. Syn., *Ray-filter.* **C.s, Warm,** those of the red end of the spectrum.

Colorimetric (*kul-or-im-et'-rik*). Relating to methods of color-measuring. **C. Equivalent,** the amount of heat necessary to raise the temperature of the calorimeter 1° C.

Colotyphoid (*ko-lo-ti'-foid*). Typhoid accompanied with follicular ulceration of the colon and lesions in the small intestine.

Colpitis. (See Illus. Dict.) **C. diphtherica.** See *Vaginitis, Diphtheric* (Illus. Dict.). **C. emphysematosa.** See *Colpohyperplasia cystica.* **C. granulosa.** See *Vaginitis, Granular* (Illus. Dict.). **C., Macular,** a variety characterized by the dissemination of dark-red spots over the walls of the vagina and the cervix uteri, especially where there are neither folds nor papillas. **C. mycotica,** a form of vaginitis due to fungi, such as *Oïdium albicans, Monilia candida,* or *Leptothrix vaginalis.* Cf., *Vaginitis, Membranous.* **C. vesiculosa emphysematosa.** See *Colpohyperplasia cystica.*

Colpoceliotomy (*kol-po-se-le-ot'-o-me*) [κόλπος, vagina; *celiotomy*]. Vaginal celiotomy. **C., Anterolateral,** Dührssen's name for a new vaginal operative route into the abdomen. It consists in a combination of vaginal celiotomy with complete division of one broad ligament.

Colpocystoplasty (*kol-po-sist-o-plas'-te*) [κόλπος, vagina; κύστις, bladder; πλάσσειν, to form]. Plastic surgery of the vagina and bladder.

Colpocystoureterocystotomy (*kol-po-sist-o-u-re-tur-o-sist-ot'-o-me*) [κόλπος, vagina; κύστις, bladder; *ureter; cystotomy*]. Exposure of the orifices of the ureter by incision of the walls of the bladder and vagina.

Colpodesmorrhaphy (*kol-po-des-mor'-af-e-*) [κόλπος, vagina; δεσμός, a fastening; ῥαφή, a seam]. Suturing of the vaginal sphincter.

Colpoedema. See *Colpedema* (Illus. Dict.).

Colpohyperplasia. (See Illus. Dict.) **C. cystica,** Winckel's term for vaginitis with gas-cysts due, according to Lindenthal, to an organism which he calls *Bacillus emphysematis vaginæ.* Syn., *Emphysema vaginæ* (Schroeder); *Colpitis vesiculosa emphysematosa* (Ruge).

Colpohysteropexy (*kol-po-his-ter-o-pek'-se*) [κόλπος, vagina; ὑστέρα, womb; πῆξις, a fixing]. Vaginal hysteropexy; supravaginal amputation of the cervix and anastomosis of the uterus and the vaginal mucosa. Syn., *Hysteropexy vaginalis.*

Colpoklisis. See *Colpocleisis* (Illus. Dict.).

Colpomyomectomy (*kol-po-mi-o-mek'-to-me*) [κόλπος, the vagina; *myomectomy*]. Vaginal myomectomy. Myomectomy through the vagina.

Colpomyotomy (*kol-po-mi-ot'-o-me*]. See *Colpomyomectomy.*

Colpoperineorrhaphy (*kol-po-per-in-e-or-'a-fe*) [κόλπος, vagina; περίνεον, perineum; ῥαφή, seam]. Repair of the perineum and posterior vaginal wall.

Colpospasmus (*kol-po-spaz'-mus*) [κόλπος, vagina; σπασμός, spasm]. Spasm of the vagina.

Colpostenotomy (*kol-po-sten-ot'-o-me*) [κόλπος, vagina; στενός, narrow; τομή, a cutting]. A surgical operation for vaginal atresia.

Colposynizesis (*kol-po-sin-iz-e'-sis*) [κόλπος, the vagina; συνίζησις, a falling in]. Narrowness of the vagina.

Colpoureterotomy (*kol-po-u-re-tur-ot'-o-me*). Incision of the ureter through the vagina.

Columella. (See Illus. Dict.) **C. auris,** a cartilaginous and bony rod running between the fenestra ovalis and the inner surface of the tympanic membrane.

Column. (See Illus. Dict.) **C.s, Anterior** (of the oblongata). See *Pyramids, Anterior* (of the oblongata) (Illus. Dict.). **C.s, Bertin's.** See *Columna bertini* (Illus. Dict.). **C., Commissural,** one of nerve-substance extending along the bottom of the horizontal fissure of the cerebellum and connecting the anterior and posterior superior lobes. **C., Crossed Pyramidal, C., Crossed, of Türck, C., Cuneiform.** See *C., Posteroexternal* (Illus. Dict.). **C., Direct Pyramidal, C., Direct, of Türck.** See *C., Türck's* (Illus. Dict.). **C., Enamel.** See under *Enamel* (Illus. Dict.). **C., Fat.** See *Fat C.* (Illus. Dict.). **C., Flechsig's.** See *Tract, Direct Cerebellar* (Illus. Dict.). **C., Gray, Anterior,** the ventral cornu of the spinal cord. **C., Gray, Posterior,** the dorsal cornu of the spinal cord. **C., Intermediolateral,** a longitudinal column of motor cells in the ventral cornu of the spinal cord. Syn., *Nucleus, Intermediolateral.* **C. of the Intermediolateral Tract,** a column of motor cells in the intermediolateral tract of the spinal cord; it is best seen in the dorsal region. **C.s, Prototovertebral.** See *Protovertebræ* (Illus. Dict.). **C., Respiratory.** See *Fascicle, Solitary.* **C., Restiform,** the restiform body. **C.s, Sertoli's.** See under *Sertoli* (Illus. Dict.). **C., Slender.** See *Funiculus gracilis.* **C., Spinal.** See *Vertebral Column* (Illus. Dict.). **C.s of the Spinal Cord.** See under *Spinal Fissures* (Illus. Dict.). **C.s, Stilling's.** See *Cells, Stilling's.* **C.s of the Vagina.** See under *Vagina* (Illus. Dict.). **C., Vesicular.** See *Vesicular C.* (Illus. Dict.).

Columna. (See Illus. Dict.) **C. carneopapillaris anterior,** the anterior column of the vagina. **C. c. posterior,** the posterior column of the vagina. **Columnæ cinereæ, Columnæ griseæ,** the cornu-dorsale and cornu ventrale, of the spinal cord. **Columnæ cordis.** See *Columnæ carneæ* (Illus. Dict.). **Columnæ cristarum vaginæ,** the columns of the vagina. **C. fornicis.** See *Fornicolumn;* also under *Pillar* (Illus. Dict.). **Columnæ papillares.** See *Muscles, Papillary* (Illus. Dict.). **C. plicarum, C. rugarum,** the columns of the vagina. **Columnæ quintæ,** a bundle of nerve-fibers apparently originating in the upper nucleus of the fifth cranial nerve and decussating along the Sylvian aqueduct. **Columnæ recti.** See *Columns of Morgagni* (Illus. Dict.).

Columning (*kol'-um-ing*) [*columna,* a column]. The placing of vaginal tampons to support a procident uterus.

Comb (*kōm'*). A crest or ridge. **C.s, Dorsal.** 1. A ridge on the dorsal aspect of a bone. 2. See *Ridges, Medullary* (Illus. Dict.). **C.-like,** having the form of a comb; pectinate. **C., Vaccinating,** a comb-shaped scarificator.

Combiner (*kom-bi'-nur*) [*combinare,* to join]. That which combines. **C., Galvano-faradaic,** an instrument by means of which the galvanic and faradaic

currents can be used alternately or in combination in electrotherapeutics.

Combining-weight (*kom-bi'-ning-wāt*). The quantity of an element which can enter into combination with any given element.

Comestible (*kom-est'-e-bl*) [*comedere*, to eat up]. Edible.

Comma-tract (*kom'-ah-trakt*). See under *Tract.*

Commelina (*kom-el-e'-nah*) [*Johann* and *Kasper Commelyn*, Dutch botanists]. A genus of plants of the order *Commelinaceæ*, several species of which were extensively used by the Aztecs in the treatment of fevers, neoplasms, and hemorrhages. **C. tuberosa**, L., *Yerba del Pollo*, a Mexican species, is valued by the natives in the treatment of hematemesis, hemorrhoids, etc. Dose, of aqueous extract, 1.0–6.0 gm. dissolved in 180.0 c.c. of water; or in pills containing 0.06–0.1 gm., 24 to 48 of these to be taken in the course of a day. Metrorrhagia is treated by injections of an aqueous decoction, 1 dram to 1 oz. in a pint of water.

Commensalism (*kom-en'-sal-izm*). See *Symbiosis* (Illus. Dict.).

Commiphora (*kom-if'-o-rah*) [κόμμι, gum; φέρειν, to bear]. A genus of shrubs and trees of the order *Burseraceæ*, found in Africa and the East Indies. **C. africanum**, Endl., yields African bdellium. **C. agallocha**, Engl., yields Indian bdellium. **C. myrrha**, Engl., yields myrrh. **C. opobalsamum**, Engl., yields balsam of Mecca or true balm of Gilead.

Commissure, Commissura. (See Illus. Dict.) **C. anterior alba, C. ventralis alba.** See *C., Anterior White* (Illus. Dict.). **C. anterior cerebri.** See *Precommissure* (Illus. Dict.). **C. anterior grisea, C. grisea anterior, C. ventralis cinerea**, the anterior gray commissure. **C. cinerea, C. grisea.** See *C., Gray* (Illus. Dict.). **C., Gray, Anterior,** nerve-fibers in the gray columns of the cord, which, crossing to the opposite side in front of the central canal, decussate in two directions, part of the fibers entering into the opposite cornu ventrale, part into the cornu dorsale. **C., Gray, Posterior,** that portion of the gray commissure of the spinal cord lying dorsad to the central canal. **C., Gudden's Inferior,** fibers of the optic tract which come from the internal geniculate body and cross in the posterior portion of the chiasma to the opposite tract. **C., Habenular, C. habenarum.** See *Supracommissure* (Illus. Dict.). **C. hemisphæriorum cerebelli,** the pons. **C., Hippocampal.** See *Fornicommissure* (Illus. Dict.). **C., Horseshoe.** See *C., Wernekinck's.* **C., Inferior.** See *C., Gudden's.* **C. magna cerebelli,** the superior peduncles of the cerebellum. **C. maxima, C. maxima cerebri,** the callosum. **C., Meynert's,** a tract of nerve-fibers crossing from the tuber cinereum dorsally to the mesial half of the chiasm to the opposite side; it is probably connected with Luys' body. **C., Soft** (of the brain). Same as *C., Middle* (Illus. Dict.). **C. ventralis alba.** See *C. Anterior White* (Illus. Dict.). **C., Wernekinck's,** the decussating fibers of the middle cerebellar peduncle. Syn., *C., Horseshoe; Decussatio tegmenti caudicis cerebri.*

Commotio spinalis (*kom-o'-she-o spi-na'-lis*). Railway spine.

Communicans. (See Illus. Dict.) 2. Alternating; *e.g.*, *Febris communicans.* **C. willisii.** See *Artery, Communicating, Posterior* (Illus. Dict.).

Compensation (*kom-pen-sa'-shun*) [*compensare*, to compensate]. The state of counterbalancing a defect of structure or function.

Complaint (*kom-plānt'*) [*complangere*, to lament]. A disease or ailment. **C., Bowel,** diarrhea. **C., Summer,** summer diarrhea.

Complement (*kom'-ple-ment*) [*complere*, to complete]. Ehrlich's term for one of the two substances of a hemolytic serum. It resembles in its constitution and action a toxin, and has a haptophore group which unites with the immune body and a zymotoxic complex which acts on the red blood-cells saturated with immune body, in a manner partly toxic and partly fermentative. It can act on the red blood-corpuscles only in the presence of the immune or intermediary body. Syn., *Alexin* (Bordet); *Cytase* (Metchnikoff); *Addiment* (Ehrlich and Morgenroth).

Complementoid (*kom-ple-ment'-oid*). That substance which results from the destruction of a complement (*q. v.*); it can go to form an anticomplement.

Complementophil (*kom-ple-ment'-o-fil*). The haptophore group of the intermediary body by means of which it combines with the complement.

Complementophilic (*kom-ple-ment-o-fil'-ik*). Showing a special affinity for the complement.

Compound. (See Illus. Dict.) **C., Addition,** one formed from two other substances by direct union. **C., Binary,** a substance composed of two elements or of an element and a compound behaving as an element. **C., Endothermic,** one absorbing heat in its formation. **C., Exothermic,** one in which there is no elevation of temperature attending its formation. **C., Explosive,** an unstable organic product containing much oxygen and readily decomposing. **C., Quaternary,** a substance composed of four elements. **C., Saturated,** a chemic compound in which the combining capacities of all the elements are satisfied. **C., Substitution,** a compound formed from another body by replacement of one or more of its elements by another body or bodies. **C., Ternary,** a compound composed of three elements.

Compress. (See Illus. Dict.) **C., Cribriform.** See *C., Fenestrated* (Illus. Dict.). **C., Electrothermic,** an appliance devised by August Laquer; it consists of flat, elastic, flexible pillows and of thin wires isolated by asbestos and covered with canvas. This, when connected with a strong electric current, serves to supply a modified form of dry heat. [Hemmeter.]

Compressed. (See Illus. Dict.) 2. Having the lateral diameter reduced. **C.-air Illness.** See *Caisson Disease* (Illus. Dict.).

Compression. (See Illus. Dict.) **C., Digital,** compression of an artery by the fingers.

Conalbumin (*kon-al'-bu-min*). A proteid body obtained by Osborne and Campbell from white of egg, and is so designated "on account of its close relation in properties and composition to ovalbumin."

C	H	N	S	O
52.25%	6.90%	16.11%	1.70%	22.95%

Cf. *Ovalbumin; Ovomucin; Ovomucoid.*

Concavoconvex (*kon-ka-vo-kon'-veks*). Having one surface concave and the opposite surface convex; convexoconcave.

Concentration. (See Illus. Dict.) 2. Afflux toward a part.

Concha. (See Illus. Dict.) **C. media,** the middle turbinated bone. **C., Morgagni's,** the superior turbinated bone of the ethmoid. **Conchæ sphenoidales.** See *Bones, Sphenoidal Turbinated* (Illus. Dict.). **Conchæ sphenoidales anteriores.** See *Cornua sphenoidalia accessoria.* **C. superior,** the superior turbinated bone. **Conchæ turbinatæ,** the sphenoid turbinated bones.

Conchairamidin (*kon-ki-ram'-id-in*). $C_{22}H_{26}N_2O_4$. An alkaloid from cinchona.

Conchairamin (*kon-ki-ram'-in*). $C_{22}H_{26}N_2O_4$. An alkaloid from cinchona.

Conchinamin (*kon-kin'-am-in*). See *Quinidamin* (Illus. Dict.).

Conchinin (*kon'-kin-in*). See *Quinidina* (Illus. Dict.).

Conchotome (*kong'-ko-tōm*) [*κόγχα*, a shell; *τομή*, a cutting]. An instrument for the surgical removal of the middle turbinated bone.

Concrescence (*kon-kres'-ens*) [*con*, together; *cresere*, to grow]. Held's term for the plunging of the terminal of one neuron deep into the cell-body of another. **C. of Teeth**, a growing together of the roots of two teeth after complete development.

Concretio (*kon-kre'-she-o*) [L., pl. *concretiones*]. See *Concretion* (Illus. Dict.). **Concretiones gelatiniformes intestinales** (Laboulbène). Synonym of *Mucous colitis*.

Concusconin (*kon-kus'-kon-in*). See *Chairamin*.

Conductibility (*kon-dukt-e-bil'-e-te*) [*conducere*, to conduct]. 1. Capacity for being conducted. 2. Conductivity; conducting power. **C., Centrifugal**, the power of carrying centrifugal impulses from the nervous centers to the periphery. **C., Centripetal**, the power of conducting centripetal impulses from the periphery to the nervous centers.

Conductor. (See Illus. Dict.) 3. In physiology, any part of the nervous system that transmits impulses. 4. A lithotomy staff. **C., Sonorous**, one of the striæ acusticæ often seen running obliquely forward and to the side. Syn., *Bergmann's stripe*.

Condurangin (*kon-du-rang'-gin*) [*condurango*, Peruvian name]. A mixture of glucosids from condurango bark (*Marsdenia reichenbachii*), occurring as an amorphous yellow powder of an aromatic bitter taste, soluble in water, alcohol, and chloroform. It is used as a stomachic and astringent in gastric cancer and chronic dyspepsia. Dose, $\frac{1}{10}$–$\frac{1}{4}$ gr. 3 times daily.

Condylectomy (*kon-dil-ek'-to-me*) [*κόνδυλος*, a knuckle; *ἐκτομή*, excision]. Excision of a condyle.

Condylion (*kon-dil'-e-on*) [*κόνδυλος*, a knuckle]. In craniometry, the point at the lateral tip of the condyle of the jaw.

Condyloma. (See Illus. Dict.) **C. acuminatum**, the pointed condyloma or wart of the genital organs, often of nonsyphilitic origin. Syn., *Acrothymion; Acrothymiosis*. **C., Broad.** See *C. latum*. **C. elevatum.** See *C. acuminatum*. **C. endocysticum, C. endofolliculare, C. porcelaneum, C. subcutaneum.** See *Molluscum contagiosum* (Illus. Dict.). **C. latum**, the flat, broad, or moist syphilid or mucous patch. Syn., *Papula madidans*. Cf. *C. acuminatum*. **C., Syphilitic, C. syphiliticum.** See *C. latum*. **C., Thymic.** See *C. acuminatum*.

Condylosis (*kon-dil-o'-sis*). The formation of a condyloma.

Cone. (See Illus. Dict.) 2. The mechanical element of the tooth crown. [Marsh.] **C., Antipodal**, in mitosis the cone of astral rays opposite the spindle-fibers. [Van Beneden.] **C.-bipolars**, bipolar cells of the inner nuclear layer of the retina, connected with the cones of the retina externally and ramifying internally in the middle of the molecular layer. **C.-element**, a cell of the sensory or nerve epithelium of the retina, consisting of a conical tapering external part, the *cone proper*, prolonged into a nucleated enlargement from the farther side of which the *cone-fiber* passes inward to terminate by an expanded arborization in the outer molecular layer. [Raymond.] **C.-fiber**, one of the fibers of the retinal cones. **C.-foot**, one of the bulbous processes of the cone-granules of the retina. **C.-granules**, those of the outer nuclear layer of the retina, connected with the cones of the ninth layer externally, and internally by a thick process which becomes bulbous (the cone-foot); they terminate in fine fibers in the outer molecular layer. [Raymond.] Cf. *Rod-granules*.

Conessi Bark (*kon-es'-e*). The bark of *Wrightia zeylanica*, R. Br., and of *Holarrhena africana*, A. De C., apocynaceous shrubs or trees of India and Africa. It is extensively used in India in dysentery and as an antiperiodic. Syn., *Tellicherry bark*.

Conessin (*kon-es'-in*). See *Wrightin*.

Confertus (*kon-fur'-tus*) [*confercire*, to press close together]. Pressed together, dense, crowded; applied to cutaneous eruptions.

Confinement. (See Illus. Dict.) 2. The enforced isolation of one or more individuals to prevent the spread of infectious disease; detention. Cf. *Quarantine*.

Confocal (*kon-fo'-kal*). Having the same focus.

Congee (*kon'-je*) [Chinese]. Rice gruel, an emollient dish in use by the Chinese as an article of diet for the sick.

Congenerous (*kon-jen'-ur-us*) [*congener*, of the same race]. Of the same genus. **C. Muscles**, muscles producing one action.

Congestion. (See Illus. Dict.) **C., Pleuropulmonary, C., Pulmonary, Potain's Type of**, congestion marked by symptoms similar to pleurisy.

Congo Root. The root of *Psoralea melilotoides*, Michaux, a leguminous herb of the United States. It is an aromatic bitter tonic, recommended in chronic diarrhea.

Conhydrin. (See Illus. Dict.) **C., Pseudo-**, $C_8H_{17}NO$, white acicular crystals obtained from crude coniin; soluble in water, alcohol, benzene, ether, and chloroform; melt at 98° C. and boil at 230°–232° C.

Conicin (*kon'-is-in*). See *Coniin*.

Coniin. (See Illus. Dict.) **C., Animal.** See *Cadaverin* (Illus. Dict.). **C. Hydrochlorate, C. Hydrochlorid, C. Muriate**, $C_8H_{17}NHCl$, white, shining, rhomboid crystals, soluble in water and alcohol. It is used as coniin hydrobromate.

Coniism (*ko-ne'-izm*) [*κώνειον*, hemlock]. Poisoning by *Conium maculatum*, L. It begins with paralysis of the legs, which extends to the arms and respiratory muscles, leading to unconsciousness and death.

Conimene (*kon'-im-ēn*). $C_{15}H_{24}$. A sesquicamphor obtained from the distillation of conima resin from *Protium guianense*, March. It is a very aromatic liquid, boiling at 264° C.

Coniosis. See *Koniosis*.

Conjugate. (See Illus. Dict.) 2. Röderer's name for the anteroposterior diameter of the brim of the pelvis; the plane of the brim being regarded as an ellipse. **C., Anatomic.** See *Conjugate* (2). **C., Obstetric.** See *C., True* (Illus. Dict.).

Conjunctivitis. (See Illus. Dict.) Syn., *Ophthalmia externa; O. mucosa*. **C., Acute Contagious**, due to the presence of *Bacterium ægypticum*, Chester. See *Pink-eye* (Illus. Dict.). **C., Blennorrhagic, C., Blennorrheal, C. blennorrhoica.** See *Ophthalmia neonatorum* (Illus. Dict.). **C., Catarrhal.** See *Ophthalmia* (Illus. Dict.). **C. catarrhalis æstiva.** See *Vernal Conjunctivitis* (Illus. Dict.). **C., Follicular, C. folliculosis simplex.** See *Ophthalmia, Follicular* (Illus. Dict.). **C., Gonorrheal**, a severe purulent form due to infection by *Micrococcus gonorrhoæ*. **C. granulosa.** See *Trachoma* (Illus. Dict.). **C., Hemorrhagic.** See *Pink-eye* (Illus. Dict.), and *C., Acute Contagious*. **C., Hypertrophic, C. hypertrophica**, chronic catarrhal conjunctivitis attended with enlargement of the conjunctival papillas. **C., Lacrimal**, a form due to the presence of irritating secretion from the conducting part of the lacrimal apparatus. **C., Lithiasis**, irritation of the conjunctiva due to deposition of calcareous matter in the tissue of the palpebral conjunctiva. **C., Palpebral, C. palpe-**

brarum, that limited to the palpebral conjunctiva. **C., Perinaud's**, a mucopurulent form marked by the presence of large granules which are sometimes pediculated. The condition is accompanied by chills, fever, and swelling of the preauricular, retromaxillary, and cervical glands, which sometimes suppurate. **C., Pneumococcic**, acute contagious conjunctivitis due to the presence of the bacillus of conjunctivitis. **C., Purulent**, gonorrheal ophthalmia. **C., Spring.** See *Vernal Conjunctivitis* (Illus. Dict.). **C., Subacute**, redness and thickening of the conjunctiva, largely confined to the conjunctiva of the lids and fornices, a scanty secretion of mucus with some pus-corpuscles due to the presence of the bacillus of conjunctivitis. **C. suppurativa.** See *Ophthalmia, Gonorrheal* (Illus. Dict.). **C., Toxic**, forms of conjunctival irritation due to the chemic action of mydriatics, chrysarobin, dust from anilin dyes, fumes of formalin, etc., the bites of insects or caterpillar hairs.

Connivens (*kon-i'-venz*). 1. See *Connivent* (Illus. Dict.). 2. Arranged in circular folds; *e. g.*, *Valvulæ conniventes*.

Conoicin (*kon-o'-is-in*). A substance contained in *Vicia faba*, L., and *V. sativa*, L.

Consonant, Consonating (*kon'-so-nant, kon-so-na'-ting*) [*con*, together; *sonare*, to sound]. Applied to pulmonary sounds heard on auscultation which sound in unison with some other sound.

Constitutio. See *Constitution* (Illus. Dict.). **C. lymphatica**, Paltauf's term for a pathologic condition marked by hyperplasia of the entire lymphatic system, including the thymus gland, and frequently by a hyperplasia of the vascular system, and, in females, of the genital organs.

Consultant (*kon-sul'-tant*) [*consultare*, to take counsel]. A consulting physician; one summoned by the physician in attendance to give counsel in a case.

Contact. (See Illus. Dict.) 2. A person who has been exposed to a contagious disease. **C.-action**, catalysis. **C.-bed**, a large open basin containing a layer of coke or cinders, for the purification of sewage by bringing it into contact with bacteria which set up rapid decomposition and destruction of the organic matter. Cf. *Septic Tank.* **C.-substance**, a catalyst.

Contagion. (See Illus. Dict.) **C., Mental, C., Nervous, C., Psychic.** See *Irritation, Morbid* (Illus. Dict.).

Continence, Continency (*kon'-tin-enz, -e*) [*continere*, to hold back]. Self-restraint in regard to sexual indulgence.

Contraaperture (*kon-tra-ap'-ur-chur*). A counter-opening.

Contract (*kon-trakt'*) [*contrahere*, to draw together]. 1. To draw the parts together; to shrink. 2. To acquire by contagion.

Contractility. (See Illus. Dict.) **C., Faradaic.** See *Galvanofaradization.* **C., Galvanic.** See *Galvanocontractility* (Illus. Dict.). **C., Idiomuscular**, that peculiar to degenerated muscles. **C., Neuromuscular**, normal contractility as distinguished from idiomuscular contractility.

Contraction. (See Illus. Dict.) **C., Cathodal Duration**, one occurring at the cathode and continuing during the whole time of closure of the circuit. Syn., *Cathodal-closure tetanus.* **C., Clonic**, alternate muscular contraction and relaxation. **C., Dupuytren's.** See *Diseases, Table of* (Illus. Dict.). **C., Dupuytren's, False**, contraction of the palm and fingers due to injury of the palmar fascia. **C., Fibrillar, C., Fibrillary.** See under *Fibrillar* (Illus. Dict.). **C., Galvanotonic.** See *Galvanotonus* (2) (Illus. Dict.). **C., Gowers'.** See *C., Front-tap* (Illus. Dict.). **C., Hour-glass**, constriction of the middle of the stomach or uterus so as to resemble an hour-glass. **C., Idiomuscular.** See under *Idiomuscular* (Illus. Dict.). **C., Myoclonic**, the convulsive spasmodic contraction of a muscle. **C., Myotatic.** See *Myotatic* (Illus. Dict.). **C., Palmar**, Dupuytren's contraction. **C., Pelvic**, narrowing of any of the pelvic diameters. **C., Peristaltic**, peristalsis. **C., Rheumatic, of the Extremities.** Synonym of *Tetanilla.* **C., Tonic.** See *Tonic Spasm* (Illus. Dict.). **C., Vermicular**, peristalsis.

Contractor (*kon-trakt'-or*) [*contrahere*, to draw together]. A tensor muscle.

Contracture. (See Illus. Dict.) **C., Nurse's.** See under *Nurse* (Illus. Dict.). **C., Thomsenean**, that occurring in Thomsen's disease.

Contradolin (*kon-trad'-ol-in*) A compound of acetamid, salicylic acid, and phenol; analgesic. Dose, 4–8 gr. (0.25–0.5 gm.) hourly.

Contralateral (*kon-tra-lat'-ur-al*) [*contra*, against; *latus*, side]. Opposite; applied to a muscle acting in unison with another on the opposite side of the body.

Contrastimolo (*kon-tra-stim'-ol-o*). A term used by Rasori (1762–1837), of Milan, in his theory of disease, for the asthenic diathesis of Brown. Cf. *Stimolo.*

Controller (*kon-trōl'-ur*). An apparatus for regulating the electric current to the operation of small lamps, faradaic coils, small motors, etc.

Contunding (*kon-tund'-ing*) [*contundere*, to bruise]. Producing a contusion; bruising.

Conus. (See Illus. Dict.) **C. cochleæ**, the modiolus. **C. cordis**, the ventricular part of the heart. **C. corporis striati**, the ventral extremity of the striatum. **Coni Malpighii, Coni tubulosi**, the malpighian pyramids. **Coni retinæ**, the retinal cones. **C. terminalis.** See *C. medullaris* (Illus. Dict.). **Coni testiculi.** See *Coni vasculosi* (Illus. Dict.).

Convallamaretin (*kon-val-am-ar-e'-tin*). $C_{20}H_{36}O_8$. A crystalline substance obtained by heating convallamarin with dilute sulfuric acid.

Convallamarin. (See Illus. Dict.) It is used as a cardiac stimulant. Dose, ¼ gr. (0.05 gm.).

Convallaretin (*kon-val-ar-e'-tin*). $C_{14}H_{26}O_3$. A substance obtained from convallarin by prolonged boiling in dilute acids.

Converter (*kon-vurt'-ur*). See *Alternator.*

Convexoconcave (*kon-veks-o-kon-kāv'*). See *Concavoconvex.*

Convexoconvex (*kon-veks-o-kon-veks'*). Having two convex surfaces; biconvex.

Convulsion. (See Illus. Dict.) **C., Local**, one affecting one muscle, member, or part of a member. **C., Mimetic, C., Mimic**, a facial convulsion. **C., Oscillating, C., Oscillatory**, one in which the separate fiber-bundles of a muscle are affected successively and not simultaneously. **C., Suffocative**, laryngismus stridulus. **C., Tetanic**, the spasm of tetanus. **C., Tonic.** See *Tonic Spasm* (Illus. Dict.). **C., Toxic**, that due to the action of some toxic agent upon the nervous system.

Coordinator (*ko-or'-din-a-tor*) [*con*, together; *ordinare*, to arrange]. The part of the nervous system regulating coordination. **C., Oculonuchal**, Spitzka's name for the part of the posterior longitudinal fasciculus below the floor of the fourth ventricle.

Copaiba. (See Illus. Dict.) Syn., *Copaiva.* **C., East Indian.** See *Gurjun Balsam* (Illus. Dict.).

Copal. (See Illus. Dict.) **C., American**, a resin from the bark of *Rhus copallina*, L. **C., Fijian**, that obtained from *Dammara vitiensis*, Seem. **C., Kauri.** See *Agathis australis*, and *Cowdie Gum* (Illus. Dict.).

Copalchin (*ko-pal′-shin*). A bitter principle from copalche bark.

Copper. (See Illus. Dict.) **C. Acetate, Basic,** $Cu\cdot O\cdot Cu(C_2H_3O_2)_2 + 6H_2O$, a fine light-blue powder, soluble in alcohol and water. **C. Acetophosphate,** employed in chlorosis and amenorrhea. **C.-alum.** See *C., Aluminated.* **C., Aluminated,** a combination of sulfates of copper and aluminium and potassium nitrate, occurring as a green powder; a mild caustic used in ophthalmia. Syn., *Eye-stone; Copper-alum; Lapis divinus.* **C. Ammoniochlorid, C. and Ammonium Chlorid,** $CuCl_2 2NH_4Cl + 2H_2O$, large green crystals soluble in water. **C. Ammoniosulfate, C. and Ammonium Sulfate,** a dark-blue crystalline powder soluble in water, obtained by dissolving cupric sulfate in ammonia water and precipitating with alcohol. It is antispasmodic and astringent. Dose, ½–2 gr. (0.03–0.13 gm.) 3 or 4 times daily with tincture of opium after meals. Max. dose, 5 gr. (0.3 gm.) single; 10 gr. (0.6 gm.) per day. Application for gleet, etc., 0.2% to 1% solution or ointment. **C. Arsenate,** a blue powder obtained from ammonium arsenate with copper sulfate. It is used as an alterative in syphilis. Dose, $\frac{1}{32}$–$\frac{1}{8}$ gr. (0.002–0.008 gm.). **C. Blue,** azurite. See *Pigments* (Illus. Dict.). **C. Bromid,** $CuBr_2$, grayish-black crystalline powder, soluble in water. **C. Carbonate, Blue.** See *Bremen Blue,* under *Pigments* (Illus. Dict.). **C. Chlorid,** $CuCl_2 + 2H_2O$, green crystals; alterant and disinfectant. Syn., *Cupric chlorid.* **C. Monoxid.** See *C. Oxid, Black.* **C. Nucleinate,** a compound of nucleol and copper oxid containing 6% of copper; it is used in chronic conjunctivitis. Syn., *Cuprol.* **C. Oleate,** $Cu(C_{18}H_{33}O_2)_2$, a mixture of 10% copper oxid dissolved in oleic acid, forming a greenish-blue, granular powder, soluble in ether. It is applied to indolent ulcers; ointment, 10% to 20% in lanolin. **C. Oxid, Black,** CuO, a brownish-black amorphous powder obtained from copper nitrate or copper carbonate by ignition. It is used as a teniafuge. Dose, ¾–1½ gr. (0.05–0.11 gm.) 3 or 4 times daily in pills for two weeks, abstaining from acid food. Externally it is used as an ointment with lard to remove chronic indurated glands. It is also employed in organic analysis. Syn., *Cupri oxidum nigrum.* **C. Oxid, Red,** Cu_2O, dark-brown crystalline powder. Syn., *C. Suboxid.* **C. Phosphate,** $CuHPO_4$, a bluish-green powder. It is used in tuberculosis. Dose, ⅛–½ gr. (0.008–0.032 gm.) several times daily. **C. Salicylate,** $Cu(C_7H_5O_3)_2 + 4H_2O$, microscopic bluish-green needles soluble in water. **C. Subacetate.** See *C. Acetate, Basic.* **C. Sulfocarbolate,** $CuC_6H(SO_4)_2 + 6H_2O$, green crystals soluble in water and alcohol. Syn., *Cupric sulfocarbolate; Cupriaseptol.*

Copperas. (See Illus. Dict.) **C., Blue,** copper sulfate. **C., Green,** copperas; ferrous sulfate. **C., White,** zinc sulfate.

Coppernose (*kop′-ur-nōz*). See *Rosacea* (Illus. Dict.).

Copraol (*kop′-ra-ol*) [*copra,* the dried kernel of the cocoanut]. A solid fat, derived from the cocoanut, and used as a substitute for cocoa-butter in making suppositories. It melts at 30.3° C.

Coproplanesis (*kop-ro-plan-e′-sis*) [κόπρος, feces; πλάνησις, wandering]. Escape of feces through a fistula or other abnormal opening.

Copula. (See Illus. Dict.) 3. Müller's name for the intermediary body of Ehrlich.

Cor. (See Illus. Dict.) **C. hirsutum, C. hispidum, C. tomentosum.** See *C. villosum* (Illus. Dict.). **C. membranaceum,** the auricular part of the heart. **C. mobile,** a heart which changes its position with the change of posture of the individual.

Coracoacromial (*ko-rak-o-ak-ro′-me-al*). Relating to the coracoid process and the acromion.

Coracoclavicular (*ko-rak-o-klav-ik′-u-lar*). Relating to the coracoid process and the clavicle. Syn., *Omoclavicular.*

Coracohumeral (*ko-rak-o-hu′-mer-al*). Relating to the coracoid process and the humerus.

Coracohyoid (*ko-rak-o-hi′-oid*). 1. Relating to the coracoid process and the hyoid bone. 2. The omohyoid muscle.

Coracoscapular (*ko-rak-o-skap′-u-lar*). Relating to the coracoid process of the scapula and to some other portion of the scapula.

Corchorus (*kor′-kor-us*) [κορεῖν, to clean]. A genus of plants of the order *Tiliaceæ.* **C. capsularis,** L., and **C. olitorius,** L., slender-stemmed annuals, extensively cultivated in India; yield jute. **C. fascicularis,** Lam., buphalia or bhaphali; the fruit is employed in India as a diuretic and tonic in bronchitis and gonorrhea.

Cord. (See Illus. Dict.) 2. A tendon; a slender string-like structure. **C., Axis.** See *Primitive Streak* (Illus. Dict.). **C., Bioplasson,** a reticulum formed by branching cells. **C., Cholic, Transverse,** Glénard's term for that portion of the transverse colon which becomes hard and rigid as the result of a stoppage of fecal matter by the kinking of the colon near its attachment by the pylorocholic ligament. Cf. *Coloptosis.* [Hemmeter.] **C., Condylocoronoid,** a line drawn from the extremity of the condyle to the coronoid. **C., Dorsal,** the notochord. **C., Ferrein's,** the true vocal cords. **C., Frontal,** the distance in a straight line from the bregma to the frontal point. **C., Genital,** Thiersch's name for an embryonic structure formed from the two wolffian ducts and the müllerian ducts. **C., Goniosymphyseal,** the distance from the gonion to the gnathion. **C. of Hippocrates,** the tendo Achillis. **C. Lumbosacral,** a nerve-trunk formed from the divisions of the fourth and fifth lumbar nerves. **C., Muscular,** a cord-like prominence of a muscle due to morbid excitability of its fibers. **C., Sonorous,** the semicircular canals of the internal ear. **C., Spermatic, C., Testicular.** See *Spermatic Cord* (Illus. Dict.). **C., Tympanic.** See *Chorda tympani* (Illus. Dict.). **C., Vertebral.** See *Protovertebræ* (Illus. Dict.). **C., Vocal, False.** See *C., False* (Illus. Dict.). **C., Vocal, True, C., Vocal, Inferior.** See *Vocal Bands* (Illus. Dict.). **C.s, Wilde's,** the transverse fibers of the callosum. **C.s, Willis'.** 1. See *Willis, Chords of* (Illus. Dict.). 2. See *C., Wilde's.*

Cordate (*kor′-dāt*) [*cor,* the heart]. Heart-shaped.

Cordein (*kor′-de-in*). A white crystalline substance used as an analgesic and antiseptic. Syn., *Methyltribromosalol.*

Cordia (*kor′-de-ah*) [*E. and V. Cordus,* German physicians (1486–1535 and 1515–1544)]. A genus of shrubs and trees of the order *Borragineæ.* **C. aubletii,** D. C., indigenous to Guiana; the leaves are used as an application to tumors and skin-diseases. **C. myxa,** L., a species indigenous to the East Indies, but cultivated in Arabia and Egypt. The fruit is used in coughs, the powdered bark in ringworm, the root as a purgative.

Cordiform (*kor′-de-form*) [*cor,* the heart; *forma,* form]. Cordate; shaped like a heart.

Cordite (*kor′-dit*). A smokeless gunpowder consisting of guncotton dissolved in acetone and nitroglycerin.

Cordol (*kor′-dol*). See *Salol Tribromid.*

Cordyl (*kor′-dil*). See *Acetyl-tribromsalol.*

Core. (See Illus. Dict.) **C., Atomic.** See *Coelectron.*

Corectomedialysis, Corectomodialysis (*kor-ek-to-me-*

di-al'-is-is, -mo-di-al'-is-is). See *Iridectomy* and *Corediałysis* (Illus. Dict.).

Corectopy. See *Corectopia* (Illus. Dict.).

Corediastole (*kor-e-di-as'-to-le*). See *Corediastasis* (Illus. Dict.).

Coreometry (*kor-e-om'-et-re*) [κορή, pupil; μέτρον, a measure]. The measurement of the pupil of the eye.

Coretodialysis (*kor-et-o-di-al'-is-is*). See *Corediałysis* (Illus. Dict.).

Coretomodialysis (*kor-et-o-mo-di-al'-is-is*). See *Iridectomy* (Illus. Dict.).

Coriamyrtin. (See Illus. Dict.) $C_{30}H_{36}O_{10}$. A cardiac stimulant. Max. dose, $\frac{1}{8}\frac{1}{5}$ gr. (0.001 gm.).

Coriandrol (*kor-e-an'-drol*). $C_{10}H_{18}O$. The chief constituent of oil of coriander; a liquid isomerid of borneol.

Coridin (*kor'-id-in*). $C_{10}H_{15}N$. A liquid base obtained from the distillation of bones.

Cornaro's Diet. A diet for indigestion and the results of riotous living, devised by Luigi Cornaro, a Venetian gentleman of the seventeenth century. It consisted of a daily allowance of bread, meat, and yolk of egg, amounting to 12 ounces in all. With this he took 14 ounces of a light Italian wine each day.

Corneoblepharon (*kor-ne-o-blef'-ar-on*) [*corneus*, horny; βλέφαρον, the eyelid]. Adhesion of the surface of the eyelid to the cornea.

Corneoiritis (*kor-ne-o-ir-i'-tis*). Inflammation of both cornea and iris.

Corneosclera (*kor-ne-o-skle'-rah*) [*corneus*, horny; σκληρός, hard]. The cornea and sclera taken together.

Cornet. (See Illus. Dict.) 2. A bony layer. **C., Bertin's, C., Sphenoidal,** the anterior part of the body of the sphenoid bone.

Corniculate (*kor-nik'-u-lāt*) [*cornu*, a horn]. Furnished with horns or horn-shaped appendages.

Corniculum. (See Illus. Dict.) **Cornicula of the Hyoid Bone, C. interna ossis hyoidei,** the small cornua of the hyoid. **Cornicula santoriniana.** See *C. laryngis* (Illus. Dict.).

Cornin. (See Illus. Dict.) 2. A bitter crystalline substance from the bark of *Cornus florida*. Syn., *Cornic acid*.

Cornstalk Disease of Cattle and Horses. A disease caused by allowing cattle to feed on dry stalks left standing in the field after the corn has been picked in the fall. [Peters.] It has been attributed (1) to corn-smut, (2) to scarcity of salt and water, (3) to "dry murrain," a hard and dry condition of the third stomach, supposed to be morbid, though really normal; (4) to the presence of potassium nitrate in the fodder; (5) to the presence of a bacterium. [Billings.] Syn., *Bronchopneumonia bovis*.

Cornu. (See Illus. Dict.) **C. ancyroide,** the postcornu. **C. anterius** (of spinal cord). See *C. ventrale*. **C. anterius cerebri.** See *Precornu* (Illus. Dict.). **C. cerebri inferius, C. cerebri laterale,** the medicornu. **C., Dental,** a horn of the dental pulp. These extensions form the body of the dental pulp which corresponds with the positions of the cusps of the teeth. **C. descendens, C. inferius, C. laterale, C. magnum, C. medium, C. sphenoidale,** the medicornu, that prolongation of the lateral ventricle which, curving outward around the back of the thalamus, descends beneath it and, extending forward and inward, ends in the anterior extremity of the hippocampal gyrus. **C. dorsale,** the dorsal projection of the mass of cinerea seen upon each half of the spinal cord in transverse section. Syn., *Posterior cornu, Crus posticum*. **C. inferius cerebri.** See *Medicornu* (Illus. Dict.). **C. occipitale, C., Posterior** (of the lateral ventricle), the postcornu, a conical prolongation of the lateral ventricle curving outward, backward, and inward into the occipital lobe. Syn., *C. ancyroide; Cavitas digitata*. **C. posterius** (of the spinal cord). See *Cornu dorsale*. **C. posterius cerebri.** See *Postcornu* (Illus. Dict.). **Cornua sphenoidalia.** See *Bones, Sphenoidal Turbinated* (Illus. Dict.). **Cornua sphenoidalia accessoria,** inconstant processes occurring upon the anterior aspect of the body of the sphenoid. **Cornua of the Uterus.** 1. The lateral fundibuliform prolongations of the uterine cavity into which the fallopian tubes open. 2. The oviducts. **C. ventrale,** the ventral projection of the mass of cinerea seen upon each half of the spinal cord in transverse section. Syn., *Crus anterius*.

Cornucopia (*kor-nu-ko'-pe-ah*). See *Recess, Lateral* (Illus. Dict.).

Cornus. (See Illus. Dict.) 2. A genus of shrubs and trees of the order *Cornaceæ*.

Cornutin. (See Illus. Dict.) Dose, $\frac{1}{12}$ gr. (0.005 gm.). **C. Citrate,** dose $\frac{1}{20}$–$\frac{1}{10}$ gr. (0.003–0.006 gm.) in spermatorrhea.

Corona. (See Illus. Dict.) 2. The corona radiata. **C. dentis,** the crown of a tooth. **Coronæ tubulorum.** See *Crypts of Lieberkühn* (Illus. Dict.). **C. ulnæ.** See *Olecranon* (Illus. Dict.).

Coronale (*kor-o-nal'-e*) [L.]. The frontal bone.

Coronilla varia. (See Illus. Dict.) A succedaneum for digitalis in cardiac disease. An aqueous extract and a powder of the fresh plant are given in doses of 1½ gr.

Coronillien (*kor-o-nil'-e-en*) [*coronilla*, a little crown]. An amorphous resin obtained from coronillin by heating with dilute hydrochloric acid. It is a yellow powder soluble in alcohol, acetone, and chloroform, and insoluble in water.

Coronillin. (See Illus. Dict.) Dose, 0.06–0.13 gm. (1–2 gr.).

Coronion. See *Koronion* (Illus. Dict.).

Coroparelcysis (*kor-o-par-el'-si-sis*) [κόρη, the pupil; παρέλκυσις, a drawing aside]. Operative displacement of the pupil to remedy partial opacity of the cornea by bringing it opposite a transparent part.

Coroscopy (*kor-os'-ko-pe*) [κόρη, a pupil; σκοπεῖν, to view]. See *Retinoscopy* (Illus. Dict.).

Corpulin (*kor'-pu-lin*). A remedy for obesity, said to consist of bladder wrack (*Fucus vesiculosis*), tamarinds, and cascara sagrada.

Corpus. (See Illus. Dict.) **Corpora amylacea.** See *Bodies, Amylaceous*. **Corpora aranacea,** a granular substance occurring at times in the masses of papillomas. Syn., *Sand-bodies*. **C. caudatum,** a ganglion or free ring of gray matter circling around the lenticularis of the brain. It is massive in the frontal portion, but becomes attenuated caudad; the anterior portion is called the head, the posterior the tail. **C. cinereum.** See *Lamina cinerea* and *Terma* (Illus. Dict.). **C. fibrosum,** a tough semiopaque body occurring in the ovary, due to some fibrous change in the corpus luteum. **Corpora mobilia articulorum.** See *Arthrolith*. **C. okense.** See *Mesonephros* (Illus. Dict.). **C. psalloides, C. psaloides,** the lyre or psalterium. See *Lyra of the Fornix* (Illus. Dict.). **C. rhomboidale.** See *Dentoliva* (Illus. Dict.). **Corpora sesamoidea.** See *Corpora arantii* (Illus. Dict.). **C. triticum.** See *Cartilago triticea* (Illus. Dict.).

Corpuscle. (See Illus. Dict.) 2. The particles given off by radium and other radioactive substances. Cf. *Ion* (Illus. Dict.) and *Electron*. **C., Amylaceous, C., Amyloid.** See *Bodies, Amylaceous*. **C., Axile, C., Axis,** Kölliker's name for the central portion of a

tactile corpuscle. Syn., *Axile body*. **C., Babes-Ernst's.** See *Bodies, Babes-Ernst's*. **C., Bennett's,** large epithelial cells, filled with fatty detritus, found in the contents of some ovarian cysts. A smaller variety of Bennett's corpuscles is also known as Drysdale's corpuscles. **C., Bone,** an osteoblast. **C., Burckhardt's,** peculiar angular or roundish bodies of a yellowish color found in the secretion of trachoma. **C.s, Cancroid,** the pearly bodies of squamous epithelioma. **C.s, Chorea.** See under *Chorea*. **C., Chromophile.** See *Bodies, Nissl's*. **C., Chyle,** lymph-corpuscles. **C., Colostrum.** See *Colostrum C.s* (Illus. Dict.). **C., Concentric.** See *C., Hassall's*. **C.s of Cornalia.** See *Microbe de la pébrine*, in *Table of Bacteria* (Illus. Dict.). **C., Corneal,** connective-tissue corpuscles containing an oval nucleus and furnished with numerous branching processes occurring within the fibrous groundwork of the cornea. Syn., *C.s, Toynbee's; C.s, Virchow's*. **C., Cytoid,** a leukocyte. **C., Davaine's.** See *Bacillus anthracis*, in *Table of Bacteria* (Illus. Dict.). **C.s, Drysdale's Ovarian,** granular cells, nonnucleated and of varying sizes, which were regarded by Drysdale as peculiar to ovarian fluid. **C.s, Genital,** special nerve-endings in the external genitalia. **C.s, Gierke's,** roundish colloid bodies, of a significance not yet determined, sometimes found in the central nervous system; they appear to be identical with Hassall's corpuscles. **C.s, Golgi's,** tendon-spindles; small fusiform bodies, resembling Pacini's corpuscles, existing in tendons, at the junction of the tendinous fibers with the muscular fibers. They have not been found in the ocular muscles. **C.s, Golgi-Mazzoni's.** See *C.s, Mazzoni's*. **C.s, Grandry's.** See under *Grandry* (Illus. Dict.). **C., Hassall's.** See under *Hassall* (Illus. Dict.). **C.s, Hayem's.** See *Achromacyte*. **C.s, Herbst's,** small bodies resembling pacinian corpuscles, found in the mucosa of the tongue of some animals and birds. **C.s, Jaworski's,** spiral bodies of mucus found in the gastric secretion in cases of pronounced hyperchlorhydria. **C.s, Key and Retzius',** encapsulated corpuscles found in the bill of some aquatic birds and representing transition forms between Herbst's and Pacini's corpuscles. **C.s, Langerhans' Stellate.** See *Langerhans' Cells* (Illus. Dict.). **C.s, Leber's.** See *C., Gierke's*. **C.s, Lostorfer's.** See *Lostorfer's C.s* (Illus. Dict.). **C., Lymph-, C., Lymphatic, C., Lymphoid.** See under *Lymph* (Illus. Dict.). **C., Mazzoni's,** a peripheral ending of a sensory nerve closely resembling Krause's end-bulb. **C.s, Meissner's.** See *C.s, Tactile, of Wagner* (Illus. Dict.). **C.s, Merkel's.** See *Grandry's C.s* (Illus. Dict.). **C., Miescher's.** See *Miescher's Sacs* (Illus. Dict.). **C.s, Milk-,** of v. Kölliker, cells containing fat-globules observed in the acini of the mammary gland and breaking up into milk-globules on reaching the lactiferous ducts. **C.s, Montgomery's.** See *Glands, Montgomery's* (Illus. Dict.). **C., Morgagni's.** See *Globules, Morgagni's*. **C.s, Muscle-,** the muscle-nuclei. See *Nucleus, Muscle* (Illus. Dict.). **C.s, Nunn's.** See *C., Bennett's*. **C.s, Palpation.** See *C., Tactile* (Illus. Dict.). **C.s, Patterson's,** the molluscum bodies; oval, shiny bodies found in the contents of the tubercles of molluscum contagiosum. **C., Pavement.** See *Cell, Endothelial* (Illus. Dict.). **C.s, Phantom.** See *Blood-platelets* (Illus. Dict.). **C., Polar,** the centrosome. **C.s, Ponfick's Shadow-.** See *Blood-platelets* (Illus. Dict.), also *Achromacyte*. **C., Rainey's.** See under *Rainey* (Illus. Dict.). **C.s, Reissner's,** the epithelial cells covering Reissner's membrane. **C.s, Rollett's Nerve-.** See *C.s, Golgi's*. **C.s, Shadow.** See *Acromacyte*. **C.s, Spleen, C.s, Splenic.** See *Malpighian Corpuscles* (Illus. Dict.). **C.s, Tactile.** (See Illus. Dict.) 2. See *Grandry's Corpuscles* (Illus. Dict.). **C.s, Taste.** See *Taste-buds* (Illus. Dict.). **C., Tendon-,** a tendon-cell. **C., Terminal.** See *Krause's Corpuscles* (Illus. Dict.). **C.s, Third.** See *Achromacyte*. **C.s, Touch.** See *C.s, Tactile* (Illus. Dict.). **C.s, Toynbee's,** the corneal corpuscles. **C.s, Transparent, of Norris.** See *Norris' Invisible* (Illus. Dict.). **C.s, Traube's.** See *Achromacyte*. **C.s, Typhic,** the epithelial cells of Peyer's patches which in typhoid fever have become granulated through degeneration. **C.s, Vater's, C.s, Vater-Pacini's.** See *C., Pacinian* (Illus. Dict.). **C.s, Virchow's.** See *C., Corneal*. **C., Zimmermann's,** achromacytes.

Corpusculum. (See Illus. Dict.) **C. articulare mobile.** See *Arthrolith*. **Corpuscula ossea, Ca. radiata, Ca. chalicophora.** See *Bone Lacunæ* (Illus. Dict.). **C. triticeum.** See *Cartilago triticea* (Illus. Dict.). **Corpuscula Wrisbergii,** the cuneiform cartilages.

Corradiation (*kor-ra-de-a'-shun*). The act of radiating together, as focused rays.

Cortex. (See Illus. Dict.) 2. The external gray layer of the brain, the substantia corticalis, or cortical substance. 3. The peripheral portion of an organ situated just beneath the capsule. **C. corticis,** the outer sheath of the kidney. **C. Degeneration.** Synonym of *General Paralysis of the Insane*. See under *Paralysis* (Illus. Dict.).

Corticate (*kor'-te-kāt*). Furnished with a bark or cortex.

Corticifugal (*kor-te-sif'-u-gal*) [*cortex; fugere*, to flee]. Conducting away from the cortex.

Corticipetal (*kor-te-sip'-et-al*) [*cortex; petere*, to seek]. Conducting toward the cortex.

Corticoafferent (*kor-te-ko-af'-ur-ent*). See *Corticipetal*.

Corticoefferent (*kor-te-ko-ef'-ur-ent*). See *Corticifugal*.

Corticofugal. See *Corticifugal*.

Corticopetal. See *Corticipetal*.

Corticospinal (*kor-tik-o-spi'-nal*). Pertaining to the cortex and the spinal cord.

Corundum (*ko-run'-dum*) [Hind. *Kurand*]. A native crystalline aluminium oxid, Al_2O_3. Mixed with melted shellac, it is formed into wheels for use in the dental laboratory and for grinding in general.

Coruscation (*kor-us-ka'-shun*) [*coruscare*, to glitter]. A glittering or flashing of light, also the subjective sensation of light-flashes.

Corycavin (*kor-ik'-av-in*) [*Corydalis; cava*, hollow, the former name of the species]. An alkaloid obtained from *Corydalis tuberosa;* it crystallizes in small needles and fuses at 218° C..

Corydalin. (See Illus. Dict.) 2. An alkaloid, $C_{22}H_{27}NO_4$ (Freund), from *Corydalis tuberosa;* it occurs as a white crystalline powder, soluble in alcohol and ether, and melts at 135° C.; used as a heart tonic. Dose, 1–5 gr. (0.066–0.0333 gm.).

Corydalis. (See Illus. Dict.) 2. A genus of plants of the order *Papaveraceæ*. **C. tuberosa,** D. C., holewort, hollow wort, an herb indigenous to Europe; the rhizome is anthelmintic and emmenagog. It contains corydalin, corytuberin, bulbocapnin, corycavin, corybulbin, and corydin.

Corydalnobilin (*kor-id-al-nob'-il-in*). $C_{22}H_{25}NO_5$. An alkaloid extracted from *Corydalis nobilis*, Pers.

Corydin (*kor'-id-in*). An amorphous alkaloid from *Corydalis tuberosa*.

Coryl (*kor'-il*). The name given to an anesthetic composed of ethyl chlorid and methyl chlorid in such proportions that the boiling-point of the mixture shall be about 32° F.

Coryleur (*kor-il-ur'*). The instrument with the aid of which coryl is employed.

Corylin (*kor'-il-in*) [*κόρυλος*, the hazel]. The globulin of English walnut (*Juglans regia*, L.) and filbert (*Corylus avellana*, L.).

Corynanthe (*kor-e-nan'-thē*) [*κορυς*, a helmet; *ἄνθος*, a flower]. A genus of rubiaceous trees. **C. yohimbé**, K. Schumann, a tree growing in the Cameroons, yields yohimbéhé bark, which contains the alkaloid yohimbin or johimbin, which was referred by some writers (v. Dragendorff, p. 541) to a species of *Tabernæmontana*.

Corynebacterium (*kor-e-ne-bak-tē'-re-um*). See *Mycobacterium*.

Corytuberin (*kor-e-tu'-ber-in*). $C_{19}H_{25}NO_4$. A principle occurring as dextrorotary silky needles obtained from *Corydalis tuberosa*, D. C. It blackens at 200° C. and decomposes without melting. It is soluble in alkaline solutions and benzene, slightly soluble in chloroform and ether.

Cosaprin (*kos-ah'-prin*). $C_6H_4{<}^{SO_3Na}_{NH—CO—CH_3}$. The acetyl compound of sodium sulfanilate, a white crystalline mass soluble in water; an antipyretic. Dose, 5–8 gr. 3 times daily.

Cosmic (*kos'-mik*) [*κόσμος*, the universe]. World-wide, of wide distribution as cosmic disease.

Costa. (See Illus. Dict.) **Costæ fluctuantes**, floating ribs. **Costæ illegitimæ, Costæ mendosæ, Costæ nothæ**, false ribs. **Costæ legitimæ**, true ribs.

Costate (*kos'-tāt*). Ribbed; furnished with ribs or juga.

Costiform (*kos'-te-form*). Rib-shaped.

Costoabdominal (*kos-to-ab-dom'-in-al*). Relating to the ribs and the abdomen.

Costochondral (*kos-to-kon'-dral*). Pertaining to the ribs and their cartilages.

Costoclavicular (*kos-to-klav-ik'-u-lar*). Pertaining to the clavicle and the ribs.

Costocolic (*kos-to-kol'-lik*). Relating to the ribs and the colon.

Costocoracoid (*kos-to-kor'-ak-oid*). Pertaining to the ribs and the coracoid process.

Costohumeral (*kos-to-hu'-mur-al*). Connected with the ribs and humerus.

Costoinferior (*kos-to-in-fe'-re-or*). Relating to the lower ribs; applied to forms of respiration.

Costopubic (*kos-to-pu'-bik*). Relating to the ribs and the pubis.

Costopulmonary (*kos-to-pul'-mon-a-re*). Relating to the ribs and to the lungs.

Costoscapular (*kos-to-skap'-u-lar*). 1. Relating to the ribs and the scapula. 2. The serratus magnus muscle.

Costosternal (*kos-to-stur'-nal*). Pertaining to the ribs and the sternum.

Costosuperior (*kos-to-su-pe'-re-or*). Relating to the upper ribs.

Costotrachelian (*kos-to-tra-ke'-le-an*). Relating to the ribs and to the transverse processes of the cervical vertebras.

Costotransverse (*kos-to-trans'-vurs*). 1. Pertaining to the ribs and transverse vertebral processes. 2. The scalenus lateralis. See *Muscles*.

Costotransversectomy (*kos-to-tranz-vurs-ek'-to-me*) [*costotransverse*; *ἐκτομή*, a cutting out]. Excision of part of a rib and a transverse vertebral process.

Costovertebral (*kos-to-vur'-te-bral*). Pertaining to the ribs and vertebras.

Costoxiphoid (*kos-to-zif'-foid*). Relating to the ribs and to the ensiform cartilage.

Cot (*kot*) [AS., *cote*]. 1. A small bed. 2. The finger of a glove. See *Finger-cot*. **C., Fever, C., Kibbee's**, a bed devised especially for applying cold water treatment to fever patients.

Cotarnin (*ko-tar'-nin*) [an anagram of narcotin]. $C_{12}H_{15}NO_4$. An oxidation-product of narcotin. **C., Hydrochlorate.** $C_{12}H_{15}NO_4 . HCl . H_2O$, small yellow crystals, soluble in water and alcohol. It is an internal hemostatic. Dose, ½ to 2 gr. Syn., *Stypticin*.

Cotoin. (See Illus. Dict.) It is employed in treatment of dysentery and cholera. Dose, 0.03–0.3 gm. **C., Para-**, yellow crystals melting at 150° C.; one-half as strong as cotoin.

Cotton. (See Illus. Dict.) **C., Marine**, a fine quality of cotton-wool obtained from the Levant. Syn., *Adenos*. **C., Styptic**, cotton saturated with a styptic substance.

Cotyledon (*kot-il-e'-don*) [*κοτυληδών*, a socket]. 1. Any one of the numerous rounded portions into which the uterine surface of the placenta is divided. 2. A genus of plants of the order *Crassulaceæ*. **C. umbilicus**, navel-wort of Europe, has been highly recommended in epilepsy, but its medical properties are feeble. Dose of fresh juice, ½–1 fluidounce 2 or 3 times daily, to be continued for months in increased doses.

Cotylopubic (*kot-il-o-pu'-bik*). Relating to the os pubis and the acetabulum.

Cotylosacral (*kot-il-o-sa'-kral*). Relating to the acetabulum and the sacrum.

Cough. (See Illus. Dict.) **C., Chin**, whooping-cough. **C., Ear**, Fox's (of Scarborough, England) name for a peculiar reflex cough caused by irritation of the external auditory canal. **C., Morton's**, cough followed by the vomiting of food, occurring frequently in pulmonary tuberculosis. **C., Pleuritic**, the dry, short, frequent cough of pleurisy, pneumonia, and phthisis, which accompanies the pain and friction-sounds of pleurisy and disappears with effusion or when bronchitis supervenes. [Fagge and Pye-Smith.] **C., Sydenham's**, spasm of the respiratory muscles in hysteria. **C., Throat**, that due to irritation of the pharynx. **C., Uterine**, a reflex cough occurring in sufferers from genital disease due to irritation of the uterovaginal fibers of the hypogastric plexus supplying the fornix vaginæ and cervix uteri and the nerves and ganglia supplying the fundus uteri and ovaries.

Coumarate (*koo'-mar-āt*). A salt of coumaric acid.

Coumaryl (*koo'-mar-il*). The hypothetic radicle of coumarin.

Counteraction (*kown-tur-ak'-shun*). The action of a drug or agent opposed to that of some other drug or agent.

Counterfissure (*kown-tur-fish'-ur*). See *Contrafissura* (Illus. Dict.).

Counterpressure (*kown-tur-presh'-ur*). Pressure opposed to that from a contrary direction.

Counterpuncture (*kown-tur-punk'-chur*). See *Counteropening* (Illus. Dict.).

Countess's Powder. Synonym of *Cinchona bark*.

Coupler (*kup'-lur*) [*copulare*, to bind]. 1. An arrangement for fastening wire to a tooth in correcting irregularities in dentition. 2. A device for connecting different parts of an electric apparatus. See *Button*, *Anastomosis*.

Courbaril-resin, Courbarin. See *Anime* (Illus. Dict.).

Courbometer (*koor-bom'-et-ur*) [Fr. *courbe*, a curve; *μέτρον*, a measure]. A device of Chatelain to show the curve of the alternating current.

Court, Airing. See *Airing-court*.

Courvoisier's Law. See under *Gallstones*.

Cousso (*koo'-so*). See *Brayera* (Illus. Dict.).

Coutoubea (*koo-too'-be-ah*) [South American name]. A genus of plants of the order *Gentianea*. **C. spicata,** Aub., of Brazil, is emmenagog and anthelmintic.

Cover-glass. (See Illus. Dict.) **C. Gauge,** some form of fine calipers for measuring the thickness of the cover-glasses used in microscopic work.

Cowl. (See Illus. Dict.) 2. The hood or cap of a ventilator.

Cowleyin (*kow'-la-in*). An alkaloid from *Cecropia peltata*, L., an urticaceous plant of the American tropics.

Coxa. (See Illus. Dict.) **C. vara,** bending or twisting of the neck of the femur. **Coxarum morbus,** Hip-joint disease.

Coxankylometer (*koks-ang-kil-om'-et-ur*) [*coxa*, hip; *ἀγκύλος*, bent; *μέτρον*, measure]. Volkmann's instrument for measuring the deformity in hip-disease.

Coxarthritis (*koks-ar-thri'-tis*). The same as *Coxitis*.

Coxitis (See Illus. Dict.) **C. cotyloidea,** that confined principally to the acetabulum. **C., Senile,** a rheumatoid disease of the hip-joint occurring in old people; marked by pain, stiffness, and wasting without any tendency to suppuration.

Coxopathy (*koks-op'-ath-e*) [*coxa*; *πάθος*, disease]. Any affection of the hip-joint.

Crab-yaws. See *Frambesia* (Illus. Dict.).

Cramp. (See Illus. Dict.) **C. Bark,** the bark of *Viburnum opulus*. **C., Hephestic.** See *C., Hammerman's* (Illus. Dict.). **C., Intermittent,** tetany. **C. of the Jaw,** spasm of the anterior belly or the digastric muscle occurring after gaping and preventing closure of the mouth. **C. Mimic.** See *Spasm, Facial* (Illus. Dict.). **C., Professional,** spasm of certain groups of muscles from continuous use in daily occupation, as writers' cramp, tailors' cramp, etc. **C.s, Tonic** (of the fingers and toes in children). Synonym of *Tetanilla*.

Cranial. (See Illus. Dict.) **C.-capacity, Modes of Measuring.** See under *Skull*.

Craniencephalometer (*kra-ne-en-sef-al-om'-et-ur*) [*κρανίον*, the skull; *ἐγκέφαλος*, the brain; *μέτρον*, a measure]. An instrument for determining the position of the gyri of the brain from the outer surface of the head.

Cranioabdominal (*kra-ne-o-ab-dom'-in-al*). Relating to the cranium and the abdomen; applied to temperaments.

Craniocerebral (*kra-ne-o-ser'-e-bral*). Relating to the cranium and the cerebrum.

Craniocervical (*kra-ne-o-sur'-vik-al*). Relating to the cranium and the neck.

Cranioclasty, Cranioclasy (*kra-ne-o-klas'-te, -klā-ze*). See *Cranioclasm* (Illus. Dict.).

Craniognomy (*kra-ne-og'-no-me*). See *Cephalology* (Illus. Dict.).

Craniopathy (*kra-ne-op'-ath-e*). See *Cephalopathy* (Illus. Dict.).

Craniorrhachischisis (*kra-ne-or-rak-is'-kis-is*) [*κρανίον*, skull; *ῥάχις*, spine; *σχίσις*, a cleaving]. Congenital fissure of the skull and spine.

Cranioschisis (*kra-ne-os'-kis-is*) [*κρανίον*, the skull; *σχίσις*, a cleaving]. Congenital fissure of the skull.

Craniostenosis (*kra-ne-o-sten-o'-sis*). See *Craniostegnosis* (Illus. Dict.).

Craniothoracic (*kra-ne-o-thor-as'-ik*). Relating to the skull and the thorax; applied to temperaments.

Craniotonoscopy (*kra-ne-o-ton-os'-ko-pe*) [*κρανίον*, skull; *τόνος*, a tone; *σκοπεῖν*, to examine]. An auscultatory method devised by Gabritschewsky for the localization of the diseases of the bones of the skull (thinning or thickening) by means of the variations in sound transmitted through the bones and a special resonator (pneumatoscope) placed in the mouth.

Craniotripsotome (*kra-ne-o-trip'-so-tōm*) [*κρανίον*, skull; *τρῖψις*, a rubbing; *τέμνειν*, to cut]. v. Cassagny's instrument for performing cranioclasty.

Craniotrypesis (*kra-ne-o-trip-e'-sis*) [*κρανίον*, the skull; *τρύπησις*, a boring]. Trephining.

Craniotympanic (*kra-ne-o-tim'-pan-ik*) [*κρανίον*, the skull; *τύμπανον*, a drum]. Relating to the skull and tympanum; osteotympanic.

Craniovertebral (*kra-ne-o-vur'-te-bral*). Same as *Cerebrospinal*.

Craniovisceral (*kra-ne-o-vis'-ur-al*). Relating to the cranium and the viscera.

Cranitis (*kra-ni'-tis*). Inflammation of a cranial bone.

Craseology, Crasiology (*kras-e-ol'-o-je*) [*κρᾶσις*, mixture; *λόγος*, science]. The science of temperaments.

Crassamen (*kras'-am-en*). See *Crassamentum* (Illus. Dict.). **C. sanguinis.** See *Buffy Coat* (Illus. Dict.).

Cratægus (*kra-te'-gus*) [*κραταιγός*, the hawthorn]. A genus of rosaceous shrubs. **C. oxyacantha,** L., a European shrub, contains a crystallizable principle, crategin, in the bark. A strong tincture in doses of 3 drops is used in heart-disease.

Craurosis. See *Kraurosis* (Illus. Dict.).

Crealbin (*kre-al'-bin*). An internal antiseptic said to consist of creolin and albumin. Syn., *Creolalbin*.

Creasotal (*kre-as'-o-tal*). See *Creasote carbonate*.

Creasote, Creasotum. (See Illus. Dict.) **C., Alpha-,** a preparation containing the constituents of normal creasote mixed in such proportion that it contains 25% of crystalline guaiacol. **C. Benzoate,** an antiseptic used as a spray in diseases of the throat and nose. **C.-calcium Chlorhydrophosphate,** a white syrupy mass used in tuberculosis. Dose, 3–8 gr. (0.29–0.52 gm.) twice daily. **C. Carbonate,** guaiacol carbonate with other carbonates containing 90% beechwood creasote. It is a clear, light-brown, oily liquid, odorless and slightly bitter; soluble in oils, alcohol, and ether, and insoluble in water. Max. daily dose in tuberculosis, 80 ♏ (5 c.c.). It is recommended in treatment of croupous pneumonia. Dose, 15 gr. every 2 hours. Syn., *Creosotal*. **C.-chloroform.** See *Chloroform creasote*. **C.-magnesia,** a mixture of creasote and calcined magnesia, free from odor and taste of creasote. It is insoluble in water, but the addition of a few drops of HCl and warming dissolves it to a fluid. It is a non-irritant antiseptic. Dose, 8 gr. (0.13 gm.). Syn., *Kreosolid; Magnesium creosotate*. **C. Oleate,** a yellowish, oily liquid used for the same purposes as creasote. Dose, 40–60 gr. (2.6–10.4 gm.) daily. Syn., *Oleocreasote; Creasote-oleic ether*. **C.-Phosphate,** $PO_4(C_6H_7)_3$, a syrupy fluid containing 80% of creasote and 20% of phosphoric acid anhydrid; it is used as a substitute for creasote. Syn., *Tricreasote phosphate*. **C. Tannophosphate,** an amber-colored fluid used in tuberculosis. **C. Valerianate,** a noncaustic fluid which boils at 240° C. It is used in treatment of all forms of tuberculosis. Dose, 0.2 gm. in capsules. Syn., *Eosot*.

Creatin. (See Illus. Dict.) **C., Dehydrated,** creatinin.

Creatinemia (*kre-at-in-e'-me-ah*) [*κρέας*, flesh; *αἷμα*, blood]. An excess of creatin in the blood.

Credé's Ointment. A soluble silver ointment, made from colloidal silver, applied by inunctions in septicemia and pyemia. Dose, ʒss to ʒj, repeated every 12 hours until abatement of symptoms.

Creek Dots. Small shining dots, of unknown nature and often hereditary, occurring at times in the retina anterior to the retinal vessels; they were so named by Marcus Gunn, who first described them.

Cremnophobia (*krem-no-fo'-be-ah*) [*κρημνός*, a crag; *φόβος*, fear]. Morbid fear of precipices.

Cremometer (*krem-om′-et-ur*) [*cremor*, cream; *μέτρον*, a measure]. A graduated tube for determining the percentage of cream in milk.

Crenate. (See Illus. Dict.) 2. A salt of crenic acid.

Creoform (*kre′-o-form*). A solid, tasteless antiseptic consisting of guaiacol, creasote, and formaldehyd.

Creolalbin (*kre-ol-al′-bin*). See *Crealbin.*

Creosal (*kre′-o-sal*). A dark-brown, very hygroscopic powder, with odor and taste of creasote, obtained by heating beechwood creasote with tannic acid and phosphorous oxychlorid. It is soluble in water, acetone, alcohol, and glycerin, insoluble in ether. It is antiseptic and astringent and is used in bronchial inflammations. Dose, 1–9 gm. daily. Syn., *Tannosal.*

Creosin (*kre′-o-sin*). A compound of creasote, iodin, calcium hypophosphite, and balsam of Peru; it is used like creasote.

Creosoform (*kre-o′-so-form*). A combination of creasote and formaldehyd, occurring as a greenish powder.

Creosolid (*kre-o-sol′-id*). See *Creasote-magnesia.*

Creosomagnesol (*kre-o-so-mag′-ne-sol*). A dry mixture of potassium hydroxid, creasote, and magnesia; antiseptic. Dose, 2 gr. (0.13 gm.) in pill with honey.

Creosotal (*kre-o′-so-tal*). See *Creasote carbonate.*

Crepitation, Crepitus. (See Illus. Dict.) **C. indux,** a crepitant rale heard in pneumonia at the beginning of hepatization. **C., Silken,** a sensation such as is produced when two surfaces of silk are rubbed together, felt by the hand when manipulating a joint affected with hydrarthrosis.

Cresamin (*kres′-am-in*). An antiseptic and germicide mixture of ethylene diamin and trikresol.

Cresaprol (*kres′-ap-rol*). *Cresin.*

Crescent. (See Illus. Dict.) 2. A form of *Plasmodium malariæ;* one of the crescentic, nonflagellate, refractive, pigmented bodies seen in the blood of persons suffering from protracted forms of malarial poisoning; *i. e.*, after the second week in estivoautumnal fever, in the malarial remittent, and the cachectic victims of chronic malaria. **C.-sphere,** Lambertin's term for that phase of development of the malarial parasite when it becomes sausage-shaped or crescent-shaped. It constitutes a sexual phase of the parasite and is destined to be swallowed by *Anopheles* and to carry on the further life-history of the parasite. **C.s of the Spinal Cord,** the lateral gray bands of the spinal cord as seen in horizontal section.

Crescentic (*kres-en′-tik*). 1. Shaped like a new moon. 2. Derived from a member of the genus *Crescentia; e. g.*, crescentic acid.

Cresin (*kre′-sin*). A mixture of cresol, 25%, and sodium cresoxylacetate; a brown, clear fluid, said to be less poisonous than phenol. It is used in ½%–1% solution as a wound antiseptic. Syn., *Cresaprol.*

Cresochin (*kres′-o-kin*). See *Quinosol.*

Cresol. (See Illus. Dict.) Syn., *Paramethyl Phenol.* **C.anytol,** a compound of anytol and cresol, used as a bactericide. **C.-naphthol,** a brown, viscous tar-like liquid, insoluble in water; it is used as a germicide. **C. Iodid.** See *Losophan* (Illus. Dict.). **C. Salicylate, C.-salol.** See *Cresalol* (Illus. Dict.).

Crest. (See Illus. Dict.) **C., Auditive.** See *Crista acustica* (Illus. Dict.). **C., Deltoid,** a ridge on the humerus at the attachment of the deltoid muscle. **C., Dental.** See *Dental Ridges* and *Ridge, Maxillary* (Illus. Dict.). **C. of the Ethmoid Bone.** See *Crista galli* (Illus. Dict.). **C., Ethmoidal.** 1. A transverse ridge on the inner aspect of the nasal process of the superior maxilla. 2. The superior turbinated crest. **C., Gingival.** See *Ridge, Maxillary* (Illus. Dict.). **C., Incisor** (of Henle), the forward prolongation of the nasal crest, terminating in the anterior nasal spine; the cartilage of the nasal septum rests upon it. Syn., *Crista incisiva.* **C., Infratemporal,** one on the outer aspect of the great wing of the sphenoid and separating the part of the bone which partly forms the temporal fossa from that which aids in forming the zygomatic fossa. **C., Lambdoid.** See *C., Occipital* (Illus. Dict.). **C., Obturator,** a bony ridge running from the spine of the os pubis to the anterior end of the condyloid notch. **C., Orbital.** See *Orbital Ridge* (Illus. Dict.). **C., Sacral, C. of Sacrum,** a series of eminences forming a longitudinal ridge on the middle line of the posterior surface of the sacrum. **C., Sphenoid,** a thin ridge of bone in the median line of the anterior surface of the body of the sphenoid bone. **C., Sphenomaxillary,** an arched crest formed in part by the anterior surface of the great wing of the sphenoid and in part by the pterygoid process forming the border of the sphenomaxillary fissure. **C., Spiral.** See *Crista spiralis* (Illus. Dict.). **C., Sublingual,** in veterinary anatomy, a ridge on the floor of the mouth at the apex of which the sublingual glands open. **C., Supramastoid,** a bony ridge above the external auditory meatus. **C., Temporal.** See *Ridge, Temporal* (Illus. Dict.). **C., Zygomatic,** the anterior border of the great wing of the sphenoid; it articulates with the malar bone and separates the orbital from the temporal surface.

Cresyl (*kres′-il*). C_7H_7. The radicle of cresol. **C. Hydrate,** cresyl alcohol.

Cresylate (*kres′-il-āt*). Any compound of cresol with a metallic radicle.

Cresylol (*kres′-il-ol*). See *Cresol* (Illus. Dict.).

Creta. (See Illus. Dict.) **C. præparata,** calcium carbonate obtained by precipitation. **Cretæ pulvis compositus,** compound powder of chalk, consisting of chalk, 30 parts; acacia in powder, 20 parts; sugar, 50 parts. Dose, 5–60 gr. (0.333–4 gm.).

Cretaceous. (See Illus. Dict.) 2. Chalky-white in color.

Cretinism. (See Illus. Dict.) **C., Acquired, C., Adult.** Synonym of *Myxedema.*

Cretinoid Condition in Adults. [Sir Wm. Gull, 1873.] Synonym of *Myxedema.*

Cribration (*krib-ra′-shun*) [*cribrum*, a sieve]. 1. The state of being cribriform, or perforate. 2. The act of sifting.

Cribrum (*krib′-rum*) [L.; pl., *cribra*]. A sieve. **C. benedictum,** a perforate septum, supposed by the ancients to separate two hypothetic cavities of the kidneys, by which the blood in the upper one was strained and freed from impurities. **Cribra orbitalia,** inconstant porosities behind the edge of the orbit on the inferior surface of the orbital plate of the frontal bone; they may be culdesacs or, when developed more fully, may communicate.

Cricoarytenoid (*kri-ko-ar-it-e′-noid*) [*κρίκος*, a ring; *ἀρύταινα*, a pitcher; *εἶδος*, likeness]. Pertaining to the cricoid and arytenoid cartilages.

Cricohyoid, Cricohyoideus (*kri-ko-hi′-oid, -oid′-e-us*). Relating to the cricoid cartilage and the hyoid bone.

Cricoidectomy (*kri-koid-ek′-to-me*) [*κρίκος*, a ring; *ἐκτέμνειν*, to cut out]. The excision of the cricoid cartilage.

Cricothyroid, Cricothyroidean (*kri-ko-thi′-roid, -thi-roid′-e-an*). Relating to the cricoid and the thyroid cartilages.

Cricothyrotomy (*kri-ko-thi-rot′-o-me*). Cricotomy with division of the cricothyroid ligament.

Cricotracheal, Cricotrachealis (*kri-ko-tra′-ke-al, -tra-ke-a′-lis*). Relating to the cricoid cartilages and to the trachea.

Cricotracheotomy (*kri-ko-trak-e-ot′-o-me*) [*κρίκος*, a

ring; *τράχηλος*, neck; *τομή*, a cutting]. Tracheotomy through the cricoid cartilage.

Crinate, Crinated (*krin'-āt, -a'-ted*) [*crinis*, a hair]. Bearded with long hairs or hair-like processes; crinite.

Criniform (*krin'-e-form*) [*crinis*, a hair; *forma*, form]. Filiform; resembling horsehairs.

Crinose (*krin'-ōz*). Hairy.

Crinosity (*krin-os'-it-e*). Hairiness.

Crisis. (See Illus. Dict.) 2. Paroxysmal disturbance of function accompanied with pain. **C., Bronchial,** a paroxysm of dyspnea sometimes occurring in tabes. **C., Cardiac,** a paroxysm of cardiac distress or disordered action. **C.-chamber,** a term applied by Mesmer to special apartments in which he treated such of his patients as had a crisis as the result of his influence. **Crises, Dietl's,** paroxysms of gastric distress occurring in nephroptosis. **C., Doctrine of,** the theory that the gradual climax of morbid phenomena was announcement of the completion of the union of morbific material—which could then be evacuated by the sweat, urine, or stools, spontaneously or by the administration of diuretics, purgatives, etc. **C., Enteralgic,** a paroxysm of pain in the lower part of the abdomen occurring in tabes. **C., Fulgurant, C., Fulgic,** paroxysmal spasms coming on with extreme suddenness. **C., Hematic, C., Hemic,** the crisis in a fever marked by increase in the number of blood-plates. **C., Nephralgic, C., Nephritic,** a ureteral paroxysm of pain observed in tabes. **C., Rectal,** severe rectalgia in tabes dorsalis. **C., Tabetic,** paroxysmal pain occurring in the course of tabes dorsalis.

Crispation (*krisp-a'-shun*) [*crispare*, to curl]. 1. See *Crispatura*. 2. A slight involuntary quivering of the muscles.

Crispatura (*kris-pah-tu'-rah*) [L.]. A puckering; a contracture. **C. tendinum,** Dupuytren's contraction.

Crista. (See Illus. Dict.) **C. ampullaris.** See *C. acustica* (Illus. Dict.). **C. basilaris.** See *Pharyngeal Tubercle* (Illus. Dict.). **C. buccinatoria,** a ridge giving origin to the fibers of the buccinator muscle, found in the groove on the anterior surface of the coronoid process of the lower jaw. **C. capituli,** one on the head of a rib dividing its articular surface into two parts. **C. colli inferior,** one on the lower aspect of the neck of a rib. **C. colli superior,** one on the upper aspect of the neck of a rib. **C. femoris.** See *Linea aspera*, in *Lines, Table of* (Illus. Dict.). **C. fenestræ rotundæ,** the sharp border of the fenestra rotunda. **C. frontalis externa.** See *Ridge, Temporal* (Illus. Dict.). **C. frontalis interna.** See *Crest, Frontal* (Illus. Dict.). **C. glutæorum,** the intertrochanteric lines. See *Lines* (Illus. Dict.). **C. ilii,** the crest of the ilium. **C. iliopectinea.** See *Line, Iliopectineal* (Illus. Dict.). **C. interossea.** See *Ridge, Interosseous* (Illus. Dict.). **Cristæ superciliares.** See *Ridge, Superciliary* (Illus. Dict.). **C. vestibuli,** an almost vertical bony ridge on the inferior and median walls of the vestibule of the ear separating the fovea hemiepileptica from the recessus hemisphæricus. Syn., *Pyramis vestibuli.* **C. zygomatica.** See *Crest, Zygomatic.*

Cristallin (*kris'-tal-in*). A kind of collodion, in which the ether and alcohol employed as solvents for pyroxylin are replaced by methyl alcohol. It does not dry so readily as ordinary collodion. Syn., *Crystallin.*

Cristate (*kris'-tāt*). Crested.

Critical. (See Illus. Dict.) Syn., *Decretorius.* **C. Period,** Beard's term for the termination of that period in the development of mammals in which the fetus draws its supplies from the yolk-sac. The parts of the embryo being all differentiated at the critical period, it may be discharged from the uterus, as in the marsupials, but in the higher *Mammalia*, gestation is prolonged beyond the "critical period." **C. Phase,** Beard's term for the first stage in the development of the mammalian fetus, in which it draws its supplies from the yolk-sac. **C. Unit,** that period of time which, in any given species of metatherian or eutherian mammal, represents the average duration of development from the moment of fertilization until with the critical period all the parts or foundations of the embryo have come into existence. [Beard.]

Croaking, Respiratory (in babies). A peculiar stridor developing at birth, enduring for one or two years, and disappearing. Syn., *Laryngeal congenital spasm; Laryngeal congenital stridor.*

Crocated (*kro'-ka-ted*) [*κρόκος*, crocus]. Containing saffron.

Croceous (*kro'-se-us*). Saffron-colored; containing saffron.

Crocetin (*kro'-set-in*) [*κρόκος*, crocus]. $C_{34}H_{46}O_9$. A clear red powder obtained from crocin by decomposition with lime. It is soluble in alcohol and ether, and insoluble in water.

Crocidism, Crocidismus, Crocidixis (*kro'-sid-izm, -iz'-mus, -iks'-is*). See *Carphology* (Illus. Dict.).

Croconate (*kro'-kon-āt*). A salt of croconic acid.

Croconic (*kro-kon'-ik*). Saffron-colored.

Crocose (*kro'-kōz*). A dextrorotary sugar obtained from crocin by decomposition.

Crocoxanthin (*kro-ko-zan'-thin*). A yellow pigment occurring in the petals of *Crocus aureus*, Sibth.

Crocus. (See Illus. Dict.) 2. A genus of plants of the order *Iridæ*. **C.-iron.** See *Iron Oxid, Brown.*

Crocydocarcinoma (*kro-sid-o-kar-sin-o'-mah*). See *Inocarcinoma* (Illus. Dict.).

Cross. (See Illus. Dict.) 2. A structure in which parts cross each other. **C.-education,** E. W. Scripture's term for the curious results that appear in certain cases where exercise of an organ or limb develops not only that particular organ or limb, but the corresponding one on the opposite side. **C.-foot,** pes varus. **C., Occipital.** See *Occipital Protuberance, Internal* (Illus. Dict.).

Crossway, Charcot's Sensory. Carrefour sensitif; the posterior third of the posterior limb of the internal capsule. **C., Motor,** the motor decussation.

Crotaphion (*kro-taf'-e-on*) [*κρόταφος*, the temple of the head]. A craniometrical point at the dorsal end of the pterion.

Crotaphitic (*kro-taf-it'-ik*) [*κρόταφος*, the temple]. See *Temporal* (Illus. Dict.).

Crotin (*kro'-tin*). A mixture of toxic albuminoids contained in croton seeds. It is a yellowish powder containing about 21% of ashes, soluble in water and in a 10% solution of sodium chlorid; it is a protoplasmic poison.

Crotonate (*kro'-ton-āt*). A salt of crotonic acid.

Crotonic (*kro-ton'-ik*). Belonging to or derived from a plant belonging to the genus *Croton; e. g.*, crotonic acid.

Crotonism (*kro'-ton-izm*). Poisoning by croton oil; a condition marked by hemorrhagic gastroenteritis.

Crotonitril (*kro-to-ni'-tril*). C_4H_5N. A liquid with a faint odor of garlic obtained from allyl iodid by the action of potassium cyanid; sp. gr. 0.8351; boils at 119° C.

Crotonylene (*kro-ton'-il-ēn*). C_4H_6. A colorless liquid found in a gaseous state in illuminating gas.

Crounotherapy (*kru-no-ther'-ap-e*) [*κρουνός*, a spring; *therapy*). Riesman's term for the employment of mineral waters for drinking cures.

Croup. (See Illus. Dict.) **C., Artificial,** traumatic

membranous laryngitis. **C., Bronchial.** See *Bronchitis, Plastic.* **C.-kettle,** a small boiler heated by a lamp and contained within a metallic cylinder. The boiler is furnished with an inhaling tube, and either water or any medicament may be placed within it and the escaping steam inhaled. **C., Diphtheric,** laryngeal diphtheria. **C., Intestinal** (Clamens). Synonym of *Mucous Colitis.*

Croupine (*kroop'-ēn*). Laryngismus stridulus (*q. v.*).

Crowd-poison (*krowd-poi'-zon*). Volatile organic matter recognizable in the expired air of crowded places.

Crown. (See Illus. Dict.) **C.-bark.** See *Loxa Bark* (Illus. Dict.). **C., Fibrous, C., Radiating.** See *Corona radiata* (Illus. Dict.). **C., French.** See *Corona veneris* (Illus. Dict.). **C.gall,** a disease of the peach, apricot, almond, prune, plum, apple, pear, English walnut, grape, raspberry, blackberry, cherry, poplar, and chestnut, due to a parasite plasmodium, *Dendrophagus globosus.* **C., Post and Plate,** a porcelain facing with a backing of gold, and a post fitting the enlarged pulp canal, and a disc covering the exposed surface of the tooth root. [Harris.] **C.-setting,** the operation of joining an artificial crown to the root of a natural tooth; improperly called "pivoting."

Crucifer (*kru'-sif-ur*) [*crux,* cross; *ferre,* to bear]. Any member of the order *Cruciferæ.*

Cruciferous (*kru-sif'-ur-us*). Relating to the order *Cruciferæ.*

Cruciform (*kru'-se-form*) [*crux,* a cross; *forma,* form]. Crucial, shaped like a cross.

Crudivorous (*kru-div'-or-us*) [*crudus,* raw; *vorare,* to devour]. Applied to savages subsisting entirely upon uncooked food.

Cruentous (*kru-en'-tus*) [*cruor,* blood]. Bloody.

Cruenturesis (*kru-en-tu-re'-sis*) [*cruentus,* bloody; *οὖρον,* urine]. Hematuria.

Cruor (*kru'-or*) [*cruor,* blood]. Coagulated blood.

Crupper. (See Illus. Dict.) 2. The sacrococcygeal region. 3. The base of the tail in mammals.

Crurin (*kru'-rin*). Edinger's name for *Quinolinbismuthsulfocyanid.*

Cruritis (*kru-ri'-tis*) [*crus,* a leg]. See *Phlegmasia dolens* (Illus. Dict.).

Crurogenital (*kru-ro-jen'-it-al*) [*crus,* a leg; *genitalis,* relating to generation]. Relating to the thighs and the genitals.

Cruroinguinal (*kru-ro-ing'-gwin-al*). Relating to the thigh and the groin.

Crus [pl., *crura*]. (See Illus. Dict.) **Crura anthelicis, Crura bifurcata,** two ridges on the inner aspect of the external ear converging at the anthelix. Syn., *Radices anthelicis.* **Crura of the Fornix.** See *Pillars, Anterior* and *Posterior, of the Fornix* (Illus. Dict.).

Crust. (See Illus. Dict.) **C., French,** syphilis. **C., Milk, C., Milky.** See *Achor* (Illus. Dict.). **C. of the Peduncle.** See *Crusta* (Illus. Dict.).

Crusta. (See Illus. Dict.) **C. inflammatoria.** See *Buffy Coat* (Illus. Dict.). **C. lamellosa,** psoriasis. **C. osteoides (radicis).** See *C. petrosa* (Illus. Dict.). **C. pleuritica.** See *Buffy Coat* (Illus. Dict.).

Crutch. (See Illus. Dict.) **C., Perineal,** a support or brace of various forms by means of which the leg of a patient in the lithotomy position may be adjusted or held at any height or angle.

Cry. (See Illus. Dict.) **C., Epileptic.** See under *Epileptic* (Illus. Dict.). **C., Hydrencephalic.** See *Hydrocephalic Cry* (Illus. Dict.).

Cryalgesia (*kri-al-je'-ze-ah*) [κρύος, cold; ἄλγησις, pain]. Pain from the application of cold.

Crymotherapy (*kri-mo-ther'-ap-e*) [κρύος, cold; θεραπεία, therapy]. Ribard's term for the therapeutic use of great cold applied locally. A bag filled with carbonic snow at a temperature 176° F. below zero is applied daily for half an hour to the pit of the stomach. It is previously surrounded by cotton to prevent injury to the skin. These applications are stated to increase the appetite in tuberculous patients.

Cryogenin (*kri-oj'-en-in*). Metabenzaminosemicarbazid. It is given in treatment of tuberculosis for diminishing the fever, being innocuous and effective. Dose, 3–20 gm.

Cryolite (*kri'-ol-īt*) [κρύος, cold; λίθος, stone]. A mineral occurring in large beds in Greenland; it is a fluorid of sodium and aluminium, and is used extensively in the preparation of sodium carbonate and alumina.

Cryoscopic (*kri-os-kop'-ik*). Relating to cryoscopy.

Cryoscopy (*kri-os'-ko-pe*) [κρύος, cold; σκοπεῖν, to examine]. The process whereby the freezing-point of certain liquids, blood, urine, etc., may be compared with that of distilled water. Syn., *Algeoscopy.*

Cryostase (*kri'-os-tāz*). A compound of equal parts of phenol, camphor, saponin, and traces of oil of turpentine. It solidifies when heated and becomes liquid when cooled to below 0° C. Recommended as an antiseptic.

Crypt. (See Illus. Dict.) **C.s, Multilocular.** 1. Sharpey's name for simple glands with pouched or sacculated walls. 2. The lobules of a racemose gland. **C.s, Synovial.** See *Bursæ mucosæ* (Illus. Dict.). **C.s, Synoviparous,** extensions of the synovial membranes sometimes perforating the capsule of the joints and occasionally becoming shut off from the main sac. **C.s of the Tongue,** small pits in the mucosa of the tongue with walls studded with globular projections, each of which contains a vascular loop and is furnished with lymph-follicles. **C.s, Sebaceous,** the sebaceous glands.

Crypta. (See Illus. Dict.) 2. See *Glomerulus* (Illus. Dict.). **Cryptæ littrii,** the preputial glands. **Cryptæ minimæ, Cryptæ mucosæ.** See *Crypts of Lieberkühn* (Illus. Dict.). **Cryptæ odoriferæ, Cryptæ preputiales, Cryptæ tysonianæ,** the preputial glands.

Cryptobiotic (*krip-to-bi-ot'-ik*) [κρύπτος, concealed; βίος, life]. Having dormant life; applied formerly to calculi, crystals, or any inanimate objects which increase in size. Syn., *Lithobiotic.*

Cryptocarya (*krip-to-kar'-e-ah*) [κρυπτός, concealed; κάρυον, a nut]. A genus of plants of the order *Laurineæ.* **C. australis,** Benth., Australian nutmeg, contains an alkaloid which causes death by asphyxia if administered to warm-blooded animals. **C. guaianensis,** Meissn., of Brazil, and **C. moschata,** Mart., Brazilian nutmeg, have carminative and antidysenteric fruit, and the latter contains ethereal and fatty oil and cryptocaryin. **C. mandioccana,** Meissn., a species of Brazil, has bark used in treatment of diarrhea.

Cryptococcus (*krip-to-kok'-us*). See *Bacteria, Table of* (Illus. Dict.).

Cryptocrystalline (*krip-to-kris'-tal-ēn*). See *Microcrystalline* (Illus. Dict.).

Cryptogenic (*krip-to-jen'-ik*) [κρυπτός, concealed; γεννᾶν, to produce]. 1. Obscure in origin. 2. Parasitic from the beginning within another living organism.

Cryptolithiasis (*krip-to-lith-i'-as-is*) [κρυπτός, concealed; λίθος, stone]. The calcification and ossification of tumors of the skin and subcutaneous tissue.

Cryptomerorrhachischisis (*krip-to-mer-o-rak-is'-kis-is*) [κρυπτός, hidden; μέρος, a part; ῥάχις, the spine; σχίζειν, to cleave]. Spina bifida occulta, a variety with bony deficiency but without a tumor.

Cryptoporus (*krip-to'-por-us*) [κρυπτός, hidden; πόρος, a pore]. Having hidden or obscure pores.

Cryptoscope (*krip'-to-skōp*) [κρυπτός, concealed; σκοπεῖν, to view]. See *Fluoroscope*.

Crystal. (See Illus. Dict.) **C.s, Asthma.** See under *Asthma* (Illus. Dict.). **C.s, Bizzozero's.** See *C.s, Charcot-Leyden's*. **C.s, Blood.** See under *Blood* (Illus. Dict.). **C.s, Boettcher's.** See *Crystals, Spermin*. **C.s, Charcot's, C.s, Charcot-Leyden's,** octahedral or hexahedral crystals found in the sputum of asthma and fibrinous bronchitis and in other forms of sputum, in the blood in leukemia, in the intestines in infection with parasites, and in nasal polypi; they are stained yellow with iodin. Cf. *C.s, Spermin*. **C.s, Charcot-Neumann's, C.s, Charcot-Robin's.** See *C.s, Charcot-Leyden's*. **C.s, Coffin-lid,** crystals of triple phosphate found in the urine in dyspepsia and cystitis. See *Table of Urinary Sediments* (Illus. Dict.). **C.s, Complex,** those having dissimilar faces. **C.s, Dumb-bell.** See under *Dumb* (Illus. Dict.). **C.s, Ear.** See *Otolith* (Illus. Dict.). **C.s, Florence's,** those produced in semen by treatment with a solution consisting of 30 parts water; 1.65 parts iodin; and 2.54 parts potassium iodid. The reaction is produced under the cover-glass. The drop of iodin solution is placed upon the slide; a drop of spermatic fluid, or a watery extract of a suspicious spot, is placed near by, and then the cover-glass is so placed that the line of contact of the two fluids meets near its center. At the point of contact of the two fluids there is immediately formed a layer of granules and crystals. The crystals are of a long, rhombic form, about three times as long as broad. Sometimes they are much longer and look like needles. These crystals are brown in color, and dichroic. **C.s, Hedgehog.** See *Hedgehog* (Illus. Dict.). **C.s, Hemin.** See *Hemin* (Illus. Dict.). **C.s, Knife-rest,** peculiar indented crystals of triple phosphate occasionally found in urine. **C.s, Lead-chamber,** those found in the lead-chambers in which sulfuric acid is manufactured and having the composition $HSO_3(NO_2)$. **C.s, Leyden's.** See *C.s, Charcot-Leyden's*. **C.s, Lubarsch's,** minute crystals found postmortem in the epithelial cells of the testis, and regarded as distinct from Boettcher's and Charcot's crystals. **C.s, Neumann's.** Same as *C.s, Charcot-Leyden's*. **C.s, Schweiner's.** See *C.s, Charcot-Leyden's*. **C.s, Spermin,** a combination of phosphoric acid with a base spermin (C_2H_5N), forming long, monoclinic, prism-like crystals with curved edges, found in spermatic fluid after drying it or allowing it to stand and in desiccated white of egg. A strong solution of iodid and potassium iodid stains them a deep brown or violet. Syn., *C.s, Boettcher's*. Cf. *C.s, Charcot-Leyden's*. **C.s, Teichmann's.** See *Hemin* (Illus. Dict.). **C.s of Venus,** those of copper sulfate. **C.s, Virchow's,** bright yellow or orange-colored crystals of hematoidin sometimes found in extravasated blood. **C.s, Zenker's.** See *C.s, Charcot-Leyden's*.

Crystalban (*kris-tal'-ban*). Of Payer, a resinous constituent of gutta-percha.

Crystalbumin (*kris-tal'-bu-min*). An albuminous body found by Béchamp in the watery extract of crystalline lens.

Crystalfibrin (*kris-tal-fi'-brin*). An albuminous body obtained by means of hydrochloric acid from crystalline lens.

Crystallin. (See Illus. Dict.) 2. See *Cristallin*.

Crystallization. (See Illus. Dict.) **C., Alcohol of,** an alcohol uniting molecule by molecule with a crystalline substance and aiding in the preservation of the crystalline form of the latter.

Crystallographic (*kris-tal-o-graf'-ik*) [*crystal*; γράφειν, to write]. Relating to the characterization of a state or condition obtained by crystalline deposit.

Crystallomagnetism (*kris-tal-o-mag'-net-izm*). That property by which certain crystals point to the north when suspended horizontally.

Crystallometry (*kris-tal-om'-et-re*) [κρύσταλλος, crystal; μέτρον, a measure]. The science of the measurement of the angles of crystals.

Crystallose (*kris'-tal-ōz*). Sodium saccharinate.

Crystalluridrosis (*kris-tal-u-rid-ro'-sis*) [κρύσταλλος, crystal; οὖρον, urine; ἱδρώς, sweat]. A condition marked by excretion of urinary elements in the sweat which crystallize on the skin.

Cteniza (*ten-e'-zah*) [κτενίζειν, to comb]. A genus of spiders of the family *Theraphosidæ*, containing the giant trap-door spiders and the mason, mining or bird-spiders. **C. cæmentaria,** Latreille, a poisonous species of south Europe, especially of Corsica and Andalusia. **C. californica,** a venomous species of the southwestern United States. **C. fodiens,** Cambridge, and **C. sauvagii,** Rossi, are poisonous species of south Europe.

Ctenodont (*ten'-o-dont*) [κτείς, a comb; ὀδούς, a tooth]. Having pectinate teeth.

Cuban Itch. See under *Itch*.

Cubeb. (See Illus. Dict.) **C.-oleoresin,** an ethereal extract from the fruit of *Piper cubeba*, L. fil., soluble in alcohol and ether. It is antiseptic and expectorant. Dose, 5–30 ♏ (0.3–1.8 c.c.).

Cubebism (*ku'-beb-izm*). Poisoning by cubebs; it is marked by acute gastroenteritis.

Cubiform (*ku'-be-form*). Cuboid.

Cubit (*ku'-bit*) [*cubitus*, the elbow]. 1. The forearm, cubitus. 2. The ulna. 3. The elbow.

Cubitodigital (*ku-bit-o-dij'-it-al*). Relating to the forearm or to the ulna and the fingers.

Cubitometacarpal (*ku-bit-o-met-ah-kar'-pal*). Relating to the forearm or the ulna and the metacarpus.

Cubitosupraphalangeal (*ku-bit-o-su-pra-fal-an'-je-al*). Relating to the forearm or the ulna and the bases of the phalanges.

Cubitus. (See Illus. Dict.) **C. valgus,** a deformity consisting of an abnormal curvature of the humeral diaphysis. **C. varus.** See *Gunstock Deformity* (Illus. Dict.).

Cubocuneiform (*ku-bo-ku-ne'-e-form*). Relating to the cuboid bone and to one or more of the cuneiform bones.

Cucumis. (See Illus. Dict.) **C. melo,** L., muskmelon, a species indigenous to the old world tropics and widely cultivated. The root is emetic and diuretic and contains melonenemetin. **C. sativus,** L., cucumber; the juice of the fruit is purgative, diuretic, and resolvent. It is used in skin-diseases and as a cosmetic. Syn., *Sikyos* [Hipp.], *S. edodimos* [Galen].

Cucurbit. (See Illus. Dict.) 2. Any plant of the order *Cucurbitaceæ*.

Cucurbita (*ku-kurb'-it-ah*) [L., a gourd]. A genus of plants of the order *Cucurbitaceæ* indigenous to the East but cultivated extensively. **C. fœtidissima,** H. B. K., of North America; the leaf, root, and seeds are edible and the very bitter fruit is recommended in the treatment of hemorrhoids. **C. pepo,** the pumpkin; the seeds are anthelmintic. Dose of fluid ext., 14.8 c.c.

Cuirass. (See Illus. Dict.) **C., Tabetic,** an anesthetic area encircling the chest in tabetic patients.

Culex (*ku'-leks*) [L., a gnat]. A genus of dipterous insects (mosquitos) instituted by Linnæus (1790), which contains a large number of species; the essential characters are: (1) Short palpi in the female,

longer in the male. (2) Head with narrow, curved, and forked upright scales on the occiput only; never flat scales over the top of the head, as in *Stegomyia*. (3) Narrow, curved or spindle-shaped scales on the scutellum; never broad flat scales. (4) Wing-veins with median scales and long thin lateral scales on some or all of the veins (Theobald).

Culexifuge (*ku-leks'-e-fūj*). See *Culicifuge* (Illus. Dict.).

Culicide (*ku'-lis-īd*) [*culex*, a gnat; *cædere*, to kill]. Any agent which destroys mosquitos.

Culiciform (*ku-lis'-e-form*) [*culex*, a gnat; *forma*, a form]. Gnat-shaped.

Culicivorous (*ku-lis-iv'-or-us*) [*culex*, a gnat; *vorare*, to devour]. Feeding upon gnats or insects of the gnat family.

Culilawan (*koo-le'-lah-wan*) [Malay name]. A highly aromatic bark from *Cinnamomum culilawan*, Blume, a tree of Malaya and China. It has the medicinal qualities of the aromatics. Syn., *Culiliban bark*.

Culminal (*kul'-min-al*) [*culmen*, a summit]. Relating to the culmen.

Culture. (See Illus. Dict.) **C., Fractional.** See *C., Pure*. **C., Needle,** the culture of a microorganism by transferring on a sterilized needle to a medium suitable for its growth. **C., Pure,** a culture of a single form of microorganism.

Cumarin (*ku'-mar-in*). See *Coumarin* (Illus. Dict.).

Cumaryl (*ku'-mar-il*). See *Coumaryl*.

Cumate (*ku'-māt*). A salt of cumic acid.

Cuminamid (*ku-min'-am-id*). $C_{10}H_{13}NO$. A substance obtained by the action of heat on ammonium cuminate.

Cuminate (*ku'-min-āt*). A salt of cumic acid.

Cuminic (*ku-min'-ik*). See *Cumic* (Illus. Dict.).

Cumol (*ku'-mol*). See *Cumene* (Illus. Dict.).

Cumulate (*ku'-mu-lāt*). The final result of cumulative resolution.

Cumulus. (See Illus. Dict.) **C. proligerus.** See *Discus proligerus* (Illus. Dict.).

Cumyl (*ku'-mil*). $C_{10}H_{11}O$. An acid organic radicle of cumin-oil; an oily liquid. **C.-alcohol.** See *Alcohol, Cumin* (Illus. Dict.). **C. Hydrid.** See *Aldehyd, Cumic* (Illus. Dict.). **C. Oxid,** cumic acid.

Cuneal (*ku'-ne-al*) [*cuneus*, a wedge]. Wedge-shaped, cuneiform.

Cuneocuboid (*ku-ne-o-ku'-boid*). Pertaining to both the cuneiform and cuboid bones.

Cuneoscaphoid (*ku-ne-o-skaf'-oid*). Relating to the cuneiform bones and to the scaphoid bone.

Cuneus. (See Illus. Dict.) Syn., *Lobulus cerebri occipitalis (internus); L. cuneatus; L. cuneus; L. cerebri cuneatus; Lobus cuneiformis; L. pyriformis; Cuneate lobule; Internal occipital lobule; Triangular lobule*. **C. cinereus.** See *Ala cinerea* (Illus. Dict.). **C. thalami optici intergenicularis,** that part of the thalamus lying between the pregeniculum and the postgeniculum.

Cuniculus. (See Illus. Dict.) In the plural, **Cuniculi,** the semicircular canals of the ear.

Cunningham's Immediate Method of correcting the irregular position of a tooth: it consists in forcing it into the position of one just extracted.

Cup. (See Illus. Dict.) 3. A drinking-vessel or the contents of such a vessel. **C.s, Antimonial,** cups made of antimony which impart emetic properties to the contained liquid. **C., Bitter,** a drinking-cup of quassia wood. **C., Chinese,** a drinking-vessel of red arsenic which imparts cathartic properties to wine standing in it during the night **C.s, Montgomery's.** See under *Montgomery* (Illus. Dict.).

Cupania (*ku-pah'-ne-ah*) [*F. Cupani*, 1657–1710]. A genus of shrubs and trees of the order *Sapindaceæ;* the loblolly wood of Jamaica. **C. americana,** L., a Mexican species; the astringent leaves and fruit are used in blennorrhea and the starchy seeds in diarrhea.

Cuphea (*ku'-fe-ah*) [κυφός, gibbous, from the shape of the calyx]. A genus of plants of the order *Lythraceæ*. **C. antisyphilitica,** H. B. K., **C. balsamona,** Cham., **C. ingrata,** Cham., **C. microphylla,** H. B. K., are employed in decoction in the American tropics in treatment of syphilis. **C. viscosissima,** Jacq., a viscid annual of the United States, is a homeopathic remedy in cholera infantum.

Cupper (*kup'-er*). One who practices cupping.

Cupping. (See Illus. Dict.) 2. The formation of a cup-like depression.

Cupragol (*ku'-pra-gol*). A compound of copper and albumin used in solutions of 1%–5% as an antiphlogistic and secretory stimulant.

Cupram (*ku'-pram*) [*cuprum*, copper]. A solution of copper carbonate in ammonia-water used as a fungicide.

Cuprammonia (*ku-pram-o'-ne-ah*). Copper ammonio-sulfate.

Cuprammonic (*ku-pram-on'-ik*). Containing copper and ammonia.

Cuprargol (*ku-prar'-gol*). A cupronucleinic acid compound occurring as a gray powder slowly soluble in water. It is used in the treatment of conjunctivitis by instillation of 1% to 5% solutions once or several times daily; in trachoma used as an astringent in 20% aqueous solution.

Cuprate (*ku'-prāt*). A double salt containing a cupric compound.

Cupratin (*ku'-pra-tin*). A preparation of copper albuminoid, similar to ferratin.

Cuprein (*ku'-pre-in*). $C_{19}H_{22}N_2O_2$. A colorless crystalline alkaloid derived from cuprea bark. It is soluble in alcohol and slightly so in ether; it melts at 198° C.

Cuprene (*ku'-prēn*). C_7H_8. A nonvolatile insoluble hydrocarbon; a yellow bulky solid consisting of matted filaments resembling amadou in appearance, obtained by passing a current of pure acetylene gas over bright copper filings.

Cuprescent (*ku-pres'-ent*). Having the appearance of copper.

Cupressin (*ku-pres'-in*). An oil from cypress; used in pertussis.

Cupriaseptol (*ku-pre-ah-sep'-tol*). Copper sulfocarbonate.

Cupric (*ku'-prik*). Containing copper as a bivalent element. **C. Oxid.** See *Copper Oxid, Black*.

Cuprocitrol (*ku-pro-sit'-rol*). A copper and citrol derivative used in trachoma in 5%–10% salve.

Cuprohemol (*ku-pro-he'-mol*). A compound of copper and hemol used in tuberculosis. Dose, 1½–2 gr. (0.1–0.15 gm.).

Cuprol (*ku'-prol*). Nucleinate of copper occurring as a fine powder; used in ophthalmology.

Cuprosopotassic (*ku-pro-so-po-tas'-ik*). Relating to a combination of a cuprous salt and potassium.

Cuprosulfate (*ku-pro-sul'-fāt*). A double sulfate containing copper.

Cuprotartrate (*ku-pro-tar'-trāt*). A combination of copper and tartaric acid.

Cuprous (*ku'-prus*). Containing copper as a univalent element. **C. Oxid.** See *Copper Oxid, Red*.

Cupula (*ku'-pu-lah*) [L.]. An invisible substance on the cristæ acusticæ that on the application of fixation fluids coagulates and becomes visible. **C. terminalis.** See *Membrana tectoria* (Illus. Dict.).

Cupular, Cupulate (*ku'-pu-lar, -lāt*). Cup-shaped.

Curage. (See Illus. Dict.) 2. A term used by some authorities for clearing the uterine cavity by means of the finger, as distinguished from the use of the curet.

Curanga (*ku-rang'-ah*) [Malay name]. A genus of plants of the order *Scophulariaceæ*. **C. amara,** Juss., a species of southern Asia, where the leaves are employed in the treatment of helminthiasis and quartan fever and as a tonic.

Curangin (*ku-rang'-in*). A glucosid obtained from *Curanga amara*, Juss. It is used as a febrifuge in India and is similar in action to digitalis.

Curarization. (See Illus. Dict.) **C., Spontaneous,** conditions of autointoxication occasioned by the paralyzing influence upon the circulation and upon the end-plates of the neuromuscular system, of toxic substances produced in the body by the tetanization of the muscles.

Curcin (*kur'-sin*). A toxalbumin analogous to ricin found in the seeds of *Jatropha curcas*, L.

Cure. (See Illus. Dict.) **C., Air.** See *Pneumatotherapy* (Illus. Dict.). **C., Banting.** See under *Treatment* (Illus. Dict.). **C., Dew.** See *Kneippism*. **C., Faith.** See *Faith Cure* (Illus. Dict.). **C., Hagey,** a secret method of treating alcoholism. **C., Keeley,** a secret method of treating alcoholism. **C., Lacnanthes-,** the treatment of tuberculosis by *Lacnanthes tinctoria*, represented by one Alabone, an irregular practitioner of England (1900), as an infallible remedy. **C., Movement.** See *Swedish Movements* (Illus. Dict.). **C., Nudity,** a method of treatment of neurasthenia tried in Austria and consisting in exposure of the person to the air and sunlight, combined with baths, massage, and gymnastics. **C., Palliative,** that which controls partially or completely the manifestations of a disease without eradicating it. **C., Radical,** the permanent eradication of a disease as distinguished from the cure of the disability due to it. **C., Schroth.** See under *Treatment* (Illus. Dict.). **C., Violet,** the popular use of an infusion of violet leaves in the treatment of cancer. **C., Water,** hydrotherapy. **C., Whey,** orrhotherapy.

Curetage, Curettage, Curetment, Curettment, Curettement. See *Cureting*.

Cureting (*ku'-ret-ing*) [Fr. *curer*, to cleanse]. The removal of growths, retained placenta, etc., by means of a curet. Syn., *Curetting; Curetment; Curettement; Curetage; Curettage*.

Curin (*kur'-in*). A substance obtained from curare; a microcrystalline powder slightly soluble in cold water, easily soluble in alcohol, chloroform, and dilute acids. It has no effect upon the motor nerves, but acts upon the heart.

Current. (See Illus. Dict.) **C., Abterminal,** the secondary current observed at any point in the nerve or muscle on the passage of a single induction shock. **C., Adterminal,** the negative current observed at any point in a nerve or muscle on the passage of a single induction shock. **C., Anelectrotonic,** that observed at the anode on passage of a constant current through a nerve. **C.s, Angular,** those which are inclined to each other at some angle. **C., Branch.** See *C., Derived* (Illus. Dict.). **C.-breaker,** a rheotome. **C., Catelectrotonic,** that observed at the kathode on passage of a constant current through a nerve. **C.-changer,** a rheotrope. **C., Combined,** that obtained by the combined action of the galvanic and faradic currents. **C., d'Arsonval,** the high potential discharge of a condenser through a large solenoid of wire. **C., Inducing,** a primary current; one which by its opening or closure produces a faradic current in an adjoining circuit. Cf. *C., Induced* (Illus. Dict.). **C., Induction, C., Inductive.** See *C., Secondary* (Illus. Dict.). **C.-interrupter,** a rheotome. **C., Magnetoelectric,** a faradic current generated by a magnet. **C., Morton-,** the high potential, high frequency current first described by Wm. J. Morton, whose claims to priority consist in (1) the first intermittent and graduated flow from a static machine, in which the pulses are so frequent that their aggregate may be classed as a current; (2) the first apparatus to make effective a static machine having the advantages of very high frequency and oscillatory or alternating characteristics, without the disadvantages of subjecting the patient to the direct action of the primary or interrupted current. **C., Primary.** See *C., Inducing*. **C., Primitive,** an electric current from which a derived current has not been drawn off. **C.-regulator,** a rheostat. **C.-reverser,** a rheotrope. **C., Sinuous,** one sent in a curved line. **C., Sinusoidal,** an alternating induced electric current in which the electromotive force is so varied that its rise and fall in a positive direction are immediately succeeded without a break by an exactly corresponding fall and rise in the negative direction, and the rise and fall in both directions would, if graphically illustrated, describe a sine curve. [Jacoby.] **C., Spinal Cord,** an electric current applied by placing both the electrodes on the spine. **C., Spinal Cord Muscle,** an electric current in the application of which one electrode is placed over the spine, the other over a muscle. **C., Spinal Cord Nerve,** an electric current in the application of which one electrode is placed on the spine, the other on a nerve. **C., Static, C., Spark-gap,** one constituted by the continuous abstraction and renewal of a charge of static electricity. **C., Terrestrial,** thermoelectric currents due, according to Ampère, to atmospheric variations caused by the position of the sun, and which circulate from east to west, being perpendicular to the magnetic needle of each place. **C., Uniform,** an electric current which retains the same strength throughout its application. **C., Uninterrupted,** a continuous current. **C., Unit of,** an ampere.

Currie's Method of treating fevers. See *Affusion, Cold*.

Curry. (See Illus. Dict.) **C.-leaves,** the leaves of the rutaceous tree *Murraya koenigii*, Spr., used in India as an aromatic stimulant; when powdered they impart a peculiar flavor to curry.

Curtometer (*kur-tom'-et-er*) [*curvus*, bent; *μέτρον*, a measure]. A device for measuring curved surfaces.

Curvature. (See Illus. Dict.) **C., Compensatory,** in spinal curvature, a secondary curve occurring as the result of the efforts of the trunk to maintain its upright position. **C., Lateral, C., Rotarolateral** (of the spine). See *Scoliosis* (Illus. Dict.).

Curve. (See Illus. Dict.) **C., Barnes'.** See under *Barnes* (Illus. Dict.). **C.-basis,** a common level from which spring the ascending lines of a sphygmographic tracing. **C.s, Chauveau's,** in electrophysiology curves which show that with closing shocks the amount of stimulation obtained at first with the kathode grows with the strength of the current, then remains stationary and sometimes decreases. The degree of stimulation obtained with the anode regularly increases with the current and overtakes and surpasses that obtained with the kathode. With opening shocks the results are reversed. **C., Ellis-Damoiseau's, C., Garland's S.** See *Sign, Ellis'*. **C., Staircase-,** the myographic curve produced by repeated stimulation. **C., Temperature,** a graphic curve showin the variations of the temperature for a given period. **C.s, Traube's, C., Traube-Hering's.** See under *Traube* (Illus. Dict.).

Cushion. (See Illus. Dict.) 2. An aggregate of adi-

pose or elastic tissue relieving pressure upon tissues lying beneath. **C., Coronary,** the matrix of the upper edge of the hoofs in solipeds. **C. of the Epiglottis,** the tubercle of the epiglottis, a median elevation of the mucosa within the larynx below the epiglottis. **C., Eustachian,** a part of the posterior wall of the eustachian tube. **C., Passavant's,** the bulging of the posterior pharyngeal wall, produced during the act of swallowing, by the upper portion of the superior constrictor pharyngis. **C., Plantar,** in solipeds, a cuneiform fibrous body lying between the plantar part of the hoof and the perforans tendon.

Cusparidin (*kus-par'-id-in*) [*Cuspapui*, a South American Mission which exported the cusparia bark]. $C_{19}H_{17}NO_3$. A crystalline alkaloid obtained from cusparia bark. Its salts are more soluble than those of cusparin. It melts at 78° C.

Cusparin (*kus'-par-in*). $C_{20}H_{19}NO_3$. A crystalline alkaloid obtained from cusparia bark, readily soluble in alcohol, ether, chloroform, and acetone. It melts at 89° C. Syn., *Angusturin: Angosturin.*

Cuspated, Cusped, Cuspid, Cuspidal (*kusp-a'-ted, kuspd', kusp'-id, kusp'-id-al*). See *Cuspidate* (Illus. Dict.).

Cutal (*ku'-tal*). See *Aluminium Borotannate.*

Cuticle. (See Illus. Dict.) **C., Enamel, C. of Nasmyth.** See *Cuticula dentis* (Illus. Dict.).

Cuticolor (*ku-tik'-ol-or*) [*cutis*, the skin; *color*, color]. A term descriptive of various ointments and powders simulating the color of the skin and used in the treatment of skin diseases.

Cuticolous (*ku-tik'-ol-us*) [*cutis*, the skin; *colere*, to inhabit]. Living under the skin; said of parasitic larvas.

Cuticula. (See Illus. Dict.) 2. See *Layer, Cuticular.*

Cutification (*ku-tif-ik-a'-shun*) [*cutis*, the skin; *facere*, to make]. The formation of skin.

Cutin. (See Illus. Dict.) 2. A preparation of the muscular layer of the intestines of cattle. It is used for dressing wounds and as a substitute for catgut.

Cutis. (See Illus. Dict.) **C. ærea,** the bronzing of the skin in Addison's disease. **C. laxa.** See *Dermatolysis* (Illus. Dict.).

Cutitis (*ku-ti'-tis*) [*cutis*, the skin]. See *Dermatitis* (Illus. Dict.).

Cut-off (*kut'-off*). A device for cutting off the flow of a gas or liquid or electric current.

Cutol (*ku'-tol*). Aluminium borotannotartrate.

Cutting (*kut'-ing*). The operation of making a cut. **C. on the Gripe,** lateral lithotomy.

Cyamellone (*si-am-el'-ōn*). See *Mellon* (Illus. Dict.).

Cyanacetone (*si-an-as'-e-tōn*). $CH_3.CO.CH_2CN$. A derivative of the interaction of chloracetone and potassium cyanid. It boils at 120°–125° C. Syn., *Acetoacetic nitrile.*

Cyanacetyl (*si-an-as'-e-til*). See *Acetylisocyanid.*

Cyanate (*si'-an-āt*). A salt of cyanic acid.

Cyanformate (*si-an-form'-āt*). A salt of cyanformic acid.

Cyanformic (*si-an-form'-ik*). Containing formic acid and cyanogen.

Cyanic. (See Illus. Dict.) 2. Relating to or containing cyanogen.

Cyanocrystallin (*si-an-o-krist'-al-in*). The blue pigment of the egg and shell of the river-crab, lobster and other crustaceans.

Cyanoform (*si-an'-o-form*). $CH(CN)_3$. A compound occurring in small needles obtained by heating chloroform and potassium cyanid and alcohol.

Cyanogen. (See Illus. Dict.) Syn., *Prussin.* **C. Bromid,** bromin cyanid. **C. Chlorid,** CNCl, a liquid compound of chlorin and cyanogen crystallizing at 6° C. and boiling at 15.5° C. Syn., *Chlorcyanogen.*

Cyanogenesis (*si-an-o-jen'-e-sis*). The production of prussic acid in plants by the action of a cyanogenetic glucosid such as dhurrin.

Cyanophile (*si-an'-o-fil*) [κύανος, blue; φιλεῖν, to love]. Auerbach's term for the blue-staining nuclear substance of cells of plants and animals.

Cyanophilic, Cyanophilous (*si-an-o-fil'-ik, si-an-of'-il-us*). Having an especial affinity for blue or green dyes.

Cyanosed (*si'-an ōzd*). Affected with cyanosis.

Cyanosis. (See Illus. Dict.) **C., Local,** the preferred term for local anemia, digitus mortuus, regional ischemia, or local syncope.

Cyanurate (*si-an'-u-rāt*). A salt of cyanuric acid.

Cyanurea (*si-an-u'-re-ah*). $C_2H_3N_3O$. An amorphous body obtained from urea by action of cyanogen iodid with heat.

Cyanuric (*si-an-u'-rik*). Relating to or containing cyanurea.

Cyclamen (*sik'-lam-en*) [κύκλος, a circle]. A genus of herbs of the order *Primulaceæ.* **C. europæum,** L., a species of southern Europe; the corms have laxative and emmenagog properties and contain cyclamin.

Cyclamin (*sik'-lam-in*). A glucosid, $C_{30}H_{34}O_{10}$, from the corms of *Cyclamen europæum,* L., and the roots of *Primula officinalis.* It is a white microcrystalline powder or amorphous mass with a very sharp taste, soluble in alcohol and in water, the solution frothing as soapsuds; insoluble in ether, chloroform, and benzol. It is emetic and cathartic. Syn., *Primulin.*

Cyclamiretin, Cyclamirrhetin (*sik-lam-ir-e'-tin*). $C_{15}H_{22}O_2$. A white, tasteless, odorless mass obtained from cyclamin by boiling with dilute hydrochloric acid; insoluble in water, readily soluble in alcohol and ether.

Cyclamose (*sik'-lam-ōz*). $C_{12}H_{22}O_{11}$. A levorotary sugar obtained from the corms of *Cyclamen europæum,* L.; it reduces Fehling's solution.

Cycle (*si'-kel*) [κύκλος, a circle]. A period in which a round of operations or events is repeated; a succession of events or symptoms. **C., Aberrant,** the establishment of communication between the pulmonary and bronchial vessels from congestion due to mitral stenosis. **C., Cardiac,** the complete cardiac movements embracing the systolic and diastolic movements with the interval between them. **C., Cardiacovascular,** the circuit of the blood through the organism. **C. of Generation, C., Generations,** Haeckel's term for the successive changes through which an individual passes from its birth to the period when it is capable of reproducing its kind. **C. of Golgi,** that phase of development of *Plasmodium malariæ* which occurs in human blood. Cf. *C. of Ross.* **C. of Ross,** that phase of development of *Plasmodium malariæ* which occurs in the mosquito. Cf. *C. of Golgi.*

Cyclic. (See Illus. Dict.) 2. Having a self-limited course, as certain diseases. Cf. *Acyclic.*

Cyclochoroiditis (*si-klo-ko-roid-i'-tis*) [κύκλος, a circle; *choroiditis*]. Combined inflammation of the choroid and ciliary body.

Cyclopin (*sik'-lo-pin*). $C_{21}H_{28}O_{13}$. A glucosid occurring in bush-tea, *Cyclopia genistoides,* Vent., and *C. subternata,* Vog., two leguminous plants of South Africa.

Cycloplegic (*si-klo-plej'-ik*). 1. Relating to cycloplegia. 2. A drug which paralyzes the ciliary muscle.

Cyclopterin (*si-klop'-ter-in*). A protamin obtained from the spermatozoa of *Cyclopterus lumpus* (lumpsucker).

Cyclotherapy (*si-klo-ther'-a-pe*) [κύκλος, wheel; θεραπεία, therapy]. The use of the bicycle as a therapeutic measure.

Cyclothymiac (*si-klo-thi'-me-ak*). Affected with cyclothymia; a person so affected.

Cydonin (*si-do'-nin*) [Κυδωνία, a city in Crete where quince-trees flourished]. The mucilage from quince seeds. See under *Cydonium* (Illus. Dict.).

Cylinder. (See Illus. Dict.) 2. See *Cast.* **C.s, Bence Jones',** long, cylindric formations, derived from the seminiferous tubules, sometimes seen in the urine.

Cylindroadenoma (*sil-in-dro-ad-e-no'-mah*). An adenoma containing cylindric masses of hyaline matter.

Cylindrodendrite (*sil-in-dro-den'-drīt*). See *Paraxon.*

Cylindrosarcoma (*sil-in-dro-sar-ko'-mah*). A tumor containing both cylindromatous and sarcomatous elements.

Cylindruria (*sil-in-dru'-re-ah*) [κύλινδρος, a cylinder; οὖρον, urine]. The discharge of urine containing hyaline casts or cylindroids.

Cyllopodia (*sil-o-po'-de-ah*) [κυλλόπους, crook-footed]. The state of having a distorted foot, especially talipes varus.

Cyllosomus (*sil-o-so'-mus*) [κυλλός, crooked; σῶμα, body]. A monster characterized by an eventration in the side of the lower abdominal region and the imperfect development of the corresponding leg.

Cymenyl (*si'-men-il*). $C_{10}H_{13}$. The univalent radicle found in cymene.

Cymic (*si'-mik*). Relating to cymene.

Cymol (*si'-mol*). See *Cymene* (Illus. Dict.).

Cymophenol (*si-mo-fe'-nol*). See *Carvacrol* (Illus. Dict.).

Cymyl (*si'-mil*). See *Cymenyl.*

Cynanche. (See Illus. Dict.) **C. dysarthritica,** sore throat sometimes resulting in abscess occurring during the course of an attack of arthritis. Syn., *Arthritic angina.*

Cynanchin (*si-nan'-kin*). See *Asclepiadin* (Illus. Dict.).

Cynanchocerin (*si-nan-ko'-sur-in*). A crystalline homolog of benzyl alcohol, melting at 145°–146° C., soluble in hot alcohol, obtained from *Cynanchum acutum,* L.

Cynanchol (*si-nan'-kol*). $C_{15}H_{24}O$. A crystalline compound, homologous with benzyl alcohol, obtained from *Cynanchum acutum,* L.

Cynapine (*si'-nap-ēn*). A poisonous alkaloid obtained from the seeds of *Æthusa cynapium,* L.

Cynarase (*si'-nar-āz*). A ferment isolated by Morgenroth from flowers of the wild artichoke, *Cynara cardunculus,* L., which coagulates milk and is used in Italy in making a kind of cheese from sheep's milk.

Cynoglossum (*si'-no-glos-um*) [κύων, a dog; γλῶσσα, the tongue]. A genus of boraginaceous plants. **C. officinale,** L., hound's-tongue, the powdered root, leaves, and flowers are recommended as a cure for ulcerated epitheliomas; application twice daily.

Cynomania (*si-no-ma'-ne-ah*) [κύων, dog; μάνια, madness]. Term proposed by Ellis (1899) as a substitute for lyssa or rabies.

Cynometra (*si-no-met'-rah*) [κύων, a dog; μήτρα]. A genus of leguminous plants. **C. cauliflora,** L., a species indigenous to Malaya, has edible fruit used as a tonic. **C. ramiflora,** L., an East Indian species; the root is purgative, the leaf is used in asthma, the seeds yield an oil.

Cynomorion (*si-no-mo'-re-on*) [κύων, a dog; μόριον, the penis]. A genus of plants of the order *Balophoreæ.* **C. coccineum,** L., a species indigenous to the regions about the Mediterranean. The blood-red, astringent, and styptic juice is used in diarrhea.

Cyophorin (*si-of'-or-in*). See *Gravidin* (Illus. Dict.).

Cyotrophia (*si-o-tro'-fe-ah*). See *Cyotrophy.*

Cyotrophy (*si-ot'-ro-fe*) [κύος, fetus; τροφή, nourishment]. Nutrition of the fetus.

Cyperus (*si-pe'-rus*) [κύπειρον, a sweet-smelling marsh plant]. A genus of sedges. **C. articulatus,** L., adrue, a species of South America, is antiemetic and tonic. Dose of fl. ext., 10–30 m (0.6–1.8 c.c.). **C. rotundus,** L., a tropical species, the tubers of which are tonic and stimulant and are used in treatment of cholera.

Cyprian (*sip'-re-an*) [*Island of Cyprus,* the original source of copper]. Containing copper.

Cypridol (*sip'-rid-ol*). A 1% solution of nascent mercuric iodid in aseptic oil; it is used in syphilis (dose, 0.2 gm.) and as an application in skin-diseases.

Cypridopathy (*sip-rid-op'-ath-e*) [Κύπρις, Venus; πάθος, disease]. An adenopathy of venereal origin.

Cyrtoid (*sur'-toid*) [κυρτός, curved; εἶδος, likeness]. Like a hump.

Cyrtometry (*sur-tom'-et-re*) [κυρτός, curved; μέτρον, a measure]. The measurement of the curves of the body.

Cyst. (See Illus. Dict.) **C.s, Adgenic,** dermoid congenital cysts adhering to the genial tubercles. **C.s, Adhyoid,** of Gérard-Marchant, dermoid cysts adherent to the hyoid bone. **C., Adventitious,** one enclosing a foreign body. **C., Air,** one containing gas. **C., Allantoic,** cystic dilation of the urachus. **C., Alveolar,** one communicating with the alveolus of a tooth. **C., Aneurysmal,** an aneurysmal sac. **C., Apoplectic,** one enclosing a cerebral effusion of blood. **C., Arachnoid,** a meningeal hematoma. **C., Atheroma-.** See *C., Dermoid* (Illus. Dict.). See *Sign, Küster's* (Illus. Dict.). **C.s, Baker's,** hernial protrusions of the synovial membrane of the joints through the fibrous capsule. **C., Boyer's,** cystic enlargement of the subhyoid bursa. **C., Branchial,** one formed from incomplete closure of a branchial cleft in an embryo. **C. of the Broad Ligament,** one originating in the ovary and developing between the layers of the broad ligament. **C., Bursal,** a cyst-like dilation of a bursa. **C., Butter,** a cystic tumor of the mammary gland, containing semisolid contents of yellowish-brown color and of a buttery consistence, that may harden with exposure to the air. **C., Cholesteomatous.** See *Cholesteatoma* (Illus. Dict.). **C., Chyle,** one in the mesentery containing chyle. **C., Colloid,** a cyst with jelly-like contents. **C., Compound.** See *C., Multilocular* (Illus. Dict.). **C., Conjunctival,** a rare congenital form, transparent and large as a pea, occurring near the corneal margin. **C., Cowperian, C., Cowper's,** a retention cyst formed by Cowper's gland. **C.s, Crabs' Eye,** small vesicles distinctive of gout which appear over Heberden's nodosities. **C., Cuticular.** 1. One developed in the skin. 2. See *C., Dermoid* (Illus. Dict.). **C., Daughter,** one developed by secondary growth from the walls of a larger one. **C., Dilation.** See *C., Retention* (Illus. Dict.). **C., Distention,** a normal serous cavity distended with a collection of watery fluid. **C., Epidermal,** an atheroma. **C., Extravasation.** See *C., Exudation.* **C., False.** See *C., Adventitious,* and *C., Exudation* (Illus. Dict.). **C., Follicular,** one due to the occlusion of the duct of a small follicle or gland. **C., Gärtnerian,** a cystic tumor originating in Gärtner's duct. **C., Hairy,** a dermoid cyst containing hair. **C., Hematic.** See *Hematoma* (Illus. Dict.). **C.s, Hemorrhagic Arachnoid.** See *C., Arachnoid.* **C., Hygromatous.** See *Hygroma* (Illus. Dict.). **C., Intraligamentous.** See *C. of the Broad Ligament.* **C., Involution,** multiple cystic dilation of the milk-ducts after the menopause. **C., Kobelt's,** a small, pedunculated cyst formed by one of Kobelt's tubes. **C., Morgagnian.** See *Hy-*

datid of Morgagni (Illus. Dict.). **C., Mucoid,** a retention cyst in a mucous follicle or in the duct of a muciparous gland. **C.s, Nabothian,** small retention cysts formed by the nabothian follicles. **C., Neural,** a cyst-like distention of a lymph-space of the brain or spinal cord. **C., Nevoid,** one with vascular walls. **C., Ovarian,** a cystoma of the ovary. **C., Pancreatic,** a retention cyst of the pancreatic duct. **C., Parovarial, C., Parovarian,** one originating in the parovarium. **C., Phylloid,** a cystic adenosarcoma. **C., Pilous, C., Pilocystic.** See *Pilonidal Fistula* (Illus. Dict.). **C., Proliferation, C., Proliferative, C., Proliferous.** See *Proliferative Cysts* and *Proliferous Cysts* (Illus. Dict.). **C., Proligerous, C., Recurring Proliferous,** a cystic adenosarcoma. **C., Renal,** a cyst-like dilation of the kidney. **C., Resting.** See *Hypnocyst* (Illus. Dict.). **C., Rice-grain,** cystic distention of a synovial sheath containing rice-seed bodies. **C., Salivary,** a retention cyst of the duct of a sebaceous gland. **C., Sanguineous,** one containing blood. **C., Seminal,** a retention cyst of a seminiferous tubule. Syn., *Oscheocele seminalis.* **C., Serous,** one containing transparent watery fluid. **C., Simple, C., Single,** a unilocular cyst. **C., Spermatic,** a retention cyst connected with the spermatic duct. **C., Sterile,** a true hydatid cyst which fails to reproduce. **C., Subsynovial,** a cystic enlargement of a synovial follicle due to obstruction. **C., Testicular.** Same as *C., Seminal.* **C., Thyroid,** a cyst connected with the thyroid gland. **C., True,** an abnormal cyst not formed by the dilation of some canal or cavity. **C., Umbilical,** a congenital cyst in the umbilical region said to be due to the shutting off of a portion of the fetal stomach. **C., Urinary,** a thin-walled cyst of the cortical substance of the kidney, projecting beneath the capsule and containing a clear yellow fluid. **C.-worm.** See *Cysticercus* (Illus. Dict.).

Cystadenoma (*sist-ad-en-o′-mah*) [κύστις, bladder; *adenoma*]. 2. Adenoma of the bladder. **C. papilliferum,** one with papillas on the inner aspect of the cyst-walls.

Cystadenosarcoma (*sist-ad-en-o-sar-ko′-mah*). Combined cystadenoma and sarcoma.

Cystamine (*sist′-am-in*). A compound of formaldehyd and ammonia, used as a bactericide and antiseptic in cystitis and gout. Dose, 5–10 gr.

Cystanastrophe (*sist-an-as′-tro-fe*). See *Inversion of the Bladder* (Illus. Dict.).

Cystauchenotomy (*sist-aw-ken-ot′-o-me*) [κύστις, bladder; αὐχήν, neck of the bladder; τέμνειν, to cut]. A surgical incision into the neck of the bladder.

Cystectomy (*sist-ek′-to-me*) [κύστις, a bladder; ἐκτέμνειν, to cut out]. Excision of the cystic duct.

Cystencephalia (*sist-en-sef-al′-e-ah*) [κύστις, a bladder; ἐγκεφαλός, the brain]. The state or condition of a cystencephalus.

Cysteogenesis (*sist-e-o-jen′-e-sis*) [κύστις, a pouch; γεννᾶν, to produce]. The formation of cysts.

Cysterethism (*sist-er′-eth-izm*) [κύστις, the bladder; ἐρεθισμός, irritation]. Irritability of the bladder.

Cysthypersarcosis (*sist-hi-pur-sar-ko′-sis*) [κύστις, the bladder; ὑπέρ, over; σάρκωσις, a fleshy excrescence]. Thickening of the muscular coat of the bladder.

Cystic. (See Illus. Dict.) 3. A drug efficient in affections of the urinary bladder.

Cysticercoid (*sist-i-sur′-koid*). Resembling *Cysticercus;* applied to any encysted tapeworm larva.

Cysticolithectomy (*sist-ik-o-lith-ek′-to-me*) [κύστις, a bladder; λίθος, a stone; ἐκτέμνειν, to cut out]. v. Greiffenhagen's operation for removal of calculi from the gall-bladder, consisting in opening the cystic duct alone, and leaving the gall-bladder intact.

Cysticotomy (*sist-ik-ot′-o-me*) [κύστις, a bladder; τομή, a cutting]. Incision into the cystic duct.

Cystidolaparotomy (*sist-id-o-lap-ar-ot′-o-me*) [κύστις, a bladder; λαπάρα, loin; τομή, a cutting]. An abdominovesical incision.

Cystidotrachelotomy (*sist-id-o-trak-el-ot′-o-me*). See *Cystauchenotomy.*

Cystinemia (*sist-in-e′-me-ah*) [*cystin;* αἷμα, blood]. The occurrence of cystin in the blood.

Cystinous (*sist′-in-us*). Containing cystin.

Cystirrhagia (*sist-ir-aj′-e-ah*). See *Cystohemorrhagia* (Illus. Dict.).

Cystitis. (See Illus. Dict.) **C. colli proliferans œdematosa.** See *C. papillomatosa.* **C., Croupous, C., Diphtheric.** See *C., Exfoliative* (Illus. Dict.). **C. fellea.** See *Cholecystitis* (Illus. Dict.). **C. glandularis cystica,** a chronic form in which besides nests of solid epithelium gland-like structures or tubes are found, which apparently penetrate deeply into the muscular wall of the urinary tract. **C., Necrotic, C., Pseudomembranous.** See *C., Exfoliative* (Illus. Dict.). **C. nodularis,** a chronic form marked by the presence of numerous minute lymphoid nodules in the superficial layers of the mucosa. They consist of closely packed masses of lymphocytes, that lie directly beneath the epithelium, and cause small protrusions of the surface of the urinary tract. **C. papillomatosa,** chronic cystitis attended with formation of red translucent papillas. **C. parenchymatosa, C. submucosa, C., Subserous,** that affecting the entire thickness of the wall of the bladder. **C. typhosa,** inflammation of the mucosa of the bladder due to the action of *Bacillus typhi abdominalis.*

Cystitomy (*sist-it′-o-me*). See *Cystotomy* (2).

Cystocolostomy (*sist-o-kol-os′-tom-e*) [κύστις, the bladder; *colostomy*]. The surgical establishment of a permanent passage from the bladder to the colon.

Cystoenterocele (*sist-o-en-ter′-o-sēl*) [κύστις, a bladder; ἔντερον, an intestine; κήλη, a tumor]. A hernia containing a part of the bladder and of the intestine.

Cystoepiplocele (*sist-o ep-ip′-lo-sēl*) [κύστις, a bladder; ἐπίπλοον, the omentum; κήλη, hernia]. A hernia containing both bladder and omentum.

Cystoepithelioma (*sist-o-ep-e-the-le-o′-mah*) [κύστις, a cyst; *epithelioma*]. An epithelioma containing cysts filled with fluid.

Cystogen (*sist′-o-jen*). See *Urotropin.*

Cystogenia, Cystogenesis (*sist-o-je′-ne-ah, sist-o-jen′-e-sis*) [κύστις, a cyst; γεννᾶν, to produce]. The formation or genesis of cysts.

Cystohemia (*sist-o-he′-me-ah*) [κύστις, a bladder; αἷμα, blood]. A congested condition of the bladder.

Cystoid (*sist′-oid*) [κύστις, a cyst; εἶδος, likeness]. 1. Having the form or appearance of a cyst. 2. Composed of a collection of cysts. 3. A pseudocyst.

Cystology (*sist-ol′-o-je*) [κύστις, a cyst; λόγος, science]. The science of cyst-formations.

Cystoma. (See Illus. Dict.) **C. glandulare proliferum, C. proliferum papillare,** proliferating cystoma, a cystic formation derived from gland-ducts and acini. It is the most common form of ovarian and pancreatic cystomas; the lining of the inner wall consists of epithelium showing papillomatous growths or crypts resembling the acini of a gland. Syn., *Cylindrocellular adenoma.*

Cystomyoma (*sist-o-mi-o′-mah*). Cystoma combined with myoma.

Cystomyxoadenoma (*sist-o-miks-o-ad-en-o′-mah*). Cystomyxoma with adenoma.

Cystoneuralgia (*sist-o-nu-ral′-je-ah*) [κύστις, bladder; νεῦρον, a nerve; ἄλγος, pain]. Neuralgia of the bladder; cystalgia.

Cystophlegmatic (*sist-o-fleg-mat'-ik*) [κύστις, bladder; φλέγμα, phlegm]. Pertaining to vesical mucus.

Cystopyelitis (*sist-o-pi-el-i'-tis*) [κύστις, bladder; *pyelitis*]. Ultzmann's name for inflammation of the urinary bladder and the pelvis of the kidney.

Cystopyelonephritis (*sist-o-pi-e-lo-nef-ri'-tis*). See *Cystopyelitis*.

Cystopyic (*sist-o-pi'-ik*). Relating to suppuration of the bladder.

Cystorectostomy (*sist-o-rek-tos'-to-me*) [κύστις, a bladder; *rectum*, rectum; στόμα, a mouth]. The formation of a fistula between the rectum and bladder.

Cystorrhaphy (*sist-or'-af-e*) [κύστις, a bladder; ῥαφή, a seam]. Suture of the bladder.

Cystorrhea. (See Illus. Dict.) 2. Vesical hemorrhage. 3. Polyuria.

Cystosarcoma (*sist-o-sar-ko'-mah*) [κύστις, a cyst; *sarcoma*]. Müller's name for a sarcoma containing cysts.

Cystoschisis (*sist-o-ski'-sis*) [κύστις, a bladder; σχίσις, a cleaving]. A congenital fissure of the urinary bladder from imperfect development.

Cystoscirrhus (*sist-o-skir'-us*) [κύστις, a bladder; σκιῤῥός, an induration]. A hard carcinoma of the urinary bladder.

Cystose (*sist'-ōz*) [κύστις, a cyst]. Bladdery; full of cysts.

Cystosis (*sist-o'-sis*) [κύστις, a cyst]. Spinal curvature.

Cystospermitis (*sist-o-spurm-i'-tis*) [κύστις, a bladder; σπέρμα, a seed]. Inflammation of the seminal vesicles.

Cystosteatoma (*sist-o-ste-at-o'-mah*). See *Cyst*, *Sebaceous* (Illus. Dict.).

Cystotomy. (See Illus. Dict.) 2. The surgical incision or opening the capsule of the crystalline lens. **C. by Cutting on the Gripe**, the old method of cutting on the stone grasped forward into the perineum by the left finger in the rectum.

Cystotrachelotomy (*sist-o-trak-el-ot'-o-me*). See *Cystauchenotomy*.

Cysturectasia (*sist-u-rek-ta'-ze-ah*). See *Cystectasia* (Illus. Dict.).

Cytameba, Cytamœba (*sit-am-e'-bah*). See *Plasmodium malariæ* (Illus. Dict.).

Cytase (*si'-tāz*). Metchnikoff's name for complement.

Cytaster (*si-tas'-tur*). The same as *Aster*.

Cytherean (*si-the'-re-an*) [*Cythera*, an island sacred to Venus]. Venereal.

Cytheromania (*sith-ur-o-ma'-ne-ah*). See *Nymphomania* (Illus. Dict.).

Cytisin. (See Illus. Dict.) **C. Hydrochlorate,** $C_{11}H_{14}N_2O$. HCl, white crystals soluble in water. It is a nervine. Dose, $\frac{1}{6}$ – $\frac{1}{2}$ gr. (0.0032–0.005 gm.) subcutaneously. **C. Nitrate,** $C_{11}H_{14}N_2O$. $(HNO_3)_2 + 2H_2O$, white or yellow crystals soluble in water, used as cytisin hydrochlorate.

Cytisism (*sit'-is-izm*) [κύτισος, a kind of clover]. Poisoning by means of *Laburnum anagyroides*, Medic., sometimes occurring in children and characterized by pains in the stomach, vomiting, weakness in the legs, meteorism, and collapse.

Cytitis (*si-ti'-tis*) (*cutis*, the skin]. Dermatitis.

Cytoblast. (See Illus. Dict.) 2. One of the hypothetic ultimate vital units of the cell. See *Bioblast*. 3. Any naked cell or protoblast.

Cytochemism (*si-to-kem'-izm*) [κύτος, a cell; χημεία, chemistry]. The reaction of the living cell to chemic reagents, antitoxins, etc.

Cytochemistry (*si-to-kem'-is-tre*). The chemistry of living cells.

Cytochrome (*si'-to-krōm*) [κύτος, a cell; χρῶμα, color]. Applied by Nissl to those nerve-cells having an ill-developed cell-body which does not appear to surround the nucleus completely, and in which the nucleus does not exceed in size that of an ordinary leukocyte.

Cytoclasis (*si-to-kla'-sis*) [κύτος, a cell; κλάν, to break, to weaken]. Cell-necrosis.

Cytodendrite (*si-to-den'-drīt*) [κύτος, cell; δένδρον, a tree]. Lenhossék's term for a true medullated, cellulifugally conducting collateral fibril of a nerve-cell. Cf. *Axodendrite*.

Cytodiagnosis (*si-to-di-ag-no'-sis*). The determination of the nature of a pathogenic liquid by the study of the cells it contains. [Widal and Ravant, 1900.]

Cytodistal (*si-to-dis'-tal*) [κύτος, a cell; *distare*, to stand apart]. Applied to that portion of an axon furthest removed from its cell of origin.

Cytographic (*si-to-graf'-ik*) [κύτος, a cell; γράφειν, to write]. Descriptive of cells.

Cytohydrolist (*si-to-hi'-dro-list*) [κύτος, a cell; *hydrolysis*]. An agent producing hydrolysis of cellular substance.

Cytolymph (*si'-to-limf*) [κύτος, cell; *lympha*, clear water]. The ground-substance or matrix of the cytoplasm of cells.

Cytolysin (*si-tol'-is-in*) [κύτος, a cell; λύσις, a loosing]. A substance capable of destroying cells, and resulting from inoculation by organic products. Cf. *Spermolysin*, *Epitheliolysin*, *Nephrolysin*, *Leukocytolysin*.

Cytolysis (*si-tol'-is-is*). Cell-dissolution.

Cytolytic (*si-to-lit'-ik*). Relating to or concerned in cell-destruction.

Cytomicrosome (*si-to-mik'-ro-sōm*). See *Microsoma* (Illus. Dict.).

Cytomorphosis (*si-to-mor-fo'-sis*) [κύτος, a cell; μόρφωσις, a shaping]. A term proposed by Minot to designate comprehensively all the structural alterations which cells or successive generations of cells may undergo from the earliest undifferentiated stage to their final destruction.

Cytophagy (*si-tof'-aj-e*) [κύτος, a cell; φαγεῖν, to devour]. The englobing of cells by other cells.

Cytophil (*si'-to-fil*) [κύτος, a cell; φιλεῖν, to love]. The haptophorous group of the intermediary body with which it combines with the receptor of the cell.

Cytophysiology (*si-to-fiz-e-ol'-o-je*) [κύτος, cell; *physiology*]. The physiology of a cell unit.

Cytoplasm. (See Illus. Dict.) 2. Cell-plasm other than that of the nucleus; the paraplasm and endoplasm of a cell.

Cytoplastin (*si-to-plas'-tin*) [κύτος, cell; πλάσσειν, to mold]. Schwartz's name for cell protoplasm.

Cytoproximal (*si-to-proks'-im-al*) [κύτος, a cell; *proximare*, to draw near]. A term applied to that portion of an axon nearest its cell of origin.

Cytoreticulum (*si-to-re-tik'-u-lum*). See *Cytomitoma* (Illus. Dict.).

Cytoryctes (*si-tor-ik'-tēz*) [κύτος, a cell; ὀρύκτης, a digger]. Name given by Guarnieri (1892) to intracellular bodies produced by inoculating vaccine lymph into the cornea of rabbits. They are regarded by him and by Wasielewsky as cellular parasites and as the causative agents of vaccinia. Huchel regards them as the products of a specific degeneration of the cytoplasm induced by the vaccine virus. Syn., *Guarnieri's vaccine bodies*.

Cytosin (*si'-tos-in*). $C_{21}H_{30}N_{10}O_4 + 5H_2O$. A basic substance obtained by Kossel and Neumann as a cleavage product from thymin. Cf. *Acid*, *Thyminic*.

Cytosome (*si'-to-som*) [κύτος, a cell; σῶμα, a body]. Of Haeckel, a cell-body as distinguished from the nucleus.

Cytospongium (*si-to-spun'-je-um*) [κύτος, cell; σπόγγος, sponge]. The cell network or spongioplasm containing in its meshes the hyaloplasm. Cf. *Mitome* and *Paramitome.*

Cytothesis (*si-to-the'-sis*) [κύτος, a cell; θέσις, a placing or arranging]. Cell-repair.

Cytotoxin (*si-to-toks'-in*). See *Cytolysin.* Cf. *Hemotoxin, Hepatotoxin, Leukotoxin, Nephrotoxin, Spermatoxin.*

D

Daboia (*da-boi'-ah*) [native name]. A genus of solenoglyph serpents established by Gray, 1840; certain species are worshiped in India. **D. russellii,** a venomous species of viper dreaded greatly in India and Ceylon, where it is called Russell's viper, cobra monil, and ticpolonga. The nostrils are large, lateral, and surrounded by three scales; color brown with three rows of large white-edged rings, ventral surface yellow; habits nocturnal. The venom causes intravascular thrombosis.

Dacryadenoscirrhus (*dak-re-ad-en-o-skir'-us*) [δάκρυ, a tear; ἀδήν, a gland; σκιῤῥός, hard]. An indurated tumor of the lacrimal gland.

Dacryocystitis. (See Illus. Dict.) **D. blennorrhoica,** purulent inflammation of the lacrimal sac. **D. phlegmonosa,** inflammation of the tissues composing the lacrimal sac and of the surrounding soft parts.

Dacryocystoblennorrhea (*dak-re-o-sist-o-blen-o-re'-ah*). See *Dacryocystitis blennorrhoica.*

Dacryocystotome (*dak-re-o-sist'-o-tōm*) [δάκρυ, a tear; κύστις, a sac; τομή, a cutting]. An instrument for incising the lacrimal sac.

Dacryocystotomy (*dak-re-o-sist-ot'-o-me*). Incision of the lacrimal sac.

Dacryuria (*dak-re-ū'-re-ah*) [δάκρυ, a tear; οὖρον, urine]. The enuresis which accompanies weeping in cases of hysteria, fright, or nervousness.

Dactylic (*dak'-til-ik*) [δάκτυλος, a finger]. Pertaining to a finger or toe.

Dactyliferous (*dak-til-if'-ur-us*) [δάκτυλος, a finger; *ferre,* to bear]. 1. Having fingers or finger-like parts, organs, or appendages. 2. [δάκτυλος, a date, so called because shaped like a dactyl]. Date-bearing, as *Phœnix dactylifera,* the date palm.

Dactylitis. (See Illus. Dict.) **D. syphilitica,** a rare tertiary-syphilitic affection of the fingers and toes, consisting of a gummatous infiltration of the subcutaneous connective tissue, and of the fibrous portions of the joints and bones. It is accompanied by great deformation, and is to be distinguished from a similar affection of the muscular tissues called by Lewin phalangitis syphilitica (*q. v.*). Syn., *Paronychia syphilitica.*

Dactylius (*dak-til'-e-us*) [δακτύλιος, anything ring-shaped]. See *Parasites, Table of* (Illus. Dict.).

Dactylocampsodynia (*dak-til-o-kamp-so-din'-e-ah*) [δάκτυλος, a finger; κάμψις, a bending; ὀδύνη, pain]. Painful flexion of the fingers or toes.

Dactylograph (*dak-til'-o-graf*) [δάκτυλος, a finger; γράφειν, to write]. 1. A "typewriter"; a writing machine operated by the fingers. 2. A keyboard instrument for the purpose of communication between blind deaf-mutes.

Dactylose, Dactylous (*dak'-til-ōz, -us*). See *Dactylate* (Illus. Dict.).

Dactylotheca (*dak-til-o-the'-kah*) [δάκτυλος, a finger; θήκη, a case]. See *Finger-cot.*

Dadyl (*dad'-il*). Blanchet and Sell's name for a camphene produced by the action of lime on artificial camphor.

Dædaleum. See *Dedaleum.*

Dæmia (*de'-me-ah*). A genus of plants of the order *Asclepiadeæ.* **D. extensa,** R. Br., a twining, shrubby plant of eastern India, Malaya, and tropic Africa. It is employed in infusion in the treatment of pulmonary complaints. The juice of the leaves mixed with tabashir or chunam, a silicious deposit found in bamboos, is applied externally in cases of rheumatism.

Dæmonorops (*de-mon'-o-rops*) [δαίμων, a devil; ῥώψ, a shrub]. A genus of plants of the order *Palmæ.* **D. draco,** Blume, a palm of Malaya; the inspissated juice constitutes the finest dragon's-blood. **D. grandis,** Mart., same habitat as *D. draco,* affords a variety of dragon's-blood.

Dahlia (*dah'-le-ah*) [*Dahl,* a Swedish botanist]. A genus of composite plants. The roots of several species are edible, diuretic, diaphoretic, and carminative, and furnish a purple coloring-matter. The bulbs of **D. variabilis,** Desf., a Mexican species, yield white inulin (*q. v.*). **D.-paper,** a purple test-paper made from several species of *Dahlia;* acids change its color to red and alkalis to green. **D.-violet.** See *Pyoktanin, Blue.*

Dahlin (*dah'-lin*). 1. An anilin dye obtained by the action of ethyl iodid on mauvein. It gives a reddish-purple color 2. A form of inulin (Kiliani-Merck) obtained from the roots of *Inula helenium,* Linn. (See *Inulin.*) It is also called *Menyanthin, Alantin, Sinistrin, Syantherin.*

Dal fil [Arabic, swollen leg]. A native name for elephantiasis arabum.

Dalbergia (*dal-bur'-je-ah*) [*N. Dalberg,* Swedish physician (1730–1829)]. A genus of tropic leguminous, papilionaceous plants. **D. sissoo,** Roxb., a useful timber tree of India and Afghanistan. The raspings of the wood are employed as an alterative. **D. sympathetica,** Nimmo., a tree of the East Indies. An infusion of the bark is administered in dyspepsia; the leaves are applied externally in leprosy and other cutaneous diseases and internally as an alterative. The seeds yield an oil used in rheumatism, and the milky juice of the root is applied to ulcers.

Dalea (*da'-le-ah*) [*Samuel Dale,* English physician (1650–1739)]. A genus of plants of the order *Leguminosæ.* **D. emoryi,** A. Gray, a species found in Mexico and California; the branches yield a yellowish-brown dye. **D. fruticosa,** G. Don., a species found in Mexico and the West Indies; the fragrant leaves are used as a substitute for vanilla. **D. polyphylla,** Mart. and Gal., a Mexican species employed as an antiperiodic.

Daltonian (*dal-ton'-e-an*). 1. Pertaining to John Dalton, an English chemist (1766–1844). 2. A color-blind person.

Damar, Damaria (*dam'-ar, dam-a'-re-ah*). See *Dammar* (Illus. Dict.).

Damascenin (*dam-as-e'-nin*) [*damascenus*, of Damascus]. An alkaloid from *Nigella damascena*.

Dambose (*dam'-bōz*) [*n'dambo*, the African name]. $C_6H_{12}O_6$. A glucose derived from Gaboon caoutchouc. It forms hexagonal prisms, melts at 212° C., and is soluble in water.

Dambosite (*dam'-bo-sīt*). $C_6H_{10}(CH_3)_2O_6$. The dimethyl ether of dambose.

Dammar. (See Illus. Dict.) Syn., *Damar; Damaria; Resina damara.* **D., American,** a hard, fragrant, reddish resin obtained from *Araucaria braziliana*, A. Rich. **D., Australian,** a product of *Agathis australis*, Steud., and *Dammara ovata*, C. Moore; a semifossil resin found in the Kauri fields of New Zealand. It has an aromatic taste, balsamic odor, and resembles copal. On distillation it yields dammarol and dammarone (*q. v.*). **D., Bengal,** a product of the sal-tree, *Shorea robusta*, Gaertn. f. **D., Black,** a resin obtained from *Canarium strictum*, Roxb., and *C. rostratum*, Zipp. It is black in reflected light, amber-colored by transmitted light. Partly soluble in hot alcohol, soluble in oil of turpentine. A proposed substitute for Burgundy pitch. **D., East Indian, D., Indian,** the product of *Hopea micrantha*, Hook., *H. splendida*, De Vriese., *Agathis loranthifolia*, Salisb., and *Engelhardtia spicata*, Blume. It occurs in trade as irregular fragments, yellowish, transparent; it has a conchoidal fracture and is softer than copal. **D., New Zealand.** See *D., Australian.* **D. Pine,** the *Agathis loranthifolia*, Salisb. **D. puti** [Hind., cat's-eye dammar], the resin of *Agathis loranthifolia*, Salisb. **D., Sal-.** See *D., Bengal.* **D. of the Sal-tree.** See *D., Bengal.* **D. selan,** the resin of *Vateria ceylanica*, Wight. **D. Varnish,** a mounting medium used in microscopy; it is made by adding 10 parts of white dammar to 20 parts of benzene, decanting after 24 to 48 hours, and adding 4 parts of pure oil of turpentine. **D., White,** a resin obtained from *Vateria indica*, Linn.

Dammara. A genus of plants of the order *Coniferæ.* **D. ovata,** C. Moore, a species of New Caledonia; its exudate occurs as a semifossil resin in the Kauri fields of New Zealand. See *Dammar, Australian.* **D. vitiensis,** Seem., a lofty tree native of the Fiji Islands. Its resin, called *mabradra* by the natives, is the Fijian copal of trade.

Dammarane (*dam-ar'-ān*). A neutral resin obtained from gum dammar.

Dammarin (*dam'-ar-in*). A resin extracted by Brandes and Lecanu from gum dammar.

Dammarol (*dam'-ar-ol*). A volatile oil obtained by distillation from Australian dammar. It contains 82.2% of carbon and 11.1% of hydrogen.

Dammarone (*dam'-ar-ōn*). A yellow volatile oil, obtained by the distillation of Australian dammar with lime.

Dammaryl (*dam'-ar-il*). That constituent of Indian dammar which is insoluble in weak alcohol and in ether.

Dammer (*dam'-ur*). See *Dammar.*

Damper (*damp'-ur*) [ME., *dampen*, to choke]. 1. A shutter placed in a flue to control draft. 2. A device attached to a galvanometer to control the secondary currents.

Danaidin (*dan-ah'-id-in*). An alkaloid occurring in *Danais fragrans*, Gaert.; it is soluble in alcohol and water and affords a yellow dye.

Danain (*dan-ah'-in*). See *Danaidin.*

Danais (*dan-ah'-is*) [Δαναίς, one of the daughters of Danaus]. A genus of plants of the order *Rubiaceæ.* **D. fragrans,** Gaertn. f., a native of the Mascarine Islands and Madagascar. The root and bark, together with the alkaloid danaidin, are used as a substitute for cinchona; the fresh juice is employed as a vulnerary, and a decoction of the root is a remedy in skin-diseases.

Dance. (See Illus. Dict.) **D., St. Guy's,** chorea. **D. of St. John the Baptist,** a form of chorea major. Possibly the connection with this saint was through the dancing of the daughter of Herodias, but more probably it was because the old pagan festival of dancing and leaping through fire took place on St. John's Day at midsummer. (Fagge and Pye-Smith.)

Dancing Madness. Synonym of *Choromania.*

Dansomania (*dan-so-ma'-ne-ah*) [Fr., *danser*, to dance; μανία, madness]. Epidemic chorea.

Danta (*dan'-tah*) [Sp.]. The American tapir, *Tapirus americanus;* the powdered hoofs are employed as a sudorific and as a remedy for epilepsy.

Daphne. (See Illus. Dict.) **D. alpina,** L., a low shrub native of the Mediterranean region and the Himalayas. It contains daphnin (*q. v.*). **D. cannabina,** Wall., the Nepal paper-shrub, a small tree or shrub of the Himalaya region. The bark affords good paper stock; the bark and root are purgative. **D. cneorum,** L., the garland flower, a poisonous species indigenous to southern Europe. The bark is employed as a vesicant and as a dye-stuff. **D. gnidium,** Linn., flax-leaved daphne, a poisonous species growing in southern Europe. It affords in part the mezereum of commerce, as well as a yellow dye. **C. laureola,** L., dwarf-bay, wood-laurel, spurge-laurel. A species indigenous to southern Europe and northern Africa. It is one of the sources of mezereum. **D. mezereum,** L., the mezereon, a species native to Europe and northern Asia. It is cultivated for its root, which is the chief source of mezereon. The berries act as a drastic purgative. Cf. *Daphnism.* **D. pontica,** L., a poisonous species of Asia Minor. The honey made from its flowers is said to be poisonous.

Daphnism (*daf'-nizm*). Poisoning by *Daphne mezereum*, L., or allied plants. It produces a hemorrhagic gastroenteritis with delirium and collapse.

D'Arcet's Metal. See under *Metal.*

Dasya (*da-se'-ah*) [δασύς, hairy]. A genus of marine *Algæ* indigenous to the Mediterranean. **D. coccinea,** a species of bright scarlet color, used in the preparation of the vermifuge known as helminthochorton.

Datiscetin (*da-tis'-et-in*). $C_{15}H_{10}O_6$. A dissociation-product of datiscin, occurring in colorless needles soluble in alcohol, ether, and alkalis, insoluble in water.

Datura. (See Illus. Dict.) **D. arborea,** Linn., a South American species, the leaves of which are used as an emollient. **D. ceratocaula,** Jacq., a species indigenous to tropic America; its properties are similar to those of *D. stramonium.* **D. fastuosa,** L., a species found throughout the tropics of the Old World. The root is administered by Mohammedan physicians in cases of epilepsy. The fruit, seeds, and leaves are used in poultices for boils, carbuncles, and in the treatment of herpetic diseases. A tincture and decoction are given as a remedy for asthma. The plant is poisonous and soporific, and is used in India as an intoxicant, and by professional poisoners for killing newborn female infants. Cf. *Dhatureas.* **D. ferox,** Linn., an exceedingly poisonous Chinese species. **D. metel.** See *D. fastuosa.* **D. sanguinea,** Ruiz et Par, a South American species, the *floripondio* of Peru, from the seeds of which an intoxicating beverage called *tonga* is prepared. Taken alone and in large doses it produces furious delirium, but diluted is a soporific. The seeds are used in the preparation of an ointment. **D. tatula.** Same as *D. stramonium*, L.

Daturin (*da-tu'-rin*). $C_{17}H_{23}NO_3$. A poisonous alka-

loid obtained by Ladenburg from *Datura stramonium*. It is identical with hyoscyamin and isomeric with atropin. It occurs in soft white needles, soluble in alcohol, ether, and chloroform; melts at 106°–108° C. It is employed in the treatment of mania, epilepsy, neuralgia, rheumatism, syphilis, cancer, pains, spasms, asthma, and as a hypnotic in insanity. Dose, $\frac{1}{250}$–$\frac{1}{64}$ gr. (0.00026–0.001 gm.). Antidotes: emetics, stomach-pump, castor oil. It is also called heavy or true daturin. **D. Hydrochlorate**, $C_{17}H_{23}NO_3HCl$, a white crystalline salt, soluble in water and alcohol. Uses and dose same as daturin. **D., Light**, hyoscyamin, obtained by Ladenburg from *Datura stramonium*. **D. Sulfate**, $(C_{17}H_{23}NO_3)_2H_2SO_4$, a soft, white, crystalline salt, soluble in water and alcohol; melts at about 206° C. Uses and dose same as daturin.

Dauciform (*daw'-si-form*). See *Daucoid*.

Daucoid (*daw'-koid*) [δαῦκον, the carrot; εἶδος, likeness]. Resembling a carrot; dauciform.

Daucosterin (*daw-ko-ste'-rin*). See *Carotin* (Illus. Dict.).

Daucus (*daw'-kus*) [δαῦκον]. A genus of plants of the order *Umbelliferæ*. **D. carota**, Linn., the carrot, a cultivated biennial indigenous to Europe and the Orient. The root contains sugar, starch, pectin, malic acid, albumin, a volatile oil, a crystalline coloring-matter (*carotin*). It is a stimulant when applied to indolent ulcers, and is fed to horses to render the coat glossy. The aromatic seeds (fruit) are diuretic and are used in cases of dropsy and nephritic complaints. **D. gingidium**, L., a species indigenous to Europe and northern Africa; it yields a gum resin, bdellium siculum.

Daysight (*da'-sīt*). See *Hemeralopia* (Illus. Dict.).

Deacidification (*de-as-id-if-ik-a'-shun*). The act or process of neutralizing an acid.

Deafness. (See Illus. Dict.) **D., Clang-.** See *Clangdeafness* (Illus. Dict.). **D., Hysteric**, deafness of sudden onset in cases of severe hysteria unaccompanied by any local lesion of the ear. **D., Intellectual.** See *D., Psychic* (Illus. Dict.). **D., Malarial**, that accompanying severe malarial poisoning. **D., Nervous**, deafness due to some affection of the nervous mechanism of the ear. **D., Speech-**, a variety of psychic deafness resembling word-deafness, except that the faculty of repeating and writing after dictation is not lost. **D., Throat-**, deafness due to a congestion or inflammation of the pharynx. **D., Vascular**, a form of deafness due, according to R. T. Cooper, to "a basic aural dyscrasia."

Dealbate (*de-al'-bāt*) [*dealbatus*, whitewashed]. In biology, coated with a fine white down or powder.

Dealbation (*de-al-ba'-shun*) [*dealbare*, to whiten over]. The process or act of becoming or being made white, as by bleaching.

Dealcoholization (*de-al-ko-hol-i-za'-shun*). The removal of alcohol from an object or compound used in microscopic technic. **D.-agent**, a liquid employed for the purpose of getting rid of the alcohol in preserved specimens, and to facilitate the penetration of paraffin in microtomy.

Deambulation (*de-am-bu-la'-shun*) [*deambulare*, to take a walk]. Gentle exercise, as walking; or, of the mind.

Deammoniated (*de-am-o'-ne-a-ted*) [*de*, from; *ammonium*]. Deprived of ammonia.

Deanesthesiant (*de-an-es-the'-ze-ant*) [*de*, from; ἀναισθησία, want of feeling]. A means for arousing the system from a state of anesthesia.

Deaquation (*de-ak-wa'-shun*) [*de*, from; *aqua*, water]. The act or process of removing water from a substance.

Deargentation (*de-ar-jen-ta'-shun*) [*deargentare*, to plate with silver]. The act or process of silvering.

Dearterialization (*de-ar-te-ri-al-i-za'-shun*) [*de*, from; *artery*]. The transformation of the blood from the arterial to the venous state. Cf. *Atmospherization*.

Dearticulation (*de-ar-tik-u-la'-shun*). See *Disarticulation*, *Dislocation*, *Diarthrosis* (Illus. Dict.).

Death. (See Illus. Dict.) **D., Binsical**, death preceded by mania. **D., Local**, gangrene, mortification. **D., Muscular**, a state of the muscles in which they no longer react to stimuli. **D., Systemic.** See *D., Somatic* (Illus. Dict.). **D., White**, tuberculosis.

Deauration (*de-aw-ra'-shun*) [*deaurare*, to gild]. The act or process of gilding.

Debility. (See Illus. Dict.) **D., Nervous.** See *Neurasthenia* (Illus. Dict.).

Decagonal (*dek-ag'-on-al*) [δέκα, ten; γώνια, an angle]. Having ten angles; decangular.

Decahedral (*dek-a-he'-dral*) [δέκα, ten; ἕδρα, a base]. Having ten sides.

Decamolybdate (*dek-a-mol-ib'-dāt*). A salt of molybdic acid, each molecule of which contains 10 atoms of molybdenum.

Decarbonated (*de-kar'-bon-a-ted*). Deprived of carbonic acid.

Decarbonization, Decarburation, Decarburization (*de-kar-bon-i-za'-shun*, *de-kar-bu-ra'-shun*, *de-kar-bu-ri-za'-shun*). The act or process of freeing a substance from carbon.

Decemcostate (*de-sem-kos'-tāt*) [*decem*, ten; *costa*, a rib]. Having 10 ribs.

Decemfid (*de-sem'-fid*) [*decem*, ten; *findere*, to divide]. Cut into 10 parts.

Decene (*des'-ēn*). C_{10} . H_{20}. The product obtained by prolonged heating of oil of turpentine, 1 part, and hydroiodic acid, 20 parts, at a temperature of 200°–250° C.

Decentered (*de-sent-urd'*) [*de*, from; *center*]. Out of common center; said of lenses as to focus, or of masses as to equilibrium, etc.

Decerebrize (*de-ser'-e-brīz*) [*de*, from; *cerebrum*]. To remove the brain, as of a frog, in physiologic experiments; decerebrate.

Decidua. (See Illus. Dict.) Syn., *Membrana decidua; Decidua tunica*. **D., Catamenial.** See *D., Menstrual*. **D., Epichorial.** See *D. reflexa* (Illus. Dict.). **D. graviditatis**, the menstrual decidua during pregnancy. **D., Interuteroplacental.** See *D. serotina* (Illus. Dict.). **D. membrana.** See *Decidua* (Illus. Dict.). **D., Menstrual**, the outer layer of the uterine mucosa which is shed during menstruation. In membranous dysmenorrhea it is discharged in pieces before disintegration. Syn., *D., Catamenial*. **D. placentalis subchorialis**, the layer of the maternal placenta lying next the chorion. Syn., *D. subchorialis*. **D. serotina, Glandular.** See *D. serotina, Uterine*. **D. serotina, Placental**, that portion of decidua serotina which is in contact with the parts or cotyledons of the placenta, as distinguished from the uterine decidua serotina. **D. serotina, Uterine**, the outer layer of the decidua serotina; the glandular decidua serotina. **D. subchorialis.** See *D. placentalis subchorialis*. **D. tuberosa et polyposa**, a form of decidual endometritis characterized by a roughened condition and polypoid growths of the uterine mucosa.

Deciduata (*de-sid-u-a'-tah*) [*deciduus*, falling off]. Those placental *Mammalia* which shed a part of the uterine mucosa in parturition.

Deciduate (*de-sid'-u-āt*). Characterized by a decidua or part to be shed; having reference to the *Deciduata*; deciduous. Cf. *Nondeciduate*.

Deciduation (*de-sid-u-a'-shun*). The act or process of dropping off or shedding.

Deciduitis (*de-sid-u-i'-tis*). Inflammation of the decidual membranes of the gravid uterus.

Deciduoma. (See Illus. Dict.) **D. malignum,** a variety of uterine sarcoma first described by Sänger, which in its microscopic characters strongly resembles decidual tissue. Syn., *Sarcoma deciduo-cellulare; Syncytioma malignum; Chorioepithelioma malignum.*

Deciduosarcoma (*de-sid-u-o-sar-kō'-mah*). See *Deciduoma malignum.*

Decipara (*de-sip'-ar-ah*) [*decem*, ten; *parere*, to bring forth]. A woman pregnant for the tenth time.

Decipium (*de-sip'-e-um*) [L.]. A metallic element described by Delafontain as occurring in North Carolina samarskite and as being allied to the cerium and yttrium groups.

Declive (*de-klīv'*) [*declivis*, sloping]. 1. A lower or descending part. 2. See *Declivis cerebelli* (Illus. Dict.).

Decolorant (*de-kul'-or-ant*) [*de*, priv.; *color*]. An agent for the altering or removal of color.

Decombustion (*de-kom-bust'-yun*). See *Deoxygenation.*

Decompensation (*de-kom-pen-sa'-shun*) [*de*, priv.; *compensare*, to compensate]. Failure of compensation (as of the circulation, or of the heart).

Decomposability (*de-kom-po-za-bil'-it-e*) [*de*, from; *componere*, to compose]. Capability of being decomposed.

Decompose (*de-kom-pōz'*). 1. To cause a compound to break up into its simpler constituents. 2. To undergo putrefaction.

Decompression (*de-kom-presh'-on*). The removal of compression or pressure.

Decostate (*de-kos'-tāt*) [*de*, from; *costa*, a rib]. Without ribs.

Decrement (*dek'-re-ment*). See *Decline* (Illus. Dict.).

Decrustation (*de-krust-a'-shun*) [*de*, from; *crusta*, a crust]. The detachment of a crust.

Decubital (*de-ku'-bit-al*). Relating to a decubitus or to a bed-sore.

Decubitus. (See Illus. Dict.) **D., Andral's.** See under *Signs.*

Decurtation (*de-kur-ta'-shun*) [*decurtare*, to curtail]. The ablation or shortening of a structure or usual duration of a condition.

Decurvature (*de-kurv'-a-chur*) [*decurvatus*, bent back]. A descending curvature.

Decussation. (See Illus. Dict.) **D., Forel's,** the ventral tegmental decussation. **D., Fountain,** Spitzka's term for such a decussation of nerve-fibers as is seen in the cortex of the anterior quadrigeminum. **D., Fountain-like, D., Fountain-like Tegmental.** See *D., Tegmental, of Meynert.* **D., Inferior.** See under *Meynert* (Illus. Dict.). **D., Motor.** See *D. of the Pyramids.* **D. of the Optic Nerve,** the chiasm. **D., Pineal,** Spitzka's term for the crossing of certain fibers of the inner division of the reticular formation. **D., Piniform.** See *D. of the Pyramids, Sensory.* **D., Pyramidal, Superior, D., Pyramidal, Upper.** See *D. of the Pyramids, Sensory.* **D. of the Pyramids, D., Pyramidal,** the oblique crossing of the bundles of the anterior pyramids of the oblongata from opposite sides of the median fissure. Syn., *D., Inferior; D., Motor; D., Piniform; D., Ventral, of the pyramids.* **D. of the Pyramids, Sensory,** a crossing of certain fibers having their origin in the funiculi cuneati of the spinal cord, which occurs in the upper part of the oblongata, between the anterior pyramids and the gray floor of the fourth ventricle. Syn., *D., Interolivary; D., Pyramidal Posterior; D. of the Fillet.* **D. of the Pyramids, Ventral.** See *D. of the Pyramids.* **D., Sensory.** 1. See *D. of the Pyramids, Sensory.* 2. The crossing of the outer bundles of the anterior pyramids of the spinal cord. [Meynert.] Syn., *D., Superior.* **D., Sensory, Middle,** a crossing in the median line of certain fibers between the upper and lower pyramids described by Huguenin. **D., Tegmental, of Meynert,** the crossing of the fibers in the cortex of the anterior quadrigeminum.

Decyl (*dē'-sil*). A monatomic radicle. **D.hydrid.** See *Decane* (Illus. Dict.).

Dedaleum, Dædaleum (*ded-a'-le-um*) [δαιδάλεος, curiously wrought]. A form of anorthoscope devised by W. G. Horner; it resembles the discs of Uchatius and J. Müller. Cf. *Stroboscope, Reverse.*

Dedalous, Dædalous (*ded'-al-us*) [δαιδάλεος, curiously wrought]. Labyrinthiform; intricately wrought.

Dedalum, Dædalum (*ded'-al-um*). See *Dedaleum.*

Defecation. (See Illus. Dict.) 2. Clarification, as of wine. Cf. *Decantation.*

Defensive (*de-fens'-iv*). See *Prophylactic* and *Protective* (Illus. Dict.).

Deferentectomy (*def-ur-ent-ek'-to-me*). Excision of the vas deferens.

Deferential (*def-ur-en'-shal*). Pertaining to the vas deferens.

Deferentiovesical (*def-ur-en-she-o-ves'-ik-al*). Pertaining to both the vas deferens and the bladder.

Defiguration (*de-fig-u-ra'-shun*). See *Deformation* (Illus. Dict.).

Defining Power (*de-fī'-ning pow'-ur*). See *Definition* (Illus. Dict.).

Deflagrator (*def-la-gra'-tur*) [*deflagrare*, to burn down]. An apparatus for producing very rapid combustion. **D., Hare's.** See *Battery, Hare's.*

Deformity. (See Illus. Dict.) **D., Sprengel's,** congenital upward displacement of one of the scapulas. **D., Volkmann's,** congenital tibiotarsal dislocation.

Defurfuration (*de-fur-fur-a'-shun*) [*de*, from; *furfur*, bran]. Desquamation.

Defuselation (*de-fu-sel-a'-shun*). The removal of fusel oil from spirits.

Defusion (*de-fu'-shun*). See *Decantation* (Illus. Dict.).

Degenerate (*de-jen'-ur-āt*) [*degenerare*, to differ from ancestors]. 1. To revert to a lower type. 2. An individual who has reverted to a lower type.

Degeneration. (See Illus. Dict.) Syn., *Degenerescence.* **D., Abercrombie's,** amyloid degeneration. **D., Acute Fatty.** 1. See *Foot-halt of Colts.* 2. See *Acute Yellow Atrophy of the Liver,* under *Icterus* (Illus. Dict.). **D., Adipose.** See *D., Fatty* (Illus. Dict.). **D., Albuminous,** albuminous infiltration. **D., Armanni-Ehrlich's,** hyaline degeneration of the epithelial cells of Henle's looped tubes in diabetes. **D., Bacony, D., Bacon-like.** See *D., Amyloid* (Illus. Dict.). **D., Cellulose.** See *D., Amyloid* (Illus. Dict.). **D., Cheesy.** See *Caseation* (Illus. Dict.). **D., Chitinous.** See *D., Amyloid* (Illus. Dict.). **D., Cholesterin,** according to Meckel, the same as waxy degeneration. See *Albuminoid Disease* (Illus. Dict.). **D., Cystic,** degeneration with cyst-formation. **D., Cystoid, of the Retina,** round or oval cystoid spaces surrounded by hypertrophied radial fibers found in the retina at all ages, as described by Iwanoff. **D., Earthy.** See *Calcification* and *D., Calcareous* (Illus. Dict.). **D., Fascicular,** that form of atrophy of paralyzed muscles following pathologic change in the motor ganglion cells of the central tube of the gray matter of the spinal cord or their efferent fibers. **D., Fibro-fatty, of the Placenta,** an association of fatty degeneration of the placenta with fibromatous degeneration of the chorionic villi and of the decidua ser-

otina. **D., Fibrous** (of the heart), hyperplasia of the cardiac connective tissue accompanying chronic interstitial inflammation. **D., Gelatiniform.** See *D., Colloid* (Illus. Dict.). **D., Granular,** parenchymatous degeneration distinguished by a deposit of albuminoid particles. **D., Hoen's,** degenerative change in striated muscles with nuclear proliferation. **D., Hyaloid.** See *D., Amyloid* (Illus. Dict.). **D., Hydrocarbonaceous,** Paschutin's term for a special degeneration peculiar to diabetes. Syn., *Paschutin's degeneration.* **D., Liquefactive,** a process accompanying fibrous exudations. **D., Meckel's,** cholesterin disease or waxy degeneration. **D., Mineral.** See *Calcification* (Illus. Dict.). **D., Myelin,** a process sometimes occurring in chronic pneumonia in which there is a formation of myelin coincident with fatty degeneration in the pulmonary alveoli. **D., Myxomatous.** See *D., Mucoid* (Illus. Dict.). **D., Ossific.** See *Ossification* (Illus. Dict.). **D., Parenchymatous,** a degeneration of the parenchyma of the kidney following the acute nephritis of pregnancy, diphtheria, or an acute attack of fever. It is accompanied by 10% to 25% of albumin in the urine, which remains of normal quantity. **D., Paschutin's.** See *D., Hydrocarbonaceous.* **D., Pigmentary, D., Pigment,** a pigmentation of the muscles accompanying the atrophy due to cachexia, insufficient food, or the marasmus of old age. **D., Putrid.** See *Hospital Gangrene* (Illus. Dict.). **D., Secondary** (of the spinal cord). See *D., Türck's.* **D., Theroid,** in psychiatry, the lowering or approximation of the human mental faculties and instincts to those of the lower animal. **D., Trabecular,** a degeneration of the bronchial wall in which there is a hypertrophy of the elastic and inelastic tissues of the fibrous sheath of the bronchus and its cartilages. **D., Türck's,** secondary parenchymatous degeneration of the spinal nerve-tracts. **D., Uratic,** the deposition of uric acid and the urates in the tissues. **D., Virchow's.** See *D., Amyloid* (Illus. Dict.). **D., Vitreous.** See *Albuminoid Disease* and *D., Amyloid* (Illus. Dict.). **D., Wallerian.** See under *Wallerian* (Illus. Dict.).

Degenerescence (*de-jen-ur-es'-ens*). See *Degeneration.*

Deglabration (*deg-la-bra'-shun*) [*deglabrare,* to make smooth]. The process of becoming bald.

Degustation (*de-gus-ta'-shun*) [*degustare,* to taste]. The act of tasting.

Dehiscence. (See Illus. Dict.) **D., Zuckerkandl's,** small gaps sometimes existing in the papyraceous lamina of the ethmoid bone, and bringing the lining membrane of the latter in contact with the dura. They are not pathologic.

Dehydratation (*de-hi-dra-ta'-shun*). The removal of hydrogen from a compound by means of reducing agents, by heating, or by the action of strong acids on hydrocarbons. Cf. *Dehydration.*

Dehydrogenize (*de-hi'-dro-jen-iz*). To deprive of hydrogen.

Dehydrotriacetonamin (*de-hi-dro-tri-as-et-on-am'-in*). A substance acting as a base obtained from acetone by action of ammonia. Syn., *Acetonin.* [Heintz.]

Deintoxication (*de-in-toks-ik-a'-shun*) [*de,* from; *intoxication*]. The process of overcoming the effects of toxic substances.

Deintoxification (*de-in-toks-if-ik-a'-shun*). See *Detoxification.*

Dejecta (*de-jekt'-ah*) [*dejicere,* to throw down]. Intestinal evacuations; alvine discharges; fecal matter.

Dejecture (*de-jekt'-chur*) [*dejicere,* to throw down]. Matter evacuated from the intestines; feces.

Dekamali, Dikamili. A golden yellow exudate obtained from *Gardenia lucida,* Roxb.

Delaceration (*de-las-ur-a'-shun*) [*delacerare*]. To tear to pieces, or lacerate severely.

Delactation (*de-lak-ta'-shun*). See *Ablactation* (Illus. Dict.).

Delimitation (*de-lim-it-a'-shun*) [*delimitare,* to mark out]. The determination of the limits of areas, regions, or organs in physical diagnosis.

Deliquation, Deliquiation (*del-ik-wa'-shun, del-ik-wi-a'-shun*). See *Deliquescence* (Illus. Dict.).

Delirium. (See Illus. Dict.) **D., Acute,** acute mania accompanied by incoherent speech and great fear. **D. of Collapse,** the delirium coincident to the feebleness and general asthenia accompanying severe diseases. **D. constantium,** the constant repetition and expression of a single fixed idea, characteristic of the delirium of insane persons having fever. **D. cordis,** the most extreme form of irregularity of the heart. **D., Depressive,** a form of general delirium in which there is a marked torpidity as to ideas, feelings, and determinations. **D., Dupuytren's.** See *D. nervosum* (Illus. Dict.). **D., Grave.** See *D., Acute.* **D. metamorphosis,** delirium in which there is a fixed idea of metamorphosis into an animal. **D., Micromaniacal,** delirium in which the patient believes he is dwarfed or his members atrophied. **D. mite.** See *D. mussitans* (Illus. Dict.). **D. nervosum traumaticum.** See *D. nervosum* (Illus. Dict.). **D., Primordial,** a form marked by ideas which dominate the mind and from which the patient is not able to free himself. **D., Traumatic.** See *D. nervosum* (Illus. Dict.).

Delphinate (*del'-fin-at*). A salt of delphinic acid.

Delta. (See Illus. Dict.) **D. fornicis,** a triangular area of the ventral surface of the fornix dorsad of the portæ, found in some mammals, *e. g.,* cat.

Delusion. (See Illus. Dict.) **D.s, Expansive, D.s, Large,** a symptom of the second stage of the general paralysis of the insane, in which the patient conceives ideas involving colossal size, magnificent wealth, or extravagant numbers.

Delusionist (*de-lu'-shun-ist*). The victim of a delusion.

Demagnetization (*de-mag-net-i-za'-shun*). The act of depriving an object of magnetic properties.

Demedication (*de-med-ik-a'-shun*). The removal of deleterious drugs from the system, as lead, arsenic, or phosphorus, by the reversal of the electric current used in cataphoresis, in a suitably arranged bath.

Dementation (*de-men-ta'-shun*) [*de,* from; *mens,* the mind]. Loss of mind, insanity.

Dementia. (See Illus. Dict.) **D. præcox** [Esquirol], a form which appears at the age of puberty in children previously intellectually bright; there are various delirious symptoms at the beginning; constant sudden impulses; and rapid termination in a dementia which is more or less complete. Called by Christison *Hebephrenia gravis.*

Demifacet (*dem-e-fas-et'*) [*demi,* half; *facet*]. One half of an articulation surface adapted to articulate with two bones.

Demipenniform (*dem-e-pen'-e-form*) [*demi,* half; *penna,* a wing]. Applied to structures or organs which have one of two margins winged.

Demography. (See Illus. Dict.) **D., Dynamic,** a study of the activities of human communities, their rise, progress, and fall. **D., Static,** a study of the anatomy of a human community, its numbers, the sex, age, wealth, calling, etc., of the people.

Demonomelancholia, Dæmonomelancholia (*de-mon-o-mel-an-ko'-le-ah*). See *Demonomania* (Illus. Dict.).

Demonomy (*de-mon'-om-e*) [δῆμος, the people; νόμος, a law, a custom]. The science of humanity.

Demonophobia (*de-mon-o-fo'-be-ah*) [*δαίμεον*, a demon; *φόβος*, fear]. Morbid dread of devil and demons.

Demorphinization (*de-morf-in-i-za'-shun*) [*de*, from; *morphin*]. Gradual alienation from undue use of morphin.

Denaturization (*de-nat-u-ri-za'-shun*) [*de*, priv.; *natura*, nature]. Alteration in the characteristics of an organic substance by chemical action, boiling, or addition.

Dendraxon (*den-draks'-on*) [*δένδρον*, a tree; *axon*]. Von Lenhossék's term for a neuron with a short axon, its axonal processes being for the most part devoid of sheaths.

Dendric (*den'-drik*) [*δένδρον*, tree]. Provided with dendrons.

Dendriform (*den'-dre-form*). See *Dendroid* (Illus. Dict.).

Dendrite (*den'-drīt*). See *Dendron*.

Dendrodont (*den'-dro-dont*) [*δένδρον*, tree; *ὀδούς*, tooth]. 1. Applied to teeth consisting of dendrodentin. 2. Having such teeth.

Dendron (*den'-dron*) [*δένδρον*, tree]. Schäfer's term for one of the short, free projections or so-called protoplasmic processes of a nerve-cell.

Denguis (*den'-gwis*) [New Latin]. Synonym of *Dengue*.

Denigration (*de-ni-gra'-shun*) [*denigrare*, to blacken]. The act or process of rendering black; the state of having become black.

Denisensko's Method. See under *Treatment*.

Denitration (*de-ni-tra'-shun*). The process of taking away nitric acid from a compound.

Denitrify (*de-ni'-tre-fi*) [*de*, priv.; *niter*]. To remove nitrogen.

Denitrifying (*de-ni'-tre-fi-ing*). Applied to bacteria which reduce nitric acid to nitrous acid and ammonia.

Densimeter (*den-sim'-et-ur*) [*densus*, dense; *μέτρον*, a measure]. An appliance for ascertaining the specific gravity of a liquid. Cf. *Hydrometer*, *Lactometer*, *Alcoholometer*. **D., Rousseau's,** a Beaumé aerometer having at the top of the tube a small capsule capable of holding 1 c.c. of the fluid, the specific gravity of which is to be ascertained; the tube being so graduated that the degree of submersion in distilled water indicates the degree of density.

Densimetric (*den-sim-et'-rik*). Having reference to the use of the densimeter.

Dentata (*den-ta'-tah*). See *Axis* (2) (Illus. Dict.).

Dentation (*den-ta'-shun*). The formation of tooth-like structures, as on the margin of a leaf.

Dentelation (*den-tel-a'-shun*). The condition of being furnished with tooth-like processes.

Dentiaskiascope (*den-te-ah-ski'-a-skōp*) [*dens*, a tooth; *skiascope*]. An instrument for examining the teeth and alveoli. It consists of a small fluorescent screen within an aluminium case, so situated that the screen-image is reflected upon a mirror which the operator sees through a tube.

Denticle (*den'-tik-l*) [*denticulus*, a small tooth]. A small tooth or projecting point. **D., Dermal,** one of the tooth-like skinplates found in many animals; as skates.

Dentilave (*den'-te-lāv*) [*dens*, a tooth; *lavare*, to wash]. A mouth-wash or tooth-wash.

Dentin, Dentine. (See Illus. Dict.) **D., Secondary,** adventitious deposits of dentin which occur in or upon the dental pulp, after tooth formation is complete.

Dentinification (*den-tin-if-ik-a'-shun*) [*dens*, tooth; *facere*, to make]. The formation of dentin through the agency of specialized cells, the odontoblasts.

Dentinoid (*den'-tin-oid*). 1. Similar to dentin. 2. Pertaining to an odontoma.

Dentinosteoid (*den-tin-os'-te-oid*) [*dens*, a tooth; *ὀστέον*, bone]. A tumor of dentin and bone.

Dentiporous (*den-tip'-or-us*) [*dens*, a tooth; *πόρος*, a pore]. Having pores with toothed edges.

Dentition. (See Illus. Dict.) **D., Acrodont.** See *Acrodont* (Illus. Dict.). **D., Deciduous.** See *D., First.* **D., First,** the 20 teeth which appear during the first two years of life and are replaced by the permanent teeth; deciduous, milk, or primary dentition. **D., Milk.** See *D., First.* **D., Permanent,** the 32 teeth which replace the first teeth. **D., Pleurodont.** See *Pleurodont* (Illus. Dict.). **D., Thecodont.** See *Thecodont* (Illus. Dict.).

Dentoiletta (*dent-wah-let'-ah*). A device consisting of two mirrors so arranged that persons may examine their own teeth.

Dentola (*den'-to-lah*). A solution used on swollen gums said to consist of cocain hydrochlorid, 1 part; potassium bromid, 10 parts; glycerin and water, each, 200 parts.

Dentolingual (*den-to-ling'-wal*). Pertaining to the teeth and the tongue or lingual nerve.

Dentomental (*den-to-ment'-al*). Pertaining to the teeth and chin.

Dentonasal (*den-to-na'-zal*). Pertaining to the teeth and nose.

Deodoriferant (*de-o-dor-if'-ur-ant*) [*de*, priv.; *odorare*, to smell]. 1. Possessing the power of overcoming bad odors. 2. See *Deodorant* (Illus. Dict.).

Deorsum. (See Illus. Dict.) **D.-duction,** a downward movement, as of the eye.

Deoxygenation (*de-oks-e-jen-a'-shun*). The process of removing oxygen from a compound.

Depecoration (*de-pek-or-a'-shun*) [*pecus*, gen. *pecoris*, a herd]. 1. The thinning out or extermination of flocks. 2. In veterinary practice, invulnerability.

Dephlegmation (*de-fleg-ma'-shun*) [*de*, priv.; *φλέγειν*, to burn]. The removal of water by distillation.

Dephlegmator (*de-fleg'-mat-or*). That part of a still adapted to receive the vapors of such compounds as are condensed at successively lower and lower temperatures.

Depigmentation (*de-pig-ment-a'-shun*). The removal of natural pigments from the skin or from microscopic preparations by the action of weak solutions of bleaching or oxidizing solutions.

Depilous (*dep'-il-us*) [*de*, priv.; *pilus*, a hair]. Hairless.

Deplanate (*dep'-lan-āt*) [*deplanare*, to level]. Leveled; flattened.

Depolarizer (*de-po'-lar-īz-ur*). A refracting plate used with a polarizer which resolves the polarized ray into ordinary and extraordinary rays.

Deportation (*de-por-ta'-shun*) [*de*, priv.; *portare*, to bear]. Veit's term for the process in which the chorionic fringes are detached and lose all connection with the fetal placenta.

Depressed (*de-prest'*) [*deprimere*, to press down]. 1. Referring to a state of lowered vitality; depressus. 2. Having the dorsolateral diameter reduced. 3. Flattened from above downward.

Depression. (See Illus. Dict.) 3. The act of depressing a part. 4. Melancholia. **D., Anterolateral.** See *Fissure*, *Anterolateral* (of the spinal cord) (Illus. Dict.). **D., Digital,** the descending cornu of the lateral ventricle of the brain. **D., Infrasternal,** a depression in the sternum just above the ensiform process. **D., Interpeduncular.** See *Space*, *Interpeduncular*. **D., Mental,** melancholia. **D., Nervous,** neurasthenia. **D., Vital,** a lowered physical state,

Depressor. (See Illus. Dict.) 2. One of two substances found in the infundibular part of the hypophy-

sis, having distinct physiologic properties. It produces a fall of blood-pressure. Cf. *Pressor*.

Derangement. (See Illus. Dict.) **D., Internal** (of the kneejoint), a form of injury described by Hey in which the margin of the condyle is forced over the edge of the internal semilunar fibrocartilage, the leg is rotated carrying the tibia forward and outward, and the pressure gives rise to spasmodic contractions.

Deric (*der'-ik*) [δέρος, the skin]. External.

Dermataneuria (*dur-mat-ah-nu'-re-ah*) [δέρμα, the skin; νεῦρον, a nerve]. Derangement of the nerve-supply of the skin, giving rise to anesthesia or paralysis.

Dermatatrophia (*dur-mat-ah-tro'-fe-ah*) δέρμα, skin; *a*, priv.; τροφή, nourishment]. Atrophy of the skin.

Dermathemia (*dur-mat-he'-me-ah*) [δέρμα, the skin; αἷμα, blood]. A congestion of the skin. Syn., *Dermæmia; Dermohemia*.

Dermatin (*dur'-mat-in*). A preparation used in dermatology. It consists of salicylic acid, 5–7 parts; starch, 7–15 parts; talc, 25–50 parts; silicic acid, 30–60 parts; kaolin, 3–9 parts. It is used as a protective.

Dermatitis. (See Illus. Dict.) **D., Blastomycetic,** a skin-disease caused by a yeast-like fungus, *Blastomyces dermatitidis*, first described by Gilchrist, 1894. Syn., *Oidial dermatitis; Pseudolupus vulgaris; Saccharomycosis hominis; Pseudoepithelioma with Blastomyces*. **D. capillitii papillomatosa.** See *D. papillomatosa capillitii* (Illus. Dict.). **D., Common Moist,** eczema. **D., Duhring's,** an erythematobullous, herpetiform affection, regarded by some as a hemato-dermatitis. **D., Electroplating,** a form of inflammation due to lime-dust employed in finishing electroplating, which coming in contact with an abrasion forms a caustic paste which in time produces an ulcer. **D. hiemalis,** a recurrent inflammation of the skin associated with cold weather and allied to the erythemata; the color is dark blue. It attacks distal extremities first and appears to be due to circulatory disturbance. **D. nodularis necrotica,** a necrosis of the skin and superficial strata of the corium due primarily to changes and consequent obstruction in the bloodvessels between the cutis and subcutis. **D., Oidial.** See *D., Blastomycetic*. **D., Primal,** that caused by contact with *Primula obconica*, Hance; it is due to the fine hairs on the under surface of the leaves. **D., Pustular,** impetigo. **D., Vegetative,** elevated, vegetating lesions covered with crusts and very prone to bleeding occurring in remissions of eczema on nurslings and believed to be due to some infection. A similar affection in adults has been recorded under the names *eczema végétante* and *pyodermite végétante*. **D., X-ray,** that due to prolonged exposure to *x*-rays.

Dermatoautoplasty (*dur-mat-o-aw'-to-plas-te*) [δέρμα, skin; *autoplasty*]. Skin-grafting with grafts taken from the patient's body.

Dermatocellulitis (*dur-mat-o-sel-u-li'-tis*). Inflammation of the subcutaneous connective tissue.

Dermatoconiosis, Dermatokoniosis (*dur-mat-o-koni'-o-sis*) [δέρμα, skin; κονία, dust]. Any skin-disease due to dust. Cf. *Enteroconiosis; Pneumoconiosis*.

Dermatocyst (*dur-mat'-o-sist*) [δέρμα, the skin; *cyst*]. A cyst of the skin.

Dermatodynia (*dur-mat-o-din'-e-ah*). See *Dermatalgia* (Illus. Dict.).

Dermatodyschroia (*dur-mat-o-dis-kroi'-ah*) [δέρμα, skin; δύσχροια, a bad color]. Abnormal pigmentation of the skin.

Dermatoheteroplasty (*dur-mat-o-het'-ur-o-plas-te*) [δέρμα, the skin; *heteroplasty*]. Dermatoplasty by means of grafts taken from the body of another than the patient.

Dermatokelidosis (*dur-mat-o-kel-id-o'-sis*) [δέρμα, the skin; κηλιδοῦν, to stain]. Pigmentation of the skin.

Dermatomere (*dur-mat'-o-mēr*) [δέρμα, the skin; μέρος, a part]. The integumentary portion of the embryonic metamere.

Dermatomucosomyositis (*dur-mat-o-mu-ko-so-mi-o-si'-tis*). Inflammation involving the skin, mucosa, and muscles.

Dermatomycosis. (See Illus. Dict.) **D. achorina.** See *Favus* (Illus. Dict.). **D. barbæ nodosa.** See *Sycosis parasitica* (Illus. Dict.). **D. diffusa.** See *Tinea imbricata* (Illus. Dict.). **D. favosa,** favus of the skin, exclusive of that of the hair and nails. **D. furfuracea.** See *Tinea versicolor* (Illus. Dict.). **D. maculovesiculosa.** See *Tinea circinata* (Illus. Dict.). **D. marginata.** See *Eczema marginatum* (Illus. Dict.). **D. palmellina,** a parasitic disease described by Pick as affecting the axillas, the chest, the backs of the hands, the inner surfaces of the thighs, and the pubes. It is characterized by the presence of rounded spores adherent to the hairs. **D. pustulosa.** See *Impetigo contagiosa* (Illus. Dict.).

Dermatomyositis (*dur-mat-o-mi-o-si'-tis*) [δέρμα, the skin; μῦς, muscle]. An infectious inflammation of both skin and muscles accompanied by edema, fever, and general depression. Cf. *Myositis, Polymyositis*.

Dermatoneuria (*dur-mat-o-nu'-re-ah*). See *Dermatoneurosis* (Illus. Dict.).

Dermatoneurology (*dur-mat-o-nu-rol'-o-je*) [δέρμα, the skin; *neurology*]. Neurology limited to the skin.

Dermatoneurosis. (See Illus. Dict.) **D. indicatrix,** an eruption of the skin due to nervous disease and indicative of more serious symptoms. **D., Stereographic,** a form characterized by an elevation, welt, or wheal corresponding in size and shape to the object the application of which produced the elevation. It is due to an extravasation of serum and is illustrated in the welts that follow light blows of the whip on a nervous horse.

Dermatonosus. (See Illus. Dict.) **D., Neuropathic,** any cutaneous disease of nervous origin, as angioneurosis, trophoneurosis, and idioneurosis.

Dermatophagus (*dur-mat-of'-ag-us*). See *Table of Animal Parasites* (Illus. Dict.).

Dermatophone (*dur-mat'-o-fōn*) [δέρμα, the skin; φωνή, sound]. A stethoscopic appliance devised by Voltolini-Hueter by means of which one may perceive the sound of the blood-current in the skin. It also makes perceptible the muscle-tones and in the tendons and bones it demonstrates the transmitted vibrations. It is called also *myophone, tendophone*, and *osteophone*.

Dermatophyte. (See Illus. Dict.) 2. A cutaneous appendage, as a hair, feather, scale, nail, or horn; dermaphyte.

Dermatoplasia (*dur-mat-o-pla'-ze-ah*) [δέρμα, the skin; πλάσσειν, to form]. The reparative power of the skin to injury.

Dermatoplasm (*dur-mat'-o-plazm*) [δέρμα, the skin; πλασσειν, to form]. The active protoplasm which is held by Wiesner and others to form a part of the cell-membrane in plants.

Dermatosis. (See Illus. Dict.) **D., Angioneurotic,** an infectious, toxic, or essential skin disease, characterized by a general disturbance of the vascular tension, together with inflammatory excitement at the surface of the skin. **D., Engorgement,** a skin disease characterized by passive derangement of the circulation with imperfect venous and lymphatic absorption. **D., Hemorrhagic,** a traumatic or essential disease of the skin, characterized by hemorrhage from the cutaneous bloodvessels, without inflammation or stasis; dermatorrhagia. **D., Neurotic,** a cutaneous affection due to disease of

the sensory or trophic nerves. It may be self-limited in its course (cyclic), as herpes zoster and herpes febrilis; or it may be acyclic, as neurotic edema, neurotic atrophy, and neurotic necrosis of the skin. **D., Parasitic,** a papulovesicular disease described by Nielly in which a filaria-like parasite was found, in the vesicles, and believed by him to be identical with craw-craw. **D., Postvaccinal,** a dermatosis following vaccination marked by lesions similar to those of urticaria pigmentosa except that desquamation is present and dermographism is absent. **D., Unna's.** See *Dermatitis, Seborrheic* (Illus. Dict.).

Dermatosome. (See Illus. Dict.) **2.** One of the hypothetic ultimate units that form the membrane of vegetal cells.

Dermatotherapy (*dur-mat-o-ther'-ap-e*). The therapeutics of cutaneous affections.

Dermatoxerasia (*dur-mat-o-zer-a'-ze-ah*) [δέρμα, skin; ξηρασία, dryness]. Dryness of the skin. Cf. *Xeroderma.*

Dermatozoonosus (*dur-mat-o-zo-on-o'-sus*) [δέρμα, skin; ζῶον, an animal; νόσος, a disease]. A cutaneous disease due to animal parasites. See *Table of Animal Parasites* under *Acarus, Filaria, Ixodes, Leptus, Pediculus, Pulex, Sarcoptes,* etc. Cf. *Epizoa.*

Dermectasia (*dur-mek-ta'-ze-ah*). See *Dermatolysis* (Illus. Dict.).

Dermelminthiasis (*dur-mel-min-thi'-ah-sis*) [δέρμα, the skin; ἕλμις, a tapeworm]. A cutaneous affection due to a parasitic worm. Cf. *Dermatozoonosus.*

Dermoabdominalis (*dur-mo-ab-dom-in-a'-lis*). Pertaining to the skin of the abdomen.

Dermoactinomycosis (*dur-mo-ak-tin-o-my-ko'-sis*). Infection of the skin by actinomyces.

Dermoepidermal (*dur-mo-ep-e-durm'-al*). Partaking of both the superficial and deep layers of the skin; said of skin-grafts.

Dermohemia (*dur-mo-he'-me-ah*). See *Dermathemia.*

Dermoid. (See Illus. Dict.) **2.** A dermoid cyst.

Dermol (*dur'-mol*). See *Bismuth Chrysophanate.*

Dermolabial (*dur-mo-la'-be-al*). Having relation to the skin and the lips.

Dermomuscular (*dur-mo-mus'-ku-lar*). Having relation to both skin and muscles, as certain embryonic tissues.

Dermopapillary (*dur-mo-pap'-il-a-re*). Having relation to the papillary layer of the true skin.

Dermophlebitis (*dur-mo-fleb-i'-tis*) [δέρμα, the skin; φλέψ, a vein]. Inflammation of the cutaneous veins.

Dermosapol (*dur-mo-sap'-ōl*). A soap said to contain perfumed cod-liver oil, Peruvian balsam, wool-fat, fat, glycerin, and alkali. To this specifics may be added; it is used as an inunction in skin diseases, tuberculosis, etc.

Dermostenosis (*dur-mo-ste-no'-sis*) [δέρμα, skin; στένωσις, stenosis]. A tightening of the skin, due to swelling or to disease. Cf. *Scleroderma.*

Dermostosis (*dur-mos-to'-sis*) [δέρμα, skin; ὀστέον, a bone]. Ossification occurring in the true skin.

Dermosynovitis (*dur-mo-si-no-vi'-tis*) [δέρμα, skin; *synovitis*]. Inflammation of a subcutaneous bursa together with the adjacent skin. **D. plantaris ulcerosa,** a severe suppuration in the sole of the foot which proceeds from inflammation of the bursa beneath a callosity and gives rise to a perforating ulcer.

Dermotherapy (*dur-mo-ther'-ap-e*). See *Dermatotherapy.*

Derrid (*der'-id*). A highly toxic substance isolated by Greshof from derris root, *Derris elliptica,* Benth., a leguminous plant of Malaya, used in Borneo as an arrow-poison; it kills fish in a dilution of 1 : 5,000,000.

Desalination (*de-sal-in-a'-shun*) [*de,* from; *sal,* salt]. The process of decreasing the salinity of a substance by the removal of salts.

Descent. (See Illus. Dict.) **D. of the Fetus,** the subsidence of the fetus in the latter part of gestation. **D., Theory of,** the theory that all higher organisms have descended by evolution from lower forms; as opposed to the theory of spontaneous generation or special creation. Cf. *Biogenesis, Darwinism, Evolution.*

Desiccator (*des-ik-a'-tor*) [*desiccare,* to dry]. A vessel containing some strongly hygroscopic substance, such as calcium chlorid or anhydrous sulfuric acid, and used to absorb the moisture from the air of a chamber.

Desichthol (*des-ik'-thol*). Deodorized ichthyol; a preparation produced from ichthyol by the removal of about 5% of volatile oil, to which the disagreeable odor is due.

Desilicification (*de-sil-is-if-ik-a'-shun*). The removal of silica from a body, as in the preparation of siliceous sponges for microtomy. Hydrofluoric acid is used.

Desmameba (*des-mah-me'-bah*) [δέσμα, a bond; *amœba*]. A connective-tissue corpuscle considered as an ameboid element.

Desmarestia (*des-mar-est'-e-ah*) [A. G. Desmarest, French zoologist, d. 1838]. A genus of marine *Algæ* of the order *Punctariaceæ.* **D. aculeata,** Lam., a cosmopolitan species. It forms one of the constituents of Corsican moss.

Desmatitis (*des-mat-i'-tis*). See *Desmitis.*

Desmectasia, Desmectasis (*des-mek-ta'-se-ah, -mek'-ta-sis*) [δεσμός, a band; ἔκτασις, a stretching]. The stretching of a ligament.

Desmepithelium (*des-mep-ith-e'-le-um*) [δεσμός, a bond; *epithelium*]. The endothelial or epithelial lining of the bloodvessels, lymphatics, and synovial cavities; the epithelial portions of the mesoderm; desmal-epithelium.

Desmiognathus (*des-me-o-na'-thus*) [δεσμός, a band; γνάθος, the jaw]. A monster, the lower jaw of which has a supplementary head joined to it by ligamentous or muscular attachment.

Desmoblast (*des'-mo-blast*) [δεσμός, a bond; βλαστός, a germ]. Rouber's term for that portion of the area opaca of the blastoderm, especially in mesoblastic ova, which gives rise to the mesenchyma. Syn., *Desmohemoblast.*

Desmodium (*des-mo'-de-um*) [δεσμός, a bundle]. A genus of plants of the order *Leguminosæ.* **D. erythrynæfolium,** D. C., a species indigenous to South America. An infusion of the roots is used in diarrhea and dysentery. **D. heterophyllum,** D. C., a species native of tropical Asia. The leaf and stem are used medicinally. **D. incanum,** D. C., a native of the West Indies, where the root is prized as a remedy for dysentery. **D. tortuosum,** D. C., a species indigenous to North America and the West Indies; the root is purgative. **D. triflorum,** D. C., a species found in all tropical countries. In India it takes the place held by *Trifolium* and *Medicago* in Europe. The fresh plant is applied to abscesses and wounds.

Desmohemoblast (*des-mo-hem'-o-blast*). See *Desmoblast.*

Desmology (*des-mol'-o-je*) [δεσμός, a band; λόγος, science]. The anatomy of the ligaments. Cf. *Syndesmology.*

Desmon (*des'-mon*) [δεσμός, a bond]. London's name for the intermediary body of Ehrlich.

Desmonosology (*des-mon-os-ol'-o-je*). See *Desmopathology.*

Desmopathology (*des-mo-path-ol'-o-je*) [δεσμός, a band; *pathology*]. The pathology of ligaments.

Desmopexia (*des-mo-peks'-e-ah*) [δεσμός, a band; πῆξις, a putting together]. Fixation of the round ligaments

to the abdominal wall or to the wall of the vagina for correction of uterine displacement.

Desmorrhexis (*des-mor-eks'-is*) [δεσμός, a band; ῥῆξις, a bursting]. The rupture of a ligament.

Desmurgia, Desmurgy (*des-mur'-je-ah, des-mur'-je*) [δεσμός, a band; ἔργειν, to do, to work]. The art of bandaging or applying ligatures; desmaturgia.

Desolution (*de-so-lu'-shun*) [*de*, away from; *solutio*, solution]. The separation from one body, of another dissolved in it under certain conditions which remove or diminish the solubility of the latter.

Desquamatio, Desquamation. (See Illus. Dict.) **D., Furfuraceous**, shedding the skin in bran-like scales. **D. neonatorum**, the epidermal exfoliation of new-born infants which takes place during the first week of life. **D. siliquosa**, the shedding of the entire epidermis of a part in a continuous husk-like structure.

Desulfuration, Desulfurization (*de-sul-fur-a'-shun, de-sul-fur-i-za'-shun*). The act or process of abstracting sulfur from a compound. Cf. *Sulfuration*.

Desumvergence (*de-sum-ver'-jenz*) [*desursum*, from above; *vergere*, to turn]. A downward inclination of the eyes.

Detarium (*de-ta'-re-um*) [*detar*, Senegal name]. A genus of plants of the order *Leguminosæ*. **D. senegalense**, J. F. Gmel., a species indigenous to tropical Africa. The bark is poisonous, acting as a cardiac depressant. The fruit is edible.

Detention (*de-ten'-shun*) [*detinere*, to detain]. The enforced isolation of one or more individuals to prevent the spread of infectious disease; confinement.

Dethyroidism (*de-thi'-roid-izm*). See *Athyrea* and *Athyreosis*.

Detonation (*det-o-na'-shun*) [*detonare*, to thunder]. The loud noise made by sudden chemical decomposition, as of the fulminates. Cf *Fulminate*.

Detorsion (*de-tor'-shun*) [*detorquere*, to turn]. The correction of an abnormal curvature; the restoration of a deformed part to its normal position.

Detoxification (*de-toks-if-ik-a'-shun*) [*de*, priv.; τοξικόν, poison]. The power of reducing the poisonous properties of a substance. Ger., *Entgiftung*.

Detoxify (*de-toks'-e-fi*). To deprive a substance of its poisonous attributes.

Detrital (*de-tri'-tal*). Consisting of or pertaining to detritus.

Detruncation (*de-trun-ka'-shun*). See *Decapitation* (Illus. Dict.).

Detrusion (*de-tru'-shun*) [*detrudere*, to drive]. An ejection or expulsion; a thrusting or driving down or out.

Detrusor, Detrusorium (*de-tru'-sor, -e-um*). 1. A means or instrument for performing expulsion. 2. A muscle having as its function the forcing down or out of parts or materials. **D. urinæ.** See *Muscles, Table of* (Illus. Dict.).

Deuteroalbumosuria (*du-ter-o-al-bu-mo-su'-re-ah*). See *Albumosuria* (Illus. Dict.).

Deuterology (*du-tur-ol'-o-je*) [δευτέρια, the secundines; λόγος, science]. The biology of the placenta.

Deuteromesal (*du-ter-o-me'-sal*) [δεύτερος, second; μέσος, middle]. In biology, situated along the median line and in the second series.

Deuterotoxins (*du-tur-o-toks'-ins*). Dissociation products of toxins.

Deutipara (*du-tip'-ar-ah*) [δεύτερος, second; *parere*, to bear]. A woman pregnant for the second time.

Deutobromid (*du-to-bro'-mid*). The second in order of any given series of bromids.

Deutocarbonated (*du-to-kar-bon-a'-ted*). Having carbonic acid present in excess of the amount found in the protocarbonate of the same base.

Deutochlorid (*du-to-klo'-rid*). The second in order of any given series of chlorids; deutomuriate.

Deutosclerous (*du-to-skler'-us*) [δεύτερος, second; σκληρός, hard]. Relating to an induration secondary to some pathologic condition.

Deutyl (*du'-til*). See *Ethyl* (Illus. Dict.).

Devaporation (*de-va-por-a'-shun*). To bring vapor back to the liquid state.

Developer (*de-vel'-op-ur*). A chemical compound employed in photography to reduce the metallic salts and to render visible the image upon an exposed plate, *e. g.*, *Eikonogen* (*q. v.*).

Deviation. (See Illus. Dict.) **D., Duane's Test of,** a candle having been placed in front of the person to be examined, a screen is held before one eye for a time and then suddenly transferred to the other side. The existence of deviation in the first eye is recognized by a sudden apparent displacement of the candle-flame in the direction opposite to that in which the eye has deviated.

Devil's Grip. An epidemic disease resembling dengue, prevalent in Virginia in 1888.

Devisceration (*de-vis-ur-a'-shun*). See *Evisceration* (Illus. Dict.).

Devitrifaction, Devitrification (*de-vit-re-fak'-shun, de-vit-re-fi-ka'-shun*) [*de*, priv.; *vitrum*, glass; *facere*, to make]. To change from the glass-like state.

Devolution (*dev-o-lu'-shun*) [*devolvere*, to roll down]. 1. Transmission from one person to another. 2. Degeneration.

Devorative (*de-vor'-a-tiv*) [*devorare*, to swallow down]. Intended to be swallowed without chewing.

Dew-cure (*du'-kūr*). See *Kneippism*.

Dewworm (*du'-wurm*). A species of earthworm said to be employed by the peasants of the department of Smolensk in Russia as a diuretic. The dried worms are made into a powder or infusion.

Dextral, Dextraural, Dextrocardial, Dextrocerebral, Dextrocular, Dextromanual. See under *Sinistral, Sinistro-*, etc.

Dextrality (*deks-tral'-it-e*) [*dexter*, right]. The condition of turning toward, being on, or pertaining to the right side.

Dextrinate (*deks'-trin-āt*). To change into dextrin.

Dextrinuria (*deks-trin-u'-re-ah*) [*dextrin; οὖρον*, urine]. The presence of dextrin in the urine.

Dextrocarvol (*deks-tro-kar'-vol*). $C_{10}H_{14}O$. An oil obtained by the fractional distillation of the essential oils of caraway, dill, or fennel.

Dextrococain (*deks-tro-ko'-kah-in*). An artificial alkaloid obtained by heating ecgonin or its derivative with strong alkali. It occurs in prisms, soluble in alcohol, benzin, and ether, and melts at 45° C. It is a local anesthetic and stimulant, its action similar to cocain, but more rapid, irritating, and fugitive. Syn., *Isococain*.

Dextroform (*deks'-tro-form*). A combination of formaldehyd and dextrin, soluble in water and glycerin. It is used internally in suppurating cystitis and in the treatment of gonorrhea in applications of 10%–20% solutions. Cf. *Amyloform*.

Dextroglucose (*deks-tro-glu'-kōz*). See *Dextrose* (Illus. Dict.).

Dextrogyr (*deks-tro-jīr'*) [*dexter*, right; *gyrare*, to turn around]. A substance producing rotation to the right.

Dextrosaccharin (*deks-tro-sak'-ar-in*). A mixture of saccharin 1 part and glucose 2000 parts.

Dextrosuria (*deks-tro-su'-re-ah*) [*dexter*, right; *οὖρον*, urine]. The presence of dextrose in the urine. Cf., *Levulosuria; Pentosuria*.

Dhatureas (*dah-tu'-re-as*). Professional poisoners of India who employ the *Datura fastuosa*, Linn.

Dhooley (*doo'-le*). A covered stretcher used in India.

Dhurrin (*dur'-in*). A cyanogenetic glucosid derived from glucose and occurring in young plants of *Sorghum vulgare* (durra or Guinea corn). It gives rise to prussic acid when acted on by a hydrolytic enzyme.

Diabetes. (See Illus. Dict.) Syn., *Diarrhœa urinosa.* See *Sign, Unschuld's.* **D., Alimentary,** that due to defective assimilative power over the carbohydrates of food. **D., Alternating,** a form of diabetes mellitus alternating with gout. **D., Azoturic,** diabetes without glycosuria accompanied by increase of urea in the urine. **D., Biliary,** Hanot's disease. **D., Bronzed.** See *Hemochromatosis.* **D., Composite,** that in which sugar and oxybutyric acid and its derivatives are discharged in the urine. **D., Conjugal.** See under *Conjugal* (Illus. Dict.). **D. decipiens,** glycosuria without increase in the amount of urine. **D., Hydruric,** polyuria in which the water in the urine is in excess without increase in the solid constituents of the urine. **D. inositus,** diabetes mellitus in which inosite takes the place of grape-sugar. **Marie-Robinson's Syndrome,** a variety of diabetes with melancholia, insomnia, impotence, and the presence in the urine of a levulose that disappears rapidly on the suppression of carbohydrates. **D., Neurogenic,** that due to disorder of the nervous system. **D., Puncture.** See *D., Artificial* (Illus. Dict.).

Diabetico (*di-a-bet'-ik-o*). A beverage recommended in diabetes said to consist of alcohol, 8.25%; extractive, 3.27%; glycerin, 0.82%; saccharin, 0.023%; sulfuric acid, 0.036%; tartaric acid, 0.56%; phosphoric acid, 0.025%.

Diabetide (*di-ab-ĕ'-tid*) [διά, through; βαίνειν, to go]. A cutaneous manifestation of diabetes.

Diabetogenic, Diabetogenous (*di-a-be-to-jen'-ik, di-a-be-toj'-en-us*) [*diabetes;* γεννᾶν, to produce]. Causing diabetes.

Diabetograph (*di-a-bet'-o-graf*) [*diabetes;* γράφειν, to write]. An instrument which registers the amount of glucose present in the urine which is dropped into it in boiling Fehling's solution.

Diabrosis (*di-ab-ro'-sis*). See *Anabrosis* (Illus. Dict.).

Diacaustic. (See Illus. Dict.) 2. Exceedingly caustic. Cf. *Dieretic.*

Diacetanilid (*di-as-et-an'-il-id*). $C_6H_5N(C_2H_3O_2)_2$. A compound of acetanilid and glacial acetic acid closely resembling but stronger than acetanilid in physiologic action.

Diacetic-aciduria (*di-as-et-ik-as-id-u'-re-ah*). See *Diaceturia* (Illus. Dict.).

Diacetonuria (*di-as-et-on-u'-re-ah*). See *Diaceturia* (Illus. Dict.).

Diacoustics (*di-ak-oos'-tiks*) [διά, through; ἀκούειν, to hear]. The department of physics which treats of the refraction of sound. Syn., *Diaphon.*

Diacrisis. (See Illus. Dict.) **D., Follicular,** an alteration of the secretion of follicular glands, due to disease.

Diacrylate (*di-ak'-ril-āt*). A salt of diacrylic acid.

Diactinic (*di-ak-tin'-ik*). Capable of transmitting actinic rays.

Diagnosis. (See Illus. Dict.) **D., Anatomic.** 1. A diagnosis based upon the recognition of definite anatomic alterations lying back of the phenomena. 2. A postmortem diagnosis. **D., Pathologic,** diagnosis based upon the nature of a lesion without regard to its situation. **D., Topographic,** that based upon the seat of a lesion.

Diagnostics (*di-ag-nos'-tiks*) [διά, apart; γνῶσις, knowledge]. The science and art of diagnosis.

Diagnostitial (*di-ag-nos-tish'-al*). Procedure having a diagnostic purpose.

Diahydric (*di-ah-hi'-drik*) [διά, through; ὕδωρ, water]. Relating to transmission through water, as a percussion-note through a stratum of interposed fluid.

Dialose (*di-al-ōs*). A substance obtained from the fruit of *Gymnocladus chinensis,* Baill., and used as a cleansing agent.

Dialuramid (*di-al-u'-ram-id*). Same as *Uramil* or *Murexane* (Illus. Dict.).

Dialysis. (See Illus. Dict.) **D., Gaseous,** the separation of gases by means of differences in their diffusibility.

Dialytic (*di-al-it'-ik*) [διά, through; λύειν, to loose]. 1. Pertaining to or similar to the process of dialysis. 2. Producing relaxation (said of a remedy). 3. A condition of divergent change or evolution. Cf. *Catalytic; Hemolytic.*

Dialyzable (*di-al-i'-za-bl*). Capable of being separated by diffusion.

Dialyzed Raw Meat. A reddish fluid, with a slightly acid or bitter taste, prepared from fresh beef or mutton to which are added 200 gm. of water, 5 gm. of hydrochloric acid, and 2 gm. of pepsin; the whole is boiled at 38° C. for 5 or 6 hours.

Diametric (*di-am-et'-rik*). 1. Of, pertaining to, or coinciding with a diameter. 2. At opposite ends of a diameter—extremely opposed. **D. Pupil,** one which constitutes a vertical slit, as is the case after two iridectomies, one upward and the other downward.

Diaminuria (*di-am-in-u'-re-ah*) [*diamin;* οὖρον, urine]. The presence of diamin compounds in the urine.

Diamylphosphin (*di-am-il-fos'-fin*). A variety of amyliñphosphin; secondary amylphosphin.

Dianella (*di-an-el'-ah*) [*Diana,* goddess of the chase]. A genus of plants of the order *Liliaceæ.* **D. nemorosa,** Lam., a species indigenous to tropical Asia and Australia. A decoction of the root is employed in urinary and catarrhal complaints.

Dianthus (*di-an'-thus*) [διος, godlike; ἄνθος, a flower]. A genus of plants of the order *Caryophylleæ.* **D. arenarius,** Linn., a species indigenous to Europe. The infusion of the flowers is given as a diaphoretic, cephalic, and nervine. The same use and properties belong to **D. armeria,** Linn., **D. barbatus,** Linn., and **D. carthusianorum,** Linn., all natives of Europe. **D. caryophyllus,** Linn., a native of Europe and western Asia, is the original stock from which are derived the many varieties of cultivated carnations. It is used in decoction as a diaphoretic. The flowers furnish a volatile oil used in perfumery; they are also used for coloring and flavoring syrups. The flowers of **D. deltoides,** Linn., of Europe and western Tibet, were formerly official.

Diaphane (*di'-af-ān*) [διά, through; φαίνειν, to shine]. 1. A transparent investing membrane of an organ or cell. 2. A small electric lamp used in transillumination.

Diaphaneity (*di-af-an-ē'-it-e*). Transparency.

Diaphonics (*di-af-on'-iks*). Same as *Diacoustics.*

Diaphotoscope (*di-af-o'-to-skōp*) [διά, through; φῶς, light; σκοπεῖν, to see]. A variety of endoscope.

Diaphragm. (See Illus. Dict.) **D., Condensing,** a diaphragm containing lenses for converging the light-rays. Cf. *Condenser, Abbé's.* **D., Cylindric,** in microscopy, a piece of substage apparatus fitted with perforated stops, each allowing a different amount of light to pass. **D., Graduating,** one which allows a concentric increase or diminution of the light. See *D., Iris* (Illus. Dict.). **D., Inferior,** the vertical part of the diaphragm. Syn., *Musculus diaphragmaticus minor.* **D., Pelvic.** 1. See *Levator ani,* in *Table of Muscles* (Illus. Dict.). 2. The *levatores ani* and the *coccygei* muscles combined; also called perineal, and rectal diameter. **D., Perineal.** See *D., Pelvic.* **D.-**

phenomenon. See under *Signs*. **D., Plate,** the ordinary perforated plate or simple shutter diaphragm. **D., Rectal.** See *D., Pelvic*. **D., Superior,** the horizontal part of the diaphragm. Syn., *Musculus diaphragmaticus major*. **D., Thoracoabdominal,** that separating the thoracic and abdominal cavities.

Diaphragma (*di-ah-fram'-ah*) [L.]. 1. See *Diaphragm* (2). 2. The velum of the *Hydromedusæ*. **D. auris.** See *Membrane, Tympanic* (Illus. Dict.). **D. cerebri.** See *Septum lucidum* (Illus. Dict.). **D. hypophyseos.** See *D. sellæ*. **D. narium,** the septum of the nose. **D. oris,** the mylohyoid muscle. **D. pelveos, D. pelvicum, D. pelvis, D. pelvis proprium.** See *Diaphragm, Pelvic*. **D. pharyngis.** See *Velum pendulum palati* (Illus. Dict.). **D. sellæ,** a shelf-like process at the base of the skull given off by the dura and forming a roof for the pituitary fossa; it is perforated for the passage of the infundibulum. Syn., *D. hypophyseos*. **D. urogenitale,** the inferior layer of the deep perineal fascia. **D. ventriculorum lateralium.** See *Septum lucidum* (Illus. Dict.).

Diaphragmocele (*di-ah-fram'-o-sēl*). See *Diaphragmatocele* (Illus. Dict.).

Diaphtol (*di-af'-tol*). $C_9H_7O_4SN$. An ortho-oxyquinolin-meta-sulfonic acid; an antiseptic, yellowish-white, crystalline substance soluble in boiling water, melting at 295° C. It is used in internal disinfection of the urinary tract in place of salol. Syn., *Chinaseptol; Quinaseptol*.

Diaphysis. (See Illus. Dict.) 2. An interspace. 3. A prominent part of a bony process. 4. A ligament of the knee-joint.

Diaplastic (*di-ah-plas'-tik*) [διάπλασις, the setting of a broken limb]. 1. Relating to the setting of a fracture or reduction of a dislocation. 2. Any application for a fracture or dislocation.

Diarius (*di-a'-re-us*) [*dies*, a day]. Enduring but a single day.

Diarrhea, Diarrhœa. (See Illus. Dict.) Syn., *Enteria; Profluvium ventris; Laxitas alvi; L. ingestorum; L. intestinorum*. **D. ablactorum,** that of infants consequent to weaning. **D., Accidental.** See *D., Ephemeral*. **D., Acid,** that in which the passages are flocculent, green, and acid; it is accompanied by severe colicky pains. **D. acrasia,** involuntary defecation in indolent or sleeping persons. Cf. *D., Asthenic*. **D. acuta serosa mucosa.** See *D., Serous* (Illus. Dict.), and *D., Catarrhal*. **D. adiposa.** See *D., Fatty* (Illus. Dict.). **D. æstivalis.** See *D., Summer* (Illus. Dict.). **D. alba.** Same as *Sprue*. **D., Albuminous,** that in which the passages contain albuminous matter derived from the blood. **D., Alimentary,** that form in which the stools contain undigested food. **D., Aphthous,** diarrhea accompanying aphthæ. **D. aquosa.** See *D., Serous* (Illus. Dict.). **D., Arthritic,** diarrhea accompanying gout. **D., Asthenic,** an idiopathic form met with in feeble persons and those of lymphatic temperament. Cf. *D. acrasia*. **D., Atonic.** See *D., Chronic*, and *D., Camp*. **D., Atrophic.** See *D., Colliquative*. **D., Bilious,** that accompanied by a free discharge of bile in the stools. Syn., *D. cœliaca; D. hepatica*. **D., Blood,** a form which Becquerel and Rodier describe as *Diarrhée de sang pur*, the dejections consisting entirely of blood. **D., Camp,** that form of diarrhea common among soldiers. The discharges are apt to be purulent and there is liability to thickening and ulceration of the colon. Also called *atonic diarrhea*. **D. carnosa,** dysentery in which flesh-like masses are passed. **D., Catarrhal.** 1. A form which is often epidemic at times when catarrhs are prevalent. 2. That of catarrhal gastritis or enteritis. Syn., *D. acuta serosa mucosa; D. pituitosa; D., Rheumatic; D., Phlegmatic; Mucous colitis*. **D. cerebralis.** See *D., Serous* (Illus. Dict.). **D., Chronic,** that characterized by continuous and intractable discharges, often offensive, bloody, or containing undigested food. It occurs as a manifestation of an intestinal lesion or of a constitutional disease. Syn., *D. habitualis; D., Atonic; Mucous colitis*. **D., Chylous,** a variety of alimentary diarrhea met with in cases of catarrh of the liver and similar affections, where gastric digestion is complete, but intestinal digestion and absorption are interfered with. Syn., *D. chylosa; D. chymosa; D. lactica*. **D. chymosa.** See *D., Chylous*. **D. cinerea** (Belgarum), a chronic form frequent in the Netherlands. The discharges are grayish in color and there is an exhausting hectic fever. Cf. *D. hectica*. **D., Cirrhotic,** a mechanical diarrhea accompanying cirrhosis of the liver. **D., Cochin-China,** a parasitic form common in Cochin-China, due to infection with the *Rhabdonema intestinale*, R. Blanchard. It occurs in both men and fowls. **D. cœliaca.** See *D., Bilious*. **D., Collateral.** See *D., Vicarious* (Illus. Dict.). **D., Colliquative,** that characterized by excessively frequent and copious discharges and extreme prostration, and occurring as a rule toward the close of a chronic disease; also called *atrophic diarrhea*. **D., Congestive,** that which accompanies congestion of the alimentary canal or some of its appendages. **D., Convalescent,** that seen in convalescents; the frequent semisolid discharges unaccompanied by tenesmus occurring shortly after meals. **D., Crapulous,** that following a debauch. **D. critica,** that which sometimes marks the crisis of a disease. **D. cruenta,** that accompanied by bloody discharges; also called *D. sanguiniolenta*. Cf. *D., Bloody*. **D. cum apepsia.** See *D., Lienteric* (Illus. Dict.). **D. dentientium,** that which accompanies the cutting of teeth. Cf. *D., Sympathetic*. **D., Dry,** a form described by Broussais, characterized by rare and scanty stools. Syn., *D. sicca*. **D., Dyscrasic** (eliminative), that which accompanies the elimination of morbid substances from the blood. **D., Dyspeptic.** See *D., Lienteric* (Illus. Dict.). **D., Emotional,** that which accompanies nervous excitement, as extreme joy, fear, or anger. **D., Ephemeral,** a transient form of stercoral diarrhea. **D. febricosa.** See *Enteritis, Pseudomembranous* (Illus. Dict.). **D., Febrile Intermittent,** the "abdominal anthrax" of camels; it occurs as an enzootic and is held by Burke to be due to malarial poisoning. **D., Feculent.** See *D., Simple*. **D. frustranea,** symptomatic diarrhea with scanty stools and great tenesmus. **D. fusa.** See *D., Simple*. **D., Glutinous.** Synonym of *Mucous colitis*. **D., Green,** the green alvine discharges of infants. It is infectious and due to the bacillus of Lesage, or *B. fluorescens non liquefaciens*, Schiller. See *Bacteria, Table of*. **D. habitualis.** See *D., Chronic*. **D. hectica,** an East Indian form resembling diarrhœa cinerea. **D. hepatica.** See *D., Bilious*. **D., Hill,** a form occurring in certain districts of India owing to the finely divided particles of mica in the water. **D., Hypercathartic,** that following excessive purgation. **D., Inflammatory,** that caused by congestion of the intestinal mucosa following sudden chilling of the body surface, suppression of perspiration or menstruation. It frequently constitutes the so-called cholera infantum and sthenic diarrhea. **D. ingestorum.** See *D., Lienteric* (Illus. Dict.). **D., Ingluvic,** that which results from the indigestion following excessive eating. **D., Intermittent,** the chronic intermittent variety sometimes accompanying malaria; also called *malarial diarrhea*. **D. lactantium,** the diarrhea of nurslings. **D. lactica.** See *D., Chylous*. **D., Malarial.** See *D., Intermit-*

tent. **D., Membranous,** a form characterized by the presence of mucous shreds in the stools. It may be chronic or subacute, and alternate with constipation. Hysteric symptoms, griping, and abdominal tenderness are often present; also called *tubular diarrhea.* **D., Milk,** a puerperal diarrhea attributed by Deleurye to a metastasis of milk and described as *Diarrhée laiteuse.* **D., Mixed,** a form which may be attributed to a variety of causes: intestinal irritation, engorgement of mesenteric vessels, exosmosis, etc. **D., Mucous.** See *Colitis, Mucous.* **D. of Negroes,** a chronic mucous diarrhea of asthenic character. **D., Nocturnal.** 1. Diarrhea at night; a frequent concomitant of intestinal tuberculosis. 2. Diarrhœa acrasia occurring at night. **D., Ocherous,** that in which the dejections are ocher-colored, as in typhoid fever. **D., Pancreatic,** a persistent form in which the discharges are thin and viscid. It is supposed to depend upon disease of the pancreas. **D., Parasitic,** a diarrhea incited by the presence of intestinal parasites. Cf. *D., Cochin-China, D. verminosa.* **D., Phlegmasic.** Same as *D., Catarrhal.* **D., Phthisical.** See *D., Tuberculous* (Illus. Dict.). **D., Pilgrim's,** a form of severe diarrhea or chronic dysentery which is common among the pilgrims who have returned from Mecca, in the ports along the Red Sea. **D. pituitosa** (Sauvages). Synonym of *Mucous colitis.* **D. pituitosa.** See *D., Catarrhal.* **D. pleuritic orum,** that of pleuritic patients. **D., Pseudomembranous.** See *Enteritis, Pseudomembranous* (Illus. Dict.). **D., Purulent,** that which accompanies ulceration of the intestine; characterized by pus in the stools. **D., Rheumatic.** See *D., Catarrhal.* **D., Saburral.** See *D., Simple.* **D. sanguinolenta.** See *D. cruenta.* **D., Scorbutic.** See *Dysentery, Scorbutic.* **D. sicca.** See *D., Dry.* **D., Simple,** that form in which the evacuations consist of fecal matter only. Syn., *D., Feculent; D., Saburral; D. fusa; D. stercoralis; D. vulgaris.* **D. stercoralis, D. stercorea, D. stercorosa.** See *D., Simple.* **D., Sthenic.** See *D., Inflammatory.* **D., Strumous,** a chronic form frequently met with in underfed, strumous children. **D., Sudoral,** a variety in which there is an accompanying increase in the perspiration. **D., Summer** (of children), that due to *Bacillus dysenteriæ,* Shiga, and etiologically identical with acute bacillary dysentery of adults. **D., Supplementary.** See *D., Vicarious* (Illus. Dict.). **D., Sympathetic,** that which seems to depend upon some morbid or unusual state, as emotional excitement, dentition, etc. Cf. *D. dentientium* and *D., Emotional.* **D., Syphilitic,** chronic diarrhea of syphilitic origin. **D., Thermic.** See *D., Summer* (Illus. Dict.). **D., Tubular.** See *D., Membranous.* **D. tubularis,** of Mason Good (1825). Same as *Mucous colitis.* **D. urinosa.** See *Diabetes* (Illus. Dict.). **D. verminosa,** that due to intestinal worms. Cf. *D., Parasitic.* **D. vulgaris.** See *D., Simple.* **D., Zymotic.** Synonym of *Dysentery.*

Diarrhemia (*di-ar-e′-me-ah*) [*διά*, through; *ῥεῖν*, to flow; *αἷμα*, blood]. See *Ascites, Sanguineous.*

Diarrhetic (*di-ar-et′-ik*). Producing diarrhea.

Diarthrosis. (See Illus. Dict.) Syn., *Prosarthrosis; Perarticulation.* **D. ambigua.** See *Amphiarthrosis* (Illus. Dict.). **D. obliqua,** an inconstant articulation between the spinous processes of adjacent lumbar vertebræ. **D. obliqua accessoria,** a double articulation sometimes formed by the spinous processes of adjacent dorsal or lumbar vertebræ near the basal ends of the processes. **D., Planiform.** See *Arthrodia* (Illus. Dict.). **D., Rotatory, D., Synarthrodial, D., Trochoid, D. trochoides.** See *Cyclarthrodia* (Illus. Dict.).

Diarthrotic (*di-ar-throt′-ik*). See *Diarthrodial* (Illus. Dict.).

Diasostic (*di-as-os′-tik*) [*διασώζειν*, to preserve]. Pertaining to hygiene or the preservation of health; hygienic; diateretic.

Diastase. (See Illus. Dict.) **D., Animal,** a general term for the amylolytic enzymes of animals, ptyalin, amylopsin, and the special enzyme of the liver capable of converting glycogen to sugar. **D., Pancreatic,** amylopsin. **D., Salivary,** ptyalin. **D., Vegetable,** the enzyme of germinating seeds; diastase proper.

Diastemata enteria (*di-as-tem-at-en-te′-re-ah*) [*διάστημα*, a fissure; *ἔντερον*, intestine]. A longitudinal fissure of the intestine; diastementeria.

Diastematia (*di-as-tem-a′-she-ah*) [*διάστημα*, a fissure]. An abnormality in which the body is split or fissured longitudinally. Syn., *Diastematocaulia.*

Diastematocrania (*di-as-tem-at-o-kra′-ne-ah*) [*διάστημα*, a fissure; *κρανίον*, the skull]. A skull congenitally cleft along the median line.

Diastematogastria (*di-as-tem-at-o-gas′-tre-ah*) [*διάστημα*, a fissure; *γαστήρ*, stomach]. A mesial fissure of the ventral wall of the body.

Diastematoglossia (*di-as-tem-at-o-glos′-e-ah*) [*διάστημα*, fissure; *γλῶσσα*, the tongue]. A congenital longitudinal fissure of the tongue.

Diastematomyelia (*di-as-tem-at-o-mi-e′-le-ah*) [*διάστημα*, fissure; *μυελός*, marrow]. A congenital splitting or doubling of the spinal cord.

Diastematopyelia (*di-as-tem-at-o-pi-e′-le-ah*) [*διάστημα*, a fissure; *πύελος*, a trough]. A mesial fissure of the pelvis.

Diastematorrhachia (*di-as-tem-at-o-ra′-ke-ah*) [*διάστημα*, a fissure; *ῥάχις*, the back]. A congenital longitudinal fissure of the vertebral column.

Diastematorrhinia (*di-as-tem-at-or-in′-e-ah*) [*διάστημα*, a fissure; *ῥίς*, the nose]. A congenital, mesial fissure of the nose.

Diastematostaphylia (*di-as-tem-at-o-staf-il′-e-ah*) [*διάστημα*, a fissure; *σταφυλή*, the uvula]. A congenital mesial fissure of the uvula.

Diastementeria (*di-as-tem-en-te′-re-ah*). See *Diastematenteria.*

Diastol (*di′-as-tol*). A proprietary malt extract.

Diastole. (See Illus. Dict.) **D., Arterial,** the expansion of an artery following the ventricular systole. **D., Auricular,** the dilation of the cardiac auricle. **D., Cardiac,** the period of expansion which follows a cardiac contraction. **D., Ventricular,** the dilation of the cardiac ventricles.

Diastrophometry (*di-as-tro-fom′-et-re*) [*διαστροφή*, distortion; *μέτρον*, measure]. The measurement of deformities.

Diatele (*di′-at-el*). See *Diatela* (Illus. Dict.).

Diateretic (*di-ah-ter-et′-ik*) [*διατηρεῖν*, to watch closely]. Of or pertaining to the practice of hygiene; diasostic.

Diathermometer (*di-ah-thur-mom′-et-ur*) [*διά*, through; *θέρμη*, heat; *μέτρον*, a measure]. An appliance for measuring the heat-conducting capacity of substances; the thermomultiplier of Melloni.

Diathesin (*di-ath′-es-in*). $C_7 . H_8 . O_2$. A substitute for salicylic acid, the salicylates, and salicin; its use is indicated in gouty diatheses. It crystallizes in fine leaflets, melts at 86° C., has a slightly bitter taste, dissolves in cold water about 1 : 15, is freely soluble in hot water and in alcohol. Its watery solution assumes a blue color on the addition of a drop of dilute solution of ferric chlorid. Dose, 7½–15 gr.

Diathesis. (See Illus. Dict.) **D., Acute Purulent.** See *D., Purulent.* **D., Albuminous,** one in which albuminuria is the chief symptom. **D., Aneurysmal,** a constitutional tendency to the formation of an-

eurysms. **D., Arsenical,** chronic arsenic-poisoning. **D., Arthritic.** See *D., Uric-acid.* **D., Asthenic,** general debility; a constitutionally low state of vitality. **D., Bilious,** the morbid condition that follows chronic disturbance of the portal circulation and imperfect elimination of bile. **D., Calculous,** a constitutional tendency to the formation of calculi. **D., Cancerous.** See *Cachexia, Cancerous.* **D., Catarrhal,** a tendency to excessive secretion of mucus. **D., Climatic,** a morbid state of body dependent upon local physical conditions, as elevation, soil, water, humidity, etc. **D., Congestive,** a constitutional tendency to vasomotor disturbances and local congestions. **D., Gouty, D., Lithic.** See *D., Uric acid.* **D., Melanotic.** See *Melanosis* (Illus. Dict.). **D., Mercurial.** See *Cachexia mercurialis.* **D., Nonspecific,** a hereditary predisposition to weakness or disease not attributable to syphilis or other specific family taint. Cf. *D., Virulent Specific.* **D., Osseous, D., Ossific,** a tendency to abnormal development of bony tissues. **D., Osteophytic,** a constitutional tendency to the formation of abnormal ankyloses. **D., Psychopathic,** a hereditary predisposition to mental derangement. **D., Purulent,** a constitutional condition affording little or no resistance to the growth of pyogenic microorganisms; a tendency to the formation of abscesses; pyemia. **D., Rhachitic.** See *Rhachitis* (Illus. Dict.). **D., Rheumatic.** See *D., Uric-acid.* **D., Scorbutic.** See *Scorbutus.* **D., Scrofulous,** a hereditary predisposition to scrofulous affections. Syn., *Strumous diathesis.* **D., Serous, of Pregnant Women,** a tendency, seen in pregnancy, to serous effusions or hydrorrhea. **D., Specific.** See *D., Virulent Specific.* **D., Sthenic,** a hereditary tendency to exaltation of vital activity in one or many respects; overgrowth, overexcitability. Syn., *Plethoric diathesis.* **D., Strumous.** See *D., Scrofulous.* **D., Syphilitic,** hereditary syphilis. **D., Tuberculous,** a constitutional inability to resist tuberculous infection. Syn., *Phthisical diathesis.* **D., Ulcerous,** a general condition favorable to the development of ulcers. **D., Uric-acid,** a constitutional tendency to the accumulation of uric acid and urates in the fluids of the body and the development of rheumatism, gout, etc.; the arthritic, gouty, rheumatic, or lithic diathesis. **D., Varicose,** a tendency to abnormal dilation of the veins. **D., Virulent Specific,** a special predisposition or constitutional defect attributable to syphilitic or other infection.

Diaxon. (See Illus. Dict.) **2.** A neuron having two axons.

Diazoamidobenzene, Diazoamidobenzol (*di-az-o-amid-o-ben'-zēn, -zol*). $C_6H_5 . N_2 . NH . C_6H_5$. A golden-yellow crystalline body obtained by the action of nitrous acid on the cold alcoholic solution of anilin; by mixing diazobenzene nitrate with anilin; and by pouring a slightly alkaline solution of sodium nitrate upon anilin hydrochlorid or sulfate. It is insoluble in water, readily soluble in hot alcohol, ether, and benzene. It melts at 96° C. and explodes at high temperatures. Syn., *Diazobenzeneanilid; Diazobenzolanilid; Benzolazoanilin; Benzenediazoanilid.*

Diazobenzolanilid (*di-az-o-ben-zol-an'-il-id*). See *Diazoamidobenzene.*

Diazonal (*di-az'-o-nal*) [*διά*, through; *ζώνη*, a zone]. Applied by Fürbringer to nerve-trunks which lie across a sclerozone.

Diborated (*di-bo'-ra-ted*). Combined with two molecules of boric acid.

Dibromated (*di-bro'-ma-ted*). Containing two atoms of bromin in the molecule.

Dibromethane (*di-bro-meth-ān'*). See *Ethylene Bromid* (Illus. Dict.).

Dicacodyl (*di-kak'-o-dil*). $As_2(CH_3)_4$. A double molecule polymer of the radicle cacodyl. It is a colorless, highly refractive liquid and burns spontaneously upon exposure to the air. It forms combinations directly with the elements, acting like a diatomic molecule of an elementary body. The odor is nauseous and it is excessively irritating. Syn., *Diarsentetramethyl; Methylcacodyl.*

Dicalcic (*di-kal'-sik*). Containing two atoms of calcium in each molecule.

Dicamphendion (*di-kam-fen'-de-on*). $(C_{10}H_{14}O)_2$. A reaction-product obtained from bromocamphor by action of metallic sodium; it occurs in flat yellow needles which melt at 193° C.

Dicamphor (*di-kam'-for*). $(C_{10}H_{15}O)_2$. A colorless crystalline substance, melting at 166° C., obtained with dicamphendion (*q. v.*).

Dichloralantipyrin (*di-klo-ral-an-te-pi'-rin*). See *Antipyrin bichloral.*

Dichlorethane (*di-klor-eth-ān'*). See *Ethylene Chlorid* (Illus. Dict.).

Dichlorid (*di-klo'-rid*). A compound in each molecule of which two atoms of chlorin are combined with an element or radicle.

Dichlormethane (*di-klor-meth-ān'*). See *Methylene Dichlorid* (Illus. Dict.).

Dichopsis (*dik-op'-sis*) [*δίχα*, apart; *ὤψ*, the eye]. A genus of plants of the order *Sapotaceæ.* **D. elliptica,** Benth. and Hook., a species indigenous to eastern Asia. It yields a gum called *panchontee.* **D. gutta,** Benth. and Hook., a species of Malaya. Its milky juice furnishes, in part, the gutta-percha of commerce.

Dichotomization (*di-kot-o-mi-za'-shun*). See *Dichotomy.*

Dichotomy (*di-kot'-o-me*) [*δίχα*, in two; *τέμνειν*, to cut]. The state of being bifid; the phenomena of bifurcation. **D., Anterior,** said of a double monster united below the upper limbs. **D., Posterior,** said of a double monster in which the two individuals are fused above the posterior extremities.

Dichroa (*di-kro'-ah*) [*δίς*, double; *χρόα*, color]. A genus of plants of the order *Saxifrageæ.* **D. febrifuga,** Lour., a species indigenous to the Himalaya region, Malaya, and China. The root and leaves have emetic and purgative properties and are administered as a febrifuge.

Dichromasy (*di-kro'-mas-e*) [*δίς*, two; *χρῶμα*, color]. The condition of a dichromat; inability to distinguish more than two colors. Cf. *Monochromasy, Trichromasy.*

Dichromat (*di'-kro-mat*). A person to whom there are two sharply limited regions at the ends of the spectrum, within which there are no changes of hue, but merely of intensity. All other parts of the spectrum, the "middle region," can be produced by mixtures of the two end regions. [Scripture.] Cf. *Monochromat, Trichromat.*

Dichromatopsia (*di-kro-mat-op'-se-ah*) [*δίς*, double; *χρῶμα*, color; *ὄψις*, sight]. A form of color-blindness in which there is perception of two of the primary colors.

Dichromic (*di-kro'-mik*). **1.** Marked by two colors. **2.** Containing two atoms of chromium.

Dichromism (*di-kro'-mizm*). See *Dichroism* (Illus. Dict.) and *Dichromatopsia.*

Dichromophilism (*di-kro-mof'-il-izm*) [*δίς*, twice; *χρῶμα*, color; *φιλεῖν*, to love]. Capability for double staining.

Dichroous, Dichrous (*di'-kro-us, di'-krus*). Having two colors; relating to dichroism.

Diclidostosis (*dik-lid-os-to'-sis*) [*δικλίδες*, folding doors; *ὀστέον*, a bone]. Ossification of the venous valves. Syn., *Osteodiclis*

Dicodeylmethane (*di-co-de-il-meth'-ān*). The hydrochlorid of a condensation-product of one molecule of formaldehyd with two molecules of codein. A soluble mass melting at 140° C.

Didelphic, Didelphous (*di-del'-fik, -fus*) [δίς, double; δελφύς, the matrix]. Having a double uterus.

Diductor (*di-duk'-tor*) [*diducere*, to draw apart]. A muscle which in action produces diduction.

Didymin (*did'-im-in*) [δίδυμοι, the testes]. A dry preparation made from the testes of the ox. Aphrodisiac dose, 5 gr. (0.3 gm.). In larger doses it is hypnotic.

Didymium. (See Illus. Dict.) **D. Chlorid,** $Di_2Cl_6 + 12H_2O$, rose-colored crystals soluble in water and alcohol. A recommended non-caustic disinfectant in solutions of 1:500 to 1:1000. **D. Nitrate,** $Di_2(NO_3)_6 + 12H_2O$, rose-red crystals soluble in water and alcohol. It is an efficient bactericide. **D. Salicylate,** a waste product in the manufacture of mantles for incandescent gas-lights. It is an excellent topical, siccative, and antiseptic, employed in form of 10% pomade in burns and cutaneous affections. Syn., *Dymal.* **D. Sulfate,** $Di_2(SO_4)_3 + 9H_2O$, hygroscopic crystals used as a disinfectant in the form of a dusting-powder.

Dielectric. (See Illus. Dict.) **D., Pseudo-,** any compound which acts as a dielectric when pure but as an electrolyte when mixed with other members of its own class.

Diestrous, Dicestrous (*di-es'-trus*). Pertaining to a type of sexual season in female animals in which there is a short period of sexual rest.

Diestrum, Dicestrum (*di-es'-trum*) [διά, between; οἶστρος, gad-fly]. Heape's term for the short period of sexual rest characteristic of some female animals. Cf. *Estrum* (Illus. Dict.), *Anestrum*, *Monestrum*.

Diet. (See Illus. Dict.) **D., Bland,** one consisting of food that is free from the ingredients which excite heat, but containing all the nutrients—albumin, carbohydrates, and fat—necessary for the maintenance of man.

Diethyl (*di-eth'-il*). C_4H_{10}. A double molecule of ethyl; in a free state it constitutes normal butane. **D. Acetal.** See *Acetal* (Illus. Dict.). **D.acetone, D.-ketone.** See *Propione* (Illus. Dict.). **D. Disulfid.** Same as *Ethyl bisulfid.* **D.-glycocoll-guaiacoll Hydrochlorate,** an antiseptic used in pulmonary tuberculosis, ozena, etc. Dose, 15 to 60 gr. Syn., *Gujasanol.* **D.-sulfondiethylmethane.** See *Tetronal* (Illus. Dict.). **D.-sulfondimethylmethane.** See *Sulphonal* (Illus. Dict.). **D.-sulfonmethylethylmethane.** See *Trional* (Illus. Dict.).

Diethylenediamin (*di-eth-il-ĕn-di-am'-in*). See *Piperazin* (Illus. Dict.).

Dietotherapy (*di-et-o-ther'-ap-e*) [δίαιτα, mode of life; θεραπεία, therapy]. The regulation of diet for therapeutic purposes.

Differentiation. (See Illus. Dict.) **D., Pneumatic,** a mode of treatment for pulmonary diseases consisting in breathing rarefied or compressed air. **D., Precocious,** applied to eggs that admit of complete orientation at the first or second cleavage, or even before cleavage, reflecting precociously the late organization; as when the region of apical growth is represented by conspicuous teloblasts, the fate of which is seen to be definitely fixed from the moment of their appearance. (Whitman.)

Diffluence (*dif'-lu-enz*) [*diffluere*, to flow apart]. The condition of being almost liquefied.

Diffusate (*dif'-u-sāt*) [*diffundere*, to spread by pouring]. The portion of the liquid which passes through the animal membrane in dialysis, and holds crystalloid matter in solution.

Diffusibility (*dif-u-si-bil'-it-e*). Capacity for being diffused. **D. of Gases,** Dalton's term for that property by which two or more gases confined in an enclosed space expand as if the space were occupied by one gas alone, the elastic force of the mixture being equal to the sum of the elastic forces of all the combined gases.

Diffusiometer (*dif-u-ze-om'-et-ur*) [*diffusion*; μέτρον, a measure]. A device for estimating the diffusibility of gases.

Difluordiphenyl, Difluorodiphenyl (*di-flu-or-di-fen'-il, -o-di-fen'-il*). $C_6H_4Fl—C_6H_4Fl$. A white, crystalline, aromatic powder, freely soluble in alcohol, ether, and chloroform; insoluble in water; specific gravity of 1.04 and melting at 86° C. It is used as a 10% dusting-powder or as a 10% ointment in treating luetic ulcers, etc.

Digenetic (*di-jen-et'-ik*) [δίς, two; γένεσις, generation]. Relating to alternate generation.

Digenism (*di'-jĕn-izm*). 1. See *Digenesis* (Illus. Dict.). 2. The combined or concurrent action of two causes.

Digester (*di-jest'-ur*) [*digerere*, to digest]. An autoclave or apparatus for destructive distillation.

Digital. (See Illus. Dict.) 2. Performed with the fingers. 3. Resembling a depression made with a finger-tip; *e. g.*, *digital fossa.*

Digitalacrin (*dij-it-al-a'-krin*). $C_{25}H_{46}O_6$. A substance isolated by Walz from digitalis.

Digitalein. (See Illus. Dict.) 2. A yellowish-white, intensely bitter powder soluble in water and alcohol; it is a cardiac tonic and diuretic. Dose, $\frac{1}{64}$–$\frac{1}{32}$ gr. (0.001–0.002 gm.) two to four times daily.

Digitaletin (*dij-it-al-et'-in*). $C_{22}H_{38}O_9$. A substance obtained from digitalin by heating with dilute acid.

Digitaliform (*dij-it-al'-e-form*) [*digitus*, a finger; *forma*, form]. Finger-shaped.

Digitalin, Digitalinum. (See Illus. Dict.) **D., Crystallized.** See *Digitin.* **D., French,** a yellowish, odorless, bitter powder, soluble in alcohol, chloroform, and in 2000 parts of water, and said to consist of digitalin with some digitoxin. It is used as a heart tonic. Dose, $\frac{1}{2\frac{1}{2}\frac{1}{0}}$ gr. (0.00026 gm.) rapidly increased to $\frac{1}{4\frac{1}{0}}$ gr. (0.0015 gm.) daily. Max. dose, $\frac{1}{4\frac{1}{8}}$ gr. (0.0015 gm.) daily. Syn., *D., Insoluble; D., Chloroformic; D., Homolle's Amorphous.* **D., German,** a white or yellowish powder, soluble in water or alcohol, almost insoluble in ether and chloroform, and said to consist of digitalein with some digitonin and digitalin. It is a noncumulative heart tonic and diuretic. Dose, $\frac{1}{64}$–$\frac{1}{32}$ gr. (0.001–0.002 gm.) 3 or 4 times daily in pills or subcutaneously. Max. dose, $\frac{1}{16}$ gr. (0.004 gm.) single, $\frac{1}{3}$ gr. (0.022 gm.) daily. Antidotes, emetics, tannic acid, saponin, nitroglycerin, morphin early, strophanthin later, alcoholic stimulants, etc. **D., Homolle's, D., Insoluble.** See *D., French.* **D.-Kiliani,** a white, amorphous powder, soluble in 1000 parts of water and in 100 parts of dilute alcohol, and exerting the characteristic effect of digitalis leaves. Dose, $\frac{1}{3\frac{1}{0}\frac{1}{0}}$ gr. (0.00025 gm.). Syn., *Digitalinum verum Kiliani.* **D., Nativelle's, D.-Nativelle,** $C_{25}H_{40}O_{15}$, fine crystalline needles almost insoluble in water, soluble in alcohol, said to consist chiefly of digitoxin. It is recommended as a heart tonic and in treatment of pulmonary inflammation. Dose, $\frac{1}{1\frac{1}{0}\frac{1}{0}}$–$\frac{1}{64}$ gr. (0.00065–0.001 gm.). **D., Soluble.** See *D., German.*

Digitaliretin, Digitalirrhetin (*dij-it-al-i-ret'-in*). $C_{16}H_{26}O_3$. A substance obtained by Walz from digitalin by action of dilute acid with heat.

Digitalism, Digitalismus (*dij'-it-al-izm, dij-it-al-iz'-mus*). Poisoning through cumulative action of *Digitalis purpurea*, L., used medicinally, consisting in paralysis of cardiac action.

Digitalization (*dij-it-al-i-za'-shun*). Subjection to the effects of digitalin or digitalis.

Digitiform (*dij'-it-e-form*) [*digitus*, a finger; *forma*, form]. Finger-shaped; dactyliform.

Digitin (*dij'-it-in*). $(C_4H_9O_2)n$. A therapeutically inert substance occurring as a granular, crystalline powder isolated by Nativelle from leaves of *Digitalis purpurea*, L. Syn., *Crystallized digitalin*.

Digitofibular (*dij-it-o-fib'-u-lar*). Pertaining to the fibular aspect of the toes.

Digitoleate (*dij-it-o'-le-āt*). A salt of digitoleic acid.

Digitometatarsal (*dij-it-o-met-a-tar'-sal*). Pertaining to the metatarsus and the toes.

Digitoradial (*dij-it-o-ra'-de-al*). Relating to or situated upon the radial aspect of the fingers.

Digitotibial (*dij it-o-tib'-e-al*). Relating to the tibial aspect of the toes.

Digitoulnar (*dij-it-o-ul'-nar*). Relating to the ulnar aspect of the fingers.

Digitoxin. (See Illus. Dict.) A white crystalline powder, soluble in alcohol, in chloroform, slightly in ether; insoluble in water. A powerful heart tonic used in valvular lesions and myocarditis, etc. Dose, $\frac{1}{250}$–$\frac{1}{120}$ gr. (0.00026–0.0005 gm.) 3 times daily, with 3 ♏ (0.2 c.c.) chloroform, 60 ♏ (4 c.c.) alcohol, 1½ fl.oz. (45 c.c.) water. Enema, $\frac{1}{10}$ gr. (0.001 gm.) with 10 ♏ (0.6 c.c.) alcohol, 4 fl. oz. (120 c.c.) water, one to three times daily. Max. dose, $\frac{1}{32}$ gr. (0.002 gm.) daily.

Digitus. (See Illus. Dict.) **D. hippocraticus.** See *Hippocratic Nail* (Illus. Dict.).

Dihexyl (*di-heks'-il*). $(C_6H_{13})_2$. A double molecule of hexyl. **D.-ketone,** enanthene.

Dihydrate (*di-hi'-drāt*) [δίς, twice; ὕδωρ, water]. 1. Any compound containing two molecules of hydroxyl. Syn., *Bihydrate*. 2. A compound containing two molecules of water.

Dihydrated (*di-hi'-dra-ted*). Having absorbed two hydroxyl molecules.

Dihydric (*di-hi'-drik*). Containing two atoms of hydrogen in the molecule; bihydric.

Dihydrid (*di-hi'-drid*). A compound of two atoms of hydrogen with an element or radicle.

Dihydroresorcin (*di-hi-dro-re-zor'-sin*). Shining white prisms soluble in water, alcohol, or chloroform, melting at 104°–106° C., obtained from resorcin by action of sodium amalgam with carbon dioxid. It is recommended as an antiseptic.

Dihydroxytoluene (*di-hi-droks-e-tol'-u-ēn*). See *Orcin* (Illus. Dict.).

Diiodethane (*di-i-od-eth'-ān*). Same as *Ethylene Iodid*.

Diiodid (*di-i'-o-did*). A compound consisting of a basic element and two atoms of iodin. **D. Hydroiodate.** See *Caffein Triiodid*.

Diiodoanilin (*di-i-o-do-an'-il-in*). $C_6H_5.NH_2.I_2$ [1: 2: 4]. A reaction-product of anilin with iodin chlorid, forming acicular crystals soluble in ether, chloroform, carbon disulfid, acetic ether, or hot alcohol, melting at 96° C. It is antiseptic and used as an application in skin-diseases. Syn., *Metadiiodanilin*.

Diiodobetanaphthol (*di-i-o-do-ba-tah-naf'-thol*). $C_{16}H_6I_2O_2$. A yellowish-green, odorless, tasteless powder obtained from mixed solutions of iodin with potassium iodid and β-naphthol with sodium carbonate and S. hypochlorite; it is soluble in chloroform, slightly soluble in alcohol and ether, decomposing by heat with violet fumes. It is used as an antiseptic in place of aristol. Syn., *Naphtholaristol; Naphtholdiiodid*.

Diiodocarbazol (*di-i-o-do-kar'-ba-zol*). $C_{12}H_6I_2:NH$. A substance obtained from carbazol by action of iodin with heat, forming yellow odorless laminas which melt at 184° C.; insoluble in water, soluble in alcohol and chloroform. It is recommended as an antiseptic.

Diiododithymol (*di-i-o-do-di-thi'-mol*). See *Aristol* (Illus. Dict.).

Diiodoform (*di-i-o'-do-form*). C_2HI_3. A substance forming fine, yellow, odorless needles, obtained from acetylene iodid by excess of iodin and containing 95.28% of iodin. It is soluble in chloroform, benzene, toluene, or carbon bisulfid, melts at 192° C., and decomposes on exposure to light. It is used as a substitute for iodoform. Syn., *Tetraethylene iodid*.

Diiodomethane (*di-i-o-do-meth'-ān*). Methylene iodid.

Diiodonaphthol (*di-i-o-do-naf'-thol*). See *Diiodobetanaphthol*.

Diiodopentane (*di-i-o-do-pen'-tān*). See *Amylene Iodid*.

Diiodophenol Iodid (*di-i-o-do-fen'-ol*). See *Phenol Diiodid*.

Diiodoresorcin (*di-i-o-do-re-zor'-sin*). A brown inodorous powder, soluble in alcohol or ether, insoluble in water or diluted acids. It is used as an antiseptic in place of aristol.

Diiodosalicylic Acid (*di-i-o-do-sal-is-il'-ik*). See under *Acid*. **D.-methylester.** See *Sanoform*. **D.-phenylester.** See *Diiodosalol*.

Diiodosalol (*di-i-o-do-sal'-ol*). $C_6H_2I_2(OH)CO_2C_6H_5$. A condensation-product of diiodosalicylic acid with phenol, forming an odorless crystalline powder, melting at 135° C. It is used in treatment of skin diseases.

Diiodothioresorcin (*di-i-o-do-thi-o-re-zor'-sin*). $C_6H_2O_2I_2S_2$. A brown amorphous powder soluble in alcohol. It is used as a dusting-powder and in 10%–20% ointment.

Diisoprene (*di-is'-o-prēn*). See *Dipentene* (Illus. Dict.).

Diisopropylideneacetone (*di-is-o-pro-pil-id-en-as'-et-ōn*). See *Phorone* (Illus. Dict.).

Dika mali. A fetid gum resin obtained from *Gardenia gummifera*, L., and *G. lucida*, Roxb. In decoction it is used as an antiperiodic and in treatment of chronic skin diseases.

Dilamination (*di-lam-in-a'-shun*). See *Chorisis* (Illus. Dict.).

Dilation (*di-la'-shun*). Expansion. See also *Dilatation* (Illus. Dict.). **D., Digital,** dilation of a body-cavity or orifice by means of a finger. **D., Hydrostatic,** dilation of a cavity or part by means of an introduced elastic bag which is subsequently distended with water. **D. of the Stomach,** increase in size of the stomach from relaxation of the walls and expansion with gas in chronic gastritis.

Dilatometer (*dil-at-om'-et-ur*) [*dilatare*, to spread out; μέτρον, a measure]. An apparatus for the estimation of the dilation of liquids.

Diliturate (*dil-it'-u-rāt*). A salt of dilituric acid.

Diluting Fluids. Solutions for use with the hemocytometer. See *Hayem's Fluid* (Illus. Dict.), and *Solutions, Toisson's, Sherrington's*.

Dimethyl (*di-meth'-il*). $(CH_3)_2$. A double molecule of methyl; in the free state it constitutes ethane. **D.acetal,** $C_4H_{10}O_2$, a colorless ethereal liquid obtained from aldehyd, methyl alcohol, and glacial acetic acid with heat; sp. gr. 0.879 at 0° C.; melts at 64° C. It is used as an anesthetic, either alone or combined with one-half its volume of chloroform. Syn., *Ethylidenedimethyl ether*. **D.-amidoantipyrine.** See *Pyramidon*. **D.amidoazobenzene,** $C_{14}H_{15}N_3$, a derivative of dimethylanilin forming small, yellow plates soluble in alcohol, oils, and strong mineral acids, melting at 115° C. It is used as an indicator in

alkalimetry and as a fat color. Syn., *Butter yellow.* **D.amidophenyl dimethyl pyrazolon.** See *Pyramidon.* **D.anilin,** $C_8H_{11}N$, a reaction-product of anilin hydrochlorate with anilin and methyl alcohol. It is a colorless oily liquid; sp. gr. 0.957 at 20° C.; boils at 193° C. **D.arsin Chlorid,** $(CH_3)_2AsCl$, a heavy transparent liquid with penetrating stupefying odor. Inhaled even in moderate quantity it produces excessive inflammation of the nasal mucosa and causes the eyes to become congested with blood. Syn., *Cacodyl chlorid.* **D.arsin Cyanid,** $(CH_3)_2As(CN)$, an excessively poisonous crystalline substance. A few grains allowed to evaporate in a room at ordinary temperature produce complete unconsciousness in one inspiring the air. Syn., *Cacodyl cyanid.* **D.arsin Oxid,** $[As(CH_3)_2]_2O$, a colorless, heavy liquid, soluble in alcohol and ether, which gives off excessively irritating vapor which when mixed with air explodes if heated above 50° C. It acts as a powerful poison; its inhalation destroys the mucous membrane and produces insensibility. Syn., *Cacodyl oxid.* **D.benzene, D.-benzol.** See *Xylol* (Illus. Dict.). **D.diethylmethane.** See *Heptane* (Illus. Dict.). **D.-ethylcarbinol.** See *Amylene Hydrate* (Illus. Dict.). **D.ethylcarbinol Chloral.** See *Amylene Chloral.* **D.nornarcotin,** $C_{21}H_{22}NO_7$, a homolog of normal narcotin. **D.phosphin,** $P(CH_3)_2H$, a colorless liquid boiling at 25° C. and igniting instantly on exposure to the air. **D.-piperazin.** See *Lupetazin.* **D.-piperazin Tartrate.** See *Lycetol.* **D.pyridin.** Same as *Lutidin.* **D.pyrocatechin.** See *Veratrol.* **D.resorcin,** $C_8H_{10}O_2$, a light, mobile aromatic liquid; sp. gr. 1.086 at 15° C.; boils 214° C. Syn., *Resorcinol-dimethyl Ether.* **D. Sulfate,** $\frac{CH_3}{CH_3}>SO_4$, a colorless oily fluid much used in chemical manipulation and giving rise to poisoning with marked local and pulmonary symptoms, convulsions, coma, and paralysis. **D.xanthin.** 1. See *Paraxanthin* in *Table of Leukomains* (Illus. Dict.). 2. See *Theobromin* (Illus. Dict.).

Dimethylated (*di-meth'-il-a-ted*). Combined with molecules of methyl.

Dimetra (*di-me'-trah*) [*δίς*, double; *μήτρα*, the womb]. A double uterus.

Dimorphobiotic (*di-mor-fo-bi-ot'-ik*) [*δις*, two; *μορφή*, shape; *βίωσις*, life]. Relating to an organism which runs through two or more morphologically distinct phases in its life-history—a free stage and a parasitic stage.

Dineuric (*di-nu'-rik*) [*δίς*, two; *νεῦρον*, nerve]. Provided with two neuraxons; said of a nerve-cell.

Dinitrocresol (*di-ni-tro-kre'-sol*). $C_7H_6N_2O_5$. Explosive crystals melting at 85° C. The potassium salt of *o*-dinitrocresol is an excellent insecticide and an efficient remedy in scabies, and mixed with equal parts of soap is, under the name of *antinonnin*, used as an insecticide and to destroy rats and mice. A mixture of the potassium salts of *o*-dinitrocresol and *p*-dinitrocresol, a commercial substitute for saffron, has been employed with fatal results.

Dinitronaphthol (*di-ni-tro-naf'-thol*). See *Martin's Yellow, Table of Pigments* (Illus. Dict.).

Dinitroresorcin (*di-ni-tro-re-zor'-sin*). $C_6H_4N_2O_6 + 2H_2O$. Small yellowish-gray crystals, soluble in alcohol, obtained from dinitroresorcinol in ether solution by action of nitrogen trioxid. It is employed in histologic preparations. Syn., *Ordinary dinitroresorcinol.*

Dionin (*di'-o-nin*). $C_3H_5O.(OH).C_{17}H_{17}NO.HCl + H_2O$. A synthetic substitution-product of morphin, the hydrochlorate of ethyl morphin; a white, crystalline, bitter powder, soluble in alcohol and water. It is analgesic, antispasmodic, and sedative, and is employed in diseases of the respiratory passages and in morphinism. Dose, 1/6–1/2 gr.

Dioning (*di-o'-ning*) [*Διώνη*, the mother of Aphrodite, afterward applied to Aphrodite herself]. Normal love between the opposed sexes; as distinguished from *urning*, abnormal love between the same sexes.

Dioptoscopy (*di op-tos'-ko-pe*) [*διά*, through; *ὀψεσθαι*, to see; *σκοπειν*, to examine]. A method of estimating ocular refraction by means of the ophthalmoscope.

Dioptroscopy (*di-op-tros'-ko-pe*). See *Retinoscopy.*

Diosmic (*di-oz'-mik*). Containing two atoms of osmium as a quadrivalent radicle.

Diosmotic (*di-oz-mot'-ik*) [*διά*, through; *ὠσμός*, impulse]. Pertaining to osmosis.

Diosphenol (*di-os'-fen-ol*). $C_{14}H_{22}O_3$ (Flückiger). A body isolated by Flückiger (1880) from the essential oil of the leaves of *Barosma betulina*, Bartl., a rutaceous plant of southern Africa. Syn., *Barosma camphor; Stearoptene.*

Diospyros (*di-os'-pi-ros*) [*δίος*, of Jove; *πυρός*, grain, fruit]. A genus of trees of the order *Ebenaceæ.* **D. virginiana, L.,** the persimmon tree of the United States. The bark is astringent, tonic, antiperiodic, and hemostatic, and is used in diarrhea, intermittent fever, and uterine hemorrhage. Dose of fld. ext., 30–60 ♏ (1.9–3.7 c.c.).

Diostosis (*di-os-to'-sis*) [*διά*, away from; *ὀστέον*, a bone]. Misplacement of a bone.

Dioviburnia (*di-o-vi-bur'-ne-ah*). A combination of equal parts of the fluid extracts of *Viburnum opulus*, L., *V. prunifolium*, L., *Chamælirium carolinianum*, Willd., *Caulophyllum thalictroides*, Michx., *Aletris farinosa*, L., *Mitchella repens*, L., *Scutellaria lateriflora*, L., and *Dioscorea villosa*, L. It is antispasmodic and anodyne and is used in dysmenorrhea, amenorrhea, etc.

Dioxyanthranol, Dioxyanthrol (*di-oks-e-an'-thran-ol, -throl*). See *Anthrarobin* (Illus. Dict.).

Dioxybenzene (*di-oks-e-ben'-zēn*). See *Hydroquinone* (Illus. Dict.).

Dioxycoumarin, Dioxycumarin (*di-oks-e-koo'-mar-in*). Same as *Daphnetin* (Illus. Dict.).

Dioxygen (*di-oks'-e-jen*). H_2O_2. A term introduced by G. V. I. Brown (1901) for a preparation of pure hydrogen dioxid.

Dioxynaphthalene (*di-oks-e-naf'-thal-ēn*). $C_{10}H_8O_2$. A toxic compound obtained by fusing naphthalene disulfonic acid with potassic hydrate, and occurring as acicular crystals. According to Lépine, if given in daily doses of 3 gr. (0.194 gm.) it increases the strength of asthenic persons.

Dioxytoluene (*di-oks-e-tol'-u-ēn*). Same as *Orcin* (Illus. Dict.).

Dioxytriphenylphthalid (*di-oks-e-tri-fen-il-thal'-id*). See *Phenolphthalein* (Illus. Dict.).

Dipentene. (See Illus. Dict.) Syn., *Cynene; Cajuputene; Isoterebentene; Inactive limonene; Diisoprene; Divalerylene.* **D. Dihydrochlorate.** See *Terpin Dihydrochlorate.* **D. Glycol.** See *Terpin Hydrate.* **D. Hydroiodid.** See *Terpin Hydroiodate.*

Dipentylene-glycol (*di-pen-til-ēn-gli'-kol*). See *Terpin Hydrate.*

Diphenyl. (See Illus. Dict.) Syn., *Phenylbenzene.* **D.carbinol.** See *Benzhydrol.* **D.ethylene.** See *Stilbene* (Illus. Dict.). **D.glyoxal.** See *Benzil* (Illus. Dict.). **D.imid.** See *Carbazol* (Illus. Dict.). **D.ketone.** See *Benzophenone* (Illus. Dict.). **D.-urea.** See *Carbanilid* (Illus. Dict.).

Dipholis (*dif'-ol-is*) [*δίς*, twice; *φολίς*, a spot or scale] A genus of sapotaceous trees or shrubs indigenous to

the West Indies. **D. salicifolia**, A. DC., furnishes galimata or white balata.

Diphtheria. (See Illus. Dict.) Syn., *Ulcera syriaca* (Aretæus, 70 A.D.); *Ulcera pestifera in tonsillis* (Paulus Ægineta, 680 A.D.); *Angina puerorum epidemica* (Bartholinus, 1646); *Angina maligna* (Heredia, 1673); *Putrid sore throat attended with ulcers* (Fothergill, 1748); *Diphthérie* (Bretonneau, 1821). **D., Bretonneau's,** diphtheria of the pharynx. **D., Bronchial,** that form in which the false membrane extends into the air-passages. **D., Buccal,** that in which the pseudomembrane is confined to the mucosa of the cheek and gums. **D., Conjunctival,** diphtheritic conjunctivitis. **D., False.** See *Pseudodiphtheria* (Illus. Dict.). **D., Faucial,** that form in which the false membrane is confined to the fauces. **D. of the Mouth.** See *D., Buccal.* **D. sine diphtheria,** a diphtheric infection unaccompanied by "false membrane." **D., Toxin,** a toxalbumin produced by *Bacillus diphtheriæ*, destroyed by a temperature over 60° C., and capable of causing in susceptible animals the same phenomena induced by inoculation with the living bacilli. **D. of Wounds,** the formation of pseudomembrane on the surface of wounds, but not necessarily due to diphtheric infection.

Diphthericide (*dif-ther'-is-īd*). A proprietary prophylactic against diphtheria, said to consist of thymol, sodium benzoate, and saccharin.

Diphtherin (*dif'-ther-in*). See *Diphtheria Toxin.*

Diphtheroid. (See Illus. Dict.) 2. A general term for all pseudomembranous formations not due to *Bacillus diphtheriæ.*

Diphtherotoxin (*dif-ther-o-toks'-in*). See *Diphtheria Toxin.*

Diplegia. (See Illus. Dict.) **D. facialis,** double facial paralysis. Paralysis of the portio dura on both sides; the face remains expressionless, there is no distortion under emotion, the patient laughs or cries behind a mask. It is caused by a new-growth or gumma involving both nerves at their origin, or by disease affecting the two petrous bones separately or by the action of cold upon both sides of the face in succession. **D., Spastic Cerebral** (of infancy). See *Disease, Little's* (Illus. Dict.).

Diploblastic (*dip-lo-blas'-tik*) [διπλόος, double; βλαστός, a germ]. Having two germinal layers.

Diplocardiac (*dip-lo-kar'-de-ak*) [διπλόος, double; καρδία, heart]. Having a double heart.

Diplocephalia (*dip-lo-sef-al'-e-ah*) [διπλόος, double; κεφαλή, the head]. A monstrosity marked by the presence of two heads on one body.

Diplocephalus (*dip-lo-sef'-al-us*). A monster with a single body and two heads.

Diplogenesis. (See Illus. Dict.) 2. The process described by Pignè in 1846 whereby congenital tumors are formed by the inclusion of embryonic remains.

Diplomeric (*dip-lom'-ur-ik*) [διπλόος, double; μέρος, a part]. Applied to muscles arising from two myotomes; *e. g.*, the supraspinatus and infraspinatus muscles.

Diplopia, Diplopsis, Diplopy. (See Illus. Dict.) **D., Nasal.** See *D., Crossed* (Illus. Dict.). **D., Temporal.** See *D., Homonymous* (Illus. Dict.). **D., Vertical,** diplopia in which one image is seen above the other.

Diplopsic (*dip-lop'-sik*). See *Diplopic* (Illus. Dict.).

Dipolar (*di-po'-lar*). See *Bipolar* (Illus. Dict.).

Dipropyl (*di-pro'-pil*). A double molecule of propyl. **D.-carbinol,** heptyl alcohol. **D.-ketone.** See *Butyrone* (Illus. Dict.). **D.-methane.** See *Heptane* (Illus. Dict.).

Dipsorrhexia (*dip-sor-eks'-e-ah*) [δίψα, thirst; ὄρεξις, appetite]. Thebault's term for that early stage of alcoholism in which no organic lesions have as yet appeared in consequence of the alcoholic poisoning, but when the appetite has been developed.

Dipteryx odorata, Willd. (See Illus. Dict.) The seeds are stimulant, antispasmodic, and antiseptic; used in whooping-cough and for flavoring. Dose of fl. ext., 5–30 ♏ (0.3–1.8 c.c.).

Dipylidium (*di-pi-lid'-e-um*) [δίπυλος, with two entrances]. A genus of parasitic platode worms. See *Parasites, Table of* (Illus. Dict.).

Diradiation (*di-ra-di-a'-shun*) [*diradiare*, to diverge in rays]. See *Actinobolia.*

Diremption (*di-remp'-shun*) [*dirimere*, to separate]. See *Chorisis* (Illus. Dict.).

Disacidify (*dis-as-id'-e-fi*) [*dis*, priv.; *acidify*]. To remove the acid from a substance.

Disc. (See Illus. Dict.) **D., Amici's.** See *Membrane, Krause's* (Illus. Dict.). **D., Anisotropous.** See *D., Sarcous.* **D., Becquerel's,** an apparatus for estimating the difference in temperature between a sound limb and a paralyzed one. **D., Bowman's.** See *Sarcous Elements* (Illus. Dict.). **D., Choked** (see Illus. Dict.), **Leber's Theory of,** that it has its origin in an irritation due to the existence in the cerebrospinal fluid of toxic elements introduced by intracranial tumors or inflammations. **D., Contractile, D., Dark.** See *D., Sarcous.* **D, Engelmann's Intermediate.** See *Membrane, Krause's* (Illus. Dict.). **D., Englemann's Lateral.** See *D., Interstitial.* **D., Epiphyseal,** the broad articular surface with slightly elevated rim on each end of the centrum of a vertebra. Syn., *Epiphyseal plate.* **D., Equatorial.** See *Plate, Equatorial* (Illus. Dict.). **D., Hensen's.** See *Engelmann's Middle Disc* (Illus. Dict.). **D., Intermediate.** See *Membrane, Krause's* (Illus. Dict.). **D., Interpubic.** See *Interpubic Discs* (Illus. Dict.). **D.s, Interstitial,** the more translucent cementing substance conjoining the sarcous elements, and to which the lighter narrower strias of the muscle-fiber and the intervals of the fibrils are due. Syn., *D., Isotropous; D., Lateral; D., Light; Englemann's lateral discs.* **D., Intervertebral.** See under *Intervertebral* (Illus. Dict.). **D., Invisible.** See *Corpuscles, Norris' Invisible* (Illus. Dict.). **D., Isotropous, D., Lateral, D., Light.** See *D., Interstitial.* **D., Krause's.** See *Membrane, Krause's* (Illus. Dict.). **D., Median, D., Middle.** See *Englemann's Middle Disc* (Illus. Dict.). **D., Nuclear.** See *Plate, Equatorial* (Illus. Dict.). **D., Optic.** See *Disc* (Illus. Dict.). **D., Ovigerous.** See *Discus proligerus* (Illus. Dict.). **D., Placido's,** a keratoscope composed of a disc with concentric circles. **D., Principal.** See *D., Sarcous.* **D., Ranvier's.** See under *Ranvier* (Illus. Dict.). **D., Sarcous,** the dark, broad, transverse stripe of striated muscle-fiber; it is anisotropic and supposed to represent the proper contractile substance of the fiber. Syn., *D., Dark; D., Anisotropic; D., Contractile; D., Principal; D., Transverse.* **D., Schiefferdecker's Intermediate,** the substance which is assumed to fill in the space existing at Ranvier's nodes between Schwann's sheath and the axis-cylinder. It appears as a black line on staining with silver nitrate and forms the horizontal branch of Ranvier's Latin cross. **D., Slender.** See *D., Membrane, Krause's* (Illus. Dict.). **D., Stenopeic,** a lens allowing the passage of light rays only through a straight narrow slit; it is used for testing astigmatism. **D.s, Strobic,** revolving discs drawn with concentric circles. **D., Tactile, D., Terminal.** See *Meniscus, Tactile,* and *Ranvier's Tactile Discs* (Illus. Dict.). **D., Transverse.** See *D., Sarcous.* **D., Vitelline.** See *Discus proligerus* (Illus. Dict.).

Discal (*dis'-kal*). See *Discoid* (Illus. Dict.).

Discaria (*dis-ka'-re-ah*) [δίσκος, a round plate]. A genus of rhamnaceous shrubs and trees. **D. febrifuga,** Mart., a Brazilian species from the bark of which a bitter, tonic, and digestive extract is made.

Discharge. (See Illus. Dict.) 2. A setting free or escape of pent-up energy. In electricity the restoration to a neutral electric condition by which a highly electrified body gives off its surplus of electricity to surrounding objects less highly electrified. **D., Conductive,** an electric discharge taking place through conduction. **D., Convective,** an electric discharge in which the charged particles of a fluid convey the electricity. **D., Disruptive,** an electric discharge with emission of heat and sound. **D., Lochial.** See *Lochia* (Illus. Dict.).

Disciform (*dis'-e-form*). Disc-shaped.

Discoblastic (*dis-ko-blas'-tik*) [δίσκος, a disc; βλαστός, a germ]. Undergoing discoid segmentation of the vitellus.

Discoid. (See Illus. Dict.) 2. An excavator having a blade in the form of a disc.

Discoloration (*dis-kul-ur-a'-shun*) [*discolor*, of different colors]. A change in or loss of the natural color of a part.

Discophorous (*dis-kof'-or-us*) [δίσκος, a disc; φορεῖν, to bear]. Furnished with a disciform organ or part.

Discoplacenta (*dis-ko-pla-sen'-tah*). See *Placenta, Discoid* (Illus. Dict.).

Discoplasm, Discoplasma (*dis'-ko-plazm, -plaz'-mah*) [δίσκος, a disc; *plasma*]. The plasma of red blood-corpuscles.

Discous (*dis'-kus*) [δίσκος, a disc]. Discoid.

Discus. (See Illus. Dict.) **D. genu,** the patella. **D. lentiformis,** the lenticula. **D. oophorus, D. vitellinus.** See *D. proligerus* (Illus. Dict.).

Disease. (See Illus. Dict.) **D., Acetabular,** a disease or perforation affecting the acetabulum. **D., Acute Specific.** 1. An infectious febrile disease. 2. Acute syphilis. **D., Adams', D., Adams-Stokes,** permanent or recurrent bradycardia, combined with syncopal or epileptoid attacks, dependent probably upon arteriosclerosis of the vertebral and basilar arteries. **D., Albert's,** achillodynia. **D., Alibert's.** (See Illus. Dict.) 2. Sclerodermia. **D., Alveolar-echinococcous,** Melnikow-Raswedenkow's name for the black jaundice of the Tyrol. **D., Amyloid.** Same as *Albuminoid Disease.* **D., Anserine.** See under *Anserine* (Illus. Dict.). **D., Autogenous,** due to failure on the part of some group of body-cells to perform its function. **D.s, Bacterial,** diseases due to the action of the special products of bacteria upon the body-cells. **D., Baelz's,** progressive ulceration and ultimate destruction of the mucous glands of the lips. **D., Balfour's,** chloroma; chlorosarcoma. A fatal disease of childhood, with post-mortem findings of greenish-yellow or greenish-gray fibrosarcomas in various parts of the body, especially in the periosteum. **D., Ballingal's,** mycetoma. **D., Bamberger's,** saltatory spasm. **D., Banti's,** enlargement of the spleen with progressive anemia, followed by hepatic cirrhosis. **D., Barking,** A. C. Clark's name for slight nervous disorder attended with a dry barking cough. **D., Barlow's,** infantile scurvy, generally associated with rickets, and characterized by subperiosteal hemorrhages, especially of the long bones, with painful swellings. **D., Barometer-maker's.** See under *Barometer* (Illus. Dict.). **D., Barthez's Theory of,** that held by Paul Joseph Barthez (1734–1806), of Montpellier, who believed disease to be due to a derangement of the vital principle, to which he attributed motion and sensibility different from a thinking mind. Every disease was divisible into certain disease elements, viewed as parts of the whole, and these were divisible again into secondary elements. [Park.] **D., Bateman's,** molluscum contagiosum. **D., Bayle's,** progressive general paralysis of the insane. **D., Beard's,** nervous exhaustion; neurasthenia. **D., Beau's,** asystole; cardiac insufficiency. **D., Beauvais' (Landré),** chronic articular rheumatism. **D., Bechterew's,** ankylosis of the vertebral column, associated, as a rule, with muscular atrophy and sensory symptoms. **D., Beigel's,** trichorrhexis nodosa. **D., Berlin's,** traumatic edema of the retina. Syn., *Commotio retinæ.* Ger., *Berlin'sche Truebung.* **D., Billroth's.** 1. Spurious meningocele. 2. Malignant lymphoma. **D., Blocq's.** See *Ataxia, Briquet's* (Illus. Dict.). **D., Blue,** cyanosis. **D., Bohemian,** an epidemic of typhoid fever in Bohemia in the year 1620 which caused a loss to the Bavarian army of 20,000 men. **D., Bonfils'.** See *Hodgkin's Disease* (Illus. Dict.). **D., Bottom,** poisoning due to seeds of rattle-box, *Crotalaria sagittalis,* L. **D., Bouchard's,** dilation of the stomach due to deficient function of the gastric muscular fibers. **D., Bouveret's,** paroxysmal tachycardia. **D., Brass-founders',** chronic poisoning from working in brass. **D., Breisky's,** kraurosis vulvæ. **D., Brinton's,** linitis plastica; hypertrophy and sclerosis of the submucous connective tissue of the stomach. **D., Bronzed-skin,** Addison's disease. **D., Brown's Doctrine of.** See *Brunonian Theory* (Illus. Dict.). **D., Bruck's,** a syndrome described by Bruck as consisting of multiple fractures and marked deformity of bones, ankylosis of most of the joints, and muscular atrophy. **D., Bulbar.** See *Paralysis, Bulbar* (Illus. Dict.). **D., Button** (of chickens), an affection of young chickens in tropical countries characterized by the appearance of button-like tubercles at the angle of the mouth. It is regarded as a kind of aspergillosis. **D., Caisson.** See under *Caisson* (Illus. Dict.). **D., Campanian,** a skin-eruption usually accompanied by purple warts. Syn., *Morbus campanus.* **D., Cane-of-Provence,** dermatitis of the face and other parts, especially the genitals, accompanied by fever, headache, and vertigo, and later by vomiting, diarrhea, and dyspnea, observed among basket-makers who handle the reed *Arundo donax,* L. It is due to a poisonous fungus, *Sporotrichium dermatodes,* growing upon the reeds. Syn., *Maladie des cannes; M. des roseaux.* **D., Carrion's,** verruga peruviana; Peruvian wart. **D.s, Cereal,** those due to ingestion of diseased grains. **D., Charcot-Guinon's,** dementia complicating some cases of progressive muscular dystrophy. **D., Cheadle's, D., Cheadle-Barlow's.** See *D., Barlow's.* **D., Cherchewsky's,** nervous ileus. An affection closely simulating intestinal obstruction, that has been observed in neurasthenia. **D., Cheyne's English,** hypochondria. **D., Choleraic,** a tropical affection resembling cholera, due to the ingestion of poisonous fish. Cf. *Siguatera.* **D., Cholesterin,** amyloid degeneration. **D., Chronic Alcohol,** chronic alcoholism. **D., Chylopoietic,** one affecting the digestive organs. **D., Coitus.** See under *Coitus* (Illus. Dict.). **D., Colloid.** See *Amyloid Degeneration* (Illus. Dict.). **D., Compound System** (of Ross), a disease that involves two or more of the embryologic systems of the spinal cord, either simultaneously or consecutively. **D., Confectioner's,** weakened and disorganized finger-nails due to immersion in hot syrup. **D., Cornstalk.** See *Cornstalk-disease.* **D., Corrigan's.** (See Illus. Dict.) 2. Cirrhosis of the lung. **D., Corvisart's,** idiopathic cardiac hypertrophy. **D., Cotugno's,** malum

Cotunnii; sciatica. **D., Cyclic,** a disease following cycles or periods of exacerbation or change. **D., Cystic, of the Breast.** See *D., Reclus'* (Illus. Dict.). **D., Dancing.** See *Tarantism* (Illus. Dict.). **D., Danielssen's,** anesthetic leprosy. **D., Debove's,** splenomegaly. **D., Déjerine's,** hypertrophic interstitial neuritis of infancy. **D., Dercum's.** See *Adiposis dolorosa.* **D., Die-back,** a fungus-disease of certain plants; as of apricots. **D.s, Dietic.** See *Dietic* (Illus. Dict.). **D., Divers',** an affection similar to caisson disease. **D., Dubois',** the presence of multiple necrotic foci in the thymus glands of infants affected with hereditary syphilis. **D., Duroziez's,** congenital mitral stenosis. **D., Ebstein's,** hyaline degeneration and insular necrosis of the epithelial cells of the renal tubules in diabetes. **D.s, Echinococcous,** disorders due to the invasion of echinococci. **D., Eichstedt's,** pityriasis versicolor. **D., Elevator.** 1. An affection of the heart occurring in elevator-men. Syn., *Liftman's heart.* 2. See under *Elevator* (Illus. Dict.). **D., Endemic.** See *Endemic* (Illus. Dict.). **D., English,** rhachitis. **D., Enthetic,** one introduced extraneously; an infectious disease. **D., Entozootic,** one due to the presence of animal parasites within the body. **D., Epidemic.** See *Epidemic* (Illus. Dict.). **D., Fenwick's,** primary atrophy of the stomach. **D., Fibrous.** a condition of the system supposed to favor the formation of fibrous growths. **D., Filatow's,** acute febrile cervical adenitis of children, probably identical with Pfeiffer's glandular fever. **D., Fish,** a disease of salmon and other fishes and of tritons and newts, due to the growth of a facultative parasitic fungus (*Saprolegnia ferox,* Nees.) on abraded places of the skin. Also called *Salmon disease.* **D., Fishskin,** ichthyosis. **D., Fish-slime,** a peculiar form of septicemia due to punctured wounds by fish-spines. **D., Flax-dresser's,** pneumonia from inhalation of particles of flax. **D., Flesh-worm,** trichiniasis. **D., Flint.** Synonym of *Chalicosis.* **D., Foot and Mouth.** See under *Foot* (Illus. Dict.). **D., Fothergill's,** neuralgia of the trigeminus. **D., Fourth,** Clement Dukes' term for a contagious disease resembling measles, scarlet fever, and rubella or rose-rash, but distinct. Syn., *Quatrième fièvre éruptive.* Cf. *Erythema scarlatiniforme.* **D., Friedländer's,** obliterative arteritis. **D.s, Fungoid, D.s, Fungous,** those due to the invasion of fungi, causing impaired or perverted action of the cells encroached upon. **D., Fungous, of India,** a prevalent endemic disease of India affecting the extremities and disorganizing the tissues, due to the implantation of spores in the tissues. **D., Gannister,** the formation of fibroid tissue in the lungs of gannister miners and grinders, due to constant irritation from breathing the fine dust. **D., Gaucher's,** an affection described by Gaucher as "primary epithelioma of the spleen," but probably identical with splenic anemia. **D., Gayet's,** a rare and fatal form of narcolepsy somewhat resembling the African sleeping sickness. Cf. *Uncinariasis.* **D., Gerhardt's.** See *D., Mitchell's.* **D., Giovannini's,** a rare form of nodular disease of the hair caused by a fungus. **D., Goldflam's.** See *D., Erb's* (Illus. Dict.). **D., v. Graefe's,** progressive ophthalmoplegia. **D., Grancher's,** spléno-pneumonie; pneumonie massive. A form of pneumonia with splenization of the lung, the coagulable exudate filling not only the alveoli, but also the larger bronchi. **D., Griesinger's,** uncinariasis. **D., Grinder's,** fibroid phthisis. **D., Gross'.** See *Physick's Encysted Rectum* (Illus. Dict.). **D., Gruby's.** See *Alopecia areata* (Illus. Dict.). **D., Guinea-worm,** disease due to *Filaria medinensis.* See *Parasites, Table of* (Illus. Dict.). **D., Guinon's,** tic de Guinon. See *D., Tourette's* (Illus. Dict.). **D., Gull and Sutton's,** arteriocapillary fibrosis; diffuse arteriosclerosis. **D., Habit,** one that results from long continuation and frequent repetition of an act. **D., Hallopeau's,** chronic pustular dermatitis, a form of Neumann's disease. **D., Hammond's (W. A.).** See *Athetosis* (Illus. Dict.). **D., Hand, Foot, and Mouth.** See *Pemphigus vegetans* (Illus. Dict.). **D., Hayem's,** apoplectiform myelitis. **D.s, Hematopoietic,** those affecting the blood-making apparatus. **D., Hendon,** an endemic outbreak of scarlet fever occurring at Hendon, England, from ingestion of milk of cows suffering from a peculiar vesicular eruption on the teats. **D., Henoch-Bergeron's.** See *D., Bergeron's* (Illus. Dict.). **D.s, Heterotoxic,** those due to toxic substances introduced from without the body. **D., Hide-bound.** See *Scleroderma* and *Sclerema neonatorum.* **D., Hirschfeld's,** a form of diabetes of rapid march which usually ends in death in three months, by progressive cachexia or by complication. **D., Hirschsprung's,** congenital hypertrophic dilation of the colon. **D., Hodara's,** a form of trichorrhexis nodosa that has been observed by Hodara in women in Constantinople. **D., Hookworm,** uncinariasis. **D., Horner's,** a slight ptosis accompanied by miosis, retraction of the eyeball, and flushing of the face of the same side, in destructive lesions of the cervical sympathetic. **D., Hotel.** See *D., National Hotel.* **D., Huchard's,** excessive arterial tension due to a spasm of the vasoconstrictors and which, according to Huchard, causes general arteriosclerosis. **D., Huguier's.** (See Illus. Dict.) 2. Hypertrophic elongation of the supravaginal portion of the cervix uteri. **D., Humoral, Theory of,** that of Christopher Ludwig Hoffmann [1721–1807], which referred diseases to certain bodily humors, and in which the "acridities" of Boerhaave were mingled with the "putridities" of the Pneumatists and the "irritability" of Glisson. [Park.] **D.. Hutchinson's.** See *Tay's Choroiditis, Table of Diseases* (Illus. Dict.). **D., Hydrocephaloid,** a disease of children resembling hydrocephalus, following premature weaning. **D., Infectious,** one arising from the invasion, growth, and multiplication in the body of specific, pathogenic microorganisms which produce a chemic poison that induces its characteristic effects. **D., Isambert's,** tuberculous ulceration of the mouth, fauces, and pharynx. **D., Jumping,** a form of choromania. See *Jumpers* (Illus. Dict.). **D., Kahlbaum's.** See *Catatonia* (Illus. Dict.). **D., Kahler's,** a rare constitutional affection characterized by the formation of round-celled neoplasms in the skeleton, paroxysms of pain, a tendency to spontaneous fractures, especially of the ribs, enlargement of the spleen and lymphatic glands, and the presence of Bence Jones' bodies in the urine. The sarcoma-like growths first invade the marrow and afterward destroy the osseous tissue, and it appears that when the marrow is rendered unable to perform its normal functions, albumose is formed by the established pathologic condition and this causes a true intoxication. **D., Kuemmell's,** traumatic spondylitis. **D., Kussmaul's,** poliomyelitis anterior acuta; acute atrophic spinal paralysis. **D., Lardaceous,** amyloid degeneration. **D., Lasègue's,** mania of persecution. **D., Lobstein's,** osteopsathyrosis. **D., Local,** one confined to some particular region of the body or to one tissue or organ. **D., Loco.** See under *Loco* (Illus. Dict.). **D., Lucas-Championnière's,** chronic pseudomembranous bronchitis. **D., Maher's,** perivaginitis simplex. **D., Malignant Mold-fungus,** an affection of the skin

and mucosa, especially of the mouth, lips, and nose; is described by de Hahn as due to a mold-fungus. **D., Marie's.** (See Illus. Dict.) 2. Hereditary cerebellar ataxia. 3. Hypertrophic pulmonary osteoarthropathy. 4. Spondylosis rhizomelica; ankylosis of the spinal column and the coxofemoral, less frequently also of the scapulohumeral, articulations. The affection is identified with Struempell's disease. **D., Mathieu-Weil's.** See *D., Weil's* (Illus. Dict.). **D., Meyer's,** hypertrophy of the pharyngeal tonsil; adenoid vegetations of the pharynx. **D., Mikulicz's,** chronic hypertrophic enlargement of the lacrimal and salivary glands. **D., Mitchell's** (**Weir**), erythromelalgia. **D., Mitral,** disease affecting the mitral valves. **D., Moebius',** periodic or recurrent paralysis of the motor oculi. **D., Moeller's.** See *D., Barlow's.* **D., Mucous,** a form of chronic gastrointestinal catarrh in children. It consists of a mucous flux, from the whole internal surface of the alimentary canal, which interferes mechanically with the digestion and absorption of food, and so impedes nutrition as to suggest the presence of tubercles. It usually arises between the fourth and the twelfth year, frequently as a sequel of pertussis. [Starr.] **D., Mucous** (Whitehead), **D., Mucous** (of the colon). See *Colitis, Mucous.* **D., National Hotel,** severe irritation of the alimentary canal and particularly of the large intestine due to sewer-gas poisoning; it occurred as an endemic among the occupants of the National Hotel in Washington in 1857. **D., Neftels',** atremia; inability to walk, stand, or sit without general discomfort and paresthesia of the head and back, all movements being readily executed in the recumbent posture. **D., Neumann's,** pemphigus vegetans. **D.s, Occupation.** See under *Occupation* (Illus. Dict.). **D., Organic,** one due to structural changes. **D., Ottawa,** Canadian syphiloid. **D., Page's,** railway spine. **D., Painted,** *mal del pinto* (Sp.). See *Carate* (Illus. Dict.). **D., Pallid.** See *Pali* (Illus. Dict.). **D., Pandemic,** a disease epidemic over a wide area. **D., Parasitic,** one due to an animal or vegetable parasite. **D., Parenchymatous,** that affecting the parenchyma of an organ. **D., Paris',** acrodynia. **D., Parrot.** Ses *Psittacosis.* **D., Pearl,** bovine tuberculosis. **D., Periodic.** See under *Periodic* (Illus. Dict.). **D., Phocas',** chronic fibrous mastitis, characterized by the presence of multiple fibrous nodules in both breasts. **D., Pianoplayer's.** See *Cramp, Pianist's* (Illus. Dict.). **D., Pick's,** pseudocirrhosis of the liver, met with occasionally as a complication of adhesive pericarditis. **D., Planet-struck,** apoplexy. **D., Policeman's,** tarsalgia. **D., Porcupine.** See *Ichthyosis hystrix* (Illus. Dict.). **D.s, Protozoal,** pathologic conditions due to the invasion of the body by protozoa. **D., Protozoic** (of Posadas, Wernicke, etc.). See *Dermatitis, Blastomycetic.* **D., Pulpy,** tuberculous arthritis. **D., Ragsorter's.** See *Ragpicker's D.* (Illus. Dict.). **D., Rat,** bubonic plague. **D., Recklinghausen's.** 1. Multiple neurofibromatosis. 2. Hemochromatosis; an affection characterized by bronzing of the skin, hypertrophic cirrhosis of the liver, enlargement of the spleen, and, in later stages, diabetes from pancreatic sclerosis. **D., Reichmann's,** gastrosuccorrhea; a neurosis of the stomach attended with hypersecretion. **D., Rice,** a name for cholera, from the supposition that it was due to the ingestion of damaged rice. **D., Riegel's,** Riegel's syndrome; tachycardia associated with troubles simulating asthma. **D., Roger's,** simple perforation of the interventricular septum. **D., Romberg's,** progressive facial hemiatrophy. **D., Rosenbach's,** a nodular enlargement, painful to the touch, of the dorsal aspect of the proximal ends of the last phalanges. The affection is regarded as identical with Heberden's nodes. **D., Roth's,** meralgia paresthetica, Bernhardt's paresthesia. **D., Rougnon-Heberden's.** See *D., Heberden's* (Illus. Dict.). **D., Rummo's.** Synonym of *Cardioptosis.* **D., Rust's,** tuberculous spondylitis affecting the first and second cervical vertebras. **D., Sacroiliac.** See *Sacroiliac Disease* (Illus. Dict.). **D., Saint Euphemia's,** syphilis. **D., Salmon.** See *D., Fish.* **D., Sarmatian.** See *Plica polonica* (Illus. Dict.). **D., Savill's,** dermatitis exfoliativa epidemica; epidemic eczema. **D., Scythian.** See *Scythian* (Illus. Dict.). **D., Septinous,** a form of septic disease in which there is absorption of the toxic substance through an abrasion of the mucosa of the alimentary canal. **D., Seven Days',** trismus. **D., Smith's** (Eustace). See *Colitis, Mucous.* **D., Spot,** a name given to various fungal diseases of plants; *e. g.*, S. d. of violets, due to *Alternaria violæ.* Leaf-spot d. of cherry-trees, due to *Clasterosporium amygdalearum.* **D., Spotted, of Central America.** See *Cutare* (Illus. Dict.). **D., Sternberg's,** the tuberculous form of pseudoleukemia. **D., Stokes-Adams'.** See *D., Adams-Stokes'.* **D., Stomach-worm,** a disease of cattle due to species of *Strongylus, S. contortus, S. Curticei, S. Parkeri, S. retortæformis, S. fillicolis.* See *Parasites, Table of* (Illus. Dict.). **D., Straddling,** quebrabunda; a tropic disease resembling beriberi, attacking horses and pigs. **D., Structural,** one involving a change of structure in the part first affected. **D., Struempell's.** (See Illus. Dict.) 2. Chronic ankylosing inflammation of the vertebral column. **D., Struempell-Leichtenstern's,** acute encephalitis of infancy. **D., Summer,** cholera infantum. **D., Suprarenal-capsule,** Addison's disease. **D., Sutton and Gull's.** See *D., Gull and Sutton's.* **D., Swediaur's,** achillodynia. **D.s, Symmetric,** those affecting both halves of the body. **D., Talma's,** myotonia acquisita. **D., Tea-taster's,** a disorder characterized by extreme neurasthenia, rapid heart action, fibrillary muscular twitching and paresthesia due to excessive use of tea. **D., Thunderstruck,** apoplexy. **D., Tillaux-Phocas'.** See *D., Phocas'.* **D., Tomaselli's,** quinin-fever. **D., Tricuspid,** disease affecting the tricuspid valve. **D., Trousseau's,** stomachal vertigo. **D., Tsetse-fly,** that caused in horses, cattle, and other stock in Africa by the hematozoon *Trypanosoma Brucei,* which is transmitted by the tsetse-fly (*Glossina morsitans,* Westwood). See *Parasites, Table of* (Illus. Dict.). **D., Typical.** See *D., Cyclic.* **D., Vagabond's, D., Vagrant's.** See *Vagabond's D.* (Illus. Dict.). **D., Valsuani's,** pernicious progressive anemia occurring in pregnancy. **D., Van Buren's,** chronic circumscribed infiltration of the corpus cavernosum. **D., Venereal.** See *Venereal* (Illus. Dict.). **D., Virchow's,** leontiasis ossium. **D., Waxy,** amyloid degeneration. **D., Wagner's** (of bone), epiphyseal osteochondritis occurring in infants affected with hereditary syphilis. **D., Wernicke's,** polioencephalitis acuta hæmorrhagica; acute superior polioencephalitis. **D., White's.** See *D., Darier's* (Illus. Dict.). **D., White-blood,** leukemia. **D., Whytt's,** hydrocephalus internus. **D., Wilkinson's,** paralysis agitans. **D., Wilk's,** chronic parenchymatous nephritis. **D., Willard's,** lupus vulgaris. **D., Wilson-Brocq's.** See *D., Wilson's* (Illus. Dict.). **D., Wool-sorters'.** See under *Wool* (Illus. Dict.). **D., Yellow,** hemorrhagic malarial fever. **D., Yellow-eye,** the Chinese name for epidemic jaundice, from the deep lemon color of the sclera.

Disgorgement (*dis-gorj'-ment*) [O F., *desgorger*]. 1. Ejection by vomiting. 2. The subsidence of an engorgement.

Disgregation (*dis-greg-a'-shun*) [*disgregare*, to separate]. Dispersion; separation, as of molecules or cells.

Disinfectin (*dis-in-fek'-tin*). A brown liquid obtained from treating 5 parts of the residue of naphtha-distillation with 1 part of concentrated sulfuric acid and the resulting product with 5 parts of 10% soda solution. Diluted it is used as a disinfectant.

Disintoxication (*dis-in-toks-ik-a'-shun*). See *Detoxification*.

Dislocation. (See Illus. Dict.) Syn., *Paracinesis; Olisthesis; Exothesis; Delocatio; Diacinema; Luxation; Lygismus.* See *Signs, Callaway's, Dugas', Hamilton's.* **D., Divergent**, separate dislocation of the ulna and radius. **D., Double**, displacement at the same time of corresponding bones on both sides of the body. **D., Habitual**, one that recurs repeatedly from a relaxed condition of the ligaments or from incomplete repair of the articular capsule. **D., Monteggia's**, the dislocation of the hip-joint in which the head of the femur is near the anterior superior spine of the ilium, the limb being rotated outward. **D., Nélaton's**, upward dislocation of the ankle, the astragalus being wedged in between the tibia and fibula. **D., Pathologic**, one due to a diseased joint or paralysis of the controlling muscles. **D., Relapsing.** See *D., Habitual.* **D., Smith's** (of the foot), dislocation upward and backward of all the metatarsal bones, together with the internal cuneiform. **D., Subclavicular**, one of the head of the humerus beneath the pectoralis major below the clavicle. **D., Subglenoid**, one of the humerus directly below the glenoid fossa. **D., Subpubic**, dislocation of the hip-joint below the pubes. **D., Subspinous**, one in which the head of the humerus is held in the infraspinous fossa. **D., Thyroid**, displacement of the head of the femur into the thyroid foramen.

Dislysin (*dis'-lis-in*). See *Dyslysin* (Illus. Dict.).

Disodic (*di-so'-dik*) [*dis*, two; *sodium*]. Having two atoms of sodium in each molecule.

Disodic (*dis-od'-ik*) [δίς, twice; ὁδός, a way]. Furnished with or relating to two openings.

Disoma, Disomus, (*di-so'-mah, -mus*) [δίς, twice; σῶμα, body; pl., *disomata, disomi*]. A monster having two trunks.

Disoxidation (*dis-oks-id-a'-shun*). See *Deoxidation.*

Disoxygenation (*dis-oks-e-jen-a'-shun*). See *Deoxygenation.*

Dispar (*dis'-par*) [L.]. Unequal.

Disparity (*dis-par'-e-te*) [*dispar*, unequal]. Difference, inequality. **D., Crossed**, a condition of binocular relief whereby in superimposed similar figures having their points of sharpest vision coinciding, a certain other point in the left field appears to be to the right, and the same point in the right field to the left of the point of sharpest vision. **D., Uncrossed**, a similar condition of binocular relief, but in which a point of the left is seen to the left of a similar point in the right field.

Dispermin (*di-spurm'-in*). See *Piperazin* (Illus. Dict.).

Dispermy (*di-spurm'-e*) [δίς, twice; σπέρμα, a seed]. The entrance of two spermatozoa into the egg-cell.

Displacement. (See Illus. Dict.) 2. Percolation. **D., Backward** (of the arm), **D., Dorsal** (of the arm), a backward displacement across the neck or occipital region, of one of the arms of the fetus, causing obstruction to delivery. **D., Fishhook**, a displacement of the stomach in which the pyloric orifice faces directly upward and the duodenum extends upward and to the right, connecting with the pylorus at an angle, which produces a constricting hook.

Dissimilation (*dis-sim-il-a'-shun*). See *Catabolism* (Illus. Dict.).

Distillation. (See Illus. Dict.) **D., Dry**, distillation of solids without the addition of liquids, conducted within a closed vessel in order to hinder combustion.

Distobuccal (*dis-to-buk'-al*) [*distare*, to separate; *bucca*, the cheek]. Relating to the distal and buccal walls of the bicuspid and molar teeth.

Distolabial (*dis-to-la'-be-al*) [*distare*, to separate; *labium*, lip]. Relating to the portions of the anterior teeth between their distal and labial walls.

Distolingual (*dis-to-lin'-gwal*) [*distare*, to separate; *lingua*, tongue]. Relating to the portions of teeth between their distal and lingual walls.

Distomatosis (*dis-to-mat-o'-sis*). See *Distomia.*

Distomia (*di-sto'-me-ah*) [δίς, twice; στόμα, mouth]. Congenital duplication of the mouth.

Distraction (*dis-trak'-shun*) [*distrahere*, to draw apart]. A method of treating certain joint-diseases and bone fractures by extension and counterextension.

Disvolution (*dis-vo-lu'-shun*) [*dis*, apart; *volvere*, to roll down]. Degeneracy; devolution; extreme catabolism.

Ditain (*dit'-ah-in*). $C_{22}H_{28}N_2O_4$ (Hesse). An alkaloid from dita bark forming bitter glassy prisms soluble in water, alcohol, ether, or chloroform; melting at 206° C. It is used hypodermically in tetanus. Dose, $\frac{1}{12}$ gr. (0.005 gm.) 1 or 2 times per day or until effectual. Syn., *Echitamin.*

Ditamin (*dit'-am-in*). $C_{16}H_{19}NO_2$. An alkaloid found by Hesse in dita bark.

Dithan (*dith'-an*). See *Trional* (Illus. Dict.).

Dithienyl (*di-thi'-en-il*). $C_8H_6S_2$. An oxidation-product of thiophene with sulfuric acid forming large, glossy laminas; soluble in alcohol, ether, and glacial acetic acid; melting at 83° C.; boiling at 266° C.

Dithion (*dith'-e-on*). A mixture of the two sodium dithiosalicylates occurring as a gray powder. It is used as an antiseptic wash (5% to 10%) and dusting-powder in gonorrhea and in foot and mouth disease.

Dithionaphtol (*dith-e-o-naf'-tol*). $C_{10}H_8S_2$. A reduction-product of α-naphthalene disulfochlorid occurring as a white crystalline powder, soluble in hot alcohol; melts at 180° C.; boils at 210° C.

Dithymoldiiodid, Dithymoliodid (*di-thi-mol-di-i'-o-did, di-thi-mol-i'-o-did*). See *Aristol* (Illus. Dict.).

Diurism (*di'-ur-izm*). See *Diuresis* (Illus. Dict.).

Diurnation (*di-ur-na'-shun*). The diurnal sleep of the bat and other nocturnal animals.

Divalerene (*di-val'-ur-ēn*). See *Dipentene* (Illus. Dict.).

Diverticular (*di-vur-tik'-u-lar*) [*divertere*, to turn]. Relating to or arising from a diverticulum.

Diverticulitis (*di-vur-tik-u-li'-tis*). Inflammation of a diverticulum (of the urethra).

Diverticulum. (See Illus. Dict.) Syn., *Deverticulum.* **D., Cecal.** See *D., Meckel's* (Illus. Dict.). **D. of the Duodenum**, the ampulla of Vater. **D., Esophageal.** See *Pharyngocele* (Illus. Dict.). **D., False**, a sacciform dilation due to disease or injury. **D., Heister's**, the sinus of the jugular vein **D. ilei, D. of the Ileum.** See *D., Meckel's* (Illus. Dict.). **D., Lateral** (of the fourth ventricle). See *Recess, Lateral* (Illus. Dict.). **D., Nuck's.** See *Canal, Nuck's* (Illus. Dict.). **D., Pertik's**, a diverticulum of the nasopharyngeal space which may occur close to Rosenmueller's fossa and show itself as an enlargement of the latter. **D., Pituitary.** See under *Pituitary* (Illus. Dict.). **D., Pulsion, D., Traction**, a false diverticulum produced by traction on the outside of a hollow organ. **D., Vater's.** See *Ampulla,*

Vater's (Illus. Dict.). **D. vesicæ**, a false diverticulum of the urinary bladder.

Doaia. The vernacular name in India for trypanosomiasis.

Dochmiasis, Dochmiosis (*dok-mi'-a-sis, dok-mi-o'-sis*). See *Uncinariasis.*

Docimasia. (See Illus. Dict.) **D. circulationis**, a postmortem investigation of the organs of circulation in a newborn child to ascertain if it was born alive. **D. gastrointestinalis.** See *Breslau's test*, under *Birth* (Illus. Dict.). **D. hæmatopulmonaris, D. pulmonum statica.** See *Ploucquet's test*, under *Birth* (Illus. Dict.). **D. hepatica**, the test for glycogen and sugar in the liver. **D. hepatis**, a test of live-birth based on the theory that the weight of the liver is greatly decreased after respiration, due to suppression of the blood-supply from the umbilical vein. **D. hydrostatica, D. pulmonum hydrostatica.** See *Hydrostatic test*, under *Birth* (Illus. Dict.). **D. pulmonalis, D. pulmonaris.** See *D. pulmonum* (Illus. Dict.). **D. pulmonum Danieli**, in medical jurisprudence, an attempted method of testing live-birth by measurement of the chest.

Docimasiology (*dos-im-a-se-ol'-o-je*) [*docimasia; λόγος*, science]. The art or science of investigation, embracing medicine, surgery, chemistry, etc.

Docimaster (*dos-im-as'-tur*). An examiner or tester.

Doctrine. (See Illus. Dict.) **D. of Coction.** See under *Coction.* **D. of Infarctus.** See under *Infarctus.* **D. of Irritability, Glisson's.** See under *Irritability.* **D. of Similia Similibus Curentur.** See under *Similia.* **D. of Vitalism, Borden's.** See under *Vitalism.*

Dog-surra (*dog-sur'-ah*). Trypanosomiasis in dogs.

Dolichocephalus (*dol-ik-o-sef'-al-us*) [*δολιχός*, long; *κεφαλή*, head]. A skull having a relatively long anteroposterior diameter; a skull-formation resulting from the too rapid ossification of the longitudinal suture. The varieties are *leptocephalus; sphenocephalus* (see Illus. Dict.), and *clinocephalus.* **D. simplex**, that occurring through synostosis of the sagittal suture.

Dolichochamæcephalus (*dol·ik-o-kam-e-sef'-al-us*) [*δολιχός*, long; *χαμάι*, on the ground; *κεφαλή*, head]. Applied to a skull which is characterized by both dolichocephalia and chamecephaly.

Dolichocnemic, Dolichoknemic (*dol-ik-o-ne'-mik*) [*δολιχός*, long; *κνήμη*, a leg]. Having the leg of almost the same length as that of the thigh.

Dolichoderus (*dol-ik-od'-ur-us*) [*δολιχός*, long; *δέρη*, the neck]. Having the neck long.

Dolichoeuromesocephalus (*dol-ik-o-u-ro-mez-o-sef'-al-us*) [*δολιχός*, long; *εὐρύς*, broad; *μέσος*, middle; *κεφαλή*, head]. Having a dolichocephalic skull which is broad in the temporal region.

Dolichoeuroopisthocephalus (*dol-ik-o-u-ro-o-pis-tho-sef'-al-us*) [*δολιχός*, long; *εὐρύς*, broad; *ὄπισθε*, behind; *κεφαλή*, the head]. Having a dolichocephalic skull, broad in the occipital region.

Dolichoeuroprocephalus (*dol-ik-o-u-ro-pro-sef'-al-us*) [*δολιχος*, long; *εὐρύς*, broad; *πρό*, before; *κεφαλή*, the head]. Having a dolichocephalic skull very broad in the frontal region.

Dolichofacial (*dol-ik-o-fa'-shal*). With a long face.

Dolichokerkic (*dol-ik-o-kerk'-ik*) [*δολιχός*, long; *κερκις*, a shuttle]. Having the angle which is formed by the crest of the scapula with its spinal border over 80 degrees.

Dolicholeptocephalus (*dol-ik-o-lep-to-sef'-al-us*) [*δολιχός*, long; *leptocephalus*]. Having a skull both dolichocephalic and leptocephalic.

Dolichoplatycephalus (*dol-ik-o-plat-e-sef'-al-us*) [*δολιχός*, long; *platycephalus*]. Having the skull both long and flat.

Dolichorrhine (*dol'-ik-or-ĕn*) [*δολιχός*, long; *ῥίς*, the nose]. Long-nosed.

Dolichouranic (*dol-ik-o-u-ran'-ik*) [*δολίχός*, long; *οὐρανός*, the palate]. Having a long alveolar arch. Cf. *Brachyuranic; Mesuranic.*

Dolioform (*dol'-e-o-form*) [*dolium*, a cask; *forma*, form]. Cask-shaped.

Dolomia (*dol-o'-me-ah*) [*de Dolomieu*, a French geologist (1750–1801)]. A compound of the carbonates of calcium and magnesium. Syn., *Dolomite.*

Dolomol (*dol'-o-mol*). Stearate of calcium and magnesium; it is used as a base for dusting-powders, etc.

Dolor. (See Illus. Dict.) **Dolores ad partum**, labor pains during the expulsive stage. **D. ani**, proctalgia. **D. atrox**, violent, excessive pain. **Dolores conquassantes**, the labor pains which accomplish the expulsion of the head. **D. faciei, D. faciei crucians, D. fothergillii.** See *Prosopalgia* (Illus. Dict.). **D. glandularum**, adenalgia. **D. ischiadicus**, sciatica. **D. lateris**, pleurodynia. **D. nephriticus**, nephralgia. **Dolores osteocopi**, the boring, nocturnal pains in the bones due to syphilis. Syn., *Osteocopic pains; Dolores terebrantes.* **Dolores parturientium, Dolores partus**, labor pains. **D. pectoris**, pleurodynia. **Dolores post partum**, after-pains. **Dolores præparantes.** See *Dolores præsagientes* (Illus. Dict.). **Dolores puerperarum.** See *Pains, After-* (Illus. Dict.). **Dolores rodentes**, gnawing pains. **Dolores sanguinolenti**, the labor pains of the placental stage. **D. stupidus**, a dull pain. **D. terebrans**, a boring pain.

Dominus morborum (*dom'-in-us mor-bor'-um*). The lord of diseases; gout.

Donders' Schema. An arrangement of the dead thorax with manometers to gauge the pressure.

Dormiol (*dor'-me-ol*). The commercial name for amylene chloral; recommended as a soporific. Dose, 7½–45 gr. (0.5–2 gm.).

Dormitio (*dor-me'-she-oh*) [L.], 1. Sleep. 2. A sedative said to consist of dilute alcohol, oil of anise, extract of lettuce, and sugar.

Dorsalis (*dor-sa'-lis*) [*dorsum*, the back]. See *Arteries, Muscles, Nerves, Veins, Tables of* (Illus. Dict.).

Dorsicolumn (*dor-se-kol'-um*) [*dorsum*, the back; *columna*, a column]. The dorsal column of the spinal cord.

Dorsicommissura (*dor-se-kom-is-u'-rah*) [*dorsum*, the back; *commissure*]. Wilder's name for the gray commissure of the spinal cord.

Dorsiduction (*dor-se-duk'-shun*) [*dorsum*, the back; *ducere*, to lead]. The act of moving toward the back.

Dorsiflexion (*dor-se-flek'-shun*) [*dorsum*, the back; *flectere*, to bend]. A flexion, as of toes, toward the back.

Dorsispinalis (*dor-se-spi-na'-lis*) [*dorsum*, the back; *spina*, the spine]. 1. Relating to the back and the spinal column. 2. See *Spinalis dorsi*, in *Table of Muscles* (Illus. Dict.). In the plural, **Dorsispinales**, the dorsal spinal veins.

Dorsiventral (*dor-se-ven'-tral*). See *Dorsoabdominal.*

Dorsoabdominal (*dor-so-ab-dom'-in-al*) [*dorsum*, the back; *abdomen*]. Relating to both the dorsal and abdominal regions; extending from the back to the abdomen. Syn., *Dorsiventral.*

Dorsoacromial (*dor-so-ak'-ro-me-al*). Relating to the back and the acromion.

Dorsoanterior (*dor-so-an-te'-re-or*). Applied to a fetus having its back toward the ventral aspect of the mother.

Dorsocervical (*aor-so-sur'-vik-al*). Relating to the back and the neck.

Dorsocostal (*dor-so-kos'-tal*). Relating to the back and the ribs.

Dorsohumeral (*dor-so-hu'-mur-al*). Relating to the back and the humerus.

Dorsointercostal (*dor-so-in-tur-kos'-tal*). Relating to the back and the intercostal spaces.

Dorsointerosseal, Dorsointerosseous (*dor-so-in-tur-os'-e-al, -us*). Located between the metacarpal or metatarsal bones and on the back of the hand or foot.

Dorsointestinal (*dor-so-in-test'-in-al*). Situated upon the dorsal aspect of the intestines.

Dorsolateral (*dor-so-lat'-ur-al*). Relating to the back and the sides.

Dorsomedian (*dor-so-me'-de-an*). Situated in or relating to the middle region of the back.

Dorsonasal (*dor-so-na'-sal*). Relating to the back of the nose.

Dorsoposterior (*dor-so-pos-te'-re-or*). Applied to the position of a fetus having its back toward the dorsal aspect of the mother.

Dorsoradial (*dor-so-ra'-de-al*). Relating to or situated upon the dorsal aspect and radial border of the hand, finger, or arm.

Dorsosacral (*dor-so-sak'-ral*). Relating to the back and the sacrum.

Dorsoulnar (*dor-so-ul'-nar*). Relating to or situated upon the dorsal aspect and ulnar border of the arm, hand, or finger.

Dorsoventral (*dor-so-vent'-ral*). See *Dorsoabdominal.*

Dorstenia (*dor-ste'-ne-ah*) [*Theodor Dorsten*, German physician (d. 1539)]. A genus of plants of the order *Urticaceæ*. **D. arifolia**, Lam., and **D. brasiliensis**, Lam., are Brazilian species and sources of contrayerva. Dose of root of *D. brasiliensis* as digestive tonic, 2 gm.; as diaphoretic, dose, 4–8 gm. **D. contrajerva**, L. See under *Contrayerva* (Illus. Dict.).

Dorsualis (*dor-su-a'-lis*). See *Dorsalis.*

Dosage. (See Illus. Dict.) **D., Electrical**, the regulation of the strength of an electric current for therapeutic purposes.

Dose. (See Illus. Dict.) **D., Daily**, the sum of all the doses which are to be given in twenty-four hours. **D., Fractional.** See *D., Divided* (Illus. Dict.). **D., Lethal**, a fatal dose; one that will cause death.

Dot [AS., *dott*]. A speck, a spot. **D.s, Gunn's.** See *Creek-dots.*

Double. (See Illus. Dict.) **D. Thought**, a distinct sensory after-image following every idea.

Douche. (See Illus. Dict.) 2. An apparatus for directing a jet of water or other substance against a part. **D., Air-**, a current of air blown into or against a part or organ for therapeutic purposes. **D., Alternating**, a hot and cold current applied in succession. **D., Capillary.** See *Aquapuncture* (Illus. Dict.). **D., Charcot**, a cold daily spinal douche. **D., Galvanic**, a precision douche by means of which the faradaic or galvanic current can be communicated to the douching current; especially effective in gastralgias and enteralgias. [Hemmeter.] **D., Hot-air**, the use of a blast of heated air as a method of treatment, especially in gouty rheumatism and neuralgic conditions. **D., Mobile**, one applied successively to different regions of the body. **D., Precision**, one devised by H. Rieder, by which fluid of any desired temperature can be applied under any desired pressure. **D., Rain**, a shower-bath. **D., Scotch, D., Scottish**, one of alternating temperature. **D., Sheet**, one in which a sheet of water is directed through a slit. **D., Transitional.** See *D., Alternating*, and *D., Scotch.*

Doundaké (*doon-dak-a*) [Fr.]. The Guinea peach, *Sarcocephalus esculentus*, Afz., yielding a tonic, febrifuge, and astringent bark. Dose: wine (3%), 1–2 fl. oz.; ext., 2½–3 gr.; bark, 50–60 gr.; aq. ext., 3–4 gr.

Doundakin (*doon'-dak-in*). An alkaloid from doundaké. A substitute for quinin. Dose, 3–4 gr. (0.20–0.25 gm.).

Douradinha, Dourahina (*doo-rah-den'-yah, doo-rah-yen'-ah*). A Brazilian drug from *Psychotria rigida*, used as a diuretic and diaphoretic and as a substitute for digitalis.

Dowieism (*dow'-e-izm*). A form of faith cure propagated in America by a charlatan named Dowie (1899) under the name *Zionists.*

Draconin (*dra'-kon-in*). $C_{10}H_{10}O_2$ (Johnston). A red resin contained in dragon's blood, constituting, according to Herberger, 90.7 parts of it.

Dracontium (*dra-kon'-she-um*). See *Skunk-cabbage* (Illus. Dict.).

Draft, Draught. (See Illus. Dict.) **D., Riverius'**, a solution of sodium citrate.

Drainage. (See Illus. Dict.) **D., Basal**, withdrawal of the cerebrospinal fluid from the basal subarachnoid space to relieve intracranial pressure. **D., Capillary**, that by means of capillary attraction, using loosely woven cloth, thread, wisps of hair, etc. **D., Funnel**, that effected by means of glass funnels. **D.-grenade, Bauner's**, a device for ascertaining defects in plumbing. It consists of a thin glass vial charged with pungent and volatile chemicals. It is dropped into the drain or soil-pipe and exploded. **D.-tester, Hudson's**, a device for introducing oil of peppermint into drains or soil-pipes. Syn., *Peppermint cartridge.* **D.-tester, Kemp's**, a glass tube containing a strong-smelling chemical and fitted with a glass cover held in place by a spring and a paper band. When thrown into the pipes and hot water poured after it, the paper band breaks, the spring opens the cover, and the contents escape. **D., Through**, drainage accomplished by means of counteropenings and the passage of a tube completely through the part to be drained, so that a cleansing fluid may be injected through one opening and allowed to escape by the counteropening.

Drapetomania (*drap-et-o-ma'-ne-ah*) [δραπέτης, a runaway; μανία, mania]. A morbid desire to wander from home.

Drassidæ (*dras'-id-e*). A family of narrow-bodied hunting spiders. The genera *Cheiracanthium* and *Clubione* are said to include some poisonous species.

Dromomania (*dro-mo-ma'-ne-ah*) [δρόμος, a course; μανία, madness]. An insane desire to wander; vagabondage.

Dromotropic (*dro-mo-tro'-pik*) [δρόμος, a course; τρέπειν, to turn]. Applied by T. W. Englemann to a supposed set of fibers in the cardiac nerves, which he holds influences the power of conducting the contraction. Cf. *Bathmotropic, Inotropic.*

Drone-fly (*drōn'-fli*). See *Eristalis tenax, Table of Parasites* (Illus. Dict.).

Dropped (*dropt'*) [AS., *dropa*, a drop]. In a condition of ptosis. **D.-lid**, ptosis.

Dropsy. (See Illus. Dict.) **D., Abdominal.** See *Ascites* (Illus. Dict.). *Duparque's method for detecting:* when fluctuation is indistinct, the patient is to be placed on one side for a few moments, so that the whole quantity of fluid may gravitate to the depending flank; then quickly turned upon the back, when dulness and temporary fluctuation will be found at the site of accumulation. [Starr.] **D., Acute**, dropsy due to congestion of the kidneys from sudden exposure to cold. Syn., *D., Active; D., Febrile; D., Plethoric.* **D. of the Amnion, D., Amniotic.** See *Hydramnios* (Illus. Dict.). **D. of the Anterior Chamber.** See *Keratectasia* (Illus. Dict.). **D. of the Antrum.** See *Mucocele* (Illus. Dict.). **D., Arachnoid, D., Arachnoidean**, an accumulation of serous fluid in the arachnoid cavity. **D. of the Areolar Tissue, D. of the Cellular Tissue**, edema. **D., Articular.** See *Hydrarthrosis* (Illus.

Dict.), and *Arthredema*. **D., Asthenic.** See *D., Passive*. **D., Asthmatic,** beriberi. **D. of the Bile-ducts,** dilation of obstructed bile-ducts with pure bile at first changing to a colorless mucoserous fluid containing little or no bile. **D., Cachectic,** that due to cachexia and the consequent decrease of the albuminous constituents of the blood and an increase of the watery constituents. **D., Cerebral.** See *Hydrocephalus* (Illus. Dict.). **D. of the Ear,** an accumulation of fluid in the tympanic cavity; hydrotis. **D., Encysted.** See *Ascites saccatus*. **D. of the Eye.** See *Hydrophthalmia* (Illus. Dict.). **D. of the Fallopian Tube.** See *Hydrosalpinx* (Illus. Dict.). **D., Febrile.** See *D., Acute*. **D., Fibrinous,** dropsy with coagulated fibrin in the fluid. **D. of the Flesh.** See *Anasarca* (Illus. Dict.). **D., Free,** that occurring in one of the closed body-cavities. **D. of the Gallbladder,** dilation of the gallbladder with the secretion of the mucous glands and with epithelium; a very unusual condition due to obliteration of the cystic duct. **D., General.** 1. Dropsy of one or more of the large serous sacs of the body combined with anasarca. 2. Superficial dropsy when it affects the trunk and arms as well as the legs. **D., Glandular,** that due to disease of the lymphatics. **D. of the Head.** See *Hydrocephalus* (Illus. Dict.). **D. of the Heart.** See *D., Cardiac* (Illus. Dict.). **D. of the Kidney.** Synonym of *Hydronephrosis*. **D. of the Larynx,** edema of the glottis. **D. of the Lungs,** pulmonary edema. **D., Lymphatic,** infiltration of the tissues with lymph caused by obstruction of the lymphatics. **D., Mechanical,** that due to mechanical obstruction of the veins or lymphatics. **D., Omental,** encysted ascites confined to the omentum. **D., Ovarian,** ovarian cystoma. **D. of the Ovum.** See *Hydramnios* (Illus. Dict.). **D., Passive.** 1. That due to obstruction of the veins or lymphatics or to defective absorption. 2. See *D., Cachectic*. **D., Plethoric.** See *D., Acute*. **D. of the Pleura, D., Pleural.** See *Hydrothorax* (Illus. Dict.). **D. of Pregnancy.** 1. Edema of the legs and feet of puerperal women, due to debility. 2. Dropsy secondary to the albuminuria of pregnancy. **D., Pulmonary, D., Pulmonic,** pulmonary edema. **D., Renal.** 1. Anasarca due to disease of the kidneys. 2. Hydronephrosis. **D., Salpingian,** hydrosalpinx. **D. of the Skin,** anasarca. **D., Subchoroid, D., Subsclerotic,** extravasation of fluid between the choroid and the sclera. **D., Symptomatic,** that said to be induced when there is 6% of albumin in the blood and a simultaneous occurrence of increase of arterial pressure. **D. of the Thoracic Cavity, D. of the Thorax.** See *Hydrothorax* (Illus. Dict.). **D., Tubal,** hydrosalpinx. **D. of the Tunica vaginalis testis,** hydrocele. **D. of the Tympanum.** See *Hydromyringa* (Illus. Dict.). **D., Urinal,** hydronephrosis. **D. of the Ventricles, D., Ventricular,** internal hydrocephalus. **D. of the Vitreous,** hydrophthalmia. **D., Wind.** See *Tympanites* and *Emphysema* (Illus. Dict.).

Drum. (See Illus. Dict.) **D.-cavity,** the cavity of the tympanum.

Drummin (*drum'-in*). See *Drumin* (Illus. Dict.).

Drumstick (*drum'-stik*). A stick terminating in a knob. The word is used to describe certain microbes, clubbed organs, etc. **D.-bone,** the tibia. **D. Finger.** See *Clubbed Fingers* (Illus. Dict.).

Dualist (*du'-al-ist*). A believer in dualism.

Duane's Test. See under *Deviation*.

Duboisin. (See Illus. Dict.) It is used as a mydriatic; also as a hypnotic and sedative in epilepsy. Dose, $\frac{1}{50}$–$\frac{1}{30}$ gr. (0.0008–0.002 gm.). Antidotes: emetics, pilocarpin, muscarin. **D. Hydrobromate,** a yellowish powder soluble in water and in alcohol. Dose and uses the same as duboisin. **D. Hydrochlorate,** a yellowish hygroscopic powder or a syrup; soluble in water and in alcohol. Usage and dose as duboisin. **D. Salicylate,** a yellowish powder soluble in water and alcohol; it is used as a mydriatic in 0.2% to 0.8% solution. **D. Sulfate,** a yellowish powder soluble in water and in alcohol; it is used as a mydriatic in aqueous solution (0.065 gm. to 30 c.c.).

Du Bois Reymond Inductorium. See under *Inductorium*. **D.-R. Key.** See under *Key*.

Duct. (See Illus. Dict.) **D., Blasius' (Blaes).** See *D., Stenson's* (Illus. Dict.). **D., Common Seminal.** See *D., Ejaculatory* (Illus. Dict.). **D., Cowperian,** the efferent duct of Cowper's gland. **D., Galen's.** See *Ductus arteriosus* (Illus. Dict.). **D., Gasserian.** See *D. of Müller* (Illus. Dict.) **D., Primitive Kidney.** See *D., Segmental* (Illus. Dict.). **D., Rathke's,** that portion of Müller's duct which intervenes between the latter and the sinus pocularis, and may persist after birth as a patulous duct. **D., Reichel's Cloacal,** in the embryo, the narrow cleft separating Douglas's septum from the cloaca. **D., Salivary,** a duct of any salivary gland. **D.s, Salivary.** See *D. of Wharton, D. of Stenson*, and *D.s, Sublingual* (Illus. Dict.). **D., Salivary, Inferior,** Wharton's duct. **D., Salivary, Superior,** Stenson's duct. **D.s, Schueller's,** the ducts of Skene's glands. **D.s, Skene's.** See *Glands, Skene's* (Illus. Dict.). **D.s, Stomach.** See *Pit, Stomach* (2) (Illus. Dict.). **D., Submaxillary.** See *D., Wharton's* (Illus. Dict.). **D., Umbilical.** See *D., Vitelline* (Illus. Dict.). **D., Utriculosaccular.** See *D., Sacculoutricular* (Illus. Dict.). **D.s, Walther's,** the ducts of the accessory sublingual glands.

Ductile (*duk'-til*) [*ducere*, to lead]. Susceptible of elongation or of change of shape.

Duction (*duk'-shun*) [*ducere*, to lead]. A colloquialism used to represent one or more of the terms, abduction, adduction, or sursumduction.

Ductor (*duk'-tor*) [*ducere*, to lead]. A surgical instrument used as a guide or in making traction.

Ductus [pl., *ductus*]. (See Illus. Dict.) **D. eustachii.** See *Canal, Eustachian* (Illus. Dict.). **D. ferreinii.** See *Canal, Ferrein's* (Illus. Dict.). **D. jacobsonianus, D., Jacobson's.** See *Canal, Tympanic* (Illus. Dict.). **D. meseraicus,** the vitelline duct. **D. pancreaticus azygos,** the accessory pancreatic duct. **D. pancreaticus minor, D. pancreaticus recurrens, D. pancreaticus Santorini, D. pancreaticus secondarius, D. pancreaticus superior.** See *D., Pancreatic Accessory* (Illus. Dict.). **D. papillares,** the uriniferous tubules. **D. perilymphaticus,** the aqueduct of the cochlea. **D. rosenthalianus,** the accessory pancreatic duct. **D. Rosenthali spiralis.** See *Canal, Spiral, of the Modiolus* (Illus. Dict.). **D. semicirculares, D. semicirculares membranacei, D. semicirculares ossei.** See *Canals, Semicircular* (Illus. Dict.). **D. semicircularis anterior, D. semicircularis frontalis,** the superior semicircular canal. **D. semicircularis horizontalis,** the external semicircular canal. **D. semicircularis inferior, D. semicircularis sagittalis,** the posterior semicircular canal. **D. semicircularis lateralis,** the external semicircular canal. **D. seminales, D. seminiferi,** the seminiferous tubules. **D. spirales (cochleæ).** See *Canal, Spiral* (of the cochlea) (Illus. Dict.). **D. sublinguales minores,** the ducts of Rivini. **D. sublingualis major.** See *Duct of Bartholin* (Illus. Dict.). **D. thoracicus dexter.** See *Duct, Lymphatic, Right* (Illus. Dict.).

D. thoracicus sinister. See *Duct, Lymphatic, Left* (Illus. Dict.). **D. thyreolingualis.** See *D. thyroglossus* (Illus. Dict.). **D. urinæ, D. urinarii,** the urinary passages. **D. urinarii contorti,** the convoluted uriniferous tubules. See *Tubulus uriniferi* (Illus. Dict.). **D. urinarii recti medullares.** See *Tubes of Bellini* (Illus. Dict.). **D. urinarii serpentarii,** the convoluted uriniferous tubules, tubes of Ferrein. **D. uriniferi.** See *Tubulus uriniferi* (Illus. Dict.). **D. uriniferi Bellini.** See *Tubes of Bellini* (Illus. Dict.). **D. (uteri) varicosus.** See *Oviduct* (Illus. Dict.).

Duipara (*du-ip'-ar-ah*) [*duo*, two; *parere*, to bring forth]. A woman pregnant for the second time.

Dulcamaretin, Dulcamarrhetin (*dul-kam-ar-ĕ'-tin*). $C_{22}H_{34}O_{10} + 2H_2O$. A resinous mass obtained by heating dulcamarin with dilute acids.

Dulcification (*dul-sif-ik-a'-shun*) [*dulcificare*, to sweeten]. See *Edulcoration* (Illus. Dict.).

Dulcify (*dul'-sif-i*). To render sweet.

Dulcin (*dul'-sin*). $C_9H_{12}N_2O_2$. A toxic substance 200 times as sweet as cane-sugar, obtained from paraphenetidin, by action of potassium cyanate and occurring in shining needles, soluble in ether, 25 parts of alcohol, 800 parts of water, 150 parts of boiling water, melting at 174° C. It is used as a sweetening medium. Syn., *Sucrol; Valzin; Paraphenetol-carbamid; Paraethoxyphenylurea.*

Dulcoration (*dul-kor-a'-shun*). See *Edulcoration* (Illus. Dict.).

Dulcose (*dul'-kōs*). See *Dulcitol* (Illus. Dict.).

Dulness. (See Illus. Dict.) **D., Wooden,** a percussion note sounding as if given out from wood.

Duodenocholedochotomy (*du-o-den-o-ko-led-o-kot'-o-me*). A modification of choledochotomy consisting in incising the duodenum in order to reach the gall-duct.

Duodenocystostomy (*du-o-den-o-sist-os'-to-me*) [*duodenum; cystostomy*]. The establishment of a communication between the bladder and the duodenum.

Duodenogastric (*du-o-den-o-gas'-trik*). See *Gastroduodenal* (Illus. Dict.).

Duotal (*du'-o-tal*). The commercial name for guaiacol carbonate.

Duparque's Method for detecting ascites. See under *Dropsy, Abdominal.*

Duramatral (*du-rah-ma'-tral*). See *Dural* (Illus. Dict.).

Duritis (*du-ri'-tis*). Inflammation of the dura; pachymeningitis.

Durol (*du'-rol*). See *Durene* (Illus. Dict.).

Duroleum (*du-ro'-le-um*). An ointment base obtained from petroleum.

Dust [AS.]. A substance reduced to a powder. Cf. *Coniosis, Dermatoconiosis, Enteroconiosis, pneumoconiosis.* **D., Animal,** that derived from feathers, wool, fur, or bristles. **D.-bodies, Müller's.** See *Hemokonia.* **D.-brand,** smut. See *Ustilago* (Illus. Dict.). **D., Metallic,** that derived from steel, brass, etc. Cf. *Siderosis* (2). **D., Mineral,** that derived from stone, pottery, coal, etc. Cf. *Anthracosis, Chalicosis, Silicosis.* **D., Vegetable,** that derived from husks of cereals and from the fluff of cotton, hemp, or flax. Cf. *Byssinosis* (Illus. Dict.).

Dwarfism (*dwarf'-izm*) [M.E., *dwarf*]. An abnormal stature in man, often pathologic (microcephaly, rickets, etc.), in which the height falls below 1 m. 25 cm., and may be as little as 38 cm. (15 inches), as in the instance of the dwarf Hilany Agyba, of Sinai. Cf. *Nanism.*

Dyad. (See Illus Dict.) 2. A unit made up of primary units which are differentiated into parts, but yet constitute an individual; *e. g.*, a morula.

Dyadic (*di-ad'-ik*). Having the nature of a dyad.

Dye. (See Illus. Dict.) **D., Acid,** one produced by combining a substance having coloring properties and which plays the part of an acid (an anilin) with some ordinary base, as sodium, potassium, etc. **D., Basic,** one produced by combining with some acid a coloring principle (an anilin) which plays the part of a base.

Dyestuff. (See Illus. Dict.) **D., Indifferent,** a group of histologic dyestuffs, neither basic nor acid, obtained by Michaelis from acid which possesses a peculiar affinity for fats; an example is Sudan III (Benzolazo-β-naphthol). **D., Neutral,** Ehrlich's term for a salt the acid portion of which is an acid dye and of which the basic portion is a basic dye.

Dymal (*di'-mal*). See *Didymium salicylate.*

Dymyarious (*di-mi-a'-re-us*) (δύς, two; μῦς, a muscle]. Furnished with two muscles.

Dynactinometer (*di-nak-tin-om'-et-ur*) [δύναμις, energy; ἀκτίς, a ray; μέτρον, a measure]. An apparatus for determining the intensity of the photogenic rays and estimating the power of object glasses.

Dynameter (*di-nam'-et-ur*). See *Dynamometer* (2).

Dynamicity (*di-nam-is'-it-e*) [δύναμις, energy]. The greatest capacity for inherent power possessed by a substance or organism.

Dynamics. (See Illus. Dict.) **D., Vital,** the science of the inherent power of an organism.

Dynamimeter, Dynamiometer (*di-nam-im'-et-ur, di-nam-e-om'-et-ur*). See *Dynamometer* (Illus. Dict.).

Dynamoelectric (*di-nam-o-e-lek'-trik*) [δύναμις, power; *electric*]. Relating to the motor power of electricity.

Dynamogen (*di-nam'-o-jen*). A proprietary remedy resembling hematogen; used in anemia.

Dynamography (*di-nam-og'-ra-fe*) [δύναμις, power; γράφειν, to write]. 1. Mechanics. 2. The measurement and graphic record of muscular strength.

Dynamometer. (See Illus. Dict.) 2. An instrument for estimating the magnifying power of lenses. Syn., *D., Optical; Dynameter.*

Dynamometry (*di-nam-om'-et-re*) [δύναμις, power; μέτρον, a measure]. The measurement of force by means of the dynamometer. **D., Vital,** the estimation of the inherent force of an individual.

Dynamoscope (*di-nam'-o-skōp*) [δύναμις, power; σκοπεῖν, to examine]. An apparatus for auscultating the muscles.

Dynamoscopy (*di-nam-os'-ko-pe*). Auscultation of the muscles by means of the dynamoscope.

Dysapulotous, Disapulous (*dis-ap-u-lo'-tus, dis-ap-u'-lus*) [δυσαπούλωτος, δυσάπουλος, hardly forming a scar]. See *Dysepulotic* (Illus. Dict.).

Dysarthritis (*dis-ar-thri'-tis*) [δύς, bad; *arthritis*]. Anomalous gout.

Dysbasia. (See Illus. Dict.) **D. intermittens.** See *Claudication, Intermittent.*

Dysblennia (*dis-blen'-e-ah*) [δύς, bad; βλέννα, mucus]. A disordered state or formation of the mucus.

Dyscatabrosis (*dis-kat-ah-bro'-sis*) [δύς, bad; κατάβρωσις, a devouring]. Difficulty in swallowing food; dysphagia.

Dyschezia (*dis-ke'-ze-ah*) [δύς, bad; χέζειν, to go to stool]. Painful or difficult defecation, as in cases of prolapse of the ovary.

Dyscholia (*dis-ko'-le-ah*) [δύς, bad; χολή, bile]. A disordered or morbid state of the bile.

Dyschondroplasia (*dis-kon-dro-pla'-ze-ah*) [δύς, bad; χόνδρος, cartilage; πλάσις, molding]. A disease of unknown etiology, attacking the long bones and the metacarpal and phalangeal skeleton of the hand. It is characterized by the cartilaginous tissue developing regularly in one and ossifying very slowly.

Dyschrea, Dyschroia, Dyschroma (*dis-kre'-ah, -kroi'-ah, -kro'-mah*). See *Dyschroa* or *Parachrea* (Illus. Dict.).

Dyschromasia (*dis-kro-ma'-ze-ah*). 1. See *Dyschroa* (Illus. Dict.). 2. See *Dyschromotopsia* (Illus. Dict.).

Dyschromatodermia, Dyschromodermia (*dis-kro-mat-o-dur'-me-ah, dis-kro-mo-dur'-me-ah*). See *Dyschroa* (Illus. Dict.).

Dyschromatope (*dis-kro'-mat-ōp*) [δύς, bad; χρῶμα, color; ὄψις, vision]. An individual affected with color-blindness.

Dysemesia, Dysemesis (*dis-em-e'-ze-ah, -sis*) [δύς, bad; *emesis*]. Painful vomiting; retching.

Dysemia, Dysæmia (*dis-e'-me-ah*) [δύς, bad; αἷμα, blood]. A morbid state of the blood.

Dysenteriform (*dis-en-ter'-e-form*) [*dysentery; forma*, form]. Resembling dysentery.

Dysenterioid (*dis-en-ter'-e-oid*). See *Dysenteriform.*

Dysentery, Dysenteria. (See Illus. Dict.) Syn., *Difficultas intestinorum; Defluxio dysenteria; Ulcerative colitis; Zymotic diarrhea.* **D., Acute.** See *Dysentery* (Illus. Dict.). **D., Adynamic, D., Asthenic,** that marked by great prostration. **D., Asylum,** colitis. **D., Bilharzia,** an inflammation of the colon caused by irritation through deposits of the eggs of *Distoma hæmatobium.* **D., Bilious,** a form marked by prostration and disordered secretion of the bile. **D., Bloody,** that accompanied by bloody stools. **D. carnosa.** See *Diarrhœa carnosa.* **D. castrensis.** See *Diarrhea, Camp.* **D., Catarrhal,** a seropurulent form in which the swollen follicles of the large intestine are surrounded by a red area, the submucosa is thickened, and the spaces between the glands contain abundant pus-corpuscles. **D., Cercomonadic,** a form ascribed to the presence in the intestine of species of *Cercomonas.* **D., Choleriform, D., Choleroid,** a form marked by suppression of urine, an algid condition, and stools resembling those of cholera. **D., Cochin-China,** an endemic form held by Normand to be due to *Anguilulla intestinalis.* **D. cruenta.** See *D., Bloody.* **D., Diphtheric, D., Diphtheritic,** the putrid dysentery of the aged, in which the whole mucosa under an inflammatory fibrinous exudate is changed into a horny, structureless, necrotic mass mingled with extravasated blood. Syn., *Dysenteria gangrænosa.* **D., Gangrenous.** See *D., Diphtheric.* **D. hæmatura,** bloody dysentery. **D., Hepatic,** that attended by inflammation of the liver. **D., Japanese,** a form occurring as an epidemic in Japan and the Philippines due to *Bacillus dysintericus,* Shiga and Flexner. Also called *Philippine D.* **D., Malarial, D., Malarious,** that due to malaria or associated with it. **D., Mucous,** a benign form in which the dejecta consist of mucus or of feces inclosed in mucus. **D., Nephritic,** diabetes mellitus. **D., Nervoadynamic, D., Neuroadynamic.** See *D., Typhoid.* **D., Philippine.** See *D., Japanese.* **D., Pituitous.** See *D., Mucous.* **D., Purulent,** that in which there are purulent but not bloody discharges. **D., Rheumatic,** that marked by extreme pain and tenesmus, but particularly by metastases to the joints. **D., Scorbutic,** that accompanying or due to scurvy. Also called *Scorbutic diarrhea.* **D., Sloughing,** that in which there is sloughing of the intestinal mucosa. **D. of the Transverse Colon** (Lasègue). Synonym of *Mucous colitis.* **D., Trichomonadic,** that due to the presence of some species of *Trichomonas* in the drinking-water. **D., Typhodes, D., Typhoid,** dysentery attended with prostration and phenomena of a typhoid character.

Dyserethisia (*dis-er-e-the'-ze-ah*) [δύς, bad; ἐρεθίζειν, to excite]. Impaired sensibility or irritability.

Dysergasia, Dysergasy (*dis-ur-ga'-ze-ah, dis-ur-ga'-ze*) [δυσεργής, difficult to effect]. Disturbances of function, especially as manifested in neurasthenia.

Dysgenesia (*dis-jen-e'-ze-ah*) [δύς, bad; γεννᾶν, to produce]. Loss or impairment of procreative power.

Dyshæmia (*dis-he'-me-ah*). See *Dysemia.*

Dyshaphia (*dis-haf'-e-ah*). See *Dysaphe* (Illus. Dict.).

Dyshidria (*dis-id'-re-ah*). See *Dysidria.*

Dysidria (*dis-id'-re-ah*) [δύς, bad; ἱδρώς, sweat]. A morbid condition of the function of perspiration.

Dyskatabrosis. See *Dyscatabrosis.*

Dyskoria. See *Dyscoria* (Illus. Dict.).

Dysmasesis, Dysmassesis, Dysmastesis (*dis-mas-e'-sis, dis-mas-te'-sis*). See *Bradymasesis* (Illus. Dict.).

Dysmenorrhea. (See Illus. Dict.) Syn., *Paramenia difficilis; Menses dolorifici; Menstrua dolorosa.* **D., Dermatic,** Schönlein's name for a form of hematidrosis in which blood oozes out in circumscribed erythematous spots on the surface of the skin during menstruation. **D., Hysteralgic,** uterine neuralgia occurring during menstruation. **D., Inflammatory,** that due to an inflammatory condition of the mucosa or the parenchyma of the uterus, or of the ovary or to posterior parametritis. **D., Intermenstrual.** See *D., Intermediate* (Illus. Dict.). **D., Mechanical.** See *D., Obstructive* (Illus. Dict.). **D., Plethoric.** See *D., Congestive* (Illus. Dict.). **D., Rheumatic,** that attributed to rheumatism of the uterus. **D., Stenotic,** that due to stenosis of the uterine canal or the vagina. **D., Tubal,** that due to disease of the oviduct. **D., Uterine,** that due to disease of the uterus. **D., Vaginal,** that due to vaginal obstruction. **D., Vascular,** pain, congestive symptoms in the genital apparatus, and tenesmus of the bladder and anus appearing some days prior to menstruation.

Dysmeristic (*dis-mer-is'-tik*) [δύς, bad; μέρος, a part]. Relating to dysmerogenesis.

Dysmorphophobia (*dis-morf-o-fo'-be-ah*) [δύς ill; μορφή, form; φόβος, fear]. Morbid dread of deformity; it is a rudimentary form of paranoia.

Dysmorphosteopalinklast (*dis-morf-os-te-o-pal'-in-klast*). An instrument for refracturing a bone which has united with deformity.

Dysmorphosteopalinklasy (*dis-morf-os-te-o-pal-in'-kla-se*) [δύσμορφος, deformed; ὀστέον, a bone; πάλιν, again; κλᾶν, to break]. The operation of refracturing a bone which has healed with deformity after a fracture.

Dysnephronervia, Dysnephroneuria (*dis-nef-ro-nur'-ve-ah, -nu'-re-ah*). See *Nephrodysneuria* (Illus. Dict.).

Dysnoia (*dis-noi'-ah*) [δύς, ill; νόος, mood, disposition]. Heavy, gloomy thought.

Dysodontiasis. (See Illus. Dict.) **D. adultorum,** difficult dentition of the wisdom teeth. **D. lactantium,** difficult dentition of the temporary teeth. **D. puerilis,** difficult second dentition.

Dysostosis. (See Illus. Dict.) **D., Cleidocranial,** a singular congenital malformation compatible with life, intelligence, and purity of the blood, consisting in incomplete ossification of the skull, malformation of the palatine arch, and atrophy more or less great of the clavicles.

Dyspareunia. (See Illus. Dict.) Syn., *Coitus difficilis.* **D., Climacteric,** pain or difficulty in coitus following the menopause; it is regarded as a symptom of kraurosis vulvæ.

Dyspepsia. (See Illus. Dict.) **D., Acid,** that attended with hyperacidity of the gastric juice. **D., Alkaline,** that accompanied by lack of the normal acidity of the gastric juice **D. anorexia.** See *Anorexia* (Illus. Dict.). **D., Apyretic, D., Asthenic.** See *D., Atonic* (Illus. Dict.). **D., Biliary,**

D., Bilious, intestinal dyspepsia due to impaired secretion of bile. **D., Buccal.** See *D., Salivary.* **D., Bulimic,** that attended with bulimia. **D., Cardiac,** that due to heart-disease. **D., Catarrhal,** that caused by gastric catarrh. **D., Chemic,** that due to some change in the constitution of the digestive secretions. **D., Feculent,** that due to excess of starchy food in the diet. **D., Flatulent, D., Gaseous,** that marked by almost constant generation of gas within the stomach. **D., Follicular-colonic, D., Follicular-duodenal.** Synonym of *Mucous Colitis.* **D., Gastralgic,** gastralgia. **D., Gastric,** that confined to the stomach. **D., Gastrointestinal,** that in which both the stomach and the intestine are concerned. **D., Gastrorrheal,** that due to gastric catarrh and hypersecretion. **D., Inflammatory,** that due to some form of gastritis. **D., Lienteric,** that due to defective nutrition or superalimentation and indicated by lienteric stools. **D., Motor.** See *D., Atonic* (Illus. Dict.). **D., Muscular,** that due to atony of the muscular coat of the stomach or intestine. **D., Nervosecretory,** neurotic dyspepsia with perverted or excessive gastric secretion. **D., Neuralgic,** that marked by intermittent gastrodynia. **D., Neurotic,** that due to some nervous disorder. **D., Ovarian,** that dependent upon a diseased condition of the ovary. **D.-pica.** See *Pica* (Illus. Dict.). **D., Pituitary, D., Pituitous,** that due to gastric catarrh. **D. polydipsia.** See *Polydipsia* (Illus. Dict.). **D., Pyretic,** Gendrin's name for the forms of inflammatory dyspepsia formerly known as bilious or gastric fever. **D. pyrosis.** See *Pyrosis* (Illus. Dict.). **D., Salivary,** due to impairment or perversion of the saliva or to insufficient mastication.

Dysphagia. (See Illus. Dict.) **D. amyotactica,** a disturbance of the act of deglutition, not due to organic changes in the pharynx or esophagus, nor to spasm or paralysis of the muscles concerned in swallowing; it consists in a disturbance of the rhythm of the function of the higher nerve-centers. **D. callosa,** that resulting from the destruction of the muscular layers of the esophagus and the formation of cicatricial tissue causing constriction. **D. constricta,** that due to stenosis of the pharynx or esophagus. **D. hyoidea,** that due to some defect in the hyoid bone. **D. inflammatoria,** that due to pharyngitis or esophagitis. **D. linguosa,** that due to paralysis of the tongue. **D. lusoria,** a doubtful form ascribed to compression of the esophagus by the right subclavian artery when by a freak of nature this artery springs from the aorta behind the left subclavian artery and turns to the right either before or behind the esophagus. **D. psychica,** See *D. globosa* (Illus. Dict.). **D. ranula.** See *Ranula* (Illus. Dict.). **D.-tablets,** a remedy for dysphagia, each tablet containing menthol (0.01 gm.) and cocain hydrochlorid (0.005 gm.).

Dysphemia (*dis-fe'-me-ah*) [δυς, ill; φήμη, a speech]. Stammering.

Dysplasmatic, Dysplastic (*dis-plas-mat'-ik, dis-plast'-ik*). See *Cacoplastic* (Illus. Dict.).

Dyspnea, Dyspnœa. (See Illus. Dict.) **D. expiratoria, D., Expiratory,** difficulty in expelling air from the lungs, as in asthma and other affections. **D., Inspiratory,** difficulty in inspiration as compared with expiration. **D., Traube's,** with slow respiratory movements, marked expansion of the thorax during inspiration, and collapse during expiration; it is noted in diabetes mellitus.

Dysspermasia, Dysspermatism (*dis-spurm-az'-e-ah, dis-spurm'-at-ism*). See *Bradyspermatism* (Illus. Dict.).

Dysstechiasis, Dysstœchiasis, Dysstichiasis (*dis-stek-i-a'-sis, dis-stik-i-a'-sis*). See *Distichiasis* (Illus. Dict.).

Dystaxia. (See Illus. Dict.) **D. agitans,** tremor due to irritation of the spinal cord. Syn., *Pseudoparalysis agitans.*

Dysthermasia (*dis-thur-ma'-ze-ah*) [δύς, bad; θέρμη, heat]. Insufficient production of bodily heat.

Dysthyreosis (*dis-thi-re-o'-sis*) [δύς, bad; *thyroid*]. Impaired functional activity of the thyroid gland.

Dysthyroid, Dysthyroidism (*dis-thi'-roid, -izm*). Incomplete development and function of the thyroid gland.

Dystrophia, Distrophy. (See Illus. Dict.) **D. musculorum progressiva juvenilis,** Erb's juvenile hereditary form of primary muscular dystrophy.

Dystrypsia (*dis-trip'-se-ah*) [δύς, ill; *trypsin*]. An analog of dyspepsia from lack of trypsin. **D., Intestinal,** a term proposed as a substitute for intestinal dyspepsia, since trypsin is the most important enzyme in intestinal digestion.

Dysuresia, Dysuresis (*dis-u-re'-ze-ah, -sis*) [δύς, bad; οὐρήσις, micturition]. Any disease of the urinary apparatus.

Dysuriac (*dis-u'-re-ak*). A person affected with dysuria.

E

Ear. (See Illus. Dict.) **E., Asylum, E., Insane.** See *Hæmatoma auris* (Illus. Dict.). **E., Cauliflower,** an enlargement of the ear due to irritation. **E.-mold,** otomycosis.

Earth. (See Illus. Dict.) **E., Absorbent,** magnesium. **E., Animal,** calcium phosphate of animal origin occurring in the soil. **E., Bolar.** See *Bole* (Illus. Dict.). **E., Bone,** phosphate of lime. **E., Heavy,** baryta. **E., Japan,** extract of catechu.

Eblanin (*eb-lan'-in*). See *Pyroxanthin* (Illus. Dict.).

Ebonation (*e-bo-na'-shun*) [ε, away from; *bone*]. The removal of splinters of bone after injury.

Ebriecation (*e-bri-e-ka'-shun*) [*ebrietas,* drunkenness]. Mental disorder due to the use of alcoholic stimulants.

Ebullioscope (*e-bul'-e-o-skōp*) [*ebullire,* to boil; σκοπεῖν, to examine]. An apparatus for determining the strength of hydrated alcohol by its boiling-point.

Eburico, Eburiko (*e-bu'-rik-o*). A sacred medicine of Japan consisting of a fungus found upon larch trees.

Eburite (*e'-bur-it*) [*ebur,* ivory]. An artificial ivory produced by treating a solution of rubber with chlorin.

Eburnated (*e-bur'-na-ted*) [*ebur,* ivory]. A term applied to dentine the tubules of which have been obliterated by a calcareous deposit.

Eccentropiesis (*ek-sen-tro-pi-e'-sis*) [ἔκκεντρος, eccentric; πίεσις, a pressing]. Pressure from within outward; a method proposed for the treatment of anal fistula.

Eccephalosis (*ek-sef-al-o′-sis*) [ἐκ, out of; κεφαλή, the head]. Synonym of *Cephalotomy* or *Excerebration.*

Ecchymosis. (See Illus. Dict.) Syn., *Livor sanguinis.* **E., Bayard's, E., Röderer's, E., Tardieu's.** See *Tardieu's Spots* (Illus. Dict.).

Ecclasis (*ek-kla′-sis*) [ἐκκλᾶν, to break in pieces]. A breaking away, as of a small piece of bone from a larger piece.

Ecclisis (*ek-kli′-sis*) [ἐκκλίνειν, to turn aside]. 1. Dislocation. 2. The displacement of fractured bones.

Ecclysis (*ek-kli′-sis*) [ἐκκλύζιεν, to wash out]. A washing out by injections.

Eccope (*ek′-op-e*) [ἐκκοπή, an incision]. Excision of a part; or, the vertical division of the cranium by a saw or other means.

Eccorthatic (*ek-or-tha′-tik*) [ἐκ, out of; κόρθυς, a heap]. Producing copious fecal discharge.

Eccrisiology, Eccrisionomy (*ek-kris-e-ol′-o-je, -on′-om-e*). See *Eccrinology* (Illus. Dict.).

Eccrisis (*ek′-ris-is*) [ἐκκρίνειν, to expel]. The expulsion of waste or morbid products; excretion.

Eccritic (*ek-krit′-ik*) [ἐκκρίνειν, to excrete]. 1. A medicine promoting excretion. 2. Promoting excretion.

Ecdermoptosis (*ek-dur-mo-to′-sis*). See *Acne varioliformis* (Illus. Dict.).

Echidnase (*ek-id′-nāz*) [ἐχιδνα, viper]. Name given by Phisalix and Bertrand (1894) to a principle found in snake-venom; it has a phlogogenic action comparable to certain diastases. Cf. *Echidnotoxin; Cobralysin; Cobra-nervin; Venom-globulin; Venom-peptone.*

Echidnotoxin (*ek-id-no-toks′-in*). Name applied by Phisalix and Bertrand (1894) to a principle of snake-venom possessing a general action, actively impressing the nervous system.

Echinococcotomy (*ek-in-o-kok-ot′-o-me*) [*echinococcus;* τέμνειν, to cut]. The Posadas-Bobrow operation, consisting in the evacuation of echinococcus-cysts and closure of the cavity by suture.

Echinodermatous, Echinodermous (*ek-in-o-dur′-mat-us, ek-in-o-dur′-mus*). Having a spiny surface.

Echinops (*ek′-in-ops*) [ἐχῖνος, a hedgehog; ὤψ, appearance]. A genus of composite plants. **E. sphærocephalus,** L., the globe thistle, a European species; is laxative and diuretic, and contains an alkaloid, echinopsin, similar in action to brucin and strychnin.

Echinopsin (*ek-in-op′-sin*). See under *Echinops.*

Echis carinata (*ek′-is kar-in-a′-tah*) [ἐχις, a viper]. A poisonous viper of India.

Echo. (See Illus. Dict.) **E., Amphoric.** See *Amphoric Resonance* (Illus. Dict.). **E., Metallic.** See *Metallic Tinkling* (Illus. Dict.).

Echoacousia (*ek-o-ah-koo′-se-ah*) [ἠχώ, a sound; ἀκουσία, hearing]. The subjective sensation of hearing echoes after sounds heard normally.

Echographia (*ek-o-gra′-fe-ah*) [ἠχώ, a sound; γράφειν, to write]. A form of aphasia in which printed or written questions submitted to the patient are copied without ability to comprehend the inquiry; also, in writing the last word or letter is repeated.

Echolalus (*ek-o-la′-lus*) [ἠχώ, a sound; λαλιά, babble]. A hypnotized person who repeats words heard without comprehension of their meaning.

Echomatism (*ek-om′-at-izm*) [ἠχώ, echo; ματίζειν, to strive to do]. The opposite of automatism. The mimicking condition produced in hypnotics when the hand is pressed on the vertex of the head.

Echoscopia (*ek-o-sko′-pe-ah*) [*echoscope*]. Auscultation.

Eclabium *ek-la′-be-um*) [ἐκ, out; *labium,* a lip]. An eversion of the lip.

Eclampsia, Eclampsy. (See Illus. Dict.) **E., Cerebral,** a form in which the irritation is presumed to originate in the brain as distinguished from uterine eclampsia. **E. gravidarum.** See *Eclampsia* (Illus. Dict.). Cf. *Trauber-Rosenstein Theory of* (Illus. Dict.). **E., Nodding.** See *E. nutans* (Illus. Dict.). **E. parturientium, E., Puerperal, E. puerperalis, E. puerperarum.** See *Eclampsia* (Illus. Dict.). **E. tardissima,** that occurring several days or as long as eight weeks after parturition. **E., Uterine,** that in which the seat of irritation is supposed to be the uterus.

Eclampsism (*ek-lamp′-sizm*) [ἐκλάμπειν, to shine or burst forth]. Bar's name for eclampsia without convulsions.

Eclamptism (*ek-lamp′-tizm*). The morbid condition produced by the retention of various toxic principles and autointoxication, all dependent upon the state of pregnancy; it is prone to result in convulsions, but may show only prodromes, such as headache, impairment of vision, etc.

Ecmetropia (*ek-me-tro′-pe-ah*). See *Ametropia* (Illus. Dict.).

Ecmnesia (*ek-ne′-ze-ah*) [ἐκ, out of; μνῆσις, remembrance]. A gap in memory; amnesia in which there was normal memory to a certain date and loss of memory for a period after it.

Ecology (*e-kol′-o-je*). The preferred spelling for *Œcology* (Illus. Dict.).

Economy. (See Illus. Dict.) **E., Animal,** that of an animal organism. **E., Medical,** the rules regulating the practice of medicine and surgery.

Ecophony (*ek-of′-on-e*) [ἠχώ, echo; φωνή, sound]. An echo immediately following vocal sounds, heard on auscultation in acute congestion of the lungs.

Ecostate (*e-kos′-tāt*) [*ecostatus*]. Without ribs.

Ecphyma. (See Illus. Dict.) **E. globulus,** a contagious disease of Ireland marked by the formation on the skin of tubercles which soften and form raspberry-like tumors.

Ecsomatic (*ek-so-mat′-ik*) [ἐκ, out of; σῶμα, the body]. Relating to ecsomatics or to material removed from the body, as pus, urine, etc.

Ecsomatics (*ek-so-mat′-iks*). That department of medicine included in clinical laboratory methods; so called because all the material dealt with is removed from the body and examined elsewhere.

Ecsomatist (*ek-so′-mat-ist*). An individual who is versed in clinical laboratory methods.

Ecstasis (*ek-sta′-sis*). See *Ecstasy* (Illus. Dict.).

Ectacolia, Ectacoly (*ek-ta-ko′-le-ah, ek-ta-ko′-le*) [ἐκτακός, capable of stretching; κόλον, the colon]. Congenital dilation of a more or less extensive section of the colon.

Ectasin (*ek′-ta-sin*) [ἔκτασις, extension]. A substance isolated from tuberculin, which causes dilation of the vessels.

Ectasis. (See Illus. Dict.) **E. iridis,** the expansion of the iris causing diminution of the pupil.

Ecthol (*ek′-thol*). A proprietary remedy said to contain the active principles of *Echinacea angustifolia,* D. C., and *Thuja occidentalis,* L.; it is antipurulent and antimorbific. Dose, 1 fld. dram 3 times daily.

Ecthyma. (See Illus. Dict.) **E. gangrænosum, E., Gangrenous,** a form marked by the appearance of brown discolorations of the skin, usually surrounded by a halo; the center of these efflorescences rapidly becomes necrotic. It is due to *Bacillus pyocyaneus.* **E., Syphilitic.** See *Rupia* (Illus. Dict.).

Ecthyreosis, Ekthyrosis (*ek-thi-re-o′-sis, ek-thi-ro′-sis*). See *Athyreosis.*

Ectocardia. (See Illus. Dict.) **E. abdominalis,** a malformation in which the heart is wholly within the abdomen or within a sac in the precordia. **E. cephalica, E. cervicalis,** a form in which the heart is at the

base of the neck. **E. extrathoracica,** that in which the heart is external to the thoracic cavity. **E. intrathoracica,** that in which the heart is inside the thorax. **E. pectoralis,** that in which the heart lies in front of the chest.

Ectocentral (*ek-to-sen′-tral*) [ἐκ, out of; *central*]. Near to the center and to the external surface.

Ectochoroidea (*ek-to-ko-roid′-e-ah*). The outer layer of the choroid.

Ectocnemial (*ek-to-ne′-me-al*) [ἐκτός, without; κνήμη, the leg]. Located on the external aspect of the fibula.

Ectocolostomy (*ek-to-ko-los′-to-me*) [ἐκτός, outside; *colostomy*]. A surgical operation upon the colon to establish an external opening.

Ectocondylar, Ectocondyloid (*ek-to-kon′-dil-ar, -oid*). Relating to an ectocondyle.

Ectocuneiform (*ek-to-ku-ne′-e-form*) [ἐκτός, outside; *cuneiform*]. 1. Relating to the outer cuneiform bone of the foot. 2. The outer cuneiform bone.

Ectodermal, Ectodermic (*ek-to-dur′-mal, ek-to-dur′-mik*) [ἐκτός, outside; δέρμα, skin]. Relating to the ectoderm; applied to structures derived from the upper epithelial layers of the derma, as hair, chitin, enamel, etc. [Huxley.]

Ectodysesthesia (*ek-to-dis-es-the′-se-ah*) [ἐκτός, outside; *dysesthesia*]. Torpidity of the external senses.

Ectoglobular (*ek-to-glob′-u-lar*). Formed outside the blood-globules.

Ectokelostomy (*ek-to-kel-os′-to-me*) [ἐκτός, external; κήλη, hernia; στόμα, a mouth]. Vitrac's operation, by which the sac of an infected inguinal hernia is kept open with drainage, the whole being displaced through a counteropening in the abdominal wall, the hernia being then cured radically.

Ectomarginal (*ek-to-mar′-jin-al*). Situated on the external aspect and near the margin

Ectomia (*ek-to′-me-ah*) [ἐκ, out; τέμνειν, to cut]. Excision, amputation.

Ectoorbital (*ek-to-or′-bit-al*). See *Ectorbital*.

Ectopectoral (*ek-to-pek′-tor-al*). The outer of the two pectoral muscles; pectoralis major.

Ectoperitonitis (*ek-to-per-it-on-i′-tis*) [ἐκτός, external; περιτόναιον, peritoneum]. Inflammation of the attached side of the peritoneum.

Ectopia, Ectopy. (See Illus. Dict.) **E. ani,** prolapse of the anus. **E. bulbi.** See *E. oculi* (Illus. Dict.). **E. pupillæ.** See *Corectopia* (Illus. Dict.).

Ectoplastic (*ek-to-plas′-tik*). Relating to ectoplasm; applied to cells in which the ectoplasm is undergoing changes.

Ectoplasmatic (*ek-to-plaz-mat′-ik*). See *Ectoplastic*.

Ectopocystic (*ek-to-po-sist′-ik*). Relating to ectopocystis.

Ectopocystis (*ek-to-po-sist′-is*) [ἐκτόπος, out of the way; κύστις, the bladder]. Displacement of the bladder.

Ectopotomy (*ek-to-pot′-o-me*) [ἐκτοπος, out of the way; τέμνειν, to cut]. Laparotomy for the removal of the contents of an extrauterine gestation-sac.

Ectopterygoid (*ek-to-ter′-e-goid*) [ἐκτός, external; *pterygoid*]. Outside the pterygoid. See *Bone, Ectopterygoid*.

Ectorbital (*ekt-orb′-it-al*). Relating to the temporal part of the orbits.

Ectorganism (*ekt-or′-gan-izm*). An organism external to another. Cf. *Ectoparasite* (Illus. Dict.).

Ectosac (*ek′-to-sak*) [ἐκτός, external; σάκκος, a sac]. The limiting membrane of an ovum.

Ectoskeletal (*ek-to-skel′-et-al*). Relating to the exoskeleton; exoskeletal.

Ectospore (*ek′-to-spōr*). See *Exospore* (Illus. Dict.).

Ectosteomyces (*ekt-os-te-o-mi′-sēz*) [ἐκτός, outside; ὀστέον, a bone; μύκης, a fungus]. A fungous new-growth from a bone.

Ectothalamus (*ek-to-thal′-am-us*) [ἐκτός, external; *thalamus*]. The external medullary layer of the thalamus.

Ectothrix (*ek′-to-thriks*) [ἐκτός, outside; θρίξ, hair]. An organism parasitic upon the hair. Cf. *Tricophyton* (Illus. Dict.).

Ectotrochanter (*ek-to-tro-kan′-tur*) [ἐκτός, external; *trochanter*]. The greater trochanter.

Ectromelian (*ek-tro-me′-le-an*). See *Ectromelus* (Illus. Dict.).

Ectropia (*ek-tro′-pe-ah*). See *Exstrophy* (Illus. Dict.). **E., Intestinal.** See *Adenoma, Umbilical.*

Ectropic (*ek-trop′-ik*). Turned out or everted.

Ectropionization (*ek-tro-pe-on-iz-a′-shun*). Inversion of the upper eyelid and exposure of the conjunctiva to facilitate therapeutic manipulation.

Ectropodism (*ek-tro′-pod-izm*) [ἔκτρωμα, an abortion; ποίς, foot]. Congenital absence of a foot.

Eczema. (See Illus. Dict.) Syn., *Pustula ardens.* **E. arthriticum,** a vesicular form occurring about gouty joints. Syn., *Arthrophlysis vulgaris.* **E., Ichorous,** that attended with an ichorous discharge. **E. lotricum.** See *Washerwoman's Itch* (Illus. Dict.). **E. rhagadiforme.** See *E. fissum* (Illus. Dict.). **E. sudamen, E. sudorale,** that due to excess of perspiration. **E. sycomatosum, E. sycosiforme,** a pustular form occurring on the hairy parts and affecting the hair-follicles. **E. tuberculatum, E. tuberculosum** (E. Wilson), mycosis fungoides. See *Granuloma fungoides* (Illus. Dict.). **E. tyloticum,** a form occurring on the palmar aspect of the hands and fingers and attended with callosity. **E. vegetante.** See *Dermatitis vegetante.*

Eczematization (*ek-ze-mat-i-za′-shun*). A condition of the skin marked by persistent eczema-like lesions, due to continued injury from scratching.

Eddyism (*ed′-e-izm*). A form of faith cure propagated by an American woman, "Mother Eddy," under the name of Christian Science.

Edea, Ædœa (*e-dē′-ah*) [αἰδοια, the genitals]. The genital organs.

Edeitis, Ædœitis. (See Illus. Dict.) **E., Gangrenous, Æ. gangrænosa,** gangrenous inflammation of the genitals. **E., Puerperal, Æ. puerperarum,** inflammation of the genitals in childbirth.

Edema, Œdema. (See Illus. Dict.) **E., Acute.** See *Œ. calidum.* **Œ. algidum.** See *Sclerema neonatorum* (Illus. Dict.). **E., Arsenical,** the puffiness of the face and eyelids due to chronic arsenic-poisoning or excessive use of arsenic. **Œ. articulare.** See *Hydrarthrosis* (Illus. Dict.). **E., Blue,** edema with cyanosis, seen in hysteric paralysis accompanied with pain. **Œ. calidum,** that due to a serous exudation; it is sudden in its onset and resembles acute inflammation. **Œ. capitis,** a serous effusion into the subcutaneous areolar tissue of the scalp. **Œ. carbunculosum.** See *E., Malignant* (Illus. Dict.). **Œ. cardica** (of the kidney), the change in the kidneys due to passive congestion in consequence of heart-disease. **E., Cerebral.** See *Hydrocephalus* (Illus. Dict.). **E., Collateral,** the serous infiltration of the tissue encircling an inflamed part. **E., Compact** (of infants), a variety of scleroderma neonatorum in which the skin is edematous. Syn., *Scleroderma œdematosa.* **E., Cretinoid.** See *Myxedema* (Illus. Dict.). **Œ. cruentum.** See *Hematedema* and *Suggillation* (Illus. Dict.). **Œ. ex vacuo,** edema of a part to counteract the tendency to a vacuum caused by atrophy of some neighboring part. **E., Febrile Purpuric,** localized edema accompanying an eruption of purpura urticans about

the joints, and rheumatic fever. **Œ. frigidum,** a chronic swelling, cold to the touch and painless. **Œ. fugax,** edema due to atmospheric changes occurring in the face, eyelids, and neck of chlorotic patients. **E., Glottidial.** See *Laryngeal Edema* (Illus. Dict.). **Œ. indurativum,** that accompanied with induration. **E., Infectious.** See *E., Malignant* (Illus. Dict.). **E., Inflammatory,** a serous infiltration into inflamed tissue. **E., Iwanoff's** (of the retina). Cystoid degeneration of the retina. **E., Laryngeal.** See under *Laryngeal* (Illus. Dict.). **E., Neuroparalytic, E., Neuropathic,** that due to paralysis of the vasomotor nerves or to neuroparalytic congestion. **Œ.-oculi.** See *Hydrophthalmia* (Illus. Dict.). **Œ.œdematodes.** See *Œ. frigidum.* **E., Paroxysmal Pulmonary,** a rare form of edema of the lungs marked by rapid onset, imminent asphyxia, and copious albuminous expectoration. The attack, lasting from a few minutes to some days, may terminate fatally or the symptoms may disappear. **Œ. puerperarum,** phlegmasia alba dolens. **E., Purulent,** a serous infiltration containing pus-corpuscles. **E., Retinal,** the development of irregular spaces filled with transparent fluid at the periphery of the retina occurring after middle age. **E., Rheumatismal,** rheumatism with painful subcutaneous edema. **Œ. scleroticum,** Pick's name for edema attended with induration. **Œ. scroti aquosum,** edema of the scrotum; oschydredema. **Œ. scroti cruentum.** See *Oschematedema* (Illus. Dict.). **Œ. scroti purulentum,** purulent edema of the scrotum; oscheopyedema. **Œ. scroti urinale, Œ. scroti urinosum.** See *Urocele* (Illus. Dict.). **Œ. simplex durius.** See *Phlegmasia alba dolens* (Illus. Dict.). **E. of Trichiniasis,** the swelling of the face and extremities attending extensive trichiniasis; said to be due to the destruction of the muscular capillaries. **Œ. uvulæ.** See *Staphyledema* (Illus. Dict.).

Edemamycosis, Œdemamycosis (*e-de-mah-mi-ko'-sis*) [*edema*; *μύκης*, fungus]. The name applied by Edington to an ectogenous infective disease, commonly referred to as African horse-sickness; it is characterized by intense congestion of the bloodvessels with consequent edema of the lungs and at times of the subcutaneous tissues of the head and neck.

Edemania, Ædœmania (*e-de-ma'-ne-ah*). See *Nymphomania* (Illus. Dict.).

Edematization (*e-dem-at-iz-a'-shun*) [*οἰδεῖν*, to swell]. Edema of the tissues produced by the injection of a 2% salt solution at a lower temperature than the heat of the body.

Edematoscheocele (*e-dem-at-os-ke'-o-sēl*) [*edema*; *ὀσχη*, the scrotum; *κήλη*, a tumor]. Edematous oscheocele.

Edemerysipelas (*e-dem-er-e-sip'-e-las*). Edematous erysipelas.

Edemosarcocele, Edemosarcoma (*e-de-mo-sar'-ko-sēl, -sar-ko'-mah*). See *Andrum* (Illus. Dict.).

Edental, Edentalous (*e-den'-tal, -us*). See *Edentate* (Illus. Dict.).

Edestin (*ed-est'-in*). The chief and characteristic proteid of the seeds of sunflower, hemp, squash, and castor-oil bean.

Effete (*ef-ēt'*) [L., *effetus*]. Exhausted, worn out.

Effumability (*ef-u-ma-bil'-e-te*). Capacity for volatilization.

Effusion. (See Illus. Dict.) **E., Pericardial,** an effusion into the pericardium. See *Signs, Auenbrugger's; Ewart's; Roth's; Rotch's; Samson's;* and *Sibson's.* **E., Pleural,** an effusion into the pleura. See *Signs, Baccelli's; Skoda's; Williams'*, in *Table of Signs* (Illus. Dict.); also *Signs, Kellock's; Litten's; Pitres'; Sieur's;* and *de Mussey's.*

Egols (*e-gols'*). Compounds of mercury with parasulfonic acid and a phenol. They are red-brown powders, soluble and emetic.

Ehrlich's Method for the fixation of blood films. Consists in boiling the specimen for one minute in a test-tube containing absolute alcohol.

Ehrlich's Side-chain Theory. See *Lateral Side-chain Theory, Ehrlich's.*

Ehrlich's Theory of the origin of leukocytes. See under *Leukocytes.*

Eigons (*i'-gons*). Compounds of iodin and albumin used as substitutes for iodin. ***a*-Eigon,** albuminiodatum, a brown powder, odorless and tasteless; contains 20% of iodin. Soluble in alkalis and acids, insoluble in water. ***a*-E.-sodium,** sodium iodo-albuminatum, a white, odorless, nearly tasteless powder containing 15% of iodin. ***β*-Eigon,** pepton iodate, a yellow powder, odorless and tasteless; contains 15% of iodin. It is recommended as a substitute for iodin where there is digestive weakness. Dose, 45–150 gr. (3–10 gm.) daily. ***a*-** and ***β*-** eigons are also used as a dusting-powder.

Eikonogen (*i-kon'-o-jen*). $NH_2C_{10}H_5(OH) \cdot SO_3Na + 2\frac{1}{2}H_2O$. The sodium salt of amido-*β*-naphthol-*β*-monosulfonic acid; a white powder soluble in water; it is used in photography. See *Developer.*

Ekaiodoform (*ek-ah-i-o'-do-form*). A combination of iodoform and 0.5% of paraformaldehyd. It is used as a dressing for wounds.

Ektogan (*ek'-to-gan*). The commercial name for peroxid of zinc; it is used externally.

Ekzemin (*ek'-ze-min*). An ointment consisting of precipitated sulfur with coloring-matter and perfume.

Elacin (*el'-a-sin*). Basophile elastin.

Elæometer, Elaiometer (*el-e-om'-et-ur, el-a-i-om'-et-ur*). See *Eleometer.*

Elæomyenchysis. See *Eleomyenchysis.*

Elæoptene. See *Eleoptene* (Illus. Dict.).

Elasticin (*el-as'-tis-in*). See *Elastin* (Illus. Dict.).

Elastometer (*e-las-tom'-et-ur*) [*elastic*; *μέτρον*, a measure]. An apparatus for determining the elasticity of tissues.

Elaterite (*e-lat'-ur-īt*). A blackish-brown, slightly elastic substance containing about 85% of carbon and 15% of hydrogen; it is found in the ground only in South Australia, in one place in England, one in France, and at Woodbury, Connecticut. Syn., *Mineral caoutchouc; Mineral resin; Elastic bitumen.*

Elaterometer (*e-lat-ur-om'-et-ur*) [*ἐλατήρ*, a driver; *μέτρον*, a measure]. An apparatus for determining the elasticity of gases. Syn., *Aerelaterometer.*

Elatin (*el-at'-in*). See *Elaterin* (Illus. Dict.).

Elayl (*el'-al*). See *Ethylene* (Illus. Dict.).

Elbow-boil (*el'-bo-boil*). A form of bursitis olecrani attacking horses that stand in stalls with hard floors. Syn., *Calk-boil.*

Elective (*e-lek'-tiv*) [*eligere*, to choose]. Optional; in chemistry, having a preference.

Electivity (*e-lek-tiv'-it-e*). Capacity for elective action.

Electric. (See Illus. Dict.) **E. Strain,** the directed condition or rotational strain of the space around a body in a state of electrification which is produced by electric force. Syn., *Electrostatic strain; Ether strain.* **E. Wind.** See *Wind* (Illus. Dict.).

Electrician (*e-lek-trish'-an*). 1. One skilled in electric science or a manipulator of electric apparatus. 2. One who employs electricity in the treatment of disease.

Electricity. (See Illus. Dict.) **E., Franklin's One-fluid Theory of,** it assumes that electricity exists in all bodies as a common stock, its quantity varying according to circumstances. By interaction with other

bodies a particular body may possess more or less electricity than the constant quantity.

Electrification (*e-lek-trif-ik-a'-shun*). See *Electrization* (Illus. Dict.).

Electrization. (See Illus. Dict.) **E., Intragastric,** electrotherapy practised by the introduction of an electrode into the stomach. Cf. *Electrode, Deglutable.*

Electroanesthesia. (See Illus. Dict.) 2. Local anesthesia induced by the introduction of anesthetizing substances into the tissues by means of the electric current without injury to the skin. It is called the cataphoretic method.

Electrobiologists (*e-lek-tro-bi-ol'-o-jists*) [*electricity; biology*]. A class of phrenologic mesmerists whose practice was to pass the hand over the different organs of the brain claiming to excite them to action. [Wilks.]

Electrobiology (*e-lek-tro-bi-ol'-o-je*). A modern term for mesmerism or hypnotism.

Electrocapillarity (*e-lek-tro-kap-il-ar'-it-e*). See *Action, Electrocapillary.*

Electrocardiagram (*e-lek-tro-kar-de'-ah-gram*) [*electricity; καρδία*, heart; *γράμμα*, a writing]. A registration of electromotive variations in heart-action.

Electrocatalysis (*e-lek-tro-kat-al'-is-is*) [*electricity; catalysis*]. The action of the galvanic current upon the trophic processes in the nervous system, upon the contraction of the vessels, the movement of the lymph in the lymphatics, etc., through which a resorbent effect is produced by means of exudation, infiltration, new-formation, etc.

Electrocautery (*e-lek-tro-kaw'-ter-e*). See *Cautery, Galvanic* (Illus. Dict.).

Electrochemism (*e-lek-tro-kem'-izm*). The theory that all chemic action is caused by electricity.

Electroconductivity (*e-lek-tro-kon-duk-tiv'-it-e*). Capability for transmitting electricity.

Electrocutaneous (*e-lek-tro-ku-ta'-ne-us*). Relating to the sensibility of the skin to the electric current.

Electrocution (*e-lek-tro-ku'-shun*) [*electricity; execution*]. Judicial execution by electricity.

Electrode. (See Illus. Dict.) **E., Allman's,** a device for the application of electricity to cause absorption of corneal opacities. **E., Colon** (Pennington's), an appliance for hydroelectric applications to the colon. It is a perforated hollow carbon electrode connected with the conducting cord by means of a spiral wire passing through and surrounded by a soft colon tube, through which the colon may be flushed with warm water or saline solution. [Jacoby.] **E., Deglutable,** an electrode suitable to be passed into the stomach for intragastric electrization. **E., Dispersing.** See *E., Indifferent.* **E., Ear,** one adapted to the application of the galvanic current to the external canal of the ear. **E., Esophageal-,** one adapted to the electrotherapeutic treatment of the esophagus. **E., Exciting,** in electrotherapy, the small electrode used in nerve and muscle stimulation, immediately over or near the nerve to be examined. Also called localizing electrode. Cf. *E., Indifferent.* **E., Exciting, Erb's,** a bundle of 400 metal threads separated from one another by insulation and tightly incased in a hard-rubber tube; employed in electrotherapy. **E., Indifferent,** the large electrode used in nerve and muscle stimulation, at a distance from the nerve to be examined. Also called dispersing electrode. Cf. *E., Exciting.* **E., Laryngeal,** one adapted to the use of electricity in diseases of the larynx. **E., Localizing.** See *E., Exciting.* **E., Rectal,** one adapted to the application of the galvanic current to the rectum. **E., Uterine,** a pure copper intrauterine sound arranged for the application of the galvanic current to the uterus. **E., Vaginal,** one adapted to vaginal electrotherapy.

Electrodiaphane (*e-lek-tro-di'-af-ān*) [*electricity; διαφαίνειν*, to show through]. An apparatus for illumination of the stomach. Cf., *Diaphanoscope.*

Electrodiaphany (*e-lek-tro-di-af'-an-e*). See *Diaphanoscopy* and *Transillumination* (Illus. Dict.).

Electrodynamics, Electrodynamism (*e-lek-tro-di-nam'-iks, -izm*) [*electricity; dynamic*]. The science of the reciprocal action of electric currents.

Electrodynamometer (*e-lek-tro-di-nam-om'-et-ur*) [*electricity; dynamometer*]. An instrument for measuring the strength of electric currents.

Electroendoscopy (*e-lek-tro-end-os'-ko-pe*). See *Diaphanoscopy* and *Transillumination* (Illus. Dict.).

Electrogram (*e-lek'-tro-gram*) [*electricity; γράμμα*, a writing]. A skiagram.

Electrograph (*e-lek'-tro-graf*) [*electricity; γράφειν*, to write]. See *Skiagraph.*

Electrography (*e-lek-trog'-raf-e*). 1. Skiagraphy. 2. Electrology.

Electrohemostasis (*e-lek-tro-hem-os'-ta-sis*) [*electricity; hemostasis*]. Arrest of hemorrhage in a tissue or vessel by grasping it with a forceps, in the jaws of which heat is generated by an electric current, causing desiccation of the tissue and union of the arteries.

Electrokinetic (*e-lek-tro-kin-et'-ik*). Electromotive.

Electrokinetics (*e-lek-tro-kin-et'-iks*) [*electricity; κινεῖν*, to move]. 1. The science of galvanism. 2. The science of electricity as applied to mechanical motion.

Electrolepsy (*e-lek-tro-lep'-se*) [*electricity; epilepsy*]. Electric chorea.

Electrolithotrity (*e-lek-tro-lith-ot'-rit-e*). Lithotrity by means of electricity.

Electrolizer (*e-lek'-tro-li-zer*). An instrument for removing strictures by electricity.

Electrologist (*e-lek-trol'-o-jist*). An electrician.

Electrology (*e-lek-trol'-o-je*) [*electricity; λόγος*, science]. The branch of physics treating of the laws and phenomena of electricity.

Electrolysis. (See Illus. Dict.) **E., Cupric,** electrolysis in which a bulb of chemically pure copper is applied directly to the diseased area; the copper oxychlorid generated acts as a germicide.

Electrolyte (*e-lek'-tro-līt*). A compound capable of resolution by electrolysis.

Electrolyzer (*e-lek'-tro-li-zer*). An apparatus for the relief of urethral strictures by electrolysis.

Electromagnetics (*e-lek-tro-mag-net'-iks*). 1. See *Electromagnetism* (Illus. Dict.). 2. The science of the relation of electricity to magnetism.

Electromedication (*e-lek-tro-med-ik-a'-shun*). The introduction of medicaments into the system by electric means.

Electromedicine (*e-lek-tro-med'-is-in*). Electricity as related to medicine.

Electrometry (*e-lek-trom'-et-re*) [*electricity; μέτρον*, a measure]. The measurement of electricity.

Electromotive. (See Illus. Dict.) 2. Producing electricity; electrogenic.

Electron (*e-lek'-tron*) [*ἤλεκτρον*, amber]. 1. A term coined by Dr. Johnstone Coney to represent a separate unit of electricity. Cf. *Satellites* of Lord Kelvin. According to J. J. Thompson, the mass of an electron is about one seven-hundredth part of that of the hydrogen atom. 2. The ultimate particle of negative electricity. Cf. *Ion* (Illus. Dict.) and *Coelectron.*

Electronecrosis (*e-lek-tro-ne-kro'-sis*). See *Electrocution.*

Electronegative (*e-lek-tro-neg'-at-iv*). Relating to the electric conditions at the negative pole of a battery.

Electroneurotone (*e-lek-tro-nu'-ro-tōn*) [*electricity; νεῦρον*, a nerve; *τόνος*, tone]. An apparatus for applying massage by electricity.

Electrooptics (*e-lek-tro-op'-tiks*). The department of physics which deals with the optic phenomena of electric light.

Electrophobia (*e-lek-tro-fo'-be-ah*) [*electricity; φόβος*, fear]. A morbid fear of electricity.

Electrophobist (*e-lek-tro-fo'-bist*). A person having a morbid fear of electricity.

Electrophotography (*e-lek-tro-fo-tog'-raf-e*). Same as *Skiagraphy*.

Electrophototherapy (*e-lek-tro-fo-to-ther'-ap-e*) [*electricity; phototherapy*]. Therapeutic treatment by means of electric light.

Electropositive (*e-lek-tro-pos'-it-iv*). Relating to the electric state existing at the positive pole of a battery.

Electroprognosis (*e-lek-tro-prog-no'-sis*). See *Electrodiagnosis* (Illus. Dict.).

Electrosensibility (*e-lek-tro-sen-se-bil'-it-e*). The irritability of a sensory nerve to electricity.

Electroskiagraphy (*e-lek-tro-ski-ag'-raf-e*). Synonym of *Skiagraphy*.

Electrosurgery (*e-lek-tro-sur'-jer-e*). The use of electricity in surgery.

Electrosynthesis (*e-lek-tro-sin'-the-sis*) [*electricity; synthesis*]. Chemic combination by means of electricity.

Electrotherm (*e-lek'-tro-thurm*) [*electricity; θέρμη*, heat]. An apparatus for relieving pain by the application of electricity to the skin.

Electrothermal (*e-lek-tro-thurm'-al*). Pertaining to heat and electricity or to heat generated by electricity.

Electrotrephine (*e-lek-tro-tre'-fin*). A trephine operated by electricity.

Electrozone (*e-lek'-tro-zōn*). The proprietary name for a disinfectant fluid produced by the electrolysis of seawater.

Eleometer (*el-e-om'-et-ur*) [*ἔλαιον*, oil; *μέτρον*, a measure]. An apparatus for ascertaining the specific gravity of oil.

Eleomyenchysis (*el-e-o-mi-en'-ke-sis*) [*ἔλαιον*, oil; *μῦς*, muscle; *ἔγχεῖν*, to pour in]. The intramuscular injection and congelation of oils in treatment of chronic local spasm. 2. Surgical prosthesis by injection of paraffin.

Elephantiac, Elephantiasic (*el-e-fant'-i-ak, el-e-fant-i-a'-sik*). Relating to or affected with elephantiasis; elephantic.

Elephantiasis. (See Illus. Dict.) **E. anæsthetica,** anesthetic leprosy. **E. asturiensis,** pellagra. **E. congenita cystica,** a state of malformation marked by skeletal defects, general anasarca, and formation of cysts in the subcutaneous tissue. **E. dura, E. scirrhosa,** a variety of elephantiasis marked by density and sclerosis of the subcutaneous connective tissues. **E., Nevoid.** See *E. teleangeiectodes* (Illus. Dict.). **E. sclerosa.** See *Sclerodermia* (Illus. Dict.).

Elephantic (*el-e-fant'-ik*). See *Elephantiac*.

Elephantine (*el-e-fant'-in*). See *Elephantiac*. 2. Excessively hypertrophied.

Eliminant (*e-lim'-in-ant*) [*eliminare*, to expel]. 1. Promoting elimination. 2. A drug causing elimination.

Elinguation (*e-ling-gwa'-shun*) [*e*, out; *lingua*, the tongue]. Surgical removal of the tongue.

Elinguid (*e-ling'-gwid*) [*e*, priv.; *lingua*, the tongue]. Tongue-tied; without the power of speech.

Elkoplasty (*el-ko-plas'-te*). See *Helcoplasty* (Illus. Dict.).

Elongatio, Elongation (*e-lon-ga'-she-o, -shun*). 1. The process of lengthening. 2. A lengthened condition. **E. colli,** pathologic lengthening of the cervix uteri through hypertrophy.

Elosin (*el'-o-sin*). A remedy said to be a resinoid from the root of *Chamælirium carolinianum*, Willd. It is tonic, diuretic, emmenagog, and a vermifuge.

Elsner's Method of diagnosing typhoid. See under *Typhoid*.

Elytriform (*el-it'-re-form*). See *Elytroid*.

Elytrocleisis, Elytroclisis (*el-it-ro-kli'-sis*). See *Colpocleisis* (Illus. Dict.).

Elytroid (*el'-it-roid'*) [*ἔλυτρον*, a sheath; *εἶδος*, likeness]. Like a sheath.

Elytropneumatosis (*el-it-ro-nu-mat-o'-sis*) [*ἔλυτρον*, sheath; *πνεῦμα*, air]. A collection of air in the vagina.

Emballometer (*em-bal-om'-et-ur*) [*ἐμβάλλειν*, to throw; *μέτρον*, a measure]. A percussion instrument employed in connection with a stethoscope.

Embolalia (*em-bo-la'-le-ah*). See *Embololalia* (Illus. Dict.).

Embole, Embolia (*em'-bo-le, em-bo'-le-ah*). See *Embolism* (Illus. Dict.).

Embolism. (See Illus. Dict.) **E., Miliary,** a state in which many small blood-vessels are the seats of emboli. **E., Oil.** See *E., Fat* (Illus. Dict.). **E., Pigment, E., Pigmental, E., Pigmentary,** embolism due to melanemia and usually occurring in the spleen, liver, brain, or kidney.

Embryochemic (*em-bri-o-kem'-ik*) [*ἔμβρυον*, embryo; *χημεία*, chemistry]. Relating to the changes in the chemic distribution of nitrogen and phosphorus in the fertilized egg during development.

Embryoctonic, Embryoctonous (*em-bri-ok-ton'-ik, -ok'-ton-us*). Abortifacient; relating to embryoctony.

Embryogeny (*em-bri-oj'-en-e*). See *Embryogenesis* (Illus. Dict.).

Embryoism, Embryonism (*em'-bri-o-izm, em'-bri-on-izm*). The state of being an embryo.

Embryolemma (*em-bri-o-lem'-ah*) [*ἔμβρυον*, the embryo; *λέμμα*, a husk]. In the plural, *embryolemmata*, the special fetal membranes, the amnion, serolemma, etc.

Embryomas (*em-bri-o'-mahs*). A term applied by Wilnis to the dermoid cysts found in the mammalian ovary and testis, which he regards as rudimentary embryos.

Embryometrotrophia (*em-bri-o-met-ro-tro'-fe-ah*) [*ἔμβρυον*, embryo; *μήτρα*, the womb; *τρέφειν*, to nourish]. The nourishment of the embryo.

Embryomorphous (*em-bri-o-mor'-fus*) [*embryo; μορφή*, shape]. Like an embryo or of embryonic origin.

Embryonate (*em'-bri-o-nāt*). 1. Relating to an embryo. 2. Fecundated; containing an embryo.

Embryoplastic (*em-bri-o-plas'-tik*) [*embryo; πλάσσειν*, to form]. Participating in the formation of the embryo; it is said of cells.

Embryoscope (*em'-bri-o-skōp*) [*embryo; σκοπεῖν*, to examine]. An appliance by means of which the course of development of the embryo in eggs with shells may be observed.

Embryospastic (*em-bri-o-spas'-tik*) [*embryo σπᾶν*, to draw]. Relating to fetal extraction with an instrument.

Emergency. (See Illus. Dict.) **E. Ration.** See under *Ration*.

Emetin. (See Illus. Dict.) 2. A resinoid from ipecac root occurring in yellowish-brown lumps soluble in water; it is emetic, diaphoretic, and expectorant. Emetic, dose ⅛–¼ gr. (0.008–0.016 gm.); expectorant, $\frac{1}{60}$–$\frac{1}{30}$ gr. (0.001–0.002 gm.).

Emetism (*em'-et-izm*) [*ἐμεῖν*, to vomit]. Poisoning from undue use of ipecac, manifested by acute inflammation of the pylorus attended with hyperemesis and diarrhea and in some instances with paroxysms of coughing and asthmatic suffocation.

Emetized (*em'-et-izd*). 1. Prepared with tartar emetic. 2. Nauseated.

Eminence. (See Illus. Dict.) **E., Antithenar.** See

under *Antithenar* (Illus. Dict.). **E., Arcuate,** a round protuberance on the upper aspect of the petrosa marking the location of the superior semicircular canal. Syn., *Jugum petrosum.* **E., Articular,** in dentistry, the projection upon the zygomatic process which marks the anterior boundary of the glenoid cavity. **E., Auditory,** the more prominent part of the floor of the fourth ventricle lying between the inferior and superior fovea. Syn., *Eminentia acustica.* **E., Cinereous.** See *Ala cinerea* or *Lamina cinerea* (Illus. Dict.). **E., Digital,** the calcar. **E., Doyère's.** See *Motor al Endplate* and *Sarcoglia* (Illus. Dict.). **E., Germinal,** the discus proligerus. **E., Hypothenar.** See *Antithenar Eminence* (Illus. Dict.). **E., Iliopubic.** See *E., Iliopectineal* (Illus. Dict.). **E., Intercondyloid,** the spine of the tibia. Syn., *Adclivitas tibiæ.* **E., Mammillary.** See *Corpora mammillaria* (Illus. Dict.). **E., Meckel's.** See *E., Collateral* (Illus. Dict.). **E., Median,** the anterior pyramids. **E., Müller's,** in the embryo, the protuberance formed by the cloaca at the point of entrance of Müller's duct. Syn., *Colliculus Mülleri.* **E., Occipital.** 1. The ridge in the paracele corresponding to the occipital fissure, distinct in the fetus. Syn., *Bulbous postcornu of Henle.* 2. See *Occipital Protuberance, External* (Illus. Dict.). **E., Posterior Portal,** the caudate lobe of the liver. **E. of the Scapha,** one on the dorsal aspect of the external ear corresponding to the scapha. Syn., *Agger perpendicularis; A. ponticulus.* **E., Supracondylar,** that formed by the internal or external epicondyles. **E., Terete,** a slight thickening of the terete funicle on the floor of the fourth ventricle. Syn., *Eminentia teres; Colliculus rotundus; Corpus teres.* **E., Thenar,** the eminence on the palm at the base of the thumb.

Eminentia (*em-in-en'-she-ah*) [L.]. See *Eminence* (Illus. Dict.). **E. caudata,** an isthmus connecting the spigelian lobe with the under surface of the right lobe of the liver. Syn., *Tailed lobe; Eminentia longitudinalis; E. radiata.* **E. cruciata,** the occipital cross. See *Occipital Protuberance, Internal* (Illus. Dict.). **E. cuneatus,** a slight swelling of the internal funicle near the eminence of the clava; it contains the internal cuneate nucleus. **E. gracilis.** See *Pyramid, Posterior* (Illus. Dict.). **E. hepatis caudata, E. hepatis longitudinalis, E. hepatis radiata,** the lobus caudata, the spigelian lobe of the liver. **Eminentiæ longitudinales.** See *E. caudata.* **E. mandibularis,** G. Schwalbe's term for a bony protuberance of the inner surface of the skull, beneath the fossa mandibularis. **E. pyriformis, E. striata,** the striatum. **E. radiata.** See *E. caudata.* **Eminentiæ teretes.** See *Fasciculi teretes.*

Emissary (*em'-is-a-re*) [*emittere,* to send forth]. 1. An outlet. 2. Furnishing an outlet.

Emol (*e'-mol*) [*emollire,* to soften]. A fine, flesh-colored powder composed of steatite, silica, aluminium, and a trace of lime, miscible with water, and used as paste in the treatment of various forms of hyperkeratosis.

Emotiometabolic (*e-mo-she-o-met-ah-bol'-ik*). Producing metabolism in consequence of some emotion.

Emotiomotor (*e-mo-she-o-mo'-tor*). Inducing some activity in consequence of emotion.

Emotiomuscular (*e-mo-she-o-mus'-ku-lar*). Relating to muscular activity which is due to emotion.

Emotiovascular (*e-mo-she-o-vas'-ku-lar*). Relating to some vascular change brought about by emotion.

Emotivity (*e-mo-tiv'-it-e*) [*emotio,* agitation]. The degree of an individual's susceptibility to emotion.

Empasm (*em'-pazm*) [*ἐν,* on; *πάσσειν,* to strew]. A perfumed powder for dusting the person.

Emphysatherapy (*em-fiz-ah-ther'-ap-e*) [*ἐμφυσᾶν,* to inflate; *therapy*]. The therapeutic injection of gas into a body-cavity.

Emphysema. (See Illus. Dict.) Syn., *Aerethmia; Aerethmopneumonia.* **E. abdominale, E. abdominis,** tympanites. **E., Alveolar.** See *E., Pulmonary* (Illus. Dict.). **E., Atrophic, E., Atrophous,** the confluence of several alveoli of the lungs through simple senile disappearance of their septa and without enlargement of the organ. Syn., *E., Senile; E., Small-lunged; Senile atrophy of the lung.* **E., Cellular, E. cellulare.** See *E., Subcutaneous.* **E., Compensatory, E., Complementary, E., Essential,** pulmonary emphysema due to defective expansion of some other area of the lung in consequence of which the affected alveoli have assumed the function of a number of others and give way under the pressure. **E., Extraalveolar, E., Extravesicular, E., Interstitial.** See *E., Interlobular* (Illus. Dict.). **E. pectoris.** Synonym of *Pneumothorax.* **E., Senile.** See *E., Atrophic.* **E., Subcutaneous,** distention of the subcutaneous connective tissue with air from abnormal communication with the air-passages or rectum. **E., Substantial.** See *E., Pulmonary* (Illus. Dict.). **E., Substantive.** See *E., Complementary.* **E. vaginæ.** See *Colpohyperplasia cystica.* **E., Vesicular.** See *E., Pulmonary* (Illus. Dict.). **E., Vicarious.** See *E., Complementary.*

Emphysemodyspnea (*em-fiz-e-mo-disp'-ne-ah*) [*emphysema; dyspnea*]. The dyspnea attending pulmonary emphysema.

Emphytic (*em-fit'-ik*) [*ἔμφυτος*]. Inborn, innate.

Empiric. (See Illus. Dict.) 2. Founded on experiment without regard to science, *e. g.,* an empiric formula.

Emplastic (*em-plas'-tik*) [*ἐμπλαστικός,* clogging]. 1. Suitable for a plaster. 2. A constipating medicine.

Emplastration (*em-plas-tra'-shun*) [*emplastrum,* a plaster]. The act of applying a plaster.

Empodistic (*em-pod-is'-tik*) [*ἐμποδίζειν,* to hinder]. 1. Checking, preventing. 2. A preventive remedy.

Empresis, Empresma (*em-pre'-sis, em-pres'-mah*) [*ἐμπρήθειν,* to burn]. Inflammation.

Emprosthocyrtoma, Emprosthocyrtosis (*em-pros-tho-sir-to'-mah, -sis*) [*ἐμπροσθεν,* forward; *κύρτωμα,* a bending]. Lordosis.

Emprosthokyphosis (*em-pros-tho-ki-fo'-sis*) [*ἐμπροσθεν,* forward; *kyphosis*]. Lordosis.

Emprosthozygosis (*em-pros-tho-zi-go'-sis*) [*ἐμπροσθεν,* forward; *ζυγοῦν,* to join]. The condition of conjoined twins in which the fusion is anterior.

Empyreuma (*em-pi-ru'-mah*) [*ἐμπίρευμα,* a heating; a burnt flavor]. The odor developed in organic matter by destructive distillation.

Emulsic (*e-mul'-sik*). Relating to emulsin.

Emulsive. (See Illus. Dict.) 2. Affording oil on pressure, as certain seeds.

Emulsum (*e-mul'-sum*). Same as *Emulsion.*

Emundans, Emundant (*e-mun'-danz, -dant*) [*emundare,* to clean out]. Cleansing and disinfectant, applied to certain washes.

Emundantia, Emundants (*e-mun-dan'-she-ah, e-mun'-dants*) [*emundare,* to clean out]. Detergents.

Emundation (*e-mun-da'-shun*). The rectification of drugs.

Emusculate (*e-mus'-ku-lāt*). Without muscles.

Enadelphia (*en-ah-del'-fe-ah*) [*ἐν,* in; *ἀδελφός,* a brother]. Fetal inclusion.

Enamel. (See Illus. Dict.) **E.-jelly, E.-pulp.** See *Organ, Enamel* (Illus. Dict.).

Enantesis (*en-an-te'-sis*) [*ἐναντίος,* opposite]. The approximation of ascending and descending blood-vessels.

Enanthem (*en-an'-them*) [ἐν, in; ἄνθημα, bloom]. An eruption on an internal mucous membrane.

Enanthin, Œnanthin (*e-nan'-thin*). A resinous substance contained in *Œnanthe crocata*, L., and *Œ. fistulosa*, L.

Enanthol, Œnanthol (*e-nan'-thol*). See *Aldehyd, Enanthylic* (Illus. Dict.).

Enanthotoxin, Œnanthotoxin (*e-nan-tho-toks'-in*). $C_{17}H_{22}O_5$. A poisonous resinoid contained in *Œnanthe crocata*, L. It acts as picrotoxin in producing violent convulsions.

Enanthrope (*en-an'-thrōp*) [ἐν, in; ἄνθρωπος, man]. A source of disease originating internally.

Enantiobiosis (*en-an-ti-o-bi-o'-sis*) [ἐναντίος, opposite; βίος, life]. Commensalism in which the associated oaganisms are antagonistic to each other's development.

Enantiopathic (*en-an-te-op'-ath-ik*). 1. Palliative. 2. Pertaining to enantiopathy.

Enantiopathy (*en-an-te-op'-ath-e*) [ἐναντίος, opposite; πάθος, disease]. A disease antagonistic to another disease.

Enarkyochrome (*en-ar-ke'-o-krom*) [ἐν, in; ἄρκυς, a net; χρῶμα, color]. Nissl's term for a nerve-cell taking the stain best in the cell-body, the formed part of which is arranged in the shape of a network.

Enarthrum (*en-ar'-thrum*) [ἐν, in; ἄρθρον, a joint] A foreign body lodged in a joint.

Encarditis (*en-kard-i'-tis*). Same as *Endocarditis*.

Encelitis, Encœlitis (*en-se-li'-tis*) [ἐγκοίλια, the intestines]. Inflammation of the abdominal viscera.

Encephalalgia. (See Illus. Dict.) **E. hydropica,** hydrocephalus.

Encephalanalosis (*en-sef-al-an-al-o'-sis*) [ἐγκέφαλος, the brain; ἀνάλωσις, a wasting away]. Cerebral atrophy.

Encephalasthenia (*en-sef-al-as-the'-ne-ah*) [ἐγκέφαλος, the brain; *a*, priv.; σθένος, strength]. Althaus' term for the cerebral form of neurasthenia.

Encephalauxe (*en-sef-al-awks'-e*) [*encephalon*; αὔξη, increase]. Hypertrophy of the brain.

Encephaledema (*en-sef-al-e-de'-mah*) [ἐγκέφαλος, the brain; *edema*]. Edema of the brain.

Encephalelcosis (*en-sef-al-el-ko'-sis*) [*encephalon*; *helcosis*]. Ulceration of the brain.

Encephalemia, Encephalæmia (*en-sef-al-e'-me-ah*). See *Encephalohemia*.

Encephalitis. (See Illus. Dict.) **E. neonatorum** (Virchow), localized softening consisting of numerous yellow spots surrounded by hemorrhage; these occur most commonly in the brains of syphilitic infants.

Encephalodialysis (*en-sef-al-o-di-al'-is-is*) [ἐγκέφαλος, brain; διά, through; λύειν, to loose]. Softening of the brain.

Encephalohemia (*en-sef-al-o-he'-me-ah*) [ἐγκέφαλος, brain; αἷμα, blood]. Congestion of the brain.

Encephalomalacia. (See Illus. Dict.) **E., Red, E., White, E., Yellow.** See under *Softening* (Illus. Dict.).

Encephalomalacosis, Encephalomalaxis (*en-sef-al-o-mal-ah-ko'-sis, -aks'-is*). See *Encephalomalacia* (Illus. Dict.).

Encephalomeningitis (*en-sef-al-o-men-in-ji'-tis*) [*encephalon*; *meninges*]. Combined inflammation of the brain and membranes.

Encephalomeningocele (*en-sef-al-o-men-in'-go-sēl*) [*encephalon*; *meningocele*]. Hernia of the membranes and brain substance.

Encephalomyelitis (*en-sef-al-o-mi-el-i'-tis*). Encephalitis combined with myelitis.

Encephalopyosis (*en-sef-al-o-pi-o'-sis*) [*encephalon*; *pyosis*]. Abscess of the brain.

Encephalorachidian, Encephalorrhachidian (*en-sef-al-o-ra-kid'-e-an*). Same as *Cerebrospinal*.

Encephaloscopy (*en-sef-al-os'-ko-pe*) [*encephalon*; σκοπεῖν, to examine]. Examination of the brain.

Encephalosepsis (*en-sef-al-o-sep'-sis*) [*encephalon*; σῆψις, decay]. Gangrene of the tissue of the brain.

Encephalosis (*en-sef-al-o'-sis*). The formation of an encephaloma.

Encephalospinal (*en-sef-al-o-spi'-nal*) [ἐγκέφαλος, brain; *spina*, spine]. Cerebrospinal.

Encephalothlipsis (*en-sef-al-o-thlip'-sis*) [ἐγκέφαλος, brain; θλίψις, pressure]. Pressure on the brain.

Enchondral (*en-kon'-dral*). See *Endochondral* (Illus. Dict.).

Enchondroma. (See Illus. Dict.) **E. mucosum.** See *Chondroma mucosum*.

Enchondrosarcoma (*en-kon-dro-sar-ko'-mah*) [ἐν, in; χόνδρος, cartilage; *sarcoma*]. Sarcoma containing cartilaginous tissue.

Enchyma (*en'-ke-mah*) [ἐγχεῖν, to pour in]. An organic juice elaborated from chyme, the formative juice of tissues.

Encolpism, Encolpismus (*en-kol'-pizm, en-kol-piz'-mus*) [ἐν, in; κόλπος, the vagina]. 1. A vaginal suppository. 2. Medication by vaginal suppositories.

Encranial (*en-kra'-ne-al*). See *Intracranial* (Illus. Dict.).

Encyesis (*en-si-e'-sis*) [ἐγκύησις]. Pregnancy.

Encystation (*en-sist-a'-shun*). See *Encystment* (Illus. Dict.).

End. (See Illus. Dict.) **E.-artery,** a terminal artery not anastomosing with another. **E.-body,** Wassermann's term for that substance which kills the bacteria in the production of immunity to typhoid. Cf. *Body, Immune.* **E.-brain.** See *Prosencephalon* (Illus. Dict.). **E.-brush,** the tuft of brush-like arrangement in which a nerve-process or fiber ends. **E.-organ.** (See Illus. Dict.) **E.-o., Ruffini's,** small bodies found in the skin where pacinian corpuscles exist; they are made up of the terminal arborizations of a nerve and a fibrous framework. **E.-plate.** (See Illus. Dict.) **E.-p., Grand.** See *Terma* (Illus. Dict.). **E.-p., Motorial Nerve.** See *Motorial End-plate* (Illus. Dict.).

Endadelphia (*end-ah-del'-fe-ah*). See *Inclusio fœtalis* (Illus. Dict.).

Endaortitis (*end-a-or-ti'-tis*) [ἔνδον, within; ἀορτή, aorta]. Inflammation of the intima of the aorta.

Endarterial (*end-ar-te'-re-al*). Within an artery.

Endarteritis. (See Illus. Dict.). Syn., *Endoarteritis.* **E., Aortic.** See *Endaortitis.* **E. obliterans, E. obliterativa,** a thickening of the intima of vessels whereby the lumina are completely closed.

Endaxoneuron (*end-aks-o-nu'-ron*) [ἔνδον, within; *axoneuron*]. A neuron the nerve-process of which does not leave the spinal cord; the endaxoneurons include the column-cells and the internal cells.

Endchondral (*end-kon'-dral*). See *Endochondral* (Illus. Dict.).

Endectoplastic (*end-ek-to-plas'-tik*) [ἔνδον, within; ἐκτος, outward; πλάσσειν, to form]. Applied to cells which form tissue by a metamorphosis of the protoplasm at both the periphery and the center.

Endemoepidemic (*en-dem-o-ep-e-dem'-ik*). Endemic, but periodically becoming epidemic.

Endermism (*en'-durm-izm*). The endermatic administration of remedies. See *Endermatic* (Illus. Dict.).

Endermosis (*en-durm-o'-sis*) [ἐν, in; δέρμα, the skin]. 1. See *Endermism.* 2. Any herpetic affection of a mucosa.

Endoabdominal (*en-do-ab-dom'-in-al*). Within the abdomen.

Endoaortitis (*end-o-a-or-ti'-tis*). See *Endaortitis*.

Endoappendicitis (*en-do-ap-en-dis-i'-tis*) [ἐνδον, within; *appendicitis*]. Inflammation of the mucosa of the vermiform appendix.

Endobronchitis (*en-do-brong ki'-tis*) [ἐνδον, within; *bronchitis*]. Inflammation of the bronchial mucosa.

Endocarditis. (See Illus. Dict.) **E. tuberculosa,** that due to tubercle bacilli within the heart.

Endocelar, Endocœlar (*en-do-se'-lar*). Relating to the endocelarium.

Endocolitis (*en-do-ko-li'-tis*) [ἐνδον, within; κῶλον, the colon]. See *Colitis* (Illus. Dict.).

Endocomplements (*en-do-kom'-ple-ments*). A class of intracellular complements.

Endocranial (*en-do-kra'-ne-al*). 1. Relating to the endocranium. 2. See *Intracranial*.

Endocular (*end-ok'-u-lar*). Intraocular.

Endocystitis (*en-do-sist-i'-tis*). See *Cystitis* (Illus. Dict.).

Endocytic (*en-do-sit'-ik*) [ἐνδον, within; κύτος, a cell]. Relating to the contents of a cell.

Endodermal, Endodermic (*en-do-durm'-al, -ik*). Relating to the endoderm; applied to structures originating in the lower layers of the derma, as dentin.

Endodiascopy (*en-do-di-as'-ko-pe*) [ἠνδον, within; δία, through; σκοπεῖν, to examine]. Bouchacourt's (1898) method of exploration characterized by the introduction of a Crookes tube into a natural body-cavity in order to obtain either a skiagraph or a skiascope.

Endoenteritis (*en-do-en-ter-i'-tis*). See *Enteritis* (Illus. Dict.).

Endoesophagitis (*en-do-e-sof-aj-i'-tis*) [ἐνδον, within; *esophagitis*]. Inflammation of the membrane lining the esophagus.

Endoexoteric (*en-do-eks-o-ter'-ik*) [ἐνδον, within; ἐξωτερικός, external]. Applied to a disease the origin of which is both endopathic and exopathic.

Endogenesis, Endogeny (*en-do-jen'-e-sis, en-doj'-en-e*) [ἐνδον, within; γένεσις, production]. Growth within; endogenous formation.

Endoglobular (*en-do-glob'-u-lar*) [ἐνδον, within; *globus*, a ball]. Within the blood-corpuscles.

Endolepidoma (*en-do-lep-id-o'-mah*). See under *Lepidoma*.

Endomastoiditis (*en-do-mas-toid-i'-tis*) [ἐνδον, within; *mastoid*]. Inflammation within the mastoid cavity.

Endomesognathic, Endomesognathicus (*en-do-mez-o-nath'-ik, -us*). Connected with the endognathion and the mesognathion.

Endometrectomy (*en-do-met-rek'-to-me*) [ἐνδον, within; μήτρα, the uterus; ἐκτομή, a cutting out]. The extirpation of the entire mucosa of the uterus through the abdomen and incised uterus.

Endometritis. (See Illus. Dict.) **E. dissecans, E., Dissecting, E. exfoliativa.** See *Dysmenorrhea, Membranous* (Illus. Dict.). **E. dolorosa,** painful spasms or continuous pain in the region of the uterus, believed to be an inflammatory lesion of the uterine mucosa localized in the fundus at the internal orifice and opening of the tubes. **E. placentaris hypertrophica.** See *Placentitis* (Illus. Dict.).

Endometrorrhagia (*en-do-met-ro-raj'-e-ah*). See *Metrorrhagia* (Illus. Dict.).

Endonarteritis, Endonarteriitis (*en-don-ar-ter-i'-tis, -e-i'-tis*). See *Endarteritis* (Illus. Dict.).

Endoneuritis (*en-do-nu-ri'-tis*). Inflammation of the endoneurium.

Endopathy (*en-dop'-ath-e*) [ἐνδον, within; πάθος, disease]. Any disease arising within the body.

Endoperiarteritis (*en-do-per-e-ar-ter-i'-tis*). Endarteritis combined with periarteritis.

Endoperitonitis (*en-do-per-it-on'-i-tis*) [ἐνδον, within; περιτόναιον, peritoneum]. Inflammation of the serous surface of the peritoneum.

Endophlebitis. (See Illus. Dict.) **E. portalis.** See *Pylephlebitis* (Illus. Dict.).

Endorhinitis (*en-do-ri-ni'-tis*) [ἐνδον, within; ῥίς, nose]. Inflammation of the membrane lining the nasal passages.

Endosepsis (*en-do-sep'-sis*) [ἐνδον, within; σῆψις, decay]. Septicemia arising within the body.

Endosmic (*en-dos'-mik*). Relating to endosmosis.

Endostethoscope (*en-do-steth'-o-skōp*) [ἐνδον, within; *stethoscope*]. A form of stethoscope for auscultation through the esophagus.

Endotheliolysin (*en-do-the-le-ol'-is-in*) [*endothelium*; λύσις, a loosing]. A cytotoxin endowed with the capacity of dissolving endothelial cells. Syn., *Hemorrhagin*.

Endotheliomyoma (*en-do-the-li-o-mi-o'-mah*). A myoma springing from endothelium.

Endotheliotoxin (*en-do-the-le-o-toks'-in*). See *Endotheliolysin*.

Endothelium. (See Illus. Dict.) **E., Subepithelial.** See *Membrane, Debove's* (Illus. Dict.). **E., Vascular,** that lining the heart-cavities, the bloodvessels, and lymph-vessels.

Endotheloid (*en-do-the'-loid*). See *Endothelioid* (Illus. Dict.).

Endotome (*en'-do-tōm*) [ἐνδον, within; τέμνειν, to cut]. Strong shears used in decapitation of the fetus.

Endotoscope (*end-o'-to-skōp*) [ἐνδον, within; οὖς, the ear; σκοπεῖν, to see]. An apparatus designed for examination of the ear and for rendering visible the movements of the tympanum.

Endotracheitis (*en-do-trak-e-i'-tis*) [ἐνδον, within; *trachea*]. Inflammation of the mucous membrane of the trachea.

Endotrachelitis (*en-do-trak-el-i'-tis*) [ἐνδον, within; τράχηλος, the neck]. Cervical endometritis.

Endouteritis (*en-do-u-ter-i'-tis*). See *Endometritis* (Illus. Dict.).

Endovascular (*en-do-vas'-ku-lar*). See *Intravascular* (Illus. Dict.).

Endovasculitis (*en-do-vas-ku-li'-tis*). See *Endangeitis* (Illus. Dict.).

Endovenous (*en-do-ve'-nus*). See *Intravenous* (Illus. Dict.). **E. Medication,** the introduction of medicaments in solution into the veins.

Energid (*en-ur'-jid*) [ἐνεργεῖν, to execute]. Sachs' term for the cell-nucleus and the cytoplasm lying within its sphere of influence.

Energin (*en ur'-jin*). An artificial food prepared from protein.

Engelhardtia (*en-gel-hard'-te-ah*) [C. Moritz v. Engelhardt, a Russian naturalist, born 1779]. A genus of plants of the order *Juglandæ*. **E. spicata,** Blume, a species indigenous to Malaya, yields in part the Indian or East Indian dammar of commerce.

Englobing (*en-glo'-bing*) [ἐν, in; *globus*, a globe]. The taking in of an object by a monad, ameba, or phagocyte.

Engonus (*en'-gon-us*) [ἐν, in; γεννᾶν, to produce]. 1. Native. 2. Offspring.

Enhæmospores (*en-he'-mo-spōrs*) [ἐν, in; αἷμα, blood; σπόρος, a spore]. Ray Lankester's name for the first spores of the malarial parasite produced within the human body.

Enkatarrhaphy (*en-kat-ar'-af-e*) [ἐγκατάῤῥαπτειν, to sew in]. E. Kaufmann's method of sewing the two sides of a furrow together to bury an epithelial structure.

Enkauma (*en-kaw'-mah*) [ἐγκαυμα, a sore from burning]. A burn.

Enneatic, Enneatical (*en-e-at′-ik, -al*) [ἐννέα, nine]. Occurring once in nine times.

Enneurosis (*en-u-ro′-sis*) [ἐν, in; νεῦρον, nerve]. Innervation.

Enophthalmin (*en-of-thal′-min*). Oxytoluylmethylvinyldiacetonalkamin hydrochlorate. A substance closely allied to eucain; it is used as a mydriatic in 2% to 5% solution.

Enorchismus (*en-or-kis′-mus*). See *Cryptorchidism* (Illus. Dict.).

Ens (*enz′*) [*esse*, to be]. An entity; an inherent quality or power. **E. martis,** ammoniated iron. **E. morbi,** the pathology of a disease considered apart from its etiology. **E. primum solare,** antimony. **E. veneris,** chlorid of copper.

Ensal (*en′-sal*) [*ensis*, a sword]. Sword-shaped.

Ensellure (*ahn-sel-yur*) [Fr.]. The strongly marked curve of the dorsolumbosacral region, saddle-back. It is especially marked among Spanish women.

Entacoustic (*ent-ak-oos′-tik*) [ἐντός, within; ἀκούειν, to hear]. Applied to subjective auditory sensations having their origin within the ear or in its vicinity.

Entada (*en-tah′-dah*) [Malabar name]. A genus of leguminous trees and shrubs. **E. scandens,** Benth., a tropic species, the cocoon, scimitar-pod-plant, or filbert tree of the West Indies, the match-box bean of Queensland, furnishes seeds used as food (St. Thomas' bean, Mackay bean). The unripe legumes are used as a hair tonic and in dressing wounds.

Entallantoic (*ent-al-an-to′-ik*) [ἐντός, within; *allantois*]. Located within the allantoic sac.

Entamniotic (*ent-am-ne-ot′-ik*) [ἐντός, within; *amnion*]. Located within the folds of the amnion.

Entelmintha (*en-tel-minth′-ah*). See *Entozoa* (Illus. Dict.).

Entencephalic (*ent-en-sef-al′-ik*) [ἐντός, within; *encephalon*]. Applied to sensations having origin within the brain and not in the external world.

Entepicondylar (*ent-ep-e-kon′-dil-ar*) [ἐντός, within; *epicondyle*]. Located at the inner aspect of the epicondyle.

Entepicondyle (*ent-ep-e-kon′-dil*) [ἐντός, within; *epicondyle*]. Owen's name for the internal condyle of the humerus.

Entèqué (*ahn-ta-ka*) [Fr.]. A curious disease of South American animals marked by the occurrence of hard spines of bone in the lungs.

Enteraden (*ent-er-ah′-den*) [ἔντερον, an intestine; ἀδήν, a gland] [pl., *enteradenes*]. Any gland of the intestinal tract.

Enterangiemphraxis (*en-ter-an-ji-em-fraks′-is*) [ἔντερον, the intestine; ἀγγεῖον, a vessel; ἐμφραξίς, a stoppage]. Obstruction of the bloodvessels of the intestines.

Enteratrophia (*en-ter-at-ro′-fe-ah*) [ἔντερον, the intestine; *atrophy*]. Intestinal atrophy.

Enterauxe (*en-ter-awks′-e*) [ἔντερον, intestine; αὔξη, growth]. Hypertrophy of the muscles of the intestinal wall.

Enterembole (*en-ter-em′-bo-le*) [ἔντερον, an intestine; ἐμβολή, insertion]. Intussusception of the intestines.

Enteremia, Enteræmia (*en-ter-e′-me-ah*) [ἔντερον, an intestine; αἷμα, blood]. Intestinal congestion.

Enteremphraxis (*en-tur-em-fraks′-is*) [ἔντερον, an intestine; ἐμφραξις, stoppage]. Intestinal obstruction.

Enteritis. (See Illus. Dict.) Syn., *Endoenteritis.* See *Sign, Stokes'* (Illus. Dict.). **E., Chronic Cystic,** that characterized by the formation of cystic dilations of the intestinal glands due to stenosis of the mouths of the gland. **E., Diphtheric, E. diphtherica,** a form in which the mucosa is covered by a flaky, whitish-gray deposit. **E. nodularis,** that characterized by hyperplastic enlargement of the lymph-nodules. **E., Phlegmonous,** a secondary phenomenon due to other intestinal diseases, particularly carcinomata, ulcers of tuberculous, dysenteric, and embolic origin, and occasionally to strangulated hernia and intussusceptions. [Hemmeter.] **E. polyposa,** that characterized by polypoid growths in the intestine resulting from proliferation of the connective tissue.

Enteroapokleisis (*en-ter-o-ap-o-kli′-sis*) [ἔντερον, intestine; ἀπόκλεισις, a shutting off]. The surgical exclusion of a portion of the intestine.

Enterocele. (See Illus. Dict.) 2. **Enterocœle** [ἔντερον, intestine; κοιλία, a cavity]. The abdominal cavity. 3. See *Space, Intermesoblastic* (Illus. Dict.). **E., Crural, E., Femoral,** a femoral hernia containing intestine. **E., Inguinal,** an inguinal hernia containing intestine. **E., Partial,** the condition when only a portion of the circumference of the bowel is included within the hernial sac. Syn., *Richter's hernia.*

Enteroceliac, Enterocœliac (*en-ter-o-se′-le-ak*). Relating to the abdominal cavity.

Enterochirurgia (*en-ter-o-ki-rur′-je-ah*) [ἔντερον, intestine; χειρουργία, surgery]. Intestinal surgery.

Enteroclysm (*en′-ter-o-klizm*) [ἔντερον, intestine; κλύσμα, a clyster]. 1. A rectal injection. 2. A syringe.

Enteroconiosis, Enterokoniosis (*en-ter-o-ko-ne-o′-sis*) [ἔντερον, intestine; κονία, dust]. Any gastrointestinal affection due to dust. Cf. *Dermatoconiosis; Pneumoconiosis.*

Enterocyst (*en-ter′-o-sist*). An intestinal cyst.

Enterocystoma (*en-ter-o-sist-o′-mah*) [ἔντερον, intestine; *cystoma*]. A cystic tumor formed by the persistence of a part of the vitelline duct, opening neither externally nor into the intestinal canal.

Enterocystoscheocele (*en-ter-o-sist-os-ke′-o-sēl*) [ἔντερον, intestine; κύστις, a bladder; ὀσχεον, the scrotum; κήλη, tumor]. A hernia of the scrotum containing both intestine and bladder.

Enterodialysis (*en-ter-o-di-al′-is-is*) [ἔντερον, intestine; *dialysis*]. Complete division of an intestine by injury.

Enteroectasia (*en-ter-o-ek-ta′-se-ah*). See *Enterectasis* (Illus. Dict.).

Enteroenterostomy (*en-ter-o-en-ter-os′-to-me*) [ἔντερον, intestine; στόμα, mouth]. The formation of a fistula between two intestinal loops.

Enterogenetic, Enterogenous (*en-ter-o-jen-et′-ik, en-ter-oj′-en-us*) [ἔντερον, intestine; γεννᾶν, to produce]. Originating in the intestine.

Enterograph (*en′-ter-o-graf*) [ἔντερον, intestine; γράφειν, to write]. An x-ray picture of the intestines made more intense by ingestion of bismuth salts.

Enterohelcosis (*en-ter-o-hel-ko′-sis*). See *Enteroelcosis* (Illus. Dict.).

Enterohemia (*en-ter-o-he′-me-ah*). See *Enteremia.*

Enterohepatitis (*en-ter-o-hep-at-i′-tis*) [ἔντερον, intestine; *hepatitis*]. Combined inflammation of the intestines and liver.

Enterokinase (*en-ter-o-kin′-āz*) [ἔντερον, intestine; κινεῖν, to move]. Pawlow's name for a ferment of the succus entericus which awakens proteolytic action.

Enterol (*en′-ter-ol*). A mixture of cresols used as an intestinal antiseptic. Dose, 15–75 gr. (1–5 gm.) of a solution of 0.02 gm. in 100 gm. of water, daily.

Enterologist (*en-ter-ol′-o-jist*) [ἔντερον, intestine; λόγος, science]. One who concerns himself with the study of the intestines and their disorders.

Enteromalacosis, Enteromalaxis (*en-ter-o-mal-a-ko′-sis, -aks′-is*). See *Enteromalacia* (Illus. Dict.).

Enteromere (*en-ter′-o-mer*) [ἔντερον, intestine; μέρος, a part]. One of the primitive transverse divisions of the embryonic alimentary tract.

Enterometer (*en-ter-om′-et-ur*) [ἔντερον, the intestine;

μέτρον, a measure]. An instrument to measure the lumen of the small intestine.

Enteromphalus (*en-ter-om'-fal-us*) [*ἔντερον*, intestine; *ὀμφαλός*, the navel]. An umbilical hernia of intestine.

Enteromycodermitis (*en-ter-o-mi-ko-durm-i'-tis*) [*ἔντερον*, the intestine; *μύκης*, a fungus; *δέρμα*, the skin]. Inflammation of the intestinal mucosa.

Enteromycosis (*en-ter-o-mi-ko'-sis*) [*ἔντερον*, intestine; *mycosis*]. Intestinal mycosis.

Enteromyiasis (*en-ter-o-mi-i-a'-sis*) [*ἔντερον*, intestine; *μυῖα*, a fly]. Intestinal disease due to the presence of the larvæ of flies. See *Calliphora sp.*, *Gastrophilus sp.*, *Homalomya sp.*, *Musca sp.*, *Œstrus sp.*, under *Parasites, Table of* (Illus. Dict.).

Enteronervia (*en-ter-o-nur'-ve-ah*). See *Enteroneuria* (Illus. Dict.).

Enteroparalysis (*en-ter-o-par-al'-is-is*) [*ἔντερον*, intestine; *paralysis*]. Paralysis of the intestines.

Enteropexy (*en-ter-o-peks'-e*). See *Enteropexia* (Illus. Dict.).

Enteroptosis. (See Illus. Dict.) See *Sign*, *Stiller's*. **E., Landau's Form of,** that due to relaxation of the abdominal walls and pelvic floor.

Enteropyra (*en-ter-o-pi'-rah*) [*ἔντερον*, intestine; *πῦρ*, a fire]. **1.** Enteritis. **2.** Typhoid fever. **E. asiatica,** cholera. **E. biliosa,** bilious fever.

Enterorose (*en'-ter-or-ōs*). A dietetic recommended in gastrointestinal catarrh; a yellow powder miscible with water. Dose, 2 dr. (8 gm.) several times daily.

Enterorrhaphy. (See Illus. Dict.) **E., Circular,** the suturing of a completely divided intestine.

Enterorrheuma (*en-ter-or-ru'-mah*) [*ἔντερον*, intestine; *ῥεῦμα*, a flowing]. Intestinal rheumatism.

Enterosarcoma (*en-ter-o-sar-ko'-mah*) [*enteron; sarcoma*]. Sarcoma of the intestine.

Enteroscheocele (*en-ter-os-ke'-o-sēl*) [*ἔντερον*, the intestine; *ὀσχεον*, the scrotum; *κήλη*, a tumor]. An enterocele of the scrotum.

Enteroscope (*en'-ter-o-skōp*) [*ἔντερον*, intestine; *σκοπεῖν*, to examine]. An instrument for examining the inside of the intestines by means of electric light.

Enterospasm (*en'-ter-o-spazm*) [*ἔντερον*, bowel; *σπασμός*, spasm]. Spasmodic colic.

Enterotyphus (*en-ter-o-ti'-fus*) [*ἔντερον*, intestine; *typhus*]. Typhoid fever.

Enterovaginal (*en-ter-o-vaj'-in-al*). Intestinovaginal; relating to the intestines and the vagina.

Enterum (*en'-ter-um*) [L.]. See *Enteron* (Illus. Dict.).

Enteruria (*en-ter-u'-re-ah*) [*ἔντερον*, intestine; *οὖρον*, urine]. The vicarious occurrence of urinary constituents in the intestine.

Enterydrocele (*en-ter-i'-dro-sēl*). See *Enterohydrocele* (Illus. Dict.).

Enthelioma (*en-the-le-o'-mah*) [*ἐντός*, within; *ἕλκος*, an ulcer]. A comprehensive term including papilloma and adenoma.

Enthelminth (*en-thel'-minth*) [*ἐντός*, within; *ἕλμινς*, a worm]. A parasitic intestinal worm.

Enthlasis (*en-thla'-sis*) [*ἐνθλᾶν*, to indent]. A depressed, comminuted fracture of the skull.

Entoccipital (*ent-ok-sip'-it-al*) [*ἐντός*, within; *occiput*]. Situated entad of the occipital gyrus or fissure.

Entocelic, Entocœlic (*en-to-se'-lik*) [*ἐντός*, within; *κοιλία*, a cavity]. Within the intestines.

Entocentral (*en-to sen'-tral*) [*ἐντός*, within; *center*]. Near the center and on the inner aspect.

Entocranial (*en-to-kra'-ne-al*). See *Intracranial* (Illus. Dict.).

Entogenous (*en-toj'-en-us*). See *Endogenous* (Illus. Dict.).

Entohyal (*en-to-hi'-al*). Hyoid and on the inner aspect.

Entohyaloid (*en-to-hi'-al-oid*) [*ἐντός*, within; *hyaloid*]. Located within the vitreous body.

Entolambdoidal (*en-to-lamb-doid'-al*). Situated entad of the lambdoidal suture.

Entomarginal (*en-to-mar'-jin-al*). Near the margin and internal.

Entome (*en'-tōm*) [*ἐν*, in; *τομή*, cut]. A knife for dividing a urethral stricture.

Entomiasis (*en-to-mi'-a-sis*) [*ἔντομον*, an insect]. Any pathologic condition due to infestation with insects.

Entomophtera (*en-to-mof'-ter-a*) [*ἔντερον*, insect; *φθείρειν*, to destroy]. Parasitic malady of insects. [Pasteur.]

Entomus (*en'-tom-us*) [*ἐντέμνειν*, to cut in]. Segmented, incised.

Entoplasm (*en'-to-plazm*). See *Endoplasm* (Illus. Dict.).

Entopterygoid (*en-to-ter'-e-goid*) [*ἐντός*, within; *πτέρυξ*, a wing; *εἶδος*, resemblance]. **1.** Like a wing and situated entad. **2.** Owen's name for the pterygoid process of the sphenoid. **3.** E. Coues' name for the internal pterygoid muscle.

Entoptic. (See Illus. Dict.) Relating to entoptoscopy.

Entoptics (*ent-op'-tiks*). See *Entoptoscopy* (Illus. Dict.).

Entorbital (*ent-orb'-it-al*). Located on the inner part of the orbital lobe or entad of its orbital fissure.

Entosarc (*en'-to-sark*). See *Endosarc* (Illus. Dict.).

Entosphenoid (*en-to-sfen'-oid*) [*ἐντός*, within; *sphenoid*]. Sphenoid and internal.

Entosylvian (*en-to-sil'-ve-an*). Within the sylvian fissure.

Entotentorial (*en-to-ten-to'-re-al*). Entad of the tentorial gyrus or fissure.

Entothalamus (*en-to-thal'-am-us*) [*ἐντός*, within, *thalamus*]. Spitzka's name for the inner gray thalamic zone.

Entotorrhea (*ent-o-tor-e'-ah*) [*ἐντός*, within; *otorrhea*]. Internal otorrhea.

Entotrochanter (*en-to-tro-kan'-tur*) [*ἐντός*, within; *trochanter*]. The lesser trochanter.

Entotympanic (*en-to-tim-pan'-ik*) [*ἐντός*, within; *tympanum*]. Located within the tympanum.

Entropia (*en-tro'-pe-ah*) [*ἐντρέπειν*, to turn about]. A turning inward. Cf. *Ectropia*.

Entropion. (See Illus. Dict.) **E. musculare,** that due to contraction of the ciliary part of the orbicular muscle resulting from senile atony. **E., Organic,** that due to contraction of the lid resulting from cicatricial contraction of the conjunctiva or to diphtheric conjunctivitis. **E. spasmodicum, E., Spastic, E. spasticum.** See *E. musculare*.

Entropionize (*en-tro'-pe-on-iz*). To turn inward.

Entropy (*en'-tro-pe*) [*ἐντρέπειν*, to turn about]. That part of the activity or energy of a body which cannot be converted into mechanical work.

Enula (*en'-u-lah*) [L.]. The inner aspect of the gums.

Enuresis. (See Illus. Dict.) **E. paralytica, E. paralyticorum,** that attending paralysis of the bladder.

Envelope. (See Illus. Dict.) **E., Fetal,** the chorion and the amnion.

Envenimation (*en-ven-e-ma'-shun*) [*ἐν*, in; *venom*]. The introduction and action of snake-venom.

Enzymol (*en'-zi-mol*). A proprietary artificial gastric juice prepared from the glands of the stomach; it is used as a solvent and antiseptic, especially in the external treatment of diseases of the ear and nose.

Eolipyle, Æolipyle (*e-ol'-e-pīl*) [*αἰόλος*, windy; *πύλη*, a narrow passage]. A form of spirit-lamp used to heat cautery irons.

Eosinophilia (*e-o-sin-o-fil'-e-ah*) [*eosin*; *φιλεῖν*, to

love]. 1. An increase above the normal standard in the number of eosinophiles in the circulating blood. 2. The condition of microbes or histologic elements which readily absorb and become stained by eosin.

Eosot (*e'-o-sōt*). The commercial name of creasote valerianate. It is used in tuberculosis. Dose, 0.2 gm. increasing to 1.2 or 1.8 gm. daily in milk.

Eparsalgia (*ep-ars-al'-je-ah*) [ἐπαιρειν, to lift; ἄλγος, pain]. Any disorder due to overstrain of a part.

Epauxesiectomy (*ep-awk-se-zi-ek'-to-me*) [ἐπαύξησις, increase; ἐκτομή, a cutting out]. Excision of a growth.

Epechontoic (*ep-e-kon-to'-ik*) [ἐπέχειν, to delay; τόκος, parturition]. Capable of moderating uterine contraction.

Epeiridæ (*ep-i'-rid-e*) [ἔμπειρος, skilful]. A family of mostly bright-colored, hump-backed garden spiders considered harmless with the exception of *Epeira fasciata* and *E. lobata*, which are venomous.

Ephedra. (See Illus. Dict.) **E. nevadensis,** S. Wats., tapopote, canutillo, Brigham weed, Mormon tea, is used as an alterative and antigonorrheic. Dose of fld. ext., 1–2 drams (3.7–7.4 c.c.).

Ephedrin. (See Illus. Dict.) **E., Pseudo-,** $C_{10}H_{15}NO$, a white crystalline substance soluble in alcohol, ether, chloroform, melting at 115°–116° C.; obtained from species of the genus *Ephedra*. **E., Pseudo-, Hydrochlorate,** $C_{10}H_{15}NO \cdot HCl$, white crystals soluble in water and alcohol, melting at 176° C. It is used as a mydriatic, one or two drops of 10% to 12% solution.

Ephodist (*ef'-od-ist*) [ἐφοδος, one who goes the rounds]. v. Pettenkofer's name for a believer in the doctrine that epidemic diseases are disseminated by fomites adhering to persons coming from places where these diseases are prevalent.

Epibasal (*ep-e-ba'-sal*) [ἐπί, upon; βάσις, a base]. Situated ventrad of the basal wall; said of the ventral half of a proembryo.

Epiblepharon (*ep-e-blef'-ar-on*). See *Epicanthus* (Illus. Dict.).

Epicarin (*ep-e-kar'-in*). A condensation-product of cresolinic acid and β-naphtol, occurring as an odorless, tasteless, clear, yellowish-gray powder, easily soluble in alcohol, ether, acetone, insoluble in oil. It is used in scabies in 10% salve.

Epichlorhydrin (*ep-e-klor-hi'-drin*). C_3H_5ClO. A sweet liquid with odor of chloroform, obtained from dichloropropyl alcohol by action of gaseous hydrochloric acid. It is miscible in alcohol and ether, boils at 118°–119° C. Sp. gr. 1.203 at 0° C.

Epichordal (*ep-e-kord'-al*) [ἐπί, upon; χορδή, a cord]. Located above or dorsad of the notochord.

Epichorial (*ep-e-ko'-re-al*). Relating to the epichorion; located on the chorion or on the derma.

Epichrosis (*ep-e-kro'-sis*) [ἐπίχρωσις, a spot]. A discoloration of the skin. **E. alphosis,** albinism. **E. aurigo,** a yellow discoloration of the skin, as in icterus. **E. ephelis,** chloasma caloricum, pigmentation of the skin from exposure to the sun. **E. lenticula,** lentigo. **E. leucasmus,** vitiligo. **E. pœcilia,** vitiligo or partial albinism. **E. spilus.** See *Nævus pigmentosus* (Illus. Dict.).

Epicolic (*ep-e-kōl'-ik*) [ἐπί, upon; κῶλον, the colon]. Lying over the colon.

Epicondylalgia (*ep-e-kon-dil-al'-je-ah*) [*epicondyle*; ἄλγος, pain]. Pain in the muscular mass about the elbow-joint, following fatiguing work.

Epicondylus (*ep-e-kon'-dil-us*). See *Epicondyle* (Illus. Dict.). **E. extensorius,** the external condyle of the humerus. **E. femoris lateralis,** the outer tuberosity of the femur. **E. femoris medialis,** the inner tuberosity of the femur. **E. flexorius,** the internal condyle of the humerus.

Epicophosis (*ep-e-ko-fo'-sis*) [ἐπί, upon; κώφωσις, deafness]. Deafness dependent upon some disease.

Epicoracohumeral (*ep-e-kor-ak-o-hu'-mer-al*) [ἐπι, upon; *coracoid, humerus*]. Relating to the epicoracoid bone and the humerus.

Epicoracoid (*ep-e-kor'-ak-oid*) [ἐπί, upon; coracoid]. Located upon or over the coracoid bone or process.

Epicostal (*ep-e-kos'-tal*) [ἐπί, upon; *costa*, a rib]. Situated upon the ribs.

Epicranius (*ep-e-kra'-ne-us*). 1. See *Epicranial.* 2. See *Occipitofrontalis*, in *Table of Muscles* (Illus. Dict.).

Epictetus (*ep-ik-te'-tus*) [ἐπίκτητος, acquired]. Acquired; said of a disease.

Epicyte. (See Illus. Dict.) 2. A cell of epithelial tissue.

Epidemiologist (*ep-e-dem-e-ol'-o-jist*) [ἐπιδημία, an epidemic; λογος, science]. One who has made a special study of epidemics.

Epidermatization (*ep-e-durm-at-i-za'-shun*). Same as *Epidermidalization.*

Epidermidalization (*ep-e-durm-id-al-i-za'-shun*) [ἐπί, upon; δέρμα, skin]. The conversion of columnar into stratified epithelium.

Epidermidoid (*ep-e-durm'-id-oid*). See *Epidermatoid* (Illus. Dict.).

Epidermidolysis (*ep-e-durm-id-ol'-is-is*). See *Epidermolysis* (Illus. Dict.).

Epidermidophyton (*ep-e-durm-id-o-fi'-ton*) [*epidermis*; φυτόν, a plant]. A fungus found in psoriasis.

Epidermidosis (*ep-e-durm-id-o'-sis*) [ἐπιδερμίς, the epiderm]. A collective name for anomalous growths of the skin of epithelial origin and type.

Epidermolysis. (See Illus. Dict.) **E. bullosa hereditaria,** a rare disease first described by Goldscheider, consisting in an inherited tendency to the formation of bullæ.

Epidermomuscular (*ep-e-durm-o-mus'-ku-lar*). Relating to the epidermis and the muscles.

Epidermophyton (*ep-e-durm-o-fi'-ton*). See *Epidermidophyton.*

Epidiascope (*ep-e-di'-ah-skōp*) [ἐπι, upon; διά, through; σκοπεῖν, to look]. A magic lantern arranged for ordinary lantern slides, and also for opaque objects; a combined magic lantern and episcope.

Epididymectomy (*ep-e-did-em-ek'-tom-e*) [*epididymis*; ἐκτομή, a cutting out]. Excision of the epididymis.

Epididymoorchitis (*ep-e-did-im-o-or-ki'-tis*). Epididymitis combined with orchitis.

Epifagus (*ep-e-fa'-gus*) [ἐπί, upon; φηγός, the beech-tree]. A genus of plants of the order *Orobancaceæ*, parasitic on the roots of beech-trees. It is confined to one species. **E. americanus,** Nutt., cancer-root, beech-drop; it has astringent and antiseptic properties and is used internally in diarrhea and externally in indolent ulcers. Dose, 30–60 ♏ (1.8–3.7 c.c.).

Epigastriocele, Epigastrocele (*ep-e-gas-tre'-o-sēl, ep-e-gas'-tro-sēl*) [*epigastrium*; κήλη, a tumor]. A hernia in the epigastrium.

Epigenesist (*ep-e-jen'-e-sist*). An advocate of the doctrine of epigenesis.

Epiglottidean (*ep-e-glot-id'-e-an*). See *Epiglottic* (Illus. Dict.).

Epiguanin (*ep-e-gwan'-in*). $C_{10}H_{13}N_9O_2$. A xanthin base isolated from the urine of lunatics; it is similar to guanin in solubilities.

Epilepidoma (*ep-e-lep-id-o'-mah*). See under *Lepidoma.*

Epilepsy. (See Illus. Dict.) See *Sign, Seguin's* (Illus. Dict.). Syn., *Affectus magnus* (Hipp.); *Malum caducum*; *Morbus lunaticus*; *M. major*; *M. mesalis*; *M. popularis*; *M. viridellus*; *M. vitriolatus*; *M.*

astralis ; M. comitialis ; M. deificus ; M. divinus ; M. divus ; M. fœdus ; M. heracleios ; M. herculeus ; M. sacer ; Falling sickness ; Haut mal. **E., Abdominal,** reflex epilepsy due to some disease of the abdominal organs. **E., Absinthic,** that due to use of absinthe. **E., Aural, E., Auricular,** that due to excessive labyrinthine pressure or other disease of the ear. **E., Bravais-Jackson's.** See *E., Jacksonian* (Illus. Dict.). **E., Central,** that due to some affection of the brain or spinal cord. **E., Cerebral.** See *Petit mal,* under *Epilepsy* (Illus. Dict.). **E., Congestive,** that due to hyperemia. **E., Diurnal,** that in which the paroxysms occur in the daytime. **E., Eccentric,** reflex epilepsy. **E., Experimental,** that induced artificially for experiment. **E., Feigned,** an imitation of a paroxysm of epilepsy by an impostor. Exposure of the eye to a strong light will cause contraction of the pupil if the condition is feigned. **E., Gastric,** that dependent on gastric disorder. **E., Gastrointestinal,** epileptoid convulsions due to gastrointestinal disorders. **E., Hemiplegic,** Jacksonian epilepsy. **E., Hysteric.** See *Hysteroepilepsy* (Illus. Dict.). **E., Intestinal.** See *E., Gastrointestinal.* **E., Laryngeal.** See under *Laryngeal* (Illus. Dict.). **E., Latent,** a form due to some local irritation, generally in the stomach, which ceases on removal of the irritation, but is liable to recur upon any indulgence. **E., Lead.** See *E., Saturnine* (Illus. Dict.). **E., Maniacal,** an abortive form in which there may be no occurrence of convulsions, but mental derangement or some irregular manifestation. **E., Matutinal,** that in which the paroxysms occur chiefly in the morning. **E., Menstrual,** that in which the paroxysms occur at the menstrual period. **E., Motorial,** Jacksonian epilepsy. **E., Nocturnal,** that in which the paroxysms occur at night. **E., Provoked Spinal,** ankle clonus. **E., Psychic.** See *E., Maniacal.* **E., Renal.** See *Convulsion, Uremic* (Illus. Dict.). **E., Retinal.** 1. See *Amaurosis, Epileptiform.* 2. See *E. of the Retina* (Illus. Dict.). **E., Simulated.** See *E., Feigned.* **E., Sympathetic,** reflex epilepsy. **E., Uterine.** 1. See *Hysteroepilepsy* (Illus. Dict.). 2. Reflex epilepsy due to disease of the uterus. **E., Vasomotor,** that in which extreme contraction of the arteries precedes the attacks.

Epileptisant (*ep-e-lep'-tiz-ant*). 1. Producing epileptoid convulsions. 2. A drug which produces epileptoid convulsions ; *e. g.*, absinthe.

Epileptogenic (*ep-e-lep-to-jen'-ik*). See *Epileptogenous* (Illus. Dict.).

Epimandibular (*ep-e-man-dib'-u-lar*) [ἐπί, upon ; *mandibulum*, jaw]. Upon or above the lower jaw.

Epimere (*ep'-e-mēr*). See *Epimerite* (Illus. Dict.).

Epimysium (*ep-e-me'-ze-um*) [ἐπί, upon ; μῦς, a muscle]. The sheath of areolar tissue surrounding a muscle.

Epinephelos, Epinephelus (*ep-e-nef'-el-os, -us*) [ἐπί, upon ; νεφέλη, a cloud]. Cloudy, turbid.

Epinephrin (*ep-e-nef'-rin*) [ἐπί, upon ; νεφρός, the kidney]. $C_{10}H_{11}NO_3$. A constituent of the suprarenal capsule isolated by J. J. Abel.

Epineurial (*ep-e-nu'-re-al*). Relating to the epineurium.

Epinosic (*ep-e-no'-sik*) [ἐπί, upon ; νόσος, disease]. Unhealthy, sickly.

Epinyctis. (See Illus. Dict.) Syn., *Pustula livens et noctibus inquietans ; Pustula nocturna ; Pustula serotina ; Perinyctis.* **E. vulgaris,** a form marked by the development of painful phlyctenæ on the legs.

Epionychium (*ep-e-o-nik'-e-um*). See *Eponychium* (Illus. Dict.).

Epiperipheral (*ep-e-per-if'-ur-al*) [ἐπί, upon ; *periphery*]. Exterior ; at the periphery.

Epipharyngeal (*ep-e-far-in'-je-al*) [ἐπί, upon ; φάρυγξ, pharynx]. Located upon or above the pharynx.

Epiphysal, Epiphysary (*ep-e-fiz'-al, ep-e-fiz'-ar-e*). See *Epiphyseal* (Illus. Dict.).

Epiphyseolysis (*ep-e-fiz-e-ol'-is-is*) [*epiphysis ;* λύσις, a loosing]. The separation of an epiphysis.

Epiphysis. (See Illus. Dict.) 2. The same as *E. cerebri.* Syn., *Conarium ; Pinea ; Pineal body or gland ; Corpus pineale.* **E. acetabuli, E. ilii anterior,** the cotyloid bone. **E. cruris longioris incudis, E. incudis,** the orbicular bone. **E. piæ matris,** the choroid plexus.

Epipial (*ep-e-pi'-al*) [ἐπί, upon ; *pia*]. Situated upon or above the pia.

Epipleural (*ep-e-plu'-ral*) [ἐπί, upon ; *pleura*]. 1. Relating to an epipleura or to a pleurapophysis. 2. Located on the side of the thorax.

Epiplopexy (*ep-ip-lo-peks'-e*) [ἐπίπλοον, omentum ; πῆξις, a fixing in]. Talma's (of Utrecht) operation of suturing the great omentum to the anterior abdominal wall for the purpose of establishing a collateral venous circulation in cirrhosis of the liver.

Epiplosarcomphalocele (*ep-ip-lo-sar-kom-fal'-o-sēl*) [ἐπίπλοον, omentum ; σάρξ, flesh ; ὀμφαλός, navel ; κήλη, hernia]. An epiplomphalocele in which the omentum has become indurated.

Epipolic (*ep-e-pol'-ik*) [ἐπιπολής, at the top]. Relating to fluorescence.

Epipterygoid (*ep-e-ter'-e-goid*) [ἐπί, upon ; *pterygoid*]. Located upon or above the pterygoid bone.

Epipubic (*ep-e-pu'-bik*) [ἐπί, upon ; *pubes*]. Located upon or above the pubes.

Epipygus (*ep-ip'-e-gus*) [ἐπί, on ; πυγή, rump]. See *Pygomelus* (Illus. Dict.).

Episarcidium (*ep-e-sar-sid'-e-um*). See *Anasarca* (Illus. Dict.).

Episarkin (*ep-e-sark'-in*) [ἐπί, upon ; σάρξ, flesh]. $C_4H_6N_2O$. Balke's term for a xanthin base which occurs in normal urine of man and dogs and in the urine in leukemia. It is nearly insoluble in cold water. It gives the murexid test with HCl and potassium chlorate.

Episclera (*ep-e-skle'-rah*). The loose connective tissue lying between the conjunctiva and the sclera.

Episcopalis (*ep-is-ko-pa'-lis*) [ἐπίσκοπος, a bishop]. Mitral. **Episcopales valvulæ,** the mitral valves.

Episcope (*ep'-e-skōp*) [ἐπί, upon ; σκοπεῖν, to look]. 1. A magic lantern for projecting the image of opaque objects, like coins, pictures in books, etc. It consists of one or more powerful radiants for illuminating the opaque objects, an ordinary projection objective, and a prism or mirror for making the vertical rays from the objects horizontal. Syn., *Aphengescope ; Megascope ; Opaque lantern.* 2. An instrument for the examination of a surface.

Episioelytrorrhaphy (*ep-e-si-o-el-it-ror'-af-e*) [ἐπίσειον, pubes ; *elytrorrhaphy*]. The operation of suturing a ruptured perineum and narrowing the vagina for the support of a prolapsed uterus.

Episioperineorrhaphy (*ep-e-si-o-per-in-e-or'-af-e*). See *Episioelytrorrhaphy.*

Epispadic (*ep-e-spad'-ik*). 1. Relating to epispadias. 2. A person affected with epispadias.

Epistasis. (See Illus. Dict.) 2. A checking or stoppage of a hemorrhage or other discharge.

Epistation (*e-pis-ta'-shun*). See *Pistation* (Illus. Dict.).

Episthotonos, Episthotonus (*ep-is-thot'-o-nos, -us*). See *Emprosthotonos* (Illus. Dict.).

Epistriatum (*ep-e-stri-a'-tum*) [ἐπί, upon ; *striatum*]. Edinger's name for a part of the brain lying upon the striatum, sharply defined in reptiles ; it is possible that it corresponds to the nucleus amygdala in mammals.

Epistrophicoatlanticus (*ep-e-strof-ik-o-at-lan'-tik-us*). See *Atloaxoid.*

Epistrophicooccipital (*ep-e-strof-ik-o-ok-sip'-it-al*) [*epistropheus; occiput*]. Relating to the second cervical vertebra and the occiput.

Episylvian (*ep-e-sil'-ve-an*). Situated above the sylvian fissure.

Episynthetic (*ep-e-sin-thet'-ik*) [ἐπί, upon; σύνθεσις, synthesis]. An eclectic, a physician who declined to adopt any exclusive system of medicine, and who doubted that which he could not understand. Cf. *Pyrrhonian.*

Epitela (*ep-e-te'-lah*) [ἐπί, upon; *tela*, a web]. The delicate tissue of Vieussens' valve.

Epiteric (*ep-e-ter'-ik*) [ἐπί, upon; *pterion*]. Upon or above the pterion.

Epithalamic (*ep-e-thal'-am-ik*) [ἐπί, upon; *thalamus*]. Situated upon the thalamus.

Epitheliogenetic (*ep-e-the-le-o-jen'-et-ik*) [*epithelium; γένεσις*, generation]. Originating from undue epithelial proliferation.

Epitheliolysin (*ep-e-the-le-ol'-is-in*) [*epithelium; λύσις*, a loosing]. V. Dungern's term for a cytolysin produced by inoculation with epithelial cells. Cf. *Cytolysin.*

Epitheliolytic (*ep-e-the-le-o-lit'-ik*). Capable of bringing about the destruction of epithelial cells. Metchnikoff found that the introduction of comminuted epithelium into the blood gave this power to the serum.

Epithelioma. (See Illus. Dict.) Syn., *Morbus cancriformis.* **E., Adamantine,** a kind occurring about the jaws marked by the presence of adamantine epithelium. **E. adenoides cysticum.** See *Adenoma sudiparum.* **E., Calcific, E., Calcified,** one in which calcareous degeneration has taken place. **E., Chorionic.** See *Chorioepithelioma.* **E., Columnar.** See *E., Cylindric.* **E. contagiosum.** See *Molluscum contagiosum* (Illus. Dict.). **E., Corneous,** one in which the cells resemble the outer layer of epidermal cells. **E., Cylindric,** one in which the epithelial cells resemble ordinary columnar epithelia and the structure resembles ordinary mucosa. Syn., *Cylinder-cell cancer; Cylindriform epithelial cancer; Columnar-celled carcinoma.* **E., Cylindrocellular.** See *E., Cylindric.* **E., Cystic,** a form containing pits filled with fluid. **E., Diffuse,** a form marked by rapid infiltration of the adjacent connective tissue with epithelial cells. **E., Flat-celled.** See *E., Squamous* (Illus. Dict.). **E., Glandular,** a not very malignant form composed of gland-cells occurring in mucosas, especially of the nose and palate, and of slow growth. **E., Hyperino-,** a scirrhous cancer. **E., Ino-,** one containing fibrous tissue. **E., Keratoid Squamocellular,** a variety in which the cells resemble those of the horny layer of the epidermis. **E., Lobulated,** one with irregular lobate divisions. **E., Malpighian,** one marked by the presence of malpighian cells. **E., Multiple Cystic,** a variety in which scattered cysts are formed in consequence of mucoid degeneration and the fusion of adjacent drops of fluid. **E. myxomatodes psammosum,** a tumor of the third ventricle of the brain, of the character of a very soft myxoma and containing very hard, granular, milk-white contents. **E., Papillary,** one with papillary outgrowths; a papilloma. **E., Polymorphocellular,** one consisting of cells of various forms. **E., Suprarenal.** Synonym of *Hypernephroma.* **E., Tubular, E., Tubular Tessellated-celled.** See *Cylindroma* (Illus. Dict.). **E., Villous,** one on the inner aspect of the bladder, consisting of branched villi.

Epitheliomatous (*ep-e-the-le-o-mat'-us*). Having the nature of an epithelioma.

Epitheliomuscular (*ep-e-the-le-o-mus'-ku-lar*). Resembling epithelium and muscle.

Epithelium (pl., *epithelia*). (See Illus. Dict.) Syn., *Epithelial membrane.* **E., Alveolar,** that of the alveoli of glands or of the lungs. **E., Bacillated,** that made up of bacillated cells. **E., Calyciform,** that containing many goblet-cells. **E., Cylinder, E., Cylindric, E. cylindricum, E. cylindriforme.** See *E., Columnar* (Illus. Dict.). **E., Dusky,** an epithelium rendered cloudy or opaque by the presence of oil globules or dark granules. **E., Ectodermic,** that derived from the ectoderm. **E., Enamel.** See *Cuticula dentis* (Illus. Dict.). **E., Enteric,** embryonic cells forming the rudiment of the cellular lining of the enteron. **E., Entodermic,** that derived from the entoderm. **E., False.** See *Endothelium* (Illus. Dict.). **E., Fibrillated.** See *Rod-epithelium* (Illus. Dict.). **E., Flattened.** See *E., Pavement* (Illus. Dict.). **E., Follicular,** that lining the graafian follicle. **E., Germ, E., Germinal, E., Germinative.** 1. See *Ridge, Genital* (Illus. Dict.). 2. The single layer of columnar epithelial cells covering the free surface of the ovary. **E., Glandular,** that composed generally of spheroid cells and constituting the proper secreting substance of a gland. **E. of the Graafian Follicle.** See *Membrana granulosa* (Illus. Dict.). **E., Intestinal,** columnar epithelium. **E., Lamellar, E. lamellosum.** See *E., Pavement* (Illus. Dict.). **E., Laminar, E., Laminated.** See *E., Stratified* (Illus. Dict.). **E., Lymphatic,** that of the lymphatic vessels. **E., Malpighian.** See *E., Mucous.* **E., Mesodermic,** that originating from the mesoderm. **E. micans.** See *E., Ciliated* (Illus. Dict.). **E., Mucous.** 1. The rete mucosum. 2. The entire embryonic epidermis with the exception of the epitrichium. **E., Nerve,** epithelium in which sensory cells combined with ordinary epithelial cells form the peripheral terminations of the nerves in the organs of sense. **E., Olfactory,** the ordinary columnar and proper olfactory cells lining the olfactory region of the nasal cavity. **E., Ovarian.** See *E., Germ* (2). **E., Palisade,** columnar epithelium. **E., Pigmentary, E., Pigmented,** epithelial cells holding pigment granules. **E., Protective,** that serving for protection, as the epidermis, as distinguished from that serving for secretion or sensation. **E., Pyramidal,** columnar epithelium. **Epithelia, Reserved.** See *Cells, Marginal.* **E., Rod.** See *Rod-epithelium* (Illus. Dict.). **E., Scaly.** See *E., Pavement* (Illus. Dict.). **E., Secreting, E., Secretory.** See *E., Glandular.* **E., Sense,** epithelium in the lower animals looked upon as possessing sensory functions. **E., Sensory.** See *E., Nerve.* **E., Serous,** that of a serous surface. **E., Simple,** that made up of a single layer of cells. **E., Spheroid.** See *E., Glandular.* **E. spurium.** See *Endothelium* (Illus. Dict.). **E., Striated,** that consisting of striated cells. **E., Subcapsular,** the epithelial-like lining of the internal surface of the capsule of the nerve-cells of spinal ganglions. **E., Tabular, E. tabulare,** pavement epithelium. **E., Tegumentary,** the epidermis. **E., Transitional,** epithelium intermediate between simple and stratified. **E., Vascular,** vascular endothelium. **E. vibrans, E., Vibratile, E., Vibrating, E. vibratorium,** ciliated epithelium. **E., Waldeyer's Germinal.** See *Ridge, Genital* (Illus. Dict.).

Epitonic (*ep-e-ton'-ik*). Tightly drawn; on the stretch.

Epitonos, Epitonus (*ep-e-to'-nos, -nus*) [ἐπιτείνειν, to stretch]. 1. See *Epitonic.* 2. Anything exhibiting abnormal tension or stretched from one point to another.

Epitoxoid (*ep-e-toks'-oid*). See *Toxon.*

Epitrichial (*ep-e-trik'-e-al*). Relating to the epitrichium.

Epitrochanterian (*ep-e-tro-kan-te'-ri-an*) [ἐπί, upon; *trochanter*]. Situated upon the trochanters.

Epitrochlear (*ep-e-trok'-le-ar*). Applied to muscles of the forearm which are attached to the epitrochlea.

Epitympanic (*ep-e-tim-pan'-ik*) [ἐπί, upon; τύμπανον, the tympanum]. Upon or above the tympanum. **E. Recess,** the attic.

Epitympanum (*ep-e-tim'-pan-um*). The attic.

Epityphlitis (*ep-e-tif-li'-tis*) [ἐπί, upon; τυφλόν, the cecum]. Synonym of *Appendicitis*. [Küster.]

Epityphlon (*ep-e-tif'-lon*) [ἐπί, upon; τυφλόν, the cecum]. Küster's name for the vermiform appendix.

Epivertebral (*ep-e-vur'-te-bral*) [ἐπί, upon; *vertebra*]. 1. Situated upon a vertebra. 2. A spinous process of a vertebra.

Epoikic (*ep-oi'-kik*) [ἐπί, upon; οἶκος, a house]. Applied to diseases limited to the household or other circumscribed locality.

Epoptic (*ep-op'-tik*) [L., *epopticus*]. Fluorescent.

Epoticum (*ep-ot'-ik-um*) [ἐπί, upon; οὖς, the ear]. Huxley's name for a part of the embryonic petrosa.

Epovarium (*ep-o-va'-re-um*). See *Parovarium* (Illus. Dict.).

Epsomite (*ep'-sum-īt*). 1. Native magnesium. 2. Epsom salts.

Epstein's Pearls. See under *Pearls*.

Epulis. (See Illus. Dict.) Syn., *Odontia excrescens*. **E., Malignant,** giant-cell sarcoma of the jaw.

Epuloid (*ep'-u-loid*). Like an epulis.

Equiangular (*e-kwi-ang'-u-lar*) [*æquus*, equal; *angulus*, an angle]. Having all the angles equal.

Equibiradiate (*e-kwi-bi-ra'-de-āt*) [*æquus*, equal; *bis*, twice; *radius*, a ray]. Having two equal rays.

Equidifferent (*e-kwi-dif'-ur-ent*) [*æquus*, equal; *differentia*, difference]. Having a common difference.

Equiformal (*e-kwi-form'-al*) [*æquus*, equal; *forma*, form]. Of the same form.

Equilibrating Operation. See under *Operation*.

Equilibrium. (See Illus. Dict.) **E., Indifferent,** that which is independent of the positions assumed by the body. **E., Mobile,** the constant temperature kept by neighboring bodies after a mutual exchange of heat proportionate to their capacities; this constancy is due to the fact that after the attainment of heat equilibrium the subsequent emission is equal to the quantity of heat received. **E., Neutral.** See *E., Indifferent*. **E., Nitrogenous,** the condition of the system in which the amount of nitrogen in the matter discharged from the body exactly equals the amount taken in. **E., Physiologic,** the state of the system in which the amount of material discharged from the body exactly equals the amount taken in.

Equinated (*e-kwin-a'-ted*). Inoculated with the virus of equinia.

Equinia. (See Illus. Dict.) **E. mitis.** See *Grease* (Illus. Dict.).

Equinin (*e'-kwin-in*). The zymotic principle of equinia.

Equinocavus (*e-kwi-no-ka'-vus*) [*equinus*, of a horse; *cavus*, hollow]. Dorsal pes equinus in which the plantar surface is excessively hollowed and creased.

Equinovarus (*e-kwi-no-va'-rus*) [*equinus*, of a horse; *varus*, bent outward]. A variety of clubfoot presenting the characteristics of pes equinus and pes varus.

Equinus (*e-kwi'-nus*) [*equus*, the horse]. 1. Pes equinus. 2. Relating to the horse; equine. **E. dorsalis,** a form of pes equinus in which the patient walks on the dorsal surface of the flexed toes. **E. plantaris,** the form of pes equinus in which the toes are extended throughout or only at the metatarsophalangeal joint.

Equipollency (*e-kwip'-o-len-se*). The condition of being equipollent.

Equipotential (*e-kwi-po-ten'-shal*) [*æquus*, equal; *potentia*, power]. Of equal power; applied in electricity to bodies with equal dynamic units.

Equisetate (*ek-wis'-et-āt*) [*Equisetum*, a genus of cryptogamous plants]. A salt of equisetic acid.

Equisetum hiemale, L. (See Illus. Dict.) It is used in dropsy and diseases of genitourinary origin. Dose of fld. ext., 30–60 ♏ (1.8–3.7 c.c.).

Equitation (*ek-wit-a'-shun*) [*equus*, the horse]. Horseback exercise.

Equivalent. (See Illus. Dict.) **E., Endosmotic,** the ratio obtained by dividing the amount of the replacing liquid in osmotic action by the amount replaced. **E., Joule's,** the mechanic equivalent of heat or the amount of work that, converted into heat, will raise the temperature of one pound of water 1° F. **E., Psychic Epileptic,** mental disturbance or excitement which may take the place of epileptic attacks. **E., Toxic,** the quantity of poison capable of killing, by intravenous injection, one kilogram of animal. [Bouchard.]

Equivorous (*e-kwiv'-or-us*) [*equus*, a horse; *vorare*, to devour]. Living upon horse-flesh. Syn., *Hippophagous*.

Erasin (*e-ras'-in*). A hydrocarbon derived from the resin of *Pinus sabiniana*, Dougl., a California pine; an almost colorless, aromatic liquid.

Erb's Myotonic Reaction, E.'s Waves. See under *Reaction* (Illus. Dict.).

Erbin (*urb'-in*). Native erbium oxid.

Erector. (See Illus. Dict.) 2. A prism frequently attached to the eyepiece of the microscope, for correcting the inversion of the image. **E. Nerves.** See *Nervi erigentes*.

Erepsin (*er-ep'-sin*) [ἐρείπειν, to destroy]. A name given by Otto Cohnheim to a ferment produced by the intestinal mucosa having no effect on unaltered albumin, but causing cleavage of peptones.

Erethetic, Erethetical (*er-e-thet'-ik, -al*). See *Erethismic* (Illus. Dict.).

Erethisma (*er-e-thiz'-mah*) [ἐρέθισμα, a stirring up]. An irritant.

Erethitic (*er-e-thit'-ik*). See *Erethismic* (Illus. Dict.).

Ereuthophobia (*e-ruth-o-fo'-be-ah*) [ἐρευθος, redness; φόβος, fear]. Morbid fear of blushing.

Ereuthosis (*e-ruth-o'-sis*) [ἐρευθος, a redness]. Extreme facility for blushing.

Ergoapiol (*ur-go-ap'-e-ol*). A proprietary combination of apiol, 5 parts; ergotin, 1 part; oil of savin, ½ part; aloin, ⅛ part; it is used as an emmenagog. Dose, 7–14 gr. (0.45–0.9 gm.).

Ergotate (*ur'-go-tāt*). A salt of ergotic acid.

Ergoted (*ur'-got-ed*). Affected with ergot fungus.

Ergotinia (*ur-got-in'-e-ah*). See *Ergotinin* (Illus. Dict.).

Ergotinol (*ur-go'-tin-ol*). A proprietary ammoniated solution of ergotin.

Ergotinum (*ur-go-ti'-num*). See *Ergotin* (Illus. Dict.).

Ergotized (*ur'-go-tizd*). Systemically affected with ergot.

Ericin (*er'-is-in*) [ἐρείκη, heather]. A dye obtained from common heath and varieties of poplar wood by treating with a hot solution of alum.

Ericinol (*er-is'-in-ol*). $C_{10}H_{16}O$. A colorless oil turning brown on exposure, obtained by heating ericolin with dilute sulfuric acid.

Erigens (*er'-e-jenz*) [L.]. Producing erection, as the nervi erigentes.

Erigeron canadense. (See Illus. Dict.) It is used

in dropsy and diseases of the genitourinary tract. Dose of fld. ext., 30–60 ♏ (1.8–3.7 c.c.).

Eriobotrya (*er-e-o-bot'-re-ah*) [ἔριον, wool; βότρυς, a bunch of grapes]. A genus of rosaceous plants. **E. japonica**, Lindl., the Japanese medlar, called *P'i-p'a* from the resemblance of the leaves to the native violin; the leaves are used in coughs and as an astringent and tonic in atonic dyspepsia.

Eriocome (*er'-e-o-kōm*) [ἔριον, wool; κόμη, hair]. Haeckel's term for a race having wooly hair that covers the head like a continuous fleece, as in the majority of negroes. Cf. *Lophocome.*

Eriocomous (*er-e-ok'-om-us*). Villous; covered with fine hair.

Eristalis (*er-is'-tal-is*) [L., an unknown precious stone]. See *Table of Parasites* (Illus. Dict.).

Erodium (*er-o'-de-um*) [ἐρωδιός, the heron]. A genus of plants of the order *Geraniaceæ.* **E. cicutarium**, L'Hèrit., a species of Europe, used in uterine hemorrhages. Dose, a tablespoonful of the infusion 1 : 12 every two hours.

Erosion. (See Illus. Dict.) **E., Aphthous**, the formation of flat ulcers on a mucosa. **E., Chancrous**, the destruction of the normal elements about a chancre. **E., Dental**, a progressive decalcification, affecting most commonly the labial and buccal faces of the teeth, not due to the causes of dental caries, and usually associated with the gouty diathesis. **E., Granular.** See *E., Papillary.* **E., Hemorrhagic**, that of a mucosa due to hemorrhagic infiltration and softening. **E., Papillary**, a condition developed from simple erosion; after the destruction of the epithelium the exposed points of the papillas swell and appear as granular, dark-red, and easily bleeding elevations.

Erotism (*er'-o-tizm*) [ἐρως, love]. A condition of erotic intoxication.

Erotopathy, Erotopathia (*er-o-top'-ath-e, er-o-to-path'-e-ah*) [ἐρως, love; πάθος, disease]. Perverted sexual instinct.

Erpetology (*er-pet-ol'-o-je*). See *Herpetology* (Illus. Dict.).

Errabund (*er'-a-bund*) [*errare*, to wander]. Erratic, wandering.

Errhysis (*er'-ris-is*) [ἐρρεῖν, to go slowly]. Slow bleeding.

Eruption. (See Illus. Dict.) **E., Drug, E., Medicinal.** See *Dermatitis medicamentosa* (Illus. Dict.). **E., Koch's**, a morbilliform eruption following the injection of tuberculin. **E., Miliary**, an eruption of little vesicles occurring in the course of febrile diseases.

Eryglucin (*er-e-glu'-sin*). See *Erythrol* (Illus. Dict.).

Eryngium (*er-in'-je-um*) [ἐρυγεῖν, to belch, to vomit]. A genus of plants of the order *Umbelliferæ.* **E. yuccæfolium**, Michx., button snake-root, rattlesnake-master, water-eryngo, a species indigenous to the Western prairies and Southern barrens of the United States. The root is diaphoretic, expectorant, and refrigerant. Dose of fld. ext., 30–60 ♏ (1.8–3.7 c.c.).

Erysimin (*er-is'-im-in*). A glucosid with properties like those of digitalin, separated by Schlagdenhauffen and Reeb (1900) from a number of species of *Erysimum*, a genus of cruciferous plants.

Erysipelaceous (*er-e-sip-el-a'-she-us*). See *Erysipelatous* (Illus. Dict.).

Erysipelas. (See Illus. Dict.) Syn., *Febris erysipelatosa; Ignis sacer; Rosa; St. Anthony's fire; Rose; Wildfire.* **E. ambulans.** See *E., Wandering* (Illus. Dict.). **E., Bilious**, a kind accompanied by bitter eructation and vomiting, constipation or bilious diarrhea, yellowness of the skin, conjunctiva, and urine, etc. **E. bullosum**, that attended with formation of bullæ. **E. chronicum.** Synonym of *Erysipeloid.* **E. consensuale.** See *E., Symptomatic.* **E. crustosum**, that attended with an exudate which dries into crusts. **E. diffusum**, that in which the affected area is not sharply defined, the redness merging gradually with the color of the surrounding skin. **E., Edematous**, that attended with swelling. **E. erraticum.** See *E., Wandering* (Illus. Dict.). **E. erythematosum**, that resembling erythema. **E., External**, that attacking the integument. **E., False.** See *E. phlegmonodes* (Illus. Dict.). **E. gangrænosum**, that accompanied by gangrene. **E. glabrum**, that in which the skin is tightly stretched and has a smooth, shining appearance. Syn., *E. lævigatum.* **E., Hepatic**, a variety connected with disease of the liver. **E., Internal, E. internum**, that affecting the interior of the body, especially the mucosas. **E. læve, E. lævigatum.** See *E. glabrum.* **E., Medical**, that coming within the domain of the physician, as distinguished from that originating from wounds or trauma and within the surgeon's domain. **E. medicamentosum**, a dermatitis resembling erysipelas, but marked by rapid development, the absence of well-defined areas, and tenderness on pressure. **E. menstruale**, an erysipeloid eruption occurring on the face at the menstrual period. **E. neonatorum**, that beginning in the umbilical region of newborn children before cicatrization and extending over the body. **E. nosocomiale, E. nothum**, that due to trauma. **E. odontalgicum**, that due to an alveolar abscess occurring on the cheek. **E. œdematodes, E. œdematosum**, a form attended with edematous swelling and without marked redness. **E. otalgicum**, that confined to the region of the ear or due to some affection of the ear. **E., Pustular, E. pustulosum**, a variety of erysipelas bullosum in which the bullæ contain pus. **E. serpens.** See *E., Wandering* (Illus. Dict.). **E., Serpiginous**, a form which extends by involving neighboring parts of the skin. **E. spontaneous**, that to which no external cause can be assigned. **E. spurium.** See *E., Traumatic.* **E. superficiale.** See *E. simplex* (Illus. Dict.). **E., Surgical.** See *E., Traumatic.* **E., Symptomatic**, that dependent on some constitutional disorder. **E., Traumatic**, that occurring in parts about a wound. Syn., *Wound-E.; Surgical E.* **E., True**, that due to infection with *Streptococcus erysipelatis*, Fehleisen. See *Bacteria, Table of* (Illus. Dict.). **E. vaccinæ, E., Vaccinal, E. vaccinale**, that extending from a vaccination-wound, generally the result of secondary infection. **E. variegatum**, that marked by stripes. **E., Venous**, that accompanied by venous congestion and marked by a dark-red color which does not entirely disappear on pressure. **E. verrucosum**, that characterized by a warty or lumpy appearance. **E., Vesicular, E. vesiculosum.** See *E. bullosum.* **E., White**, a variety of erysipelatous edema in which there is no manifest dilation of the bloodvessels. **E. zona, E. zoster**, herpes zoster.

Erysipelococcus (*er-is-ip-el-o-kok'-us*). A name for *Streptococcus erysipelatis*, to which erysipelas is due.

Erysipelotoxin (*er-e-sip-el-o-toks'-in*). The toxin of erysipelas.

Erysipeloid. (See Illus. Dict.) It is due to *Cladothrix dichotoma.* Syn., *Erysipelas chronicum; Erythema migrans.*

Erythema. (See Illus. Dict.) **E. ab acribus.** See *E. venenatum.* **E. ab attritu.** See *Intertrigo* (Illus. Dict.). **E. a decubitu**, that due to pressure upon the skin from decubitus. **E. æstivum**, an intense itching and burning, attended with swelling and formation of bullæ, attacking the feet and ankles of those who walk barefooted in hay-fields; it has been attributed to

the irritant action of *Ranunculus acris*. **E. a frigore, E. a gelu,** chilblain. **E., Amorphous,** that in which the efflorescence is irregular in outline and arrangement. **E. angeiectaticum,** Auspitz's term for rosacea in order to convey the idea of its dependence upon dilation of the cutaneous bloodvessels. **E., Annular, E. annulatum.** See *E. annulare* (Illus. Dict.). **E. anthrax,** anthrax. **E. balsamicum,** that due to administration of copaiba or other balsamics. **E., Bazin's.** See *E. induratum* (Illus. Dict.). **E., Belladonna,** a form resembling the rash of scarlatina though not followed by desquamation, due to overdoses of belladonna. **E. bullosum vegetans,** Unna's name for *Pemphigus vegetans* (Illus. Dict.). **E. caloricum,** that due to action of heat or cold; the first degree of burning or freezing. **E., Centrifugal, E. centrifugum.** See *E. annulare* (Illus. Dict.). **E., Choleraic,** erythema multiforme occurring in cholera patients, chiefly affecting the extremities and marked by papules bluish-red or livid in color. It has been observed as occurring at both the initial and declining stages of the disease. **E. contusiforme.** See *E. nodosum* (Illus. Dict.). **E. cyanoticum,** that attended with venous engorgement imparting a blue coloration. **E. diffusum** (Braun), a form resembling scarlatina, with ill-defined outline, the red color of the affected skin merging gradually into that of the surrounding parts. Syn., *Porphyra* (Retzius); *Puerperal scarlatinoid* (Littré). **E. enematogenes,** an eruption sometimes observed in children, on the anterior surface of the knees, backs of the elbows, buttocks and face, appearing from 12 to 24 hours after the administration of enemas. It lasts from 24 to 48 hours, is rarely followed by desquamation, and gives rise to no constitutional disturbance. **E. ex profluviis.** See *Intertrigo* (Illus. Dict.). **E., Hebra's.** See *E., Multiform* (Illus. Dict.). **E., Infantile.** See *E. roseola* (Illus. Dict.). **E., Infectious,** a name given to erythema multiforme to express the theory of its infectious character. **E. intertriginosum, E. intertrigo.** Same as *Intertrigo*. **E., Lewin's, of the Larynx,** simple syphilitic catarrh of the larynx. **E. lupinosum.** See *Lupus erythematosus* (Illus. Dict.). **E. mercuriale,** that due to topical application of mercury. **E. migrans.** Synonym of *Erysipeloid*. **E., Symptomatic,** hyperemia of the skin, either diffuse or in nonelevated patches. **E. venenatum,** that due to the direct action of toxic substances on the skin.

Erythematica (*er-ith-e-mat'-ik-ah*) [ἐρυθρός, red]. A form of idiopathic enteritis, according to Cullen. Cf. *Phlegmonodœa*.

Erythræa (*er-ith-re'-ah*) [ἐρυθραῖος, red]. A genus of gentians. **E. centaurium,** Pers., centaury, a European species; is tonic and antipyretic. Dose of extract, 5–30 gr. (0.32–1.9 gm.). **E. venusta,** A. Gray, Canchalagua, a species found in California, is a valuable bitter tonic and stomachic.

Erythrate (*er-ith'-rāt*). A salt of erythric acid.

Erythrenteria (*er-ith-ren-te'-re-ah*) [ἐρυθρός, red; ἔντερον, intestine]. Hyperemia of the intestine.

Erythrism. (See Illus. Dict.) 2. Broca's term for the pathologic condition exhibited by the individual having red hair in a dark-haired race free from intermixture, as among European Jews.

Erythrocentaurin (*er-ith-ro-sen-taw'-rin*) [ἐρυθρός, red; κένταυρος, centaur]. $C_9H_{14}O_5$ (Leuderich). A colorless, nonnitrogenous substance obtained from the tops of centaury, *Erythræa centaurium*, Pers., occurring in needles and having the peculiar property of being strongly reddened by exposure to sunlight and becoming decolorized by dissolving and crystallizing again.

Erythrocytolysis (*er-ith-ro-si-tol'-is-is*) [ἐρυθρός, red; κυτός, cell; λύσις, a loosening]. The plasmolysis of red blood-corpuscles; the escape of soluble substances and the reduction of the volume of the corpuscle.

Erythrocytometer (*er-ith-ro-si-tom'-et-ur*) [*erythrocyte*; μέτρον, measure]. A heavy, graduated, glass capillary tube, the lumen of which is expanded near the upper end into a bulb containing a small cubical glass bead which serves as a stirrer. It is used in counting erythrocytes. Cf. *Leukocytometer*.

Erythrocytorrhexis (*er-ith-ro-si-tor-reks'-is*). See *Plasmorrhexis*.

Erythrocytoschisis (*er-ith-ro-si-tos'-kis-is*) [*erythrocyte*; σχίσις, cleavage]. The splitting up of red blood-corpuscles into disks resembling blood-platelets. Cf. *Plasmoschisis*.

Erythrocytosis. (See Illus. Dict.) 2. The presence in the blood, before birth, of red cells with nuclei, and with karyokinetic figures.

Erythrol. (See Illus. Dict.) 2. A double salt of bismuth and cinchonidin. It is used in rare forms of dyspepsia in which acid reaction of the gastric juice is accompanied by the production of butyric acid. **E. Titranitrate,** $(CH_2ONO_2)_2(CH.ONO_2)_2$, large scales, soluble in alcohol, insoluble in water, exploding on percussion, melting at 61° C.; recommended as a substitute for amyl nitrite and nitroglycerin in angina pectoris, asthma, lead colic, and cardiac affections. Dose, ½–1 gr. (0.03–0.06 gm.).

Erythrolysin (*er-ith-rol'-is-in*). See *Hemolysin*.

Erythromannite (*er-ith-ro-man'-it*). Same as *Erythrol*.

Erythromelia (*er-ith-ro-me'-le-ah*) [ἐρυθρός, red; μέλος, limb]. An affection of the extensor surfaces of the arms and legs characterized by painless progressive redness of the skin; it is distinct from erythromelalgia.

Erythronium (*er-ith-ro'-ne-um*) [ἐρυθρός, red]. A genus of liliaceous plants. **E. americanum,** a species indigenous to the United States; the bulb and all parts of the plant are emetic. Dose, 20 or 30 gr.

Erythrophile (*er-ith'-ro-fil*) [ἐρυθρός, red; φιλεῖν, to love]. Auerbach's term for the red-staining nuclear substance of animal and vegetal cells. Cf. *Cyanophile; Neutrophile*.

Erythrophilous (*er-ith-rof'-il-us*) [ἐρυθρός, red; φιλεῖν, to love]. Having an especial affinity for red dyes.

Erythrophlein, Erythrophlœin. (See Illus. Dict.) **E. Hydrochlorate,** a white or yellowish powder or crystalline granules, soluble in water or alcohol. It is a local anesthetic and cardiac tonic; used chiefly in ophthalmology in 0.05% to 0.25% solution. Dose, $\frac{1}{32}$–$\frac{1}{16}$ gr. (0.002–0.004 gm.).

Erythrophlogosis (*er-ith-ro-flo-go'-sis*) [ἐρυθρός, red; φλόγωσις, a burning]. Inflammation attended with redness.

Erythrophobia. (See Illus. Dict.) 2. Fear of blushing; ereuthophobia.

Erythrophose (*er'-ith-ro-fōz*) [ἐρυθρός, red; φῶς, light]. A red phose.

Erythropityriasis (*er-ith-ro-pit-e-ri'-a-sis*). See *Pityriasis rubra* (Illus. Dict.).

Erythroplast (*er-ith'-ro-plast*). See *Erythroblast* (Illus. Dict.).

Erythropyknosis (*er-ith-ro-pik-no'-sis*) [ἐρυθρός, red; πυκνός, thick]. Degenerative changes in the invaded erythrocyte, characteristic of the estivoautumnal infections. It consists in the development of a brassy appearance of the blood-cell, together with distinct crenation. [DaCosta.]

Erythrorhinia (*er-ith-ro-rin'-e-ah*) [ἐρυθρός, red; ῥίς, the nose]. The condition of having a red nose.

Erythrosclerotin (*er-ith-ro-skler'-ot-in*). See *Sclererythrin* (Illus. Dict.).

Erythrosinophil (*er-ith-ro-sin′-o-fil*) [*erythrosin*; *φιλεῖν*, to love]. Easily stainable with erythrosin.

Erythrosis. (See Illus. Dict.) **2.** An exaggerated tendency to blush.

Escigenin, Æscigenin (*es-ij′-en-in*) [*Æsculus*, the Italian oak; *γεννᾶν*, to produce]. $C_{12}H_{20}O_2$. A decomposition-product of telæscin; a crystalline powder insoluble in water, soluble in alcohol.

Esciorcin, Æsciorcin (*es-e-or′-sin*) [*Æsculus*, a genus of trees; *orcin*]. $C_9H_8O_4$. A product of esculetin by action of sodium amalgam. It dissolves in alkalis, green changing to red, and is used in discovering corneal defects and lesions of conjunctival epithelium, the red color being more distinct on the iris than the green color of fluorescin. Application, 1 drop of 10% to 20% aqueous solution.

Esciorcinol (*es-e-or′-sin-ol*). Same as *Esciorcin*.

Escorcin, Æscorcin (*es-kor′-sin*). See *Esciorsin*.

Esenbeckia (*es-en-bek′-e-ah*) [*v. Esenbeck*, two distinguished botanists]. A genus of rutaceous plants. **E. febrifuga**, Juss., a species found in Brazil and furnishing the Brazilian angustura bark; is prized as a febrifuge and tonic.

Eseria (*es-e′-re-ah*). See *Eserin* (Illus. Dict.).

Eseridin (*es-er′-id-in*), $C_{15}H_{23}N_3O_3$. An alkaloid from Calabar bean forming white four-sided crystals soluble in alcohol, ether, and chloroform, melting at 132° C. It is a laxative and motor-excitant and is recommended as a cathartic in veterinary practice. Its uses are the same as eserin, but it is only one-sixth as powerful. Subcutaneous dose, 0.01–0.02 gm.

Eserin, Eserinum. (See Illus. Dict.) Syn., *Physostigmin*. It is used in traumatic tetanus, tonic convulsions, strychnin-poisoning, neuralgia, muscular rheumatism, chronic bronchitis, etc. Dose, $\frac{1}{200}$–$\frac{1}{60}$ gr. (0.0003–0.001 gm.). Max. dose, $\frac{1}{60}$ gr. (0.001 gm.), single. Antidotes, emetics, stomach siphon, artificial respiration, stimulants, chloral hydrate, and atropin. **E. Benzoate**, $C_{15}H_{21}N_3O_2 . C_7H_6O_2$, hard white crystals soluble in water and alcohol, melting at 116° C. Uses and doses as eserin. **E. Borate**, a white crystalline powder soluble in water; it is mydriatic; the solutions are permanent and nonirritating. Uses and dosage as eserin. **E. Hydrobromate**, white crystals soluble in water. Dose, $\frac{1}{60}$–$\frac{1}{30}$ gr. **E.-pilocarpin**, a combination of eserin and pilocarpin forming a white, crystalline, soluble powder. It is anodyne and laxative and used in veterinary practice in colic of horses. Injection, 6 gr. (0.4 gm.) in 5 c.c. of water. **E. Salicylate**, $C_{15}H_{21}N_3O_2 . C_7H_6O_3$, colorless or yellowish, lustrous crystals, soluble in 150 parts of water. It is used in 5% solutions to contract the pupil; red solutions have lost their power. It is used in intestinal atony. Dose, $\frac{1}{40}$–$\frac{1}{20}$ gr., divided into 2, 3, or 4 doses: other uses and dosage as eserin. **E. Sulfate**, a white or yellowish crystalline powder with bitter taste, soluble in water and alcohol; melts at 105° C. Uses and dosage as eserin. It is used hypodermically in veterinary practice for colic. Dose, 1½ gr. (0.1 gm.). **E. Tartrate**, $(C_{15}H_{21}N_3O_2)_2C_4H_6O_6$, a crystalline deliquescent mass, soluble in water. Uses and dosage as eserin.

Esoethmoiditis (*es-o-eth-moid-i′-tis*) [*ἔσω*, within; *ethmoiditis*]. Endosteitis of the ethmoid.

Esohyperphoria (*es-o-hi-pur-fo′-re-ah*) [*ἔσω*, within; *ὑπέρ*, over; *φορός*, tending]. Excessive esophoria.

Esophageurysma, Œsophageurysma (*e-so-faj-ur-is′-mah*) [*οἰσοφάγος*, esophagus; *εὐρύνειν*, to widen]. Abnormal dilation of the esophagus.

Esophagitis, Œsophagitis. (See Illus. Dict.) Syn., *Dysphagia inflammatoria*. **E. catarrhalis**, desquamative catarrh of the esophagus occurring in both acute and chronic form, with thickening, separation, and sloughing of the epithelium, catarrhal ulceration, and in chronic cases with hypertrophic thickening of the mucosa. **E. corrosiva**, inflammation and mortification of greater or less degree, of the walls of the esophagus, due to swallowing corrosive poison. **E. follicularis**, swelling of the mucous glands of the esophagus, tending to follicular ulceration; the etiology is unknown. **E. phlegmonosa**, suppurative inflammation of the submucosa of the esophagus, of greater or less extent, and generally secondary to the incarceration of some foreign body or to perforation of a neighboring focus of suppuration. **E. variolosa**, smallpox eruption upon the mucosa of the esophagus.

Esophagoectasis (*e-so-faj-o-ek-ta′-sis*) [*esophagus*; *ἐκτείνειν*, to stretch]. Diffuse spindle-form dilation of the esophagus, almost always due to stenosis of the cardia.

Esophagoenterostomy (*e-sof-aj-o-en-ter-os′-to-me*) [*esophagus*; *enterostomy*]. Schlatter's operation for the total extirpation of the stomach; the esophagus is first sutured to the duodenum.

Esophagometer (*e-sof-aj-om′-et-ur*) [*esophagus*; *μέτρον*, measure]. An instrument for measuring the esophagus.

Esophagoplasty (*e-sof-aj-o-plast′-e*) [*esophagus*; *πλάσσειν*, to shape]. Plastic surgery of the esophagus.

Esophagoptosis (*e-sof-aj-o-to′-sis*) [*esophagus*; *πτῶσις*, a falling]. Prolapse of the esophagus.

Esophagorrhea (*e-sof-aj-or-e′-ah*) [*esophagus*; *ῥεῖν*, to flow]. A discharge from the esophagus.

Esophagostoma (*e-sof-aj-os′-to-mah*) [*esophagus*; *στόμα*, a mouth]. An abnormal aperture or passage into the esophagus.

Esophagostomy. (See Illus. Dict.) **E. externa**, the surgical opening of the esophagus from the surface of the neck for the removal of foreign bodies. **E. interna**, incision of the esophagus from the inside by means of the esophagotome for relief of stricture.

Esosis (*es-o′-sis*) [*εἰς*, into; *ὠθεῖν*, to push]. A curvature.

Esosmosis, Esosmus (*es-os-mo′-sis, es-os′-mus*) [*εἰς*, into; *ὠσμός*, a thrusting]. See *Endosmosis* (Illus. Dict.).

Esosphenoiditis (*es-os-fen-oid-i′-tis*) [*ἔσω*, within; *sphenoid*]. Osteomyelitis of the sphenoid bone.

Esotery (*es-o′-ter-e*) [*ἔσω*, the inner]. The property or condition of arising within the organism. Cf. *Exotery*.

Esothyropexy (*es-o-thi-ro-peks′-e*). See *Exothyropexy*.

Espnoic (*esp-no′-ik*) [*εἰς*, in; *πνοή*, vapor]. **1.** Inspiratory. **2.** Relating to the injection of gases or vapors.

Esquamatus (*e-skwam-a′-tus*) [*e*, priv.; *squama*, a scale]. Without scales.

Essentialism (*es-en′-shal-izm*) [*essentia*, essence]. The theory that diseases are not the results of a local morbid process, but specific entities and to be cured only with specifics.

Essentiality (*es-en-she-al′-it-e*). The specific character of a disease as opposed to its origin from a local morbid process.

Estagnon (*es-tan′-yon*) [Fr.]. A tinned copper jar in which orange-flower water is exported from southern France.

Esthesioblast (*es-the′-ze-o-blast*) [*αἴσθησις*, sensation; *βλαστός*, germ]. Same as *Ganglioblast*.

Esthesioneure (*es-the′-ze-o-nūr*) [*αἴσθησις*, perception; *νεῦρον*, nerve]. A sensory neuron.

Esthesionosis (*es-the-se-o-no′-sis*) [*αἴσθησις*, sensation; *νόσος*, disease]. See *Esthesiodermia* (Illus. Dict.).

Esthesiophysiology (*es-the-ze-o-fiz-e-ol′-o-je*). See *Esthesophysiology* (Illus. Dict.).

Estriasis, Œstriasis (*es-tri-a'-sis*) [*Œstrus*, a genus of dipterous insects]. Myiasis due to the larvas of the *Œstrus*.

Estromenstruation, Œstromenstruation (*es-tro-men-stru-a'-shun*) [*estrum; menstruation*]. The menstrual function and phenomena analogous to the estruation of the lower animals.

Estrus, Œstrus. (See Illus. Dict.) 2. Heape's term for the climax of the sexual season, the special period of desire in the female during which fruitful coitus is possible. Cf. *Anestrum; Metestrum; Proestrum.* **E., Abnormal,** a period of sexual desire in animals during pregnancy or at times when the organs of generation are normally quiescent (anestrous stage).

Estuarium. (See Illus. Dict.) 2. A tube through which a hot cautery iron can be passed to the part to be operated upon.

Esuritis (*es-u-ri'-tis*) [*esuries*, hunger]. Gastric ulceration from inanition.

Etesticulation (*e-tes-tik-u-la'-shun*). See *Castration* (Illus. Dict.).

Ethalate (*eth'-al-āt*). A salt of ethalic (palmitic) acid.

Ethanediamid (*eth-ān-di'-am-id*). See *Oxamid* (Illus. Dict.).

Ethanedioxylureid (*eth-ān-di-oks-il-u'-re-id*). See *Oxalylurea* (Illus. Dict.).

Ethannitril (*eth-an-ni'-tril*). See *Acetonitril.*

Ethanol (*eth'-an-ol*). See *Alcohol, Ethyl* (Illus. Dict.).

Ethene. (See Illus. Dict.) **E. Chlorid, Monochlorinated,** $C_2H_3Cl_3$, a colorless, fragrant liquid obtained from vinyl chlorid by action of antimony pentachlorid; boils at 114° C.; sp. gr. 1.458 at 9° C. It is used as an anesthetic.

Ether. (See Illus. Dict.) Syn., *Ethyl oxid; Ethylic ether; Sulfuric ether.* 3. As used by Hoffmann, it corresponded to the "pneuma" of the ancients, a sort of vis vitæ, a motor principle, and at the same time a perceptive soul; it was stored in the medulla and circulated in a double way in the body. [Park.] Cf. *Soul, Stahl's; Force, Animal.* **E., Acetophenonacetylparamidophenol,** a hypnotic and antipyretic. Syn., *Hypusacetin.* **E., Alcoholic Muriatic,** a mixture of equal parts of ethyl chlorid and alcohol. **E., Aldehyd.** See *Crotonaldehyd* (Illus. Dict.). **E., Allophanic,** an allophanate of a hydrocarbon radicle. **E., Allylacetic,** an allylacetate of a compound radicle, applied usually to ethyl allylacetate. **E., Allylic.** See *E., Allyl* (Illus. Dict.). **E., Allylmethyl,** C_4H_8O, a colorless liquid obtained by action of allyliodid on sodium methylate. Syn., *Allyl and methyl oxid; Allylmethyl oxid.* **E., Allylphenyl,** $C_9H_{10}O$, an isomer of allylphenol, a colorless, strongly refractive liquid, formed by the action of sodium phenylate upon a bromid. Syn., *Allylphenyl oxid; Allylphenylic oxid.* **E., Ammoniacal,** a combination of ammonium chlorid, 1 part, dissolved in 1 part of distilled water with the addition of 1 part each of quicklime and sulfuric acid distilled in a receptacle surrounded by ice. **E., Amylic, E., Diamyl.** See *Amyl Oxid.* **E., Amyloacetic.** Same as *Amyl Acetate.* **E., Amylonitric.** See *Amyl Nitrate.* **E., Anesthetic.** 1. A mixture of ether, 20 parts; rhigolene, 80 parts; and petroleum ether, 80 parts; it is used as a local anesthetic. 2. A mixture of absolute alcohol and ether, each 1 part, and petroleum ether, 4 parts. **E., Aran's.** See *Ethidene Chlorid* (Illus. Dict.). **E., Benzhydrolic,** $(C_6H_5)_2 = CH - O - CH = (C_6H_5)_2$, a decomposition-product of benzhydrol. **E., Benzoic.** See *Ethyl Benzoate.* **E., Benzoylacetic.** See *Ethyl Benzoylacetate.* **E., Benzyl,** a combination of oxygen with benzyl and another radicle. **E., Boric,** ethyl monoborate. **E., Bromic.** See *Ethyl Bromid* (Illus. Dict.). **E., Butyl, E., Butylic, E., Butyric.** See *Ethyl Butyrate.* **E., Cantharidic,** a combination of cantharidic acid with an alcohol radicle. **E., Capric,** ethyl caprate or any caprate of an alcoholic radicle. **E., Caproic,** a caproate of an alcoholic radicle, particularly ethyl caproate. **E., Carbanilic,** a phenylmethane, a salt composed of carbanilic acid and a compound radicle. **E., Carbomethylic,** ethyl methyl carbonate. **E., Carbonic,** ethyl carbonate or any ethereal salt of carbonic acid. **E., Carbonic, Normal or Neutral.** See *Ethyl Carbonate.* **E., Catecholdimethyl.** See *Veratrol.* **E., Cetylethyl,** $C_2H_5 - O - C_{16}H_{33}$, a crystalline compound of cetyl, ethyl, and oxygen. **E., Chloric,** a mixture of chloroform and alcohol. **E., Chlorinated Muriatic.** See *Ethidene Chlorid* (Illus. Dict.). **E., Chlormethylmenthyl-,** $C_{10}H_{19} - O - CH_2Cl$, obtained from the action of formaldehyd upon menthol in the presence of hydrochloric acid. It is used in the treatment of catarrhal affections of the air-passages. Syn., *Forman.* **E., Cinnamic,** a cinnamate of an organic radicle, particularly ethyl cinnamate. **E., Cinnyl-ethyl,** $C_6H_5 . C_3H_4 . O . C_2H_5$, a heavy liquid boiling at a high temperature. **E., Citric,** a combination of citric acid and an organic base, particularly ethyl citrate. **E., Compound,** a salt of an alcohol radicle. **E., Compound Anesthetic,** a combination of equal parts of rhigolene and anhydrous ethyl ether employed as a spray to produce local anesthesia. **E.-cone,** an apparatus for administering ether. **E., Creasotoleic.** See *Oleocreasote.* **E., Cyanic.** 1. Ethyl allophanate. 2. Ethyl cyanate, or any cyanate of a compound radicle. **E., Dicinnyl,** $(C_6H_5 . C_3H_4)_2O$, a thick, oily liquid with odor of cinnamon, obtained from cinnyl alcohol by heating with boron trioxid. **E., Diethylcarbonic.** Same as *Ethyl Carbonate.* **E., Diphenyl,** $(C_6H_5)_2O$, a crystalline substance obtained from phenol by action of diazobenzene sulfate, melting at 28° C., boiling at 246° C., soluble in alcohol and ether, but not in water. Syn., *Diphenyl oxid.* **E.-effect,** paralysis of the muscles closing the glottis, occurring in animals deeply narcotized with sulfuric ether. **E., Ethylidenedimethyl.** See *Dimethylacetal.* **E., Ethylmethyl,** $CH_3O . C_2H_5$, obtained from sodium methylate by the action of ethyl iodid; it is said to be an effectual anesthetic free from baleful effects. **E., Formic.** See *Ethyl Formate.* **E., Formylparamidophenyl,** white, glossy, tasteless scales soluble in boiling water, alcohol, and ether, obtained from a fusion of para-amido-phenyl-ether hydrochlorid, sodium formate and formic acid. **E., Glycidic,** ethereal salts obtained from glycide. **E., Glycol,** a compound of ethylene with oxygen or with an acid radicle. **E., Guaiacol-oleic.** See *Oleoguaiacol.* **E., Halogen, E., Halogenic, E., Haloid,** a combination of an alcohol radicle (ethyl, methyl, etc.) with a halogen. **E., Homopyrocatecholmonomethyl.** See *Creasol* (Illus. Dict.). **E., Hydramyl,** a local anesthetic consisting of equal parts of hydramyl and anhydrous ether. **E., Hydrochloric.** See *Ethyl Chlorid* (Illus. Dict.). **E., Hydrochloric, Chlorinated.** See *Ethidene Chlorid* (Illus. Dict.). **E., Hydrochloric, Monochlorinated,** $C_2H_4Cl_2$, a colorless liquid isomer of ethylene bichlorid, which it resembles in odor, but differs from it in intensity. **E., Hydrocyanic,** ethyl cyanid. **E., Hydrosulfuric,** ethyl mercaptan. **E., Iodhydric.** See *Ethyl Iodid* (Illus. Dict.). **E., Isobutyric,** ethyl butyrate. **E., Lactic.** See *Ethyl Lactate.* **E.-menthol-chloroform,** a combination

of ether, 15 parts; chloroform, 10 parts; and menthol, 1 part; it is used as an anesthetic spray. **E., Methacrylic,** $C_4H_5O_2C_2H_5$, a very transparent, colorless liquid with offensive odor. Syn., *Ethylmethacrylate.* **E., Methylacetoacetic.** See *Ethyl* and *Methyl Acetoacetate.* **E., Methylated, E., Methylethylic, E., Methylic-ethylic,** absolute ethylic ether saturated at 0° C. with methylic ether. **E., Methylethyl,** C_3H_8O, a mixed ether composed of one molecule of ethyl and one of methyl combined with one atom of oxygen. It is used as an anesthetic. Syn., *E., Three-carbon.* **E., Methylphenyl.** See *Anisol* (Illus. Dict.). **E., Mucic.** See *Ethyl Mucate.* **E., Muriatic.** See *Ethyl Chlorid* (Illus. Dict.). **E.-nephritis.** See under *Nephritis.* **E., Officinal Pure.** See *E. fortior* (Illus. Dict.). **E., Oxy-, E., Oxygen,** an oxid of a hydrocarbon. **E., Ozone, E., Ozonic, E., Ozonized,** a mixture of ether, hydrogen peroxid, and alcohol. It is used in diabetes and whooping-cough. Dose, 2–4 gm., 3 times daily. It is used also as a local antiseptic in scarlet fever. **E., Para-allyl-phenyl-methylic.** See *Anethol* (Illus. Dict.). **E., Petroleum.** See *Petroleum Ether* and *Benzinum* (Illus. Dict.). **E., Phenylamyl.** See *Amyl Carbolate.* **E., Phosphorated,** a preparation obtained by macerating 2 or 3 parts of finely divided phosphorus in 100 parts of ether. **E.-pneumonia.** See under *Pneumonia.* **E., Pyroacetic.** See *Acetone* (Illus. Dict.). **E., Quinic,** a body derived from the distillation of calcium quinate with sulfuric acid and alcohol; it is recommended for inhalation in intermittent fever. **E., Rectified Commercial,** that purified by frequent distillation. **E., Resorcinol-dimethyl.** See *Dimethylresorcin.* **E., Spirit of,** a solution of ether in twice its volume of alcohol. **E.-strain.** See *Electric Strain.* **E., Stronger.** See *E. fortior* (Illus. Dict.). **E., Sulfurated,** a mixture of sulfur, 1 part; ether, 10 parts. It is used in cholera, in teaspoonful doses mixed with carbonated water. **E., Sulfuric.** See *Ether* (2) (Illus. Dict.). **E., Syrup of, Syrupus ætheris, S. cum æthere,** a syrup containing 5% each of ether and alcohol. **E., Terebinthinated,** a combination of ether, 4 parts, and oil of turpentine, 1 to 2 parts. It is used in treatment of gall-stone. Dose, 10–20 drops. **E., Three-carbon,** methyl ethyl ether. **E., Vitriolic.** See *Ether* (2) (Illus. Dict.). **E., Wiggers' Anesthetic.** See *Ethyl Chlorid, Polychlorated.*

Etherene (*eth'-ur-ēn*). See *Ethene* (Illus. Dict.).

Ethereous (*e-the'-re-us*). See *Ethereal* (Illus. Dict.).

Etheride (*e'-thur-id*). A comprehensive term for any combination of formyl with a haloid.

Etherification (*e-ther-if-ik-a'-shun*) [*æther,* ether; *facere,* to make]. The formation of an ether from an alcohol.

Ethërin, Etherine (*e'-thur-in, -ēn*). 1. $C_{16}H_{32}$ (?). A solid crystalline body isomeric with cetylene, melting at 110° C., obtained from ethene by distillation; it is a constituent of light oil of wine. 2. A toxin extracted in ether, by Auclair, from tubercle bacilli. Syn., *Etherobacillin.*

Etherion (*e-the'-re-on*). A gas found in the air by Brush (Chas. F.), 1898, with a heat conductivity one hundred times that of oxygen.

Etherioscope (*e-the'-re-o-skōp*) [*æther,* ether; σκοπεῖν, to examine]. An apparatus for estimating the proportions of ether or of acetic acid to water in a given solution.

Etherize (*e'-thur-īz*). To bring under the influence of ether.

Etherobacillin (*e-thur-o-bas-il'-in*). See *Etherin* (2).

Etherochloroform (*e-thur-o-klo'-ro-form*). A mixture of ether and chloroform employed in long-continued anesthesia.

Etherol (*e'-thur-ol*). A constituent of light oil of wine formed from ethene by distillation; it is an oily, liquid product of alcohol by excessive action of sulfuric acid.

Etherone (*e'-thur-ōn*). A light, very volatile liquid formed with heavy oil of wine in the dry distillation of the sulfovinates.

Etheryl (*e'-thur-il*). See *Ethylene* (Illus. Dict.).

Ethidene. (See Illus. Dict.) **E.-hydramin.** See *Aldehyd ammonia.*

Ethin, Ethine (*eth'-in, -ēn*). See *Acetylene* (Illus. Dict.).

Ethinyl (*eth'-in-il*). $C_2H : CH . C \equiv$. A quinquivalent radicle.

Ethiomopemphigus (*eth-e-o-mo-pem'-fe-gus*) [ἔθιμος, accustomed; πέμφιξ, a pustule]. Continued or habitual pemphigus.

Ethionate (*eth'-e-on-āt*). A salt of ethionic acid.

Ethionic (*eth-e-on'-ik*) [*ethylene; θεῖον,* sulfur]. Made up of ethylene and a sulfur compound. **E. Anhydrid,** $C_2H_4O_2S_2O_4$, ethionic acid deprived of the elements of water; a colorless crystalline substance.

Ethmocarditis (*eth-mo-kar-dī'-tis*) [ἠθμός, a sieve; καρδία, heart]. Inflammation of the connective tissue of the heart.

Ethmodermitis (*eth-mo-durm-i'-tis*) [ἠθμός, a sieve; δέρμα, the skin]. Inflammation of the connective tissue of the skin.

Ethmoiditis. (See Illus. Dict.) **E., Anterior,** inflammation of the ventral part of the ethmoid. **E., Necrosing,** a disease marked by inflammation of the nasal tributaries of the ethmoid bone and its mucoperiosteal lining, with enlargement of the inferior turbinated process and the occurrence of spicules of necrosed bone in the body of the tumor.

Ethmoidofrontal (*eth-moid-o-frunt'-al*). Relating to the ethmoid and frontal bones.

Ethmolacrimal (*eth-mo-lak'-re-mal*). Relating to the junction of the ethmoid and lacrimal bones.

Ethmopalatine (*eth-mo-pal'-a-tēn*). Relating to the ethmoid and palatal bones, area, or cartilage.

Ethmophlogosis (*eth-mo-flo-gō'-sis*). See *Ethmyphitis* (Illus. Dict.).

Ethmosphenoidal (*eth-mo-sfen-oid'-al*). Relating to the ethmoid and sphenoid bones.

Ethmoturbinals (*eth-mo-tur'-bin-als*). The ethmoturbinal bones.

Ethmovomerine (*eth-mo-vo'-mur-ēn*). Relating to the ethmoid bone and the vomer.

Ethnography (*eth-nog'-ra-fe*) [ἔθνος, nation; γράφειν, to write]. A description of the races of men.

Ethology (*eth-ol'-o-je*) [ἔθος, custom, usage]. The study of the instinct, intelligence, habits, manners, and behavior of animals. The science of the external conditions of existence which pertain to organisms as individuals and at the same time regulate their relations to other organisms and to the inorganic environment. [Weismann.]

Ethoxid (*eth-oks'-id*). R . O . C_2H_5. A compound of ethyl, oxygen, and a radicle or element; an ethylate.

Ethyl. (See Illus. Dict.) Syn., *Deutyl.* **E.-acetanilid,** $C_{10}H_{13}NO$, white crystals soluble in alcohol, melting at 50° C., obtained from ethyl anilin and acetyl chlorid by heating. It is analgesic and antipyretic. Syn., *Acetethylanilid.* **E. Acetate.** See *Ether, Acetic* (Illus. Dict.). **E. Acetoacetate,** $C_6H_{10}O_3$, a fragrant liquid derived from ethyl acetate by action of sodium and acetic acid with heat. Sp. gr. 1.030 at 15° C., boils at 180°–181° C. It strikes a Bordeaux red color with a solution of ferric chlorid, which distin-

guishes it from acetone. Syn., *Diacetic ether.* **E.-alizarin,** $C_{24}H_{22}O_6$, a yellow crystalline body insoluble in water, soluble in alcohol. **E. Allophanate,** $C_4H_8N_2O_3$, lustrous prismatic needles, without taste or odor, soluble in acids, melting at 190° C. **E.-ammonium Chlorid.** See *Ethylamin Chlorid.* **E.-anilin,** $C_8H_{11}N$, a reaction-product of anilin and ethyl bromid, occurring as a yellowish oily liquid; boils at 204° C.; sp. gr. 0.954 at 18° C. **E.benzene,** C_8H_{10}, obtained from benzene and aluminium chlorid by action of ethyl chlorid. It is a colorless liquid; boils at 136° C.; sp. gr. 0.867 at 20° C. **E. Benzoate,** $C_9H_{10}O_2$, an aromatic liquid, soluble in alcohol; boils at 212°–213° C. It is used in the manufacture of artificial fruit essences. Syn., *Benzoic ether.* **E. Benzoylacetate,** $C_{11}H_{12}O_3$, a strongly refractive, fragrant liquid; boils at 265°–270° C. Syn., *Benzoylacetic ether.* **E.-benzoylecgonin.** See *Cocaethylin.* **E. Bichlorid.** See *Ether, Hydrochloric, Monochlorinated.* **E. Bisulphid,** $C_4H_{10}S_2$, a highly inflammable, colorless, oily liquid with odor of garlic; sp. gr. 0.9927 at 20° C.; soluble in alcohol, ether, and chloroform, slightly soluble in water; boils at 153° C.; burns blue. **E. Butyrate,** $C_6H_{12}O_2$, a colorless liquid with fragrance of pineapples, soluble in alcohol, slightly soluble in water; boils at about 121° C.; sp. gr. 0.9004 at 0° C. Syn., *Butyl ether; Butylic ether; Butyric ether.* **E. Butyrate, Monobromated,** $C_6H_{11}BrO_2$, a colorless liquid; boils at 178° C.; sp. gr. 1.345 at 12° C. **E.-cacodyl,** a univalent arsenic radicle. Syn., *Diethylarsin.* **E. Caproate, E. Capronate,** $C_8H_{16}O_2$, a colorless, fragrant liquid; sp. gr. 0.889 at 0° C.; boils at 167° C. **E. Caprylate,** $C_{10}H_{20}O_2$, a colorless liquid with fragrance of pineapples; soluble in alcohol; boils at 205°–206° C.; sp. gr. 0.884 at 0° C. **E. Carbamate.** See *Urethane* (Illus. Dict.). **E. Carbanilate.** See *Euphorin* (Illus. Dict.). **E.-carbinol,** primary propyl alcohol. **E. Carbolate, E. Phenate.** See *Phenetol* (Illus. Dict.). **E. Carbonate,** $C_5H_{10}O_3$, an inflammable, colorless, fragrant liquid soluble in alcohol and ether; boils at 126° C.; sp. gr. 0.999 at 0° C. **E.-carbonate,** a salt of ethyl carbonic acid. **E.-chloralurethane.** See *Somnal* (Illus. Dict.). **E. Chlorid, Chlorinated.** See *Chlorethylene Chlorid.* **E. Chlorid, Polychlorated,** a combination of chlorinated ethyl chlorids; a clear, colorless liquid with aromatic odor, miscible in alcohol and ether. It is a local anesthetic and irritant. **E. Chlorocarbonate,** $C_3H_5ClO_2$, a colorless, mobile liquid with pungent taste and odor, soluble in alcohol; boils at 94° C.; sp. gr. 1.144 at 15° C. **E. Cinnamate,** $C_{11}H_{12}O_2$, a limpid, fragrant, oily liquid soluble in ether; boils at 271° C.; sp. gr. 1.066 at 0° C. Syn., *Cinnamic ether; Cinnamylic ether.* **E. Citrate,** $C_{12}H_{20}O_7$, a thick, oily, bitter liquid, soluble in water, alcohol, and ether; boils at 294° C.; sp. gr. 1.137 at 20° C. Syn., *Triethyl ether of citric acid; Citric ether.* **E.-codein,** morphin ethylate. **E. and Copper Acetoacetate,** $CuC_{12}H_{18}O_6$, green acicular crystals, soluble in alcohol, benzene-ether, or carbon disulfate; melts at 182° C. Syn., *Copper acetoacetic ether.* **E. Cyanacetate,** $C_5H_7NO_2$, a heavy colorless liquid; boils at 207° C.; sp. gr. 1.066. **E. Cyanid,** C_2H_5CN, a poisonous mobile liquid with odor of ether, soluble in water and alcohol; boils at 97°–98° C.; sp. gr. 0.801 at 0° C. **E. Dichloracetate,** $C_4H_6Cl_2O_2$, a liquid substance boiling at 156°–157° C.; sp. gr. 1.29 at 22°. **E. Disuccinate,** $C_8H_{14}O_4$, a liquid boiling at 226° C. It is used as a local irritant. **E. Enanthate, E. Œnanthate,** a product of the etherification of the higher monobasic fatty acids; it is a clear, colorless oil, soluble in alcohol, ether, and chloroform; sp. gr. 0.864–0.87. It is stimulant and aromatic. **E. Formate,** $C_3H_6O_2$, colorless mobile liquid with fragrance of peach-kernels, soluble in ether, water, and alcohol; boils at 55° C.; sp. gr. 0.937 at 0° C. It is hypnotic and analgesic. Dose, 1–2 fl. drams (3.7–7.5 c.c.). Syn., *Formic ether.* **E. Heptylate,** $C_2H_5 . O . C_7H_{15}$, a fragrant mobile liquid; boils at 165° C.; sp. gr. 0.790. **E. Hydrate,** ordinary alcohol. **E.-kairin.** See *Kairin* (Illus. Dict.). **E. Lactate,** $C_5H_{10}O_3$, a yellowish or colorless limpid liquid, soluble in water; boils at 154.4° C.; sp. gr. 1.031 at 19° C.; it is hypnotic and sedative. Dose, 8–16 ♏ (0.5–1 c.c.). **E. Malonate,** $C_7H_{12}O_4$, a bitter liquid with slightly aromatic taste; boils at 198° C.; sp. gr. 1.061 at 15° C. **E. Mercaptan,** C_2H_6S, a colorless, highly inflammable liquid with an odor of garlic, soluble in alcohol and ether and slightly soluble in water; boils at 36.2° C.; sp. gr. 0.8391 at 20° C. Syn., *Hydrosulfuric ether.* **E. and Methyl Acetoacetate,** $C_7H_{12}O_3$, a colorless liquid; boils at 186.8° C.; sp. gr. 1.009 at 6° C. Syn., *Methylacetoacetic ether.* **E. Monochloracetate,** $C_4H_7ClO_2$, an oily, pungent liquid; boils at 145° C.; sp. gr. 1.158 at 20° C. Syn., *Monochloracetic ether; Ethyl ether of monochloracetic acid.* **E.-morphin Hydrochlorate.** See *Dionin.* **E. Mucate,** $C_{10}H_{18}O_8 = C_6H_4(OH)_4(CO . OC_2H_5)_2$, a substance derived from mucic acid by the action of sulfuric acid and alcohol with heat. Syn., *Mucic ether.* **E. Mustard Oil.** See *E. Thiocarbimid.* **E. Nitrate,** $C_2H_5NO_3$, a colorless inflammable liquid, miscible in alcohol and ether; boils at 86° C.; sp. gr. 1.132 at 0° C. **E. Nitrite,** $C_2H_5NO_2$, a very volatile, yellowish, inflammable, ethereal liquid; boils at about 170° C.; it is used in alcoholic solution and called sweet spirits of niter. **E. Octoate.** Same as *E. Caprylate.* **E. Œnanthate.** See *E. Enanthate.* **E. Oxalacetate,** $C_8H_{12}O_5$, a colorless oily liquid; boils at 132° C. at 24 Mm.; sp. gr. 1.159 at 23° C. **E. Oxalate,** $C_6H_{10}O_4$, a colorless oily liquid, soluble in alcohol; boils at 186° C.; sp. gr. 1.079 at 20° C. **E. Oxid.** See *Ether* (2) (Illus. Dict.). **E. Oxid, Hydrated,** ethyl alcohol. **E. Pelargonate,** $C_{11}H_{22}O_2$, an aromatic, colorless, oily liquid with the fragrance of quinces, soluble in alcohol, ether, and chloroform; boils at 227°–228° C.; sp. gr. 0.865 at 17.5° C. It is used in the manufacture of artificial quince essence. **E.phenacetin,** $C_{12}H_{17}O_2N$, a reaction-product of ethyl iodid and phenacetin sodium; a yellowish, oily liquid, soluble in ether and chloroform, insoluble in water; boils at 330°–335° C. It is a hypnotic. **E. Phenate.** See *Phenetol* (Illus. Dict.). **Ethylphenylketone,** $C_9H_{10}O$, a fragrant liquid obtained from benzoyl chlorid by action of zinc ethyl; boils at 218° C.; sp. gr. 1.009 at 0° C. **E. Propionate,** $C_5H_{10}O_2$, a colorless liquid; boils at 98.8° C.; sp. gr. 0.911 at 0° C. **E.-propionyl.** See *Propione* (Illus. Dict.). **E.-propyl.** See *Pentane* (Illus. Dict.). **E.-propylene.** See *Amylene* (Illus. Dict.). **E.-pyoktanin,** is recommended in surgery and ophthalmology as more active than ordinary pyoktanin. **E.pyridin.** Same as *β-Lutidin.* **E. Salicylate,** $C_9H_{10}O_3$, a nearly colorless liquid, soluble in alcohol; boils at 231.5° C.; sp. gr. 1.184 at 20° C. **E. Sebacate,** $C_{14}H_{26}O_4$, a nearly colorless liquid with peculiar odor; boils at 307°–308° C.; sp. gr. 0.965 at 16° C. **E. and Succinyl Succinate,** $C_{12}H_{16}O_6$, light-green crystals with an intense light-blue fluorescence, soluble in alcohol and ether; melts at 127° C. Syn., *Succinyl succinic ether.* **E. Sulfate,** $C_2H_6SO_4$, an oily, colorless, very acid liquid obtained by the action of sulfuric acid on alcohol, soluble in water and alcohol. Syn., *Ethylsulfuric acid; Sulfethylic acid; Sulfovinic acid; Monoethyl sulfate.*

E. Sulfid, $C_4H_{10}S$, an oily liquid with an odor of garlic, soluble in alcohol; melts at 93° C.; sp. gr. 0.837 at 20° C. **E. Sulfocyanate,** C_3H_5NS, a mobile oil without color, miscible in alcohol and ether, insoluble in water; boils at 146° C.; sp. gr. 1.033. **E. Tartrate,** $C_8H_{14}O_8$, a heavy, odorless, oily liquid, soluble in alcohol; boils at 280° C.; sp. gr. 1.210 at 14° C. **E.-thallin,** $C_{12}H_{17}NO$, an antipyretic alkaloid. **E. Thiocarbimid,** C_3H_5NS, a biting liquid; boils at 133° C.; sp. gr. 1.019 at 0°. It is used as a local irritant in rheumatism, etc. Syn., *Ethyl mustard oil.* **E. Trichloracetate,** $C_4H_5Cl_3O_2$, a colorless, oily liquid with the odor of peppermint; boils at 164° C.; sp. gr. 1.369 at 15° C. **E.-urethane.** See *Urethane* (Illus. Dict.). **E. Valeranate, E. Valerate, E. Valerianate,** $C_7H_{14}O_2$, a reaction-product of sodium isovalerianate, alcohol, and sulfuric acid, forming a colorless liquid, boiling at about 134° C.; sp. gr. 0.885 at 0° C. It is antispasmic and sedative. Dose, 1–2 drops several times daily. Syn., *Isovaleric ether.* **E.vanillin,** $C_6H_7(C_2H_5)O_3$, a crystalline body obtained from action of ethyl iodid on a solution of potassium vanillate in boiling alcohol. Syn., *Ethylmethyl protocatechuic aldehyd.*

Ethylamin. (See Illus. Dict.) **E. Chlorid,** C_2H_8NCl, obtained from ethyl chlorid by the action of boiling alcoholic ammonia; it occurs in large deliquescent crystals, soluble in water and alcohol; melts at 76°–80° C. Syn., *Ethylammonium chlorid; Monoethylamin hydrochlorate.* **E.diamin-mercury Citrate,** a disinfectant for hands and surgical instruments. **E. Iodid,** C_2H_8NI, obtained from boiling ethyl iodid and absolute alcohol by action of ammonium; it occurs in transparent, very deliquescent crystals, soluble in water and alcohol. Syn., *Ethylammonium iodid; Monoethylamin hydroiodate.* **E. Sulfate,** $C_4H_{16}N_2SO_4$, a deliquescent gummy mass. **E. Urate** is soluble in water; it is used as a remedy for gout and vesical calculi.

Ethylation (*eth-il-a′-shun*). The act or process of combining with ethyl.

Ethylene. (See Illus. Dict.) **E.-chlorhydrin,** $C_2H_4Cl.OH$, a colorless, sweet liquid soluble in water, first obtained by Wurtz from saturating ethyl alcohol with hydrochloric-acid gas. Sp. gr. 1.223 at 0° C.; boils at 128° C. Syn., *Monochlorethyl alcohol; Glycol chlorhydrin.* **E. Chlorid, Monochlorinated,** $C_2H_3Cl_3$, a colorless liquid with pleasant odor, obtained from vinyl chlorid by action of antimony pentachlorid; sp. gr. 1.458 at 9° C.; boils at 114° C. It is used as an anesthetic. Syn., *Vinyl trichlorid; Monochlorethylene chlorid.* **E. Dichlorid.** See *Ethene Chlorid* (Illus. Dict.). **E. Glycol.** See *Glycol* (Illus. Dict.). **E.-guaiacol.** See *Guaiacol Ethylenate.* **E. Iodid,** $C_2H_4I_2$, colorless needles or prisms; sp. gr. 2.07; soluble in alcohol and ether, melts at 81°–82° C. Syn., *Diiodethane.*

Ethylenediamin. (See Illus. Dict.) It is a solvent of albumin and fibrin and is used in diphtheria. **E.-cresol,** a colorless liquid used as a wound antiseptic. **E.-silver-phosphate.** See *Argentamin.* **E. Tricresol,** a mixture of ethylenediamin, 10 parts; tricresol, 10 parts; distilled water, 500 parts; a clear liquid turning slightly yellow in the air; it has an alkaline reaction and is used as an antiseptic in 0.1% to 1% solution. Syn., *Kresamin.*

Ethylenethenyldiamin (*eth-il-en-eth-en-il-di-am′-in*). See *Lysidin.*

Ethylenimid, Ethylenimin (*eth-il-en-im′-id, -in*). 1. See *Piperazin* (Illus. Dict.). 2. C_2H_5N. A nonposionous base found by Kunz (1888) in cholera cultures and believed to be identical with spermin.

Ethylic (*eth-il′-ik*). Relating to or obtained from ethyl. **E. Alcohol,** ethyl alcohol. **E. Aldehyd,** acetic aldehyd.

Ethylization (*eth-il-i-za′-shun*) [*ethyl*]. The induction of the physiologic effects of ethyl bromid.

Ethylize (*eth′-il-īz*). To anesthetize with ethyl bromid.

Ethylism (*eth′-il-izm*). Poisoning by ethyl alcohol.

Ethylol (*eth′-il-ol*). Ethyl chlorid.

Etiology, Ætiology. (See Illus. Dict.) 2. The science of the causes of the phenomena of life and their relation to physical laws in general.

Etionymous, Ætionymous (*e-te-on′-im-us*) [*αἰτία*, a cause; *ὄνυμα*, name]. A term derived from the name of a cause; it is applied to diseases; *e.g.*, alcoholism, lead-colic.

Etypic, Etypical (*e-tip′-ik, -al*) [*e*, without; *τύπος*, a type]. See *Atypic* (Illus. Dict.).

Eubiol (*u′-be-ol*). A preparation of hemoglobin.

Eubiose (*u′-be-ōz*). A highly concentrated proprietary hematogenous substance.

Eucain (*u′-ka-in*). The commercial name for a local anesthetic used as a substitute for cocain. ***α*-E., Eucain A, Alpha-E.,** $C_{19}H_{27}NO_4$, a benzoyl-methyl-tetra-methyl-γ-oxy-piperidincarboxylic-methyl-ester, occurring in glossy prisms melting at 104° C. The hydrochlorate is used. Application to nose or throat, 5% to 10% solution; dental surgery, 10% solution. ***β*-E., Eucain B, Beta-E.,** $C_{15}H_{21}NO_2$. HCl, benzoyl-vinyldiaceton-alkamin hydrochlorid; white crystals soluble in 3½ parts of water, melting at 263° C. It is used in 2% solution in dental surgery as more active and less toxic than cocain, for which it is used as a substitute. ***β*-E. Acetate** is recommended for use in ophthalmology.

Eucalose (*u′-kal-ōz*). See *Eucalin* (Illus. Dict.).

Eucalyptene (*u-kal-ip′-tēn*). $C_{10}H_{16}$. A hydrocarbon from eucalyptol; a clear antiseptic liquid soluble in alcohol, boiling at 160°–170° C. The hydrochlorid is used as an intestinal antiseptic. Dose, 20–30 gr. (1.33–2 gm.). **E. Hydrochlorate.** See *Eucalypteol.*

Eucalypteol (*u-kal-ip′-te-ol*). $C_{10}H_{16}2HCl$. White aromatic scales of peculiar taste, soluble in alcohol, ether, chloroform, and oils, melting at about 50° C. It is used as an intestinal antiseptic. Dose, 24 gr. (1.6 gm.) daily. Children, 4–12 gr. (0.26–0.78 gm.) daily. Syn., *Terpilene dihydrochlorate.*

Eucalyptin (*u-kal-ip′-tin*). A substance resembling pectin, obtained from a tincture of Botany Bay kino by action of ammonia.

Eucalyptolene (*u-kal-ip′-tol-ēn*). A hydrocarbon from *Eucalyptus globulus*, Labill., a thin liquid with odor of camphor and pungent taste, soluble in alcohol; boils above 300° C.

Eucalyptoresorcin (*u-kal-ip-to-res-or′-sin*). See *Resorcin-eucalyptol.*

Eucalyptus rostrata. (See Illus. Dict.) It is recommended in sea-sickness. Dose, 1 gr. (0.06 gm.) 3 or 4 times daily.

Eucanthus (*u-kan′-thus*) [*εὖ*, expressive of greatness; *canthus*]. Any enlargement of the fleshy papilla at the inner canthus of the eye.

Eucasin (*u′-ka-sin*). A casein food-preparation soluble in warm water, obtained by pouring ammonia over casein.

Eucasol (*u′-kas-ol*). Soluble eucalyptolanytol, a preparation containing 25% of eucalyptol; it is used in dental surgery.

Euchinin (*u′-kin-in*). $C_2H_5O.CO.OC_{20}H_{23}O$. An ethylcarbonic ester of quinin forming tasteless white crystals soluble in alcohol, ether, and chloroform, melting at 95° C. It is used in whooping-cough, pneumonia, malaria, etc. Dose, 15–30 gr. (1–2 gm.).

Euchlorhydria (*u-klor-hi'-dre-ah*) [εὖ, well; *hydrochloric acid*]. A normal acidity of the gastric juice.

Euchlorin. (See Illus. Dict.) 2. A mixture of potassium chlorate and hydrochloric acid; it is used as a spray and gargle in diphtheria.

Euchromatopsia (*u-kro-mat-op'-se-ah*) [εὖ, well; χρῶμα, color; ὄψις, sight]. Capacity for correct recognition of colors.

Euchymy (*u'-ki-me*). See *Euchymia* (Illus. Dict.).

Eucol (*u'-kol*). A combination of eucalyptol, santal oil, cubeb, oleoresin, creasote, and cod-liver oil; it is used in bronchitis and pulmonary consumption.

Eucrasic (*u-kra'-sik*) [εὖ, well; κρᾶσις, a mixture]. 1. In a condition of good health. 2. Opposed to dyscrasia or capable of bettering it.

Eucrasy (*u'-kra-se*). See *Eucrasia* (Illus. Dict.).

Eucyesia, Eucyesis (*u-si-e'-ze-ah, u-si-e'-sis*) [εὖ, well; κύησις, pregnancy]. Normal pregnancy.

Eudermol (*u-dur'-mol*). The proprietary name of nicotin salicylate; used as an ointment in the treatment of skin-diseases.

Eudesmin (*u-des'-min*). $C_{28}H_{30}O_8$. A substance found in the kino of *Eucalyptus hemiphloia*, F. v. M.

Eudiaemorrhysis (*u-di-a-em-or'-is-is*) [εὖ, well; διά, through; αἷμα, blood; ῥύσις, a flowing]. The normal flowing of the blood through the capillaries.

Eudiaphoresis (*u-di-af-o-re'-sis*) [εὖ, well; *diaphoresis*]. A healthy condition of perspiration.

Eudiometry (*u-di-om'-et-re*) [εὐδία, calm weather; μέτρον, a measure]. See *Analysis, Gasometric* (Illus. Dict.).

Eudosmol (*u-doz'-mol*). $C_{10}H_{16}O$. A crystalline camphor obtained from various species of *Eucalyptus*.

Eudoxin (*u-doks'-in*). The proprietary name of the bismuth salt of tetra-iodo-phenol-phthalein (nosophen); a reddish-brown, odorless, tasteless powder, insoluble in water, containing 52% of iodin and 14% of bismuth. It is used as an intestinal antiseptic. Dose, 3–8 gr. (0.2–0.5 gm.) 3 times daily.

Euformol (*u-form'-ol*). A proprietary antiseptic fluid containing oils of eucalyptus and wintergreen, thymol, menthol, boric acid, extract of wild indigo, and formaldehyd. It is used as a disinfectant and deodorant.

Eugallol (*u-gal'-ol*). Pyrogallol monoacetate; a yellowish-brown syrupy mass soluble in water, alcohol, ether, chloroform, and acetone. It is used in skin-diseases, applied with a brush to the affected part, being a powerful inflammatory irritant upon healthy skin.

Eugamy (*u'-gam-e*) [εὖ, well; γαμεῖν, to marry]. The most favorable conjugation plan.

Eugenate (*u'-jen-āt*). A salt of eugenic acid.
